

Procedural Models: Pseudo-code

Example: Check project project plan

```
check_plan (report)
    if report (date_time) > due_date_time then error (too_late)
    if report (client) = none then error (no_client)
    if report (team) < min_team or > max_team
        then error (bad_team)
    if error() = none
    then comments = read_report (report)
        return (comments (text), comments (grade))
    else return error()
```
