CPC08 Construction, Plumbing and Services Training Package

Release: 7.0

CONTENTS

Preliminary information.....	24
CPC08 sectors and functional areas.....	24
AQF qualifications in CPC08.....	27
CPC08 native units of competency	30
CPC08 units with prerequisite unit requirements	53
Imported units used in CPC08 qualifications.....	74
Mapping of CPC08 units of competency.....	79
Mapping of CPC08 qualifications.....	263
Overview	309
CPC08 Overview	314
Introduction.....	321
Qualifications Framework.....	322
Skill sets.....	329
Employability skills.....	330
Assessment Guidelines.....	333
Competency Standards.....	352
CPC10111 Certificate I in Construction	356
CPC20111 Certificate II in Construction.....	360
CPC20211 Certificate II in Construction Pathways	366
CPC20311 Certificate II in Steelfixing	372
CPC20411 Certificate II in Concreting.....	377
CPC20511 Certificate II in Stoneworking	382
CPC20711 Certificate II in Drainage	387
CPC20811 Certificate II in Metal Roofing and Cladding	392
CPC20911 Certificate II in Urban Irrigation.....	398
CPC30111 Certificate III in Bricklaying/Blocklaying	403
CPC30211 Certificate III in Carpentry	409
CPC30311 Certificate III in Concreting	415
CPC30411 Certificate III in Demolition	421
CPC30511 Certificate III in Dogging	428
CPC30611 Certificate III in Painting and Decorating.....	433
CPC30711 Certificate III in Rigging.....	439
CPC30811 Certificate III in Roof Tiling.....	444
CPC30911 Certificate III in Scaffolding.....	449
CPC31011 Certificate III in Solid Plastering	454
CPC31111 Certificate III in Steelfixing	459
CPC31211 Certificate III in Wall and Ceiling Lining	464
CPC31311 Certificate III in Wall and Floor Tiling	471
CPC31411 Certificate III in Construction Waterproofing	476
CPC31511 Certificate III in Formwork/Falsework	481
CPC31611 Certificate III in Paving.....	487
CPC31711 Certificate III in Low Rise Structural Framing.....	492
CPC31811 Certificate III in Shopfitting	497
CPC31911 Certificate III in Joinery	503
CPC32011 Certificate III in Carpentry and Joinery	509
CPC32111 Certificate III in Signage.....	515
CPC32211 Certificate III in Joinery (Stairs).....	521
CPC32311 Certificate III in Stonemasonry (Monumental/Installation).....	526
CPC32411 Certificate III in Plumbing.....	532

CPC32511 Certificate III in Plumbing (Mechanical Services)	545
CPC32611 Certificate III in Roof Plumbing	558
CPC32711 Certificate III in Gas Fitting	564
CPC32811 Certificate III in Fire Protection.....	570
CPC40110 Certificate IV in Building and Construction (Building).....	576
CPC40208 Certificate IV in Building and Construction (Contract Administration)	585
CPC40308 Certificate IV in Building and Construction (Estimating)	591
CPC40408 Certificate IV in Building and Construction (Sales).....	599
CPC40508 Certificate IV in Building and Construction (Site Management).....	605
CPC40611 Certificate IV in Building and Construction (Specialist Trades)	614
CPC40708 Certificate IV in Building and Construction (Trade Contracting)	623
CPC40808 Certificate IV in Swimming Pool and Spa Building	631
CPC40911 Certificate IV in Plumbing and Services.....	640
CPC50108 Diploma of Building Surveying.....	654
CPC50210 Diploma of Building and Construction (Building).....	659
CPC50308 Diploma of Building and Construction (Management)	668
CPC50408 Diploma of Plumbing and Services.....	675
CPC50509 Diploma of Fire Systems Design	682
CPC50611 Diploma of Hydraulic Services Design.....	688
CPC60108 Advanced Diploma of Building Surveying.....	694
CPC60208 Advanced Diploma of Building and Construction (Management)	700
CPC70109 Vocational Graduate Certificate in Fire Systems Design Management.....	706
CPCSS00001 Lead a building, construction or plumbing and services team.....	710
CPCSS00002 Manage complex building projects	712
CPCSS00003 Undertake trade contracting	714
CPCCBC4001A Apply building codes and standards to the construction process for low rise building projects	717
CPCCBC4002A Manage occupational health and safety in the building and construction workplace.....	726
CPCCBC4003A Select and prepare a construction contract.....	737
CPCCBC4004A Identify and produce estimated costs for building and construction projects.....	747
CPCCBC4005A Produce labour and material schedules for ordering	756
CPCCBC4006B Select, procure and store construction materials for low rise projects...	764
CPCCBC4007A Plan building or construction work	774
CPCCBC4008B Conduct on-site supervision of building and construction projects	783
CPCCBC4009B Apply legal requirements to building and construction projects	792
CPCCBC4010B Apply structural principles to residential low rise constructions.....	801
CPCCBC4011B Apply structural principles to commercial low rise constructions.....	812
CPCCBC4012A Read and interpret plans and specifications	823
CPCCBC4013A Prepare and evaluate tender documentation	832
CPCCBC4014A Prepare simple building sketches and drawings.....	841
CPCCBC4015A Prepare specifications for all construction works.....	849
CPCCBC4016A Administer a construction contract	858
CPCCBC4017A Arrange resources and prepare for the building or construction project	867
CPCCBC4018A Apply site surveys and set-out procedures to building and construction projects.....	875
CPCCBC4019A Apply sustainable building design principles to water management systems	883
CPCCBC4020A Build thermally efficient and sustainable structures.....	891
CPCCBC4021A Minimise waste on the building and construction site.....	899
CPCCBC4022A Supervise tilt-up work.....	907
CPCCBC4024A Resolve business disputes	918

CPCCBC4025A Manage personal work priorities and professional development.....	926
CPCCBC4026A Arrange building applications and approvals.....	934
CPCCBC4027B Establish a basis for sales consulting.....	942
CPCCBC4028A Prepare design brief for construction works.....	952
CPCCBC4029B Apply construction information to the sales process	960
CPCCBC4030A Analyse and communicate industry information.....	968
CPCCBC4031A Process client requirements	977
CPCCBC4032A Apply contract law to sales processes	985
CPCCBC4033A Maintain the sales environment	993
CPCCBC4034A Apply codes and standards to building trade and services contracting.....	1001
CPCCBC4035A Initiate the heritage works process	1009
CPCCBC4036A Prepare to undertake the heritage restoration process	1018
CPCCBC4037A Prepare drawings for heritage works	1028
CPCCBC4038A Prepare work plans for restoration work.....	1039
CPCCBC4039A Undertake the heritage restoration process	1049
CPCCBC4040A Prepare report for heritage restoration work.....	1057
CPCCBC4041A Undertake preparations for refractory work.....	1066
CPCCBC4042A Construct a fire brick wall and arch using refractory materials	1074
CPCCBC4043A Operate a self-erecting tower crane	1082
CPCCBC4044A Operate a tower crane.....	1096
CPCCBC4045A Perform advanced rigging	1109
CPCCBC4046A Erect and dismantle advanced scaffolding	1124
CPCCBC4047A Quality assure fire-rated lining systems	1138
CPCCBC4048A Apply building codes and standards to the construction process for swimming pools and spas	1151
CPCCBC4049A Apply structural principles to construction of swimming pools and spas.....	1159
CPCCBC4050A Select, procure and store construction materials for swimming pools and spa projects.....	1168
CPCCBC4051A Supervise asbestos removal.....	1178
CPCCBC5001B Apply building codes and standards to the construction process for medium rise building projects	1194
CPCCBC5002A Monitor costing systems on medium rise building and construction projects.....	1203
CPCCBC5003A Supervise the planning of on-site medium rise building or construction work	1212
CPCCBC5004A Supervise and apply quality standards to the selection of building and construction materials	1222
CPCCBC5005A Select and manage building and construction contractors	1232
CPCCBC5006B Apply site surveys and set-out procedures to medium rise building projects.....	1242
CPCCBC5007A Administer the legal obligations of a building or construction contract.....	1251
CPCCBC5009A Identify services layout and connection methods to medium rise construction projects	1261
CPCCBC5010B Manage construction work	1271
CPCCBC5011A Manage environmental management practices and processes in building and construction.....	1281
CPCCBC5012A Manage the application and monitoring of energy conservation and management practices and processes.....	1291
CPCCBC5013A Develop professional technical and legal reports on building and construction projects	1301
CPCCBC5014A Conduct asbestos assessment associated with removal	1311
CPCCBC5018A Apply structural principles to the construction of medium rise buildings.....	1326

CPCCBC6001A Apply building codes and standards to the construction process for large building projects	1334
CPCCBC6002A Generate and direct the development of new projects	1343
CPCCBC6003A Establish, maintain and review contract administration procedures and frameworks.....	1352
CPCCBC6004A Manage processes for and legal obligations of a building or construction contract	1362
CPCCBC6005A Manage tender developments for major projects	1371
CPCCBC6006A Manage the procurement and acquisition of resources for building or construction projects	1381
CPCCBC6007A Develop, plan and implement appropriate building or construction environmental management practices and processes	1391
CPCCBC6008A Develop and implement an appropriate estimating and tendering system.....	1401
CPCCBC6009A Develop, plan and implement an appropriate building or construction planning process.....	1410
CPCCBC6010A Plan, develop and implement building or construction energy conservation and management practices and processes.....	1421
CPCCBC6011A Establish systems to develop and monitor building and construction costs.....	1431
CPCCBC6012A Manage and administer development of documentation for building or construction projects	1441
CPCCBC6013A Evaluate materials for multi-storey buildings	1451
CPCCBC6014A Apply structural principles to the construction of large, high rise and complex buildings	1460
CPCCBC6015A Apply building surveying procedures	1470
CPCCBC6016A Assess construction faults in large building projects.....	1478
CPCCBC6017A Evaluate services layout and connection methods for the planning of large building projects	1487
CPCCBL2001A Handle and prepare bricklaying and blocklaying materials	1499
CPCCBL2002A Use bricklaying and blocklaying tools and equipment	1512
CPCCBL3001A Lay paving	1524
CPCCBL3002A Carry out masonry veneer construction	1536
CPCCBL3003A Carry out cavity brick construction	1549
CPCCBL3004A Construct masonry steps and stairs	1562
CPCCBL3005A Lay masonry walls and corners.....	1574
CPCCBL3006A Lay multi-thickness walls and piers	1586
CPCCBL3007A Install glass blockwork	1598
CPCCBL3009A Install flashings and damp proof course	1609
CPCCBL3010A Construct masonry arches	1621
CPCCBL3011A Construct curved walls	1634
CPCCBL3012A Construct fireplaces and chimneys.....	1646
CPCCBL3013A Construct masonry structural systems	1658
CPCCBL3014A Install fire-rated masonry construction.....	1671
CPCCBL3015A Construct decorative brickwork.....	1682
CPCCBL3016A Construct battered masonry walls and piers.....	1694
CPCCBL3017A Carry out tuck pointing to brickwork	1706
CPCCBL3018A Install aerated autoclaved concrete products	1718
CPCCCA2002A Use carpentry tools and equipment	1730
CPCCCA2003A Erect and dismantle formwork for footings and slabs on ground	1741
CPCCCA2011A Handle carpentry materials.....	1752
CPCCCA3001A Carry out general demolition of minor building structures	1763
CPCCCA3002A Carry out setting out	1775
CPCCCA3003A Install flooring systems	1786
CPCCCA3004A Construct wall frames.....	1797

CPCCCA3005A Construct ceiling frames	1808
CPCCCA3006A Erect roof trusses	1819
CPCCCA3007B Construct pitched roofs	1830
CPCCCA3008A Construct eaves	1841
CPCCCA3009A Construct advanced roofs	1852
CPCCCA3010A Install and replace windows and doors	1863
CPCCCA3011A Refurbish timber sashes to window frames	1876
CPCCCA3012A Frame and fit wet area fixtures	1887
CPCCCA3013A Install lining, panelling and moulding	1899
CPCCCA3014A Construct bulkheads	1911
CPCCCA3015A Assemble partitions	1922
CPCCCA3016A Construct timber external stairs	1933
CPCCCA3017A Install exterior cladding	1944
CPCCCA3018A Construct, erect and dismantle formwork for stairs and ramps	1956
CPCCCA3019A Erect and dismantle formwork to suspended slabs, columns, beams and walls	1968
CPCCCA3020A Erect and dismantle jump form formwork	1980
CPCCCA3021A Erect and dismantle slip form formwork	1991
CPCCCA3022A Install curtain walling	2002
CPCCCA3023A Carry out levelling operations	2013
CPCCCM1011A Undertake basic estimation and costing	2025
CPCCCM1012A Work effectively and sustainably in the construction industry	2034
CPCCCM1013A Plan and organise work	2049
CPCCCM1014A Conduct workplace communication	2057
CPCCCM1015A Carry out measurements and calculations	2067
CPCCCM2001A Read and interpret plans and specifications	2076
CPCCCM2002A Carry out excavation	2087
CPCCCM2003B Calculate and cost construction work	2098
CPCCCM2004A Handle construction materials	2107
CPCCCM2005A Use construction tools and equipment	2118
CPCCCM2006A Apply basic levelling procedures	2129
CPCCCM2007A Use explosive power tools	2140
CPCCCM2008A Erect and dismantle restricted height scaffolding	2152
CPCCCM2009A Carry out basic demolition	2163
CPCCCM2010A Work safely at heights	2175
CPCCCM2011A Carry out tilt-up work safely	2185
CPCCCM3001B Operate elevated work platforms	2193
CPCCCM3002A Operate a truck mounted loading crane	2204
CPCCCM3003A Work safely around power sources, services and assets	2215
CPCCCO2011A Handle concreting materials	2226
CPCCCO2012A Use concreting tools and equipment	2238
CPCCCO2013A Carry out concreting to simple forms	2249
CPCCCO2014A Carry out concrete work	2261
CPCCCO3021A Place concrete	2274
CPCCCO3022A Finish concrete	2285
CPCCCO3023A Cure concrete	2296
CPCCCO3024A Carry out decorative finishes to concrete	2307
CPCCCO3025A Resurface concrete	2319
CPCCCO3026A Carry out repair and rectification of concrete	2330
CPCCCO3027A Cut and core concrete	2342
CPCCCO3028A Carry out tilt panel construction	2353
CPCCCO3029A Apply and finish sprayed concrete	2365
CPCCCO3030A Carry out high performance concreting	2377

CPCCCO3031A Conduct off-form vertical concrete operations.....	2389
CPCCCO3032A Conduct concrete boom delivery operations	2401
CPCCCO3033A Slump test concrete	2413
CPCCCO3034A Conduct concrete agitator truck operations.....	2424
CPCCDE2011A Use demolition tools and equipment	2436
CPCCDE2012A Carry out manual general demolition.....	2448
CPCCDE3011A Carry out mechanical general demolition	2460
CPCCDE3013A Operate a crushing plant	2472
CPCCDE3014A Remove non-friable asbestos	2483
CPCCDE3015A Remove friable asbestos	2495
CPCCDO2011A Handle and use dogging tools and equipment	2510
CPCCDO3011A Perform dogging.....	2521
CPCCDO3012A Perform crane scheduling.....	2532
CPCCJN2001A Assemble components	2543
CPCCJN2002A Prepare for off-site manufacturing process	2554
CPCCJN2003A Package manufactured products for transport	2566
CPCCJN3001A Use static machines.....	2576
CPCCJN3002A Use computer-controlled machinery	2587
CPCCJN3003A Manufacture components for door and window frames and doors.....	2598
CPCCJN3004A Manufacture joinery components.....	2609
CPCCJN3005A Cut and install glass	2622
CPCCJS3002A Manufacture stair components for straight flighted stairs	2632
CPCCJS3003A Assemble and install stairs	2643
CPCCJS3004A Manufacture and install continuous handrailing and special stair components.....	2655
CPCCJS3005A Manufacture stair components for curved and geometric stairs.....	2666
CPCCJS3006A Construct fabricated stairs.....	2677
CPCCJS3011A Design and set out stairs	2690
CPCCLB3001A Licence to operate a concrete placing boom	2701
CPCCLDG3001A Licence to perform dogging	2713
CPCCLHS3001A Licence to operate a personnel and materials hoist	2724
CPCCLHS3002A Licence to operate a materials hoist	2735
CPCCLRG3001A Licence to perform rigging basic level	2746
CPCCLRG3002A Licence to perform rigging intermediate level.....	2760
CPCCLRG4001A Licence to perform rigging advanced level	2773
CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level.....	2786
CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level...	2799
CPCCLSF4001A Licence to erect, alter and dismantle scaffolding advanced level	2811
CPCC LTC4001A Licence to operate a tower crane	2822
CPCC LTC4002A Licence to operate a self-erecting tower crane	2833
CPCCOHS1001A Work safely in the construction industry	2845
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry	2857
CPCCPA3001A Prepare subgrade, base and bedding course for segmental paving.....	2872
CPCCPA3002A Lay segmental pavers	2883
CPCCPA3003A Cut segmental pavers.....	2894
CPCCPA3004A Finish segmental paving	2905
CPCCPA3005A Maintain and repair segmental paving	2915
CPCCPB3001A Fix standard plasterboard wall sheets.....	2926
CPCCPB3002A Fix standard plasterboard ceiling sheets.....	2938
CPCCPB3003A Fix battens.....	2949
CPCCPB3004A Fix wet area sheets	2960
CPCCPB3005A Fix ceiling sheets to external protected areas	2972

CPCCPB3006A Fix fibre cement board	2983
CPCCPB3007A Apply levels of finish standards to planning and inspection of own work.....	2994
CPCCPB3008A Mix plastering compounds	3005
CPCCPB3009A Finish plasterboard joins manually	3016
CPCCPB3010A Manually sand plaster work.....	3027
CPCCPB3011A Finish category 1 and 2 wet areas	3038
CPCCPB3012A Cut and fix paper-faced cornices	3049
CPCCPB3013A Plan travel routes	3061
CPCCPB3014A Install batt insulation products	3070
CPCCPB3015A Install acoustic and thermal environmental protection systems.....	3081
CPCCPB3016A Install and finish columns.....	3092
CPCCPB3017A Rectify faults in plaster applications	3103
CPCCPB3018A Use vacuum and electric sanding equipment to finish plaster work	3114
CPCCPB3019A Inspect equipment for serviceability	3125
CPCCPB3020A Match, mitre and install cast ornamental cornices	3136
CPCCPB3021A Install and fix residential acoustic plaster products	3148
CPCCPB3022A Use mechanical jointing equipment to finish joints	3159
CPCCPB3023A Load and unload plaster and plaster-related products	3170
CPCCPB3024A Use manual handling equipment to manoeuvre plaster products	3181
CPCCPB3025A Store plasterboard and related products	3191
CPCCPB3026A Erect and maintain trestle and plank systems.....	3202
CPCCPB3027A Install ceiling insulation.....	3212
CPCCPD2011A Handle painting and decorating materials	3229
CPCCPD2012A Use painting and decorating tools and equipment.....	3241
CPCCPD2013A Remove and replace doors and door and window components.....	3252
CPCCPD3021A Prepare surfaces for painting	3263
CPCCPD3022A Apply paint by brush and roller	3275
CPCCPD3023A Apply texture coat paint finishes by brush, roller and spray	3287
CPCCPD3024A Apply paint by spray	3299
CPCCPD3025A Match specified paint colour.....	3311
CPCCPD3026A Apply stains and clear timber finishes	3321
CPCCPD3027A Apply wallpaper	3334
CPCCPD3028A Apply decorative paint finishes.....	3345
CPCCPD3029A Remove graffiti and apply protective coatings.....	3358
CPCCPD3030A Apply protective paint coating systems.....	3369
CPCCPD3031A Implement safe lead paint and asbestos work practices in the painting industry	3382
CPCCPD3032A Apply advanced wallpaper techniques.....	3394
CPCCPD3033A Apply intumescent coatings	3406
CPCCPD3034A Apply advanced decorative paint finishes	3419
CPCCRI3001A Operate personnel and materials hoists.....	3433
CPCCRI3012A Perform basic rigging	3444
CPCCRI3013A Perform intermediate rigging	3455
CPCCRI3014A Perform advanced structural steel erection	3467
CPCCRI3015A Perform advanced tilt-up slab erection	3478
CPCCRI3016A Perform advanced tower crane erection.....	3491
CPCCRT2001A Handle roof tiling materials.....	3504
CPCCRT2002A Use roof tiling tools and equipment	3516
CPCCRT3001A Tile regular roofs	3528
CPCCRT3002A Tile irregular roofs	3540
CPCCRT3003A Repair and replace valleys, valley irons and flashings	3552
CPCCRT3004A Repair and renovate tile roofs	3565
CPCCRT3005A Slate a roof.....	3577

CPCCRT3006A Fix shingles to roofs and facades	3588
CPCCSC2001A Safely handle and use scaffolding tools and equipment.....	3601
CPCCSC2002A Erect and dismantle basic scaffolding	3611
CPCCSC3001A Erect and dismantle intermediate scaffolding	3623
CPCCSF2001A Handle steelfixing materials	3634
CPCCSF2002A Use steelfixing tools and equipment	3645
CPCCSF2003A Cut and bend materials using oxy-LPG equipment	3656
CPCCSF2004A Place and fix reinforcement materials	3666
CPCCSF2005A Arc weld reinforcement steel	3677
CPCCSF2006A Machine cut reinforcement materials	3688
CPCCSF2007A Splice and anchor using mechanical methods.....	3698
CPCCSF3001A Apply reinforcement schedule	3708
CPCCSF3002A Carry out monostrand post-tensioning.....	3718
CPCCSF3003A Carry out multistrand post-tensioning	3729
CPCCSF3004A Carry out stressbar post-tensioning.....	3740
CPCCSH2001A Prepare surfaces.....	3751
CPCCSH2002A Use aluminium sections for fabrication	3762
CPCCSH2003A Apply and install sealant and sealant devices.....	3772
CPCCSH3001A Set out and assemble cabinets, showcases, wall units, counters and workstations	3783
CPCCSH3002A Set out and fabricate shopfront commercial entries bulkheads and component fittings	3796
CPCCSH3003A Assemble and install shopfront commercial entries bulkheads and components.....	3807
CPCCSH3004A Apply finishes	3818
CPCCSH3005A Apply and trim decorative finishes	3829
CPCCSI2001A Use colour for signage	3839
CPCCSI2002A Lay out and design signage.....	3847
CPCCSI2003A Prepare surfaces for signage.....	3855
CPCCSI2004A Produce digital signage	3865
CPCCSI2005A Fabricate signage	3876
CPCCSI2006A Signwrite to simple forms	3886
CPCCSI2007A Apply fasteners and fixings	3896
CPCCSI3001A Produce vinyl signage.....	3906
CPCCSI3002A Use rotary router	3916
CPCCSI3003A Signwrite to decorative forms	3926
CPCCSI3004A Apply advanced vinyl applications	3937
CPCCSI3005A Use engraving systems.....	3949
CPCCSI3006A Apply gilding to signage.....	3959
CPCCSI3007A Apply lines and scrolls	3970
CPCCSI3008A Write showcards and chalkboards.....	3980
CPCCSI3009A Screen-print signage.....	3990
CPCCSI3010A Hand render pictorials	4001
CPCCSI3011A Use LED technology for signage	4011
CPCCSI3012A Apply electrical theory for illuminated signage.....	4021
CPCCSI3013A Install LED systems.....	4031
CPCCSI3014A Manufacture gas-charged glass-formed illuminated signage.....	4041
CPCCSP2001A Handle solid plastering materials.....	4052
CPCCSP2002A Use solid plastering tools and equipment	4063
CPCCSP2003A Prepare surfaces for plastering	4074
CPCCSP3001A Apply float and render to straight and curved surfaces	4085
CPCCSP3002A Apply set coats	4097
CPCCSP3003A Apply trowelled texture coat finishes.....	4108

CPCCSP3004A Restore and renovate solid plasterwork	4119
CPCCSP3005A Install pre-cast decorative mouldings	4130
CPCCSP3006A Install cast plaster blockwork	4141
CPCCSP3007A Apply plaster by projection machine	4152
CPCCST2001A Prepare for stonemasonry construction process	4163
CPCCST2002A Identify and use stone products	4174
CPCCST2003A Finish stone	4184
CPCCST2004A Lay stone	4195
CPCCST2005A Carry out load slinging of off-site materials	4206
CPCCST3001A Dress and mould stone	4217
CPCCST3002A Shape solid stone	4228
CPCCST3003A Split stone manually	4238
CPCCST3004A Dress stone manually	4248
CPCCST3005A Carry out profile work	4259
CPCCST3006A Machine stone	4270
CPCCST3007A Turn stone	4282
CPCCST3008A Inlay lead to stone	4293
CPCCST3009A Use computer-controlled static machinery to produce stone components	4304
CPCCST3010A Set out and cut letters in stone	4315
CPCCST3011A Plan monument construction	4326
CPCCST3012A Build stone veneer walls	4336
CPCCST3013A Carry out cemetery monument fixing	4349
CPCCST3014A Set and anchor stone facades	4361
CPCCSV5001A Assess the construction of domestic scale buildings	4372
CPCCSV5002A Evaluate materials for construction of domestic scale buildings	4383
CPCCSV5003A Produce working drawings for residential buildings	4392
CPCCSV5004A Apply legislation to urban development and building controls	4401
CPCCSV5005A Apply footing and geomechanical design principles to domestic scale buildings	4411
CPCCSV5006A Assess construction faults in residential buildings	4420
CPCCSV5007A Undertake site surveys and set-out procedures for building projects	4430
CPCCSV5008A Apply building control legislation to building surveying	4440
CPCCSV5009A Assess the impact of fire on building materials	4449
CPCCSV5010A Interact with clients in a regulated environment	4458
CPCCSV5011A Apply building codes and standards to residential buildings	4468
CPCCSV5012A Assess timber-framed designs for one and two storey buildings	4476
CPCCSV5013A Apply principles of energy efficient design to buildings	4486
CPCCSV5014A Apply building surveying procedures to residential buildings	4496
CPCCSV5015A Assess structural requirements for domestic scale buildings	4505
CPCCSV6001A Assess the construction of buildings up to three storeys	4515
CPCCSV6002A Produce working drawings for buildings up to three storeys	4530
CPCCSV6003A Assess construction faults in buildings up to three storeys	4540
CPCCSV6004A Apply footing and geomechanical design principles to buildings up to three storeys	4550
CPCCSV6005A Evaluate services layout and connection methods for residential and commercial buildings up to three storeys	4558
CPCCSV6006A Evaluate the use of concrete for residential and commercial buildings up to three storeys	4571
CPCCSV6007A Assess structural requirements for buildings up to three storeys	4580
CPCCSV6008A Apply building codes and standards to buildings up to three storeys	4589
CPCCSV6009A Implement performance-based codes and risk management principles for buildings up to three storeys	4598
CPCCSV6010A Apply fire technology to buildings up to three storeys	4607

CPCCSV6011A Apply legal procedures to building surveying	4616
CPCCSV6012A Facilitate community development consultation.....	4625
CPCCSV6013A Coordinate building refurbishment.....	4633
CPCCSV6014A Manage and plan land use.....	4641
CPCCSV6015A Analyse and present building surveying research information	4649
CPCCSV6016A Apply building surveying procedures to buildings up to three storeys.....	4657
CPCCVE1002A Undertake a basic computer design project.....	4666
CPCCVE1011A Undertake a basic construction project.....	4676
CPCCWC2001A Complete penetrations and flashings.....	4686
CPCCWC3001A Install and finish plasterboard and fibre cement sheeting to curved walls and ceilings	4697
CPCCWC3002A Install and finish plasterboard and fibre cement sheeting to arches ...	4709
CPCCWC3003A Install dry wall passive fire-rated systems	4720
CPCCWC3004A Install suspended ceilings.....	4732
CPCCWF2001A Handle wall and floor tiling materials	4743
CPCCWF2002A Use wall and floor tiling tools and equipment.....	4754
CPCCWF3001A Prepare surfaces for tiling application.....	4765
CPCCWF3002A Fix floor tiles.....	4778
CPCCWF3003A Fix wall tiles.....	4791
CPCCWF3004A Repair wall and floor tiles.....	4805
CPCCWF3005A Carry out decorative tiling.....	4817
CPCCWF3006A Carry out mosaic tiling.....	4829
CPCCWF3007A Tile curved surfaces	4842
CPCCWF3008A Tile domestic pools and spas	4854
CPCCWP2001A Handle waterproofing materials.....	4866
CPCCWP2002A Use waterproofing tools and equipment	4879
CPCCWP2003A Prepare for construction waterproofing process	4892
CPCCWP2004A Prepare surfaces for waterproofing application.....	4907
CPCCWP3001A Apply waterproofing process to below ground level wet areas	4921
CPCCWP3002A Apply waterproofing process to internal wet areas	4936
CPCCWP3003A Apply waterproofing process to external wet areas.....	4950
CPCCWP3004A Apply waterproofing remedial processes.....	4965
CPCMCM7001A Plan and manage complex projects.....	4978
CPCMCM7002A Manage the quality of projects and processes.....	4990
CPCPCM2002A Carry out interactive workplace communication	5000
CPCPCM2004A Read plans and calculate plumbing quantities.....	5010
CPCPCM2011A Apply first aid in the workplace	5022
CPCPCM2021A Work effectively in the plumbing and services sector	5032
CPCPCM2023A Carry out OHS requirements	5042
CPCPCM2025A Handle and store plumbing materials.....	5053
CPCPCM2026A Use plumbing hand and power tools	5064
CPCPCM2027A Carry out levelling	5075
CPCPCM2028A Cut and join sheet metal.....	5085
CPCPCM2029A Cut using oxy-LPG-acetylene equipment	5095
CPCPCM2030A Mark out materials	5105
CPCPCM2032A Weld using oxy-acetylene equipment	5115
CPCPCM2033A Weld using arc welding equipment	5125
CPCPCM2034A Carry out simple concreting and rendering	5135
CPCPCM2035A Work safely on roofs.....	5145
CPCPCM3011A Flash penetrations through roofs and walls.....	5156
CPCPCM3012A Weld plastic pipe using fusion method.....	5167
CPCPCM3013A Fabricate and install non-ferrous pressure piping.....	5177
CPCPCM4001A Carry out work based risk control processes	5188

CPCPCM4002A Estimate and cost work	5200
CPCPCM4003A Produce 2-D architectural drawings using CAD software	5209
CPCPCM4004A Prepare simple sketches and drawings	5217
CPCPCM5000A Design complex sanitary plumbing and drainage systems	5227
CPCPCM5001A Design complex cold water systems	5240
CPCPCM5002B Design complex stormwater and roof drainage systems	5253
CPCPCM5003B Design complex (non-solar) heated water systems	5266
CPCPCM5004A Design sewer systems	5279
CPCPDR2011A Locate and clear blockages	5293
CPCPDR2012A Install domestic treatment plants	5304
CPCPDR2013A Maintain effluent disinfection systems	5315
CPCPDR2014A Install stormwater and sub-soil drainage systems	5325
CPCPDR2015A Drain work site	5336
CPCPDR2016A Install prefabricated inspection openings and enclosures	5347
CPCPDR3011A Plan layout of a residential sanitary drainage system	5358
CPCPDR3012A Install below ground sanitary drainage systems	5369
CPCPDR3013A Install on-site disposal systems	5380
CPCPDR4011A Design and size sanitary drainage systems	5391
CPCPDR4012A Design and size stormwater drainage systems	5401
CPCPDR4013A Design and size domestic treatment plant disposal systems	5412
CPCPFS2011A Connect static storage tanks for fixed fire protection systems	5424
CPCPFS2012A Install portable fire equipment	5435
CPCPFS3010A Design pre-calculated fire sprinkler systems	5446
CPCPFS3011A Fabricate and install fire hydrant and hose reel systems	5456
CPCPFS3012A Install distribution and range pipes	5467
CPCPFS3013A Fit off sprinkler heads, controls and ancillary equipment	5478
CPCPFS3014A Install control valve assemblies, actuating devices and local alarms	5489
CPCPFS3015A Test fire protection systems for pressure	5500
CPCPFS3016A Install special hazard systems	5510
CPCPFS3017A Install domestic and residential life safety sprinkler systems	5523
CPCPFS3018A Test and maintain fire hydrant and hose reel installations	5534
CPCPFS3019A Test and maintain automatic fire sprinklers	5544
CPCPFS3020A Conduct basic functional testing of water-based fire-suppression systems	5554
CPCPFS3021A Inspect and test fire pumpsets	5565
CPCPFS3022A Conduct annual functional testing of complex water-based fire-suppression systems	5576
CPCPFS3023A Conduct functional water flow testing	5589
CPCPFS4005A Commission fire alarm and detection systems	5601
CPCPFS4006A Commission firefighting appliances	5611
CPCPFS4011A Commission domestic and residential fire suppression sprinkler systems	5621
CPCPFS4012A Commission and maintain special hazard fire suppression systems	5631
CPCPFS4013A Commission fire system pump sets	5642
CPCPFS4014A Design residential and domestic fire sprinkler systems	5653
CPCPFS5000A Design fire-compliant hydraulic services	5664
CPCPFS5001A Design fire sprinkler systems	5677
CPCPFS5002A Design fire hydrant and hose reel systems	5691
CPCPGS3014A Install LPG storage of aggregate storage capacity up to 500 litres	5704
CPCPGS3016A Install LPG systems in caravans, mobile homes, water craft and mobile workplaces	5715
CPCPGS3017A Install gas detection devices	5726
CPCPGS3018A Install gas pressure control equipment	5737
CPCPGS3019A Install Type A gas appliance flues	5748
CPCPGS3020A Install Type B gas appliance flues	5760

CPCPGS3021A Purge consumer piping	5771
CPCPGS3022A Maintain Type A gas appliances	5782
CPCPGS3023A Disconnect and reconnect Type A gas appliances	5793
CPCPGS3024A Calculate and install natural ventilation for Type A gas appliances	5804
CPCPGS3025A Install subsidiary gas meters	5815
CPCPGS3031A Install gas piping systems	5826
CPCPGS3032A Size consumer gas piping systems	5837
CPCPGS3033A Install and Commission Type A gas appliances	5846
CPCPGS3034A Install LPG storage of aggregate storage capacity up to 500 litres	5858
CPCPGS3035A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL.....	5869
CPCPGS4003A Install, commission and service Type B gas appliances	5880
CPCPGS4011A Design and size consumer gas installations.....	5895
CPCPGS4012A Service Type A gas appliances	5906
CPCPIG2011A Design domestic urban irrigation systems	5920
CPCPIG3011A Set out, install and commission irrigation systems	5931
CPCPIG3012A Install and commission domestic irrigation pumps	5942
CPCPMS2011A Assemble mechanical services components	5953
CPCPMS3011A Fabricate and install steel pressure piping	5964
CPCPMS3012A Select and fit insulation and sheathing	5976
CPCPMS3013A Install small bore heating systems.....	5987
CPCPMS3014A Install medical gas pipeline systems.....	5998
CPCPMS3015A Install and test ducting systems.....	6009
CPCPMS3016A Install air handling units.....	6022
CPCPMS3017A Install and test split system air conditioning.....	6033
CPCPMS3018A Install air conditioning control equipment.....	6044
CPCPMS3019A Maintain mechanical services equipment.....	6055
CPCPMS3020A Install and maintain evaporative air cooling systems.....	6066
CPCPMS3021A Install domestic solid fuel burning appliances	6077
CPCPMS4002A Commission air and water systems	6090
CPCPMS4003A Design compressed air systems.....	6100
CPCPMS4011A Design, size and lay out heating and cooling systems	6111
CPCPMS5000A Design steam distribution systems	6122
CPCPMS5001A Design air conditioning and ventilation systems.....	6136
CPCPMS5002A Design sound attenuated hydraulic services.....	6149
CPCPMS5003A Design hydronic heating and cooling systems	6161
CPCPPS5000A Design gas bulk storage systems	6175
CPCPPS5001A Design industrial gas systems.....	6187
CPCPPS5002A Design gas reticulation systems.....	6199
CPCPPS5003A Design solar water heating systems	6211
CPCPPS5004A Conduct a water audit and identify water-saving initiatives	6226
CPCPPS5005A Design grey water re-use systems in sewerred areas	6238
CPCPPS5006A Design rainwater collection, storage, distribution and re-use systems...	6253
CPCPPS5007A Design irrigation systems.....	6267
CPCPPS5008A Design trade waste pre-treatment systems	6281
CPCPPS5009A Analyse and report on technical plumbing systems.....	6295
CPCPPS5010A Design pump systems.....	6305
CPCPPS5011A Coordinate services and penetrations within a building	6318
CPCPPS5012A Design siphonic stormwater drainage systems	6328
CPCPPS5013A Design vacuum sewerage systems.....	6341
CPCPPS5014A Locate and maintain piping systems	6354
CPCPPS5015A Inspect plumbing and drainage systems	6364
CPCPRF2012A Select and install roof sheeting and wall cladding.....	6374

CPCPRF2013A Collect and store roof water	6387
CPCPRF2014A Fabricate roof coverings for curved structures	6398
CPCPRF3011A Receive roofing materials	6409
CPCPRF3012A Fabricate and install roof drainage components	6420
CPCPRF3013A Fabricate and install external flashings.....	6433
CPCPRF3014A Install roof components	6444
CPCPRF3015A Install roof coverings to curved roof structures	6456
CPCPRF3016A Install composite roof systems.....	6467
CPCPRF4011A Design and size roof drainage systems	6478
CPCPSN3011A Plan layout of a residential sanitary plumbing system.....	6489
CPCPSN3012A Install discharge pipes	6500
CPCPSN3013A Fabricate and install sanitary stacks	6511
CPCPSN3014A Install and fit off sanitary fixtures	6522
CPCPSN3015A Install pre-treatment facilities	6533
CPCPSN3016A Install sewerage pump sets	6545
CPCPSN4011A Design and size sanitary plumbing systems	6556
CPCPWT3010A Connect and install storage tanks to a domestic water supply	6567
CPCPWT3011A Set out and install water services.....	6578
CPCPWT3012A Install and adjust water service controls and devices.....	6590
CPCPWT3013A Install and commission water heating systems.....	6602
CPCPWT3014A Install and maintain domestic water treatment equipment	6613
CPCPWT3015A Install water pump sets.....	6624
CPCPWT3016A Fit off and commission heated and cold water services.....	6635
CPCPWT3017A Connect irrigation systems from drinking water supply.....	6646
CPCPWT3018A Install water service	6657
CPCPWT3019A Install water pipe systems.....	6669
CPCPWT4011A Design and size heated and cold water services and systems	6682
CPCPWT4012A Commission and maintain backflow prevention devices.....	6693
CPCPWT4013A Commission and maintain heated water temperature control devices	6703
CPCSFS5001A Define scope and hazard level of fire systems design projects	6713
CPCSFS5002A Research and interpret detailed fire systems design project requirements.....	6724
CPCSFS5003A Develop plans and methodology for fire systems design projects.....	6737
CPCSFS5005A Research and evaluate fire system technologies and components	6747
CPCSFS5006A Create detailed designs for fire sprinkler systems	6758
CPCSFS5007A Create detailed designs for hydrant and hose reel systems.....	6771
CPCSFS5008A Create detailed designs for fire detection and warning systems	6782
CPCSFS5009A Create detailed designs for fire systems' water supplies.....	6795
CPCSFS5010A Provide documentation and support for fabrication of fire sprinkler systems	6807
CPCSFS5011A Provide design documentation and review and support fire system installation processes	6817
CPCSFS5013A Support commissioning processes and finalise fire systems design projects.....	6827
CPCSFS5014A Conduct annual fire systems certification inspections.....	6838
CPCSFS5015A Assess documentation for annual fire systems certification inspections	6848
CPCSFS7001A Define scope of and initiate special hazard fire systems design projects.....	6858
CPCSFS7002A Analyse, design and evaluate complex special hazard fire systems	6874
CPCSFS7003A Develop and submit tenders for fire systems design solutions	6891
CPCSUS4001A Implement and monitor environmentally sustainable work practices	6902
CPCSUS5001A Develop workplace policies and procedures for sustainability	6916
BSBADM506B Manage business document design and development	6928
BSBAUD504B Report on a quality audit.....	6935
BSBCUS301A Deliver and monitor a service to customers	6943
BSBCUS402A Address customer needs.....	6951

BSBCUS501B Manage quality customer service	6958
BSBFIM501A Manage budgets and financial plans	6965
BSBHRM402A Recruit, select and induct staff.....	6974
BSBHRM509A Manage rehabilitation or return to work programs.....	6981
BSBINN301A Promote innovation in a team environment.....	6988
BSBINN502A Build and sustain an innovative work environment.....	6997
BSBITA401A Design databases.....	7006
BSBITS401A Maintain business technology	7014
BSBITU201A Produce simple word processed documents	7022
BSBITU202A Create and use spreadsheets.....	7031
BSBITU301A Create and use databases	7040
BSBITU402A Develop and use complex spreadsheets.....	7048
BSBITU404A Produce complex desktop published documents	7057
BSBLED401A Develop teams and individuals	7066
BSBLED502A Manage programs that promote personal effectiveness.....	7074
BSBMGT403A Implement continuous improvement.....	7082
BSBMGT502B Manage people performance	7089
BSBMGT515A Manage operational plan	7096
BSBMGT617A Develop and implement a business plan.....	7104
BSBMKG414A Undertake marketing activities	7111
BSBMKG609A Develop a marketing plan	7119
BSBOHS201A Participate in OHS processes	7127
BSBOHS403B Identify hazards and assess OHS risks	7135
BSBOHS404B Contribute to the implementation of strategies to control OHS risk.....	7146
BSBOHS504B Apply principles of OHS risk management	7157
BSBOHS603B Analyse and evaluate OHS risk.....	7170
BSBPMG404A Apply quality management techniques	7182
BSBPMG407A Apply risk management techniques.....	7190
BSBPMG504A Manage project costs.....	7198
BSBPMG505A Manage project quality.....	7206
BSBPMG507A Manage project communications	7214
BSBPMG508A Manage project risk	7223
BSBPMG510A Manage projects	7230
BSBRES401A Analyse and present research information.....	7239
BSBRSK501A Manage risk.....	7248
BSBSLS403A Present a sales solution.....	7257
BSBSLS404A Secure prospect commitment.....	7266
BSBSLS502A Lead and manage a sales team	7274
BSBSMB301A Investigate micro business opportunities	7281
BSBSMB401A Establish legal and risk management requirements of small business ...	7289
BSBSMB402A Plan small business finances.....	7298
BSBSMB404A Undertake small business planning.....	7306
BSBSMB405A Monitor and manage small business operations.....	7317
BSBSMB406A Manage small business finances.....	7325
BSBSMB407A Manage a small team	7333
BSBWOR401A Establish effective workplace relationships.....	7342
BSBWOR402A Promote team effectiveness	7351
BSBWOR501B Manage personal work priorities and professional development.....	7359
BSBWOR502B Ensure team effectiveness.....	7366
BSBWRT401A Write complex documents	7374
CHCCOM403A Use targeted communication skills to build relationships.....	7382
CHCCOM404B Develop, implement and promote effective communication techniques ...	7392
CPPCMN2001A Control and direct traffic	7400

CPPDSM4014A Market property for sale.....	7408
CPPDSM4022A Sell and finalise the sale of property by private treaty.....	7417
CPPDSM5022A Implement asset management plan.....	7433
CPPDSM6002A Conduct a property investment feasibility study.....	7445
CPPDSM6008A Develop strategic facilities management plan.....	7457
FPICOT2204B Maintain chainsaws.....	7469
FPICOT2206B Cross cut materials with a hand-held chainsaw.....	7471
HLTHIR403B Work effectively with culturally diverse clients and co-workers.....	7473
ICAU1128B Operate a personal computer.....	7481
ICAU1129B Operate a word processing application.....	7490
ICAU1130B Operate a spreadsheet application.....	7499
ICAU1131B Operate a database application.....	7508
ICAU1133B Send and retrieve information using web browsers and email.....	7516
LGAPLEM502A Apply ecologically sustainable development principles to the built environment.....	7526
LMFFM3006B Install furnishing.....	7528
LMFFM3013B Measure and draw site layout for manufactured furniture products.....	7536
LMFFM3028B Fabricate synthetic solid surface products.....	7542
LMFFM3030B Set up, operate and maintain CNC sizing machines.....	7550
LMFFM3031B Set up, operate and maintain CNC machining and processing centres.....	7557
LMFFT4010B Identify and calculate production costs.....	7566
LMFGG1001B Complete a basic glass and glazing project.....	7574
LMFGG2008B Glaze/reglaze residential windows and doors.....	7582
LMFGG3015B Fabricate and install shower screens and wardrobe doors.....	7593
MEM05010C Apply fabrication, forming and shaping techniques.....	7603
MEM05049B Perform routine gas tungsten arc welding.....	7613
MEM05050B Perform routine gas metal arc welding.....	7620
MEM10009B Install refrigeration and air conditioning plant and equipment.....	7627
MEM10010B Install pipework and pipework assemblies.....	7637
MEM18086B Test, recover, evacuate and charge refrigeration systems.....	7644
PRMPFES25C Inspect, test and maintain gaseous fire suppression systems.....	7652
PRMPFES43A Prevent ozone depleting substance and synthetic greenhouse gas emissions.....	7674
PRMPFES47A Inspect and test control and indicating equipment.....	7686
PRMWM15B Move waste using load shifting equipment.....	7704
RIICBS201A Conduct tack coat spraying operations.....	7714
RIICBS202A Hand spread asphalt.....	7723
RIICBS203A Safely handle bituminous materials.....	7732
RIICCM207A Spread and compact materials manually.....	7740
RIICCM210A Install trench support.....	7748
RIICFW301A Construct underpinning.....	7756
RIIMPO318A Conduct skid steer loader operations.....	7765
RIIMPO320A Conduct civil construction excavator operations.....	7767
RIIOHS202A Enter and work in confined spaces.....	7779
RIIOHS205A Control traffic with stop-slow bat.....	7790
RIIOHS302A Implement traffic management plan.....	7800
RIISAM204A Operate small plant and equipment.....	7810
RIIWMG203A Drain and dewater civil construction site.....	7820
RTE3605A Troubleshoot irrigation systems.....	7829
RTF3203A Construct brick and/or block structures and features.....	7836
RTF3221A Implement a retaining wall project.....	7844
TAEDEL402A Plan, organise and facilitate learning in the workplace.....	7852
TLILIC1008A Licence to operate a slewing mobile crane (up to 100 tonnes).....	7862
TLILIC108A Licence to operate a forklift truck.....	7877

TLILIC608A Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity).....	7887
TLILIC808A Licence to operate a slewing mobile crane (up to 20 tonnes)	7901
TLILIC908A Licence to operate a slewing mobile crane (up to 60 tonnes)	7915

Modification History

Version modification history

The version details of this endorsed Training Package are in the table below.

Version	Release date	Comments
7		<p>NSSC endorsement for the:</p> <ul style="list-style-type: none"> • addition of four new units of competency: <ul style="list-style-type: none"> • CPCCDE3014A Remove non-friable asbestos • CPCCDE3015A Remove friable asbestos • CPCCBC4051A Supervise asbestos removal • CPCCBC5014A Conduct asbestos assessment associated with removal • addition of a new, or replacement of an old, asbestos unit of competency in the elective pool of the following qualifications, as well as the further addition of the associated prerequisite unit (CPCCOHS1001A Work safely in the construction industry): <ul style="list-style-type: none"> • CPC30411 Certificate III in Demolition • CPC40110 Certificate IV in Building and Construction (Building) • CPC40308 Certificate IV in Building and Construction (Estimating) • CPC40508 Certificate IV in Building and Construction (Site Management) • CPC40611 Certificate IV in Building and Construction (Specialist Trades) • CPC40708 Certificate IV in Building and Construction (Trade Contracting) • CPC40808 Certificate IV in Swimming Pool and Spa Building • CPC50210 Diploma of Building and Construction (Building) • deletion from CPC08 of two units of competency packaged as elective units: <ul style="list-style-type: none"> • CPCCDE3012A Encapsulate and remove asbestos • CPCCBC4023A Plan and undertake site inspection and assessment of asbestos products and materials.

Version	Release date	Comments
		<ul style="list-style-type: none"> Removal of erroneous listing in the elective pool of CPC32711 Certificate III in Gas Fitting of the unit CPCPCM2032A Weld using oxy-acetylene equipment; relocating it to its originally intended core pool location in that qualification. Re-coding of the following five units in response to stakeholder implementation advice with regard to the use of previous version unit codes: <ul style="list-style-type: none"> CPCPGS3031A Install gas piping systems CPCPGS3032A Size consumer gas piping systems CPCPGS3033A Install and commission Type A gas appliances CPCPGS3034A Install LPG storage of aggregate storage capacity up to 500 litres CPCPGS3035A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL. Adjustment of CPC32411 Certificate III in Plumbing, CPC32511 Certificate III in Plumbing (Mechanical Services) and CPC32711 Certificate III in Gas Fitting to reflect above re-coding of five units. Typographical changes made to ensure that unit codes for CPCPCM2028A Cut and join sheet metal, CPCPCM2029A Cut using oxy-LPG-acetylene equipment and CPCPCM2032A Weld using oxy-acetylene equipment were uniformly correctly cited. Other minor typographical corrections, including minor change to title of unit CPCPWT3016A in qualification packaging rules.

4	1 March 2010	<p>Changes to packaging rules of three existing qualifications:</p> <ul style="list-style-type: none"> • CPC40110 Certificate IV in Building and Construction (Building): packaging rules changed to total of 16 units, consisting of 13 core and 3 elective units • CPC50210 Diploma of Building and Construction (Building): <ul style="list-style-type: none"> • packaging rules changed to total of 18 units, consisting of 13 core and 5 elective units • options for choice of elective units amended and extended • CPC50308 Diploma of Building and Construction (Management): <ul style="list-style-type: none"> • two elective units changed to reflect changes detailed immediately below (CPCCBC5001A to CPCCBC5001B; and CPCCBC5008A to CPCCBC5018A). <p>Changes to two units of competency:</p> <ul style="list-style-type: none"> • amended content of CPCCBC5001B Apply building codes and standards to the construction process for medium rise building projects to remove duplication with other units in the Diploma qualification • deleted unit of competency (CPCCBC5008A Apply structural principles to the construction of medium rise buildings) replaced by added new unit CPCCBC5018A Apply structural principles to the construction of medium rise buildings, now with a prerequisite requirement.

Version	Release date	Comments
3	20 October 2009	Addition of new specialist stream for hydraulic services design to CPC40909 Certificate IV in Plumbing and Services. Addition of new hydraulic services design qualification CPC50609 Diploma of Hydraulic Services Design.
2	22 July 2009	Addition of two new fire systems design qualifications: <ul style="list-style-type: none">• CPC50509 Diploma of Fire Systems Design• CPC70109 Vocational Graduate Certificate in Fire Systems Design Management. Addition of 18 new fire systems design units of competency. Addition of one imported unit (BSBAUD504B to CPC50509).
1	February 2009	Primary release. CPC08 brings together the qualifications and units of competency from three previous Training Packages: <ul style="list-style-type: none">• BCG03 General Construction• BCF00 Off-Site Construction• BCP03 Plumbing and Services.

Preliminary information

Important note to users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment

This Training Package is Version 7 – check whether this is the latest version by going to the National Training Information Service (www.ntis.gov.au) and locating information about the Training Package. Alternatively, contact Construction and Property Services Industry Skills Council at www.cpsisc.com.au (www.cpsisc.com.au) to confirm the latest version number.

Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. A significant change would mean assigning the version identifier ‘Version 2’ to the Training Package.

When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control (i.e. a new year identifier in the code is added, for example TDT02 becomes TDT07), then it is called Version 1.

Do not confuse the version number with the Training Package’s national code (which remains the same during its period of endorsement).

Explanation of the review date

The review date (shown on the title page and in the footer of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Training Packages and their components remain current until they are reviewed or replaced.

CPC08 sectors and functional areas

CPC08 units of competency		
Sector	Functional area	Unit code identifier
Common	Management	MCM
	Sustainability	SUS
Construction	Building and construction	CBC

CPC60108	Advanced Diploma of Building Surveying
CPC60208	Advanced Diploma of Building and Construction (Management)
CPC70109	Vocational Graduate Certificate in Fire Systems Design Management

CPC08 native units of competency

Code	Title
CPCCBC4001A	Apply building codes and standards to the construction process for low rise building projects
CPCCBC4002A	Manage occupational health and safety in the building and construction workplace
CPCCBC4003A	Select and prepare a construction contract
CPCCBC4004A	Identify and produce estimated costs for building and construction projects
CPCCBC4005A	Produce labour and material schedules for ordering
CPCCBC4006B	Select, procure and store construction materials for low rise projects
CPCCBC4007A	Plan building or construction work
CPCCBC4008B	Conduct on-site supervision of building and construction projects
CPCCBC4009B	Apply legal requirements to building and construction projects
CPCCBC4010B	Apply structural principles to residential low rise constructions
CPCCBC4011B	Apply structural principles to commercial low rise constructions
CPCCBC4012A	Read and interpret plans and specifications
CPCCBC4013A	Prepare and evaluate tender documentation
CPCCBC4014A	Prepare simple building sketches and drawings
CPCCBC4015A	Prepare specifications for all construction works
CPCCBC4016A	Administer a construction contract
CPCCBC4017A	Arrange resources and prepare for the building or construction project
CPCCBC4018A	Apply site surveys and set-out procedures to building and construction projects
CPCCBC4019A	Apply sustainable building design principles to water management systems
CPCCBC4020A	Build thermally efficient and sustainable structures

CPCCBC4021A	Minimise waste on the building and construction site
CPCCBC4022A	Supervise tilt-up work
CPCCBC4024A	Resolve business disputes
CPCCBC4025A	Manage personal work priorities and professional development
CPCCBC4026A	Arrange building applications and approvals
CPCCBC4027B	Establish a basis for sales consulting
CPCCBC4028A	Prepare design brief for construction works
CPCCBC4029B	Apply construction information to the sales process
CPCCBC4030A	Analyse and communicate industry information
CPCCBC4031A	Process client requirements
CPCCBC4032A	Apply contract law to sales processes
CPCCBC4033A	Maintain the sales environment
CPCCBC4034A	Apply codes and standards to building trade and services contracting
CPCCBC4035A	Initiate the heritage works process
CPCCBC4036A	Prepare to undertake the heritage restoration process
CPCCBC4037A	Prepare drawings for heritage works
CPCCBC4038A	Prepare work plans for restoration work
CPCCBC4039A	Undertake the heritage restoration process
CPCCBC4040A	Prepare report for heritage restoration work
CPCCBC4041A	Undertake preparations for refractory work
CPCCBC4042A	Construct a fire brick wall and arch using refractory materials
CPCCBC4043A	Operate a self-erecting tower crane
CPCCBC4044A	Operate a tower crane
CPCCBC4045A	Perform advanced rigging
CPCCBC4046A	Erect and dismantle advanced scaffolding

CPCCBC4047A	Quality assure fire-rated lining systems
CPCCBC4048A	Apply building codes and standards to the construction process for swimming pools and spas
CPCCBC4049A	Apply structural principles to construction of swimming pools and spas
CPCCBC4050A	Select, procure and store construction materials for swimming pools and spa projects
CPCCBC4051A	Supervise asbestos removal
CPCCBC5001B	Apply building codes and standards to the construction process for medium rise building projects
CPCCBC5002A	Monitor costing systems on medium rise building and construction projects
CPCCBC5003A	Supervise the planning of on-site medium rise building or construction work
CPCCBC5004A	Supervise and apply quality standards to the selection of building and construction materials
CPCCBC5005A	Select and manage building and construction contractors
CPCCBC5006B	Apply site surveys and set-out procedures to medium rise building projects
CPCCBC5007A	Administer the legal obligations of a building or construction contract
CPCCBC5009A	Identify services layout and connection methods to medium rise construction projects
CPCCBC5010B	Manage construction work
CPCCBC5011A	Manage environmental management practices and processes in building and construction
CPCCBC5012A	Manage the application and monitoring of energy conservation and management practices and processes
CPCCBC5013A	Develop professional technical and legal reports on building and construction projects
CPCCBC5014A	Conduct asbestos assessment associated with removal
CPCCBC5018A	Apply structural principles to the construction of medium rise buildings

CPCCBC6001A	Apply building codes and standards to the construction process for large building projects
CPCCBC6002A	Generate and direct the development of new projects
CPCCBC6003A	Establish, maintain and review contract administration procedures and frameworks
CPCCBC6004A	Manage processes for and legal obligations of a building or construction contract
CPCCBC6005A	Manage tender developments for major projects
CPCCBC6006A	Manage the procurement and acquisition of resources for building or construction projects
CPCCBC6007A	Develop, plan and implement appropriate building or construction environmental management practices and processes
CPCCBC6008A	Develop and implement an appropriate estimating and tendering system
CPCCBC6009A	Develop, plan and implement an appropriate building or construction planning process
CPCCBC6010A	Plan, develop and implement building or construction energy conservation and management practices and processes
CPCCBC6011A	Establish systems to develop and monitor building and construction costs
CPCCBC6012A	Manage and administer development of documentation for building or construction projects
CPCCBC6013A	Evaluate materials for multi-storey buildings
CPCCBC6014A	Apply structural principles to the construction of large, high rise and complex buildings
CPCCBC6015A	Apply building surveying procedures
CPCCBC6016A	Assess construction faults in large building projects
CPCCBC6017A	Evaluate services layout and connection methods for the planning of large building projects
CPCCBL2001A	Handle and prepare bricklaying and blocklaying materials
CPCCBL2002A	Use bricklaying and blocklaying tools and equipment

CPCCBL3001A	Lay paving
CPCCBL3002A	Carry out masonry veneer construction
CPCCBL3003A	Carry out cavity brick construction
CPCCBL3004A	Construct masonry steps and stairs
CPCCBL3005A	Lay masonry walls and corners
CPCCBL3006A	Lay multi-thickness walls and piers
CPCCBL3007A	Install glass blockwork
CPCCBL3009A	Install flashings and damp proof course
CPCCBL3010A	Construct masonry arches
CPCCBL3011A	Construct curved walls
CPCCBL3012A	Construct fireplaces and chimneys
CPCCBL3013A	Construct masonry structural systems
CPCCBL3014A	Install fire-rated masonry construction
CPCCBL3015A	Construct decorative brickwork
CPCCBL3016A	Construct battered masonry walls and piers
CPCCBL3017A	Carry out tuck pointing to brickwork
CPCCBL3018A	Install aerated autoclaved concrete products
CPCCCA2002A	Use carpentry tools and equipment
CPCCCA2003A	Erect and dismantle formwork for footings and slabs on ground
CPCCCA2011A	Handle carpentry materials
CPCCCA3001A	Carry out general demolition of minor building structures
CPCCCA3002A	Carry out setting out
CPCCCA3003A	Install flooring systems
CPCCCA3004A	Construct wall frames
CPCCCA3005A	Construct ceiling frames

CPCCCA3006A	Erect roof trusses
CPCCCA3007B	Construct pitched roofs
CPCCCA3008A	Construct eaves
CPCCCA3009A	Construct advanced roofs
CPCCCA3010A	Install and replace windows and doors
CPCCCA3011A	Refurbish timber sashes to window frames
CPCCCA3012A	Frame and fit wet area fixtures
CPCCCA3013A	Install lining, panelling and moulding
CPCCCA3014A	Construct bulkheads
CPCCCA3015A	Assemble partitions
CPCCCA3016A	Construct timber external stairs
CPCCCA3017A	Install exterior cladding
CPCCCA3018A	Construct, erect and dismantle formwork for stairs and ramps
CPCCCA3019A	Erect and dismantle formwork to suspended slabs, columns, beams and walls
CPCCCA3020A	Erect and dismantle jump form formwork
CPCCCA3021A	Erect and dismantle slip form formwork
CPCCCA3022A	Install curtain walling
CPCCCA3023A	Carry out levelling operations
CPCCCM1011A	Undertake basic estimation and costing
CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications

CPCCCM2002A	Carry out excavation
CPCCCM2003B	Calculate and cost construction work
CPCCCM2004A	Handle construction materials
CPCCCM2005A	Use construction tools and equipment
CPCCCM2006A	Apply basic levelling procedures
CPCCCM2007A	Use explosive power tools
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2009A	Carry out basic demolition
CPCCCM2010A	Work safely at heights
CPCCCM2011A	Carry out tilt-up work safely
CPCCCM3001B	Operate elevated work platforms
CPCCCM3002A	Operate a truck mounted loading crane
CPCCCM3003A	Work safely around power sources, services and assets
CPCCCO2011A	Handle concreting materials
CPCCCO2012A	Use concreting tools and equipment
CPCCCO2013A	Carry out concreting to simple forms
CPCCCO2014A	Carry out concrete work
CPCCCO3021A	Place concrete
CPCCCO3022A	Finish concrete
CPCCCO3023A	Cure concrete
CPCCCO3024A	Carry out decorative finishes to concrete
CPCCCO3025A	Resurface concrete
CPCCCO3026A	Carry out repair and rectification of concrete
CPCCCO3027A	Cut and core concrete
CPCCCO3028A	Carry out tilt panel construction

CPCCCO3029A	Apply and finish sprayed concrete
CPCCCO3030A	Carry out high performance concreting
CPCCCO3031A	Conduct off-form vertical concrete operations
CPCCCO3032A	Conduct concrete boom delivery operations
CPCCCO3033A	Slump test concrete
CPCCCO3034A	Conduct concrete agitator truck operations
CPCCDE2011A	Use demolition tools and equipment
CPCCDE2012A	Carry out manual general demolition
CPCCDE3011A	Carry out mechanical general demolition
CPCCDE3013A	Operate a crushing plant
CPCCDE3014A	Remove non-friable asbestos
CPCCDE3015A	Remove friable asbestos
CPCCDO2011A	Handle and use dogging tools and equipment
CPCCDO3011A	Perform dogging
CPCCDO3012A	Perform crane scheduling
CPCCJN2001A	Assemble components
CPCCJN2002A	Prepare for off-site manufacturing process
CPCCJN2003A	Package manufactured products for transport
CPCCJN3001A	Use static machines
CPCCJN3002A	Use computer-controlled machinery
CPCCJN3003A	Manufacture components for door and window frames and doors
CPCCJN3004A	Manufacture joinery components
CPCCJN3005A	Cut and install glass
CPCCJS3002A	Manufacture stair components for straight flighted stairs
CPCCJS3003A	Assemble and install stairs

CPCCJS3004A	Manufacture and install continuous handrailing and special stair components
CPCCJS3005A	Manufacture stair components for curved and geometric stairs
CPCCJS3006A	Construct fabricated stairs
CPCCJS3011A	Design and set out stairs
CPCCLBM3001A	Licence to operate a concrete placing boom
CPCCLDG3001A	Licence to perform dogging
CPCCLHS3001A	Licence to operate a personnel and materials hoist
CPCCLHS3002A	Licence to operate a materials hoist
CPCCLRG3001A	Licence to perform rigging basic level
CPCCLRG3002A	Licence to perform rigging intermediate level
CPCCLRG4001A	Licence to perform rigging advanced level
CPCCLSF2001A	Licence to erect, alter and dismantle scaffolding basic level
CPCCLSF3001A	Licence to erect, alter and dismantle scaffolding intermediate level
CPCCLSF4001A	Licence to erect, alter and dismantle scaffolding advanced level
CPCCLTC4001A	Licence to operate a tower crane
CPCCLTC4002A	Licence to operate a self-erecting tower crane
CPCCOHS1001A	Work safely in the construction industry
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
CPCCPA3001A	Prepare subgrade, base and bedding course for segmental paving
CPCCPA3002A	Lay segmental pavers
CPCCPA3003A	Cut segmental pavers
CPCCPA3004A	Finish segmental paving
CPCCPA3005A	Maintain and repair segmental paving
CPCCPB3001A	Fix standard plasterboard wall sheets

CPCCPB3002A	Fix standard plasterboard ceiling sheets
CPCCPB3003A	Fix battens
CPCCPB3004A	Fix wet area sheets
CPCCPB3005A	Fix ceiling sheets to external protected areas
CPCCPB3006A	Fix fibre cement board
CPCCPB3007A	Apply levels of finish standards to planning and inspection of own work
CPCCPB3008A	Mix plastering compounds
CPCCPB3009A	Finish plasterboard joins manually
CPCCPB3010A	Manually sand plaster work
CPCCPB3011A	Finish category 1 and 2 wet areas
CPCCPB3012A	Cut and fix paper-faced cornices
CPCCPB3013A	Plan travel routes
CPCCPB3014A	Install batt insulation products
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCPB3016A	Install and finish columns
CPCCPB3017A	Rectify faults in plaster applications
CPCCPB3018A	Use vacuum and electric sanding equipment to finish plaster work
CPCCPB3019A	Inspect equipment for serviceability
CPCCPB3020A	Match, mitre and install cast ornamental cornices
CPCCPB3021A	Install and fix residential acoustic plaster products
CPCCPB3022A	Use mechanical jointing equipment to finish joints
CPCCPB3023A	Load and unload plaster and plaster-related products
CPCCPB3024A	Use manual handling equipment to manoeuvre plaster products
CPCCPB3025A	Store plasterboard and related products

CPCCPB3026A	Erect and maintain trestle and plank systems
CPCCPB3027A	Install ceiling insulation
CPCCPD2011A	Handle painting and decorating materials
CPCCPD2012A	Use painting and decorating tools and equipment
CPCCPD2013A	Remove and replace doors and door and window components
CPCCPD3021A	Prepare surfaces for painting
CPCCPD3022A	Apply paint by brush and roller
CPCCPD3023A	Apply texture coat paint finishes by brush, roller and spray
CPCCPD3024A	Apply paint by spray
CPCCPD3025A	Match specified paint colour
CPCCPD3026A	Apply stains and clear timber finishes
CPCCPD3027A	Apply wallpaper
CPCCPD3028A	Apply decorative paint finishes
CPCCPD3029A	Remove graffiti and apply protective coatings
CPCCPD3030A	Apply protective paint coating systems
CPCCPD3031A	Implement safe lead paint and asbestos work practices in the painting industry
CPCCPD3032A	Apply advanced wallpaper techniques
CPCCPD3033A	Apply intumescent coatings
CPCCPD3034A	Apply advanced decorative paint finishes
CPCCRI3001A	Operate personnel and materials hoists
CPCCRI3012A	Perform basic rigging
CPCCRI3013A	Perform intermediate rigging
CPCCRI3014A	Perform advanced structural steel erection
CPCCRI3015A	Perform advanced tilt-up slab erection

CPCCRI3016A	Perform advanced tower crane erection
CPCCRT2001A	Handle roof tiling materials
CPCCRT2002A	Use roof tiling tools and equipment
CPCCRT3001A	Tile regular roofs
CPCCRT3002A	Tile irregular roofs
CPCCRT3003A	Repair and replace valleys, valley irons and flashings
CPCCRT3004A	Repair and renovate tile roofs
CPCCRT3005A	Slate a roof
CPCCRT3006A	Fix shingles to roofs and facades
CPCCSC2001A	Safely handle and use scaffolding tools and equipment
CPCCSC2002A	Erect and dismantle basic scaffolding
CPCCSC3001A	Erect and dismantle intermediate scaffolding
CPCCSF2001A	Handle steelfixing materials
CPCCSF2002A	Use steelfixing tools and equipment
CPCCSF2003A	Cut and bend materials using oxy-LPG equipment
CPCCSF2004A	Place and fix reinforcement materials
CPCCSF2005A	Arc weld reinforcement steel
CPCCSF2006A	Machine cut reinforcement materials
CPCCSF2007A	Splice and anchor using mechanical methods
CPCCSF3001A	Apply reinforcement schedule
CPCCSF3002A	Carry out monostrand post-tensioning
CPCCSF3003A	Carry out multistrand post-tensioning
CPCCSF3004A	Carry out stressbar post-tensioning
CPCCSH2001A	Prepare surfaces
CPCCSH2002A	Use aluminium sections for fabrication

CPCCSH2003A	Apply and install sealant and sealant devices
CPCCSH3001A	Set out and assemble cabinets, showcases, wall units, counters and workstations
CPCCSH3002A	Set out and fabricate shopfront commercial entries bulkheads and component fittings
CPCCSH3003A	Assemble and install shopfront commercial entries bulkheads and components
CPCCSH3004A	Apply finishes
CPCCSH3005A	Apply and trim decorative finishes
CPCCSI2001A	Use colour for signage
CPCCSI2002A	Lay out and design signage
CPCCSI2003A	Prepare surfaces for signage
CPCCSI2004A	Produce digital signage
CPCCSI2005A	Fabricate signage
CPCCSI2006A	Signwrite to simple forms
CPCCSI2007A	Apply fasteners and fixings
CPCCSI3001A	Produce vinyl signage
CPCCSI3002A	Use rotary router
CPCCSI3003A	Signwrite to decorative forms
CPCCSI3004A	Apply advanced vinyl applications
CPCCSI3005A	Use engraving systems
CPCCSI3006A	Apply gilding to signage
CPCCSI3007A	Apply lines and scrolls
CPCCSI3008A	Write showcards and chalkboards
CPCCSI3009A	Screen-print signage
CPCCSI3010A	Hand render pictorials

CPCCSI3011A	Use LED technology for signage
CPCCSI3012A	Apply electrical theory for illuminated signage
CPCCSI3013A	Install LED systems
CPCCSI3014A	Manufacture gas-charged glass-formed illuminated signage
CPCCSP2001A	Handle solid plastering materials
CPCCSP2002A	Use solid plastering tools and equipment
CPCCSP2003A	Prepare surfaces for plastering
CPCCSP3001A	Apply float and render to straight and curved surfaces
CPCCSP3002A	Apply set coats
CPCCSP3003A	Apply trowelled texture coat finishes
CPCCSP3004A	Restore and renovate solid plasterwork
CPCCSP3005A	Install pre-cast decorative mouldings
CPCCSP3006A	Install cast plaster blockwork
CPCCSP3007A	Apply plaster by projection machine
CPCCST2001A	Prepare for stonemasonry construction process
CPCCST2002A	Identify and use stone products
CPCCST2003A	Finish stone
CPCCST2004A	Lay stone
CPCCST2005A	Carry out load slinging of off-site materials
CPCCST3001A	Dress and mould stone
CPCCST3002A	Shape solid stone
CPCCST3003A	Split stone manually
CPCCST3004A	Dress stone manually
CPCCST3005A	Carry out profile work
CPCCST3006A	Machine stone

CPCCST3007A	Turn stone
CPCCST3008A	Inlay lead to stone
CPCCST3009A	Use computer-controlled static machinery to produce stone components
CPCCST3010A	Set out and cut letters in stone
CPCCST3011A	Plan monument construction
CPCCST3012A	Build stone veneer walls
CPCCST3013A	Carry out cemetery monument fixing
CPCCST3014A	Set and anchor stone facades
CPCCSV5001A	Assess the construction of domestic scale buildings
CPCCSV5002A	Evaluate materials for construction of domestic scale buildings
CPCCSV5003A	Produce working drawings for residential buildings
CPCCSV5004A	Apply legislation to urban development and building controls
CPCCSV5005A	Apply footing and geomechanical design principles to domestic scale buildings
CPCCSV5006A	Assess construction faults in residential buildings
CPCCSV5007A	Undertake site surveys and set-out procedures for building projects
CPCCSV5008A	Apply building control legislation to building surveying
CPCCSV5009A	Assess the impact of fire on building materials
CPCCSV5010A	Interact with clients in a regulated environment
CPCCSV5011A	Apply building codes and standards to residential buildings
CPCCSV5012A	Assess timber-framed designs for one and two storey buildings
CPCCSV5013A	Apply principles of energy efficient design to buildings
CPCCSV5014A	Apply building surveying procedures to residential buildings
CPCCSV5015A	Assess structural requirements for domestic scale buildings
CPCCSV6001A	Assess the construction of buildings up to three storeys

CPCCSV6002A	Produce working drawings for buildings up to three storeys
CPCCSV6003A	Assess construction faults in buildings up to three storeys
CPCCSV6004A	Apply footing and geomechanical design principles to buildings up to three storeys
CPCCSV6005A	Evaluate services layout and connection methods for residential and commercial buildings up to three storeys
CPCCSV6006A	Evaluate the use of concrete for residential and commercial buildings up to three storeys
CPCCSV6007A	Assess structural requirements for buildings up to three storeys
CPCCSV6008A	Apply building codes and standards to buildings up to three storeys
CPCCSV6009A	Implement performance-based codes and risk management principles for buildings up to three storeys
CPCCSV6010A	Apply fire technology to buildings up to three storeys
CPCCSV6011A	Apply legal procedures to building surveying
CPCCSV6012A	Facilitate community development consultation
CPCCSV6013A	Coordinate building refurbishment
CPCCSV6014A	Manage and plan land use
CPCCSV6015A	Analyse and present building surveying research information
CPCCSV6016A	Apply building surveying procedures to buildings up to three storeys
CPCCVE1002A	Undertake a basic computer design project
CPCCVE1011A	Undertake a basic construction project
CPCCWC2001A	Complete penetrations and flashings
CPCCWC3001A	Install and finish plasterboard and fibre cement sheeting to curved walls and ceilings
CPCCWC3002A	Install and finish plasterboard and fibre cement sheeting to arches
CPCCWC3003A	Install dry wall passive fire-rated systems
CPCCWC3004A	Install suspended ceilings

CPCCWF2001A	Handle wall and floor tiling materials
CPCCWF2002A	Use wall and floor tiling tools and equipment
CPCCWF3001A	Prepare surfaces for tiling application
CPCCWF3002A	Fix floor tiles
CPCCWF3003A	Fix wall tiles
CPCCWF3004A	Repair wall and floor tiles
CPCCWF3005A	Carry out decorative tiling
CPCCWF3006A	Carry out mosaic tiling
CPCCWF3007A	Tile curved surfaces
CPCCWF3008A	Tile domestic pools and spas
CPCCWP2001A	Handle waterproofing materials
CPCCWP2002A	Use waterproofing tools and equipment
CPCCWP2003A	Prepare for construction waterproofing process
CPCCWP2004A	Prepare surfaces for waterproofing application
CPCCWP3001A	Apply waterproofing process to below ground level wet areas
CPCCWP3002A	Apply waterproofing process to internal wet areas
CPCCWP3003A	Apply waterproofing process to external wet areas
CPCCWP3004A	Apply waterproofing remedial processes
CPCMCM7001A	Plan and manage complex projects
CPCMCM7002A	Manage the quality of projects and processes
CPCPCM2002A	Carry out interactive workplace communication
CPCPCM2004A	Read plans and calculate plumbing quantities
CPCPCM2011A	Apply first aid in the workplace
CPCPCM2021A	Work effectively in the plumbing and services sector
CPCPCM2023A	Carry out OHS requirements

CPCPCM2025A	Handle and store plumbing materials
CPCPCM2026A	Use plumbing hand and power tools
CPCPCM2027A	Carry out levelling
CPCPCM2028A	Cut and join sheet metal
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPCM2030A	Mark out materials
CPCPCM2032A	Weld using oxy-acetylene equipment
CPCPCM2033A	Weld using arc welding equipment
CPCPCM2034A	Carry out simple concreting and rendering
CPCPCM2035A	Work safely on roofs
CPCPCM3011A	Flash penetrations through roofs and walls
CPCPCM3012A	Weld plastic pipe using fusion method
CPCPCM3013A	Fabricate and install non-ferrous pressure piping
CPCPCM4001A	Carry out work based risk control processes
CPCPCM4002A	Estimate and cost work
CPCPCM4003A	Produce 2-D architectural drawings using CAD software
CPCPCM4004A	Prepare simple sketches and drawings
CPCPCM5000A	Design complex sanitary plumbing and drainage systems
CPCPCM5001A	Design complex cold water systems
CPCPCM5002B	Design complex stormwater and roof drainage systems
CPCPCM5003B	Design complex (non-solar) heated water systems
CPCPCM5004A	Design sewer systems
CPCPDR2011A	Locate and clear blockages
CPCPDR2012A	Install domestic treatment plants
CPCPDR2013A	Maintain effluent disinfection systems

CPCPDR2014A	Install stormwater and sub-soil drainage systems
CPCPDR2015A	Drain work site
CPCPDR2016A	Install prefabricated inspection openings and enclosures
CPCPDR3011A	Plan layout of a residential sanitary drainage system
CPCPDR3012A	Install below ground sanitary drainage systems
CPCPDR3013A	Install on-site disposal systems
CPCPDR4011A	Design and size sanitary drainage systems
CPCPDR4012A	Design and size stormwater drainage systems
CPCPDR4013A	Design and size domestic treatment plant disposal systems
CPCPFS2011A	Connect static storage tanks for fixed fire protection systems
CPCPFS2012A	Install portable fire equipment
CPCPFS3010A	Design pre-calculated fire sprinkler systems
CPCPFS3011A	Fabricate and install fire hydrant and hose reel systems
CPCPFS3012A	Install distribution and range pipes
CPCPFS3013A	Fit off sprinkler heads, controls and ancillary equipment
CPCPFS3014A	Install control valve assemblies, actuating devices and local alarms
CPCPFS3015A	Test fire protection systems for pressure
CPCPFS3016A	Install special hazard systems
CPCPFS3017A	Install domestic and residential life safety sprinkler systems
CPCPFS3018A	Test and maintain fire hydrant and hose reel installations
CPCPFS3019A	Test and maintain automatic fire sprinklers
CPCPFS3020A	Conduct basic functional testing of water-based fire-suppression systems
CPCPFS3021A	Inspect and test fire pumpsets
CPCPFS3022A	Conduct annual functional testing of complex water-based fire-suppression systems

CPCPFS3023A	Conduct functional water flow testing
CPCPFS4005A	Commission fire alarm and detection systems
CPCPFS4006A	Commission firefighting appliances
CPCPFS4011A	Commission domestic and residential fire suppression sprinkler systems
CPCPFS4012A	Commission and maintain special hazard fire suppression systems
CPCPFS4013A	Commission fire system pump sets
CPCPFS4014A	Design residential and domestic fire sprinkler systems
CPCPFS5000A	Design fire-compliant hydraulic services
CPCPFS5001A	Design fire sprinkler systems
CPCPFS5002A	Design fire hydrant and hose reel systems
CPCPGS3016A	Install LPG systems in caravans, mobile homes, water craft and mobile workplaces
CPCPGS3017A	Install gas detection devices
CPCPGS3018A	Install gas pressure control equipment
CPCPGS3019A	Install Type A gas appliance flues
CPCPGS3020A	Install Type B gas appliance flues
CPCPGS3021A	Purge consumer piping
CPCPGS3022A	Maintain Type A gas appliances
CPCPGS3023A	Disconnect and reconnect Type A gas appliances
CPCPGS3024A	Calculate and install natural ventilation for Type A gas appliances
CPCPGS3025A	Install subsidiary gas meters
CPCPGS3031A	Install gas piping systems
CPCPGS3032A	Size consumer gas piping systems
CPCPGS3033A	Install and commission Type A gas appliances
CPCPGS3034A	Install LPG storage of aggregate storage capacity up to 500 litres

CPCPGS3035A	Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL
CPCPGS4003A	Install, commission and service Type B gas appliances
CPCPGS4011A	Design and size consumer gas installations
CPCPGS4012A	Service Type A gas appliances
CPCPIG2011A	Design domestic urban irrigation systems
CPCPIG3011A	Set out, install and commission irrigation systems
CPCPIG3012A	Install and commission domestic irrigation pumps
CPCPMS2011A	Assemble mechanical services components
CPCPMS3011A	Fabricate and install steel pressure piping
CPCPMS3012A	Select and fit insulation and sheathing
CPCPMS3013A	Install small bore heating systems
CPCPMS3014A	Install medical gas pipeline systems
CPCPMS3015A	Install and test ducting systems
CPCPMS3016A	Install air handling units
CPCPMS3017A	Install and test split system air conditioning
CPCPMS3018A	Install air conditioning control equipment
CPCPMS3019A	Maintain mechanical services equipment
CPCPMS3020A	Install and maintain evaporative air cooling systems
CPCPMS3021A	Install domestic solid fuel burning appliances
CPCPMS4002A	Commission air and water systems
CPCPMS4003A	Design compressed air systems
CPCPMS4011A	Design, size and lay out heating and cooling systems
CPCPMS5000A	Design steam distribution systems
CPCPMS5001A	Design air conditioning and ventilation systems

CPCPMS5002A	Design sound attenuated hydraulic services
CPCPMS5003A	Design hydronic heating and cooling systems
CPCPPS5000A	Design gas bulk storage systems
CPCPPS5001A	Design industrial gas systems
CPCPPS5002A	Design gas reticulation systems
CPCPPS5003A	Design solar water heating systems
CPCPPS5004A	Conduct a water audit and identify water-saving initiatives
CPCPPS5005A	Design grey water re-use systems in sewered areas
CPCPPS5006A	Design rainwater collection, storage, distribution and re-use systems
CPCPPS5007A	Design irrigation systems
CPCPPS5008A	Design trade waste pre-treatment systems
CPCPPS5009A	Analyse and report on technical plumbing systems
CPCPPS5010A	Design pump systems
CPCPPS5011A	Coordinate services and penetrations within a building
CPCPPS5012A	Design siphonic stormwater drainage systems
CPCPPS5013A	Design vacuum sewerage systems
CPCPPS5014A	Locate and maintain piping systems
CPCPPS5015A	Inspect plumbing and drainage systems
CPCPRF2012A	Select and install roof sheeting and wall cladding
CPCPRF2013A	Collect and store roof water
CPCPRF2014A	Fabricate roof coverings for curved structures
CPCPRF3011A	Receive roofing materials
CPCPRF3012A	Fabricate and install roof drainage components
CPCPRF3013A	Fabricate and install external flashings
CPCPRF3014A	Install roof components

CPCPRF3015A	Install roof coverings to curved roof structures
CPCPRF3016A	Install composite roof systems
CPCPRF4011A	Design and size roof drainage systems
CPCPSN3011A	Plan layout of a residential sanitary plumbing system
CPCPSN3012A	Install discharge pipes
CPCPSN3013A	Fabricate and install sanitary stacks
CPCPSN3014A	Install and fit off sanitary fixtures
CPCPSN3015A	Install pre-treatment facilities
CPCPSN3016A	Install sewerage pump sets
CPCPSN4011A	Design and size sanitary plumbing systems
CPCPWT3010A	Connect and install storage tanks to a domestic water supply
CPCPWT3011A	Set out and install water services
CPCPWT3012A	Install and adjust water service controls and devices
CPCPWT3013A	Install and commission water heating systems
CPCPWT3014A	Install and maintain domestic water treatment equipment
CPCPWT3015A	Install water pump sets
CPCPWT3016A	Fit off and commission heated and cold water services
CPCPWT3017A	Connect irrigation systems from drinking water supply
CPCPWT3018A	Install water service
CPCPWT3019A	Install water pipe systems
CPCPWT4011A	Design and size heated and cold water services and systems
CPCPWT4012A	Commission and maintain backflow prevention devices
CPCPWT4013A	Commission and maintain heated water temperature control devices
CPCSFS5001A	Define scope and hazard level of fire systems design projects
CPCSFS5002A	Research and interpret detailed fire systems design project

	requirements
CPCSFS5003A	Develop plans and methodology for fire systems design projects
CPCSFS5005A	Research and evaluate fire system technologies and components
CPCSFS5006A	Create detailed designs for fire sprinkler systems
CPCSFS5007A	Create detailed designs for hydrant and hose reel systems
CPCSFS5008A	Create detailed designs for fire detection and warning systems
CPCSFS5009A	Create detailed designs for fire systems' water supplies
CPCSFS5010A	Provide documentation and support for fabrication of fire sprinkler systems
CPCSFS5011A	Provide design documentation and review and support fire system installation processes
CPCSFS5013A	Support commissioning processes and finalise fire systems design projects
CPCSFS5014A	Conduct annual fire systems certification inspections
CPCSFS5015A	Assess documentation for annual fire systems certification inspections
CPCSFS7001A	Define scope of and initiate special hazard fire systems design projects
CPCSFS7002A	Analyse, design and evaluate complex special hazard fire systems
CPCSFS7003A	Develop and submit tenders for fire systems design solutions
CPCSUS4001A	Implement and monitor environmentally sustainable work practices
CPCSUS5001A	Develop workplace policies and procedures for sustainability

CPC08 units with prerequisite unit requirements

CPC08 unit	Prerequisite unit
CPCCBC4051A	CPCCOHS1001A Work safely in the construction industry
CPCCBC5014A	CPCCOHS1001A Work safely in the construction industry
CPCCBC5018A	CPCCBC5001B Apply building codes and standards to the

	construction process for medium rise building projects
CPCCBL2001A	CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
CPCCBL2002A	CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
CPCCBL3001A	CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
CPCCBL3002A	CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
CPCCBL3003A	CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Imported units used in CPC08 qualifications

Unit code	Unit title
BSBADM506B	Manage business document design and development
BSBAUD504B	Report on a quality audit
BSBCUS301A	Deliver and monitor a service to customers
BSBCUS402A	Address customer needs
BSBCUS501B	Manage quality customer service
BSBFIM501A	Manage budgets and financial plans
BSBHRM402A	Recruit, select and induct staff
BSBHRM509A	Manage rehabilitation or return to work programs
BSBINN301A	Promote innovation in a team environment
BSBINN502A	Build and sustain an innovative work environment
BSBITA401A	Design databases
BSBITS401A	Maintain business technology
BSBITU201A	Produce simple word processed documents
BSBITU202A	Create and use spreadsheets
BSBITU301A	Create and use databases
BSBITU402A	Develop and use complex spreadsheets
BSBITU404A	Produce complex desktop published documents
BSBLED401A	Develop teams and individuals

Unit code	Unit title
BSBLED502A	Manage programs that promote personal effectiveness
BSBMGT403A	Implement continuous improvement
BSBMGT502B	Manage people performance
BSBMGT515A	Manage operational plan
BSBMGT617A	Develop and implement a business plan
BSBMKG414A	Undertake marketing activities
BSBMKG609A	Develop a marketing plan
BSBOHS201A	Participate in OHS processes
BSBOHS403B	Identify hazards and assess OHS risks
BSBOHS404B	Contribute to the implementation of strategies to control OHS risk
BSBOHS504B	Apply principles of OHS risk management
BSBOHS603B	Analyse and evaluate OHS risk
BSBPMG404A	Apply quality management techniques
BSBPMG407A	Apply risk management techniques
BSBPMG504A	Manage project costs
BSBPMG505A	Manage project quality
BSBPMG507A	Manage project communications
BSBPMG508A	Manage project risk
BSBPMG510A	Manage projects
BSBRES401A	Analyse and present research information
BSBRISK501A	Manage risk
BSBSLS403A	Present a sales solution
BSBSLS404A	Secure prospect commitment
BSBSLS502A	Lead and manage a sales team

Unit code	Unit title
BSBSMB301A	Investigate micro business opportunities
BSBSMB401A	Establish legal and risk management requirements of small business
BSBSMB402A	Plan small business finances
BSBSMB404A	Undertake small business planning
BSBSMB405A	Monitor and manage small business operations
BSBSMB406A	Manage small business finances
BSBSMB407A	Manage a small team
BSBWOR401A	Establish effective workplace relationships
BSBWOR402A	Promote team effectiveness
BSBWOR501B	Manage personal work priorities and professional development
BSBWOR502B	Ensure team effectiveness
BSBWRT401A	Write complex documents
CHCCOM403A	Use targeted communication skills to build relationships
CHCCOM4B	Develop, implement and promote effective communication techniques
CPPCMN2001A	Control and direct traffic
CPPDSM4014A	Market property for sale
CPPDSM4022A	Sell and finalise the sale of property by private treaty
CPPDSM5022A	Implement asset management plan
CPPDSM6002A	Conduct a property investment feasibility study
CPPDSM6008A	Develop strategic facilities management plan
CPPFES2006A	Prepare for installation and servicing operations
FPICOT2204B	Maintain chainsaws
FPICOT2206B	Cross cut materials with a hand-held chainsaw

Unit code	Unit title
HLTHIR403B	Work effectively with culturally diverse clients and co-workers
ICAU1128B	Operate a personal computer
ICAU1129B	Operate a word processing application
ICAU1130B	Operate a spreadsheet application
ICAU1131B	Operate a database application
ICAU1133B	Send and retrieve information using web browsers and email
LGAPLEM502A	Apply ecologically sustainable development principles to the built environment
LMFFM3006B	Install furnishing products
LMFFM3013B	Measure and draw site layout for manufactured furniture products
LMFFM3028B	Fabricate synthetic solid surface products
LMFFM3030B	Set up, operate and maintain CNC sizing machines
LMFFM3031B	Set up, operate and maintain CNC machining and processing centres
LMFFT4010B	Identify and calculate production costs
LMFGG1001B	Complete a basic glass and glazing project
LMFGG2008B	Glaze/re-glaze residential windows and doors
LMFGG3015B	Fabricate and install shower screens and wardrobe doors
MEM05010C	Apply fabrication, forming and shaping techniques
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding
MEM10009B	Install refrigeration and air conditioning plant and equipment
MEM10010B	Install pipework and pipework assemblies
MEM18086B	Test, recover, evacuate and charge refrigeration systems
PRMPFES25C	Inspect, test and maintain gaseous fire suppression systems

Unit code	Unit title
PRMPFES43A	Prevent ozone depleting substance and synthetic greenhouse gas emissions
PRMPFES47A	Inspect and test control and indicating equipment
PRMWM15B	Move waste using load shifting equipment
RIICBS201A	Conduct tack coat spraying operations
RIICBS202A	Hand spread asphalt
RIICBS203A	Safely handle bituminous materials
RIICCM207A	Spread and compact materials manually
RIICCM210A	Install trench support
RIICFW301A	Construct underpinning
RIIMPO318A	Conduct skid steer loader operations
RIIMPO320A	Conduct civil construction excavator operations
RIIOHS202A	Enter and work in confined spaces
RIIOHS205A	Control traffic with stop-slow bat
RIIOHS302A	Implement traffic management plan
RIISAM204A	Operate small plant and equipment
RIIWMG203A	Drain and dewater civil construction site
RTE3605A	Troubleshoot irrigation systems
RTF3203A	Construct brick and/or block structures and features
RTF3221A	Implement a retaining wall project
TAEDEL402A	Plan, organise and facilitate learning in the workplace
TLILIC108A	Licence to operate a forklift truck
TLILIC1008A	Licence to operate a slewing mobile crane (up to 100 tonnes)
TLILIC1108A	Licence to operate a slewing mobile crane (over 100 tonnes)

Unit code	Unit title
TLILIC608A	Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)
TLILIC808A	Licence to operate a slewing mobile crane (up to 20 tonnes)
TLILIC908A	Licence to operate a slewing mobile crane (up to 60 tonnes)

CPC08 users should go to www.ntis.gov.au to download any required imported units.

Mapping of CPC08 units of competency

Version 7

Mapping Version 7 CPC08 units of competency to Version 6.1 CPC08			
Unit code and title in V7 Training Package	Relationship to units in V6 CPC08	Comments in relation to previous version of this Training Package	Equivalent/ Not equivalent
	CPCCDE3012A Encapsulate and remove asbestos	Unit deleted	
CPCCDE3014A Remove non-friable asbestos	CPCCDE3012A Encapsulate and remove asbestos	New to CPC08 Replaces CPCCDE3012A	N
CPCCDE3015A Remove friable asbestos	CPCCDE3012A Encapsulate and remove asbestos	New to CPC08 Replaces CPCCDE3012A	N
	CPCCBC4023A Plan and undertake site inspection and assessment of asbestos products and materials	Unit deleted	

Mapping Version 7 CPC08 units of competency to Version 6.1 CPC08			
Unit code and title in V7 Training Package	Relationship to units in V6 CPC08	Comments in relation to previous version of this Training Package	Equivalent/ Not equivalent
CPCCBBC4051A Supervise asbestos removal		New to CPC08	
CPCCBBC5014A Conduct asbestos assessment associated with removal	CPCCBBC4023A Plan and undertake site inspection and assessment of asbestos products and materials	New to CPC08 Replaces CPCCBBC4023A	N

No further native or imported units of competency were changed, added or removed as a result of the changes made in Version 7.

Version 6.1

There were no changes made to the content of CPC08 Version 6 units of competency in this ISC upgrade and so a mapping table is not provided.

The following five units were assigned a different unit code (while retaining the same unit title) in response to stakeholder implementation advice with regard to the use of previous version unit codes:

- CPCPGS3011A was re-coded to CPCPGS3031A
- CPCPGS3012A was re-coded to CPCPGS3032A
- CPCPGS3013A was re-coded to CPCPGS3033A
- CPCPGS3014A was re-coded to CPCPGS3034A
- CPCPGS3015A was re-coded to CPCPGS3035A.

Minor editorial changes were made to unit code or title references in CPC08 Version 6 qualifications to ensure consistent listing of the unit code or title of:

- CPCPCM2028A Cut and join sheet metal
- CPCPCM2029A Cut using oxy-LPG-acetylene equipment
- CPCPCM2032A Weld using oxy-acetylene equipment
- CPCPWT3016A Fit off and commission heated and cold water services.

Version 6

Mapping Version 6 CPC08 units of competency to Version 5 CPC08

Unit code and title in V6 Training Package	Relationship to units in V5 CPC08	Comments in relation to previous version of this Training Package	Equivalent / Not equivalent
CPCCBC4006B Select, procure and store construction materials for low rise projects	CPCCBC4006A Select, procure and store construction materials for low rise projects	Sustainability content added to range statement Equivalent to CPCCBC4006A	E
CPCCBC4008B Conduct on-site supervision of building and construction projects	CPCCBC4008A Conduct on-site supervision of building and construction projects	Sustainability content added to range statement Equivalent to CPCCBC4008A	E
CPCCBC4009B Apply legal requirements to building and construction projects	CPCCBC4009A Apply legal requirements to building and construction projects	Missing application information added Equivalent to CPCCBC4009A	E
CPCCBC4010B Apply structural principles to residential low rise constructions	CPCCBC4010A Apply structural principles to residential low rise constructions	Sustainability content added to performance criterion Equivalent to CPCCBC4010A	E
CPCCBC4011B Apply structural principles to commercial low rise constructions	CPCCBC4011A Apply structural principles to commercial low rise constructions	Sustainability content added to performance criterion Equivalent to CPCCBC4011A	E
CPCCBC4027B Establish a basis for sales consulting	CPCCBC4027A Establish a basis for sales consulting	Minor changes to required skills in response to addition of sustainability content Equivalent to CPCCBC4027A	E
CPCCBC4029B Apply construction information to the sales process	CPCCBC4029A Apply construction information to the sales process	Sustainability content added to required skills Equivalent to CPCCBC4029A	E

Mapping Version 6 CPC08 units of competency to Version 5 CPC08			
Unit code and title in V6 Training Package	Relationship to units in V5 CPC08	Comments in relation to previous version of this Training Package	Equivalent / Not equivalent
CPCCBC5006B Apply site surveys and set-out procedures to medium rise building projects	CPCCBC5006A Apply site surveys and set-out procedures to medium rise building projects	Missing application information added Equivalent to CPCCBC5006A	E
CPCCBC5010B Manage construction work	CPCCBC5010A Manage construction work	Sustainability content added to required knowledge Equivalent to CPCCBC5010A	E
CPCCBL3018A Install aerated autoclaved concrete products	CPCCBL3008A Install aerated autoclaved concrete products	Prerequisite unit CPCCOHS2001A added Unit outcome altered Not equivalent to CPCCBL3008A	N
CPCCCA2011A Handle carpentry materials	CPCCCA2001A Handle carpentry materials	Prerequisite unit CPCCOHS2001A added Unit outcome altered Not equivalent to CPCCCA2001A	N
CPCCCA3007B Construct pitched roofs	CPCCCA3007A Construct pitched roofs	Item added to required knowledge section Unit outcome not altered Equivalent to CPCCCA3007A	E
CPCCCM1011A Undertake basic estimation and costing	CPCCCM1001A Undertake basic estimation and costing	Prerequisite unit CPCCOHS2001A removed Unit outcome altered Not equivalent to CPCCCM1001A	N
CPCCCM1012A Work effectively and sustainably in the	CPCCCM1002A Work effectively and sustainably in the	Prerequisite unit CPCCOHS2001A removed	N

Mapping Version 6 CPC08 units of competency to Version 5 CPC08			
Unit code and title in V6 Training Package	Relationship to units in V5 CPC08	Comments in relation to previous version of this Training Package	Equivalent / Not equivalent
construction industry	construction industry	Sustainability content added to range statement Unit outcome altered Not equivalent to CPCCCM1002A	
CPCCCM1013A Plan and organise work	CPCCCM1003A Plan and organise work	Prerequisite unit CPCCOHS2001A removed Unit outcome altered Not equivalent to CPCCCM1003A	N
CPCCCM1014A Conduct workplace communication	CPCCCM1004A Conduct workplace communication	Prerequisite unit CPCCOHS2001A removed Unit outcome altered Not equivalent to CPCCCM1004A	N
CPCCCM1015A Carry out measurements and calculations	CPCCCM1005A Carry out measurements and calculations	Prerequisite unit CPCCOHS2001A removed Unit outcome altered Not equivalent to CPCCCM1005A	N
CPCCCM2003B Calculate and cost construction work	CPCCCM2003A Calculate and cost construction work	Sustainability content added to required knowledge and range statement Equivalent to CPCCCM2003A	E
CPCCCM2010A Work safely at heights	CPCCCM1006A Work safely at heights	Unit code changed to address anomaly of a unit at nominal AQF level 1 having a level 2 prerequisite Unit outcome not altered Equivalent to	E

Mapping Version 6 CPC08 units of competency to Version 5 CPC08			
Unit code and title in V6 Training Package	Relationship to units in V5 CPC08	Comments in relation to previous version of this Training Package	Equivalent / Not equivalent
		CPCCCM1006A	
CPCCCM2011A Carry out tilt-up work safely	CPCCCM1007A Carry out tilt-up work safely	AQF nominal level of unit increased from 1 to 2 to allow a level 2 OHS unit as prerequisite in view of nature of work associated with unit Unit outcome not altered Equivalent to CPCCCM1007A	E
CPCCCM3001B Operate elevated work platforms	CPCCCM3001A Operate elevated work platforms	Unit version upgrade to reflect the change of code but not content of prerequisite unit Unit outcome not altered Equivalent to CPCCCM3001A	E
CPCCCO2011A Handle concreting materials	CPCCCO2001A Handle concreting materials	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO2001A	N
CPCCCO2012A Use concreting tools and equipment	CPCCCO2002A Use concreting tools and equipment	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO2002A	N
CPCCCO2013A Carry out concreting to simple forms	CPCCCO2003A Carry out concreting to simple forms	Prerequisite requirement changed from CPCCOHS1001A to	N

Mapping Version 6 CPC08 units of competency to Version 5 CPC08			
Unit code and title in V6 Training Package	Relationship to units in V5 CPC08	Comments in relation to previous version of this Training Package	Equivalent / Not equivalent
		CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO2003A	
CPCCCO2014A Carry out concrete work	CPCCCO2004A Carry out concrete work	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO2004A	N
CPCCCO3021A Place concrete	CPCCCO3001A Place concrete	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO3001A	N
CPCCCO3022A Finish concrete	CPCCCO3002A Finish concrete	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO3002A	N
CPCCCO3023A Cure concrete	CPCCCO3003A Cure concrete	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO3003A	N
CPCCCO3024A	CPCCCO3004A Carry	Prerequisite requirement	N

Mapping Version 6 CPC08 units of competency to Version 5 CPC08			
Unit code and title in V6 Training Package	Relationship to units in V5 CPC08	Comments in relation to previous version of this Training Package	Equivalent / Not equivalent
Carry out decorative finishes to concrete	out decorative finishes to concrete	changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO3004A	
CPCCCO3025A Resurface concrete	CPCCCO3005A Resurface concrete	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO3005A	N
CPCCCO3026A Carry out repair and rectification of concrete	CPCCCO3006A Carry out repair and rectification of concrete	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO3006A	N
CPCCCO3027A Cut and core concrete	CPCCCO3007A Cut and core concrete	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO3007A	N
CPCCCO3028A Carry out tilt panel construction	CPCCCO3008A Carry out tilt panel construction	Prerequisite requirement changed from CPCCOHS1001A to CPCCOHS2001A Unit outcome altered Not equivalent to CPCCCO3008A	N

Overview

What is a Training Package?

A Training Package is an integrated set of nationally endorsed Competency Standards, Assessment Guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, and recognising and assessing people's skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training that suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Training Framework?

The National Training Framework is made up of the nationally agreed quality arrangements for the vocational education and training sector, the Australian Quality Training Framework (AQTF), and Training Packages endorsed by the National Quality Council (NQC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained.

Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency and even gain a qualification without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off the job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

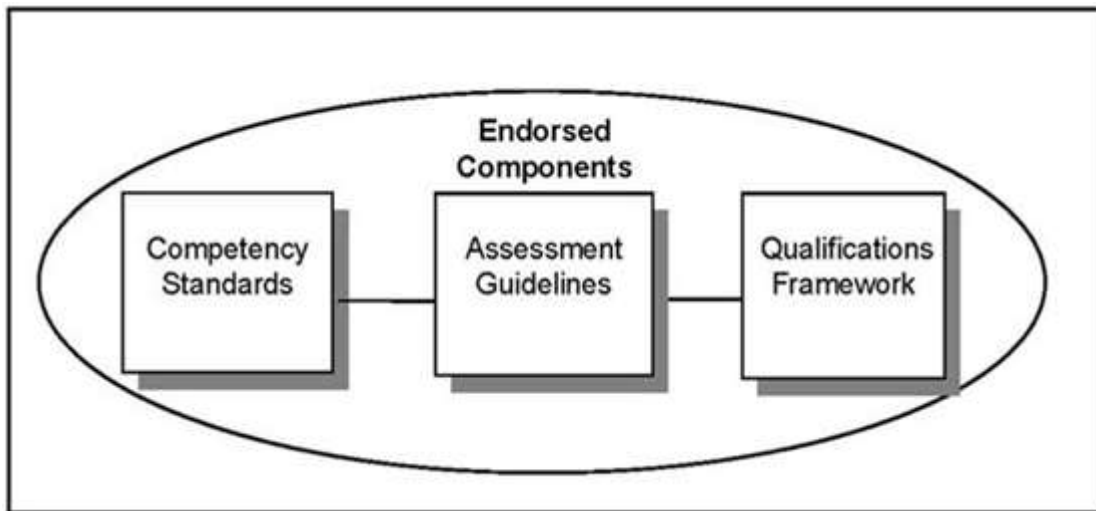

Training and assessment using Training Packages must be conducted by a registered training organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO as specified in the AQTF Standards for Registered Training Organisations.

Training Package components

Training Packages are made up of mandatory components endorsed by the NQC and optional support materials.

Training Package endorsed components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

Competency standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the Standards for Registered Training Organisations. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

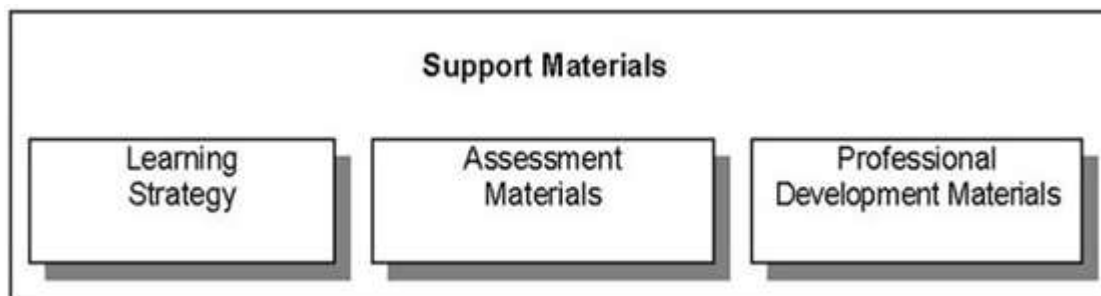

Qualifications framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the 'packaging rules'. The packaging rules must be followed to ensure the integrity of the nationally recognised qualifications issued.

Training Package support materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and government agencies.

Where such materials have been quality assured through a process of 'noting' by the NQC, they display the following official logo. Noted support materials are listed on the National Training Information Service (NTIS) website, together with a detailed description and information on the type of product and its availability (www.ntis.gov.au).

It is not compulsory to submit support materials for noting; any resources that meet the requirements of the Training Package can be used.

Training Package, qualification and unit of competency codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, and with the title always following the code.

Training Package codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example CPC08. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

Qualification codes

Within each Training Package, each qualification has a unique eight-character code, for example CPC20111. The first three letters identify the Training Package; the first number identifies the qualification level (noting that Arabic numbers are not used in qualification titles themselves); the next two numbers identify the position in the sequence of the qualification at that level; and the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

Unit of competency codes

Within each Training Package, each unit of competency has a unique code. The unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package.

A typical code is made up of 12 characters, normally a mixture of upper-case letters and numbers, as in CPCCJS3003A. The first three characters signify the Training Package (CPC in the above example) and up to eight characters, relating to an industry sector, function or skill area, follow. The last character is always a letter and identifies the unit of competency version. The 'A' in the example above indicates that this is the original unit of competency. An incremented version identifier usually means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent. Where changes are made that alter the outcome, a new code is assigned and the title is changed.

Training Package, qualification and unit of competency titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

Training Package titles

The title of each endorsed Training Package is unique and relates the Training Package's broad industry coverage.

Qualification titles

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- firstly, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma or Advanced Diploma
- this is followed by the words 'in' for Certificates I to IV and 'of' for Diploma and Advanced Diploma
- then the industry descriptor follows, for example Telecommunications
- if applicable, the occupational or functional stream follows in brackets, for example (Computer Systems).

For example:

- CPC30211 Certificate III in Carpentry
- CPC40911 Certificate IV in Plumbing and Services.

Unit of competency titles

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example:

- CPGC4028A Prepare design brief for construction works
- CPCPPS5004A Conduct a water audit and identify water-saving initiatives.

CPC08 Overview

Overview of Version 7

The model work health and safety (WHS) regulations require a licensed removalist to undertake the removal of asbestos where the area is greater than 10 square metres. Licences apply to the removal of friable asbestos (Class A) and non-friable asbestos (Class B). All licensed asbestos removal work requires workers to have completed the specified unit of competency for the type of asbestos to be removed. Supervisors are required to complete a supervisory unit in addition to the unit of competency for the class of removal, Class A or Class B. Assessors must complete the assessor unit of competency 'or equivalent' qualification.

Although this project was undertaken to develop only a small number of units, the development is significant because of its role in the new national WHS licensing context. The project was undertaken following representations from, and commissioning by, Safe Work Australia (SWA), which has led the development of national licensing for the safe removal of asbestos containing materials (ACM).

When approached by SWA, Construction and Property Services Industry Skills Council (CPSISC) was pleased to lend its support to this project to identify and deliver units of competency that reflect the skills and knowledge required by regulators of practitioners. The requirements will be specified through four categories:

- a Class A asbestos removalist licence
- a Class B asbestos removalist licence
- regulated supervisors of the removalist process
- regulated asbestos assessors.

It is of particular importance to note that the four new units of competency added to CPC08 with this Version 7, will be referenced in the new national licensing regime that SWA has negotiated with state and territory regulators.

It should also be noted that although for licensing purposes more than one asbestos-related unit may appear as electives in CPC08 qualifications, individual units will be referenced in regulations. Candidates would select one or more units related to the function they are to perform and the associated regulatory requirement.

Project Steering Committee members involved in Version 7 were:

Project Steering Committee Membership

Member	Representing
Pat Preston (Chair)	Asbestos Contractors Group Ltd (Victoria)
Anita Aiezza	WorkSafe (Victoria)
Simon Cocker	Construction ITAB Network
Lindsay Fraser	Construction, Forestry, Mining and Energy Union (CFMEU)

Project Steering Committee Membership

Michael Gray (Observer)	Department of Education, Employment and Workplace Relations (DEEWR)
Margot Hoyte	Australian Council of Trade Unions (ACTU)
Katherine Jones	Chief Minister's Department (ACT)
Laurie Kruize	Housing Industry Association
Alex Maroya	Master Builders Australia
Rosalie Mayo-Ramsay	Workcover (NSW)
John Robson	Robson Environmental Pty Ltd
Michael Shepherd	Asbestos Industry Association
Paul Taylor	Safe Work Australia
Guy Valentine	State Training Authority (Queensland)

Overview of Version 6

CPC08 Version 1 was released in early 2009. Since then, there have been four subsequent endorsements of the Training Package. In three of these endorsements new qualifications and units were added to the Training Package, while the other endorsement addressed aligning specific qualifications to licensing requirements. This version is different in that it is primarily focussing on continuous improvement within the Training Package. As a result of the implementation of CPC08 in all states and territories a number of issues have been identified that will improve the Training Package. Version 6 responds to many of those issues. This version also includes significant changes to the packaging of two qualifications in response to changing industry needs. The other major category of changes includes significant work to explicitly embed sustainability into the plumbing and services units in the Training Package. Comprehensive mapping guides have been included for the changes to units of competency and qualifications.

Overview of Version 5

As part of the government's recent *Energy Efficient Homes Package*, in particular the ceiling insulation program, the Department of Environment, Water, Heritage and the Arts (DEWHA) requested the development of nationally recognised training for ceiling insulation installers. CPSISC mapped available competencies and identified three relevant endorsed units:

- CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
- CPCCCM1006A Work safely at heights

- CPCCPB3014A Install batt insulation products.

Components of a fourth unit, CPCCPB3015A Install acoustic and thermal environmental protection systems, were selected to fill a gap in installing other types of insulation.

A further unit of competency was:

- CPCCPB3027A Install ceiling insulation to address critical safety requirements in installing ceiling insulation.

Due to the lack of a national unit of competency to cover the work requirements to install ceiling insulation, CPSISC developed training support materials for registered training organisations (RTOs) to deliver the required units of competency (CPCCPB34014A and its prerequisite and co-requisite units CPCCOHS2001A and CPCCCM1006A).

DEWHA's Ceiling Insulation Program competency guidelines also included the acceptance of individual Statements of Attainment against CPCCPB3015A Install acoustic and thermal environmental protection systems as a competency requirement for supervisors of insulation installation.

Through industry consultation it was identified that individual competencies were not sufficient to ensure that supervisors had all the relevant skills and knowledge, especially in critical safety aspects. It was agreed that a new unit of competency which combined all critical functions of installing ceiling insulation should be developed to ensure consistency in training.

Overview of Version 4

The previous CPC40108 Certificate IV in Building and Construction (Building) and CPC50208 Diploma of Building and Construction (Building) qualifications in CPC08, then titled Construction, Plumbing and Services Integrated Framework Training Package, were initially designed to cover higher level building management skills and also to meet registration and licensing requirements for builders in Australian States and Territories.

At the end of the 2007 review of the three Training Packages for the construction, plumbing and services industries, concerns were raised that the requirements for individual registration as a builder were not well aligned to the competency outcomes of these higher level construction qualifications. In some jurisdictions this resulted in the requirement to complete significant additional units of competency in the Diploma in order to meet Builder Registration requirements.

The matter could not be effectively dealt with in the re-development work undertaken during the review as it was only raised, with little detail of the issues, when the review consultation process was near completion. The concerns were not raised earlier because implementation of the qualification had only begun in 2007, so there was very limited industry or RTO experience in using them at the time of the review consultation.

In 2008, in response to further feedback from stakeholders, CPSISC initiated this Version 4 project to seek a better alignment of qualifications to licensing outcomes. Initial consultation with a variety of industry, regulator and RTO stakeholders indicated that the structure of the Certificate IV met the majority of, but not all, jurisdictional categories of limited building registration/licensing. However, it was found that the Diploma structure could be greatly improved by having the underpinning content of some Certificate IV units embedded in it to ensure that training covered the relevant progressive skills required for higher classes of builder registration.

Classes of builder licensing vary considerably across the country, with some jurisdictions having up to 30 classes or categories of licensing while one jurisdiction has a single class. Mutual recognition of licensing is in place and recognition requirements can be ascertained through the Licence Recognition website (<http://www.licencerecognition.gov.au/Default.aspx>). The site sets out the scope of building work covered by licence categories in each jurisdiction but does not provide details of competency and qualification requirements for licensing in each case. In response, CPSISC initiated the Version 4 continuous improvement project to progress the issue and seek a solution.

Overview of Version 3

In 2007 during the review of BCP03 Plumbing and Services Training Package various parties involved in hydraulic design consulting raised the issue of the training and recognition pathway for their workforce using the Training Package qualification pathway. This was set out in a discussion paper circulated by the national Association of Hydraulic Services Consultants Australia (AHSCA), where the main concern was that the Training Package hydraulic design units of competency were embedded in the plumbing services stream of the then Diploma qualification CPC50408 Diploma of Plumbing and Services.

The stream of the Diploma had a prerequisite requirement of completion of the Certificate IV in Plumbing and Services, including the Plumbing and Services – Operations stream. The Certificate IV stream had, in turn, the requirement for prior completion of a relevant trade qualification or equivalent; generally interpreted to mean the completion of a Certificate III in Plumbing. The effect was that an hydraulic services design (HSD) specialisation pathway from the then plumbing and services qualification framework was limited to learners previously completing a trade outcome at Certificate III and then progressing through Certificate IV and Diploma, choosing particular streams in order to gain the range of higher level units of competency necessary to undertake the work. That pathway, still valued by the industry, remains within CPC08 Construction, Plumbing and Services Integrated Framework Training Package, despite the addition of this new Version 3 HSD material.

However, people wanting a career in the field of hydraulic design consulting by entering directly into a Certificate IV specialist hydraulic design pathway and then a specialist Diploma qualification cannot do so under the current packaging rules and entry requirements. The HSD Version 3 additions offer an alternative pathway for hydraulic design consultants within the Training Package.

Members of the PSC involved in Version 3 were:

- Paul Naylor (Chair), Master Plumbers
- Carmel Coate, National Fire Industry Association
- Gary Cook, National Plumbing & Services Training Advisory Group (NPSTAG)
- Michael McGuinness, Australian New Zealand Reciprocity Association
- Stephen Movley, Institute of Plumbing
- Doug McClusky, CEPU – Plumbing Division
- Adrian Hart, Master Plumbers Australia
- John Mahoney, SkillsTech
- Vin Ebeger, Master Plumbers & Mechanical Services Association of Australia
- Murray Thomas, Master Plumbers Association
- Shayne LaCombre, Plumbing Industry Commission.

Overview of Version 2

The version 2 update of CPC08 came about as a result of the addition of the fire systems design (FSD) material, which itself was the result of CPSISC's response to the long-held need of the fire sector to develop qualifications to support the designers of fire systems.

This small, niche sector is of great importance, given the vital work fire systems designers do in ensuring public safety and the protection of built assets. Yet the design of fire systems was not covered by any formal competency-based qualifications.

The National Fire Industry Association (NFIA) and the Fire Protection Association Australia (FPAA) played a central and active role in the project steering committee and in the development of the FSD qualifications and units of competency. Members of the PSC involved in Version 2 were:

- Wayne Smith (Chair), Fire Protection Industry Board of Queensland Inc and NFIA
- Vince Ball, Executive Director, Construction Industry Training Council, ACT
- Luke Behncke, A/Manager, Curriculum Services Branch, Skills Victoria
- Michael Boyce, Chief Executive Officer, PEER VEET
- Carmel Coate, Executive Director, NFIA
- Paul Deipenau, Service Manager, Spectrum Fire Pty Ltd
- Graeme Hunt, Delegate of the Director of Building Control, Department of Justice, Tasmania
- Bill Lea, Managing Director, Prime Water Technologies and FPAA
- Doug McClusky, Training Manager, Communications Electrical Plumbing Union (CEPU) — Plumbing Division
- Roger Thomas, Director of Engineering, Asia Pacific, Tyco Fire Protection Services
- Terry Whitty, Senior Educator, Quality and Curriculum for Building Services, RMIT.

The FSD sector is subject to a range of regulatory and performance requirements arising from fire, plumbing, environmental agencies and Australian standards. The regulatory requirements also vary from and between the various commonwealth, state and territory jurisdictions. It is expected that this sector will be subject to increasing levels of regulatory coverage.

Overview of Version 1

The Training Package review encompassed three previously endorsed Training Packages:

- BCP03 Plumbing and Services Training Package, originally endorsed in October 2003
- BCF00 Off-Site Construction Training Package, originally endorsed in July 2000
- BCG03 General Construction Training Package, endorsed in November 2003 after the review of the previous Training Package originally completed in 1998 and resulted in Certificate IV, Diploma and Advanced Diploma units of competency and qualifications being endorsed in August 2006.

To ensure that the general and off-site units of competency and qualifications integrate and meet industry needs and that plumbing and services qualifications were relevant to industry needs the review was much more than a technical scoping of the existing units of competency and packaging into qualifications. The reviewed Training Packages were restructured where necessary to provide flexible recognition points for the many specialist job roles that have grown in the industry as new building products are developed and technology and work organisation changes occur.

The review put forward and tested how an Integrated Framework of units of competency and qualifications might work across the breadth of the construction industry for the benefit of all stakeholders. In bringing the three Training Packages under a common umbrella it was not the intention to change the recognition and status of any specialist roles or trade streams of work, but to show how the skills used across the whole industry are complementary.

Under the general theme of *A More Flexible and Responsive Training System* COAG, in February 2006, introduced a set of measures to ensure Australia's training and apprenticeship system offered more flexible pathways into work roles and trades where there are ongoing skill shortages. The Construction and Property Services Industry Skills Council was asked to develop additional, nationally portable qualifications for the General Construction Training Package. The primary intention was to better meet ongoing construction industry skill demands and shortages, provide skill recognition for existing workers and improve productivity and safety.

The result was a suite of six new qualifications; three at Certificate II and three at Certificate III that were endorsed by the National Quality Council in July and September 2006. The qualifications were:

- BCG20306 Certificate II in Steelfixing
- BCG20406 Certificate II in Concreting
- BCG20506 Certificate II in Stonemasonry
- BCG31606 Certificate III in Wall and Ceiling Lining (Plasterboard)
- BCG31506 Certificate III in Formwork/Falsework
- BCG31706 Certificate III in Low Rise Structural Framing.

These intermediate qualifications had significant focus during the review to ensure they were genuinely in demand and supported by industry. There has also been the addition of four further qualifications:

- CPC20208 Certificate II in Construction Pathways
- CPC31608 Certificate III in Paving
- CPC32008 Certificate III in Carpentry and Joinery
- CPC32108 Certificate III in Signage.

Two previous qualifications in the BCF00 Off-Site Construction Training Package have been merged with similar qualifications in the general construction area. These are:

- BCF10100 Certificate I in Construction (Off-Site), now CPC10108 Certificate I in General Construction
- BCF20100 Certificate II in Off-Site Construction, now CPC20108 Certificate II in General Construction and CPC20208 Certificate II in Construction Pathways.

Three previous qualifications in the BCF00 Off-Site Construction Training Package were amalgamated into the single new qualification CPC32108 Certificate III in Signage noted above. These qualifications were:

- BCF30700 Certificate III in Off-Site Construction (Sign Writing/Computer Operation)
- BCF30800 Certificate III in Off-Site Construction (Sign Manufacture)
- BCF30900 Certificate III in Off-Site Construction (Neon Manufacture).

Two other qualifications previously in BCF00 Off-Site Construction Training Package have been deleted and not replaced as they had no take-up over the past three years and no future demand expressed by stakeholders during consultation. Other Training Package qualifications have been identified as more suitable. The deleted qualifications are:

- BCF30400 Certificate III in Off-Site Construction (Pre-fabrication)
- BCF30500 Certificate III in Off-Site Construction (Machining).
- The review work was overseen by two specialist groups:

The Review Steering Group:

- Lindsay Fraser (Joint Chair), Assistant Secretary, Construction Forestry, Mining and Energy (CFMEU)
- Laurie Kruize (Joint Chair), Manager for Training and Professional Development, Housing Industry Association (HIA)
- Vince Ball, Executive Director, Construction Industry Training Council ACT
- Peter Brilliant, Director, Building Commission Victoria
- Tom Brown, CEO, Thomas Brown Shopfitters Pty Ltd and Australian Shop and Office Fitting Industry Association (ASOFIA)
- Richard Campbell, Manager, Training Products and Support, Queensland Training Authority
- Vin Ebejer, Training Manager, Master Plumbers Australia
- Carlo Garofali, President, Concrete Placers Association NSW
- Neil Gow, National Manager Training Policy, Master Builders Australia
- David Hay, Managing Director, Metal Plaque Pty Ltd and Australian Sign and Graphics Association (ASGA)
- Paul Lawrence, Technical Trainer, Master Builders Australia NSW
- Doug McClusky, Training Manager, Communications Electrical Plumbing Union (CEPU) – Plumbing Division
- Brian Moss, Apprenticeship Manager, Australand
- Barry Peddle, Director, Institute of TAFE South Western NSW, TAFE Directors Australia
- Terry Saunby, Principal Program Manager, Curriculum Centre for Manufacturing, Engineering, Construction and Transport (MECAT), NSW TAFE
- Alan Sparks, CEO, East Coast Apprenticeships
- Glenn Thompson, Training Manager, Australian Manufacturing Workers Union (AMWU)
- Robert Wagner, General Manager, J.H. Wagner & Sons
- Alan Waldron, General Manager, Construction Training Queensland
- Bill Watson, CEO, Connectors Pty Ltd and Master Plumbers Association of Queensland

National Plumbing Review Reference Group:

- Kerry Appelt, TAFE Queensland National Plumbing and Services Training Advisory Group (NPSTAG) Queensland
- Fred Baltetsch, TAFE Victoria National Plumbing and Services Training Advisory Group (NPSTAG) Victoria
- Carmel Coate, Executive Director, National Fire Industry Association (NFIA)

- Gary Cook, Training Adviser, Sydney Water and National Plumbing and Services Training Advisory Group (NPSTAG) NSW
- Michael McGuiness, Plumbing and Services Regulator, Queensland Australian New Zealand Reciprocity Association
- Stephen Movley, President, Institute of Plumbing WA
- Paul Naylor, CEO, Master Plumbers Association of NSW
- Geoff Sharrock, CEO, Plumbing Industry Commission Victoria
- Bill Watson, CEO, Connectors Pty Ltd and Master Plumbers Association of Queensland

Introduction

In economic terms the construction industry is a major segment of the Australian economy, employing nearly 900,000 people with half of this workforce in the housing sector. The industry is characterised by contracting and with less than 3 persons per firm the norm is micro businesses with owners working directly in a trade area, rather than just business management. The trend toward contracting labour and increasingly labour hire rather than direct employment is more pronounced in the general construction industry than any other. CPC08 Construction, Plumbing and Services Training Package covers occupations and job roles in general and off-site construction, plumbing and services from entry level to management.

There are entry points at Certificate I and Certificate II that have pre-vocational outcomes suitable for entry into Australian Apprenticeships. Stakeholders strongly support achievement of full trade qualifications to help meet ongoing industry skill shortages.

Trade outcomes include shopfitting, joinery, stair building, stonemasonry (monumental/installation), signage, brick and blocklaying, carpentry, concreting, demolition, dogging, painting and decorating, segmental paving, rigging, roof tiling, scaffolding, solid plastering, steelfixing, wall and ceiling lining, wall and floor tiling and waterproofing. Plumbing and services occupations include coverage of urban irrigation, drainage, metal roofing and cladding, plumbing, mechanical services, roof plumbing, gas fitting and fire protection services.

Certificate IV and Diploma qualifications cover building and plumbing licensing requirements with the Advanced Diploma meeting skills of construction managers. The specialist field of building surveying is included with Diploma and Advanced Diploma outcomes.

Building techniques used in the construction industry have undergone changes in recent years, with significant technological advances in prefabrication, energy efficiency and project management tools. These advancements have affected a wide range of fields, from materials (concrete, metal pre-casting and alternative wood products), management methods (subcontracting, prefabrication and project management) and innovations (robotics, computer aided design and electronically linked project management teams). Benefits of technological advancement are also seen in increased productivity, new capital equipment and the improved energy efficiency of buildings.

Qualifications Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the *AQF Implementation Handbook*. The 2007 version of the *AQF Implementation Handbook* is expected to be available on the Australian Qualifications Framework Advisory Board (AQFAB) website <www.aqf.edu.au> during September 2007, and in print in October 2007 (or you can obtain the hard copy by contacting AQFAB on phone 03 9639 1606 or email at aqfab@curriculum.edu.au).

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following AQF qualifications.

- Certificate I in ...
- Certificate II in ...
- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate of ...
- Vocational Graduate Diploma of ...

Graduate Certificates and Graduate Diplomas can also be awarded in the vocational education and training sector under certain conditions – see the *AQF Implementation Handbook* for details.

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) should issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the current *AQF Implementation Handbook* and the AQTF 2007.

Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). Issuance of Statements of Attainment must comply with the advice provided in the current *AQF Implementation Handbook* and the AQTF 2007.

Under the AQTF 2007, RTOs must recognise the achievement of competencies as recorded on a qualification testamur or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The *AQF Implementation Handbook* provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I*Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction; and
- receive and pass on messages/information.

Certificate II*Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources; and
- take limited responsibility for own outputs in work and learning.

Certificate III*Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical

advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge;
- apply a range of well-developed skills;
- apply known solutions to a variety of predictable problems;
- perform processes that require a range of well-developed skills where some discretion and judgement is required;
- interpret available information, using discretion and judgement;
- take responsibility for own outputs in work and learning; and
- take limited responsibility for the output of others.

Certificate IV

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills.

Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts;
- apply solutions to a defined range of unpredictable problems;
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas;
- identify, analyse and evaluate information from a variety of sources;

- take responsibility for own outputs in relation to specified quality standards; and
- take limited responsibility for the quantity and quality of the output of others.

Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas;
- analyse and plan approaches to technical problems or management requirements;
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations;
- evaluate information, using it to forecast for planning or research purposes;
- take responsibility for own outputs in relation to broad quantity and quality parameters; and
- take some responsibility for the achievement of group outcomes.

Advanced Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas;
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions;
- generate ideas through the analysis of information and concepts at an abstract level;
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills;
- demonstrate accountability for personal outputs within broad parameters; and
- demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.
- Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
- Generate and evaluate ideas through the analysis of information and concepts at an abstract level.
- Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
- Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

Vocational Graduate Diploma

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.

Career pathways in the construction, plumbing and services industries

The diagram below represents the qualification pathways in CPC08 Construction, Plumbing and Services Training Package.

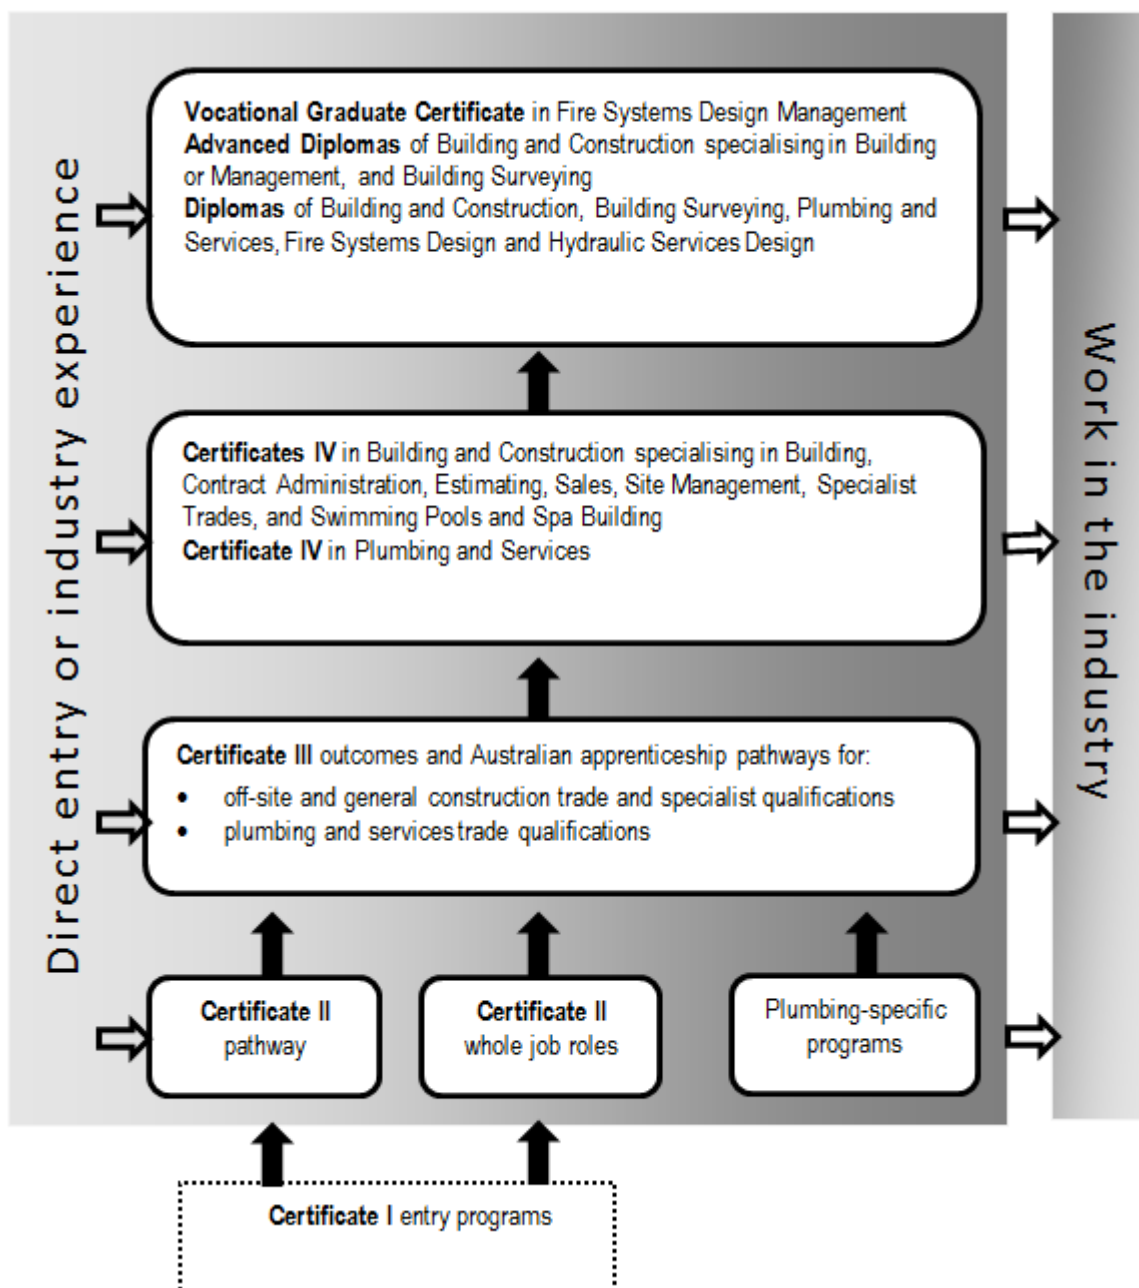

Figure 1: Construction, plumbing and services career pathways

All qualifications are open to direct entry, with the exception of the operations stream in the Certificate IV in Plumbing and Services and the Diploma of Plumbing and Services.

Skill sets

Definition

Skill sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

Wording on Statements of Attainment

Skill sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill sets are not qualifications.

Where skill sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording ‘these competencies meet *[insert skill set title or identified industry area]* need’ on the Statement of Attainment. This wording applies only to skill sets that are formally identified as such in the endorsed Training Package. See the 2007 edition of the AQF Implementation Handbook for advice on wording on Statements of Attainment - the updated version is expected to be available on the AQFAB website <www.aqf.edu.au> during September 2007 and in print in October 2007.

Skill sets in CPC08 Construction, Plumbing and Services Training Package

Skill sets are groups of units of competency that reflect a cohesive industry outcome, but one which is insufficient for a full Australian Qualifications Framework (AQF) award. Skill sets may also provide a bridge between qualifications, respond to regulatory needs or identify an emerging skill area.

- Undertake trade contracting
- Lead a building, construction or plumbing and services team
- Manage complex building projects

Employability skills

Employability Skills Framework

The following table contains the employability skills facets identified in the report *Employability Skills for the Future*.

Skill	Facets Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
Communication that contributes to productive and harmonious relations across employees and customers	<ul style="list-style-type: none"> • listening and understanding • speaking clearly and directly • writing to the needs of the audience • negotiating responsively • reading independently • empathising • using numeracy effectively • understanding the needs of internal and external customers • persuading effectively • establishing and using networks • being assertive • sharing information • speaking and writing in languages other than English
Teamwork that contributes to productive working relationships and outcomes	<ul style="list-style-type: none"> • working across different ages irrespective of gender, race, religion or political persuasion • working as an individual and as a member of a team • knowing how to define a role as part of the team • applying teamwork to a range of situations e.g. future planning and crisis problem solving • identifying the strengths of team members • coaching and mentoring skills, including giving feedback
Problem solving that contributes to productive outcomes	<ul style="list-style-type: none"> • developing creative, innovative and practical solutions • showing independence and initiative in identifying and solving problems • solving problems in teams • applying a range of strategies to problem solving • using mathematics, including budgeting and financial management to solve problems • applying problem-solving strategies across a range of areas • testing assumptions, taking into account the context of data and circumstances • resolving customer concerns in relation to complex project issues

Skill	Facets Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
Initiative and enterprise that contribute to innovative outcomes	<ul style="list-style-type: none"> • adapting to new situations • developing a strategic, creative and long-term vision • being creative • identifying opportunities not obvious to others • translating ideas into action • generating a range of options • initiating innovative solutions
Planning and organising that contribute to long and short-term strategic planning	<ul style="list-style-type: none"> • managing time and priorities – setting time lines, coordinating tasks for self and with others • being resourceful • taking initiative and making decisions • adapting resource allocations to cope with contingencies • establishing clear project goals and deliverables • allocating people and other resources to tasks • planning the use of resources, including time management • participating in continuous improvement and planning processes • developing a vision and a proactive plan to accompany it • predicting – weighing up risk, evaluating alternatives and applying evaluation criteria • collecting, analysing and organising information • understanding basic business systems and their relationships
Self-management that contributes to employee satisfaction and growth	<ul style="list-style-type: none"> • having a personal vision and goals • evaluating and monitoring own performance • having knowledge and confidence in own ideas and visions • articulating own ideas and visions • taking responsibility
Learning that contributes to ongoing improvement and expansion in employee and company operations and outcomes	<ul style="list-style-type: none"> • managing own learning • contributing to the learning community at the workplace • using a range of mediums to learn – mentoring, peer support and networking, IT and courses • applying learning to technical issues (e.g. learning about products) and people issues (e.g. interpersonal and cultural aspects of work) • having enthusiasm for ongoing learning • being willing to learn in any setting – on and off the job • being open to new ideas and techniques • being prepared to invest time and effort in learning new

Skill	Facets Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
	skills <ul style="list-style-type: none"> acknowledging the need to learn in order to accommodate change
Technology that contributes to the effective carrying out of tasks	<ul style="list-style-type: none"> having a range of basic IT skills applying IT as a management tool using IT to organise data being willing to learn new IT skills having the OHS knowledge to apply technology having the appropriate physical capacity

Employability Skills Summary

An Employability Skills Summary exists for each qualification. Summaries provide a lens through which to view employability skills at the qualification level and capture the key aspects or facets of the employability skills that are important to the job roles covered by the qualification. Summaries are designed to assist trainers and assessors to identify and include important industry application of employability skills in learning and assessment strategies. The following is important information for trainers and assessors about Employability Skills Summaries.

Employability Skills Summaries provide examples of how each skill is applicable to the job roles covered by the qualification.

Employability Skills Summaries contain general information about the industry context which is further explained as measurable outcomes of performance in the units of competency in each qualification.

The detail in each Employability Skills Summary will vary depending on the range of job roles covered by the qualification in question.

Employability Skills Summaries are not exhaustive lists of qualification requirements or checklists of performance (which are separate assessment tools that should be designed by trainers and assessors after analysis at the unit level).

Employability Skills Summaries contain information that may also assist in building learners' understanding of industry and workplace expectations.

Industry requirements for employability skills

For more information on employability skills in the Construction and Property Services Industry Skills Council (CPSISC) Training Packages go to the CPSISC website at www.cpsisc.com.au.

Assessment Guidelines

Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the AQTF 2007. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Assessment system overview

This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF requirements; licensing and registration requirements; and assessment pathways.

Benchmarks for assessment

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

In the areas of work covered by this Training Package, the endorsed units of competency are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

Australian Quality Training Framework assessment requirements

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2007 *Essential Standards for Registration*.

The AQTF 2007 *Essential Standards for Registration* can be downloaded from <www.training.com.au>. The following points summarise the assessment requirements.

Registration of training organisations

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering/Course Accrediting Body in accordance with the AQTF 2007. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

Quality training and assessment

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2007 *Essential Standards for Registration*, Standard 1.

Assessor competency requirements

Each person involved in training and assessment must be competent for the functions they perform. See the AQTF 2007 *Essential Standards for Registration*, Standard 1 for assessor (and trainer) competency requirements.

Assessment requirements

The RTO's assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2007 *Essential Standards for Registration*, Standard 1.

Assessment strategies

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2007 *Essential Standards for Registration*, Standard 1.

National recognition

Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2007 *Essential Standards for Registration*, Condition of Registration 7: Recognition of qualifications issued by other RTOs.

Access and equity and client outcomes

Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2007 *Essential Standards for Registration*, Standard 2.

Monitoring assessments

Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the *Essential Standards for Registration*. See the AQTF 2007 *Essential Standards for Registration*, Standard 3.

Recording assessment outcomes

Each RTO must manage records to ensure their accuracy and integrity. See the AQTF 2007 *Essential Standards for Registration*, Standard 3.

Issuing AQF qualifications and Statement of Attainment

Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current AQF Implementation Handbook and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). See the AQTF 2007 and the 2007 edition of the AQF Implementation Handbook—available on the AQFAB website <www.aqf.edu.au>.

Licensing requirements

A number of occupations and job roles covered by the units of competency and qualifications in CPC08 Construction, Plumbing and Services Training Package may be subject to state and territory licensing requirements. These requirements vary significantly across jurisdictions. There are 13 specific units of competency agreed by all OHS regulators and the Australian Safety and Compensation Council (ASCC) as meeting certain licensing categories. These units of competency include:

- The unit CPCCOHS1001A Work safely in the construction industry aligned at Certificate I meets the requirement for the National Code of Practice for Induction for Construction Work (ASCC 2007)
- 12 high risk work licensing units of competency that support the implementation of the National Standard for Licensing Persons Performing High Risk Work (ASCC, April 2006) and these are identified as licensing competencies in the unit code and unit descriptor.

Licensing units of competency may be packaged into a qualification, included in a skill set, or delivered and assessed as stand-alone units.

The National Standard for licensing persons performing high risk work provides the overarching regulatory framework for the delivery and assessment of the licensing units of competency. State/Territory OHS authorities have mandated the use Assessment Instruments for the 12 high risk work licensing units of competency. The Assessment Instruments have been endorsed by the national body responsible for OHS matters. For further information contact your State/Territory OHS Authority.

The high risk work licensing units of competency include:

High risk work licensing unit	Aligned to qualification in CPC08	Core or elective
CPCCLTC4001A Licence to operate a tower crane	CPC40611 Certificate IV in Building and Construction (Specialist Trades)	Core (crane operations stream)
CPCCLTC4002A Licence to operate a self-erecting tower crane	CPC40611 Certificate IV in Building and Construction (Specialist Trades)	Core (crane operations stream)
CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level	CPC30911 Certificate III in Scaffolding	Core
CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level	CPC30911 Certificate III in Scaffolding	Core
CPCCLSF4001A Licence to erect, alter and dismantle scaffolding advanced level	CPC40611 Certificate IV in Building and Construction (Specialist Trades)	Core (Rigging stream)
CPCCLRG3001A Licence to perform rigging basic level	CPC30711 Certificate III in Rigging	Core
CPCCLRG3002A Licence to perform rigging intermediate level	CPC30711 Certificate III in Rigging	Core

High risk work licensing unit	Aligned to qualification in CPC08	Core or elective
CPCCLRG4001A Licence to perform rigging advanced level	CPC40611 Certificate IV in Building and Construction (Specialist Trades)	Core (Rigging stream)
CPCCLHS3001A Licence to operate a personnel and materials hoist	CPC30711 Certificate III in Rigging	Elective
CPCCLHS3002A Licence to operate a materials hoist	CPC30711 Certificate III in Rigging	Elective
CPCCLDG3001A Licence to perform dogging	CPC30511 Certificate III in Dogging	Core
CPCCLBM3001A Licence to operate a concrete placing boom	CPC30311 Certificate III in Concreting	Elective

For further information on the implementation of these units and the National Standard for licensing persons performing high risk work visit:

<http://www.ascc.gov.au/ascc/healthsafety/trainingskillslicensing/licensing/licensing.htm>

Plumbing and services

The plumbing and services industry places a premium on skills and knowledge that can be demonstrated in a real workplace environment. Whilst assessment of some of the units of competency in CPC08 can be carried out in a simulated work environment, the industry strongly recommends that assessment is conducted in the workplace, wherever possible. When selecting a plumbing and services qualification, including choice of electives, reference should be made to the requirement identified by the Australian and New Zealand Reciprocity Association that the following units must be completed for the range of plumbing specialisations which are used within the States and Territories for licensing purposes:

All streams

CPCPCM4001A	Carry out work based risk control processes
CPCPCM4002A	Estimate and cost work
BSBSMB401A	Establish legal and risk management requirements of small business

Water supply

CPCPWT4011A	Design and size heated and cold water services and systems
CPCPWT4012A	Commission and maintain backflow prevention devices
CPCPWT4013A	Commission and maintain heated water temperature control devices

Drainage

CPCPDR4011A	Design and size sanitary drainage systems
CPCPDR4012A	Design and size stormwater drainage systems
CPCPDR4013A	Design and size domestic treatment plant disposal systems

Sanitary

CPCPSN4011A	Design and size sanitary plumbing systems
-------------	---

Fire services

CPCPFS4011A	Commission domestic and residential fire suppression sprinkler systems
CPCPFS4012A	Commission and maintain special hazard fire suppression systems
CPCPFS4013A	Commission fire system pump sets
CPCPFS4014A	Design residential and domestic fire sprinkler systems

Gasfitting

CPCPGS4011A	Design and size consumer gas installations
CPCPGS4012A	Service Type A gas appliances

Air conditioning and mechanical services

CPCPMS4002A	Commission air and water systems
CPCPMS4011A	Design, size and lay out heating and cooling systems

Roofing

CPCPRF4011A	Design and size roof drainage systems
-------------	---------------------------------------

Licensing authorities

Licensing authorities across Australia have actively participated in the development of this Training Package and it is envisaged that over time the state and territory licensing requirements in a number of occupations will be aligned with the units of competency and qualifications in this Training Package. There is no one 'national' licence for the sector or any of its functions. Certification responsibilities and systems are administered by state legislation and may differ between States and Territories.

The developers of this Training Package, together with DEEWR, consider that the licensing/registration requirements described in this section apply to RTOs, assessors or candidates with respect to this Training Package. While reasonable care has been taken in its preparation, the developers of this Training Package and DEEWR cannot guarantee that the list is definitive or accurate at the time of reading; the information in this section is provided in good faith on that basis.

In order to conduct assessments for statutory licensing or other industry registration conditions, assessors may need to meet additional requirements. While RTOs may have information on the licensing requirements for their particular State or Territory, these requirements may change over time and differ between State and Territory jurisdictions. Users of this Training Package are therefore advised to consult the relevant occupational licensing authority in their State or Territory to determine the specific licensing requirements. The regulatory authorities for the building and construction and plumbing and services industries at the time of publication of this Training Package are:

Jurisdiction	Regulatory Body	Address
National	Occupational Health and Safety Authorities	For contact details for all state/territory occupational health and safety authorities visit: http://www.ascc.gov.au/ascc/AboutUs/StateContracts/
Australian Capital Territory (for building and plumbing licences and registrations)	ACT Planning and Land Authority	2nd Floor South Dame Pattie Menzies House 16 Challis Street Dickson ACT 2601
New South Wales (for building and plumbing licences and registrations)	Office of Fair Trading	Licensing and Industry Standards Home Building Services Office of Fair Trading Level 4, 1 Fitzwilliam Street Parramatta NSW 2150
Northern Territory (for building licences)	Northern Territory Building Practitioners Board	1st Floor Cavanaugh House Darwin NT 0800
Northern Territory (for all plumbing)	Plumbers and Drainers Licensing	GPO Box 1680 Darwin NT 0801

Jurisdiction	Regulatory Body	Address
licences and registrations)	Board	
Queensland (for building licences)	Building Services Authority	11 Edmondstone Street South Brisbane QLD 4101
Queensland (for all plumbing licences and registrations)	Department of Local Government and Planning, Sport and Recreation	PO Box 15031 City East QLD 4002
Queensland (for all gasfitting licences and registrations)	Department of Mines and Energy	PO Box 15216 City East QLD 4002
South Australia (for building and plumbing licences and registrations)	Office of Consumer and Business Affairs	Chesser House Level 3, 91-97 Grenfell Street Adelaide SA 5000
Tasmania (for building licences)	Building Standards and Regulation	30 Gordons Hill Road Rosny Park TAS 7018

Western Australia (for all plumbing licences and registrations)	Department of Consumer and Employment Protection (Plumbers Licensing Board)	Locked Bag 14 Cloisters Square WA 6850
Western Australia (for all gasfitting licences and registrations)	Energy Safety	303 Sevenoaks Street Cannington WA 6107 PO Box 135 Cannington WA 6987

Requirements for Assessors

In order to deliver the qualifications contained in this Training Package, assessors delivering qualifications from this CPC08 Construction, Plumbing and Services Training Package should have the following minimum competency, recognition and experience:

- formal recognition of competency at least to the level being assessed
- relevant industry experience, that is, workplace experience within the last two years in the competency area being delivered
- relevant occupational registration or licensing in areas where this is a regulatory requirement to practise in the jurisdiction where the qualification is being assessed.

Assessing competence at higher AQF levels

In order to assess competence in qualifications within this Training Package at Certificate IV to Advanced Diploma level (excluding the Diploma and Advanced Diploma of Building Surveying), assessors or assessment team members collectively should have the following minimum competency, recognition and experience:

Certificate IV

Recommended construction industry requirements for assessors relative to vocational competencies:

- relevant vocational competencies and current industry experience at a professional or para-professional level in the construction industry.

This may be evidenced by registration on the National Building Professionals Register (at either levels 1 or 2) or registration on the National Building Technologists Register (at level 1).

Examples of appropriate employment include:

- principal or senior manager of a building practice constructing several complete houses a year
- project manager, contracts manager, site manager, quantity surveyor or general foreman on larger construction projects

- possession of a nationally recognised Statement of Attainment or qualification covering the units of competency being delivered and/or accepted by industry as a subject matter expert; where subject matter expertise can be evidenced by other credentials or confirmed experience equivalent to a nationally recognised AQF qualification in the subject area.

Examples of formal recognition are:

- proof of membership of a relevant professional body to at least Associate or Corporate (Chartered) level.

Diploma

Recommended construction industry requirements for assessors relative to vocational competencies:

- current industry experience at a professional or para-professional level in the construction industry.

This may be evidenced by registration on the National Building Professionals Register (at level 1).

Examples of appropriate employment include:

- principal or senior manager of a building practice working in the commercial construction sector and/or completing a significant number of residential or commercial projects each year, including a number of concurrent projects
- project manager, contracts manager or other senior manager for a building practice working in the commercial construction sector and/or completing a significant number of residential or commercial projects each year, including a number of concurrent projects
- possession of a nationally recognised Statement of Attainment or qualification covering the units of competency being delivered and/or accepted by industry as a subject matter expert; where subject matter expertise can be evidenced by other credentials or confirmed experience equivalent to a nationally recognised AQF qualification in the subject area.

Examples of formal recognition are:

- proof of membership of a relevant professional body to at least Corporate (Chartered) level.

Advanced Diploma

Recommended construction industry requirements for assessors relative to vocational competencies:

- current industry experience at a professional or para-professional level in the construction industry.

This may be evidenced by registration on the National Building Professionals Register (at level 1).

Examples of appropriate employment include:

- principal or senior manager of a building practice working in the commercial construction sector and/or completing a significant number of large scale and high rise projects each year, including a number of concurrent projects
- project manager, contracts manager or other senior manager for a building practice working in the commercial construction sector and/or completing a significant number of large scale and high rise projects each year, including a number of concurrent projects

- possession of a nationally recognised Statement of Attainment or qualification covering the units of competency being delivered and/or accepted by industry as a subject matter expert; where subject matter expertise can be evidenced by other credentials or confirmed experience equivalent to a nationally recognised AQF qualification in the subject area.

Examples of formal recognition are:

- proof of membership of a relevant professional body to at least Corporate (Chartered) level.

RTO assessments

The RTO's assessments meet the requirements of the endorsed components of Training Packages and the outcomes specified in accredited courses within the scope of its registration. The RTO must ensure that assessments (including RPL):

- comply with the Assessment Guidelines included in the applicable nationally endorsed Training Packages or the assessment requirements specified in accredited courses
- lead to the issuing of a statement of attainment or qualification under the AQF when a person is assessed as competent against nationally endorsed unit(s) of competency in the applicable Training Package or modules specified in the applicable accredited course
- are valid, reliable, fair and flexible
- provide for applicants to be informed of the context and purpose of the assessment and the assessment process
- where relevant, focus on the application of knowledge and skill to the standard of performance required in the workplace and cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- involve the evaluation of sufficient evidence to enable judgements to be made about whether competency has been attained
- provide for feedback to the applicant about the outcomes of the assessment process and guidance on future options
- are equitable for all persons, taking account of individual needs relevant to assessment
- provide for reassessment on appeal.

The RTO must ensure that RPL is offered to all applicants on enrolment

The RTO must have an RPL process that:

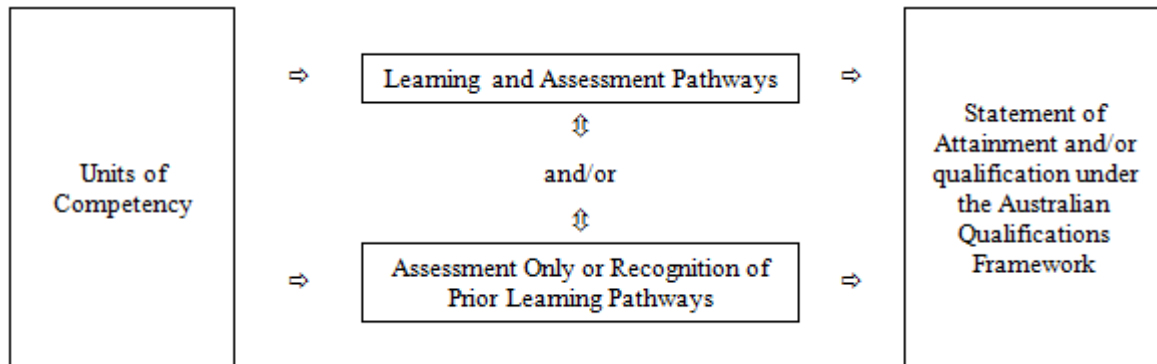

- i is structured to minimise the time and cost to applicants
- ii provides adequate information, support and opportunities for participants to engage in the RPL process.

Pathways

The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, an assessment-only or recognition pathway, or a combination of the two as illustrated in the following diagram.

Each of these assessment pathways leads to full recognition of competencies held – the critical issue is that the candidate is competent, not how the competency was acquired. Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package and the AQTF 2007.

Learning and assessment pathways

Usually, learning and assessment are integrated, with assessment evidence being collected and feedback provided to the candidate at any time throughout the learning and assessment process.

Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

Assessment-only or recognition of prior learning pathway

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were achieved.

In an assessment-only or Recognition of Prior Learning (RPL) pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor, such as in the compilation of portfolios; or directed by the assessor, such as through observation of workplace performance and skills application, and oral and/or written assessment. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF 2007 must be met.

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, and work samples. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate's own work);
- valid (directly related to the current version of the relevant endorsed unit of competency);
- reliable (shows that the candidate consistently meets the endorsed unit of competency);
- current (reflects the candidate's current capacity to perform the aspect of the work covered by the endorsed unit of competency); and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

The assessment only or recognition of prior learning pathway is likely to be most appropriate in the following scenarios:

- candidates enrolling in qualifications who want recognition for prior learning or current competencies;

- existing workers;
- individuals with overseas qualifications;
- recent migrants with established work histories;
- people returning to the workplace; and
- people with disabilities or injuries requiring a change in career.

Combination of pathways

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

Assessor requirements

This section identifies the mandatory competencies for assessors, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

Assessor competencies

The AQTF 2007 specifies mandatory competency requirements for assessors. For information, Element 1.4 from the AQTF 2007 *Essential Standards for Registration* follows:

1.4 Training and assessment are conducted by trainers and assessors who:

- a) have the necessary training and assessment competencies as determined by the National Quality Council or its successors
- b) have the relevant vocational competencies at least to the level being delivered or assessed
- c) continue developing their vocational and training and assessment competencies to support continuous improvements in delivery of the RTO's services.

Reasonable adjustment

In accordance with the Disability Standards for Education (2005), reasonable adjustments are to be made to ensure equity in training and assessment of people with disabilities. This means that all 'education providers are under a positive obligation to make changes to reasonably accommodate the needs of a student with a disability'.

Adjustments are considered 'reasonable' if they do not impose an unjustifiable hardship on a training provider or employer. When assessing people with disabilities, assessors are encouraged to apply good practice assessment methods with sensitivity and flexibility. This should include:

- checking their initial assumptions about the capacity to include people with various disabilities
- seeking advice from people with experience and expertise in training, assessing and otherwise supporting people with disabilities.

Designing assessment tools

This section provides an overview on the use and development of assessment tools.

Use of assessment tools

Assessment tools provide a means of collecting the evidence that assessors use in making judgements about whether candidates have achieved competency.

There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

Using prepared assessment tools

If using prepared assessment tools, assessors should ensure these are benchmarked, or mapped, against the current version of the relevant unit of competency. This can be done by checking that the materials are listed on the National Training Information Service <www.ntis.gov.au>. Materials on the list have been noted by the National Quality Council as meeting their quality criteria for Training Package support materials.

Developing assessment tools

When developing their own assessment tools, assessors must ensure that the tools:

- are benchmarked against the relevant unit or units of competency;
- are reviewed as part of the validation of assessment strategies required under the AQTF 2007; and
- meet the assessment requirements expressed in the AQTF 2007 *Essential Standards for Registration*.

A key reference for assessors developing assessment tools is TAE10 Training and Education Training Package and the unit of competency TAEASS502A Design and develop assessment tools.

Conducting assessment

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

Mandatory assessment requirements

Assessments must meet the criteria set out in the AQTF 2007 *Essential Standards for Registration*.

For information, the mandatory assessment requirements from Standard 1 from the AQTF 2007 *Essential Standards for Registration* are as follows:

1.5 Assessment, including Recognition of Prior Learning (RPL):

- a) meets the requirements of the relevant Training Package or accredited course
- b) is conducted in accordance with the principles of assessment and the rules of evidence
- c) meets workplace and, where relevant, regulatory requirements.

Assessment of employability skills

Employability skills are integral to workplace competency. As such, they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.

Employability skills are embedded and explicit within each unit of competency. Training providers must use employability skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant employability skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of employability skills at that qualification outcome
- designing training and assessment to address employability skills requirements.

For more information on employability skills in CPC08 Construction, Plumbing and Services Training Package go to the Construction and Property Services Industry Skills Council (CPSISC) website at www.cpsisc.com.au.

Access and equity

An individual's access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia's VET clients and Australia's current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia's economic development and social and cultural life.

Reasonable adjustments

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability.

Under the Disability Standards for Education 2005, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While 'reasonable adjustment' and 'unjustifiable hardship' are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student's disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship.

See Part 4, Chapter 2 of the Training Package Development Handbook (DEEWR, September 2007) for more information on reasonable adjustment, including examples of adjustments.

Further sources of information

The section provides a listing of useful contacts and resources to assist assessors in planning, designing, conducting and reviewing of assessments against this Training Package.

Competency Standards

What is competency?

The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.

Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself.

Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

Contextualisation of units of competency by RTOs

Registered Training Organisations (RTOs) may contextualise units of competency in this endorsed Training Package to reflect required local outcomes. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.

Any contextualisation of units of competency in this Training Package must be within the bounds of the following advice:

- RTOs must not remove or add to the number and content of elements and performance criteria.
- RTOs can include specific industry terminology in the range statement.
- Any amendments and additions to the range statement made by RTOs must not diminish the breadth of application of the competency, or reduce its portability.
- RTOs may add detail to the evidence guide in areas such as the critical aspects of evidence or required resources and infrastructure—but only where these expand the breadth of the competency and do not limit its use.

Construction, plumbing and services units of competency reflect the occupational requirements for each industry sector. This includes specific aspects of, and advice for, assessment that are critical to determining competency achievement.

Use of common units across all sectors of the Training Package has been maximised, however some skills that may appear generic are considered by industry stakeholders to require sector specialisation accommodated in individual units of competency.

Components of units of competency

The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

Unit title

The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

Unit descriptor

The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.

Employability skills

This sub-section contains a statement that the unit contains Employability skills.

Prerequisite units (optional)

If there are any units of competency that must be completed before the unit, these will be listed.

Application of the unit

This sub-section fleshes out the unit of competency's scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

Competency field (optional)

The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

Sector (optional)

The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

Elements of competency

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

Performance criteria

The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

Required skills and knowledge

The essential skills and knowledge are either identified separately or combined. Knowledge identifies what a person needs to know to perform the work in an informed and effective manner. Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Range statement

The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

Evidence guide

The evidence guide is critical in assessment as it provides information to the registered training organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:

- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment;
- relationships with the assessment of any other units of competency;
- suitable methodologies for conducting assessment including the potential for workplace simulation;
- resource implications, for example access to particular equipment, infrastructure or situations;
- how consistency in performance can be assessed over time, various contexts and with a range of evidence; and
- the required underpinning knowledge and skills

Employability skills in units of competency

The detail and application of employability skills facets will vary according to the job-role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of employability skills which are incorporated into the relevant units of competency and qualifications.

Employability skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine employability skills requirements.

Explicitly embedding employability skills in units of competency

This Training Package seeks to ensure that industry-endorsed employability skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability skills must be both explicit and embedded within units of competency. This means that employability skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to employability skills.

This Training Package also seeks to ensure that employability skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

Sample unit of competency components showing employability skills

The following table shows the sequence of a unit of competency, and each cell contains text taken from a range of units. It provides examples of where and how various employability skills could be embedded in each component.

Please note that in the example, the bracketed employability skills are provided for clarification only and would not be present in units of competency within this Training Package.

Unit Title	Give formal presentations and take part in meetings
-------------------	---

	(Communication)
Unit Descriptor	This unit covers the skills and knowledge required to promote the use and implementation of innovative work practices to effect change. (Initiative and enterprise)
Element	Proactively resolve issues. (problem solving)
Performance Criteria	Information is organised in a format suitable for analysis and dissemination in accordance with organisational requirements. (Planning and organising)
Range Statement	Software applications may include email, internet, word processing, spreadsheet, database or accounting packages. (technology)
	Modify activities depending on differing workplace contexts, risk situations and environments. (Learning)
Required Skills and Knowledge	Work collaboratively with others during a fire emergency. (teamwork)
	Instructions, procedures and other information relevant the maintenance of vessel and port security. (Communication)
Evidence Guide	<p>Evidence of having worked constructively with a wide range of community groups and stakeholders to solve problems and adapt or design new solutions to meet identified needs in crime prevention. In particular, evidence must be obtained on the ability to:</p> <ul style="list-style-type: none"> • assess response options to identified crime-prevention needs and determine the optimal action to be implemented • in consultation with relevant others, design an initiative to address identified issues. (Initiative and enterprise).

Employability Skills Summaries and units of competency

An Employability Skills Summary exists for each qualification. Summaries include broad advice on industry expectations with regard to employability skills at the qualification level. Summaries should be used by trainers and assessors to assist in identifying the employability skills requirements contained within units of competency.

For more information on employability skills in CPC08 Construction, Plumbing and Services Training Package go to the Construction and Property Services Industry Skills Council (CPSISC) website at www.cpsisc.com.au.

CPC10111 Certificate I in Construction

Modification History

Not Applicable

Description

This qualification provides an introduction to the construction industry, its culture, occupations, job roles and workplace expectations. The units of competency cover essential occupational health and safety requirements, the industrial and work organisation structure, communication skills, work planning, and basic use of tools and materials. The qualification is built around a basic construction project unit that integrates the skills and embeds the facets of employability skills in context.

The qualification is suited to VET in Schools programs or learners with no previous connection to the construction industry or relevant employment history.

There are no specific job outcomes to this qualification, but the skills achieved will assist in successfully undertaking a Certificate II pre-vocational program or job outcome qualification, or will facilitate entry into an Australian Apprenticeship.

The unit CPCCOHS1001A Work safely in the construction industry is designed to meet OHS regulatory authority requirements for OHS induction and must be achieved before access to any building and construction work site.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context. A substantial period of work placement is recommended to ensure the unit outcomes are met.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:<ul style="list-style-type: none">• Clear and direct communication• Active listening• Verbal and non-verbal language• Questioning to identify and confirm requirements• Language and concepts appropriate to cultural differences• Follows instructions from supervisor and other relevant others• Understands, interprets and applies information as required from:<ul style="list-style-type: none">• Environmental and OHS requirements• Codes and standards• Plans and drawings• Specifications• Safety signs and symbols• Organisational policies and procedures• Designs• Understands relevant definitions, terminology, symbols, abbreviations and language• Records relevant information using standard workplace documentation• Applies measurements and calculations using appropriate equipment, formulas and records as required• Reports and records hazards and risks
Teamwork	<ul style="list-style-type: none">• Works as part of a team to prioritise and action tasks• Provides assistance and encouragement to other team members• Initiates and encourages improvements in team performance• Identifies and utilises the strengths of other team members• Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	mental abilities
Problem solving	<ul style="list-style-type: none">• Participates in on-site meetings• Examines tools and equipment prior to use for damage, missing components or other defects• Identifies typical faults and problems and takes necessary remedial action• Rectifies simple faults with tools and equipment
Initiative and enterprise	<ul style="list-style-type: none">• Identifies opportunities to improve resource efficiency and makes suggestions as appropriate• Responds to change and workplace challenges• Puts ideas into action• Maximises use of resources by recycling, re-using or using appropriate disposal methods
Planning and organising	<ul style="list-style-type: none">• Identifies hazards and implements appropriate hazard control measures• Selects and uses appropriate materials, tools and equipment• Identifies requirements, applies relevant resources and sequences tasks using time management techniques
Self management	<ul style="list-style-type: none">• Completes daily work activities• Identifies own roles and responsibilities• Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems• Manages own performance to meet workplace standards• Seeks support to improve work performance• Cleans up work area
Learning	<ul style="list-style-type: none">• Identifies own learning needs and seeks skill development as required• Is open to learning new ideas and techniques
Technology	<ul style="list-style-type: none">• Uses calculators• Uses computers and relevant software• Uses and operates a range of tools and equipment correctly and safely

Packaging Rules**Packaging rules**

To achieve this qualification, the candidate must demonstrate competency in:

- 11 units of competency:
- 8 core units
- 3 elective units.

The elective units are to be chosen as follows:

- up to 3 units from the elective units below
- 1 unit from Certificate I or II qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, and they contribute to a valid, industry-supported vocational outcome.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2005A	Use construction tools and equipment
CPCCOHS1001A	Work safely in the construction industry
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
CPCCVE1011A	Undertake a basic construction project

Elective units

CPCCCM1011A	Undertake basic estimation and costing
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2004A	Handle construction materials
CPCCCM2006A	Apply basic levelling procedures
CPCCVE1002A	Undertake a basic computer design project

CPC20111 Certificate II in Construction

Modification History

Not Applicable

Description

This qualification provides an occupational outcome and a range of support tasks applicable to a majority of construction work sites.

Occupational titles may include:

- Trades assistant
- Builder's labourer
- Construction assistant.

The qualification has core units of competency that are required in many Certificate III qualifications. The elective options are structured to allow choice from a range of units aligned at Certificate III level and in total could provide meaningful credit in a construction industry Australian Apprenticeship.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

- correctly and safely
- Properly starts up, operates and shuts down equipment
- Carries out pre- and post-operational checks on equipment and machines
- Performs tool and equipment maintenance as required

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
- 9 core units
- 6 elective units.

The elective units are to be chosen as follows:

- at least 1 unit each from Group A, B and C
- the remaining units from the groups below to ensure a suitable mix of usable skills.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2005A	Use construction tools and equipment
CPCCCM2006A	Apply basic levelling procedures
CPCCCO2013A	Carry out concreting to simple forms
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Elective units

Group A: Site preparation

CPCCCM2002A	Carry out excavation
CPCCCM2009A	Carry out basic demolition
MEM05050B	Perform routine gas metal arc welding
RIICCM210A	Install trench support
RIIOHS202A	Enter and work in confined spaces
RIIWMG203A	Drain and dewater civil construction site

Group B: Site support

CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCRI3001A	Operate personnel and materials hoists
RIIOHS205A	Control traffic with stop-slow bat
TLILIC108A	Licence to operate a forklift truck

Group C: Trade preparation

CPCCCA2003A	Erect and dismantle formwork for footings and slabs on ground
CPCCCM2007A	Use explosive power tools
CPCCCO3027A	Cut and core concrete
CPCCPD2013A	Remove and replace doors and door and window components
CPCCSF2004A	Place and fix reinforcement materials
CPCCSP2003A	Prepare surfaces for plastering
CPCCWC2001A	Complete penetrations and flashings
CPCCWP2003A	Prepare for construction waterproofing process
CPCCWP2004A	Prepare surfaces for waterproofing application

Group D: General elective units

CPCCCM3003A	Work safely around power sources, services and assets
-------------	---

CPCCPD3029A	Remove graffiti and apply protective coatings
CPCCPD3030A	Apply protective paint coating systems
CPCCSH2003A	Apply and install sealant and sealant devices
CPCCWF3004A	Repair wall and floor tiles
LMFGG1001B	Complete a basic glass and glazing project
LMFGG3015B	Fabricate and install shower screens and wardrobe doors
RIICBS201A	Conduct tack coat spraying operations
RIICBS202A	Hand spread asphalt
RIICBS203A	Safely handle bituminous materials
RIICCM207A	Spread and compact materials manually
RIISAM204A	Operate small plant and equipment

CPC20211 Certificate II in Construction Pathways

Modification History

Not Applicable

Description

This qualification provides a pathway to the primary trades in the construction industry with the exception of plumbing. Trade outcomes are predominantly achieved through an Australian Apprenticeship and this Certificate II allows for inclusion of skills suited for entry to off-site occupations, such as joinery and shopfitting as well as carpentry, bricklaying and other occupations in general construction.

This Certificate II is designed to introduce learners to the recognised trade callings in the construction industry and provide meaningful credit in a construction industry Australian Apprenticeship.

The qualification has core unit of competency requirements that are required in most Certificate III qualifications. The elective options are structured to allow choice from areas of trade skills as an introduction to a range of occupations.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 12 units of competency:
- 6 core units
- 6 elective units.

The elective units are to be chosen as follows:

- no less than 2 and no more than 4 units from any of Groups A to G
- 2 units from any group.

The wide range of electives is drawn from Certificate III units of competency in CPC08 Construction, Plumbing and Services Training Package. Units of competency from Plumbing and Services qualifications are not available, as there are different plumbing and services pathways to Certificate III outcomes.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Elective units

Group A: Brick and blocklaying

CPCCBL2001A	Handle and prepare bricklaying and blocklaying materials
CPCCBL2002A	Use bricklaying and blocklaying tools and equipment

Group B: Carpentry

CPCCCA2002A	Use carpentry tools and equipment
CPCCCA2003A	Erect and dismantle formwork for footings and slabs on ground
CPCCCA2011A	Handle carpentry materials

Group C: Solid plastering

CPCCSP2001A	Handle solid plastering materials
CPCCSP2002A	Use solid plastering tools and equipment
CPCCSP2003A	Prepare surfaces for plastering

Group D: Wall and floor tiling

CPCCWF2001A	Handle wall and floor tiling materials
CPCCWF2002A	Use wall and floor tiling tools and equipment
CPCCWF3001A	Prepare surfaces for tiling application

Group E: Waterproofing

CPCCWP2001A	Handle waterproofing materials
CPCCWP2002A	Use waterproofing tools and equipment
CPCCWP2003A	Prepare for construction waterproofing process
CPCCWP2004A	Prepare surfaces for waterproofing application

Group F: Joinery and shopfitting

CPCCJN2001A	Assemble components
CPCCJN2002A	Prepare for off-site manufacturing process
CPCCSH2001A	Prepare surfaces

Group G: Stonemasonry

CPCCST2001A	Prepare for stonemasonry construction process
CPCCST2002A	Identify and use stone products
CPCCST2003A	Finish stone

Group H: General elective units

CPCCCO2013A	Carry out concreting to simple forms
-------------	--------------------------------------

CPCCJN3001A	Use static machines
CPCCCM2004A	Handle construction materials
CPCCCM2006A	Apply basic levelling procedures
CPCCCM2009A	Carry out basic demolition
CPCCCM2010A	Work safely at heights
RIICCM210A	Install trench support
RIIOHS205A	Control traffic with stop-slow bat
RIIWMG203A	Drain and dewater civil construction site

CPC20311 Certificate II in Steelfixing

Modification History

Not Applicable

Description

This qualification provides an occupational outcome in steelfixing for commercial projects. The work would be carried out under general guidance and supervision. Occupational titles may include:

- Steelfixing assistant
- Steelfixing labourer.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as two specialist fields of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Problem solving	<ul style="list-style-type: none">• Responds effectively to hazards, risks, emergencies and first aid situations• Examines tools and equipment prior to use for damage, missing components or other defects• Identifies typical faults and problems and takes remedial actions and/or reports to supervisor• Rectifies simple faults with tools and equipment• Locates and clears plumbing blockages
Initiative and enterprise	<ul style="list-style-type: none">• Maximises use of resources by recycling, re-using or using appropriate disposal methods• Responds to change and workplace challenges
Planning and organising	<ul style="list-style-type: none">• Prepares work area• Identifies and obtains necessary documentation• Collects, analyses and organises workplace information• Selects and uses appropriate materials, tools and equipment• Carries out site inspections• Determines material quantity requirements and conformity to requirements• Determines roof water storage requirements• Plans drainage system layouts• Prioritises and sequences tasks• Applies time management skills to ensure work is completed to time requirements
Self management	<ul style="list-style-type: none">• Recognises obligations and accepts responsibility for own work and safety• Recognises quality requirements and completes work to expected standard• Identifies personal career development needs and sets own and team work goals• Participates in workplace induction• Cleans up work area, including tools and equipment• Seeks support to improve work performance

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Learning	<ul style="list-style-type: none">• Identifies own learning needs and seeks skill development as required• Is open to learning new ideas and techniques• Participates in workplace induction
Technology	<ul style="list-style-type: none">• Installs, tests and maintains systems• Uses electricity and electrical equipment safely• Uses and operates a range of tools and equipment correctly and safely• Identifies technological trends that may affect the plumbing and services sector• Carries out pre- and post-operational checks on tools and equipment• Performs tool and equipment maintenance as required

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 22 units of competency:
- 18 core units
- 4 elective units.

Core units

CPCPCM2002A	Carry out interactive workplace communication
CPCPCM2004A	Read plans and calculate plumbing quantities
CPCPCM2011A	Apply first aid in the workplace
CPCPCM2021A	Work effectively in the plumbing and services sector
CPCPCM2023A	Carry out OHS requirements
CPCPCM2025A	Handle and store plumbing materials
CPCPCM2026A	Use plumbing hand and power tools
CPCPCM2027A	Carry out levelling
CPCPCM2030A	Mark out materials
CPCPCM2034A	Carry out simple concreting and rendering

CPCPDR2011A	Locate and clear blockages
CPCPDR2012A	Install domestic treatment plants
CPCPDR2014A	Install stormwater and sub-soil drainage systems
CPCPDR2015A	Drain work site
CPCPDR2016A	Install prefabricated inspection openings and enclosures
CPCPDR3012A	Install below ground sanitary drainage systems
CPCPDR3013A	Install on-site disposal systems
RIICCM210A	Install trench support
Elective units	
CPCPCM2018A	Cut and join sheet metal
CPCPCM2033A	Weld using arc welding equipment
CPCPCM2019A	Cut using oxy-LPG-acetylene equipment
CPCPCM2022A	Weld using oxy-acetylene equipment
CPCPCM3012A	Weld plastic pipe using fusion method
CPCPDR2013A	Maintain effluent disinfection systems
CPCPDR3011A	Plan layout of a residential sanitary drainage system
CPCPWT3019A	Install water pipe systems
CPCPRF2013A	Collect and store roof water
CPCPSN3015A	Install pre-treatment facilities

CPC20811 Certificate II in Metal Roofing and Cladding

Modification History

Not Applicable

Description

This qualification provides an occupational outcome in metal roofing and cladding. Occupational titles may include:

- Roofer.

The qualification has core and elective units of competency that include units common to other qualifications in the plumbing industry, as well as specialist metal roofing and cladding units of competency.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 24 units of competency:
- 15 core units
- 9 elective units.

The elective units are to be chosen as follows:

- up to 9 units from general elective units
- up to 4 units from Certificate II qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, and that they contribute to a valid, industry-supported vocational outcome.

Core units

CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms

CPCPCM2002A	Carry out interactive workplace communication
CPCPCM2004A	Read plans and calculate plumbing quantities
CPCPCM2011A	Apply first aid in the workplace
CPCPCM2021A	Work effectively in the plumbing and services sector
CPCPCM2023A	Carry out OHS requirements
CPCPCM2025A	Handle and store plumbing materials
CPCPCM2026A	Use plumbing hand and power tools
CPCPCM2027A	Carry out levelling
CPCPCM2028A	Cut and join sheet metal
CPCPCM2030A	Mark out materials
CPCPCM2035A	Work safely on roofs
CPCPCM3011A	Flash penetrations through roofs and walls
CPCPRF2012A	Select and install roof sheeting and wall cladding
Elective units	
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2033A	Weld using arc welding equipment
CPCPCM2019A	Cut using oxy-LPG-acetylene equipment
CPCPCM2022A	Weld using oxy-acetylene equipment
CPCPCM3012A	Weld plastic pipe using fusion method
CPCPDR2011A	Locate and clear blockages
CPCPRF2013A	Collect and store roof water
CPCPRF2014A	Fabricate roof coverings for curved structures
CPCPRF3011A	Receive roofing materials

CPCPRF3012A	Fabricate and install roof drainage components
CPCPRF3013A	Fabricate and install external flashings
CPCPRF3014A	Install roof components
CPCPRF3015A	Install roof coverings to curved roof structures
CPCPRF3016A	Install composite roof systems
CPPFES2006A	Prepare for installation and servicing operations
MEM05050B	Perform routine gas metal arc welding
MEM05049B	Perform routine gas tungsten arc welding

CPC20911 Certificate II in Urban Irrigation

Modification History

Not Applicable

Description

This qualification provides an occupational outcome in urban irrigation.
Occupational titles may include:

- Irrigation technician.

The qualification has core and elective units of competency that include units common to other qualifications in the plumbing industry, as well as specialist urban irrigation units of competency.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

- Performs tool and equipment maintenance as required

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 27 units of competency:
- 21 core units
- 6 elective units.

The elective units are to be chosen as follows:

- from Groups A and B
- up to 2 units from Certificate III or IV qualifications in CPC08 or another current Training Package, provided the integrity of the AQF alignment is ensured, and they contribute to a valid, industry-supported vocational outcome.

Core units

CPCCCA3002A	Carry out setting out
CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2006A	Apply basic levelling procedures
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2009A	Carry out basic demolition
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Brick and blocklaying field of work

CPCCBL2001A	Handle and prepare bricklaying and blocklaying materials
CPCCBL2002A	Use bricklaying and blocklaying tools and equipment
CPCCBL3002A	Carry out masonry veneer construction
CPCCBL3003A	Carry out cavity brick construction
CPCCBL3004A	Construct masonry steps and stairs
CPCCBL3005A	Lay masonry walls and corners
CPCCBL3006A	Lay multi-thickness walls and piers
CPCCBL3009A	Install flashings and damp proof course
CPCCBL3010A	Construct masonry arches
CPCCBL3011A	Construct curved walls
CPCCBL3014A	Install fire-rated masonry construction

Elective units*Group A: Advanced brick and blocklaying*

CPCCBL3001A	Lay paving
CPCCBL3007A	Install glass blockwork
CPCCBL3012A	Construct fireplaces and chimneys
CPCCBL3013A	Construct masonry structural systems
CPCCBL3015A	Construct decorative brickwork
CPCCBL3016A	Construct battered masonry walls and piers
CPCCBL3017A	Carry out tuck pointing to brickwork
CPCCBL3018A	Install aerated autoclaved concrete products

Group B: General elective units

CPCCCM2007A	Use explosive power tools
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms

CPCCCO2013A	Carry out concreting to simple forms
CPCCSF2004A	Place and fix reinforcement materials
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances

CPC30211 Certificate III in Carpentry

Modification History

Not Applicable

Description

This qualification provides a trade outcome in carpentry, covering work in residential and commercial applications.

Occupational titles may include:

- Carpenter
- Carpenter and joiner.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 30 units of competency:
- 22 core units
- 8 elective units.

A maximum of two of the eight required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCA2002A	Use carpentry tools and equipment
CPCCCA2011A	Handle carpentry materials
CPCCCA3001A	Carry out general demolition of minor building structures
CPCCCA3002A	Carry out setting out
CPCCCA3023A	Carry out levelling operations
CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2002A	Carry out excavation
CPCCCM2007A	Use explosive power tools
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCO2013A	Carry out concreting to simple forms

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Construction and erection of frames, trusses, eaves and roofs field of work

CPCCCA3003A Install flooring systems

CPCCCA3004A Construct wall frames

CPCCCA3005A Construct ceiling frames

CPCCCA3006A Erect roof trusses

CPCCCA3007B Construct pitched roofs

CPCCCA3008A Construct eaves

Elective units

Installation field of work

CPCCCA3010A Install and replace windows and doors

CPCCCA3012A Frame and fit wet area fixtures

CPCCCA3013A Install lining, panelling and moulding

CPCCCA3016A Construct timber external stairs

Formwork construction field of work

CPCCCA3018A Construct, erect and dismantle formwork for stairs and ramps

CPCCCA3019A Erect and dismantle formwork to suspended slabs, columns, beams and walls

CPCCCA3020A Erect and dismantle jump form formwork

CPCCCA3021A Erect and dismantle slip form formwork

General electives

CPCCCA2003A Erect and dismantle formwork for footings and slabs on ground

CPCCCA3009A Construct advanced roofs

CPCCCA3011A Refurbish timber sashes to window frames

CPCCCA3014A Construct bulkheads

CPCCCA3015A Assemble partitions

CPCCCA3017A	Install exterior cladding
CPCCCA3022A	Install curtain walling
CPCCCM3001B	Operate elevated work platforms
CPCCSF2003A	Cut and bend materials using oxy-LPG equipment
CPCCSF2004A	Place and fix reinforcement materials
CPCCWC3003A	Install dry wall passive fire-rated systems
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances
RIICCM210A	Install trench support
RIIOHS202A	Enter and work in confined spaces
RIIWMG203A	Drain and dewater civil construction site

CPC30311 Certificate III in Concreting

Modification History

Not Applicable

Description

This qualification provides a trade outcome in concreting operations for residential and commercial construction work.

Occupational titles may include:

- Concreter
- Concrete pump operator.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

	<ul style="list-style-type: none">• Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities• Coordinates and actions tasks• Participates in on-site meetings
Problem solving	<ul style="list-style-type: none">• Examines tools and equipment prior to use for damage, missing components or other defects• Identifies typical faults and problems and takes remedial action and/or reports to supervisor• Rectifies simple faults with tools and equipment• Carries out tests, such as slump testing of concrete and high performance concrete testing
Initiative and enterprise	<ul style="list-style-type: none">• Identifies opportunities to improve resource efficiency and makes suggestions as appropriate• Responds to change and workplace challenges• Puts ideas into action• Maximises use of resources by recycling, re-using or using appropriate disposal methods
Planning and organising	<ul style="list-style-type: none">• Identifies hazards and implements appropriate hazard control measures• Identifies and manages risks• Selects and uses appropriate materials, tools and equipment• Determines material quantity requirements• Prioritises and sequences tasks• Applies time management skills to ensure work is completed to time requirements
Self management	<ul style="list-style-type: none">• Evaluates own actions and makes judgements about performance and necessary improvements• Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems• Manages own performance to meet workplace standards• Seeks support to improve work performance• Cleans up work area, including tools and equipment
Learning	<ul style="list-style-type: none">• Identifies own learning needs and seeks skill development as required• Is open to learning new ideas and techniques
Technology	<ul style="list-style-type: none">• Uses calculators• Uses and operates a range of tools and equipment correctly and safely

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

- Drives concrete boom delivery and concrete agitator trucks, and follows and applies safety, operational and servicing instructions when using vehicle
- Carries out pre- and post-operational checks on equipment and machines
- Performs tool and equipment maintenance as required

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 18 units of competency:
- 13 core units
- 5 elective units.

A minimum of three elective units are to be concreting (coded 'CO') units. A maximum of two of the five required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2006A	Apply basic levelling procedures
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
RIICCM210A	Install trench support

Concreting operations field of work

CPCCCO2011A	Handle concreting materials
CPCCCO2012A	Use concreting tools and equipment

CPCCCO3021A Place concrete

CPCCCO3022A Finish concrete

CPCCCO3023A Cure concrete

Elective units

Concrete repair and finishing field of work

CPCCCO3024A Carry out decorative finishes to concrete

CPCCCO3025A Resurface concrete

CPCCCO3026A Carry out repair and rectification of concrete

CPCCCO3027A Cut and core concrete

CPCCCO3029A Apply and finish sprayed concrete

Advanced concreting field of work

CPCCCO3028A Carry out tilt panel construction

CPCCCO3030A Carry out high performance concreting

CPCCCO3031A Conduct off-form vertical concrete operations

Concrete delivery field of work

CPCCCLBM3001A Licence to operate a concrete placing boom

CPCCCO3032A Conduct concrete boom delivery operations

CPCCCO3033A Slump test concrete

CPCCCO3034A Conduct concrete agitator truck operations

General electives

CPCCCA2003A Erect and dismantle formwork for footings and slabs on ground

CPCCCA3001A Carry out general demolition of minor building structures

CPCCCM2007A Use explosive power tools

CPCCCM2008A Erect and dismantle restricted height scaffolding

CPCCCM2011A Carry out tilt-up work safely

CPCCSF2003A Cut and bend materials using oxy-LPG equipment

CPCCSF2004A	Place and fix reinforcement materials
CPCCSF3001A	Apply reinforcement schedule
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances
RIICFW301A	Construct underpinning
RIIOHS302A	Implement traffic management plan
RIIWMG203A	Drain and dewater civil construction site

CPC30411 Certificate III in Demolition

Modification History

Two new CPC08 units added to the list of elective units:

- CPCCDE3014A Remove non-friable asbestos
- CPCCDE3015A Remove friable asbestos.

CPCCOHS1001A Work safely in the construction industry also added to the elective bank given its prerequisite status in those units.

CPCCDE3012A Encapsulate and remove asbestos deleted from elective list in qualification.

Description

This qualification provides a trade outcome in demolition operations in the residential and commercial construction industry.

Occupational titles may include:

- Demolisher
- Demolition contractor.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Pathways Information

Employability Skills Summary

Employability skill

Industry/enterprise requirements for this qualification include:

Communication

- Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:
- Clear and direct communication
- Active listening
- Verbal and non-verbal language
- Questioning to identify and confirm requirements
- Language and concepts appropriate to cultural differences
- Follows instructions from supervisor and other relevant persons
- Understands, interprets and applies information as required from:
- Regulatory, legislative, licensing and organisational requirements
- Environmental and OHS requirements, including material safety data sheets (MSDS)
- Codes and standards
- Plans, drawings and specifications
- Schedules
- Work orders
- Load tables
- Safety signs and symbols
- Organisational policies and procedures
- Understands relevant definitions, terminology, symbols, abbreviations and language
- Records relevant information using standard workplace documentation
- Applies measurements and calculations using appropriate equipment, formulas and records as required
- Reports and records hazards and risks

Teamwork

- Works as part of a team
- Provides assistance and encouragement to other team members
- Initiates and encourages improvements in team performance
- Identifies and utilises the strengths of other team members
- Relates to people from diverse social, cultural and

	ethnic backgrounds and with varying physical and mental abilities
Problem solving	<ul style="list-style-type: none">• Coordinates and actions tasks• Participates in on-site meetings• Examines tools and equipment prior to use for damage, missing components or other defects• Identifies typical faults and problems and takes remedial action and/or reports to supervisor• Rectifies simple faults with tools and equipment
Initiative and enterprise	<ul style="list-style-type: none">• Identifies opportunities to improve resource efficiency and makes suggestions as appropriate• Responds to change and workplace challenges• Puts ideas into action• Maximises use of resources by recycling, re-using or using appropriate disposal methods
Planning and organising	<ul style="list-style-type: none">• Identifies hazards and implements appropriate hazard control measures• Identifies and manages risks• Selects and uses appropriate materials, tools and equipment• Determines material quantity requirements and conformity to requirements• Carries out inspections and checks• Prioritises and sequences tasks• Applies time management skills to ensure work is completed to time requirements
Self management	<ul style="list-style-type: none">• Evaluates own actions and makes judgements about performance and necessary improvements• Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems• Manages own performance to meet workplace standards• Seeks support to improve work performance• Cleans up work area, including tools and equipment
Learning	<ul style="list-style-type: none">• Identifies own learning needs and seeks skill development as required• Is open to learning new ideas and techniques
Technology	<ul style="list-style-type: none">• Uses calculators• Uses and operates a range of tools and equipment correctly and safely• Properly starts up, operates and shuts down equipment

- Carries out pre- and post-operational checks on equipment and machines
- Performs tool and equipment maintenance as required

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 18 units of competency:
- 12 core units
- 6 elective units.

A maximum of two of the six required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units of competency

Unit code	Unit title
CPCCCA3001A	Carry out general demolition of minor building structures
CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Demolition - basic and intermediate field of work

Unit code	Unit title
CPCCDE2011A	Use demolition tools and equipment
CPCCDE2012A	Carry out manual general demolition
CPCCDE3011A	Carry out mechanical general demolition
CPCCSF2003A	Cut and bend materials using oxy-LPG equipment

Elective units of competency

Unit code	Unit title
CPCCCA2002A	Use carpentry tools and equipment
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2007A	Use explosive power tools
CPCCCM3001B	Operate elevated work platforms
CPCCCM3002A	Operate a truck mounted loading crane
CPCCDE3013A	Operate a crushing plant
CPCCDE3014A	Remove non-friable asbestos
CPCCDE3015A	Remove friable asbestos
CPCCDO3011A	Perform dogging
CPCCOHS1001A	Work safely in the construction industry
CPCCRI3001A	Operate personnel and materials hoists
CPCCSC2001A	Safely handle and use scaffolding tools and equipment
CPCCSC2002A	Erect and dismantle basic scaffolding
CPCCSC3001A	Erect and dismantle intermediate scaffolding
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances
CPPCMN2001A	Control and direct traffic
FPICOT2204B	Maintain chainsaws
FPICOT2206B	Cross cut materials with a hand-held chainsaw
PRMWM15B	Move waste using load shifting equipment
RIIMPO318A	Conduct skid steer loader operations
RIIMPO320A	Conduct civil construction excavator operations
RIIOHS202A	Enter and work in confined spaces
RIIOHS302A	Implement traffic management plan

TLILIC108A	Licence to operate a forklift truck
------------	-------------------------------------

CPC30511 Certificate III in Dogging

Modification History

Not Applicable

Description

This qualification provides a trade outcome in dogging operations in the construction industry.

Occupational titles may include:

- Dogger.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

To achieve this qualification, the candidate must demonstrate competency in:

- 27 units of competency:
- 23 core units
- 4 elective units.

A maximum of two of the four required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2003B	Calculate and cost construction work

CPCCCM2010A Work safely at heights

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Painting and decorating preparation field of work

CPCCCM3001B Operate elevated work platforms

CPCCPB3026A Erect and maintain trestle and plank systems

CPCCPD2011A Handle painting and decorating materials

CPCCPD2012A Use painting and decorating tools and equipment

CPCCPD2013A Remove and replace doors and door and window components

CPCCPD3021A Prepare surfaces for painting

Painting and decorating operations field of work

CPCCCM2008A Erect and dismantle restricted height scaffolding

CPCCPD3022A Apply paint by brush and roller

CPCCPD3023A Apply texture coat paint finishes by brush, roller and spray

CPCCPD3024A Apply paint by spray

CPCCPD3025A Match specified paint colour

CPCCPD3026A Apply stains and clear timber finishes

CPCCPD3027A Apply wallpaper

CPCCPD3028A Apply decorative paint finishes

CPCCPD3031A Implement safe lead paint and asbestos work practices in the painting industry

Elective units

Specialist painting and decorating field of work

CPCCPD3029A Remove graffiti and apply protective coatings

CPCCPD3030A Apply protective paint coating systems

CPCCPD3032A Apply advanced wallpaper techniques

CPCCPD3033A Apply intumescent coatings

CPCCPD3034A Apply advanced decorative paint finishes

CPC CSP3003A Apply trowelled texture coat finishes

General electives

BSBSMB301A Investigate micro business opportunities

BSBSMB406A Manage small business finances

LMFGG2008B Glaze/re-glaze residential windows and doors

Problem solving	<ul style="list-style-type: none">• Examines tools and equipment prior to use for damage, missing components or other defects• Identifies typical faults and problems and takes remedial action and/or reports to supervisor• Rectifies simple faults with tools and equipment• Checks job location to ensure adequate provision of ventilation and fire safety• Matches replacement tiles and joints for existing roof
Initiative and enterprise	<ul style="list-style-type: none">• Identifies opportunities to improve resource efficiency and makes suggestions as appropriate• Responds to change and workplace challenges• Puts ideas into action• Maximises use of resources by recycling, re-using or using appropriate disposal methods
Planning and organising	<ul style="list-style-type: none">• Identifies hazards and implements appropriate hazard control measures• Identifies and manages risks• Carries out site inspection to identify conditions and requirements• Selects and uses appropriate materials, tools and equipment• Determines material quantity requirements and checks for conformity to requirements• Prioritises and sequences tasks• Applies time management skills to ensure work is completed to time requirements
Self management	<ul style="list-style-type: none">• Evaluates own actions and makes judgements about performance and necessary improvements• Contributes to workplace responsibilities, such as current work site environmental/sustainability frameworks or management systems• Manages own performance to meet workplace standards• Seeks support to improve work performance• Cleans up work area, including tools and equipment
Learning	<ul style="list-style-type: none">• Identifies own learning needs and seeks skill development as required

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Technology

- Is open to learning new ideas and techniques
- Uses calculators
- Uses and operates a range of tools and equipment correctly and safely
- Carries out pre- and post-operational checks on equipment and machines
- Performs tool and equipment maintenance as required

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 17 units of competency:
- 14 core units
- 3 elective units.

A maximum of one of the four required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
CPCPCM2023A	Carry out OHS requirements
CPCPCM2035A	Work safely on roofs
<i>Roof tiling field of work</i>	
CPCCRT2001A	Handle roof tiling materials

CPCCRT2002A Use roof tiling tools and equipment

CPCCRT3001A Tile regular roofs

CPCCRT3002A Tile irregular roofs

CPCCRT3004A Repair and renovate tile roofs

Elective units

Specialist roof tiling and repair field of work

CPCCPD3030A Apply protective paint coating systems

CPCCRT3003A Repair and replace valleys, valley irons and flashings

CPCCRT3005A Slate a roof

CPCCRT3006A Fix shingles to roofs and facades

General electives

CPCCCM2007A Use explosive power tools

CPCCCM2010A Work safely at heights

CPCCCM3001B Operate elevated work platforms

CPCCSC2002A Erect and dismantle basic scaffolding

BSBSMB301A Investigate micro business opportunities

BSBSMB406A Manage small business finances

CPC30911 Certificate III in Scaffolding

Modification History

Not Applicable

Description

This qualification provides a trade outcome in scaffolding operations in the residential and commercial construction industry.

Occupational titles may include:

- Scaffolder.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

To achieve this qualification, the candidate must demonstrate competency in:

- 20 units of competency:
- 15 core units
- 5 elective units.

A maximum of one of the five required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2006A	Apply basic levelling procedures
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Solid plastering field of work

CPCCPB3012A	Cut and fix paper-faced cornices
CPCCSP2001A	Handle solid plastering materials
CPCCSP2002A	Use solid plastering tools and equipment
CPCCSP2003A	Prepare surfaces for plastering
CPCCSP3001A	Apply float and render to straight and curved surfaces

CPCCSP3002A	Apply set coats
CPCCSP3004A	Restore and renovate solid plasterwork

Elective units*Specialist plastering field of work*

CPCCSP3003A	Apply trowelled texture coat finishes
CPCCSP3005A	Install pre-cast decorative mouldings
CPCCSP3006A	Install cast plaster blockwork
CPCCSP3007A	Apply plaster by projection machine

General electives

CPCCCM2007A	Use explosive power tools
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCCO2013A	Carry out concreting to simple forms
CPCCPB3026A	Erect and maintain trestle and plank systems
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 26 units of competency:
- 19 core units
- 7 elective units.

A maximum of two of the seven required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2010A	Work safely at heights
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Fixing (hanging) field of work

CPCCPB3001A	Fix standard plasterboard wall sheets
CPCCPB3002A	Fix standard plasterboard ceiling sheets
CPCCPB3003A	Fix battens
CPCCPB3004A	Fix wet area sheets
CPCCPB3005A	Fix ceiling sheets to external protected areas
CPCCPB3006A	Fix fibre cement board

Finishing (stopping, sanding and cornices) field of work

CPCCPB3007A	Apply levels of finish standards to planning and inspection of own work
CPCCPB3008A	Mix plastering compounds
CPCCPB3009A	Finish plasterboard joins manually
CPCCPB3010A	Manually sand plaster work
CPCCPB3011A	Finish category 1 and 2 wet areas
CPCCPB3012A	Cut and fix paper-faced cornices

Elective units*Commercial wall and ceiling lining field of work*

CPCCCA3014A	Construct bulkheads
CPCCCA3015A	Assemble partitions
CPCCCM2006A	Apply basic levelling procedures
CPCCCM2007A	Use explosive power tools
CPCCWC3001A	Install and finish plasterboard and fibre cement sheeting to curved walls and ceilings
CPCCWC3003A	Install dry wall passive fire-rated systems
CPCCWC3004A	Install suspended ceilings

Plasterboard handling field of work

CPCCPB3023A	Load and unload plaster and plaster-related products
CPCCPB3024A	Use manual handling equipment to manoeuvre plaster products
CPCCPB3025A	Store plasterboard and related products

General electives

CPCCCA3001A	Carry out general demolition of minor building structures
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM3001B	Operate elevated work platforms
CPCCPB3013A	Plan travel routes
CPCCPB3014A	Install batt insulation products
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCPB3016A	Install and finish columns
CPCCPB3017A	Rectify faults in plaster applications
CPCCPB3018A	Use vacuum and electric sanding equipment to finish plaster work
CPCCPB3019A	Inspect equipment for serviceability
CPCCPB3020A	Match, mitre and install cast ornamental cornices
CPCCPB3021A	Install and fix residential acoustic plaster products
CPCCPB3022A	Use mechanical jointing equipment to finish joints
CPCCPB3026A	Erect and maintain trestle and plank systems
CPCCPB3027A	Install ceiling insulation
CPCCSP3003A	Apply trowelled texture coat finishes
CPCCSP3005A	Install pre-cast decorative mouldings
CPCCWC2001A	Complete penetrations and flashings

CPCCWC3002A	Install and finish plasterboard and fibre cement sheeting to arches
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances

CPC31311 Certificate III in Wall and Floor Tiling

Modification History

Not Applicable

Description

This qualification provides a trade outcome in wall and floor tiling for residential and commercial construction work.

Occupational titles may include:

- Tiler
- Wall and floor tiler.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 19 units of competency:
- 16 core units
- 3 elective units.

A maximum of one of the three required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2006A	Apply basic levelling procedures
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Wall and floor tiling field of work

CPCCWF2001A	Handle wall and floor tiling materials
CPCCWF2002A	Use wall and floor tiling tools and equipment
CPCCWF3001A	Prepare surfaces for tiling application
CPCCWF3002A	Fix floor tiles
CPCCWF3003A	Fix wall tiles
CPCCWF3004A	Repair wall and floor tiles
CPCCWF3006A	Carry out mosaic tiling
CPCCWF3007A	Tile curved surfaces
CPCCWP3002A	Apply waterproofing process to internal wet areas

Elective units*Advanced tiling field of work*

CPCCWF3005A	Carry out decorative tiling
CPCCWF3008A	Tile domestic pools and spas

General electives

CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCCO2013A	Carry out concreting to simple forms
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances

CPC31411 Certificate III in Construction Waterproofing

Modification History

Not Applicable

Description

This qualification provides a trade outcome in waterproofing for the residential and commercial construction industry.

Occupational titles may include:

- Waterproofer.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as two specialist fields of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

To achieve this qualification, the candidate must demonstrate competency in:

- 19 units of competency:
- 14 core units
- 5 elective units.

A maximum of two of the five required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCOHS2001A	Apply OHS requirements, policies and procedures in

the construction industry

Waterproofing preparation field of work

CPCCWP2001A	Handle waterproofing materials
CPCCWP2002A	Use waterproofing tools and equipment
CPCCWP2003A	Prepare for construction waterproofing process
CPCCWP2004A	Prepare surfaces for waterproofing application

Waterproofing operations field of work

CPCCWP3001A	Apply waterproofing process to below ground level wet areas
CPCCWP3002A	Apply waterproofing process to internal wet areas
CPCCWP3003A	Apply waterproofing process to external wet areas
CPCCWP3004A	Apply waterproofing remedial processes

Elective units

CPCCCA3012A	Frame and fit wet area fixtures
CPCCCM2002A	Carry out excavation
CPCCCM2006A	Apply basic levelling procedures
CPCCCM2007A	Use explosive power tools
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2009A	Carry out basic demolition
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCCO2013A	Carry out concreting to simple forms
CPCCSH2003A	Apply and install sealant and sealant devices
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances

To achieve this qualification, the candidate must demonstrate competency in:

- 30 units of competency:
- 19 core units
- 11 elective units.

A maximum of two of the required eleven elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCM2004A	Handle construction materials
CPCCCM2005A	Use construction tools and equipment
CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2006A	Apply basic levelling procedures
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Shopfitting field of work

CPCCCA3010A	Install and replace windows and doors
CPCCJN3001A	Use static machines
CPCCJN3005A	Cut and install glass
CPCCSH2001A	Prepare surfaces
CPCCSH2002A	Use aluminium sections for fabrication
CPCCSH3001A	Set out and assemble cabinets, showcases, wall units, counters and workstations

CPCCSH3002A	Set out and fabricate shopfront commercial entries bulkheads and component fittings
CPCCSH3003A	Assemble and install shopfront commercial entries bulkheads and components
CPCCSH3004A	Apply finishes
CPCCSH3005A	Apply and trim decorative finishes
Elective units	
CPCCCA3001A	Carry out general demolition of minor building structures
CPCCCA3013A	Install lining, panelling and moulding
CPCCCA3014A	Construct bulkheads
CPCCCA3015A	Assemble partitions
CPCCCM2003B	Calculate and cost construction work
CPCCCM2007A	Use explosive power tools
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCCO2013A	Carry out concreting to simple forms
CPCCJN3002A	Use computer-controlled machinery
CPCCJN3003A	Manufacture components for door and window frames and doors
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCSF2003A	Cut and bend materials using oxy-LPG equipment
CPCCSH2003A	Apply and install sealant and sealant devices
CPCCWC3004A	Install suspended ceilings
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances

LMFFM3006B	Install furnishing products
LMFFM3013B	Measure and draw site layout for manufactured furniture products
LMFFM3028B	Fabricate synthetic solid surface products
LMFFM3030B	Set up, operate and maintain CNC sizing machines
LMFFM3031B	Set up, operate and maintain CNC machining and processing centres

CPC31911 Certificate III in Joinery

Modification History

Not Applicable

Description

This qualification provides a trade outcome in joinery covering work for residential and commercial applications.

Occupational titles may include:

- Joiner.

The qualification has core unit of competency requirements that cover common skills for the construction industry, as well as a specialist field of work.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Packaging Rules**Packaging rules**

To achieve this qualification, the candidate must demonstrate competency in:

- 30 units of competency:
- 16 core units
- 14 elective units.

A maximum of two of the required fourteen elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCA2002A	Use carpentry tools and equipment
CPCCCA2011A	Handle carpentry materials
CPCCCA3023A	Carry out levelling operations
CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications
CPCCCM2007A	Use explosive power tools
CPCCCM2010A	Work safely at heights
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Joinery - machining and component manufacture and assembly field of work

CPCCJN3001A	Use static machines
CPCCJN3002A	Use computer-controlled machinery

CPCCJN3003A	Manufacture components for door and window frames and doors
CPCCJN3004A	Manufacture joinery components
CPCCSH3001A	Set out and assemble cabinets, showcases, wall units, counters and workstations

Elective units*Joinery - stairs field of work*

CPCCJS3002A	Manufacture stair components for straight flighted stairs
CPCCJS3003A	Assemble and install stairs
CPCCJS3004A	Manufacture and install continuous handrailing and special stair components
CPCCJS3006A	Construct fabricated stairs
CPCCJS3011A	Design and set out stairs

Stair installation field of work

CPCCCA3010A	Install and replace windows and doors
CPCCCA3012A	Frame and fit wet area fixtures
CPCCCA3013A	Install lining, panelling and moulding
CPCCCA3016A	Construct timber external stairs

General electives

CPCCCA3001A	Carry out general demolition of minor building structures
CPCCCA3011A	Refurbish timber sashes to window frames
CPCCCA3014A	Construct bulkheads
CPCCCA3015A	Assemble partitions
CPCCJN2001A	Assemble components
CPCCJN2002A	Prepare for off-site manufacturing process
CPCCJN2003A	Package manufactured products for transport
CPCCJN3005A	Cut and install glass
CPCCPD3021A	Prepare surfaces for painting

CPCCSF2003A	Cut and bend materials using oxy-LPG equipment
CPCCSF2004A	Place and fix reinforcement materials
CPCCSH2003A	Apply and install sealant and sealant devices
CPCCSH3004A	Apply finishes
CPCCSH3005A	Apply and trim decorative finishes
CPCCST2005A	Carry out load slinging of off-site materials
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances

To achieve this qualification, the candidate must demonstrate competency in:

- 32 units of competency:
- 28 core units
- 4 elective units.

A maximum of two of the four required elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCA2002A	Use carpentry tools and equipment
CPCCCA2011A	Handle carpentry materials
CPCCCA3001A	Carry out general demolition of minor building structures
CPCCCA3002A	Carry out setting out
CPCCCA3010A	Install and replace windows and doors
CPCCCA3013A	Install lining, panelling and moulding
CPCCCA3017A	Install exterior cladding
CPCCCA3019A	Erect and dismantle formwork to suspended slabs, columns, beams and walls
CPCCCA3023A	Carry out levelling operations
CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCCM2001A	Read and interpret plans and specifications

CPCCCM2007A	Use explosive power tools
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCO2013A	Carry out concreting to simple forms
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Construction and erection of frames, trusses, eaves and roofs field of work

CPCCCA3003A	Install flooring systems
CPCCCA3004A	Construct wall frames
CPCCCA3005A	Construct ceiling frames
CPCCCA3006A	Erect roof trusses
CPCCCA3007B	Construct pitched roofs
CPCCCA3008A	Construct eaves

Joinery - machining and component manufacture and assembly field of work

CPCCJN3001A	Use static machines
CPCCJN3003A	Manufacture components for door and window frames and doors
CPCCJN3004A	Manufacture joinery components

Elective units

Carpentry installation field of work

CPCCCA3012A	Frame and fit wet area fixtures

To achieve this qualification, the candidate must demonstrate competency in:

- 21 units of competency:
- 14 core units
- 7 elective units.

A maximum of two of the required seven elective units may be substituted by selecting relevant units of competency from any Certificate III or IV construction qualification or qualification in another endorsed Training Package.

Core units

CPCCCM1012A	Work effectively and sustainably in the construction industry
CPCCCM1013A	Plan and organise work
CPCCCM1014A	Conduct workplace communication
CPCCCM1015A	Carry out measurements and calculations
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Signage field of work

CPCCSI2001A	Use colour for signage
CPCCSI2002A	Lay out and design signage
CPCCSI2003A	Prepare surfaces for signage
CPCCSI2004A	Produce digital signage
CPCCSI2005A	Fabricate signage
CPCCSI2006A	Signwrite to simple forms

CPCCSI2007A	Apply fasteners and fixings
CPCCSI3001A	Produce vinyl signage
CPCCSI3002A	Use rotary router
Elective units	
CPCCCM2006A	Apply basic levelling procedures
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCCM3003A	Work safely around power sources, services and assets
CPCCCO2013A	Carry out concreting to simple forms
CPCCSI3003A	Signwrite to decorative forms
CPCCSI3004A	Apply advanced vinyl applications
CPCCSI3005A	Use engraving systems
CPCCSI3006A	Apply gilding to signage
CPCCSI3007A	Apply lines and scrolls
CPCCSI3008A	Write showcards and chalkboards
CPCCSI3009A	Screen-print signage
CPCCSI3010A	Hand render pictorials
CPCCSI3011A	Use LED technology for signage
CPCCSI3012A	Apply electrical theory for illuminated signage
CPCCSI3013A	Install LED systems
CPCCSI3014A	Manufacture gas-charged glass-formed illuminated signage
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances
MEM05010C	Apply fabrication, forming and shaping techniques

CPCCCO2013A	Carry out concreting to simple forms
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
CPCCST2001A	Prepare for stonemasonry construction process
CPCCST2002A	Identify and use stone products
<i>Stonemasonry field of work</i>	
CPCCST2003A	Finish stone

CPCCST2004A	Lay stone
CPCCST3001A	Dress and mould stone
CPCCST3002A	Shape solid stone
CPCCST3003A	Split stone manually
CPCCST3004A	Dress stone manually
CPCCST3005A	Carry out profile work
CPCCST3006A	Machine stone
Elective units	
CPCCBL3016A	Construct battered masonry walls and piers
CPCCCA3014A	Construct bulkheads
CPCCCM2007A	Use explosive power tools
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCJN2001A	Assemble components
CPCCJN2003A	Package manufactured products for transport
CPCCPA3001A	Prepare subgrade, base and bedding course for segmental paving
CPCCPA3002A	Lay segmental pavers
CPCCPA3003A	Cut segmental pavers
CPCCST2005A	Carry out load slinging of off-site materials
CPCCST3007A	Turn stone
CPCCST3008A	Inlay lead to stone
CPCCST3009A	Use computer-controlled static machinery to produce stone components
CPCCST3010A	Set out and cut letters in stone
CPCCST3011A	Plan monument construction
CPCCST3012A	Build stone veneer walls

CPCCST3013A	Carry out cemetery monument fixing
CPCCST3014A	Set and anchor stone facades
BSBSMB301A	Investigate micro business opportunities
BSBSMB406A	Manage small business finances

CPC32411 Certificate III in Plumbing

Modification History

Version 6.1 unit code update:

CPCPGS3011A to CPCPGS3031A Install gas piping systems

CPCPGS3012A to CPCPGS3032A Size consumer gas piping systems

CPCPGS3013A to CPCPGS3033A Install and commission Type A gas appliances

CPCPGS3014A to CPCPGS3034A Install LPG storage of aggregate storage capacity up to 500 litres

CPCPGS3015A to CPCPGS3035A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL

Description

This qualification provides a trade outcome in plumbing.

Occupational titles may include:

- Plumber
- Plumber and drainer
- Plumber and gasfitter
- Gasfitter
- Roof plumber.

The qualification has core and elective unit of competency requirements that cover common and specialist skills for the plumbing industry in six specialist streams:

Stream 1 Water

Stream 2 Sanitary

Stream 3 Drainage

Stream 4 Mechanical services

Stream 5 Roofing

Stream 6 Gas services.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Communicates with clients, colleagues and others using effective and appropriate communication techniques, including:<ul style="list-style-type: none">• Clear and direct communication• Active listening• Verbal and non-verbal language• Questioning to identify and confirm requirements• Language and concepts appropriate to cultural differences• Follows instructions from supervisor and other relevant persons• Understands, interprets and applies information as required from:<ul style="list-style-type: none">• Regulatory, legislative, licensing and organisational requirements• Environmental and OHS requirements, including material safety data sheets (MSDS)• Codes and standards• Plans, drawings and specifications• Schedules• Load tables• Designs• Safety signs and symbols• Organisational policies and procedures• Understands relevant definitions, terminology, symbols, abbreviations and language• Uses industry-accepted visual communications, including hand signals• Reports and records routine workplace and regulatory information including test data• Applies measurements and calculations using appropriate equipment, formulas and records as required• Reports and records hazards and risks
Teamwork	<ul style="list-style-type: none">• Works as part of a team• Provides assistance and encouragement to other team members• Initiates and encourages improvements in team

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	performance
	<ul style="list-style-type: none">• Works with others to plan and sequence tasks• Identifies and utilises the strengths of other team members• Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities• Participates in workplace meetings
Problem solving	<ul style="list-style-type: none">• Responds effectively to hazards, risks, emergencies and first aid situations• Examines tools and equipment prior to use for damage, missing components or other defects• Identifies typical faults and problems and takes remedial actions and/or reports to supervisor• Performance tests penetration to ensure correct fit and remedies as required• Rectifies simple faults with tools and equipment• Locates and clears plumbing blockages• Tests systems and services• Calculates water flow rates, ventilation requirements and gas storage capacity• Rectifies incorrect roofing installations• Assesses roof work site safety• Locates and repairs gas leaks
Initiative and enterprise	<ul style="list-style-type: none">• Maximises use of resources by recycling, re-using or using appropriate disposal methods• Responds to change and workplace challenges• Designs domestic irrigation systems• Designs and fabricates roof coverings• Determines requirements for heating system installations, roof water storage, medical gas pipeline systems, appliance installations, flue installations, and gas piping system purging
Planning and organising	<ul style="list-style-type: none">• Prepares work area• Identifies and obtains necessary documentation• Collects, analyses and organises workplace information• Selects and uses appropriate materials, tools and equipment• Carries out site inspections• Determines material quantity requirements and conformity to requirements

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none">• Coordinates delivery of materials• Fabricates, sets out, installs and commissions components, equipment and systems• Plans drainage system layouts• Prioritises and sequences tasks• Applies time management skills to ensure work is completed to time requirements
Self management	<ul style="list-style-type: none">• Recognises obligations and accepts responsibility for own work and safety• Recognises quality requirements and completes work to expected standard• Identifies personal career development needs and sets own and team work goals• Participates in workplace induction• Cleans up work area, including tools and equipment• Seeks support to improve work performance
Learning	<ul style="list-style-type: none">• Identifies own learning needs and seeks skill development as required• Is open to learning new ideas and techniques• Participates in workplace induction
Technology	<ul style="list-style-type: none">• Uses electricity and electrical equipment safely• Uses and operates a range of tools and equipment correctly and safely• Properly starts up, operates and shuts down equipment• Identifies technological trends that may affect the plumbing and services sector• Carries out pre- and post-operational checks on tools and equipment• Performs tools, equipment and systems maintenance as required• Installs and adjusts a range of water service and gas controlling and regulating devices, as well as a variety of plumbing related pumps, systems, components and appliances• Installs, tests and maintains fire protection installations and component assemblies, domestic sprinkler systems, heating ventilation, and air conditioning and air cooling systems

Packaging Rules

Packaging rules

Units of competency from a minimum of four of the following six plumbing streams are required for award of this qualification.

Stream 1 Water and Stream 2 Sanitary are mandatory.

The following units of competency are required for award of this qualification:

Stream 1 Water (mandatory): 24 core units and 5 elective units from the water stream

and Stream 2 Sanitary (mandatory): 6 core units and 4 elective units from the sanitary stream.

Plus two of the following four streams:

Stream 3 Drainage: 9 core units and 3 elective units from the drainage stream

Stream 4 Mechanical services: 4 core units and 11 elective units from the mechanical services stream

Stream 5 Roofing: 8 core units and 4 elective units from the roofing stream

Stream 6 Gas services: 12 core units and 5 elective units from the gas services stream

NB: Units of competency achieved in one stream count as credit for the same unit in the core or elective requirements for any other stream.

Core units

Water stream

CPCPCM2002A	Carry out interactive workplace communication
CPCPCM2004A	Read plans and calculate plumbing quantities
CPCPCM2011A	Apply first aid in the workplace
CPCPCM2021A	Work effectively in the plumbing and services sector
CPCPCM2023A	Carry out OHS requirements
CPCPCM2025A	Handle and store plumbing materials
CPCPCM2026A	Use plumbing hand and power tools
CPCPCM2027A	Carry out levelling
CPCPCM2030A	Mark out materials
CPCPCM2032A	Weld using oxy-acetylene equipment
CPCPCM2033A	Weld using arc welding equipment
CPCPCM2034A	Carry out simple concreting and rendering
CPCPCM2035A	Work safely on roofs
CPCPCM3011A	Flash penetrations through roofs and walls
CPCPCM3012A	Weld plastic pipe using fusion method

CPCPCM3013A	Fabricate and install non-ferrous pressure piping
CPCPFS3011A	Fabricate and install fire hydrant and hose reel systems
CPCPWT3010A	Connect and install storage tanks to a domestic water supply
CPCPWT3011A	Set out and install water services
CPCPWT3012A	Install and adjust water service controls and devices
CPCPWT3013A	Install and commission water heating systems
CPCPWT3015A	Install water pump sets
CPCPWT3016A	Fit off and commission heated and cold water services
CPCPWT3017A	Connect irrigation systems from drinking water supply

Sanitary stream

CPCPCM2028A	Cut and join sheet metal
CPCPDR2011A	Locate and clear blockages
CPCPSN3011A	Plan layout of a residential sanitary plumbing system
CPCPSN3012A	Install discharge pipes
CPCPSN3013A	Fabricate and install sanitary stacks
CPCPSN3014A	Install and fit off sanitary fixtures

Drainage stream

CPCPDR2011A	Locate and clear blockages
CPCPDR2012A	Install domestic treatment plants
CPCPDR2014A	Install stormwater and sub-soil drainage systems
CPCPDR2015A	Drain work site
CPCPDR2016A	Install prefabricated inspection openings and enclosures
CPCPDR3011A	Plan layout of a residential sanitary drainage system
CPCPDR3012A	Install below ground sanitary drainage systems
CPCPDR3013A	Install on-site disposal systems
RIICCM210A	Install trench support

Mechanical services stream

CPCPCM2028A	Cut and join sheet metal
CPCPMS2011A	Assemble mechanical services components
CPCPMS3011A	Fabricate and install steel pressure piping
CPCPMS3013A	Install small bore heating systems

Roofing stream

CPCPCM2028A	Cut and join sheet metal
CPCPRF2012A	Select and install roof sheeting and wall cladding
CPCPRF2013A	Collect and store roof water
CPCPRF3011A	Receive roofing materials
CPCPRF3012A	Fabricate and install roof drainage components
CPCPRF3013A	Fabricate and install external flashings
CPCPRF3014A	Install roof components
CPCPRF3016A	Install composite roof systems

Gas services stream

CPCPCM2028A	Cut and join sheet metal
CPCPGS3016A	Install LPG systems in caravans, mobile homes, water craft and mobile workplaces
CPCPGS3017A	Install gas detection devices
CPCPGS3018A	Install gas pressure control equipment
CPCPGS3019A	Install Type A gas appliance flues
CPCPGS3021A	Purge consumer piping
CPCPGS3023A	Disconnect and reconnect Type A gas appliances
CPCPGS3024A	Calculate and install natural ventilation for Type A gas appliances
CPCPGS3031A	Install gas piping systems
CPCPGS3032A	Size consumer gas piping systems

- CPCPGS3033A Install and commission Type A gas appliances
- CPCPGS3034A Install LPG storage of aggregate storage capacity exceeding 500 litres

Elective units*Water stream*

- CPCCCM2008A Erect and dismantle restricted height scaffolding
- CPCCCM2010A Work safely at heights
- CPCCCM3001B Operate elevated work platforms
- CPCCPB3015A Install acoustic and thermal environmental protection systems
- CPCCRI3001A Operate personnel and materials hoists
- CPC CST2005A Carry out load slinging of off-site materials
- CPCPCM2028A Cut and join sheet metal
- CPCPCM2029A Cut using oxy-LPG-acetylene equipment
- CPCPFS2012A Install portable fire equipment
- CPCPFS3013A Fit off sprinkler heads, controls and ancillary equipment
- CPCPFS3014A Install control valve assemblies, actuating devices and local alarms
- CPCPFS3017A Install domestic and residential life safety sprinkler systems
- CPCPFS3018A Test and maintain fire hydrant and hose reel installations
- CPCPIG2011A Design domestic urban irrigation systems
- CPCPIG3011A Set out, install and commission irrigation systems
- CPCPIG3012A Install and commission domestic irrigation pumps
- CPCPMS3011A Fabricate and install steel pressure piping
- CPCPMS3012A Select and fit insulation and sheathing
- CPCPMS3013A Install small bore heating systems
- CPCPMS3020A Install and maintain evaporative air cooling systems
- CPCPRF2013A Collect and store roof water

CPCPWT3014A	Install and maintain domestic water treatment equipment
CPCPWT3018A	Install water service
CPCPWT3019A	Install water pipe systems
RIICCM210A	Install trench support
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding
RTE3605A	Troubleshoot irrigation systems
<i>Sanitary stream</i>	
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCRI3001A	Operate personnel and materials hoists
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPDR2012A	Install domestic treatment plants
CPCPDR2013A	Maintain effluent disinfection systems
CPCPDR2014A	Install stormwater and sub-soil drainage systems
CPCPDR2015A	Drain work site
CPCPDR2016A	Install prefabricated inspection openings and enclosures
CPCPDR3012A	Install below ground sanitary drainage systems
CPCPDR3013A	Install on-site disposal systems
CPCPMS3012A	Select and fit insulation and sheathing
CPCPSN3015A	Install pre-treatment facilities
CPCPSN3016A	Install sewerage pump sets
RIICCM210A	Install trench support

Drainage stream

CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2028A	Cut and join sheet metal
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPDR2013A	Maintain effluent disinfection systems
CPCPSN3015A	Install pre-treatment facilities
CPCPWT3019A	Install water pipe systems

Mechanical services stream

CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCRI3001A	Operate personnel and materials hoists
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPMS3012A	Select and fit insulation and sheathing
CPCPMS3014A	Install medical gas pipeline systems
CPCPMS3015A	Install and test ducting systems
CPCPMS3016A	Install air handling units
CPCPMS3017A	Install and test split system air conditioning
CPCPMS3018A	Install air conditioning control equipment
CPCPMS3019A	Maintain mechanical services equipment
CPCPMS3020A	Install and maintain evaporative air cooling systems
CPCPMS3021A	Install domestic solid fuel burning appliances
CPCPRF3013A	Fabricate and install external flashings
MEM05049B	Perform routine gas tungsten arc welding

MEM05050B	Perform routine gas metal arc welding
MEM10009B	Install refrigeration and air conditioning plant and equipment
MEM10010B	Install pipework and pipework assemblies
MEM18086B	Test, recover, evacuate and charge refrigeration systems
RIICCM210A	Install trench support

Roofing stream

CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCRI3001A	Operate personnel and materials hoists
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPRF2014A	Fabricate roof coverings for curved structures
CPCPRF3015A	Install roof coverings to curved roof structures
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding
RIICCM210A	Install trench support

Gas services stream

CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCRI3001A	Operate personnel and materials hoists
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPGS3020A	Install Type B gas appliance flues

CPCPGS3022A	Maintain Type A gas appliances
CPCPGS3025A	Install subsidiary gas meters
CPCPGS3035A	Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL
CPCPMS2011A	Assemble mechanical services components
CPCPMS3011A	Fabricate and install steel pressure piping
CPCPMS3013A	Install small bore heating systems
CPCPMS3015A	Install and test ducting systems
CPCPMS3016A	Install air handling units
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding
RIICCM210A	Install trench support

CPCPCM2019A changed to CPCPCM2029A Cut using oxy-LPG-acetylene equipment

Description

This qualification provides a trade outcome in plumbing, specialising in mechanical services. Occupational titles may include:

- Plumber.

The qualification has core and elective unit of competency requirements that cover mechanical services specialist skills and common and other specialist skills for the plumbing industry.

The qualification has options from six specialist streams:

Stream 1 Mechanical services

Stream 2 Water

Stream 3 Sanitary

Stream 4 Drainage

Stream 5 Roofing

Stream 6 Gas services.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Units of competency from a minimum of four of the following six plumbing streams are required for award of this qualification.

Stream 1 Mechanical services and Stream 2 Water are mandatory.

The following units of competency are required for award of this qualification:

Stream 1 Mechanical services (mandatory): 4 core units and 11 elective units from the mechanical services stream

and

Stream 2 Water (mandatory): 23 core units and 7 elective units from the water stream.

Plus two of the following four streams: Stream 3 Sanitary: 6 core units and 4 elective units from the sanitary stream

Stream 4 Drainage: 9 core units and 3 elective units from the drainage stream

Stream 5 Roofing: 8 core units and 4 elective units from the roofing stream

Stream 6 Gas services: 12 core units and 5 elective units from the gas services stream

NB: Units of competency achieved in one stream count as credit for the same unit in the core or elective requirements for any other stream.

Core units

Mechanical services stream

CPCPCM2028A	Cut and join sheet metal
CPCPMS2011A	Assemble mechanical services components
CPCPMS3011A	Fabricate and install steel pressure piping
CPCPMS3013A	Install small bore heating systems

Water stream

CPCPCM2002A	Carry out interactive workplace communication
CPCPCM2004A	Read plans and calculate plumbing quantities
CPCPCM2011A	Apply first aid in the workplace
CPCPCM2021A	Work effectively in the plumbing and services sector
CPCPCM2023A	Carry out OHS requirements
CPCPCM2025A	Handle and store plumbing materials
CPCPCM2026A	Use plumbing hand and power tools
CPCPCM2027A	Carry out levelling
CPCPCM2030A	Mark out materials
CPCPCM2032A	Weld using oxy-acetylene equipment

CPCPCM2033A	Weld using arc welding equipment
CPCPCM2034A	Carry out simple concreting and rendering
CPCPCM2035A	Work safely on roofs
CPCPCM3011A	Flash penetrations through roofs and walls
CPCPCM3012A	Weld plastic pipe using fusion method
CPCPCM3013A	Fabricate and install non-ferrous pressure piping

CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCRI3001A	Operate personnel and materials hoists
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2028A	Cut and join sheet metal
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPFS2011A	Connect static storage tanks for fixed fire protection systems
CPCPFS2012A	Install portable fire equipment
CPCPFS3013A	Fit off sprinkler heads, controls and ancillary equipment
CPCPFS3014A	Install control valve assemblies, actuating devices and local alarms
CPCPFS3017A	Install domestic and residential life safety sprinkler systems
CPCPFS3018A	Test and maintain fire hydrant and hose reel installations
CPCPIG2011A	Design domestic urban irrigation systems
CPCPIG3011A	Set out, install and commission irrigation systems
CPCPIG3012A	Install and commission domestic irrigation pumps
CPCPMS3011A	Fabricate and install steel pressure piping
CPCPMS3012A	Select and fit insulation and sheathing
CPCPMS3013A	Install small bore heating systems

CPCPMS3020A	Install and maintain evaporative air cooling systems
CPCPRF2013A	Collect and store roof water
CPCPWT3014A	Install and maintain domestic water treatment equipment
CPCPWT3018A	Install water service
CPCPWT3019A	Install water pipe systems
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding
RIICCM210A	Install trench support
RTE3605A	Troubleshoot irrigation systems
<i>Sanitary stream</i>	
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCRI3001A	Operate personnel and materials hoists
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPDR2012A	Install domestic treatment plants
CPCPDR2013A	Maintain effluent disinfection systems
CPCPDR2014A	Install stormwater and sub-soil drainage systems
CPCPDR2015A	Drain work site
CPCPDR2016A	Install prefabricated inspection openings and enclosures
CPCPDR3012A	Install below ground sanitary drainage systems
CPCPDR3013A	Install on-site disposal systems

CPCPMS3012A	Select and fit insulation and sheathing
CPCPSN3015A	Install pre-treatment facilities
CPCPSN3016A	Install sewerage pump sets
RIICCM210A	Install trench support
<i>Drainage stream</i>	
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2028A	Cut and join sheet metal
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPDR2013A	Maintain effluent disinfection systems
CPCPSN3015A	Install pre-treatment facilities
CPCPWT3019A	Install water pipe systems
<i>Roofing stream</i>	
CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCRI3001A	Operate personnel and materials hoists
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPRF2014A	Fabricate roof coverings for curved structures
CPCPRF3015A	Install roof coverings to curved roof structures
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding
RIICCM210A	Install trench support
<i>Gas services stream</i>	
CPCCCM2008A	Erect and dismantle restricted height scaffolding

CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms
CPCCRI3001A	Operate personnel and materials hoists
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2029A	Cut using oxy-LPG-acetylene equipment
CPCPGS3020A	Install Type B gas appliance flues
CPCPGS3022A	Maintain Type A gas appliances
CPCPGS3025A	Install subsidiary gas meters
CPCPGS3035A	Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL
CPCPMS2011A	Assemble mechanical services components
CPCPMS3011A	Fabricate and install steel pressure piping
CPCPMS3013A	Install small bore heating systems
CPCPMS3015A	Install and test ducting systems
CPCPMS3016A	Install air handling units
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding
RIICCM210A	Install trench support

CPC32611 Certificate III in Roof Plumbing

Modification History

Not Applicable

Description

This qualification provides a trade outcome in roof plumbing.
Occupational titles may include:

- Roof plumber.

The qualification has core and elective unit of competency requirements that cover some common skills for the plumbing industry, as well as roof plumbing specialist units of competency.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Technology	<ul style="list-style-type: none"> • Uses electricity and electrical equipment safely • Uses and operates a range of tools and equipment correctly and safely • Properly starts up, operates and shuts down equipment • Identifies technological trends that may affect the plumbing and services sector • Carries out pre- and post-operational checks on tools and equipment • Performs tool and equipment maintenance as required

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 25 units of competency:
- 22 core units
- 3 elective units.

Core units

CPCCCM2008A	Erect and dismantle restricted height scaffolding
CPCCCM2010A	Work safely at heights
CPCCCM3001B	Operate elevated work platforms

CPCPCM2002A	Carry out interactive workplace communication
CPCPCM2004A	Read plans and calculate plumbing quantities
CPCPCM2011A	Apply first aid in the workplace
CPCPCM2021A	Work effectively in the plumbing and services sector
CPCPCM2023A	Carry out OHS requirements
CPCPCM2025A	Handle and store plumbing materials
CPCPCM2026A	Use plumbing hand and power tools
CPCPCM2027A	Carry out levelling
CPCPCM2028A	Cut and join sheet metal
CPCPCM2030A	Mark out materials
CPCPCM2035A	Work safely on roofs
CPCPCM3011A	Flash penetrations through roofs and walls
CPCPRF2012A	Select and install roof sheeting and wall cladding
CPCPRF3011A	Receive roofing materials
CPCPRF3012A	Fabricate and install roof drainage components
CPCPRF3013A	Fabricate and install external flashings
CPCPRF3014A	Install roof components
CPCPRF3015A	Install roof coverings to curved roof structures
CPCPRF3016A	Install composite roof systems
Elective units	
CPCCPB3015A	Install acoustic and thermal environmental protection systems
CPCCRI3001A	Operate personnel and materials hoists
CPCCST2005A	Carry out load slinging of off-site materials
CPCPCM2019A	Cut using oxy-LPG-acetylene equipment
CPCPCM2033A	Weld using arc welding equipment

CPCPCM2032A	Weld using oxy-acetylene equipment
CPCPCM2034A	Carry out simple concreting and rendering
CPCPCM3012A	Weld plastic pipe using fusion method
CPCPCM3013A	Fabricate and install non-ferrous pressure piping
CPCPDR2011A	Locate and clear blockages
CPCPDR2014A	Install stormwater and sub-soil drainage systems
CPCPDR2015A	Drain work site
CPCPDR2016A	Install prefabricated inspection openings and enclosures
CPCPMS3012A	Select and fit insulation and sheathing
CPCPRF2013A	Collect and store roof water
CPCPRF2014A	Fabricate roof coverings for curved structures
MEM05049B	Perform routine gas tungsten arc welding
MEM05050B	Perform routine gas metal arc welding
RIICCM210A	Install trench support

CPC32711 Certificate III in Gas Fitting

Modification History

Release 2 related to V6.1 changes - Removal of erroneous listing in the elective pool of CPC32711 Cert III in Gas Fitting of unit CPCPCM2032A - relocating to its originally intended core pool location in that Qualification.

Unit code update:

CPCPGS3011A change to CPCPGS3031A Install gas piping systems.

CPCPGS3012A change to CPCPGS3032A Size consumer gas piping systems

CPCPGS3013A changed to CPCPGS3033A Install and commission Type A gas appliances

CPCPGS3014A changed to CPCPGS3034A Install LPG storage of aggregate storage capacity up to 500 litres

CPCPGS3015A changed to CPCPGS3035A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL

Description

This qualification provides a trade outcome in gas fitting.

Occupational titles may include:

- Gas fitter.

The qualification has core and elective unit of competency requirements that cover some common skills for the plumbing industry, as well as gas fitting specialist units of competency. The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

CPCPCM3011A	Flash penetrations through roofs and walls
CPCPCM3012A	Weld plastic pipe using fusion method
CPCPFS2012A	Install portable fire equipment
CPCPFS3020A	Conduct basic functional testing of water-based fire-suppression systems
CPCPFS3021A	Inspect and test fire pumpsets
CPCPFS3022A	Conduct annual functional testing of complex water-based fire-suppression systems
CPCPFS3023A	Conduct functional water flow testing
CPCPWT3019A	Install water pipe systems
RIICCM210A	Install trench support

CPC40110 Certificate IV in Building and Construction (Building)

Modification History

One new CPC08 unit added to the list of elective units:

- CPCCBC4051A Supervise asbestos removal.

CPCCOHS1001A Work safely in the construction industry also added to the elective bank given its prerequisite status in that unit.

CPCCBC4023A Plan and undertake site inspection and assessment of asbestos products and materials deleted from elective list in qualification.

Description

This qualification is designed to meet the needs of builders and managers of small to medium-sized building businesses.

The builder may also be the appropriately licensed person with responsibility under the relevant building licensing authority in the State or Territory. Builder licensing varies across States and Territories and additional requirements to attainment of this qualification may be required.

Occupational titles may include:

- Builder
- Construction manager.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Employability Skills Summary

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Communicates OHS policies and procedures• Participates in ensuring compliance with standards, regulations and policies• Communicates effectively with a range of relevant parties through a range of media• Establishes on-site communication systems• Facilitates site meetings• Articulates complex ideas clearly• Interprets a range of complex and technical documents, including relevant regulatory, legislative and licensing requirements, codes and standards, plans, drawings and specifications, schedules, site files, contracts, orders, development approvals and organisational policies and procedures• Analyses and evaluates reports and reference materials• Understands relevant definitions, terminology, symbols and language• Maintains and checks logs, records and documents• Prepares a range of documents, including construction contracts, plans, sketches and drawings and specifications, reports, tenders, schedules, building applications and submissions and file notes• Reports and records hazards, risks and project costs• Negotiates conflict and dispute resolution• Analyses a range of data, including company and stakeholder resource consumption and waste product volumes•
Teamwork	<ul style="list-style-type: none">• Conducts briefings with team members• Coordinates a range of team members and activities• Keeps team informed of work practices, quality requirements and required actions• Relates positively to fellow workers and the management team• Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities• Seeks expert advice where appropriate• Works collaboratively with relevant stakeholders• Understands various stakeholders' roles

Problem solving

- Supervises and checks others' work, monitors work processes and ensures safe work practices
- Assesses structural integrity of residential and commercial low rise buildings
- Performs various calculations relating to rise and fall amounts, estimating resource acquisition and costs; measuring levels, heights and gradients; structural analysis; drawing dimensions; setting out of construction projects; comparisons of alternative water management systems; waste management minimisation strategies; and thermal efficiency, rated capacity and working load limits
- Examines tools and equipment prior to use for damage, missing components or other defects
- Identifies and rectifies faults
- Responds effectively to hazards, risks and emergencies
- Analyses problems and applies appropriate remedial solutions
- Resolves business disputes
- Deals with customer complaints and disputes
- Deals with contract variations
- Takes action to minimise contract penalties
- Analyses rejected building applications and determines the likely success of an appeal or a resubmission
- Devises approaches, implements and reflects on environmental and water, energy and resource efficiency management policies and procedures relevant to work site to improve environmental sustainability, and shares alternative approaches as required

Initiative and enterprise

- Evaluates properties of construction materials and selects appropriate materials based on evaluation
- Develops compliant, alternative solutions to construction problems
- Assesses thermal efficiency of buildings and reviews design solutions for effectiveness and compliance
- Identifies opportunities for improved water management
- Evaluates effective strategies for insulating structures
- Develops waste management strategies and dispute resolution procedures

	<ul style="list-style-type: none">• Identifies environmental and resource efficiency improvements, applies knowledge about resource use to organisational activities and customer service, and develops resource efficiency tools
Planning and organising	<ul style="list-style-type: none">• Plans and coordinates various work operations• Prepares project schedules• Participates in effective implementation of organisation's operational plans• Plans and organises on-site activities and implements procedures associated with building and construction work• Identifies and organises resource requirements and obtains supply information• Supervises various administrative and work processes, including claims and payments, insurance coverage, payroll systems and tax systems• Collects, analyses and organises workplace information and data• Plans and organises inspections• Organises testing of construction materials to ensure suitability
Self management	<ul style="list-style-type: none">• Manages own performance to ensure required levels of service standards, work quality and professional competence• Manages work priorities and professional development• Uses feedback to improve own performance• Organises and completes daily work activities
Learning	<ul style="list-style-type: none">• Is open to new ideas and techniques• Seeks feedback on personal performance• Uses information effectively to improve work performance• Learns from colleagues as part of effective teamwork
Technology	<ul style="list-style-type: none">• Operates office equipment• Uses computer equipment and relevant software• Uses cameras• Assesses new and emerging technologies for application to construction processes• Uses a range of tools and equipment, including technical instruments and surveying equipment• Maintains tools and equipment as required• Uses technology to improve efficiency and

effectiveness of managing work

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 16 units of competency:
 - 13 core units
 - 3 elective units.

The elective units may be selected as follows:

- all three elective units may be selected from the elective list below
- two of the three elective units may be selected from Certificate III, Certificate IV or Diploma level from another endorsed Training Package or from CPC08 Construction, Plumbing and Services Training Package, provided that at least one is from Certificate IV and the industry context is maintained.

Core units of competency

Unit code	Unit title
CPCCBC4001A	Apply building codes and standards to the construction process for low rise building projects
CPCCBC4002A	Manage occupational health and safety in the building and construction workplace
CPCCBC4003A	Select and prepare a construction contract
CPCCBC4004A	Identify and produce estimated costs for building and construction projects
CPCCBC4005A	Produce labour and material schedules for ordering
CPCCBC4006B	Select, procure and store construction materials for low rise projects
CPCCBC4007A	Plan building or construction work
CPCCBC4008B	Conduct on-site supervision of building and construction projects
CPCCBC4009B	Apply legal requirements to building and construction projects
CPCCBC4010B	Apply structural principles to residential low rise constructions
CPCCBC4011B	Apply structural principles to commercial low rise constructions
CPCCBC4012A	Read and interpret plans and specifications
BSBSMB406A	Manage small business finances

Elective units of competency

Unit code	Unit title
CPCCBC4013A	Prepare and evaluate tender documentation
CPCCBC4014A	Prepare simple building sketches and drawings
CPCCBC4015A	Prepare specifications for all construction works
CPCCBC4016A	Administer a construction contract
CPCCBC4017A	Arrange resources and prepare for the building or construction project
CPCCBC4018A	Apply site surveys and set-out procedures to building and construction projects
CPCCBC4019A	Apply sustainable building design principles to water management systems
CPCCBC4020A	Build thermally efficient and sustainable structures
CPCCBC4021A	Minimise waste on the building and construction site
CPCCBC4022A	Supervise tilt-up work
CPCCBC4024A	Resolve business disputes
CPCCBC4025A	Manage personal work priorities and professional development
CPCCBC4026A	Arrange building applications and approvals
CPCCBC4051A	Supervise asbestos removal
CPCCOHS1001A	Work safely in the construction industry
CPCSUS4001A	Implement and monitor environmentally sustainable work practices
BSBWOR402A	Promote team effectiveness
BSBITU201A	Produce simple word processed documents
BSBITU202A	Create and use spreadsheets
BSBITU301A	Create and use databases
BSBMGT403A	Implement continuous improvement
BSBPMG404A	Apply quality management techniques
BSBPMG407A	Apply risk management techniques

BSBPMG510A	Manage projects
BSBSMB401A	Establish legal and risk management requirements of small business
BSBSMB402A	Plan small business finances
BSBSMB404A	Undertake small business planning
BSBSMB405A	Monitor and manage small business operations
BSBWOR401A	Establish effective workplace relationships
BSBWRT401A	Write complex documents
HLTHIR403B	Work effectively with culturally diverse clients and co-workers
TAEDEL402A	Plan, organise and facilitate learning in the workplace

CPC40208 Certificate IV in Building and Construction (Contract Administration)

Modification History

Not Applicable

Description

This qualification is designed to meet the needs of contract administrators working in small to medium-sized enterprises.

Occupational titles may include:

- Contract administrator.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- **15 units of competency:**
 - 8 core units
 - 7 elective units.

The elective units are to be chosen as follows:

- up to 7 units from general elective units
- up to 3 units from qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, they contribute to a valid, industry-supported vocational outcome, and that no more than:

- 2 units are from a Certificate IV qualification
- 1 unit is from a Certificate III or Diploma qualification.

Core units of competency

Unit code	Unit title
CPCCBC4001A	Apply building codes and standards to the construction process for low rise building projects
CPCCBC4004A	Identify and produce estimated costs for building and construction projects
CPCCBC4005A	Produce labour and material schedules for ordering
CPCCBC4010B	Apply structural principles to residential low rise constructions
CPCCBC4011B	Apply structural principles to commercial low rise constructions
CPCCBC4012A	Read and interpret plans and specifications
CPCCBC4013A	Prepare and evaluate tender documentation
BSBPMG407A	Apply risk management techniques

Employability Skills Summary

Employability skill

Industry/enterprise requirements for this qualification include:

Communication

- Communicates OHS policies and procedures
- Participates in ensuring compliance with standards, regulations and policies
- Communicates effectively with a range of relevant parties through a range of media
- Establishes on-site communication systems
- Facilitates site meetings
- Articulates complex ideas clearly
- Interprets a range of complex and technical documents, including relevant regulatory, legislative, licensing and registration requirements, codes and standards, plans, drawings and specifications, contracts, schedules, site files, development approvals, and organisational policies and procedures
- Analyses and evaluates reports and reference materials
- Understands relevant definitions, terminology, symbols and language
- Maintains and checks logs, records and documents
- Prepares a range of documents, including construction contracts, plans, sketches and drawings and specifications, reports, tenders, schedules, building applications and submissions and file notes
- Reports and records hazards and risks
- Negotiates conflict and dispute resolution
- Analyses a range of data, including company and stakeholder resource consumption and waste product volumes

Teamwork

- Conducts briefings with team members
- Coordinates a range of team members and activities
- Keeps team informed of work practices, quality requirements and required actions
- Relates positively to fellow workers and the management team
- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
- Seeks expert advice where appropriate
- Works collaboratively with relevant stakeholders

Problem solving	<ul style="list-style-type: none">• Understands various stakeholders' roles• Supervises and checks others' work, monitors work processes and ensures safe work practices• Discusses ideas with team members• Assesses structural integrity of residential and commercial low rise buildings• Performs various calculations relating to estimating resource acquisition and costs, rise and fall amounts measurement of levels, heights and gradients, structural analysis, drawing dimensions, setting out of construction projects, comparisons of alternative water management systems, waste management minimisation strategies and thermal efficiency, rated capacity and working load limits and budgeting and forecasting• Examines tools and equipment prior to use for damage, missing components or other defects• Identifies and rectifies faults• Responds effectively to hazards, risks and emergencies• Analyses problems and applies appropriate remedial solutions• Resolves business disputes• Deals with customer complaints and disputes• Analyses rejected building applications and determines the likely success of an appeal or a resubmission• Devises approaches, implements and reflects on environmental and water, energy and resource efficiency management policies and procedures relevant to work site to improve environmental sustainability and shares alternative approaches as required

Self management	<ul style="list-style-type: none">• Manages own performance to ensure required levels of service standards, work quality and professional competence• Manages work priorities and professional development• Uses feedback to improve own performance• Organises and completes daily work activities
Learning	<ul style="list-style-type: none">• Is open to new ideas and techniques• Seeks feedback on personal performance• Uses information effectively to improve work performance• Learns from colleagues as part of effective teamwork
Technology	<ul style="list-style-type: none">• Operates office equipment• Uses computer equipment and relevant software• Uses cameras• Assesses new and emerging technologies for application to construction processes• Uses a range of tools and equipment, including technical instruments and surveying equipment

- Maintains tools and equipment as required
- Uses technology to improve efficiency and effectiveness of managing work

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
 - 9 core units
 - 6 elective units.

The electives may be selected as follows:

- all six electives may be selected from the list below
 - two of the six elective units from a Certificate IV qualification in another endorsed Training Package or within CPC08 Construction, Plumbing and Services Training Package, ensuring the industry context of the qualification is maintained
 - one of the six elective units may be selected from either Certificate III or Diploma level.

Core units of competency

Unit code	Unit title
CPCCBC4001A	Apply building codes and standards to the construction process for low rise building projects
CPCCBC4002A	Manage occupational health and safety in the building and construction workplace
CPCCBC4007A	Plan building or construction work
CPCCBC4008B	Conduct on-site supervision of building and construction projects
CPCCBC4009B	Apply legal requirements to building and construction projects
CPCCBC4010B	Apply structural principles to residential low rise constructions
CPCCBC4011B	Apply structural principles to commercial low rise constructions
CPCCBC4012A	Read and interpret plans and specifications
BSBWOR402A	Promote team effectiveness

Elective units of competency

Unit code	Unit title
CPCCBC4005A	Produce labour and material schedules for ordering
CPCCBC4014A	Prepare simple building sketches and drawings
CPCCBC4015A	Prepare specifications for all construction works
CPCCBC4017A	Arrange resources and prepare for the building or construction project
CPCCBC4018A	Apply site surveys and set-out procedures to building and construction projects
CPCCBC4019A	Apply sustainable building design principles to water management systems
CPCCBC4020A	Build thermally efficient and sustainable structures
CPCCBC4021A	Minimise waste on the building and construction site
CPCCBC4024A	Resolve business disputes
CPCCBC4025A	Manage personal work priorities and professional development
CPCCBC4026A	Arrange building applications and approvals
CPCCBC4028A	Prepare design brief for construction works
CPCCBC4051A	Supervise asbestos removal
CPCCOHS1001A	Work safely in the construction industry
CPCSUS4001A	Implement and monitor environmentally sustainable work practices
BSBCUS301A	Deliver and monitor a service to customers
BSBITU201A	Produce simple word processed documents
BSBITU202A	Create and use spreadsheets
BSBITU301A	Create and use databases
BSBMGT403A	Implement continuous improvement
BSBPMG404A	Apply quality management techniques
BSBPMG407A	Apply risk management techniques
BSBPMG510A	Manage projects

BSBWOR401A	Establish effective workplace relationships
BSBWRT401A	Write complex documents
HLTHIR403B	Work effectively with culturally diverse clients and co-workers
TAEDEL402A	Plan, organise and facilitate learning in the workplace

CPC40611 Certificate IV in Building and Construction (Specialist Trades)

Modification History

One new CPC08 unit added to the list of elective units:

- CPCCBC4051A Supervise asbestos removal.

CPCCOHS1001A Work safely in the construction industry also added to the elective bank given its prerequisite status in that unit.

CPCCBC4023A Plan and undertake site inspection and assessment of asbestos products and materials deleted from elective list in qualification.

Description

This qualification is designed to meet the needs of experienced tradespersons seeking to expand their skills in a diverse range of technical areas. The qualification also reflects the needs of tradespersons responsible for managing projects.

Occupational titles may include:

- Building manager and supervisor
- Heritage restorer
- Crane operator
- Rigger.

The qualification has core unit of competency requirements that cover common skills for the construction industry. An entry requirement for the Heritage restoration stream is completion of one of the following Certificate III qualifications or their equivalent:

- Bricklaying/Blocklaying
- Carpentry or Carpentry and Joinery
- Painting and Decorating
- Solid Plastering
- Stonemasonry (Monumental/Installation).

An entry requirement for the Refractory bricklaying stream is completion of the Certificate III in Bricklaying/Blocklaying or equivalent.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Employability Skills Summary

Employability skill

Industry/enterprise requirements for this qualification include:

Communication

- Participates in ensuring compliance with standards, regulations and policies
- Communicates effectively with a range of relevant parties through a range of media
- Articulates complex ideas clearly
- Uses standard communication symbols
- Interprets a range of complex and technical documents, including relevant regulatory, legislative, licensing and registration requirements, codes and standards, plans, drawings and specifications, schedules, load tables, orders, contracts, material safety data sheets and organisational policies and procedures
- Analyses and evaluates records, reports and reference materials
- Understands relevant definitions, terminology, symbols and language
- Reports and records hazards and risks and project costs
- Maintains and checks logs, records and documents
- Prepares a range of documents, including work plans, file notes, drawings and sketches, heritage works safety management plans and heritage restoration work reports
- Negotiates conflict and dispute resolution
- Analyses a range of data, including company and stakeholder resource consumption and waste product volumes

Teamwork

- Discusses and agrees roles, responsibilities and requirements of project team members
- Supervises and checks others' work, monitors work processes and ensures safe work practices
- Identifies effective strategies for problem resolution within the project team
- Seeks expert advice where appropriate
- Works collaboratively with relevant stakeholders
- Understands various stakeholders' roles
- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities

Problem solving	<ul style="list-style-type: none">• Performs various calculations relating to estimating resource acquisition and costs, drawing dimensions, comparisons of alternative water management systems, waste management minimisation strategies and thermal efficiency, rated capacity and working load limits• Examines tools and equipment prior to use for damage, missing components or other defects• Identifies and rectifies faults• Responds effectively to hazards, risks and emergencies• Analyses problems and applies appropriate remedial solutions• Performs test lift/shifts to ensure lift suitability• Resolves business disputes• Makes adjustments to processes and work plans to address problems that emerge during the heritage restoration• Devises approaches, implements and reflects on environmental and water, energy and resource efficiency management policies and procedures relevant to work site to improve environmental sustainability and shares alternative approaches as required
Initiative and enterprise	<ul style="list-style-type: none">• Assesses thermal efficiency of buildings and reviews design solutions for effectiveness and compliance• Identifies opportunities for improved water management• Evaluates effective strategies for insulating structures• Develops waste management strategies and dispute resolution procedures• Assesses restoration possibilities• Identifies environmental and resource efficiency improvements, applies knowledge about resource use to organisational activities and customer service and develops resource efficiency tools
Planning and organising	<ul style="list-style-type: none">• Participates in effective implementation of organisation's operational plans• Identifies location and nature of restoration work and prepares site prior to commencing work• Identifies and organises resource requirements and obtains supply information• Collects, analyses and organises workplace

	information and data
	<ul style="list-style-type: none">• Plans and organises inspections• Checks test certificates of materials to ensure materials meet refractory plan requirements• Plans and prepares for operation of tower crane and self-erecting tower crane
Self management	<ul style="list-style-type: none">• Manages own performance to ensure required levels of service standards, work quality and professional competence• Manages work priorities and professional development• Uses feedback to improve own performance• Organises and completes daily work activities• Manages ongoing compliance with codes and standards
Learning	<ul style="list-style-type: none">• Is open to new ideas and techniques• Seeks feedback on personal performance• Uses information effectively to improve work performance• Learns from colleagues as part of effective teamwork• Contributes to the learning of others by ensuring that workers are informed of required application of codes and standards
Technology	<ul style="list-style-type: none">• Uses and operates a range of tools and equipment correctly and safely• Properly starts up, operates and shuts down equipment• Carries out pre- and post-operational checks on equipment and machines• Performs tools and equipment maintenance as required• Operates office equipment• Uses computer equipment and relevant software• Uses cameras

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
 - 4 common core units

- all core units for one of the following streams:
 - heritage restoration (six units)
 - refractory bricklaying (two units)
 - crane operations (two units)
 - rigging (two units)
 - elective units (number to take the total number of units completed to 15).

The elective units may be selected as follows:

- all electives may be selected from the list below
- two of the required number of elective units may be selected from a Certificate III, IV or Diploma qualification in another endorsed Training Package or within CPC08 Construction, Plumbing and Services Training Package, ensuring the industry context of the qualification is maintained.

Core units of competency

Common

Unit code	Unit title
CPCCBC4004A	Identify and produce estimated costs for building and construction projects
CPCCBC4012A	Read and interpret plans and specifications
CPCCBC4034A	Apply codes and standards to building trade and services contracting
BSBOHS404B	Contribute to the implementation of strategies to control OHS risk

Heritage restoration stream

CPCCBC4035A	Initiate the heritage works process
CPCCBC4036A	Prepare to undertake the heritage restoration process
CPCCBC4037A	Prepare drawings for heritage works
CPCCBC4038A	Prepare work plans for restoration work
CPCCBC4039A	Undertake the heritage restoration process
CPCCBC4040A	Prepare report for heritage restoration work

Refractory bricklaying stream

CPCCBC4041A	Undertake preparations for refractory work
CPCCBC4042A	Construct a fire brick wall and arch using refractory materials

Crane operations stream

CPCCLTC4001A	Licence to operate a tower crane
CPCCLTC4002A	Licence to operate a self-erecting tower crane

Rigging stream

CPCCLRG4001A	Licence to perform rigging advanced level
CPCCLSF4001A	Licence to erect, alter and dismantle scaffolding advanced level

Elective units of competency

CPCCBC4019A	Apply sustainable building design principles to water management systems
CPCCBC4020A	Build thermally efficient and sustainable structures
CPCCBC4021A	Minimise waste on the building and construction site
CPCCBC4024A	Resolve business disputes
CPCCBC4025A	Manage personal work priorities and professional development
CPCCBC4043A	Operate a self-erecting tower crane
CPCCBC4044A	Operate a tower crane
CPCCBC4045A	Perform advanced rigging
CPCCBC4046A	Erect and dismantle advanced scaffolding
CPCCBC4047A	Quality assure fire-rated lining systems
CPCCBC4051A	Supervise asbestos removal
CPCCOHS1001A	Work safely in the construction industry
CPCSUS4001A	Implement and monitor environmentally sustainable work practices
BSBCUS301A	Deliver and monitor a service to customers
BSBWOR402A	Promote team effectiveness
BSBITU201A	Produce simple word processed documents
BSBITU202A	Create and use spreadsheets
BSBITU301A	Create and use databases
BSBMGT403A	Implement continuous improvement
BSBPMG404A	Apply quality management techniques
BSBPMG407A	Apply risk management techniques
BSBSMB401A	Establish legal and risk management requirements of small business
BSBWRT401A	Write complex documents
HLTHIR403B	Work effectively with culturally diverse clients and co-workers

TLILIC608A	Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)
TLILIC808A	Licence to operate a slewing mobile crane (up to 20 tonnes)
TLILIC908A	Licence to operate a slewing mobile crane (up to 60 tonnes)
TLILIC1008A	Licence to operate a slewing mobile crane (up to 100 tonnes)
TLILIC1108A	Licence to operate a slewing mobile crane (over 100 tonnes)

CPC40708 Certificate IV in Building and Construction (Trade Contracting)

Modification History

One new CPC08 unit added to the list of elective units:

- CPCCBC4051A Supervise asbestos removal

CPCCOHS1001A Work safely in the construction industry also added to the elective bank given its prerequisite status in that unit.

CPCCBC4023A Plan and undertake site inspection and assessment of asbestos products and materials deleted from elective list in qualification.

Description

This qualification is designed to meet the needs of trade contractors who manage trade contracting businesses.

Occupational titles may include:

- Trade contractor.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Employability Skills Summary

Employability skill

Industry/enterprise requirements for this qualification include:

Communication

- Interprets a range of complex and technical documents, including relevant regulatory, legislative and licensing requirements, codes and standards, plans, drawings and specifications, schedules, site files, contracts, orders and organisational policies and procedures
- Analyses and evaluates reports and reference materials
- Provides clear and accurate information to customers about the construction process and requirements and contracts
- Communicates effectively with a range of relevant parties through a range of media
- Articulates complex ideas clearly
- Understands relevant definitions, terminology, symbols and language
- Negotiates contracts as well as conflict and dispute resolution
- Prepares documents, including construction contracts, plans, sketches and drawings and specifications, reports, tenders, schedules, building applications and submissions and file notes
- Reports and records project costs
- Maintains and checks logs, records and documents
- Analyses a range of data, including company and stakeholder resource consumption and waste product volumes

Teamwork

- Coordinates a range of team members and activities
- Seeks expert advice where appropriate
- Works collaboratively with relevant stakeholders
- Understands various stakeholders' roles
- Relates positively to fellow workers and the management team
- Relates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities

Problem solving

- Performs various calculations relating to rise and fall amounts, estimating resource acquisition and costs, comparisons of alternative water management systems; waste management minimisation strategies; and thermal efficiency

- Takes action to minimise contract penalties
 - Identifies and rectifies faults
 - Responds effectively to hazards, risks and emergencies
 - Analyses problems and applies remedial solutions
 - Resolves business disputes
 - Deals with contract variations
 - Takes action to minimise contract penalties
 - Analyses rejected building applications and determines the likely success of an appeal or a resubmission
 - Devises approaches, implements and reflects on environmental and water, energy and resource efficiency management policies and procedures relevant to work site to improve environmental sustainability and shares alternative approaches as required
- Initiative and enterprise
- Acts with initiative and foresight to ensure legal requirements are applied accurately
 - Develops compliant, alternative solutions to construction problems
 - Evaluates properties of construction materials and selects appropriate materials based on evaluation
 - Identifies opportunities for improved water management
 - Evaluates effective strategies for insulating structures
 - Develops waste management strategies and dispute resolution procedures
 - Identifies environmental and resource efficiency improvements, applies knowledge about resource use to organisational activities and customer service and develops resource efficiency tools
- Planning and organising
- Plans and coordinates various work operations
 - Prepares project schedule
 - Participates in effective implementation of organisation's operational plans
 - Plans and organises on-site activities and implements procedures associated with building and construction work
 - Identifies and organises resource requirements and obtains supply information
 - Supervises various administrative and work processes, including payments
 - Collects, analyses and organises workplace

	information and data
	<ul style="list-style-type: none">• Plans and organises inspections• Organises testing of construction materials to ensure suitability
Self management	<ul style="list-style-type: none">• Manages own performance to ensure required levels of service standards, work quality and professional competence• Manages work priorities and professional development• Uses feedback to improve own performance• Organises and completes daily work activities
Learning	<ul style="list-style-type: none">• Is open to new ideas and techniques• Seeks feedback on personal performance• Uses information effectively to improve work performance• Learns from colleagues as part of effective teamwork
Technology	<ul style="list-style-type: none">• Operates office equipment and computers• Uses digital cameras• Uses technology to improve efficiency and effectiveness of managing work

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
 - 10 core units
 - 5 elective units.

The elective units are to be chosen as follows:

- up to 5 units from general elective units
- up to 3 units from qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, they contribute to a valid, industry-supported vocational outcome, and that no more than:
 - 2 units are from a Certificate IV qualification
 - 1 unit is from a Certificate III or Diploma qualification.

Core units of competency

Unit code	Unit title
CPCCBBC4002A	Manage occupational health and safety in the building and construction workplace
CPCCBBC4004A	Identify and produce estimated costs for building and construction projects
CPCCBBC4005A	Produce labour and material schedules for ordering
CPCCBBC4008B	Conduct on-site supervision of building and construction projects
CPCCBBC4012A	Read and interpret plans and specifications
CPCCBBC4024A	Resolve business disputes
CPCCBBC4034A	Apply codes and standards to building trade and services contracting
BSBCUS301A	Deliver and monitor a service to customers
BSBSMB406A	Manage small business finances
BSBWOR401A	Establish effective workplace relationships

Elective units of competency

Unit code	Unit title
CPCCBC4003A	Select and prepare a construction contract
CPCCBC4007A	Plan building or construction work
CPCCBC4010B	Apply structural principles to residential low rise constructions
CPCCBC4011B	Apply structural principles to commercial low rise constructions
CPCCBC4013A	Prepare and evaluate tender documentation
CPCCBC4017A	Arrange resources and prepare for the building or construction project
CPCCBC4019A	Apply sustainable building design principles to water management systems
CPCCBC4020A	Build thermally efficient and sustainable structures
CPCCBC4021A	Minimise waste on the building and construction site
CPCCBC4025A	Manage personal work priorities and professional development
CPCCBC4031A	Process client requirements
CPCCBC4032A	Apply contract law to sales processes
CPCCBC4051A	Supervise asbestos removals
CPCCOHS1001A	Work safely in the construction industry
CPCSUS4001A	Implement and monitor environmentally sustainable work practices
BSBWOR402A	Promote team effectiveness
BSBITU201A	Produce simple word processed documents
BSBITU202A	Create and use spreadsheets
BSBITU301A	Create and use databases
BSBMGT403A	Implement continuous improvement
BSBPMG404A	Apply quality management techniques
BSBPMG407A	Apply risk management techniques
BSBPMG510A	Manage projects

BSBSMB401A	Establish legal and risk management requirements of small business
BSBSMB402A	Plan small business finances
BSBSMB404A	Undertake small business planning
BSBSMB405A	Monitor and manage small business operations
BSBWRT401A	Write complex documents
CPCSUS4001A	Implement and monitor environmentally sustainable work practices
HLTHIR403B	Work effectively with culturally diverse clients and co-workers
TAEDEL402A	Plan, organise and facilitate learning in the workplace

CPC40808 Certificate IV in Swimming Pool and Spa Building

Modification History

One new CPC08 unit added to the list of elective units:

- CPCCBC4051A Supervise asbestos removal.

CPCCOHS1001A Work safely in the construction industry also added to the elective bank given its prerequisite status in that unit.

CPCCBC4023A Plan and undertake site inspection and assessment of asbestos products and materials deleted from elective list in qualification.

Description

This qualification provides an outcome in trade contracting for swimming pool and spa construction.

Occupational titles may include:

- Swimming pool and spa builder.

The qualification has core unit of competency requirements that cover common supervision and planning skills for the construction industry, as well as elective units common to a range of Certificate IV in Building and Construction qualifications.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet registration requirements in various States and Territories.

Technology	<ul style="list-style-type: none">• Operates office equipment• Uses computer equipment and relevant software• Uses cameras• Uses a range appropriate tools and equipment, including technical instruments and surveying equipment• Assesses new and emerging building technologies for their application to the construction process• Uses a range of tools and equipment, including

- technical instruments and surveying equipment
- Maintains tools and equipment as required
- Uses technology to improve efficiency and effectiveness of managing work

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 18 units of competency:
 - 17 core units
 - 1 elective unit.

The elective unit from a Certificate IV qualification in another endorsed Training Package or within CPC08 Construction, Plumbing and Services Training Package, ensuring the industry context of the qualification is maintained.

Core units of competency

Unit code	Unit title
CPCCBC4002A	Manage occupational health and safety in the building and construction workplace
CPCCBC4003A	Select and prepare a construction contract
CPCCBC4004A	Identify and produce estimated costs for building and construction projects
CPCCBC4005A	Produce labour and material schedules for ordering
CPCCBC4007A	Plan building or construction work
CPCCBC4008B	Conduct on-site supervision of building and construction projects
CPCCBC4009B	Apply legal requirements to building and construction projects
CPCCBC4012A	Read and interpret plans and specifications
CPCCBC4014A	Prepare simple building sketches and drawings
CPCCBC4018A	Apply site surveys and set-out procedures to building and construction projects
CPCCBC4024A	Resolve business disputes
CPCCBC4034A	Apply codes and standards to building trade and services contracting
CPCCBC4048A	Apply building codes and standards to the construction process for swimming pools and spas
CPCCBC4049A	Apply structural principles to construction of swimming pools and spas
CPCCBC4050A	Select, procure and store construction materials for swimming pools and spa projects
BSBCUS301A	Deliver and monitor a service to customers
BSBSMB406A	Manage small business finances

Elective units of competency

Unit code	Unit title
CPCCBC4013A	Prepare and evaluate tender documentation
CPCCBC4017A	Arrange resources and prepare for the building or construction project
CPCCBC4019A	Apply sustainable building design principles to water management systems

BSBPMG407A	Apply risk management techniques
BSBPMG510A	Manage projects
BSBSMB401A	Establish legal and risk management requirements of small business
BSBSMB402A	Plan small business finances
BSBSMB404A	Undertake small business planning
BSBSMB405A	Monitor and manage small business operations
BSBWOR401A	Establish effective workplace relationships

BSBWOR402A	Promote team effectiveness
BSBWRT401A	Write complex documents
HLTHIR403B	Work effectively with culturally diverse clients and co-workers
TAEDEL402A	Plan, organise and facilitate learning in the workplace

CPC40911 Certificate IV in Plumbing and Services

Modification History

Not Applicable

Description

This qualification provides an outcome for:

- experienced fire operators with responsibility for project design and supervision (Fire services stream)
- experienced plumbing service operators with responsibility for project design and supervision (Air conditioning and mechanical services stream)
- plumbers who manage a plumbing business (Plumbing and services - Management stream)
- specialist plumbing services tradespersons and operators seeking to deepen their technical skills (Plumbing and services - Operations stream)
- specialist hydraulic consultants (Hydraulic services design stream).

Occupational titles may include:

- Plumbing contractor
- Fire services supervisor
- Air conditioning technician
- Specialist hydraulic designer.

The qualification has core and elective unit of competency requirements that cover common skills for the plumbing industry, as well as the four specialist streams and a range of elective options.

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Interprets a range of complex documents, including relevant regulatory, legislative, licensing and registration requirements; codes and standards; drawings and specifications; industry definitions and terminology; contracts; plans and diagrams; job specifications; manufacturers' specifications and technical manuals; design specifications; and industrial relations policies• Understands industry terminology• Communicates effectively with a range of relevant parties through a range of media• Prepares a range of documents, including, reports, file notes, drawings and sketches, building applications and submissions; compressed air system specifications; testing and commissioning schedules; and operation and maintenance manuals• Uses active listening skills to seek clarification where needed• Facilitates site meetings• Negotiates conflict and dispute resolution
Teamwork	<ul style="list-style-type: none">• Seeks expert advice where appropriate• Supervises others' work and monitors work processes• Plans and sequences work in conjunctions with others• Participates in professional networks and associations
Problem solving	<ul style="list-style-type: none">• Performs various calculations and measurements relating to comparisons of alternative water management systems; waste management minimisation strategies; and materials and designs for compressed air systems• Identifies and rectifies faults• Deals with contract variations• Coordinates a range of team members and activities• Reviews design solutions for effectiveness and compliance• Deals with customer complaints and disputes

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Initiative and enterprise	<ul style="list-style-type: none">• Identifies building sites from location drawings• Identifies typical faults and problems and takes necessary remedial action• Uses creative design and drafting skills• Identifies opportunities for improved water management• Evaluates effective strategies for insulating structures• Develops waste management strategies• Designs compressed air systems• Develops waste management strategies and dispute resolution procedures
Planning and organising	<ul style="list-style-type: none">• Gathers required tools and equipment• Ensures a coordinated development of drawings• Supervises various administrative and work processes, including claims and payments, insurance coverage, payroll systems and tax systems• Arranges resources and prepares for the building or construction project• Plans and arranges building applications and approvals• Ensures current building codes and standards are applied• Plans and sets out work• Plans waste management strategies• Scopes extent of work required and plans and details relevant systems and layouts
Self management	<ul style="list-style-type: none">• Manages own performance to ensure required levels of service standards, work quality and professional competence, and compliance with relevant codes and standards• Manages work priorities and professional development• Maintains required standard of personal fitness, hygiene and grooming• Uses feedback to improve own performance
Learning	<ul style="list-style-type: none">• Uses appropriate mechanisms to inform others of applicable standards and codes• Applies training agreement provisions
Technology	<ul style="list-style-type: none">• Uses information technology skills to operate office equipment and computers

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

- Uses digital cameras
- Uses cad software to produce and manage architectural drawing and template files
- Uses relevant hydraulic design systems software
- Commissions fire alarm and detection systems and gas appliances
- Checks relevant tools and equipment for serviceability
- Understands basic electrical theory and the types, characteristics, uses and limitations of electrical/electronic componentry and control systems
- Designs compressed air systems using computer software

Packaging Rules

Packaging rules

Fire services stream

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
- 8 core units
- 7 elective units.

The units must be completed as follows:

- all four common core units
- all four core units shared between air conditioning and mechanical services stream and fire services
- seven elective units, ensuring that any licensing requirements are addressed.

Of these seven electives:

- at least four units must be selected from the pool of elective units in the fire services stream
- up to two units may be selected from a Certificate IV qualification in another endorsed Training Package or from the core or elective units of another stream within the Certificate IV in Plumbing and Services, ensuring both the integrity of the AQF alignment and the industry context of the qualification is maintained
- one unit may be selected from Certificate III or Diploma Plumbing and Services qualifications
- no more than three units may be selected from the common pool of elective units.

Air conditioning and mechanical services stream

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
- 8 core units
- 7 elective units.

The units must be completed as follows:

- all four common core units
- all four core units shared between air conditioning and mechanical services stream and fire services
- seven elective units, ensuring that any licensing requirements are addressed.

Of these seven electives:

- at least four units must be selected from the pool of elective units in the air conditioning and mechanical services stream
- up to two of the seven units may be selected from a Certificate IV qualification in another endorsed Training Package or from the core or elective units of another stream within the Certificate IV in Plumbing and Services, ensuring both the integrity of the AQF alignment and the industry context of the qualification is maintained
- one of the seven units may be drawn from Certificate III or Diploma Plumbing and Services qualifications
- no more than three units may be selected from the common pool of elective units.

Plumbing and services - Management stream

Industry considers it appropriate for people seeking to complete Certificate IV in Plumbing and Services - management stream to hold a relevant Certificate III qualification in the industry.

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
- 10 core units
- 5 elective units.

The units must be completed as follows:

- all four common core units
- all six core units (Plumbing and services - Management stream)
- five elective units, ensuring that any licensing requirements are addressed.

Of these five electives:

- up to five units may be selected from the pool of elective units in the Plumbing and services - Management stream
- two of the five units may be selected from a Certificate IV qualification in another endorsed Training Package or from the core or elective units of another stream within the Certificate IV in Plumbing and Services, ensuring both the integrity of the AQF alignment and the industry context of the qualification is maintained
- one of the five units may be drawn from Certificate III or Diploma Plumbing and Services qualifications
- no more than three units may be selected from the pool of elective units common to all streams.

Plumbing and services - Operations stream

This stream has an entry requirement of the completion of a relevant trade qualification or equivalent.

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
- 12 core units
- 3 elective units.

The units must be completed as follows:

- all four common core units
- all eight core units (Plumbing and services - Operations stream)
- three elective units, ensuring that any licensing requirements are addressed.

Of these three electives:

- up to three units may be selected from the pool of elective units in the Plumbing and services - Operations stream
- two of the three units may be selected from a Certificate IV qualification in another endorsed Training Package or from the core or elective units of another stream within the Certificate IV in Plumbing and Services, ensuring both the integrity of the AQF alignment and the industry context of the qualification is maintained
- one of the three units may be drawn from Certificate III or Diploma Plumbing and Services qualifications
- no more than three units may be selected from the pool of elective units common to all streams.

Hydraulic services design stream

To achieve this qualification, the candidate must demonstrate competency in:

- 15 units of competency:
- 10 core units
- 5 elective units.

The units must be completed as follows:

- all four common core units
- all six core units in the Hydraulic services design stream
- five elective units.

Of these five electives:

- at least two units must be selected from the pool of elective units in the hydraulic services design stream
- one of the five units may be selected from a Certificate IV qualification in another endorsed Training Package, ensuring both the integrity of the AQF alignment and the industry context of the qualification is maintained
- one of the five units may be drawn from the Diploma of Hydraulic Services Design qualification
- no more than three units may be selected from the common pool of elective units.

Core units*Common*

CPCBC4012A	Read and interpret plans and specifications
CPCPCM4001A	Carry out work based risk control processes
CPCPCM4002A	Estimate and cost work
BSBOHS403B	Identify hazards and assess OHS risks

Fire services, air conditioning and mechanical services streams

CPCPCM4004A	Prepare simple sketches and drawings
CPCBC4015A	Prepare specifications for all construction works
CPCPCM4003A	Produce 2-D architectural drawings using CAD software
BSBCUS301A	Deliver and monitor a service to customers

Plumbing and services - Management stream

CPCBC4034A	Apply codes and standards to building trade and services contracting
BSBCUS301A	Deliver and monitor a service to customers
BSBSMB401A	Establish legal and risk management requirements of small business
BSBSMB402A	Plan small business finances
BSBSMB404A	Undertake small business planning
BSBSMB405A	Monitor and manage small business operations

Plumbing and services - Operations stream

CPCPDR4011A	Design and size sanitary drainage systems
CPCPDR4012A	Design and size stormwater drainage systems
CPCPDR4013A	Design and size domestic treatment plant disposal systems
CPCPGS4011A	Design and size consumer gas installations
CPCPRF4011A	Design and size roof drainage systems

CPCPSN4011A	Design and size sanitary plumbing systems
CPCPWT4011A	Design and size heated and cold water services and systems
BSBSMB401A	Establish legal and risk management requirements of small business

Plumbing and services - Hydraulic services design stream

CPCCBBC4034A	Apply codes and standards to building trade and services contracting
CPCPDR4011A	Design and size sanitary drainage systems
CPCPDR4012A	Design and size stormwater drainage systems
CPCPDR4013A	Design and size domestic treatment plant disposal systems
CPCPSN4011A	Design and size sanitary plumbing systems
CPCPWT4011A	Design and size heated and cold water services and systems

Elective units

All streams

CPCCBBC4002A	Manage occupational health and safety in the building and construction workplace
CPCCBBC4024A	Resolve business disputes
CPCCBBC4025A	Manage personal work priorities and professional development
BSBINN301A	Promote innovation in a team environment
BSBITU201A	Produce simple word processed documents
BSBITU202A	Create and use spreadsheets
BSBITU301A	Create and use databases
BSBLED401A	Develop teams and individuals
BSBMGT403A	Implement continuous improvement
BSBPMG404A	Apply quality management techniques
BSBWRT401A	Write complex documents

CPCSUS4001A	Implement and monitor environmentally sustainable work practices
HLTHIR403B	Work effectively with culturally diverse clients and co-workers

Fire services stream

CPCCBBC4008B	Conduct on-site supervision of building and construction projects
CPCCBBC4017A	Arrange resources and prepare for the building or construction project
CPCCBBC4026A	Arrange building applications and approvals
CPCCBBC4034A	Apply codes and standards to building trade and services contracting
CPCPFS4005A	Commission fire alarm and detection systems
CPCPFS4006A	Commission firefighting appliances
CPCPFS4011A	Commission domestic and residential fire suppression sprinkler systems
CPCPFS4012A	Commission and maintain special hazard fire suppression systems
CPCPFS4013A	Commission fire system pump sets
CPCPFS4014A	Design residential and domestic fire sprinkler systems
BSBWOR402A	Promote team effectiveness
BSBPMG407A	Apply risk management techniques
BSBPMG510A	Manage projects
BSBSMB401A	Establish legal and risk management requirements of small business
BSBSMB402A	Plan small business finances
BSBSMB404A	Undertake small business planning
BSBSMB405A	Monitor and manage small business operations
BSBSMB406A	Manage small business finances
BSBWOR401A	Establish effective workplace relationships

TAEDEL402A	Plan, organise and facilitate learning in the workplace
------------	---

Air conditioning and mechanical services stream

CPCCBBC4008B	Conduct on-site supervision of building and construction projects
CPCCBBC4017A	Arrange resources and prepare for the building or construction project
CPCCBBC4019A	Apply sustainable building design principles to water management systems
CPCCBBC4020A	Build thermally efficient and sustainable structures
CPCCBBC4021A	Minimise waste on the building and construction site
CPCCBBC4026A	Arrange building applications and approvals
CPCCBBC4034A	Apply codes and standards to building trade and services contracting
CPCPGS4003A	Install commission and service Type B gas appliances
CPCPGS4011A	Design and size consumer gas installations
CPCPGS4012A	Service Type A gas appliances
CPCPMS4002A	Commission air and water systems
CPCPMS4003A	Design compressed air systems
CPCPMS4011A	Design, size and layout heating and cooling systems
CPCPWT4011A	Design and size heated and cold water services and systems
CPCPWT4012A	Commission and maintain backflow prevention devices
CPCPWT4013A	Commission and maintain heated water temperature control devices
BSBPMG407A	Apply risk management techniques
BSBPMG510A	Manage projects
BSBSMB407A	Manage a small team
BSBSMB401A	Establish legal and risk management requirements of small business

BSBSMB402A	Plan small business finances
BSBSMB404A	Undertake small business planning
BSBSMB405A	Monitor and manage small business operations
BSBSMB406A	Manage small business finances
BSBWOR401A	Establish effective workplace relationships
TAEDEL402A	Plan, organise and facilitate learning in the workplace

Plumbing and services - Management stream

CPCCBBC4008B	Conduct on-site supervision of building and construction projects
CPCCBBC4009B	Apply legal requirements to building and construction projects
CPCCBBC4017A	Arrange resources and prepare for the building or construction project
CPCCBBC4019A	Apply sustainable building design principles to water management systems
CPCCBBC4020A	Build thermally efficient and sustainable structures
CPCCBBC4021A	Minimise waste on the building and construction site
CPCCBBC4026A	Arrange building applications and approvals
CPCPCM4003A	Produce 2-D architectural drawings using CAD software
CPCPCM4004A	Prepare simple sketches and drawings
CPCPDR4011A	Design and size sanitary drainage systems
CPCPDR4012A	Design and size stormwater drainage systems
CPCPDR4013A	Design and size domestic treatment plant disposal systems
CPCPFS4014A	Design residential and domestic fire sprinkler systems
CPCPGS4003A	Install commission and service Type B gas appliances
CPCPGS4011A	Design and size consumer gas installations
CPCPGS4012A	Service Type A gas appliances

CPCPMS4002A	Commission air and water systems
CPCPMS4011A	Design, size and layout heating and cooling systems
CPCPRF4011A	Design and size roof drainage systems
CPCPSN4011A	Design and size sanitary plumbing systems
CPCPWT4011A	Design and size heated and cold water services and systems
CPCPWT4012A	Commission and maintain backflow prevention devices
CPCPWT4013A	Commission and maintain heated water temperature control devices
BSBPMG407A	Apply risk management techniques
BSBPMG510A	Manage projects
BSBSMB407A	Manage a small team
BSBWOR401A	Establish effective workplace relationships
TAEDEL402A	Plan, organise and facilitate learning in the workplace

Plumbing and services - Operations stream

CPCCBC4019A	Apply sustainable building design principles to water management systems
CPCCBC4020A	Build thermally efficient and sustainable structures
CPCCBC4021A	Minimise waste on the building and construction site
CPCCBC4034A	Apply codes and standards to building trade and services contracting
CPCPFS4014A	Design residential and domestic fire sprinkler systems
CPCPGS4003A	Install commission and service Type B gas appliances
CPCPGS4012A	Service Type A gas appliances
CPCPMS4002A	Commission air and water systems
CPCPMS4003A	Design compressed air systems
CPCPMS4011A	Design, size and layout heating and cooling systems

CPCPWT4013A	Commission and maintain heated water temperature control devices
CPCPWT4012A	Commission and maintain backflow prevention devices
BSBCUS301A	Deliver and monitor a service to customers

Plumbing and services - Hydraulic services design stream

BSBPMG407A	Apply risk management techniques
BSBPMG510A	Manage projects
BSBSMB407A	Manage a small team
BSBWOR401A	Establish effective workplace relationships
CPCPCM4003A	Produce 2-D architectural drawings using CAD software
CPCPCM4004A	Prepare simple sketches and drawings
CPCPFS4014A	Design residential and domestic fire sprinkler systems
CPCPGS4011A	Design and size consumer gas installations
TAEDEL402A	Plan, organise and facilitate learning in the workplace

CPC50108 Diploma of Building Surveying

Modification History

Not Applicable

Description

This qualification is designed to meet the needs of surveyors in the building and construction industry.

Occupational titles may include:

- Building surveyor
- Building certifier.

The qualification has core unit of competency requirements that cover specialist surveying skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Communicates effectively with a range of people, including staff, contractors and clients• Conducts community consultation• Articulates complex ideas clearly• Understands relevant definitions, terminology, symbols and language• Analyses and evaluates reports and reference materials• Communicates effects of planning and construction to others• Records building planning and construction information• Reports data, findings, recommendations and strategies• Prepares a range of documentation, including notices and information materials• Interprets a range of complex and technical documents, including relevant:• Produces drawings• Carries out complex calculations and measurements<ul style="list-style-type: none">• regulatory, legislative, licensing and organisational requirements• codes and standards• plans and specifications
Teamwork	<ul style="list-style-type: none">• Works collaboratively with relevant stakeholders• Works with diverse groups and individuals
Problem solving	<ul style="list-style-type: none">• Applies problem solving strategies across a range of areas, including evaluating materials and determining alternative solutions to construction problems• Conducts tests and uses results to make decisions• Uses and analyses complex data in decision making• Analyses problems and applies appropriate remedial solutions• Analyses differences between legislative requirements of different levels of government• Identifies complex faults and problems and takes necessary remedial action

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Initiative and enterprise	<ul style="list-style-type: none">• Reviews feedback and takes appropriate action• Selects suitable materials for building taking into account a range of factors such as cost and environmental issues.• Makes recommendations and strategies• Develops compliant, alternative solutions to construction problems• Identifies benefits of sustainable development and conservation• Identifies and implements appropriate and diverse strategies for interacting with diverse communities.• Applies managerial principles, including quality assurance
Planning and organising	<ul style="list-style-type: none">• Collects, analyse and organises information• Schedules and conducts meetings and consultations• Manages time and priorities• Plans and organises resources
Self management	<ul style="list-style-type: none">• Articulates own ideas and vision• Organises and completes daily work activities• Takes responsibility as required by work role, ensuring all legislative and organisational policies and procedures are followed• Manages own performance to ensure required levels of service standards, work quality and professional competence• Seeks and acts on feedback from stakeholders• Manages work priorities
Learning	<ul style="list-style-type: none">• Uses information effectively to improve work performance• Identifies and assesses legislative, organisational and environmental requirements that impact on work system• Maintains knowledge of products and services
Technology	<ul style="list-style-type: none">• Works with technology safely and according to workplace standards• Uses testing technology• Uses computers and relevant software for information gathering and analysis and completion of drawings, documentation and calculations• Uses and operates a range of tools and equipment correctly and safely• Uses technology, such as videos and computer

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

- simulations to present information
- Uses technology to improve efficiency and effectiveness of managing work
- Uses calculators

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in 24 core units of competency.

Core units

CPCCSV5001A	Assess the construction of domestic scale buildings
CPCCSV5002A	Evaluate materials for construction of domestic scale buildings
CPCCSV5003A	Produce working drawings for residential buildings
CPCCSV5004A	Apply legislation to urban development and building controls
CPCCSV5005A	Apply footing and geomechanical design principles to domestic scale buildings
CPCCSV5006A	Assess construction faults in residential buildings
CPCCSV5007A	Undertake site surveys and set out procedures for building projects
CPCCSV5008A	Apply building control legislation to building surveying
CPCCSV5009A	Assess the impact of fire on building materials
CPCCSV5010A	Interact with clients in a regulated environment
CPCCSV5011A	Apply building codes and standards to residential buildings
CPCCSV5012A	Assess timber-framed designs for one and two storey buildings
CPCCSV5013A	Apply principles of energy efficient design to buildings
CPCCSV5014A	Apply building surveying procedures to residential

	buildings
CPCCSV5015A	Assess structural requirements for domestic scale buildings
BSBADM506B	Manage business document design and development
BSBITS401A	Maintain business technology
CHCCOM403A	Use targeted communication skills to build relationships
CHCCOM4B	Develop, implement and promote effective communication techniques
ICAU1128B	Operate a personal computer
ICAU1129B	Operate a word processing application
ICAU1130B	Operate a spreadsheet application
ICAU1131B	Operate a database application
ICAU1133B	Send and retrieve information using web browsers and email

CPC50210 Diploma of Building and Construction (Building)

Modification History

One new CPC08 unit added to the list of elective units:

- CPCCBC5014A Conduct asbestos assessment associated with removal.

CPCCOHS1001A Work safely in the construction industry also added to the elective bank given its prerequisite status in that unit.

Description

This qualification is designed to meet the needs of builders, including selecting contractors, overseeing the work and its quality, and liaising with clients.

The builder may also be the appropriately licensed person with responsibility under the relevant building licensing authority in the State or Territory. Builder licensing varies across States and Territories and additional requirements to attainment of this qualification may be required.

Occupational titles may include:

- Builder.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all included units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Pathways Information

Employability Skills Summary

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">Analyses, evaluates and interprets a range of complex and technical documents, including relevant regulatory, legislative, licensing requirements, codes and standards, plans, drawings and specifications, contracts, reports, reference materials, building approvals, awards and workplace agreementsMaintains and reports records and informationUnderstands relevant definitions, terminology, symbols and languageCommunicates effectively with a range of relevant parties and provides expert testimonyEstablishes site communication proceduresPrepares complex business documents, including project expenditure schedules and reports, such as technical and legal reports, drawings and project briefsAdvises others regarding their obligations as well as company proceduresNegotiates dispute resolutionSketches service layoutsImplements feedback systems
Teamwork	<ul style="list-style-type: none">Demonstrates leadership within work teams and business unitsCollaboratively and effectively develops and implements operational plansSupervises work processes and systems, and delegates to others as requiredWorks with others to overcome problems and achieve outcomesEstablishes and maintains effective working relationshipsSeeks advice from senior management as requiredWorks collaboratively with relevant stakeholdersRelates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
Problem solving	<ul style="list-style-type: none">Analyses construction, environmental management, and energy conservation problems and applies appropriate and compliant remedial solutionsAssesses structural integrity of medium rise

	buildings
	<ul style="list-style-type: none">• Ensures processes that identify faults and required remedial action• Develops strategies to address project delays• Performs various complex calculations relating to cost-benefit analysis, rise and fall amounts, pessimistic overdraft requirements, statistical analysis, costs, set out of construction work, structural analysis and service installations• Analyses reasons for cost variations and takes remedial action• Establishes and implements dispute resolution procedures• Maintains site safety and manages risks• Provides advice on dispute resolution• Uses and analyses data in decision making
Initiative and enterprise	<ul style="list-style-type: none">• Develops and initiates strategies to use resources effectively• Ensures effective systems' development• Implements effective project quality management and continuous improvement processes• Recommends improvements to environmental management and energy conservation plans• Develops strategies that maximise resource effectiveness• Develops and reviews workplace sustainability policy
Planning and organising	<ul style="list-style-type: none">• Supervises planning processes and organisation of on-site building or construction work projects, including instituting procedures and systems• Develops sound and safe practices in relation to structural procedures on site• Coordinates and manages construction and demolition processes• Monitors building or construction costing systems• Manages preparation of project expenditure schedules• Supervises materials' procurement systems• Manages selection, engagement and performance of building and construction contractors• Administers legal obligations of building or construction contracts• Establishes construction work policies, practices and procedures

	<ul style="list-style-type: none">• Prepares and implements environmental management and energy conservation plans, including workplace sustainability policy• Advises and coordinates design process and obtains planning approval
Self management	<ul style="list-style-type: none">• Manages own performance to ensure required levels of service standards, work quality and professional competence• Manages work priorities and professional development• Uses feedback to improve own performance• Takes responsibility as required by the work role• Uses discretion and judgement when required in complex environments• Deals with contingencies
Learning	<ul style="list-style-type: none">• Is open to new ideas and techniques• Seeks feedback on personal performance• Uses information effectively to improve work performance• Learns from colleagues as part of effective teamwork• Manages induction and pre-engagement training processes
Technology	<ul style="list-style-type: none">• Operates office equipment• Uses computer equipment and relevant software• Understands building construction materials and technologies• Understands construction equipment and its use• Operates and tests levelling equipment• Uses technology to improve efficiency and effectiveness of managing work

Packaging Rules

To achieve this qualification, the candidate must demonstrate competency in:

- 18 units of competency:
 - 13 core units
 - 5 elective units.

The elective units may be selected from Groups A and B below as follows:

- a minimum of three elective units must be selected from Group A units below
- one of the five elective units may be selected from another endorsed Training Package or CPC08 Construction, Plumbing and Services Training Package, provided that the industry context of the qualification is maintained and that the unit is at Diploma level
- two of the five elective units may be selected from any Certificate IV in CPC08
- one of the five elective units may be selected from any Advanced Diploma in CPC08.

Core units of competency

Unit code	Unit title
CPCCBC4001A	Apply building codes and standards to the construction process for low rise building projects
CPCCBC4003A	Select and prepare a construction contract
CPCCBC4004A	Identify and produce estimated costs for building and construction projects
CPCCBC4010B	Apply structural principles to residential low rise constructions
CPCCBC4013A	Prepare and evaluate tender documentation
CPCCBC5001B	Apply building codes and standards to the construction process for medium rise building projects
CPCCBC5002A	Monitor costing systems on medium rise building and construction projects
CPCCBC5003A	Supervise the planning of on-site medium rise building or construction work
CPCCBC5010B	Manage construction work
CPCCBC5018A	Apply structural principles to the construction of medium rise buildings
BSBOHS504B	Apply principles of OHS risk management
BSBPMG505A	Manage project quality
BSBPMG508A	Manage project risk

Elective units of competency**Elective units – Group A**

Unit code	Unit title
CPCCBC5004A	Supervise and apply quality standards to the selection of building and construction materials
CPCCBC5005A	Select and manage building and construction contractors
CPCCBC5006B	Apply site surveys and set-out procedures to medium rise building projects
CPCCBC5007A	Administer the legal obligations of a building or construction contract
CPCCBC5009A	Identify services layout and connection methods to medium rise construction projects
CPCCBC5011A	Manage environmental management practices and processes in building and construction
CPCCBC5012A	Manage the application and monitoring of energy conservation and management practices and processes
CPCCBC5013A	Develop professional technical and legal reports on building and construction projects
CPCSUS5001A	Develop workplace policies and procedures for sustainability

Elective units – Group B

Unit code	Unit title
CPCCBC4005A	Produce labour and material schedules for ordering
CPCCBC4006B	Select, procure and store construction materials for low rise projects
CPCCBC4009B	Apply legal requirements to building and construction projects
CPCCBC4011B	Apply structural principles to commercial low rise constructions
CPCCBC4012A	Read and interpret plans and specifications
CPCCBC4014A	Prepare simple building sketches and drawings
CPCCBC4018A	Apply site surveys and set-out procedures to building and construction projects
CPCCBC4024A	Resolve business disputes
CPCCBC5004A	Supervise and apply quality standards to the selection of building and construction materials
CPCCBC5005A	Select and manage building and construction contractors
CPCCBC5006B	Apply site surveys and set-out procedures to medium rise building projects
CPCCBC5007A	Administer the legal obligations of a building or construction contract
CPCCBC5009A	Identify services layout and connection methods to medium rise construction projects
CPCCBC5011A	Manage environmental management practices and processes in building and construction
CPCCBC5012A	Manage the application and monitoring of energy conservation and management practices and processes
CPCCBC5013A	Develop professional technical and legal reports on building and construction projects
CPCCBC5014A	Conduct asbestos assessment associated with removal
CPCCOHS1001A	Work safely in the construction industry
BSBCUS501B	Manage quality customer service
BSBFIM501A	Manage budgets and financial plans

BSBHRM509A	Manage rehabilitation or return to work programs
BSBINN502A	Build and sustain an innovative work environment
BSBITA401A	Design databases
BSBITU402A	Develop and use complex spreadsheets
BSBITU404A	Produce complex desktop published documents
BSBLED502A	Manage programs that promote personal effectiveness
BSBMGT502B	Manage people performance
BSBMGT515A	Manage operational plan
BSBR5K501A	Manage risk
BSBSLS502A	Lead and manage a sales team
BSBWOR501B	Manage personal work priorities and professional development
BSBWOR502B	Ensure team effectiveness
CPPDSM5022A	Implement asset management plan

CPC50308 Diploma of Building and Construction (Management)

Modification History

Not Applicable

Description

This qualification is designed to meet the needs of senior managers within building and construction firms.

Occupational titles may include:

- Project manager
- Construction manager
- Estimating manager
- Sales manager.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">Analyses, evaluates and interprets a range of complex and technical documents, including relevant regulatory, legislative, licensing requirements, codes and standards, plans, drawings and specifications, contracts, reports, reference materials, building approvals, awards and workplace agreementsMaintains and reports records and informationUnderstands relevant definitions, terminology, symbols and languageCommunicates effectively with a range of relevant parties and provides expert testimonyEstablishes site communication proceduresPrepares complex business documents, including project expenditure schedules, reports including technical and legal reports, drawings and project briefsAdvises others regarding their obligations as well as company proceduresNegotiates dispute resolutionSketches service layoutsImplements feedback systems
Teamwork	<ul style="list-style-type: none">Demonstrates leadership within work teams and business unitsCollaboratively and effectively develops and implements operational plansSupervises work processes and systems, and delegates to others as requiredWorks with others to overcome problems and achieve outcomesEstablishes and maintains effective working relationshipsSeeks advice from senior management as requiredWorks collaboratively with relevant stakeholdersRelates to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
Problem solving	<ul style="list-style-type: none">Analyses construction, environmental management, energy conservation problems and applies appropriate and compliant remedial solutions

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

- Assesses structural integrity of medium rise buildings
- Ensures processes that identify faults and the required remedial action
- Develops strategies to address project delays
- Performs various complex calculations relating to cost-benefit analysis, rise and fall amounts, pessimistic overdraft requirements, statistical analysis, costs, set out of construction work, structural analysis and service installations
- Analyses reasons for cost variations and takes remedial action
- Establishes and implements dispute resolution procedures
- Maintains site safety and manages risks
- Provides advice on dispute resolution
- Uses and analyses data in decision making
- Initiative and enterprise
 - Develops and initiates strategies to use resources effectively
 - Ensures effective systems' development
 - Implements effective project quality management and continuous improvement processes
 - Recommends improvements to environmental management and energy conservation plans
 - Develops strategies that maximise resource effectiveness
 - Develops and reviews workplace sustainability policy
- Planning and organising
 - Supervises planning processes and organisation of on-site building or construction work projects, including instituting procedures and systems
 - Develops sound and safe practices in relation to structural procedures on site
 - Coordinates and manages construction and demolition processes
 - Monitors building or construction costing systems
 - Manages preparation of project expenditure schedules
 - Supervises materials' procurement systems
 - Manages selection, engagement and performance of building and construction contractors
 - Administers legal obligations of building or construction contracts

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none">• Establishes construction work policies, practices and procedures• Prepares and implements environmental management and energy conservation plans, including workplace sustainability policy• Advises and coordinates the design process and obtains planning approval
Self management	<ul style="list-style-type: none">• Manages own performance to ensure required levels of service standards, work quality and professional competence• Manages work priorities and professional development• Uses feedback to improve own performance• Takes responsibility as required by the work role• Uses discretion and judgement when required in complex environments• Deals with contingencies
Learning	<ul style="list-style-type: none">• Is open to new ideas and techniques• Seeks feedback on personal performance• Uses information effectively to improve work performance• Learns from colleagues as part of effective teamwork• Manages induction and pre-engagement training processes
Technology	<ul style="list-style-type: none">• Operates office equipment• Uses computer equipment and relevant software• Understands building construction materials and technologies• Understands construction equipment and its use• Operates and tests levelling equipment• Uses technology to improve efficiency and effectiveness of managing work

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 12 units of competency:

- 5 core units
- 7 elective units.

The elective units are to be chosen as follows:

- up to 7 units from general elective units
- up to 3 units from qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, they contribute to a valid, industry-supported vocational outcome, and that no more than:
 - 2 units from a Diploma qualification
 - 1 unit from a Certificate IV
 - 1 unit from an Advanced Diploma qualification.

Core units

BSBFIM501A	Manage budgets and financial plans
BSBHRM402A	Recruit, select and induct staff
BSBMGT515A	Manage operational plan
BSBOHS504B	Apply principles of OHS risk management
BSBWOR502B	Ensure team effectiveness

Elective units

CPCCBC5001B	Apply building codes and standards to the construction process for medium rise building projects
CPCCBC5002A	Monitor costing systems on medium rise building and construction projects
CPCCBC5003A	Supervise the planning of on-site medium rise building or construction work
CPCCBC5004A	Supervise and apply quality standards to the selection of building and construction materials
CPCCBC5005A	Select and manage building and construction contractors
CPCCBC5006B	Apply site surveys and set-out procedures to medium rise building projects
CPCCBC5007A	Administer the legal obligations of a building or construction contract
CPCCBC5009A	Identify services layout and connection methods to medium rise construction projects

CPCCBC5010B	Manage construction work
CPCCBC5011A	Manage environmental management practices and processes in building and construction
CPCCBC5012A	Manage the application and monitoring of energy conservation and management practices and processes
CPCCBC5013A	Develop professional technical and legal reports on building and construction projects
CPCCBC5018A	Apply structural principles to the construction of medium rise buildings
CPCSUS5001A	Develop workplace policies and procedures for sustainability
BSBCUS501B	Manage quality customer service
BSBHRM509A	Manage rehabilitation or return to work programs
BSBINN502A	Build and sustain an innovative work environment
BSBITA401A	Design databases
BSBITU402A	Develop and use complex spreadsheets
BSBITU404A	Produce complex desktop published documents
BSBLED502A	Manage programs that promote personal effectiveness
BSBMGT502B	Manage people performance
BSBPMG504A	Manage project costs
BSBPMG505A	Manage project quality
BSBPMG507A	Manage project communications
BSBPMG508A	Manage project risk
BSBSLS502A	Lead and manage a sales team
BSBWOR501B	Manage personal work priorities and professional development
CPPDSM5022A	Implement asset management plan

CPC50408 Diploma of Plumbing and Services

Modification History

Not Applicable

Description

This qualification provides an outcome for:

- specialist and senior plumbers, fire services professionals and air conditioning and mechanical services professionals with advanced technical skill requirements
- experienced professionals who are pursuing management roles within the plumbing and services industry.

Occupational titles may include:

- Senior plumber
- Fire services technician
- Air conditioning and mechanical services technician
- Plumbing manager.

The qualification has core and elective unit of competency requirements that cover common skills for the plumbing industry, as well as specialist streams:

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

	<ul style="list-style-type: none">• Establishes policy on plant and equipment usage• Manages personnel, resources, supply of materials and on-site operations
Self management	<ul style="list-style-type: none">• Manages own work to ensure compliance with relevant codes and standards
Learning	<ul style="list-style-type: none">• Establishes safety induction processes• Uses appropriate mechanisms to inform others of applicable standards and codes
Technology	<ul style="list-style-type: none">• Uses computers to design and detail plumbing and drainage systems; cold water systems; stormwater and roof drainage systems; hot water systems; fire sprinkler systems; fire hydrant and hose reel systems; hydronic systems; gas bulk storage systems; industrial gas systems; gas reticulation systems; solar water heating systems; grey water use systems; rainwater collection, storage, distribution and re-use systems; irrigation systems; trade waste pre-treatment systems; pump systems; siphonic stormwater drainage systems; and vacuum sewerage systems• Understands technological principles in the design of hydraulic systems; cold water reticulation and hydrant/hose reel systems; sewer systems; hydronic systems; gas bulk storage systems; industrial gas systems; gas reticulation systems; solar water heating systems; grey water use systems; rainwater collection, storage, distribution and re-use systems; irrigation systems; trade waste pre-treatment systems; pump systems; siphonic stormwater drainage systems; vacuum sewerage systems; and trade waste pre-treatment systems• Uses calculators and two-way radios• Uses relevant tools and equipment

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in 12 units of competency, which are to be chosen as follows:

- 2 common core units

- all units from one of the following three options:
 - Fire services:
 - 4 Group A Fire services core units
 - 6 elective units
 - Plumbing and services management:
 - 5 Group B Plumbing and services management core units
 - 5 elective units
 - Air conditioning and mechanical services:
 - 4 Group C Air conditioning and mechanical services core units
 - 6 elective units.

The elective units chosen:

- could include:
- core units not already chosen from Groups A, B or C
- Group D General electives
- no more than 2 units from Group B Plumbing and services management electives
- may be from other qualifications in CPC08 or another current Training Package or state accredited course, provided no more than:
 - 1 unit is from a Diploma qualification
 - 1 unit is from a Certificate IV qualification
- should ensure the integrity of the AQF alignment, and contribute to a valid, industry-supported vocational outcome.

NB: The plumbing and services stream has an entry requirement of the Certificate IV in Plumbing and Services or an equivalent qualification.

Core units

Common core

BSBOHS504B Apply principles of OHS risk management

BSBPMG505A Manage project quality

Group A Fire services: core

CPCCSV6010A Apply fire technology to buildings up to three storeys

CPCPFS5000A Design fire-compliant hydraulic services

CPCPFS5001A Design fire sprinkler systems

CPCPFS5002A Design fire hydrant and hose reel systems

Group B Plumbing and services management: core

CPCPCM5000A Design complex sanitary plumbing and drainage systems

CPCPCM5001A Design complex cold water systems

CPCPCM5002B Design complex stormwater and roof drainage systems

CPCPCM5003B Design complex (non-solar) heated water systems

CPCPCM5004A Design sewer systems

Group C Air conditioning and mechanical services: core

CPCPMS5000A Design steam distribution systems

CPCPMS5001A Design air conditioning and ventilation systems

CPCPMS5002A Design sound attenuated hydraulic services

CPCPMS5003A Design hydronic heating and cooling systems

Elective units

Group B Plumbing and services management: electives

CPCCBC4034A Apply codes and standards to building trade and services contracting

CPCCBC5002A Monitor costing systems on medium rise building and construction projects

CPCCBC5010B Manage construction work

BSBCUS501B Manage quality customer service

BSBFIM501A Manage budgets and financial plans

BSBPMG508A Manage project risk

BSBMGT515A Manage operational plan

BSBWOR502B Ensure team effectiveness

Group D General electives

CPCPPS5000A Design gas bulk storage systems

CPCPPS5001A Design industrial gas systems

CPCPPS5002A Design gas reticulation systems

CPCPPS5003A Design solar water heating systems

CPCPPS5004A Conduct a water audit and identify water-saving initiatives

CPCPPS5005A Design grey water re-use systems in sewerred areas

CPCPPS5006A Design rainwater collection, storage, distribution and re-use systems

CPCPPS5007A	Design irrigation systems
CPCPPS5008A	Design trade waste pre-treatment systems
CPCPPS5009A	Analyse and report on technical plumbing systems
CPCPPS5010A	Design pump systems
CPCPPS5011A	Coordinate services and penetrations within a building
CPCPPS5012A	Design siphonic stormwater drainage systems
CPCPPS5013A	Design vacuum sewerage systems
CPCPPS5014A	Locate and maintain piping systems
CPCPPS5015A	Inspect plumbing and drainage systems
CPCSUS5001A	Develop workplace policies and procedures for sustainability

CPC50509 Diploma of Fire Systems Design

Modification History

Not Applicable

Description

The Diploma of Fire Systems Design reflects and supports the role of fire systems designers who prepare detailed technical designs and documentation for water-based fire suppression systems and/or fire detection and occupant warning systems. The fire systems designs covered in this Diploma are those that meet the requirements of the Building Code of Australia or detailed designs prepared for alternative solutions designed or specified by a fire safety engineer. The Diploma of Fire Systems Design also includes a stream qualification for the annual certifier of fire systems.

Fire systems designers may enter the industry from a diverse range of occupations and sectors. They may choose to extend their careers by seeking to undertake subsequent higher education qualifications in related disciplines, including mechanical engineering and fire engineering.

The qualification has common core and elective unit of competency requirements that cover common skills for fire systems designers and certifiers, as well as specialist streams for:

- water-based systems
- detection and warning systems
- annual certifiers.
-

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Listening to, and communicating clearly with, colleagues, installers, maintainers, suppliers and contractors • Participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors • Explaining the gravity of fire systems inspection findings • Letter writing, especially to formalise recognition of errors and conflicts on other drawings and agreements with other services • Writing reports • Initiating and running meetings with lead contractor and other service contractors • Drafting detailed system specifications, including material, installation requirements; testing and commissioning schedules; project expenditure schedules; operations and maintenance manuals; and various quality control checklists
Teamwork	<ul style="list-style-type: none"> • Developing constructive and cooperative working relationships with project team members, colleagues, suppliers, fitters and clients • Working with others to plan, coordinate and complete tasks
Problem-solving	<ul style="list-style-type: none"> • Negotiating solutions to design conflicts with other services • Conducting cost-benefit analysis of design options • Performing complex calculations, such as electrical and hydraulic calculations • Identifying site health risks and installation constraints and producing design solutions
Initiative and enterprise	<ul style="list-style-type: none"> • Producing cost-effective and workable detailed designs for fire systems • Proposing creative detailed design solutions to installation issues arising on-site • Proposing creative solutions to aesthetic requirements for fire systems installation • Developing personal methodologies for ensuring project quality and for incorporating process

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<p>improvements</p> <ul style="list-style-type: none"> Managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements
Planning and organising	<ul style="list-style-type: none"> Defining the scope and hazard level of fire systems design projects Planning the layout of fire systems designs Setting up systems and checklists for ensuring a methodical approach to fire systems design projects Gathering documentation required for fire systems design projects, including plans, specifications, drawings, legislation, codes and standards Planning for the inspection of multiple fire systems (with different applicable standards) concurrently
Self-management	<ul style="list-style-type: none"> Organising own work, including creating personal systems and checklists for planning, managing and checking work Maintaining a professional detached authority
Learning	<ul style="list-style-type: none"> Reading manuals and marketing information about new technologies, products and systems Researching relevant legislation, standards and codes Updating knowledge of products, software systems and technology Researching competing technologies in new products and systems
Technology	<ul style="list-style-type: none"> Reading and interpreting drawings, including architectural, structural, mechanical, hydraulic and electrical drawings Reading manuals and marketing information about new technologies, products and systems Using computer software to produce detailed designs for fire systems, manage project participation and conduct general personal business administration Applying the principles of fire science, organic and inorganic chemistry, thermodynamics, hydraulics, fluid mechanics and electric and electronic theory Using relevant tools and equipment, such as measuring tools and calculators

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 12 units of competency:
- 4 core units
- between 3 and 8 Group A, B or C elective units
- up to 5 other elective units.

The elective units are chosen as follows:

- all units from one of the following three options:
- 8 units from Group A Water-based systems elective units
- 5 units from Group B Detection and warning systems elective units
- 4 units from Group C Annual certifier elective units
- provided the remaining elective units ensure the integrity of the AQF alignment; and contribute to a valid, industry-supported vocational outcome; they could include:
- elective units not already chosen from Groups A, B or C
- Group D general elective units:
- 1 unit from a Diploma or higher qualification in CPC08 or another current Training Package or state accredited course
- 1 unit from the Certificate IV in Plumbing and Services, Group A Fire Services units.

Core units	
Unit code	Unit title
CPCSFS5001A	Define scope and hazard level of fire systems design projects
CPCSFS5002A	Research and interpret detailed fire systems design project requirements
CPCSFS5005A	Research and evaluate fire system technologies and components
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
Group A Water-based systems elective units	
CPCSFS5003A	Develop plans and methodology for fire systems design projects

CPCSFS5006A	Create detailed designs for fire sprinkler systems
CPCSFS5007A	Create detailed designs for hydrant and hose reel systems
CPCSFS5009A	Create detailed designs for fire systems' water supplies
CPCSFS5010A	Provide documentation and support for fabrication of fire sprinkler systems
CPCSFS5011A	Provide design documentation and review and support fire system installation processes
CPCSFS5013A	Support commissioning processes and finalise fire systems design projects
CPCPCM4003A	Produce 2-D architectural drawings using CAD software
Group B Detection and warning systems elective units	
CPCSFS5003A	Develop plans and methodology for fire systems design projects
CPCSFS5008A	Create detailed designs for fire detection and warning systems
CPCSFS5011A	Provide design documentation and review and support fire system installation processes
CPCSFS5013A	Support commissioning processes and finalise fire systems design projects
CPCPCM4003A	Produce 2-D architectural drawings using CAD software
Group C Annual certifier elective units	
CPCCBC4012A	Read and interpret plans and specifications
CPCSFS5014A	Conduct annual fire systems certification inspections
CPCSFS5015A	Assess documentation for annual fire systems certification inspections
BSBAUD504B	Report on a quality audit
Group D General elective units	
CPCCBC4025A	Manage personal work priorities and professional development
CPCCBC4012A	Read and interpret plans and specifications
CPCCBC5009A	Identify services layout and connection methods to medium rise

	construction projects
CPCPCM4003A	Produce 2-D architectural drawings using CAD software
CPCPCM4004A	Prepare simple sketches and drawings
CPCCSV5009A	Assess the impact of fire on building materials
BSBCUS402A	Address customer needs
BSBCUS501B	Manage quality customer service
BSBOHS504B	Apply principles of OHS risk management
BSBPMG507A	Manage project communications
BSBPMG510A	Manage projects
HLTHIR403B	Work effectively with culturally diverse clients and co-workers

CPC50611 Diploma of Hydraulic Services Design

Modification History

Not Applicable

Description

This qualification provides an outcome for:

- specialist hydraulic design consultants who design plumbing and services systems for residential and commercial buildings.

Occupational titles may include:

- Hydraulic design consultant.

The qualification has core and elective unit of competency requirements that cover common administration and plumbing industry skills plus specialist design competencies. **This qualification does not meet the competency requirements for plumbing registration or licensing.**

The plumbing industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

NB: Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Packaging Rules**Packaging rules**

This qualification has an entry requirement of CPC40909 Certificate IV in Plumbing and Services - Hydraulic services design stream, or an equivalent qualification.

To achieve this qualification, the candidate must demonstrate competency in:

- 34 units of competency:
- 31 core units
- 3 elective units.

One of the three elective units may be selected from a Diploma qualification from CPC08 or another current Training Package, or from the core or elective units of another stream within CPC50408 Diploma of Plumbing and Services, ensuring both the integrity of the Australian Qualification Framework (AQF) alignment and the industry context of the qualification is maintained.

Core units

BSBITU201A	Produce simple word processed documents
BSBITU202A	Create and use spreadsheets
BSBITU301A	Create and use databases
BSBWRT401A	Write complex documents
CPCCBBC4012A	Read and interpret plans and specifications
CPCCBBC4034A	Apply codes and standards to building trade and services contracting

CPCPCM4003A	Produce 2-D architectural drawings using CAD software
CPCPCM4004A	Prepare simple sketches and drawings
CPCPCM5000A	Design complex sanitary plumbing and drainage systems
CPCPCM5001A	Design complex cold water systems
CPCPCM5002B	Design complex stormwater and roof drainage systems
CPCPCM5003B	Design complex (non-solar) heated water systems
CPCPDR4011A	Design and size sanitary drainage systems
CPCPDR4012A	Design and size stormwater drainage systems
CPCPDR4013A	Design and size domestic treatment plant disposal systems
CPCPFS4014A	Design residential and domestic fire sprinkler systems
CPCPFS5000A	Design fire-compliant hydraulic services
CPCPFS5002A	Design fire hydrant and hose reel systems
CPCPGS4011A	Design and size consumer gas installations
CPCPPS5000A	Design gas bulk storage systems
CPCPPS5001A	Design industrial gas systems
CPCPPS5002A	Design gas reticulation systems
CPCPPS5003A	Design solar water heating systems
CPCPPS5004A	Conduct a water audit and identify water-saving initiatives
CPCPPS5005A	Design grey water re-use systems in sewered areas
CPCPPS5006A	Design rainwater collection, storage, distribution and re-use systems
CPCPPS5008A	Design trade waste pre-treatment systems

CPCPPS5010A	Design pump systems
CPCPPS5012A	Design siphonic stormwater drainage systems
CPCPSN4011A	Design and size sanitary plumbing systems
CPCPWT4011A	Design and size heated and cold water services and systems

Elective units

CPCPCM5004A	Design sewer systems
CPCPFS5001A	Design fire sprinkler systems
CPCPMS5000A	Design steam distribution systems
CPCPMS5001A	Design air conditioning and ventilation systems
CPCPMS5002A	Design sound attenuated hydraulic services
CPCPMS5003A	Design hydronic heating and cooling systems
CPCPPS5007A	Design irrigation systems
CPCPPS5013A	Design vacuum sewerage systems
CPCPPS5014A	Locate and maintain piping systems
CPCPPS5015A	Inspect plumbing and drainage systems
CPCSUS5001A	Develop workplace policies and procedures for sustainability

CPC60108 Advanced Diploma of Building Surveying

Modification History

Not Applicable

Description

This qualification is designed to meet the needs of senior surveyors in the building and construction industry.

Occupational titles may include:

- Building surveyor
- Building certifier.

The qualification has core unit of competency requirements that cover specialist surveying skills for the construction industry. 24 core units in this qualification are also included in the CPC50108 Diploma of Building Surveying.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Communicates effectively with a range of people, including staff, contractors and clients• Conducts community consultation• Articulates complex ideas clearly• Attends court and presents information• Understands relevant definitions, terminology, symbols and language• Analyses and evaluates reports and reference materials• Communicates effects of planning and construction to others• Records building planning and construction information• Reports data, findings, recommendations and strategies• Prepares a range of documentation, including research journals for producing building drawings, notices and information materials• Interprets a range of complex and technical documents, including relevant:• Produces drawings• Carries out complex calculations and measurements<ul style="list-style-type: none">• regulatory, legislative, licensing and organisational requirements• codes and standards• plans and specifications
Teamwork	<ul style="list-style-type: none">• Works collaboratively with relevant stakeholders• Works with others to action tasks• Works with diverse groups and individuals
Problem solving	<ul style="list-style-type: none">• Applies problem solving strategies across a range of areas, including evaluating materials and determining alternative solutions to construction problems• Conducts tests and uses results to make decisions• Uses and analyses complex data in decision making• Analyses problems and applies appropriate remedial solutions• Identifies complex faults and problems and takes

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	necessary remedial action
Initiative and enterprise	<ul style="list-style-type: none">• Reviews feedback and takes appropriate action• Validates community consultation procedures• Provides a leadership role in community consultation• Makes recommendations and strategies• Develops compliant, alternative solutions to construction problems• Identifies and evaluates environmental issues and impacts• Identifies and implements appropriate and diverse strategies for interacting with diverse communities.• Applies managerial principles, including quality assurance
Planning and organising	<ul style="list-style-type: none">• Develops project scheduling• Collects, analyse and organises information• Schedules and conducts consultations• Manages time and priorities• Plans and organises resources• Coordinates activities with subcontractors
Self management	<ul style="list-style-type: none">• Articulates own ideas and vision• Organises and completes daily work activities• Takes responsibility as required by work role, ensuring all legislative and organisational policies and procedures are followed• Manages own performance to ensure required levels of service standards, work quality and professional competence• Seeks and acts on feedback from stakeholders• Manages work priorities
Learning	<ul style="list-style-type: none">• Uses information effectively to improve work performance• Identifies and assesses legislative, organisational and environmental requirements that impact on work system• Maintains knowledge of products and services
Technology	<ul style="list-style-type: none">• Works with technology safely and according to workplace standards• Uses testing technology• Uses computers and relevant software for information gathering and analysis and completion of drawings, documentation and calculations

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

- Uses and operates a range of tools and equipment correctly and safely
- Uses technology, such as videos and computer simulations to present information
- Uses technology to improve efficiency and effectiveness of managing work
- Uses calculators

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in 43 units of competency.

Core units

CPCCSV5001A	Assess the construction of domestic scale buildings
CPCCSV5002A	Evaluate materials for construction of domestic scale buildings
CPCCSV5003A	Produce working drawings for residential buildings
CPCCSV5004A	Apply legislation to urban development and building controls
CPCCSV5005A	Apply footing and geomechanical design principles to domestic scale buildings
CPCCSV5006A	Assess construction faults in residential buildings
CPCCSV5007A	Undertake site surveys and set out procedures for building projects
CPCCSV5008A	Apply building control legislation to building surveying
CPCCSV5009A	Assess the impact of fire on building materials
CPCCSV5010A	Interact with clients in a regulated environment
CPCCSV5011A	Apply building codes and standards to residential buildings
CPCCSV5012A	Assess timber-framed designs for one and two storey buildings

CPCCSV5013A	Apply principles of energy efficient design to buildings
CPCCSV5014A	Apply building surveying procedures to residential buildings
CPCCSV5015A	Assess structural requirements for domestic scale buildings
CPCCSV6001A	Assess the construction of buildings up to three storeys
CPCCSV6002A	Produce working drawings for buildings up to three storeys
CPCCSV6003A	Assess construction faults in buildings up to three storeys
CPCCSV6004A	Apply footing and geomechanical design principles to buildings up to three storeys
CPCCSV6005A	Evaluate services layout and connection methods for residential and commercial buildings up to three storeys
CPCCSV6006A	Evaluate the use of concrete for residential and commercial buildings up to three storeys
CPCCSV6007A	Assess structural requirements for buildings up to three storeys
CPCCSV6008A	Apply building codes and standards to buildings up to three storeys
CPCCSV6009A	Implement performance-based codes and risk management principles for buildings up to three storeys
CPCCSV6010A	Apply fire technology to buildings up to three storeys
CPCCSV6011A	Apply legal procedures to building surveying
CPCCSV6012A	Facilitate community development consultation
CPCCSV6013A	Coordinate building refurbishment
CPCCSV6014A	Manage and plan land use
CPCCSV6015A	Analyse and present building surveying research information

CPCCSV6016A	Apply building surveying procedures to buildings up to three storeys
BSBADM506B	Manage business document design and development
BSBITS401A	Maintain business technology
BSBMGT502B	Manage people performance
CHCCOM403A	Use targeted communication skills to build relationships
CHCCOM4B	Develop, implement and promote effective communication techniques
ICAU1128B	Operate a personal computer
ICAU1129B	Operate a word processing application
ICAU1130B	Operate a spreadsheet application
ICAU1131B	Operate a database application
ICAU1133B	Send and retrieve information using web browsers and email
LGAPLEM502A	Apply ecologically sustainable development principles to the built environment
LMFFT4010B	Identify and calculate production costs

CPC60208 Advanced Diploma of Building and Construction (Management)

Modification History

Not Applicable

Description

This qualification is designed to meet the needs of builders, including selecting contractors, overseeing the work and its quality, and liaising with the client. The builder may also be the appropriately licensed person with responsibility under the relevant building licensing authority in the State or Territory.

The qualification also meets the needs of senior managers within building, construction and services firms typically working in larger organisations and managing more complex projects and processes.

Occupational titles may include:

- Construction manager.

The qualification has core unit of competency requirements that cover common skills for the construction industry.

The construction industry strongly affirms that training and assessment leading to recognition of skills must be undertaken in a real or very closely simulated workplace environment and this qualification requires all included units of competency to be delivered in this context.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

Additional units of competency may be required to meet builder registration requirements in various States and Territories.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">Analyses, evaluates and interprets a range of complex and technical documents, including relevant regulatory, legislative, and licensing requirements, codes and standards, plans, drawings and specifications, invitations to tender, contracts and procurement reportsDiscusses construction issues and compliance issues with relevant stakeholderMaintains, checks, records and reports informationUnderstands relevant definitions, terminology, symbols and languageInterprets complex numerical informationPrepares complex business documents, including development proposals and feasibility studies, tenders, staff duty schedules, reports, project briefs, organisational policies, procedures and codes of conduct and strategic plansCommunicates effectively with a range of relevant partiesNegotiates project approvalsInterprets strategic and sometimes ambiguous informationProvides relevant legal, regulatory and administrative advice and feedback to colleagues as requiredEvaluates resource ordering information for complianceEstablishes communication policies and principles, review and feedback systems, recording and evaluation systems, and documentation processesReads relevant publications to maintain contemporary industry knowledge
Teamwork	<ul style="list-style-type: none">Uses network contacts to generate business opportunitiesSupervises and monitors performance of systems and individualsInteracts with internal and external personnelManages relationships on legal mattersFacilitates meetings between client and teams

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

Problem solving	<ul style="list-style-type: none">• Maintains effective industrial relationships with subcontractors• Consults and works with industry professionals on construction projects• Coordinates input of expert advice where appropriate• Analyses construction problems and applies appropriate and compliant remedial solutions• Assesses structural integrity of large, high rise and complex buildings• Performs various complex calculations relating to costings and returns, building designs' structural requirements and loads, effects of force and movement on structural elements, analysis of behaviours and properties of structural materials, quantitative analysis of market data and sensitivity analysis• Uses strategic level skills to conceptualise solutions to unique problems• Takes remedial action to address non-compliance issues• Addresses and resolves industrial relations issues• Deals effectively with procurement problems and delays• Conducts risk assessment of facilities management outcomes
Initiative and enterprise	<ul style="list-style-type: none">• Develops effective and compliant design solutions and quality assurance processes• Generates and directs development of new projects• Identifies potential projects and develops feasibility studies• Demonstrates strong and decisive leadership• Facilitates implementation of various new management systems• Implements energy conservation strategies and cost saving practices• Develops and reviews workplace sustainability policy• Establishes and implements costing and construction documentation quality control systems• Formulates investment scenarios
Planning and organising	<ul style="list-style-type: none">• Establishes processes to coordinate others' work• Manages project commissioning

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

- Delegates and directs work activities
 - Selects and deploys resources to enable new project development
 - Establishes, maintains and reviews contract administration procedures and frameworks
 - Develops strategic plans for the development of contracts administration and facilities/asset management
 - Manages processes for legal obligations of a building or construction contract, including ensuring required licences are obtained and regulatory compliance is administered
 - Manages processes associated with tender development for major projects and resource procurement and acquisition for building or construction projects
 - Develops, plans and implements systems designed to manage environmental practices and processes, including workplace sustainability policy
 - Develops and implements estimating and tendering systems, building or construction planning processes
 - Plans, develops and implements building or construction, energy conservation and management practices and processes
 - Directs and manages design and development of the organisation's project planning system
 - Manages and administers development of documentation for building or construction projects
 - Applies structural principles to the planning of the erection and demolition of a structure and coordinates and manages the structural elements of the construction process
 - Gathers relevant information to conduct feasibility studies
- Self management
- Understands organisational and professional procedures, ethical practices and business standards
 - Recognises limitations of own work role, responsibilities and professional abilities
- Learning
- Ensures staff receive appropriate training and instruction in matters relating to insurance and taxation and are made aware of their responsibilities
 - Ensures staff are trained and managed to ensure that quality assurance practices and energy conservation

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	and management practices are applied
Technology	<ul style="list-style-type: none"> Operates office equipment, computers and electronic communication systems Understands and applies new technologies in concrete

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in:

- 10 units of competency:
- 4 core units
- 6 elective units.

The elective units are to be chosen as follows:

- up to 6 units from general elective units
- up to 2 units from qualifications in CPC08 or another current Training Package or state accredited course, provided the integrity of the AQF alignment is ensured, they contribute to a valid, industry-supported vocational outcome, and that no more than:
 - 1 unit is from a Diploma qualification
 - 1 unit is from an Advanced Diploma qualification.

Core units

CPCCBC6001A	Apply building codes and standards to the construction process for large building projects
CPCCBC6003A	Establish, maintain and review contract administration procedures and frameworks
CPCCBC6004A	Manage processes for and legal obligations of a building or construction contract
BSBOHS603B	Analyse and evaluate OHS risk

Elective units

CPCCBC6002A	Generate and direct the development of new projects
CPCCBC6005A	Manage tender developments for major projects
CPCCBC6006A	Manage the procurement and acquisition of resources for building or construction projects
CPCCBC6007A	Develop, plan and implement appropriate building or construction environmental management practices and

	processes
CPCCBC6008A	Develop and implement an appropriate estimating and tendering system
CPCCBC6009A	Develop, plan and implement an appropriate building or construction planning process
CPCCBC6010A	Plan, develop and implement building or construction energy conservation and management practices and processes
CPCCBC6011A	Establish systems to develop and monitor building and construction costs
CPCCBC6012A	Manage and administer development of documentation for building or construction projects
CPCCBC6013A	Evaluate materials for multi-storey buildings
CPCCBC6014A	Apply structural principles to the construction of large, high rise and complex buildings
CPCCBC6015A	Apply building surveying procedures
CPCCBC6016A	Assess construction faults in large building projects
CPCCBC6017A	Evaluate services layout and connection methods for the planning of large building projects
BSBMGT617A	Develop and implement a business plan
BSBMKG609A	Develop a marketing plan
BSBRISK501A	Manage risk
CPCSUS5001A	Develop workplace policies and procedures for sustainability
CPPDSM6002A	Conduct a property investment feasibility study
CPPDSM6008A	Develop strategic facilities management plan

CPC70109 Vocational Graduate Certificate in Fire Systems Design Management

Modification History

Not Applicable

Description

The Vocational Graduate Certificate in Fire Systems Design Management reflects and supports the role of senior managers in the fire systems design sector who perform wide-ranging tasks while also exercising in-depth technical skills and knowledge, particularly in the area of special hazard fire suppression and detection systems.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY	
Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none">• Consulting with and engaging industry colleagues, staff, customers and others who may be internal or external to the organisation• Researching, preparing and presenting high-level reports and plans pitched appropriately to the needs of the audience• Using clear and insightful verbal and non-verbal communication• Reading and interpreting a range of information relevant to job/role, including industry standards, regulations, Acts, legislation and policies• Presenting information to others at briefings and via other forms of communication• Negotiating with suppliers and customers• Fostering change• Negotiating effectively• Establishing and maintaining consultative processes
Teamwork	<ul style="list-style-type: none">• Managing teams• Leading team effort towards identified goals• Liaising with relevant personnel• Engaging and working with specialist advisors and consultants
Problem solving	<ul style="list-style-type: none">• Identifying long-term customer needs and matching service delivery responses to address these needs• Resolving work-related problems• Forming and testing assumptions in an effort to resolve problems• Implementing conflict resolution strategies• Identifying and avoiding breaches in compliance and rectifying causes• Quantifying the benefits of options and performing calculations to assist in solving problems
Initiative and enterprise	<ul style="list-style-type: none">• Identifying business opportunities and building customer relationships• Thinking and acting proactively to solve problems and generate improved work practices and productivity• Identifying relevant sources of information and

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

	<ul style="list-style-type: none">using them effectively• Adjusting quickly to changing situations• Leading project planning processes
Planning and organising	<ul style="list-style-type: none">• Leading project and related business planning processes• Managing risks• Managing contracts, contractors and projects• Planning and organising own work tasks and those of a team• Planning and organising resources to meet deadlines• Time management• Determining schedules to ensure work is completed on time• Coordinating tasks and processes• Undertaking relevant research and evaluation to support work objectives
Self management	<ul style="list-style-type: none">• Demonstrating capacity to be a self-starter and self motivated• Monitoring own work and adjusting accordingly to meet agreed standards and expectations• Managing own work area
Learning	<ul style="list-style-type: none">• Taking responsibility for own learning• Undertaking self-development opportunities, including engaging with industry networks and participating in industry forums• Contributing to learning in the workplace• Maintaining up-to-date knowledge of policies, procedures and legislation which impact on council and individual performance• Obtaining feedback to identify ways to improve ongoing activities
Technology	<ul style="list-style-type: none">• Using technology relevant to the job/role which may include conducting online research; using software applications to manage and undertake projects; using in-house applications to manage finances and planning and reporting processes• Adapting to the use of new technology as appropriate

Packaging Rules

Packaging rules

To achieve this qualification, the candidate must demonstrate competency in 4 units drawn from the pool of units below.

Vocational Graduate Certificate Unit Pool	
Unit code	Unit title
CPCMCM7001A	Plan and manage complex projects
CPCMCM7002A	Manage the quality of projects and processes
CPCSFS7001A	Define scope of and initiate special hazard fire systems design projects
CPCSFS7002A	Analyse, design and evaluate complex special hazard fire systems
CPCSFS7003A	Develop and submit tenders for fire systems design solutions

CPCSS00001 Lead a building, construction or plumbing and services team

Modification History

Not Applicable

Description

Not Applicable

Pathways Information

The completion of this skill set provides a pathway to a range of Certificate IV qualifications in CPC08, including credit towards the Certificate IV in Plumbing and Services.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

Packaging rules

CPCCBBC4002A	Manage occupational health and safety in the building and construction workplace
CPCCBBC4009B	Apply legal requirements to building and construction projects
BSBWOR402A	Promote team effectiveness

Target Group

This skill set addresses the skills used by experienced tradespersons and operators who are moving into roles with additional responsibility and team leadership, typically in smaller businesses.

The skill set provides the team leadership and other skills to enable experienced site supervisors or builders to develop staff under their supervision.

Suggested words for Statement of Attainment

The suggested form of words for inclusion on a Statement of Attainment is: These units from CPC08 Construction, Plumbing and Services Training Package meet industry requirements for experienced tradespersons and operators working as building, construction or plumbing and services team leaders in the construction and plumbing and services industry.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

CPCSS00002 Manage complex building projects

Modification History

Not Applicable

Description

Not Applicable

Pathways Information

The completion of this skill set provides a pathway to a Diploma qualification in CPC08.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

Packaging rules

CPCCBC5003A	Supervise the planning of on-site medium rise building or construction work
CPCCBC5007A	Administer the legal obligations of a building or construction contract
CPCCBC5018A	Apply structural principals to the construction of medium rise buildings

Target Group

This skill set addresses the skills used by builders to manage complex and diverse building projects. The range and depth of skills required of builders is amplified by the size and complexity of the projects on which they work.

This skill set is a bridge for experienced builders already operating at the Certificate IV level who are preparing to undertake larger scale projects which may entail developing additional skills and also, possibly, seeking a higher level of builder's licence in the relevant State or Territory. This skill set may be supported by continuing professional development programs which are increasingly required of builders.

Suggested words for Statement of Attainment

The suggested form of words for inclusion on a Statement of Attainment is: These units from CPC08 Construction, Plumbing and Services Training Package meet industry requirements for experienced builders preparing to undertake complex building projects requiring additional administrative and technical skills and a higher level of builder's licence in some jurisdictions.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

CPCSS00003 Undertake trade contracting

Modification History

Pathways Information

The completion of this skill set provides a pathway to a range of Certificate IV qualifications in CPC08.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

Packaging rules

CPCCBBC4004A	Identify and produce estimated costs for building and construction projects
CPCCBBC4024A	Resolve business disputes
CPCCBBC4034A	Apply codes and standards to building trade and services contracting
BSBCUS301A	Deliver and monitor a service to customers
BSBOHS403B	Identify hazards and assess OHS risks
BSBSMB401A	Establish legal and risk management requirements of small business
BSBSMB406A	Manage small business finances

Plus one of the following units:

BSBWRT401A	Write complex documents
CPCCBBC4025A	Manage personal work priorities and professional development
CPCCBBC4031A	Process client requirements

Target Group

This skill set addresses the skills used by experienced tradespersons operating as sole traders or with limited staff who contract their services to builders. They may be in the early stages of developing and growing their newly established businesses.

The skill set provides an initial set of business skills to support contractors' existing trade skills.

Suggested words for Statement of Attainment

The suggested form of words for inclusion on a Statement of Attainment is: These units from CPC08 Construction, Plumbing and Services Training Package meet industry requirements for experienced tradespersons performing trade contracting work in the construction industry.

Completion of the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (ASCC 2007) is required before entering a construction work site. Achievement of unit CPCCOHS1001A covers this requirement.

CPCCBC4001A Apply building codes and standards to the construction process for low rise building projects

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to access, interpret and apply relevant building codes and standards applicable to the construction processes of residential and low rise commercial buildings (low rise' licensing classification with reference to Class 1 and 10 construction and Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction).

To successfully construct low rise buildings requires a thorough knowledge of the purpose and content of the Building Code of Australia (BCA), coupled with the ability to interpret other codes and standards related to a specific building.

Application of the Unit

Application of the unit

This unit of competency supports builders, site managers and related construction industry professionals responsible for ensuring compliance with building codes and standards in the residential and commercial construction industry.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and interpret relevant code and standard requirements.	<ul style="list-style-type: none">1.1. Relevant performance requirements from the BCA that apply to individual projects (described as <i>low rise</i>) are identified.1.2. Requirements of relevant BCA deemed-to-satisfy (DTS) provisions are determined.1.3. Requirements of relevant Australian standards referenced in the BCA are accessed and interpreted accordingly.
2. Classify buildings.	<ul style="list-style-type: none">2.1. Nature of a building is determined according to its use and arrangement.2.2. BCA criteria to determine the defined classification are applied.2.3. BCA requirements for multiple classification are identified and interpreted.
3. Analyse and apply a range of solutions to a construction problem for compliance with the BCA.	<ul style="list-style-type: none">3.1. Range of criteria that will ensure that construction methods comply with BCA performance requirements is determined.3.2. Alternative solutions to a design or construction problem that will comply with BCA requirements are discussed and proposed in accordance with company policies and procedures.3.3. Performance-based solutions are identified and documented in accordance with BCA requirements.3.4. <i>Assessment methods</i> referenced in the BCA to determine whether a building solution complies with <i>performance requirements</i> or DTS provision of the BCA are analysed and applied.3.5. Relevant documentation is identified and completed in accordance with BCA requirements.
4. Apply fire protection requirements.	<ul style="list-style-type: none">4.1. Passive and active fire control elements for low rise building required by the BCA and other legislation are identified and applied.4.2. Level of fire resistance required for the construction of various low rise buildings is determined.4.3. Check of existing buildings for compliance with passive and active fire protection requirements is carried out in accordance with BCA requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analysis and interpretation skills relating to documentation from a wide range of sources, including BCA and referenced documents
- application of design concepts and principles in accordance with BCA, namely:
 - Class 1 and 10
 - Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction
- attention to detail in applying building codes and standards
- communication skills to:
 - discuss and propose alternative solutions
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources, including BCA and referenced documents
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to complete documentation in accordance with BCA requirements
- numeracy skills to interpret and apply mathematical information included in building codes and standards.

Required knowledge

Required knowledge for this unit is:

- basic design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
- BCA performance hierarchy
- definitions and common technical terms or usage specified under general provisions of BCA
- general nature of materials and the effects of performance
- relevant Australian standards
- relevant legislative and OHS requirements, codes and practices
- types of working drawings and specifications
- understanding of the BCA relating to:
 - Class 1 and 10

REQUIRED SKILLS AND KNOWLEDGE

- Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of design principles and solutions specified in BCA performance requirements or DTS provisions applicable to a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- accurately apply BCA performance requirements relating to the design and construction of a building
- understand assessment methods available to determine compliance with the BCA
- identify faults and problems and proposed action to rectify.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- access to BCA and relevant documents referenced in the BCA

EVIDENCE GUIDE

- access to relevant legislation
- project documentation, including design brief, design drawings, specifications, construction schedules and other supporting documents
- research resources, including product information and data
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Low rise is described as falling within the BCA classes:

- Class 1 and 10
- Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction.

Assessment methods include:

- comparison with BCA DTS provisions
- evidence of suitability as described in the BCA
- expert judgement as defined in the BCA
- verification method as defined in the BCA.

Performance requirements include:

- performance requirements contained within other legislation applicable to a specific project
- performance requirements of the BCA determined to be relevant to a specific project
- performance-based contractual requirements that must be fulfilled by any party.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine areas of potential risk in the building and construction workplace.	<ul style="list-style-type: none">1.1. Specific risks for the range of occupations in the workplace are identified and prioritised.1.2. Construction site safety is evaluated and construction hazards and potential risk areas are identified in accordance with legislative requirements for OHS and company policies.1.3. Hazards are identified and prioritised and required approaches to remediation are documented.
2. Inspect and report on areas of specific risk.	<ul style="list-style-type: none">2.1. Inspection of the workplace is conducted to identify specific risks for the range of identified occupations.2.2. Expert advice, including advice from workplace personnel, is sought as appropriate.2.3. Inspection report is completed in accordance with best practice and statutory obligations.
3. Advise on implementation of control measures at the building and construction workplace.	<ul style="list-style-type: none">3.1. Recommendations are made from findings of inspection report.3.2. Relevant parties are consulted regarding compliance issues relating to statutory requirements.3.3. Agreed control measures are implemented in conjunction with relevant workplace personnel.3.4. Effectiveness of control measures are monitored and reviewed.
4. Establish and review communications and educational programs.	<ul style="list-style-type: none">4.1. Effective strategies for communicating OHS policy and practice are determined in consultation with appropriate personnel.4.2. Communication strategies and educational programs specific to the building and construction industry and in accordance with statutory requirements and best practice are established.4.3. Effectiveness of the communication and educational programs is reviewed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- application of regulatory requirements, including safe work method statements and plans such as site safety plans
- appropriate literacy and numeracy skills
- attention to detail in applying building codes and standards
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - seek expert advice and consult with relevant parties and workplace personnel on a variety of issues
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written communication skills to complete inspection reports and maintain records
- conducting OHS legislation and documentation research
- construction site inspection techniques for OHS compliance
- interpretation and application of construction documentation
- interviewing skills
- knowledge of the technical and trade skills in building and construction processes
- maintaining records and documents
- negotiation and conflict resolution skills
- OHS auditing skills
- OHS compliance investigation skills.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- current workplace and OHS legislation and advisory standards applicable to each State and Territory, such as:
 - Asbestos Advisory Standards
 - Concrete Pumping Supplement
 - Construction Workplace Advisory Standard
 - Demolition Advisory Standard
 - Excavation Advisory Standard
 - Falling Objects Advisory Standard
 - Falls from Heights Advisory Standard
 - Formwork Advisory Standard

REQUIRED SKILLS AND KNOWLEDGE

- Manual Handling in the Building Industry Advisory Standard
- Noise Advisory Standard
- Plant Advisory Standard
- Scaffolding Advisory Standard
- Steel Construction Advisory Standard
- Work on Roofs Advisory Standard
- other relevant state or territory building and construction codes, standards and government regulations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by conducting an OHS inspection and developing an OHS risk analysis for a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- accurately apply national and State and Territory OHS requirements relating to construction workplace
- identify faults and problems impacting on OHS and proposed action to rectify.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- current copy of relevant state OHS legislation, regulation and advisory standard for first aid
- samples of workplace incident data and incident reports
- other relevant codes, standards and

EVIDENCE GUIDE

government regulations

- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Specific risks for various occupations within the building and construction industry relate to:

- commonly used construction equipment, including:
 - concrete mixers
 - manually operated power tools
 - handheld tools
 - wheelbarrows
 - mechanical trowels
- commonly used high risk construction equipment, including:
 - lasers
 - explosive powered tools
 - compressed air nailing tools
 - ladders
 - high pressure jetting systems
 - material conveyors
- cranes, hoists and lifting gear
- demolition, including:
 - abrasive blasting

RANGE STATEMENT

- asbestos removal
- civil construction work, including excavation and trenching work
- Class 1 electrical work
- concrete pumping
- environmental conditions
- exposure to ultraviolet light (UVL)
- masonry and concrete cutting
- pre-cast concrete product installation
- pre-stressing and post-tensioning operations
- protruding objects
- spray painting
- stacking and storing materials
- steel construction
- steel fixing
- working at heights
- working on roofs
- fall protection and access equipment
- falling objects
- falls from height
- formwork
- pressure equipment
- scaffolding
- welding, cutting and gouging processes in the construction industry in particular, oxy-acetylene.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- environmental requirements to cover water quality management
- may include waste management, stormwater protection and clean-up protection
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- legislative requirements to be adhered to in all planning and implementation stages, which may require the development and use of site

Legislative requirements for OHS may include:

RANGE STATEMENT

safety plans and safe work methods statements
hazard control

- hazardous materials and substances
- organisational first aid
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - machines
 - surrounding structures and facilities
 - traffic control
 - underground services
 - working in confined spaces
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Inspection report may include:

- checklists
- company safety procedure forms
- hazard sheets
- prescribed self assessment tools identified by a relevant state or territory authority (relevant legislation must be applied).

Relevant parties include:

- designers
- employers
- manufacturers and importers
- members of site safety committees
- persons in control of workplaces
- principal contractors
- self-employed persons and subcontractors
- suppliers of plant
- workers.

Workplace personnel include:

- employers

RANGE STATEMENT

	<ul style="list-style-type: none">• members of site safety committees• persons in control of workplaces• principal contractors• self-employed persons and subcontractors• workers.
<i>Communication strategies</i> include:	<ul style="list-style-type: none">• issued site specific instructions and signage• verbal communications• written communications, including memos and emails.
<i>Educational programs</i> include:	<ul style="list-style-type: none">• general and site-specific induction training, noting that OHS induction training provided must meet the requirements of the jurisdiction in which the construction work is undertaken• other forms of specialist and targeted training.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and analyse the essential elements, sections and clauses of a business contract.	<p>1.1. Various types of <i>building and construction contracts</i> are identified and the appropriate application of each type is analysed.</p> <p>1.2. Essential terms and elements of a valid contract are identified and analysed.</p> <p>1.3. Importance of identifying an intention to create legal relations is analysed.</p> <p>1.4. Rights and liabilities of parties under a contract are identified and analysed.</p> <p>1.5. Common building contract terms and procedures are identified and applied.</p> <p>1.6. Circumstances that bring about a breach of contract are identified and analysed.</p> <p>1.7. Legislative requirements are identified and applied.</p>
2. Select an appropriate contract for the works to be undertaken.	<p>2.1. A contract, appropriate for the type of construction, is accurately selected.</p> <p>2.2. <i>Range of documents</i> that collectively make up a contract is accurately identified and prepared.</p> <p>2.3. Requirements associated with an offer and acceptance of a contract are accurately identified and applied.</p> <p>2.4. Capacity of the parties to form a binding agreement in the form of a contract is confirmed.</p> <p>2.5. Factors associated with the parties' consent to a contract are identified and applied.</p>
3. Prepare the contract.	<p>3.1. Expert advice is sought as required in the preparation of the contract.</p> <p>3.2. Factors leading to the <i>termination of a contract</i> are defined, analysed and assessed during the preparation of the contract.</p> <p>3.3. Contract rise and fall amounts are accurately calculated during the preparation of the contract.</p> <p>3.4. Schedule of progress payments is assessed and included in the preparation of the contract.</p> <p>3.5. Processes for applying for extensions of time are included in the preparation of the contract.</p> <p>3.6. Final contract is prepared in consultation with relevant personnel and in accordance with the accepted processes of the organisation and legal requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - facilitate effective communication by phone, facsimile, email or in writing, with members of the organisation and external parties, including clients and subcontractors
 - facilitate drafting detailed responses to queries relating to the finer points of contracts
- read and interpret:
 - complex legal text
 - construction schedules
 - contracts
 - reports
 - specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to prepare a construction contract, including completing memos, schedules and evaluative reports and communicating complex ideas and alternatives
- contractual arrangement problem solving
- negotiation with construction clients
- numeracy skills to apply calculations, including rise and fall amounts applicable to changed contract circumstances.

Required knowledge

Required knowledge for this unit is:

- definitions and interpretations commonly applied to contracts
- legal meanings of terms and clauses in building and construction contracts
- relationships between the organisation and its clients
- various contract types and the circumstances they cover.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the selection and development of appropriate contracts, which meet organisational and industry standards and relate to low rise building structures.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the relevant aspects of contract selection and insertion of appropriate clauses, including rise and fall and progress payments.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select the right contract for the particular project
- select appropriate clauses and conditions within the contract
- identify causes of a breach of contract
- specify requirements for the offer and acceptance of a contract
- specify requirements for the termination of a contract
- accurately calculate rise and fall amounts
- specify schedule for progress payments
- specify requirements for extensions of time
- include all related documentation
- refer to all relevant legislation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Building and construction contracts relevant to the sector and organisational needs may include:

- Australian standard contracts (including the AS2124 and AS4000 series)
- Construction Industry Contract (CIC) suite
- contracts required or supplied by regulatory

RANGE STATEMENT

	<ul style="list-style-type: none"> authorities or state or territory legislation individual organisational contracts Joint Contracts Committee (JCC) suite Master Builders Association (MBA) and Housing Industry Association (HIA) or other standard industry contracts Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum).
<i>Range of documents</i> includes:	<ul style="list-style-type: none"> equipment, site accommodation and services information human resource projections materials lists plans, drawings and specifications project timelines schedules.
<i>Termination of a contract</i> includes definitions and applications of:	<ul style="list-style-type: none"> abandonment of a contract conditions for completion at the cost of the contractor effect of ousting the contractor from the building or construction relevant legislation and contract provisions repudiation of a contract by one party and its agreed definition unreasonable or vexatious notice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and interpret plans and specifications.	<p>1.1. Appropriate plans and drawings are correctly identified.</p> <p>1.2. Project <i>plans and specifications</i> are read and understood.</p> <p>1.3. Levels, heights, gradients and other measurements are interpreted.</p> <p>1.4. Measurements are made and quantities identified from plans and specifications that conform to standard industry practice.</p>
2. Identify and calculate labour costs.	<p>2.1. Types and numbers of appropriate on-site personnel are identified and the time required on site is estimated.</p> <p>2.2. Labour hours for non-contract elements of on-site work are calculated.</p> <p>2.3. Costs or rates for required on-site work are calculated.</p>
3. Identify and establish physical resource requirements.	<p>3.1. Physical resource requirements are identified.</p> <p>3.2. Lists of materials are produced and quantities calculated.</p> <p>3.3. Quantities are established against project or standard construction contracts.</p> <p>3.4. Supplier prices for materials and consumables are obtained.</p> <p>3.5. Plant or equipment requirements are identified and costed.</p>
4. Develop estimated project costs.	<p>4.1. Appropriate labour rates and material costs are selected and applied.</p> <p>4.2. Estimates of <i>unit costs</i> are determined and applied as appropriate.</p> <p>4.3. Costs to the project of WorkCover, Environmental Protection Agency (EPA) requirements, seeking approvals, waste management site fees and other statutory or additional costs are identified and applied.</p> <p>4.4. Company overhead recovery and margins are applied.</p> <p>4.5. Completed estimated <i>project costs</i> are calculated for inclusion in a tender or bill.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- contractual arrangement problem solving
- estimate labour and materials costs from written information
- numeracy skills to calculate labour hours and costs, material quantities and costs
- use appropriate costing software programs.

Required knowledge

Required knowledge for this unit is:

- how to access and interpret:
 - national codes, including Building Code of Australia (BCA) and the Plumbing Code of Australia
 - Australian standards relevant to the industry sector
- includes state or territory and local government building and construction codes, standards and government regulations relevant to the form of building or construction being undertaken (e.g. WorkCover and EPA)
- types of building and construction drawings and specifications
- types, scope and usage of labour through the employee and subcontractor systems
- operation and structure of the organisation's costing and contracting system.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of a detailed estimate of labour, materials and other project costs as part of the preparation of a tender or bill for a residential or commercial construction project relevant to the specific trade or sector.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify materials required for a project
- gather information about material supply
- interpret measurements and calculate quantities and costs
- plan and allocate human resources
- identify and cost other related costs, such as those required to meet statutory and planning approval processes
- produce documentation that meets the timeframes and quality standards established by the organisation
- communicate effectively, both verbally and in writing.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plans and specifications include:

- building codes
- materials lists and quantity schedules
- materials specifications
- sketches or drawings
- statements of requirements.

Plant or equipment requirements include:

- communications equipment
- conveyors

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and apply all contract conditions to the schedules.	1.1. All contractual requirements are included in the schedules. 1.2. Local government and regulatory bodies' conditions of approval are included in the schedules. 1.3. Schedules include colour selections. 1.4. Variations to contracts, raised by the client or the builder, are included in the schedules.
2. Produce material and labour schedules, overlays and orders.	2.1. Nominated suppliers and contractors are detailed in work schedules. 2.2. Relevant overlay drawings are produced. 2.3. Orders include contract details and instructions. 2.4. Contract rates are applied to material and labour schedules.
3. Prepare site files.	3.1. All necessary site documents are included, including approved plans and specifications . 3.2. Call forward sheets are prepared detailing all orders.
4. Monitor and report on project costs.	4.1. Project costs are analysed against estimates during construction. 4.2. Approved variation costs are analysed. 4.3. Final project cost analysis is provided.
5. Maintain data files of standard costs.	5.1. Approved variation cost increases are incorporated into site files. 5.2. Changes to standard plans, specifications and cost files are included in site files.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

REQUIRED SKILLS AND KNOWLEDGE

- communicate information effectively within the organisation and to external agencies and the client
- read and interpret:
 - contracts
 - drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
 - prepare and maintain site files
 - produce schedules and orders
- identify and analyse relevant information
- numeracy skills to apply calculations.

Required knowledge

Required knowledge for this unit is:

- operation and structure of the organisation's costing and contracting system
- state or territory building and construction codes, standards and regulations relevant to the form of building or construction being undertaken
- types of building or construction drawings and specifications commonly used in the industry
- types, scope and usage of labour through the employee and contractor systems.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of schedules for materials and labour for a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify materials required for the project and gather supply information effectively
- plan and allocate human and physical resources
- produce documentation that meets the timeframes and quality standards established by the organisation
- communicate information effectively within the organisation and to external agencies and the client, as required.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Local government and regulatory bodies include:

- electricity regulatory authorities
- environmental authorities
- health departments
- shire or municipal councils
- water corporations.

Plans and specifications include:

- building codes
- colour selections
- contract requirements
- material and labour schedules
- materials specifications
- plans, sketches and drawings
- statements of requirements.

Project costs include:

- building or construction materials
- communications costs

RANGE STATEMENT

- fuels, lubricants and other consumables
- organisational and subcontract labour costs
- overheads
- professional indemnity and other insurance costs
- project administration costs
- site facilities, such as toilets and storage sheds.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to supervise the systems through which materials are typically selected, acquired and stored on site for projects described by the Building Code of Australia (BCA) as low rise building or construction work (low rise' licensing classification with reference to Class 1 and 10 construction and Class 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction).

It ensures the delivery to the site of materials that meet contract specifications and service requirements for low rise projects.

Application of the Unit

Application of the unit

This unit of competency supports builders, related construction industry professionals and managers within building and construction firms responsible for supervising and applying quality standards to the selection of construction materials. To achieve the outcomes for this unit, knowledge of relevant building construction materials and technologies, environmental effects on materials and evaluation procedures is required.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and evaluate the properties of building materials.	<p>1.1. Suitability of <i>materials</i> commonly used in the region for <i>low rise buildings</i> is identified for a given building system.</p> <p>1.2. Properties of materials, their quality and the compatibility and non-compatibility of different materials are <i>identified</i>.</p> <p>1.3. Environmental impacts of different materials are identified.</p> <p>1.4. Impact of allowable tolerances on the conversion of naturally occurring materials is identified.</p> <p>1.5. Tolerances for installing and assembling materials are identified and checked in regard to the nature of the work being performed and the requirements of relevant construction industry Australian standards.</p>
2. Ensure suitable building materials are selected for application.	<p>2.1. Materials that are structurally adequate and appropriate for the building system specified in the contract are <i>selected</i>.</p> <p>2.2. Materials are selected for their safety; required fire resistance rating; suitability to the application, durability, serviceability and cost effectiveness; and compliance with Australian standards.</p> <p>2.3. Short and long-term degradation of materials are considered in relation to the building's proposed life cycle.</p> <p>2.4. Alternative materials are evaluated and selected if specified materials are unavailable or unsuitable.</p> <p>2.5. Selection of materials for use is finalised in accordance with contractual requirements and in consultation with relevant professionals and the client.</p>
3. Supervise the acceptance, safe handling and storage of materials on site.	<p>3.1. Limitations and effects of transportation on materials and components are determined and action is taken in the case of potentially damaging circumstances.</p> <p>3.2. <i>Materials are handled correctly and safely</i> on site using appropriate equipment and safe work practices.</p> <p>3.3. Materials are stored in accordance with manufacturer specifications and in compliance with relevant Australian standards.</p> <p>3.4. Processes are implemented for inspecting all materials delivered on site for naturally occurring and/or manufactured defects before installation.</p>

ELEMENT

PERFORMANCE CRITERIA

-
- 3.5. Personnel are aware of actions to be taken in the case of defects caused by incorrect installation, application or placement.
 - 3.6. Timber is preserved and ferrous and non-ferrous metals used in the construction process are protected, using established methods.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analysis and report preparation
- application of safe work practices and materials handling
- apply numeracy skills to workplace requirements
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate with manufacturers and suppliers of materials
 - provide advice and information to regulatory authorities
 - read and interpret:
 - contracts
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- development and management of standardised processes
- supervision of small teams.

Required knowledge

Required knowledge for this unit is:

- alternative materials that can be specified in construction projects
- building and construction materials and technologies
- Building Code of Australia (Class 1 and 10 and Class 2 to 9 with a gross floor area not exceeding 2000 square metres, but not including Type A or Type B construction)

REQUIRED SKILLS AND KNOWLEDGE

- construction supply processes
- construction and contracting equipment and its use
- environmental effects on various building and construction materials
- relevant state or territory building and construction codes, standards and regulations
- testing procedures for construction materials
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective supervision and application of quality standards to the identification, selection and storage of the range of relevant construction materials in the range statement.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify suitable building and construction materials specified by the project or contract
- use effective verbal and written communication with manufacturers and suppliers of materials
- effectively and efficiently test materials to maintain quality standards on site
- maintain effective sampling and record-keeping processes
- safely handle and store materials
- comply with organisational and legislative requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be

EVIDENCE GUIDE

available in either a building or construction office

- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials commonly used in low rise buildings include:

- cements
- ceramics
- concrete
- engineered timber products
- flooring
- framing
- glass
- masonry units
- mortars
- paints and coatings

RANGE STATEMENT

	<ul style="list-style-type: none"> • plasterboard • plasterglass • roofing • structural steel.
<i>Low rise buildings</i> are described within the BCA as:	<ul style="list-style-type: none"> • Class 1 and 10 • Class 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction.
Material suitability is <i>identified</i> by a range of processes, including:	<ul style="list-style-type: none"> • analysing reports, manufacturer specifications or other reference material regarding the suitability of new <u>and environmentally efficient and sustainable</u> building material technologies with reference to the BCA requirements • arranging industry standard, external quality tests or inspections and provision of results as necessary • arranging relevant, industry standard, on-site quality tests for products to be used in low rise buildings • referencing external reports and manufacturer specifications • refusing to accept substandard or out of specification materials • seeking expert appraisal from relevant industry professionals, including architects, designers and engineers.
<i>Selected</i> includes:	<ul style="list-style-type: none"> • arranging for expert advice as necessary to confirm or refute material options • identifying materials from specifications and drawings • identifying specifications and standards described in contract documents • selecting and ordering materials that meet those requirements.
<i>Materials are handled correctly and safely</i> by:	<ul style="list-style-type: none"> • allocation of space for on-site storage of materials • confirming products or materials are as ordered and signing off delivery documentation • ensuring safe unloading and handling of construction materials • ensuring safe use of hazardous materials and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Appraise contract documentation to identify operational requirements.	<p>1.1. Contract documentation is reviewed to identify any unusual aspects of construction, use of materials or penalties.</p> <p>1.2. Availability of selected subcontractors to suit the job requirements is determined.</p> <p>1.3. Availability of materials is assessed and confirmed with suppliers.</p> <p>1.4. Site access requirements and limitations are identified and actions taken to facilitate entry.</p> <p>1.5. Documentation for authorities controlling construction work is prepared and project commencement date is determined.</p> <p>1.6. Procedures for controlling and recording site deliveries are implemented.</p>
2. Implement strategies for construction operations.	<p>2.1. Organisational strategies for implementing construction operations are identified.</p> <p>2.2. Procedures for recording the hire of plant and equipment are implemented.</p> <p>2.3. Organisational OHS policy and procedures, including hazard and risk management, are implemented.</p> <p>2.4. Procedures for the removal of existing services and hazardous materials are implemented in accordance with Environment Protection Agency requirements.</p> <p>2.5. Procedures for the control of multiple projects are followed.</p>
3. Prepare project schedule.	<p>3.1. Construction operations are sequenced.</p> <p>3.2. Operations details are entered into a manually prepared project schedule or computer-based software package.</p> <p>3.3. Critical path of the project is defined and revised as required.</p> <p>3.4. Project timeframes are adjusted to account for anticipated delays.</p>
4. Determine required resources.	<p>4.1. Temporary services and site accommodation requirements are determined and documented.</p> <p>4.2. Plant requirements and availability dates are determined and documented with reference to contract documentation.</p> <p>4.3. On-site labour requirements are determined and</p>

ELEMENT	PERFORMANCE CRITERIA
	documented with reference to contract documentation.
5. Prepare and submit condition reports.	5.1. Reports on the condition of existing buildings and structures on adjacent site boundaries are completed. 5.2. Copies of condition reports are forwarded to the owners of adjacent buildings prior to commencing construction.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate by telephone, facsimile, email and in writing
 - identify availability of subcontractors
 - liaise with suppliers
 - read and interpret:
 - contract documentation
 - organisational policies
 - other relevant workplace documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - document required resources
 - prepare documentation for authorities
 - prepare reports
 - record site deliveries
- numeracy skills to apply calculations.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- application of project management and critical path techniques to the organisation of materials, plant and people
- building and construction industry subcontractor system
- building, construction or civil construction practices in on-site project management
- internal documentation systems
- processes and timeframes for regulatory approvals
- relevant state or territory building and construction codes, standards and government regulations
- types of building and construction industry contracts
- types of plant and equipment employed in the undertaking of the organisation's projects.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by preparing a project schedule and the associated documentation for a construction project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify supplier alternatives and gather supply information effectively
- plan and allocate human resources effectively
- produce documentation that meets the timeframes and quality standards established by the organisation
- communicate information effectively within the organisation and to external agencies and the client, as required
- identify and communicate with the appropriate regulatory authorities to gain the necessary approvals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office

EVIDENCE GUIDE

- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Contract documentation relevant to the sector and organisation may include:

- Australian standard contracts, including the AS2124 and AS4000 series
- Construction Industry Contract (CIC) suite
- individual organisational contracts
- Joint Contracts Committee (JCC) suite
- Master Builders Association (MBA) and Housing Industry Association (HIA) contracts
- Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum).

Documentation includes:

- applications for permits and service connections

RANGE STATEMENT

- Organisational strategies* include:
- copies of plans, drawings and specifications
 - environmental applications
 - parking restriction applications.
 - advertising for tradespersons and other employees
 - appointing project managers and construction supervisors
 - briefing organisational personnel
 - calling for tenders for subcontract operations
 - purchasing processes for building supplies or construction materials
 - refining project critical path information.
- Project schedule* includes:
- human resource schedules
 - materials delivery schedules
 - project critical path
 - project timeframes
 - schedules of plant and equipment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Supervise the administration of claims and payment processes.	<p>1.1. Contract payments are made in accordance with the contract allowance or orders.</p> <p>1.2. Drawings against allowances are carried out in accordance with organisation policy and procedures.</p> <p>1.3. Variations to contracts are authorised and corrective action is taken where necessary.</p> <p>1.4. Back-charges are applied in accordance with policy guidelines.</p> <p>1.5. Payment of invoices for material supply is authorised.</p> <p>1.6. Insurance claims for site loss or damage are completed and processed.</p> <p>1.7. Administrative processes are conducted and supervised with reference to relevant <i>regulatory and organisational requirements</i>.</p>
2. Supervise and maintain on-site communications.	<p>2.1. Diary of <i>on-site communication</i> and events is maintained, including communications with clients, contractors, inspections, union matters and suppliers.</p> <p>2.2. File notes detailing specific instructions are prepared and issued.</p> <p>2.3. Site reports detailing specific supervisory inspections are prepared and kept.</p> <p>2.4. Variation requests or requirements are communicated to the appropriate person.</p> <p>2.5. Requests for extensions of time are communicated to the appropriate person.</p> <p>2.6. Notice of unsatisfactory work is communicated in writing to the appropriate individuals.</p> <p>2.7. Administrative processes are conducted and supervised with reference to relevant regulatory and organisational requirements.</p>
3. Ensure management of and compliance with quality control procedures.	<p>3.1. Relevant <i>quality control procedures</i> are identified.</p> <p>3.2. Site checklists detailing specific items to be inspected at appropriate stages are used and completed.</p> <p>3.3. Industry and organisational quality manuals and procedures are used in managing the quality process.</p> <p>3.4. Local authority inspections are arranged.</p> <p>3.5. Quality requirements are communicated to on-site personnel and building work is assessed against</p>

ELEMENT	PERFORMANCE CRITERIA
	construction standards.
	3.6. Processes are put in place to supervise on-site work to ensure the performance of work to industry, regulatory and contractual standards.
	3.7. Contractual quality standards are met.
4. Complete project administration processes.	4.1. <i>Project administration processes</i> and preparation for practical completion are carried out in accordance with the contract requirements and company policy.
	4.2. Practical completion inspection procedure is identified, communicated to the client and applied on site.
	4.3. Handover procedures are identified and carried out in accordance with organisational policy.
	4.4. Certificates and appropriate client information are provided at handover, including termite protection and appliance warranties.
	4.5. Defects liability items are obtained from clients.
	4.6. Defects are rectified and client sign-off is obtained.
	4.7. Administrative processes are conducted and supervised with reference to relevant regulatory and organisational requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of contract terms and conditions
- application of quality processes
- communication skills to:
 - communicate request and requirements
 - communicate with the client and regulatory authorities
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - facilitate on-site meetings and dispute resolution

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - quality control procedures
 - regulatory and organisational requirements
 - other relevant workplace documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
 - complete site reports
 - develop and maintain site records
- interpersonal skills relevant to the supervision and monitoring of work processes
- numeracy skills to apply calculations.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contract payment system and obligations
- building and construction industry standards
- certification requirements arising from work performed under regulations or local authority requirements
- contract variation procedures and associated documentation requirements
- contracts employed in the building and construction industry.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the supervision of administration processes relating to a residential or commercial construction project, including the administration of payments, supervision of on-site communications, compliance with quality control and record keeping processes.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

replicate construction workplace conditions, materials, activities, responsibilities and procedures.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- administer claims, variations, and drawings for work done and materials supplied in accordance with relevant regulatory and organisational requirements
- establish functional on-site communication systems that include the systematic gathering of information on site events
- implement a site safety policy
- maintain and monitor on-site quality processes
- assess work against construction quality standards and ensure that rework is carried out
- administer on-site project completion procedures and inform client as required.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- suitable work area appropriate to the

EVIDENCE GUIDE

construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in

EVIDENCE GUIDE

relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Regulatory and organisational requirements include:

- building approval conditions
- contract documents
- engineer reports
- environmental standards
- planning and scheduling
- plans and specifications
- safety management plans
- site consultations
- wage and taxation requirements.

On-site communication includes:

- allocating and managing human resources
- applying communication and interpersonal skills to facilitate dispute prevention and resolution
- communicating with regulatory authorities and ensuring conformity with relevant requirements
- dispersal and scheduling of plant and equipment
- maintaining environmental controls and obligations
- managing expenditure
- participating in on-site meetings
- placing orders for supplies or equipment.

RANGE STATEMENT

Quality control procedure
includes:

- checking materials supplied to the site
- comparing materials against specifications
- quality checklists
- regular on-site progress and quality checks
- reviews of plans and specifications with clients.

Project administration processes
include:

- contract variations
- defect identification and rectification
- determining project progress
- inspections
- obtaining required certification
- progress payments.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply the laws relating to builder licensing or registration.	<p>1.1. Licensing or registration legislation relevant to the region is researched and identified.</p> <p>1.2. Classifications for builders, supervisors and managers are applied.</p>
2. Apply OHS legislation and provisions on site.	<p>2.1. Main provisions of OHS legislation and regulations are researched and identified and local legislative requirements are met.</p> <p>2.2. Regulations and codes applicable to on-site construction are identified, applied and monitored.</p> <p>2.3. Site safety signage requirements are identified and applied.</p>
3. Apply the codes, Acts, regulations and standards relevant to construction.	<p>3.1. Current codes, Acts, regulations and standards applicable to a particular building and construction project are researched.</p> <p>3.2. Construction process is carried out in accordance with codes, Acts, regulations and standards concerning construction, insurance, sustainability, environmental matters and appropriate by-laws.</p>
4. Comply with insurance and regulatory requirements for housing construction.	<p>4.1. Insurance cover is arranged in accordance with legal requirements.</p> <p>4.2. Contract law is applied in accordance with common law principles, relevant state or territory laws and regulations, and fair trading legislation.</p>
5. Apply legislation to financial transactions.	<p>5.1. Payroll systems are set up and administered in compliance with current legislative requirements.</p> <p>5.2. GST systems are set up and administered in compliance with current legislation.</p>
6. Meet building contract obligations.	<p>6.1. Correct form of contract is selected for the project.</p> <p>6.2. Contracted work is carried out in accordance with the contractual obligations applicable to both parties.</p> <p>6.3. Conditions of the contract, including approvals and financial matters are met.</p>
7. Apply industrial relations policies and obligations relevant to housing construction.	<p>7.1. Relevant industrial relations policies and obligations are researched, identified and applied.</p> <p>7.2. Subcontract companies that comply with company policy and obligations under subcontract agreements are identified and contracted.</p> <p>7.3. Relevant awards are applied to contracts.</p> <p>7.4. Workplace agreements are used in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
8. Apply dispute resolution processes.	<p>company policy.</p> <p>7.5. Proactive measures are taken to ensure discrimination and harassment are not practised in the workplace.</p> <p>7.6. Provisions of training agreements are identified and applied.</p> <p>7.7. Reference material on access to industrial relations or legal information is made available to employees.</p> <p>8.1. Organisational dispute resolution processes are applied.</p> <p>8.2. Customer complaints are dealt with according to company policy.</p> <p>8.3. Disputes are documented and outcomes recorded and maintained.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to research, access and interpret complex documents
- communication skills to:
 - communicate with local or regulatory authorities on matters relating to site conditions or approvals and to negotiate on matters concerning industrial relations by telephone, or face to face
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to communicate by memo, letter, facsimile or email with subcontractors, staff, clients and regulatory authorities
- interpersonal skills relevant to the supervision and monitoring of work processes
- numeracy skills to apply calculations.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts

REQUIRED SKILLS AND KNOWLEDGE

- OHS frameworks and obligations under federal, state and territory legislation and regulation
- organisational policies and procedures related to discrimination and harassment
- reasonable understanding of federal, state or territory anti-discrimination and equal employment opportunity legislation
- risk management processes and practices and the planning required to develop plans
- state or territory building and construction codes, standards and government regulations
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of a portfolio of the legislative requirements for one residential and one low rise commercial building and construction project case study. ('Low rise' licensing classification with reference to Class 1 and 10 construction and Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction).

The unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- understand appropriate registration, licensing or compliance requirements of state or territory registration authorities
- meet appropriate business registration

EVIDENCE GUIDE

Context of and specific resources for assessment

requirements

- identify and specify appropriate insurance documentation, citing protection that meets local industry requirements
- identify and specify requirements for compliance with:
 - OHS legislation
 - legislation pertaining to financial transactions, including payment of wages and subcontractor and supplier invoices
 - relevant building and construction codes, Acts, regulations and standards
 - sustainability and environmental legislation
 - industrial relations laws
 - legal obligations of contractual agreements.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

EVIDENCE GUIDE

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Licensing or registration legislation includes state laws such as:

- Builders Registration Act 1939 and the Home Building Contracts Act 1991 in Western Australia
- Home Building Act and Regulations 1989 in New South Wales.

OHS legislation includes state laws such as:

- Occupational Health and Safety Act 1983 in New South Wales
- Occupational Health and Safety Act 1984 in Western Australia
- Occupational Health and Safety Act 1985 in Victoria
- Occupational Health and Safety Act 1986 in South Australia
- WorkCover Queensland Act 1996.

Codes, Acts, regulations and standards include:

- latest editions of:
 - AS1720 Timber structures
 - AS3600 Concrete structures
 - AS4100 Steel structures
- relevant Australian building and construction standards
- relevant state or territory fair trading Acts and regulations
- relevant state, territory and local authority planning and other approval requirements
- Timber Framing Code of Australia.

Insurance cover includes:

- home owner's warranty
- superannuation
- workers' compensation.

Industrial relations policies and obligations include:

- federal and state industrial instruments
- federal and state industrial legislation.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to apply structural principles to the erection or demolition of low rise residential structures using conventional methods. The unit addresses those structures classified by the Building Code of Australia (BCA) as Class 1 and Class 10. Knowledge of the application of structural principles in accordance with Australian standards is essential.

Application of the Unit

Application of the unit

This unit of competency supports the needs of builders, site managers, forepersons and other managers in the building and construction industry responsible for overseeing and managing the demolition or erection of structures.

Licensing/Regulatory Information

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply structural principles when planning the erection or demolition of a structure.	<p>1.1. Main <i>structural principles</i> that apply to the erection or demolition of a <i>residential low rise</i> structure are identified.</p> <p>1.2. Structural performance of a structure is described in terms of the effect of section properties on various materials.</p> <p>1.3. Structural performance characteristics of slabs, floors, beams, columns and retaining walls are explained and applied to the planning of the construction work.</p> <p>1.4. Demolition of existing structures is coordinated in accordance with legislative and planning requirements, environmental standards, and safe work practices.</p>
2. Analyse and plan for the structural integrity of Class 1 and Class 10 buildings.	<p>2.1. Relevant <i>industry professionals</i> are consulted as required to provide advice regarding the design process and the structural integrity of the proposed Class 1 or Class 10 building.</p> <p>2.2. <i>Project documentation</i> is collected and analysed to assist in the analysis of plans and specifications.</p> <p>2.3. Project documentation is analysed for compliance with BCA requirements for bushfire, high wind, earthquake and alpine environments.</p> <p>2.4. New and emerging building technologies are assessed for application to the construction process and their compliance with BCA requirements and Australian standards.</p> <p>2.5. Pre-commencement site inspection is conducted to confirm analysis.</p>
3. Plan, coordinate and manage the laying of footings.	<p>3.1. Footings are set out in accordance with building's plan.</p> <p>3.2. Structural integrity of the footings specified in building's plan is assessed for compliance with relevant codes and accepted industry construction principles.</p> <p>3.3. <i>Footings</i> specified in building's plan are laid and checked for compliance with project documentation.</p> <p>3.4. Damp coursing, provision of termite barriers, and other relevant techniques are planned, implemented and checked in accordance with codes, standards and industry practice.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Plan, coordinate and manage the laying of floor system.	<p>4.1. Concrete slab or bearers and joists specified in building's plan are assessed for structural integrity and compliance with relevant codes and accepted industry construction principles.</p> <p>4.2. Laying of floor system specified in building's plan is supervised and checked for compliance with project documentation.</p>
5. Plan, coordinate and manage the building of structural and non-structural wall systems.	<p>5.1. Technical construction principles and performance of materials used in the construction are identified and analysed in the planning of the building and construction project.</p> <p>5.2. Application of bracing requirements, tie-downs, tolerances, allowances, and fixing and installation of components are planned, implemented and checked for compliance with relevant Australian standards, codes and manufacturer specifications.</p> <p>5.3. Structural timber members are selected for low rise buildings to conform to AS1684 requirements.</p> <p>5.4. Processes are put in place and managed to ensure quality of the frame, whether factory pre-cut and pre-nailed, factory pre-cut and assembled on site, or cut and assembled on site.</p> <p>5.5. Vapour permeable sarking or a waterproof membrane, relevant to construction method, is attached and checked.</p>
6. Plan, coordinate and manage the building of roof system.	<p>6.1. Structural integrity of roof system components specified in building's plan is assessed for compliance with relevant codes and accepted industry construction principles.</p> <p>6.2. Erection of roof trusses is planned, implemented and checked in accordance with requirements of building plan, type of roof being constructed, relevant codes and accepted industry construction principles.</p> <p>6.3. Processes are put in place and managed to ensure quality of the manufactured roof trusses or hand-cut roof system.</p> <p>6.4. Roof sarking and cladding are planned and installation is supervised and checked for compliance with codes, standards and industry practice.</p>
7. Plan, coordinate and manage the external wall cladding of structure.	<p>7.1. Structural performance of cladding to be used for bracing in the frame construction is assessed for compliance with relevant codes, manufacturer specifications and accepted industry construction</p>

ELEMENT**PERFORMANCE CRITERIA**

principles.

7.2. Installation of the cladding, as specified in building's plan, is supervised and checked for compliance with standards and accepted industry construction principles.

7.3. Installation of windows and external doors is supervised to ensure compliance with relevant codes, manufacturer specifications and accepted industry construction principles.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply manufacturer specifications and Australian standards and codes
- apply structural principles to a variety of structures within BCA Classes 1 and 10
- communication skills to:
 - consult with industry professionals
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret project documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- identify and analyse relevant information
- select structural members based on project or specification requirements
- work safely to OHS regulations and site requirements.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- relevant state or territory building and construction codes, standards and government regulations
- underlying mathematics related to structural analysis
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of structural principles and concepts in accordance with the range of variables and application to only one sector of the building and construction industry.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- assess the structural integrity of a variety of structures found on building and construction sites
- apply the structural principles behind the safe erection and demolition of a low rise structure classified within the BCA as Class 1 and 10
- apply technical construction principles to the appropriate selection, integration and building in of construction elements and components
- coordinate, plan, implement and check the building of a low rise structure.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction

EVIDENCE GUIDE

office

- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Structural principles include:

- behaviour of structural materials
- loads and loading
- performance of beams
- performance of columns
- performance of roof trusses
- section properties
- solution of force systems
- wind bracing.

Residential low rise buildings as described within the BCA are:

- Class 1
- Class 10.

RANGE STATEMENT

- Industry professionals** include:
- architects
 - draftspersons
 - engineers
 - quantity surveyors
 - surveyors.
- Project documentation** includes:
- building approval plans
 - contract plans
 - designs and specifications
 - engineer footing designs and specifications
 - original contour survey plan
 - registered plans
 - retaining walls
 - site plans
 - soil investigation reports
 - structural floor systems, wall systems and roof systems
 - tanking designs and specifications
 - underpinning, rock anchors and shoring designs and specifications.
- Footings** include:
- bored pier footings
 - columns or stumps
 - concrete slab floors
 - piers and beams.
- Floor system** components of the bearers and joists include:
- compressed sheet wet area flooring
 - engineered floor joists
 - fitted (cut-in) floors
 - platform floor construction
 - sheet flooring
 - tongue and groove flooring.
- Materials** include:
- cavity brick
 - concrete block
 - structural steel
 - timber.
- Type of roof** includes:
- box gable
 - dual pitch roof
 - Dutch gable
 - Dutch hip
 - gable end
 - hip and valley
 - north light

RANGE STATEMENT

Cladding used on timber frame constructions includes:

- skillion.
- brick veneer
- coatings over base materials
- colourbond or zincalume sheeting
- fibre cement or compressed wood panelling
- weatherboards.

6. Plan, coordinate and manage the building of structural roof systems and roof cladding systems.	<p>6.1. Structural integrity of the structural roof system and roof cladding system components specified in building's plan is assessed for compliance with relevant codes and accepted industry construction principles.</p> <p>6.2. Construction of roof system and roof cladding system, including details of service penetrations, skylights and roof ventilators, is planned, implemented and checked in accordance with building plan's requirements, type of roof being constructed, relevant codes and accepted industry construction principles.</p> <p>6.3. Processes are put in place and managed to ensure quality of finished roof system.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analytical skills and the capacity to foresee potential problems
- apply Australian standards, codes and manufacturer specifications
- apply structural principles to a variety of low rise structures
- construction management and planning techniques
- coordination of the work and advice of internal and external professionals
- communication skills to:
 - consult with industry professionals
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret project documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- identify and analyse relevant information
- low rise construction building problem solving
- numeracy skills to apply calculations
- select structural members based on project or specification requirements
- work safely to OHS regulations and site requirements.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- new and emerging building technologies, techniques and materials
- relevant state or territory building and construction codes, standards and government regulations
- underlying principles related to structural analysis
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of structural principles and concepts for erection and demolition in accordance with the range of variables and application in a low rise building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- assess structural integrity of a variety of structures found on building and construction sites
- apply structural principles behind the safe erection and demolition of low rise structures classified within the BCA as Classes 2 to 9 with a gross floor area not exceeding 2000 square metres but not including Type A or Type B construction
- apply technical construction principles to the appropriate selection, integration and building in of construction elements and components
- coordinate, plan, implement and check building of a low rise structure.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify types of drawings and their purposes.	1.1. Purpose and advantage of different <i>types of drawings</i> are identified. 1.2. Different <i>aspects of drawings</i> are identified.
2. Apply commonly used symbols and abbreviations.	2.1. Commonly used symbols and abbreviations on drawings are identified, understood and applied. 2.2. Common building and construction terms used on drawings are identified, understood and applied.
3. Locate and identify key features on a site plan.	3.1. Building site is identified from location drawings. 3.2. True north and building orientation are identified from details provided on site plan. 3.3. Key features of site plan are identified.
4. Identify and locate key features on drawings.	4.1. Key features of plans, elevations and sections are identified. 4.2. Client requested variations to standard plans are identified on drawings.
5. Correctly read and interpret specifications.	5.1. Provisional sum (PS) and prime cost (PC) values are identified and correctly applied. 5.2. Customer variations to standard specifications are identified. 5.3. Correct interpretations of essential elements are applied to estimation, planning and supervisory tasks and are communicated. 5.4. Building codes or standards affecting the work to be undertaken are identified, including references to Australian standards and the Building Code of Australia (BCA).
6. Identify non-structural aspects to the specification.	6.1. Key features of products included in the <i>specification</i> are identified, including the design, purpose, aesthetics and cost relationships.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - consult with industry professionals
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - interact effectively by telephone, facsimile, email and in writing with clients, organisational personnel and appropriate local authorities
 - read and interpret:
 - tender documentation
 - other relevant workplace documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written communication skills to produce required documentation
- identify and analyse relevant information
- numeracy skills to calculate labour hours and costs and material quantities and costs
- translation of documented requirements into on-site activities and site and structural features from two-dimensional to three-dimensional formats.

Required knowledge

Required knowledge for this unit is:

- building and construction practices
- internal documentation systems
- regulatory approvals processes and timeframes
- relevant state or territory building and construction codes, standards and regulations
- types of building and construction drawings and drawing perspectives
- types of building and construction industry contracts.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by correctly interpreting a range of plans and

EVIDENCE GUIDE

specifications for activities relating to medium rise residential and commercial construction projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- read and interpret plans and specifications including identification of key features, levels, contours, sections, service entry points, site features to be removed or retained and other details pertinent to the construction process
- identify the characteristics and features of sites and structures pertinent to a construction project, including:
 - determine correct orientation of structures on site
 - establish location of key on-site features in relation to building or other structures
- identify and incorporate customer variations to agreed plans and specifications
- correctly interpret essential elements and apply these to estimation, planning and supervisory tasks
- effectively communicate specification changes to organisational personnel and confirm variations with the client.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction

EVIDENCE GUIDE

office

- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Types of drawings include:

- CAD drawings
- construction information
- detailed amendment drawings
- details of:
 - roads and pathways
 - parking areas
 - boundaries and landscaping
- initial sketches
- preliminary and final drawings and plans
- presentation drawings

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate contract risk.	1.1. Contracts are selected according to company policy. 1.2. Tender documents for the selected contracts are evaluated, and risks to be considered when preparing the tender are identified.
2. Prepare tender documentation.	2.1. All information necessary for preparing the tender is identified and obtained. 2.2. Company procedures and instructions are followed in the preparation of the tender.
3. Identify and attach appropriate supporting documentation.	3.1. Information and supporting documentation required to support the tender are accurately identified and selected. 3.2. Vital information, drawings, specifications or other supporting documents are attached to the tender documentation as required.
4. Evaluate completed tender documentation.	4.1. Preliminary evaluation of completed tender documentation is conducted. 4.2. Tender documents and calculations are checked to ensure conformity with company financial and administrative guidelines.
5. Obtain tender approval or endorsement.	5.1. Tender documentation is provided to the appropriate staff member for approval or endorsement. 5.2. Final documents, including amendments, are prepared for submission to the client.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- calculate material quantities and costs
- calculate labour hours and costs
- communication skills to:
 - consult with industry professionals
 - enable clear and direct communication, using questioning to identify and

REQUIRED SKILLS AND KNOWLEDGE

confirm requirements, share information, listen and understand

- read and interpret:
 - tender documentation
 - other relevant workplace documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to produce required documentation to company standards
- estimate labour and materials costs from written information
- numeracy skills to calculate labour hours and costs and material quantities and costs
- use appropriate costing software programs.

Required knowledge

Required knowledge for this unit is:

- operations and structure of the organisation's costing and contracting system
- state or territory building and construction codes, standards and government regulations relevant to the form of building or construction being undertaken
- types of building, construction or civil contracting drawings and specifications
- types, scope and usage of labour through the employee and subcontractor systems.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of complete tender documentation for a construction contract.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify requirements of selected contracts for tender
- gather detailed information effectively
- check documentation and calculations in short timeframes
- produce documentation that meets the quality standards established by the organisation
- communicate effectively, both verbally and in writing.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building, construction or civil contracting office
- relevant codes, standards and government regulations

EVIDENCE GUIDE

- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Tender documents include:

- cost schedules
- details of specialist resources
- details of specific terms and conditions to be included and excluded in relation to contracts
- estimated timeframes
- human resource details, including known subcontractors
- materials specifications
- plans and drawings
- site layout information.

Risks include:

- breaches of contract
- circumstances, such as:
 - delivery delays that delay project completion

RANGE STATEMENT

	<ul style="list-style-type: none"> • subsequent delays in progress payments • labour shortages • weather • disputes over payments • exposure through clauses that work against the organisation • failure to adequately anticipate labour or materials costs • inappropriate funding levels and funding shortfalls • industrial disputes through misunderstandings or overt action • risk of default or non-performance of key players.
<i>Supporting documentation</i> includes:	<ul style="list-style-type: none"> • artist's impressions • documentation processes required by building information modelling (BIM) • organisational information • product information • promotional materials • reports or findings beneficial to the organisation.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to make sketches and drawings.	<p>1.1. <i>Types of drawings required</i> and <i>key features</i> to be recorded are identified in compliance with the scope and standard of the job being undertaken.</p> <p>1.2. <i>OHS requirements</i> on site are identified and followed.</p> <p>1.3. <i>Tools and equipment</i> required for inspection and measurement and for producing drawings are gathered and checked for serviceability.</p>
2. Create simple sketches and drawings.	<p>2.1. Inspection of relevant area is carried out as required and measurements are taken and recorded.</p> <p>2.2. Simple two and three-dimensional sketches and drawings are created using <i>standard drawing conventions</i> and incorporating relevant codes and standards.</p> <p>2.3. Sectional drawings of simple structural elements are created using standard drawing conventions.</p>
3. Notate and process drawings.	<p>3.1. Essential information is recorded on the drawing with symbols and abbreviations according to standard drawing conventions.</p> <p>3.2. Drawings are labelled, dated and processed according to organisational administration and quality procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- drawing techniques

REQUIRED SKILLS AND KNOWLEDGE

- interpret and apply relevant standards and codes
- numeracy skills to apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- drawing conventions and features, including direction, scale, key, contours, symbols and abbreviations
- requirements of the relevant codes, standards, statutory and authority requirements
- safe work methods.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by creating a set of sketches and drawings for a small work project in the relevant field of expertise.

Measurements of components, sub-assemblies, products, models, equipment, layouts or facilities needed for the preparation of the required drawings and calculations of required dimensions and other drafting details based on the measurements and other relevant information should be made and recorded.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- produce clear and effective drawings and sketches with appropriate notations and labelling
- apply appropriate techniques for making inspections and taking measurements
- make good incursions into the fabric of a building
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes
- select and use appropriate processes, tools and equipment.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include access to:

- an appropriate work site
- appropriate documentation and data related to tasks
- scaffolding and fall protection equipment
- tools and equipment relevant to activity process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Types of drawings required include:

- floor plan
- land boundaries and footprint of building
- orthographic drawings
- schematic drawings of wiring and pipe work
- sectional views.

Key features to be recorded may include:

- ceiling heights and variations
- doors
- light fittings and power supplies
- services
- wall penetrations
- walls.

RANGE STATEMENT

- OHS requirements*** include:
- detailing appropriate installation of scaffolding
 - detailing power supplies
 - details of all services
 - understanding hazards located in the area
 - use of personal protective equipment.
- Tools and equipment*** include:
- recording devices, including:
 - computer
 - digital camera
 - pen and paper.
- Standard drawing conventions*** include:
- standard design symbols common to the building and construction industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine specification requirements.	<p>1.1. Project brief, working drawings, development approval and other relevant documents are examined to identify essential information to be included in the specification.</p> <p>1.2. <i>Standard specifications</i> are examined to determine suitability for adaptation to the current project.</p> <p>1.3. Non-standard requirements are developed and where technical aspects require clarification, advice is sought from specialists.</p>
2. Assess the nature and scope of the work.	<p>2.1. Site inspection is conducted to establish site layout and preliminary site-work requirements, and site details and features are recorded.</p> <p>2.2. Specification includes all relevant details at a level necessary to describe clearly the nature and <i>scope of the work</i>, including <i>prescriptive and performance requirements</i>.</p> <p>2.3. Research is undertaken to establish appropriate schedules, using relevant <i>data sources</i>.</p> <p>2.4. Details are tabulated and cross-referenced to ensure consistency between the design brief, working drawings and specifications.</p> <p>2.5. Details in the specification conform to industry codes of practice, Australian standards and relevant statutory requirements.</p> <p>2.6. Information requested from specialists, colleagues and clients is coordinated and added to the specifications where required.</p>
3. Prepare the specification document.	<p>3.1. Specification clearly identifies the <i>contractual obligations</i> and rights of the parties involved.</p> <p>3.2. Specification document is complete, checked thoroughly for compliance with requirements and edited.</p> <p>3.3. Specification is presented to the client in the required format and timeframe.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- attention to detail in preparing documentation
- client service standards
- commonly used document management
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - enable liaison with specialists to seek advice and request information
 - prepare, read and interpret:
 - codes of practice
 - design briefs
 - plans and drawings
 - regulations
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to prepare reports and specifications
- construction work site teamwork
- identifying specification requirements
- identifying documentation requirements for a range of sources
- product and service analysis
- research methods and investigation techniques relevant to construction specification preparation.

Required knowledge

Required knowledge for this unit is:

- client requirements
- document control
- documentation requirements for specifications
- organisational policy relating to specifications
- industry codes of practice
- NATSPEC
- relevant Australian standards
- relevant legislation, including contract law and trade practices legislation
- research sources to determine schedules
- schedule of rates

REQUIRED SKILLS AND KNOWLEDGE

- standard specification documents
- types of specification and their use.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective preparation of a specification meeting NATSPEC and other relevant standards applicable to a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- use a range of research methodologies and tools
- correctly identify and use specifications for the range of work
- apply contractual principles to the specification drafting.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include

EVIDENCE GUIDE

access to documentation such as:

- computer data files
- detailed specifications that address specific components such as mechanical, structural, electrical or other requirements
- documentation requirements arising from BIM
- local, state and commonwealth government documents and registers
- media reports
- NATSPEC or other industry standard specifications
- policy statements
- preliminary, outline or developed specifications
- publications and journals
- statistical summaries
- statutes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and analyse the essential elements, sections and clauses of a business contract.	<p>1.1. Various types of <i>building and construction contracts</i> are identified and the appropriate application of each type is analysed.</p> <p>1.2. Legislative requirements relating to building and construction contracts are identified and applied.</p> <p>1.3. Essential terms and elements of a valid contract are identified and analysed.</p> <p>1.4. Importance of identifying an intention to create legal relations is analysed.</p> <p>1.5. Rights and liabilities of parties under a contract are identified and analysed.</p> <p>1.6. Common building contract terms and procedures are identified and applied.</p> <p>1.7. Circumstances that bring about a breach of contract are identified and analysed.</p>
2. Select an appropriate contract for the works to be undertaken.	<p>2.1. Contract, appropriate for the type of construction, is accurately selected.</p> <p>2.2. <i>Range of documents</i> that collectively make up a contract is accurately identified and prepared.</p> <p>2.3. Requirements associated with an offer and acceptance of a contract are accurately identified and applied.</p> <p>2.4. Capacity of the parties to form a binding agreement in the form of a contract is confirmed.</p> <p>2.5. Factors associated with the parties' consent to a contract are identified and applied.</p>
3. Identify and apply the factors involved in the termination of a business contract.	<p>3.1. Impact and effects of repudiation of a contract by one party are identified and analysed.</p> <p>3.2. Agreed definition of acceptance of repudiation by the other party is identified and applied.</p> <p>3.3. Definitions of unreasonable or vexatious notice are identified, agreed and applied.</p> <p>3.4. Definition of the conditions for completion at the cost of the contractor is identified and applied.</p> <p>3.5. Definition of the effect of ousting the contractor from the building or construction site is identified and applied.</p> <p>3.6. Definition of abandonment of a contract is identified and applied.</p> <p>3.7. Contracts are terminated in accordance with relevant</p>

ELEMENT	PERFORMANCE CRITERIA
4. Administer the contract.	<p>legislation and contract provisions.</p> <p>4.1.Contract rise and fall amounts are accurately calculated.</p> <p>4.2.Progress payments due under the contract are accurately processed.</p> <p>4.3.Applications for extension of time are processed in accordance with company policy and contract conditions.</p> <p>4.4.Variations to contract are identified, negotiated and documented.</p> <p>4.5.Action is taken to minimise liquidated damages or penalties nominated in the contract.</p> <p>4.6.Contracts are administered and contractual disputes resolved in accordance with contract and relevant legislation and regulations.</p> <p>4.7.Conditions for issuing a final certificate are identified and applied.</p>
5. Finalise a contract.	<p>5.1.Definition of practical completion of contract is identified and applied.</p> <p>5.2.Definition of defects liability under a building or construction contract is identified and applied.</p> <p>5.3.Appropriate certificate is issued upon completion of the contract work.</p> <p>5.4.Documentation arising from finalisation of a contract is completed and secured for records purposes.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with clients, subcontractors, colleagues and external parties by phone, facsimile, email or in writing
 - communicate with members of the organisation and external parties, including

REQUIRED SKILLS AND KNOWLEDGE

clients and subcontractors

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- facilitate drafting detailed responses to queries relating to the finer points of contracts
- read and interpret:
 - complex legal text
 - construction schedules
 - contracts
 - reports
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to complete workplace documentation, including drafting responses to queries relating to the finer points of contracts
- identify and analyse relevant information
 - maintain files
 - monitor price variations in construction products and services
 - numeracy skills to apply calculations
 - use and apply data.

Required knowledge

Required knowledge for this unit is:

- basic understanding of the Australian legal system and its relevance to contracts
- contracts required or supplied by regulatory authorities
- definitions and interpretations commonly applied to contracts
- legal meanings of terms and clauses in building and construction contracts
- relationships between the organisation and its clients
- various contract types and the circumstances they cover.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the selection, development and administration of appropriate contracts that meet organisational and industry standards and relate to residential or commercial projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the relevant aspects of contract selection, insertion of appropriate clauses and administration of events arising from contract clauses, including rise and fall and progress payments.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select right contract for particular project
- select appropriate clauses and conditions within the contract
- administer contract to the standard required by the organisation and according to legal or regulatory requirements that may exist within the state or territory in which work is being done
- determine appropriate measures to be taken in the event of an anomaly in the rendering of the contract.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Building and construction contracts include:

- Australian standard contracts (including the AS2124 and AS4000 series)
- Construction Industry Contract (CIC) suite
- contracts required or supplied by regulatory authorities
- individual organisational contracts

RANGE STATEMENT

Range of documents includes:

- Joint Contracts Committee (JCC) suite
- MBA and HIA contracts
- Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum).
- equipment, site accommodation and services information
- human resource projections
- materials lists
- plans, drawings and specifications
- project timelines
- schedules.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to procure the physical and human resources necessary to ensure the development of on-site facilities and the availability of personnel, plant and equipment, materials and other site-essential items for low rise (low rise' licensing classification with reference to Class 1 and 10 construction and Classes 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction) construction projects.

Knowledge of physical resource acquisition and supply processes, and identification and procurement of suitable labour through the organisation's own employees and/or subcontractors is essential.

Application of the Unit

Application of the unit This unit of competency supports the needs of builders, site managers and forepersons, estimators and other building and construction industry professionals who have a responsibility to acquire the physical and human resources required for residential and commercial construction projects.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Notify client and relevant authorities and agencies of the schedule of works.	<p>1.1. Fees due are paid and site handover date is confirmed with client.</p> <p>1.2. Insurance and security requirements are established and provided.</p> <p>1.3. Parking restrictions are determined and advised to relevant personnel.</p> <p>1.4. Authorities requiring formal notification of the commencement of work are contacted.</p>
2. Organise the delivery of on-site accommodation and facilities.	<p>2.1. Requirements for on-site accommodation and facilities are identified.</p> <p>2.2. Site office, storage sheds and on-site toilet facilities are arranged, received and positioned.</p> <p>2.3. Site signage is erected to comply with regulations.</p> <p>2.4. Processes are developed and implemented to identify and protect existing services at the site.</p> <p>2.5. Council requirements are identified and met.</p>
3. Organise the delivery of plant.	<p>3.1. On-site plant delivery dates are confirmed.</p> <p>3.2. Hoardings are erected and rubbish removal facilities are arranged.</p>
4. Arrange the connection of temporary services.	<p>4.1. Temporary power and water connections are arranged with service providers.</p> <p>4.2. Temporary site access and egress are arranged and authorisations obtained from the local authority.</p>
5. Organise on-site human resources.	<p>5.1. On-site human resource requirements are identified.</p> <p>5.2. Construction work supervisor is engaged or appointed.</p> <p>5.3. Industrial relations and safety matters occurring on supervised work site that could impact on the resourcing and preparation for building work are addressed where required.</p> <p>5.4. Appropriate personnel is engaged according to project needs.</p>
6. Order materials.	<p>6.1. Orders for prefabricated materials are placed using approved company documentation and site delivery dates are confirmed.</p> <p>6.2. Construction arrangements required by contract are finalised to satisfy the project schedule.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - provide information to client, authorities and relevant on-site and off-site personnel by telephone, facsimile, email and in writing
 - read and interpret plans
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to complete workplace documentation
- coordinating a range of team members and activities
- effective management of a construction work site
- interpreting plans
- planning and scheduling construction work
- supervising site.

Required knowledge

Required knowledge for this unit is:

- contract documentation, quantities, rates and costs related to payments and claims
- differences in and uses of various building and construction industry contracts
- resource procurement processes
- safe working policy and procedures
- scope, operations and structures of the building and construction industry subcontractor system
- state or territory building and construction codes, standards and government regulations relevant to the form of building or construction being undertaken.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by identifying, planning and putting in place the essential infrastructure (including human, physical, plans and processes) required to commence and support a construction project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- procure resources effectively
- communicate effectively, both verbally and in writing with suppliers and subcontractors
- complete documentation to organisational standards
- advise appropriate authorities and gain necessary approvals or responses.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators,

EVIDENCE GUIDE

photocopiers and telephone systems

- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Authorities include:

- electricity authorities
- environmental protection agencies
- local government agencies
- road traffic authorities
- water authorities.

On-site accommodation and facilities include:

- caravans
- dormitories
- lunch rooms
- office facilities
- sheds
- toilet facilities.

Council requirements include:

- consent matters
- heritage protection
- tree conservation.

RANGE STATEMENT

Plant includes:

- air compressors
- pile driving equipment
- portable generators and lighting equipment
- pumps
- wheeled or tracked earthmoving equipment.

On-site human resource requirements include:

- administrative personnel
- construction workers
- cooks and kitchen hands
- drivers and machine operators
- supervisors and forepersons
- tradespersons.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform setting out, measuring techniques and associated calculations.	<p>1.1. Trigonometric and geometric calculations commonly used with grid lines, off sets and right angle triangles are calculated and recorded without error.</p> <p>1.2. Site set-out procedures are carried out according to standard work methods on <i>sites</i>.</p> <p>1.3. Errors in measured distances due to site characteristics and measurement methods are identified and explained.</p> <p>1.4. <i>Cut and fill calculations</i> are conducted without error.</p>
2. Set up and use levelling devices.	<p>2.1. Use of <i>levelling device</i> is demonstrated in accordance with standard operating procedures.</p> <p>2.2. Error present in a level by the 'two peg test' device is demonstrated in accordance with standard operating procedures.</p> <p>2.3. Reduction in a closed level run by rise and fall method and by height of plane of collimation (HPC) method is carried out in accordance with standard practices.</p> <p>2.4. Calculation of staff readings to enable a specific reduced level (RL) set-out to be determined is calculated without error.</p>
3. Mark out and determine levels on a grid for contouring and volume calculations.	<p>3.1. Set out grid and levels are determined.</p> <p>3.2. Contour plans are prepared from grid levels to specified tolerances and stated contour intervals.</p> <p>3.3. Volume of solids and the surface being levelled and contoured are determined to specified tolerances.</p>
4. Construct longitudinal sections and determine associated grades and levels in typical drainage and pipeline situations.	<p>4.1. Longitudinal sections are drawn from reduced levels and running chainages.</p> <p>4.2. Levels and clearances from given grades and distances are determined to specified tolerances.</p> <p>4.3. Calculations and expressions of grades in <i>three forms</i> are determined to specified tolerances.</p> <p>4.4. Calculations for batter levels from grades and distances are determined without error.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of design concepts and principles relating to structural systems
- application of measurements and calculations
- attention to detail when transferring levels
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret plans
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements and calculations
- use of levelling devices for survey and site set outs.

Required knowledge

Required knowledge for this unit is:

- applications of structure in building systems and application to survey and site set-out
- BCA and Australian standards
- design principles
- level and grade checking used to perform survey control to accuracy criteria
- nature of survey and levelling devices and effect of performance on site
- work drawings and specifications.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of survey and site set-out procedures and principles of selection and use of two levelling devices to survey and set out building projects.

EVIDENCE GUIDE

	<p>This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• comply with OHS and organisational quality procedures and process within the context of this unit of competency• apply and interpret relevant documentation and codes• accurately apply survey and levelling principles relating to performance of site set-out, including contouring, volume and grade calculations• identify typical faults and problems and necessary action taken to rectify such faults.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none">• documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents• research resources, including levelling device information and data• access to relevant legislation, regulations and codes of practice• relevant computer software package and suitable hardware where applicable to survey and set-out practices. <p>Reasonable adjustments for people with</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply legislative and planning requirements for effective water management systems to the building process.	<p>1.1. Current relevant state, territory and council requirements for <i>effective management of water systems</i> are identified as part of the building and construction design process.</p> <p>1.2. Client needs and expectations for the design and use of water management systems are identified and negotiated.</p> <p>1.3. Expert plumbing and other advice is gathered as part of the planning process.</p> <p>1.4. Relevant Australian standards are consulted to identify the implications for the conduct of the building project.</p> <p>1.5. Environmental and resource efficiency issues are identified and addressed.</p>
2. Identify and apply opportunities for improved water management.	<p>2.1. Impact of client and resident behaviour on effective water management and use is identified.</p> <p>2.2. Opportunities to select efficient water management <i>fixtures and appliances</i> as part of the building design are identified, evaluated and applied.</p> <p>2.3. Relative installation and ongoing usage costs of efficient water management fixtures and appliances are quantified and communicated to the client.</p> <p>2.4. Efficient water management fixtures and appliances are used as negotiated within the building project.</p>
3. Apply sound water management principles to the site and its landscaping.	<p>3.1. Soil and sediments are contained to the site as part of the site preparation and management.</p> <p>3.2. Sound waste management practices are used on site.</p> <p>3.3. Effective sediment control barriers are in place and used.</p> <p>3.4. Topsoil and local rocks are stockpiled and retained for later use in landscaping.</p> <p>3.5. Appropriate input is made to the landscape design process to optimise water use, reuse and recycling.</p>
4. Promote best practice in water management.	<p>4.1. Selection, location and installation of tanks to optimise the reuse of roof water are evaluated and implemented.</p> <p>4.2. Costs, planning implications and construction techniques for the reuse of grey water are identified and implemented as negotiated with the client.</p> <p>4.3. Costs and performance characteristics of various</p>

ELEMENT

PERFORMANCE CRITERIA

materials used in the installation of water management systems are identified and negotiated with the client.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of Australian standards and codes and manufacturer specifications
- evaluation of alternative water management systems
- communication skills to:
 - communicate information to client
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - identify and negotiate client requirements
 - read and interpret legislative and planning requirements
 - seek advice
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- numeracy skills to apply calculations
- work safely to OHS regulations and site requirements.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- relevant state or territory building and construction codes, standards and government regulations
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of mechanical principles and concepts to design of a sustainable water management system.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- source and analyse legislative and planning requirements for water management in the building process
- calculate costs and savings of implementing alternative water management systems
- apply principles of effective water use, recycling and reuse to the planning of a building project
- produce work plans that reflect effective water management.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government

EVIDENCE GUIDE

regulations

- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with

a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Effective management of water systems includes:

- grey water recycling
- roof water reuse.

Fixtures and appliances include:

- dishwashers
- showerheads (low flow and maxi flow)
- spas
- taps
- toilets
- washing machines.

Waste management practices include ensuring that:

- run-off from the cleaning up of equipment (e.g. painting) is handled appropriately
- waste bins are used and emptied appropriately.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply legislative and planning requirements for thermal efficiency to the building process.	<p>1.1. Current relevant state, territory and council <i>requirements for building thermally efficient structures</i> are identified.</p> <p>1.2. Factors that contribute to the construction of a five-star rated dwelling identified within the Building Code of Australia (BCA) are identified and the impact of <i>regional climate differences</i> is assessed.</p> <p>1.3. Client needs and expectations for the design and construction of thermally efficient structures are identified and negotiated.</p> <p>1.4. Expert design and other advice is gathered as part of the planning and construction process.</p> <p>1.5. Relevant Australian standards are consulted to identify the implications for the conduct of the building project.</p>
2. Review design solutions for effectiveness and compliance.	<p>2.1. Impact of radiation, convection, conduction and evaporation on the thermal comfort of residents is identified.</p> <p>2.2. Orientation of the building, location and size of glazing, and use of thermal mass as design features are evaluated for effectiveness and compliance with planning and other regulatory requirements.</p> <p>2.3. Effective strategy for insulating the structure is evaluated, costed and communicated to the client.</p> <p>2.4. Building designs are assessed for their compliance with the energy efficiency requirements of the BCA's five-star rating system.</p> <p>2.5. Designers and clients are consulted to ensure final construction plans are effective, efficient and compliant.</p>
3. Manage the building process to ensure an effective outcome.	<p>3.1. Effective communications are established between designers, architects and clients to ensure effective thermal performance is embedded from the design to construction phase.</p> <p>3.2. Effective quality assurance processes are confirmed as in place to evaluate and implement the building of a five-star dwelling.</p> <p>3.3. Cost effective strategies to achieve desired level of thermal performance are assessed and communicated to client.</p> <p>3.4. Life cycle costs of various construction approaches</p>

ELEMENT**PERFORMANCE CRITERIA**

are assessed and negotiated with the client.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of Australian standards and manufacturer specifications
- application of BCA Part 3.12
- communication skills to:
 - communicate information to client
 - consult designers
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - identify and negotiate client requirements
 - read and interpret legislative and planning requirements
 - seek advice
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- evaluation of the thermal efficiency of building design solutions
- apply numeracy skills to workplace requirements.

Required knowledge

Required knowledge for this unit is:

- building and construction industry processes for building sustainability
- relevant state or territory building and construction codes, standards and government regulations
- underlying mathematics related to the calculation of thermal efficiency
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of mechanical principles and concepts to construction of a thermally efficient and sustainable building structure.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- source and analyse legislative and planning requirements for thermal efficiency in the building process
- calculate costs and savings of implementing alternative thermally efficient systems
- apply principles of thermal efficiency to planning of a building project
- produce work plans that reflect effective thermal efficiency.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations

EVIDENCE GUIDE

- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Requirements for building thermally efficient structures include:

- appropriate use of thermal mass (noting impact of climatic conditions)
- glazing size and orientation
- insulation
- orientation of building
- use of relevant construction methods.

Regional climate differences and the impact on effective design solutions include areas with:

- cooling climates
- hot arid climates
- hot humid climates
- mixed climates.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan a waste management strategy.	<p>1.1. Current relevant state, territory and council requirements for managing and minimising building waste are identified.</p> <p>1.2. Relative costs and savings associated with <i>strategies to minimise waste</i> are calculated and negotiated with client.</p> <p>1.3. Effective communications are established with the architect, designer, engineer and other relevant professionals to ensure project plans incorporate waste minimisation strategies.</p> <p>1.4. Relevant Australian standards are consulted to identify the implications of waste minimisation strategies for the conduct of the building project.</p> <p>1.5. Waste management strategy to support the building and construction project is developed.</p>
2. Manage materials procurement to minimise waste.	<p>2.1. Building and construction materials are evaluated to identify high quality and more durable materials that will extend the life of the structure and simplify its future extension and refurbishment.</p> <p>2.2. Recycled materials are used where appropriate and with regard to regulatory and standards' restrictions.</p> <p>2.3. Procurement specifications are developed that seek to minimise <i>packaging waste</i>.</p>
3. Manage the building process to reduce waste.	<p>3.1. Demolition practices are determined and used to increase the recovery of materials for recycling and reuse.</p> <p>3.2. Strategies are adopted to minimise the volume of site excavation and other materials that are disposed of in landfill.</p> <p>3.3. Litter abatement strategies are adopted on site.</p> <p>3.4. Safe and environmentally effective disposal of unavoidable waste is planned and implemented.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- application of Australian standards and manufacturer specifications
- application of the Building Code of Australia (BCA)
- communication skills to:
 - communicate information to client
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - identify and negotiate client requirements
 - seek advice
 - read and interpret:
 - legislative and planning requirements
 - relevant Australian standards
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to produce a waste management strategy
- numeracy skills to apply calculations
- problem solving to determine optimum waste minimisation practices.

Required knowledge

Required knowledge for this unit is:

- building and construction industry processes for building sustainability
- relevant state or territory building and construction codes, standards and government regulations
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of sustainable waste management principles and concepts on a construction work site.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- source and analyse legislative and planning requirements for waste minimisation in the building process
- calculate costs and savings of implementing alternative waste minimisation systems
- produce a strategy or plan for effective waste minimisation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems

EVIDENCE GUIDE

- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Strategies to minimise waste include:

- procurement policies that encourage use of recyclable and recycled material
- building to standard sizes
- contracts with subcontractors that require implementation of waste minimisation
- materials salvage and recycling
- litter abatement
- use of reusable delivery and storage containers.

Packaging waste reduction methods include the use of:

- metal strapping in place of shrink wrapping
- paper packaging in place of plastic
- shredded paper packing in place of foam
- recyclable or reusable containers.

CPCCBC4022A Supervise tilt-up work

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to organise, coordinate and supervise tilt-up work on site. The knowledge and skills required to apply licensing and other regulatory requirements to the process are addressed. The erection of tilt-up pre-cast concrete panels requires the application of highly structured processes and the application of safe work practices.

Application of the Unit

Application of the unit This unit of competency supports the needs of site supervisors and builders with a responsibility for supervising tilt-up work on site. It complies with the National Code of Practice for Precast, Tilt-up and Concrete Elements in Building Construction

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Provide effective administration.	<p>1.1. <i>Licences and approvals</i> required for tilt-up work are checked or obtained, work plan is prepared, and relevant regulatory authorities are notified of work if necessary.</p> <p>1.2. Copies of all structural and design documents, pre-cast panel shop drawings, layout plans and other documents are obtained, stored on site and accessed as required.</p> <p>1.3. Details of persons assigned to perform tilt-up work are checked to ensure relevant competency licences are held and <i>regulatory training requirements</i> have been met.</p>
2. Plan and set up site.	<p>2.1. Site security, amenities, services and <i>emergency/first aid</i> facilities are provided and associated site procedures are prepared.</p> <p>2.2. Requirements for footings, structural elements, concrete slabs and site access roads for the tilt-up work are reviewed and made available.</p> <p>2.3. Concrete panel casting and delivery sequence are planned to support the work sequence and taking into account the required curing times for the concrete panels.</p> <p>2.4. Traffic management and public safety plans and procedures are developed and exclusion zones planned for concrete panel delivery, casting and erection operations.</p> <p>2.5. Ground conditions such as soakwells and drains likely to affect crane stability are identified, crane standing areas are checked for strength and compaction, crane suppliers are consulted and suitable crane operating locations are identified and recorded.</p> <p>2.6. A site specific <i>OHS management plan</i> is prepared and implemented, work plan is implemented, and <i>OHS risk control measures</i> are applied.</p>
3. Organise and coordinate tilt-up work.	<p>3.1. Delivery sequence is coordinated for concrete panels cast off site, or a casting and curing schedule and distribution of panels on site are coordinated.</p> <p>3.2. Process is put in place to ensure concrete panels are placed and stored in accordance with engineer's requirements.</p> <p>3.3. Concrete panel inspection records are checked to</p>

ELEMENT**PERFORMANCE CRITERIA**

	confirm design specifications have been followed during panel fabrication and manufacture.
	3.4. Process is put in place to ensure erection areas are cleared, exclusion zones set up, barriers erected and site personnel advised of restricted access areas prior to erection of concrete panels.
	3.5. Process is put in place to ensure fixings and anchor bolts supplied for temporary bracing are checked for compliance with designer and engineer specifications.
	3.6. Process is put in place to ensure correct type of braces are fixed to panels prior to lifting, and locating dowels and shims are correctly placed and components positioned and propped in accordance with shop drawings or as approved by the engineer.
	3.7. Supervision of <i>safe work method statements</i> , safe systems of work and safe work practices, drawings, specifications and engineering details is undertaken to ensure the required procedures are followed by workers and contractors during the erection of the concrete panels.
	3.8. In the event of unanticipated circumstances, job safety analysis and other tools are used to identify hazards, assess risks and create safe systems
4. Confirm tilt-up stabilisation.	4.1. Erected concrete panels are checked for compliance with design and engineering specifications.
	4.2. Structural steel elements being fixed to the temporarily braced panels are checked to ensure that they are in accordance with designed engineering specifications.
	4.3. Process is put in place to ensure the erected structure is inspected by an engineer and certified as being sound prior to the removal of temporary bracing from concrete panels in line with the relevant state or territory regulatory requirements.
	4.4. Process is put in place to ensure braces are removed methodically, with temporary bracing and other erection elements stacked and removed from site.
	4.5. On completion of the erection work, processes are put in place to ensure the work areas are cleared before other trades are permitted to enter exclusion zones.
	4.6. Work completion procedures are applied, relevant personnel are notified of work completion and site

ELEMENT**PERFORMANCE CRITERIA**

records are maintained to company requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - ensure safe systems of work and safe work practices are followed
 - facilitate discussion of workplace hazards and risks
 - read, interpret and apply information from:
 - design specifications
 - legislative requirements
 - plans
 - procedures
 - tilt-up guidance material
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to complete:
 - memos
 - safe work and OHS management plans
 - safe work method statements
 - schedules
 - site records
- numeracy skills to check and calculate dimensions and levels.

Required knowledge

Required knowledge for this unit is:

- National Standard for Construction Work and National Code of Practice for Induction for Construction Work
- capacity and limitations of plant, lifting gear and equipment used in tilt-up work, including associated safe systems of work

REQUIRED SKILLS AND KNOWLEDGE

- capacity and limitations of rigging and equipment, including use of load charts
- grouting, bracing, torquing, stabilisation and fixing work practices
- hazard identification and the formulation of safe work method statements and safe systems of work, which include those for safe work at height (fall arrest equipment and scaffolding and access equipment)
- interpretation of plans, drawings and specifications for tilt-up work
- National Code of Practice for Precast, Tilt-up and Concrete Elements in Building Construction, OHS regulations, and Australian standard 3850 Tilt-up concrete construction, as related to the supervision of tilt-up work.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by demonstration of the successful supervision of a tilt-up construction project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the relevant aspects supervising the erection of one multi point pre-cast tilt slab or one cast in situ tilt slab, each of at least 10 tonne.

Competence requires full compliance with the National Standard for Construction Work and National Code of Practice for Induction for Construction Work. Competence also needs to demonstrate a familiarity with and understanding of tilt-up construction codes of practice, standards, regulations and approval gaining processes, and their application.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- access and apply legislative requirements
- identify OHS hazards and assess and control OHS risks associated with the tilt-up construction process
- prepare the site OHS management plan
- plan, prepare and carry out the tilt-up construction process and implement state or territory legislative requirements and guidance material
- identify potential hazards and interpret and apply information from plans, specifications, drawings and procedures.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

<i>Licences and approvals</i> include:	<ul style="list-style-type: none"> • building licences • notification and approval, which may be required under OHS legislation for tilt-up work.
<i>Regulatory training requirements</i> refer to:	<ul style="list-style-type: none"> • induction and training, which may be required under state or territory OHS legislation for tilt-up work • induction and training in accordance with the National Standard for Construction Work and National Code of Practice for Induction for Construction Work.
<i>Emergency/first aid</i> includes:	<ul style="list-style-type: none"> • emergency shutdown and stopping • extinguishing fires • OHS first aid, emergency and evacuation requirements.
<i>OHS management plan</i> refers to:	<ul style="list-style-type: none"> • requirements of the National Standard for Construction Work.
<i>OHS risk control measures</i> refer to:	<ul style="list-style-type: none"> • control measures required by different site and soil conditions • control measures required by other site conditions, such as working with surrounding structures, restricted site access conditions, traffic control issues and working in proximity to others, including work site visitors and the public • those in accordance with OHS standards, regulations and codes of practice • trip hazards, noise, working with dangerous materials, manual handling, working in confined spaces, working at height, and electrical hazards such as overhead cables and conduits.
<i>Safe work method statements</i> refer to:	<ul style="list-style-type: none"> • requirements of the National Standard for Construction Work.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop and implement dispute resolution procedures.	<p>1.1. Established business <i>dispute resolution procedures</i> are reviewed and implemented as appropriate.</p> <p>1.2. Business dispute resolution procedures are developed where required and documented, and agreement to procedures is secured from all parties.</p> <p>1.3. Recording procedures are established and provision for record keeping is made.</p> <p>1.4. External arbitrators or conciliators are identified for consultation when disputes cannot be resolved internally.</p>
2. Conduct an initial investigation into business disputes and possible resolution strategies.	<p>2.1. Nature and <i>cause of business disputes</i> are identified and documented.</p> <p>2.2. Parties to dispute are identified and approached individually, and the issues are clarified and documented.</p> <p>2.3. Solutions based on an examination of the information collected and with reference to contractual arrangements are suggested.</p>
3. Identify opportunities for dispute resolution.	<p>3.1. Efforts are made to bring the disputing parties together.</p> <p>3.2. Where necessary, external arbiters or conciliators are consulted.</p> <p>3.3. Relevant statutory laws are identified, applied and followed.</p> <p>3.4. Disputes are resolved in accordance with common law.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate by telephone

REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- research and evaluate information and circumstances surrounding a business dispute
- read and interpret relevant legislation
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
 - complete checklists
 - send emails and faxes
 - write memos and reports
- negotiation relevant to dispute resolution situations
- problem solving in the context of dispute resolution
- research and evaluate information and circumstances surrounding a business dispute.

Required knowledge

Required knowledge for this unit is:

- contractual and business frameworks underpinning the building and construction industry
- mores, values and attitudes of various groups in the community that should be accounted for in discussions
- possible reactions from persons under pressure, such as anger and withdrawal.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by developing a set of dispute resolution procedures and demonstrating how these would apply to a selection of disputes.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify the nature of the dispute and the identity of the parties to the dispute
- document the details of the dispute in sufficient terms for an unambiguous evaluation of the issues to occur
- identify and follow established dispute resolution procedures
- develop and implement dispute resolution procedures, where there are none established.
- understand need to remain completely impartial in any involvement in a dispute.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building, construction or civil contracting office

EVIDENCE GUIDE

- relevant codes, standards and government regulations
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Dispute resolution procedures include:

- arbitrated decisions
- common law outcomes
- litigated decisions
- mutual resolution
- on-site negotiations
- reference to contractual obligations.

Cause of business disputes includes:

- contract payment issues
- different opinions about design, structural layout or dimensions
- dissatisfaction with project progress
- structural finish, quality, materials or construction methodology.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage own work performance.	<p>1.1. <i>Personal qualities</i> appropriate to the construction workplace environment and culture are known and demonstrated.</p> <p>1.2. Organisational strategies and priorities linked to personal responsibilities and accountability are reflected in personal performance plans.</p> <p>1.3. Stable work performance is maintained consistently and under pressure situations.</p> <p>1.4. Difficult workplace situations are recognised, addressed promptly and sensitively, and concluded positively.</p> <p>1.5. Work performance and presentation requirements are established and met.</p>
2. Set and meet own work priorities.	<p>2.1. Competing demands for work time and priority action are assessed and organised to achieve individual, team and organisational <i>work priorities</i>.</p> <p>2.2. Activities are managed effectively to accomplish personal, team and organisational goals and objectives.</p> <p>2.3. Technology is used where appropriate to improve efficiency and effectiveness in managing work priorities and commitments.</p>
3. Develop and maintain professional competence.	<p>3.1. Personal strengths and weaknesses are assessed against job requirements to determine personal development priorities and action where necessary.</p> <p>3.2. Feedback on performance is regularly sought and used to improve professional development.</p> <p>3.3. Management skills relevant to the job role are identified and developed to enhance performance.</p> <p>3.4. Participation in professional networks and associations is used to enhance knowledge, skills and relationships.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- adherence to organisational ethical and probity standards
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate by telephone
 - participate in workplace conversations and meetings
 - read and interpret documentation from a variety of sources
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- written skills to:
 - complete checklists
 - produce memos and reports
 - send emails and faxes
- managing conflict and change in construction work situations
- numeracy skills to apply calculations
- recognising and managing workplace improvement opportunities
- teamwork skills to:
 - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
 - work with others to coordinate and action tasks.

Required knowledge

Required knowledge for this unit is:

- mores and values of the workplace
- professional network and associations within the industry
- relevant local codes, standards and regulations applicable to the building and construction industry
- technologies applicable to and found within the workplace
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of a personal work and development plan.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- recognise and apply personal motivation and commitment to the work role
- manage day to day responsibilities and conflicting demands in an efficient and cooperative manner
- relate positively to clients, fellow workers and the management team
- assess personal strengths and weaknesses and plan and implement appropriate personal development.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office
- relevant codes, standards and government regulations
- a suitable work area appropriate to the

EVIDENCE GUIDE

construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in

EVIDENCE GUIDE

relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Personal qualities include:

- appropriate personal presentation for the job role
- confidence
- fairness
- integrity
- patience
- perseverance
- probity
- timeliness and punctuality.

Work priorities include:

- dealing with conflicting goals
- determining work and personal needs
- individual and team goals and targets
- planning new work
- prioritising and scheduling
- reassessing performance
- work in progress.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the process for lodging approval applications.	<p>1.1. Approvals required for each project stage are identified.</p> <p>1.2. Level and type of information and documentation needed for the application are determined and confirmed, where appropriate, in consultation with external specialists.</p> <p>1.3. Plan is developed and submitted for approval, recognising scheduling requirements and client needs.</p> <p>1.4. External specialists are consulted, as required, to facilitate certification of documents.</p>
2. Prepare and lodge applications for approval.	<p>2.1. Necessary documentation and supporting information are prepared and checked for compliance with the requirements of the building approval authority.</p> <p>2.2. Impact of planning application on range of stakeholders is analysed and strategies are adopted to maximise the likelihood of their support for the application.</p> <p>2.3. Necessary documentation and supporting information are lodged with approval authority.</p> <p>2.4. Confirmation of application status is sought at appropriate intervals to ensure continuing progress.</p>
3. Evaluate and review outcome of application.	<p>3.1. Outcome of building approval application is assessed to determine impact on project.</p> <p>3.2. Where required, minor amendments are negotiated in accordance with client, organisation and approval authority requirements.</p> <p>3.3. Rejected submissions are analysed to determine likely success of an appeal or a resubmission, and course of action is determined with the client.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - liaise with clients, stakeholders, specialists and approval authorities
 - negotiate amendments
 - read and interpret:
 - codes of practice
 - plans, specifications and drawings
 - regulations
 - reports
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to prepare planning submission.

Required knowledge

Required knowledge for this unit is:

- building approval processes
- documentation requirements of building approval submissions
- organisation document control processes
- organisation policy relevant to building approval submissions
- industry code of practice
- range of planning approval types
- relevant Australian standards
- specialist services for certification of documentation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation, submission and management of a building approval.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- submit planning documents in a logical, accurate and complete manner
- demonstrate sound document control processes
- apply relevant Australian standards
- manage a range of approval types, for example fire safety compliance, sustainability or other approvals that may be required by the local authority
- interpret building approval requirements and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation, including client briefs, designing concepts, construction schedules and necessary supporting documentation
- client file and information for review.

EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Approvals include:

- building approval applications for:
 - full approval
 - staged approval
- development applications
- sustainability requirements
- fees and levies.

Information and documentation include:

- design briefs
- specialist's reports
- working drawings, plans and specifications.

External specialists include:

- building surveyors, quantity surveyors and site surveyors
- geotechnical and environmental specialists
- structural, mechanical and electrical engineers.

Stakeholders include:

- clients
- employees/staff
- existing tenants
- finance providers
- interest groups
- local community
- neighbours.

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop knowledge of the industry.	<p>1.1. Industry building types are identified.</p> <p>1.2. Knowledge of styles within industry sectors is developed, including individual design, project and architectural designs, renovations and additions.</p> <p>1.3. Market segments within the relevant industry sector are identified.</p> <p>1.4. Knowledge of the industry is used to provide customers with clear and accurate information as required.</p>
2. Demonstrate the key attributes of an industry sales consultant.	<p>2.1. Gestures, posture, body language, facial expression and voice are used to create a supportive selling environment.</p> <p>2.2. Customer needs are accurately determined through the use of open-ended questions and active listening.</p> <p>2.3. Persuasive communication techniques are used to secure buyer interest.</p> <p>2.4. Product benefits are established and explained to enhance buyer retention.</p> <p>2.5. Proof of benefits are obtained and presented through product purchase process.</p> <p>2.6. Sales aids are used to build buyer understanding of how the product is aligned with needs.</p>
3. Manage self-development and personal performance.	<p>3.1. Self-development plan is produced, which reflects individual and company goals and targets.</p> <p>3.2. Personal performance is reviewed, evaluated and modified, as required.</p> <p>3.3. Processes are put in place to maintain personal mental and physical well being.</p>
4. Manage buyer resistance and complete documentation.	<p>4.1. Probing is used to identify source of buyer resistance.</p> <p>4.2. Strengths and limitations of strategies to overcome buyer resistance are identified.</p> <p>4.3. Strategy for managing buyer resistance is selected and implemented ensuring it addresses the source of buyer resistance.</p> <p>4.4. Customer and sales information is recorded as required.</p>
5. Develop and maintain professional competence.	<p>5.1. Ongoing training and development that meet requirements for professional development programs are identified and attended.</p>

ELEMENT**PERFORMANCE CRITERIA**

5.2. Participation in professional networks and associations is used to enhance knowledge, skills and relationships.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to convey information factually and accurately without overpowering the client
- ability to identify and source the latest industry information
- adhere to organisational ethical and probity standards
- apply numeracy skills to workplace requirements
- communication skills to:
 - demonstrate and communicate property benefits to customers, including long-term benefits of sustainable building solutions and other unique selling features
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret product information and relevant industry information and documentation from a variety of sources
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to record client and sales information
- conflict resolution skills to manage customer dissatisfaction
- negotiation skills to manage buyer resistance
- research skills to use sales statistics to support a verbal argument
- teamwork skills to:
 - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
 - work with others to coordinate and action tasks
- technological skills to use equipment to aid presentation of sales information and to operate a range of office equipment
- using persuasive and assertive language to promote product features and benefits.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- customer types and needs, including:
 - customer behaviour and cues
 - customer buying motives
 - individual and cultural differences, demographics, lifestyle and income
- detailed product knowledge, including industry intelligence and market analysis
- identification and overview knowledge of key provisions of relevant legislation from all levels of government that affect business operations, codes of practice and national standards, such as:
 - anti-discrimination
 - consumer protection
 - contract law
 - ethical principles
 - privacy laws
 - Trade Practices Act
- materials and aids that can be used to support the sales process
- sales strategies and sales targets and how to achieve them
- statistical methods to demonstrate sales performance
- types of customer needs, e.g. functional and psychological.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by preparing and submitting a self-development plan and a marketing plan for the sale of a structure.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- understand the role of a sales consultant
- identify characteristics of the sectors of the construction industry and range of products available in each sector
- demonstrate key attributes of a sales consultant, including personal presentation, oral communication skills and mannerisms that support client contact and instil confidence
- understand importance of adherence to organisational ethical and probity standards
- manage personal professional development and performance in line with organisational expectations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be

EVIDENCE GUIDE

available in either a building or construction office

- relevant codes, standard and regulations
- office equipment, including calculators, photocopiers and telephone systems
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area
- promotional materials and relevant information on marketing, market segments and sales strategies.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Industry building types*** include:
- double brick, brick veneer, rammed earth and steel frame construction residences
 - single and multiple storey buildings
 - timber and/or fibro-cement construction.
- Market segments*** include:
- first and subsequent home buyers
 - speculative and investment buyers.
- Proof of benefits*** includes:
- anecdotes and examples
 - comparisons
 - statistics
 - testimony.

RANGE STATEMENT

- Sales aids*** include:
- drawings
 - electronic media
 - graphs
 - models
 - photographs
 - printed materials
 - product itself
 - transparencies
 - whiteboards.
- Self-development*** includes:
- maintaining financial and lender knowledge
 - maintaining product and construction knowledge
 - membership of professional associations
 - professional development relating to sales and industry skills
 - undertaking appropriate training courses.
- Personal performance*** includes:
- commitment to achieving sales targets
 - commitment to organisation's goals and objectives
 - level of achievement
 - mannerisms and demeanour
 - oral communication skills
 - presentation skills.
- Source of buyer resistance*** includes:
- company resistance
 - price resistance
 - salesperson resistance
 - service dissatisfaction
 - timing issues
 - uncertainty about the product.
- Strategies to overcome buyer resistance*** include:
- assertive messages
 - boomerang technique
 - checking perceptions
 - direct denial
 - incentives offer
 - indirect denial
 - open and closed questions
 - requesting additional information from buyers
 - superior benefit.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm client requirements.	<p>1.1. Client requirements are clarified and confirmed through discussion with client and team member, if appropriate.</p> <p>1.2. Financial expectations of the client are reconfirmed.</p> <p>1.3. Preliminary design notions are discussed with team members to ensure consistency with client's vision.</p>
2. Clarify stakeholder requirements.	<p>2.1. Input from <i>stakeholders</i> is assessed to confirm the responsibilities, requirements and limitations of the design brief.</p> <p>2.2. Analysis of site survey is commissioned, as appropriate, and all relevant information is gathered and used to inform development of the brief.</p>
3. Negotiate engagement with the client.	<p>3.1. <i>Fee proposal</i> is discussed with the client and amended as appropriate prior to formalisation of the agreement.</p> <p>3.2. Scope of services to be undertaken within the contract is discussed and confirmed with the client, either directly or by delegation to a team member.</p> <p>3.3. Draft proposals are presented to the client, and client feedback is used to modify and improve the proposal.</p> <p>3.4. Design brief is finalised in compliance with stakeholder requirements and all documentation is completed to the client's satisfaction.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - clarify stakeholder requirements

REQUIRED SKILLS AND KNOWLEDGE

- confirm client requirements
- negotiate engagement
- read and interpret:
 - design briefs
 - drawings and plans
 - sketches
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- work with a team
- written skills to:
 - complete relevant workplace documentation
 - develop a design brief
- numeracy skills to apply calculations and to budget and forecast
- risk analysis and management for construction projects.

Required knowledge

Required knowledge for this unit is:

- fee structures
- industry codes of practice
- relevant statutory requirements applying to building work
- scope of services provided by the organisation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective preparation of a design brief applicable to construction project work.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- understand financial, legal and administrative factors affecting the contractual relationship
- communicate with clients effectively
- apply and interpret relevant statutory requirements
- analyse and commission a client design brief that complies with the requirements of all relevant stakeholders.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation, including correspondence relevant to the assessment
- relevant management information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to

EVIDENCE GUIDE

modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing

EVIDENCE GUIDE

supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Stakeholders include:

- architects and designers
- construction managers and site supervisors
- federal, state or local authorities
- principals of the building and construction company or other relevant senior personnel
- regulatory bodies
- services authorities
- subcontractors.

Fee proposals require consideration of:

- client profile and relationship to the building and construction company
- cost-benefit analysis
- financing options.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify approvals required before starting construction.	<p>1.1. Statutory approvals, in accordance with contractual or legal requirements, are identified and explained to the customer.</p> <p>1.2. Insurance cover, required in accordance with legal or contractual requirements, is identified and explained to the customer.</p>
2. Identify the sequence of construction.	<p>2.1. Main trade components of construction are identified and explained to the customer.</p> <p>2.2. Construction process sequence is identified and explained to the customer.</p> <p>2.3. Approximate duration of the main stages of construction are identified and explained to the customer.</p> <p>2.4. Industry conditions that affect construction times are identified and explained to the customer.</p>
3. Identify requirements for establishing a site before starting construction.	<p>3.1. Site establishment requirements, in accordance with legal requirements and company policy, are identified and explained to the customer.</p> <p>3.2. Arrangements for access to site are established with client.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - provide information to the customer, including long-term benefits of sustainable building solutions and other unique selling features
 - respond to client questions about the building construction process
 - read and interpret relevant construction information
 - use and interpret non-verbal communication

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- numeracy skills to estimate approximate construction timeframes based on the specifications of the building and site details.

Required knowledge

Required knowledge for this unit is:

- approvals that must be obtained prior to commencement
- building construction process and sequence of events
- site establishment requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by determining the approvals and insurances required for a construction project, and the requirements for establishing the site and the sequence of the construction.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify and explain nature of the approvals that need to be obtained before the contract proceeds
- ensure that right information is passed on to client at right time
- provide information that is accurate and easily understandable without unnecessary jargon
- use information effectively in communicating with clients
- explain circumstances that can contribute to delays in building progress and impact of those delays.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be

EVIDENCE GUIDE

available in either a building or construction office

- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- a suitable work area appropriate to the sales process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected

EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Approvals include:

- building license approvals
- electricity supply permits
- Health Department effluent disposal approvals
- Local Government Act building provisions approvals
- water service and sewerage connection approvals.

Insurance cover includes:

- builder's all risk
- indemnity

RANGE STATEMENT

- Industry conditions* include:
- public liability
 - workers' compensation.
 - availability of labour and materials
 - provisions for inclement weather
 - subcontracting structure.
- Site establishment requirements* include:
- access and egress
 - drainage
 - earthworks
 - electricity supply
 - protection for adjoining owners
 - rubbish and waste disposal
 - signage
 - site facilities
 - water connection.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review external and internal industry operating environments.	<p>1.1. Factors forming <i>external operating environment</i> are identified.</p> <p>1.2. <i>Economic factors</i> impacting on the housing industry are understood and taken into account.</p> <p>1.3. Knowledge of the availability of land, characteristics of new subdivisions and geographic location is demonstrated.</p> <p>1.4. Impact of <i>social factors</i> affecting the industry are understood and taken into account.</p> <p>1.5. Personal perceptions of potential clients are recognised and noted.</p> <p>1.6. <i>Capacity to meet requirements of the client</i>, of the industry and the building and construction company, are understood and factored into communications with the client.</p>
2. Identify and evaluate competition to building and investment.	<p>2.1. Factors that provide <i>competition</i> for finance are understood.</p> <p>2.2. <i>Other markets</i> which compete for investments are identified and their strengths and weaknesses analysed and understood.</p>
3. Identify and communicate the benefits of the industry's operating structure.	<p>3.1. Benefits of the industry's subcontracting system are explained to clients.</p> <p>3.2. Competitive nature of the industry marketplace is identified as a strength benefiting the client.</p> <p>3.3. Alternative opportunities in speculative and project construction are explained to the customer.</p> <p>3.4. Company operating structures and industry productivity information are used effectively to attract customers.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

REQUIRED SKILLS AND KNOWLEDGE

- apply numeracy skills to workplace requirements
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - provide information to clients
 - identify client requirements
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- listening and questioning skills to avoid misinterpretation of client requirements.

Required knowledge

Required knowledge for this unit is:

- economic circumstances and seasonal factors that influence the volume of housing sales
- effect of body language and personal appearance on client attitudes and behaviour
- industry, including market segments and product range
- purchasing patterns and other socioeconomic data
- types of potential customers and the factors which stimulate their decision to purchase a new dwelling.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation and submission of a current market analysis for the local region, outlining the external operating environment, competition and local opportunities.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- demonstrate understanding of external operating environment, economic and social factors and associated issues, such as land availability, which relate to housing sales
- understand internal factors which can affect construction planning
- sell benefits of housing construction to clients as a form of investment
- understand importance of adhering to organisational ethics and probity standards
- provide detailed information to clients effectively and efficiently.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be

EVIDENCE GUIDE

available in either a building or construction office

- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- a technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

External operating environment includes characteristics of the marketplace which exert an influence on people's individual decisions whether to invest in a building may be abstract or direct factors, such as:

- interest rate movements
- perceptions about the investment value of the completed property
- perceptions about the resale value of the property
- perceptions about the value of the currency and possible movements
- speculative ambitions.
- availability of finance
- current interest rates
- level of economic activity.

Economic factors include:

RANGE STATEMENT

- Social factors*** include:
- business confidence
 - job security or insecurity
 - level of socioeconomic activity
 - migration.
- Personal perceptions of potential clients*** include:
- perceptions about the investment value of the completed property
 - perceptions about the resale value of the property
 - perceptions about the value of the currency and possible movements
 - perceptions of potential interest rate movements
 - speculative ambitions.
- Capacity to meet requirements of the client*** may be influenced by:
- availability of labour and materials
 - current financial situation
 - current order levels
 - projects already committed.
- Competition*** includes effects of investments in:
- antiques
 - art
 - rental properties
 - share market.
- Other markets*** include:
- apartments
 - duplexes and triplexes
 - existing real estate properties
 - high rise apartments
 - high rise construction
 - holiday homes and resorts
 - mobile homes
 - retirement villages
 - terrace housing.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and communicate the design requirements.	1.1. Client's design requirements are identified and documented. 1.2. Client's needs are met by providing correct technical or product knowledge. 1.3. Restrictive covenants are identified and communicated to the client. 1.4. Planning requirements are identified and applied. 1.5. Documentation and design risks, including copyright issues, are identified and addressed.
2. Interpret reports on site costs.	2.1. Site investigation is arranged to determine site features and costs. 2.2. Site costs are communicated accurately to the client. 2.3. Client's understanding of extent and cost of required <i>site works</i> is confirmed.
3. Arrange and oversee preparation of sketch plans.	3.1. Requirements for sketch plans and drawings are accurately communicated to drafting personnel. 3.2. Plans are forwarded to the client for approval or amendment. 3.3. Costing and variation requests are forwarded that accurately communicate client requirements.
4. Finalise contract requirements.	4.1. All sketch plans, specifications and costing documents are discussed with client. 4.2. All documents sighted by client are signed, with details initialled.
5. Prepare preliminary contract and plan agreement.	5.1. Preliminary <i>contract</i> /plan agreement is prepared and completed according to organisational policy. 5.2. Documents are submitted to the relevant department or personnel for checking and recording.
6. Oversee the contract and contract construction documents.	6.1. <i>Contract documents</i> are prepared according to instructions. 6.2. Construction documents are prepared according to preliminary contract/plan agreement details.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to communicate by telephone, facsimile, email and in writing
- apply numeracy skills to workplace requirements
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate requirements to drafting personnel
 - confirm understanding
 - obtain information from, and provide information to, clients
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to produce contract documentation and other relevant workplace documentation
- personnel and resource management skills to achieve development or project objectives.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- building and construction industry planning processes
- financial and business principles related to dealing with clients
- regulatory authority approval processes for the area in which project is to be undertaken
- state or territory building and construction codes, standards and government regulations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by preparing contract documentation, drawings and

EVIDENCE GUIDE

specifications for a construction project that complies with client requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- obtain accurate and detailed information concerning client needs
- select right type of contract for the particular project
- process contract and all other relevant documentation correctly
- select appropriate clauses and conditions to apply within the contract
- administrate contract to standard required by the organisation and within any legal or regulatory requirements that may exist in the state or territory in which work is being done
- obtain confirmation, by initial and signature, of client acceptance of project documentation and plan agreement or preliminary contracts.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to communicate by telephone, facsimile, email and in writing
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - come to agreement with the client
 - participate in discussions
 - provide information to clients
 - read and interpret:
 - codes of practice
 - complex legal text
 - contracts
 - legislation
 - regulations
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to complete workplace documentation, including the drafting of responses to queries relating to the finer points of contracts.

Required knowledge

Required knowledge for this unit is:

- contract types and the circumstances they cover
- definitions and interpretations commonly applied to contracts
- definitions of building work
- Fair Trading regulations, including cooling off periods
- legal meanings of terms and clauses in building and construction contracts
- relationship between the organisation and its clients.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the

EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective application of contract law to a building sale contract.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- explain importance of contract in the sales process to the client and how contract is applied
- select right contract for particular project and explain reasons for that choice
- select appropriate clauses and conditions within contract and explain impact of those clauses
- administer contract to standard required by the organisation and within any legal or regulatory requirements that may exist within the state or territory in which the work is being done
- determine and explain appropriate measures to be taken in the event of an anomaly in rendering contract.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office

EVIDENCE GUIDE

- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- suitable sales area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to set up and maintain the sales environment, providing a clean and attractive location in which to promote and sell the organisation's products and services.

Application of the Unit

Application of the unit This unit of competency supports the needs of sales consultants and other professionals within the building and construction industry responsible for the marketing and sale of new residential and commercial constructions. It is essential that competence is demonstrated by the ability to establish and maintain an environment in which the best features of display are possible and customers feel free to discuss their ideas and options and obtain accurate and well informed advice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise the display or presentation area.	<p>1.1. Display or presentation area is maintained to a professional standard.</p> <p>1.2. Customer facilities are provided, including adequate parking, a children's activity area and adequate seating, and the needs of people with disability, including adequate and accessible parking.</p> <p>1.3. Display or presentation area is correctly arranged for adequate access, reduced noise, privacy and desk or demonstration space.</p>
2. Place, display and arrange plans, brochures and product information.	<p>2.1. Displays are set up at an appropriate level, within reach, ensuring that traffic through the area is not impeded.</p> <p>2.2. Product information provided is accurate, understandable and attractively packaged.</p> <p>2.3. Main features of products are identified, including design and visual features, specifications and cost advantages.</p> <p>2.4. Enterprise promotional campaign materials are made available to all sales consultants.</p>
3. Implement housekeeping policies.	<p>3.1. Displays or sales areas and offices are used in accordance with company policies.</p> <p>3.2. Housekeeping requirements, such as cleaning, lighting and room aesthetics, are addressed to maintain a pleasant and fresh environment.</p>
4. Identify maintenance requirements.	<p>4.1. Maintenance requirements are identified and communicated to the organisation.</p> <p>4.2. Maintenance matters are followed up.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- communicate maintenance requirements to organisation
- convey information factually and accurately without overpowering the client
- interact clearly and effectively with members of the public
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- coordinating and scheduling skills.

Required knowledge

Required knowledge for this unit is:

- contemporary understanding of effective interior design solutions
- organisation standards for the management of the display home or setting
- specific customer requirements in relation to access and cultural requirements and protocols.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by arranging a sales presentation area with appropriate displays of product information.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select most appropriate location in which to establish the sales environment, providing an area in which it is possible to hold a private conversation with limited distraction from other persons
- establish displays of materials and drawings in positions of prominence without obstructing the movement of people through the area
- maintain an environment, which is well lit and pleasantly appointed, clean and free from dirt and debris.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government

EVIDENCE GUIDE

regulations

- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- sales and promotional materials and display units
- suitable work area appropriate to the sales process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Display or presentation areas include:

- areas set aside for promotional purposes in display centres
- exhibition spaces
- front office scenarios
- mobile display spaces
- portable display areas and stands.

Product information includes:

- artists impressions and sketches
- brochures
- colour charts
- plans and drawings

RANGE STATEMENT

Housekeeping includes:

- price lists
- samples of materials and building products.
- general cleanliness and hygiene of display areas
- maintaining adequate lighting
- maintaining the cleanliness of display racks and spaces
- regular dusting and vacuuming
- rubbish and litter removal.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and interpret relevant code and standard requirements.	<p>1.1. Clauses from the national industry code (BCA or PCA) that apply to relevant trade areas are identified.</p> <p>1.2. Prescriptive requirements of relevant BCA or PCA clauses are determined.</p> <p>1.3. Requirements of relevant Australian standards are accessed and interpreted accordingly.</p> <p>1.4. Application of relevant state and territory variations and the identified schedule of referenced documents within the BCA or PCA are accessed and their application evaluated.</p>
2. Apply relevant codes and standards.	<p>2.1. Relevant standards and codes are applied to the selection of work methods.</p> <p>2.2. Relevant standards and codes are applied to the selection of materials and equipment.</p> <p>2.3. Assessment methods are put in place to ensure compliance with relevant codes and standards.</p>
3. Manage ongoing compliance with codes and standards.	<p>3.1. Strategies are identified to ensure current standards and codes are accessed and used.</p> <p>3.2. Mechanisms are identified and used to inform workers of the required application of relevant codes and standards.</p> <p>3.3. Impact of new materials, equipment or work processes on compliance with relevant standards and codes is evaluated before implementation.</p> <p>3.4. Relevant documentation and reporting processes are identified and completed in accordance with the relevant codes and standards.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- provide information to workers
- read and interpret:
 - Australian standards
 - BCA or PCA
 - other relevant documentation
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- technological skills to facilitate use of the organisation's software and office technology
- written communication skills to complete relevant documentation and reports.

Required knowledge

Required knowledge for this unit is:

- definitions and common technical terms or usage specified under general provisions of BCA, PCA and other standards
- nature of materials and the effects of performance
- relevant construction industry legislative and OHS requirements, codes and practices
- work drawings and specifications.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of design principles and solutions specified in the DTS and performance-based concept of BCA criteria applied to building projects or the PCA criteria applied to plumbing and services projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- accurately apply relevant BCA or PCA codes and standards relating to performance and compliance of building project work.
- demonstrate understanding of the assessment methods available to determine whether a building solution complies with performance requirements or DTS provisions of the BCA.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- BCA and relevant Australian/New Zealand

EVIDENCE GUIDE

standards

- PCA and relevant Australian/New Zealand standards
- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including product information and data
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the

EVIDENCE GUIDE

point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant trade areas include:

- bricklaying
- cabinet making and joinery
- carpentry
- painting
- plastering
- plumbing and services
- roof tiling
- stonemasonry
- tiling.

Australian standards include:

- AS3553: 1988 Adhesives for floor and wall applications - resilient vinyl, linoleum and rubber sheet and tiles
- AS3660 Termite management

RANGE STATEMENT

	<ul style="list-style-type: none">• AS3740: 2004 Waterproofing of wet areas in residential buildings• AS3786 Smoke alarms• AS3958.1: 1991 Ceramic tiles - guide to the installation of ceramic tiles• AS4256 Plastic roof and wall cladding material• AS/NZS2311: 2000 Guide to the painting of buildings• AS/NZS2908 Cellulose cement products.
<i>Assessment methods</i> include:	<ul style="list-style-type: none">• comparison with deemed-to-satisfy (DTS) provisions of the BCA• evidence of suitability• expert judgement• verification method.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify project, location and surrounds.	<p>1.1. Location and nature of the restoration work to be undertaken are identified and recorded following consultations with the architect and site inspections.</p> <p>1.2. Site access and egress for work location are noted and recorded.</p> <p>1.3. Area to be disturbed is determined and surrounding areas are noted for possible work application effects and cover protection requirements.</p> <p>1.4. Nature of the work is assessed and noted for possible use of heavy or bulky equipment.</p> <p>1.5. Effect on public access is assessed and recorded to ensure protection of the public and the environment is undertaken.</p>
2. Consult with technical specialists.	<p>2.1. Consultations with the conservator, engineer or supervisor are conducted to discuss and clarify specific job requirements.</p> <p>2.2. Specific risks and areas of concern arising due to the nature of the heritage and conservation aspects of the work are identified.</p> <p>2.3. Agreed processes and timeframes are established to ensure effective communications between project team members.</p> <p>2.4. Role responsibilities and requirements are discussed, understood and agreed with project team members.</p>
3. Consult with clients and stakeholders.	<p>3.1. Consultations are held with the client and other stakeholders, as appropriate, to clarify expectations regarding access to the site, performance of the work and timeframes.</p> <p>3.2. Clients and stakeholders are consulted to ensure common understanding of the historical and/or cultural significance of the heritage building under restoration.</p> <p>3.3. Appropriate communication channels and reporting processes are discussed and agreed, as appropriate, with the client and other relevant stakeholders.</p>
4. Clarify the impact of contractual requirements.	<p>4.1. Relevant contractual requirements affecting the performance of the restoration work are identified and clarified.</p> <p>4.2. Relevant dispute resolution processes that are to be used if required are identified.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analytical skills to analyse operations and develop procedures
- communication skills to:
 - communicate with team
 - consult with technical specialists, client and other stakeholders
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - facilitate discussions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to record relevant information
- organisational skills, including the ability to plan for and set out work
- time management skills and prioritisation skills to enable work to be completed within agreed timeframes.

Required knowledge

Required knowledge for this unit is:

- Australian standards relevant to the work
- conservation processes, including good conservation practice arising from principles of Burra Charter
- dispute resolution processes
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture and the characteristics and features of period architecture
- trade-specific techniques used in restoration work
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by completion of relevant processes and activities essential prior to the commencement of a heritage restoration project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes associated with preservation of historic structures
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of initiating the heritage restoration process
- identify job-specific requirements and inherent risks associated with heritage restoration
- select and use appropriate processes to analyse and identify particular needs for projects
- communicate and agree on expectations and timeframes for the work to be undertaken
- apply appropriate techniques to cross-reference interlocking or overlapping operations
- demonstrate techniques to check and ensure relevant information and stages of preparation are fully covered
- interactive communication with others to

restoration project.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate with team
 - consult with technical specialists, client and other stakeholders
 - facilitate discussions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to record relevant information
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan for and set out work.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- conservation processes, including good conservation practice arising from principles of Burra Charter
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture, and characteristics and features of period architecture and period plastering associated with historic buildings
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by carrying out all processes required to prepare for a restoration project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes to determine desired restoration application and finish
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of heritage restorations
- record and identify materials used
- use appropriate techniques to provide cover protection
- use safe and effective procedures to handle hazardous materials
- identify typical faults and problems that occur and take necessary action to rectify
- interact with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- historic work locations appropriate to competency range and activities
- materials appropriate to application activities
- appropriate documentation and data related to tasks
- scaffolding equipment, plant, tools and equipment relevant to activity processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,

Quality assurance includes:

- application techniques
- attention to specifications of work
- cleanliness of surfaces
- preparation of surfaces
- quality of materials
- quality of tools
- quality records
- workplace operations and procedures.

OHS requirements cover:

- handling materials
- protective clothing and equipment
- use of ladders
- use of tools and equipment

RANGE STATEMENT

	<ul style="list-style-type: none"> • working platforms and scaffolding • workplace environment and safety.
<i>Personal protective equipment</i> includes:	<ul style="list-style-type: none"> • boots • caps • ear plugs and muffs • gloves • masks and respirators • safety glasses and goggles.
<i>Safety hazards</i> include:	<ul style="list-style-type: none"> • cutting back loose surfaces • dust • handling hazardous materials • wind • working from platforms.
<i>Historically accurate information</i> includes from sources such as:	<ul style="list-style-type: none"> • building trusts • elderly local residents • historical societies • municipal building records • National Trust • restoration contractors.
<i>Materials</i> may include:	<ul style="list-style-type: none"> • fixings and fasteners of the period era • paints • plaster mixes • specialist materials of the relevant period era • tiles.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • bricklaying: shovels, wheelbarrows and string lines • carpentry: measuring tapes and rules, hammers, spirit levels, hand saws, scrapers, power leads, trowels, mortar boards and straight edges • general construction: shovels, modelling tools, brooms, wheelbarrows and trowels • painting: brushes, straight edges and ladders • plastering: wood floats, steel floats, hawk, spirit levels and trowels • plumbing: hammers, mallets and blow torches • stonemasonry: chisels, wheelbarrows and modelling tools • tiling: squares, scrapers, power leads, trowels, mortar boards and straight edges.

RANGE STATEMENT

Relevant categories of information include:

- construction technical data
- drawings, sketches and photographs
- material technical data
- materials and suppliers
- materials in construction and finishing
- OHS building regulations
- original structure and construction
- reference notes
- restoration records
- restoration work carried out
- specialist materials for the period era
- specifications
- technical brochures.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to prepare drawings for heritage works associated with historic buildings and structures of cultural significance. To successfully prepare drawings requires a comprehensive understanding of architectural forms, specifically period architecture, and appropriate drafting techniques. The unit requires the ability to interpret specifications for drawings, measure and calculate dimensions accurately, and work to scale.

Application of the Unit

Application of the unit This unit of competency supports builders, project managers and related construction industry professionals responsible for heritage works during residential and commercial projects.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for drawing requirements.	<p>1.1. Specifications for drawing are identified from request or conservation authority requirements.</p> <p>1.2. Dimensions of the historical or significant building are determined in accordance with appropriate methods, taking into account the type of structure, access to details and previous drawings available, if applicable.</p> <p>1.3. Method of recording feature details is determined in accordance with nature of the feature, location and accessibility.</p> <p>1.4. Method and system of recording identification, location and dimensional information are determined and applied in accordance with requested drawing requirements.</p> <p>1.5. Equipment and instruments required are identified, listed and used in accordance with recording task requirements.</p>
2. Organise information for drawing preparation.	<p>2.1. Information is gathered and organised to determine overall dimensions of the building, structure or details to be drafted.</p> <p>2.2. Information is gathered to identify and group all recorded details associated with each area or section of the building or structure.</p> <p>2.3. Size of the drawing and scale to be used is determined in accordance with dimensions of building, structure or section.</p> <p>2.4. Sketches, tracings or photographs of recorded features are identified and located with other recorded information related to feature work.</p>
3. Draw or develop orthographic description.	<p>3.1. Block layout of views and designed spacings, where applicable, are drawn or developed to planned layout and scaled accurately to recorded or calculated dimensions.</p> <p>3.2. Orthographic description views are detailed to show visible lines of structure and elements as seen with each view to correct scale representation of recorded dimensions.</p> <p>3.3. Architectural drawing conventions, symbols and hatching, where applicable, are shown on drawings in accordance with AS1100.301 - 1985 Architectural Drafting.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Draw or develop sectional detailed drawings.	<p>3.4. Plans of large buildings are produced by use of grids, where applicable, to provide cross-referencing and dimensioning by coordinates.</p> <p>3.5. Dimensions and reference notations are located relevantly on drawings to provide full detailed descriptions as required with each view.</p> <p>3.6. Appendices and reference details of drawing are provided with drawing as required and in accordance with overall request.</p> <p>4.1. Sectional detailed drawings are drawn or developed to scale to show detailed structural description of relationship between elements in accordance with recorded dimensions.</p> <p>4.2. Architectural hatching is shown on drawings to represent materials, in accordance with relevant Australian standards.</p> <p>4.3. Dimensions and reference notation are located on drawings to provide full details of sectional description.</p>
5. Develop detailed drawings of feature work.	<p>5.1. Photographic recording of feature work shape and design is enlarged by photocopying to provide more realistic size for analysis and reproduction.</p> <p>5.2. Gridlines are determined in accordance with actual dimensions of the feature work shape and are reproduced to enlarged photocopy.</p> <p>5.3. Enlarged photocopy is closely examined for distortion from the photographing process and adjustments are made to the design, as necessary.</p> <p>5.4. Tracing recordings are examined in accordance with the whole feature or part thereof and linked with other tracings or sketches to ascertain the feature shape to be reproduced.</p> <p>5.5. Design shape drawings are developed to produce accurate design to scale with grid lines where applicable.</p> <p>5.6. Cross-sectional details are produced accurately to scale, to provide three-dimensional information.</p> <p>5.7. Dimensions, reference notation, specific location and appendices are produced for drawings in accordance with client request or design aims.</p>
6. Complete work.	<p>6.1. Drawings are checked for accuracy, clarity of line, completeness of drawing and associated dimensions and details.</p>

ELEMENT	PERFORMANCE CRITERIA
	6.2. Copies are made, where applicable, in accordance with original request.
	6.3. Production details and coded reference information are recorded.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to use instruments and equipment for measuring
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to record relevant information
- numeracy skills to calculate measurements
- organisational skills, including the ability to set out work
- work to scale.

Required knowledge

Required knowledge for this unit is:

- Australian standards - AS1100.101 and AS1100.301
- conservation processes, including good conservation practice arising from principles of Burra Charter
- finishing trade applications to materials
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques
- methods of measuring
- relevant architectural knowledge, including orders of architecture and the characteristics and features of period architecture

REQUIRED SKILLS AND KNOWLEDGE

- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by carrying out the necessary preparatory processes and developing at least two examples of each form of drawing specified, using sample or case study heritage projects for any of the buildings listed in the range statement.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- clearly understand conservation considerations and consultative processes associated with preservation of historic structures
- clearly appreciate preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of preparing drawings to conservation requirements
- apply recording and identification system for measurements, locations and details
- select and use appropriate processes, instruments and equipment to measure and record information
- use appropriate and safe techniques to obtain measurements and details
- apply accurate techniques in preparing information for related drawings
- select and use appropriate techniques to ascertain accurate analysis of featured design shapes

EVIDENCE GUIDE

- apply techniques to ensure all relevant information is included in orthographic description
- select and use appropriate techniques to produce accurate, sharp and complete drawings.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- historic locations appropriate to competency range
- drafting and computer equipment
- equipment relevant to measuring processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over

EVIDENCE GUIDE

a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Historical or significant building includes:

- built or sculptured artefacts
- cathedrals and churches
- civic buildings
- commercial and retail buildings
- doors

RANGE STATEMENT

	<ul style="list-style-type: none">• external features• fences• government buildings• houses• mansions• out buildings• walls• wharves• windows.
Methods include:	<ul style="list-style-type: none">• accurately trace shapes or features• calculate height by use of levelling equipment and/or trigonometry• physically tape and measure all internal and external measurement• scale proportion of roof, chimney and spire heights from photograph where wall height is determined.
Feature work includes:	<ul style="list-style-type: none">• decorative tiling• mosaic tiling• ornamental mouldings• ornamental plasterwork• ornamental stonework.
Orthographic description includes:	<ul style="list-style-type: none">• front, rear and side elevations• plans• sectional elevations• sectional plans.
Sectional detailed drawings include:	<ul style="list-style-type: none">• ceiling and roof framing construction• ceiling construction• chimney construction• cladding details• external wall construction• fence construction• footings and foundation• internal wall construction• roofing details• sub-floor construction.
Development of drawings includes:	<ul style="list-style-type: none">• computer aided drafting• drafting techniques• drawings developed in accordance with National Trust guidelines or in accordance with AS1100.101 - 1992 Technical Drawing -

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify project, location and surrounds.	<p>1.1. Location and nature of restoration work to be undertaken are identified and recorded, following consultation with the architect and site inspections.</p> <p>1.2. Site access and egress for work location are noted and recorded.</p> <p>1.3. Area to be disturbed is determined and surrounding areas are noted for possible work application effects and cover protection.</p> <p>1.4. Nature of the work is assessed and noted for possible use of heavy or bulky equipment.</p> <p>1.5. Effect on public access is assessed and recorded to ensure protection of the public and the environment is undertaken.</p> <p>1.6. Presence of hazardous materials is identified and appropriate workplace procedures are followed.</p> <p>1.7. A heritage works safety management plan is produced.</p>
2. Prepare site prior to commencing work.	<p>2.1. Demolition processes and procedures, if applicable, are identified and noted.</p> <p>2.2. Restoration processes and methods are identified and noted for procedures to repair or replace material and finish surface area with restoration work.</p> <p>2.3. Where applicable, height and dust considerations are identified and noted to inform requirements for scaffolding and cover protection.</p> <p>2.4. OHS requirements for support of work personnel during the period of project are identified and recorded.</p> <p>2.5. Site preparation requirements are determined and recorded with comments for inclusion in the work plan.</p>
3. Identify demolition and salvage work.	<p>3.1. Procedures required to carry out the demolition are identified in stages and recorded.</p> <p>3.2. Materials to be salvaged and preserved are identified and recorded for specific handling procedures.</p> <p>3.3. Procedures for the handling and storage of salvaged materials are identified and protection and reference comments are recorded in accordance with organisational procedures.</p>
4. Identify material delivery and storage	<p>4.1. Materials of substantial size and quantity are identified for delivery access and location or storage</p>

ELEMENT	PERFORMANCE CRITERIA
requirements.	<p>prior to use, and comments are recorded in accordance with organisational procedures.</p> <p>4.2. General materials are identified for delivery and location or storage prior to use and comments are recorded in accordance with organisational procedures.</p>
5. Identify and record restoration processes.	<p>5.1. Preparation of surfaces, where applicable, is identified for stage processes and application work and comments are recorded in accordance with organisational procedures.</p> <p>5.2. Application, fixing or installation of material is determined and particular comments are recorded in accordance with organisational procedures.</p> <p>5.3. Application of finishing processes is identified and particular comments are recorded in accordance with organisational procedures.</p> <p>5.4. Repairs and restoration work to disturbed locations are identified and comments are recorded for inclusion in work plan.</p>
6. Identify and record clean-up procedures.	<p>6.1. Items for clean-up and removal are listed and relevant procedures included in the work plan.</p> <p>6.2. Unused or reusable materials and waste are listed for storage or removal procedures.</p> <p>6.3. Cleaning of the area is specified and relevant comments of anticipated processes are noted.</p> <p>6.4. Removal of portable workforce sheds is identified and listed in work plan and related comments are recorded.</p>
7. Prepare work plan.	<p>7.1. Recorded notes and information are reviewed for direct reference and inclusion in work plan.</p> <p>7.2. Additional areas of information for work plan are researched and determined in content and expression.</p> <p>7.3. Information is prepared and work plan written in accordance with organisational procedures.</p> <p>7.4. Draft work plan is checked and amended to ensure completeness of all necessary stages prior to <i>work plan presentation</i>.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analytical skills to be able to analyse operations and develop procedures
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - consult with architect
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- written skills to:
 - record relevant information
 - produce a safety management plan and work plan
- organisational skills, including the ability to plan for and set out work.

Required knowledge

Required knowledge for this unit is:

- Australian standards relevant to the nature of work and demolition
- Burra Charter
- conservation processes, including good conservation practice arising from principles of decorating and finishing techniques used in restoration work
- methods and processes relating to historic building construction, including the range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture and characteristics and features of period architecture
- site preparation and organisational skills
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by determining work site operations for a heritage restoration project and developing and preparing a work plan for the project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes associated with preservation of historic structures
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of preparing work plans to conservation requirements
- apply recording and identification system for determining work site operations
- select and use appropriate processes to analyse and identify particular needs for project operations
- apply appropriate techniques to ensure coverage of all elements of project's operations
- apply accurate techniques in preparing identified and determined information for reference in work plan
- apply appropriate techniques to cross-reference interlocking or overlapping operations

EVIDENCE GUIDE

- select and use appropriate format and presentation to produce final finished plan
- apply techniques to check and ensure all relevant information and stages of the project are fully covered
- communicate interactively with others to ensure all factual information is gathered.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- restoration project appropriate to unit
- appropriate documentation and data related to project.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over

EVIDENCE GUIDE

a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Restoration work includes:

- applied finishes
- cladding restoration
- decorative finishes
- lining finishes
- roofing restoration

RANGE STATEMENT

	<ul style="list-style-type: none"> • structural replacement • structural restoration.
Access:	<ul style="list-style-type: none"> • to structures and storage facilities or space may be limited.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake restoration work.	<p>1.1. Performance of the technical restoration work is undertaken in accordance with the highest standards of the relevant <i>trade skills</i>.</p> <p>1.2. <i>Legislative and organisational requirements</i> are complied with throughout the heritage restoration work.</p> <p>1.3. Ongoing consultations with the architect and relevant stakeholders are maintained to ensure contractual requirements are fulfilled.</p>
2. Monitor progress of restoration work.	<p>2.1. Conformance to the restoration work plan is monitored during completion of the restoration work.</p> <p>2.2. Adjustments to processes and the work plan to address problems that emerge during the heritage restoration are made and documented as required, in accordance with established organisational or job procedures.</p> <p>2.3. Reporting of work progress is completed in accordance with established work plan, and job and contractual requirements.</p> <p>2.4. Technical issues arising during the restoration that impact on the work of related trades are identified and communicated.</p> <p>2.5. Effective strategies for problem resolution are identified within the project team.</p>
3. Ensure area is cleaned at completion of the restoration work.	<p>3.1. Scaffolding is dismantled carefully, removed and stored.</p> <p>3.2. Cover protection for surfaces is carefully removed.</p> <p>3.3. Surface protection and unused materials are removed and stored.</p> <p>3.4. Work area is cleared and all waste material is disposed of in accordance with legislative and organisational requirements.</p> <p>3.5. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - plans specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to record relevant information
- equipment handling techniques and safe handling practices
- numeracy skills to calculate measurements
- organisational skills, including the ability to plan for and set out work
- problem solving skills to enable resolution of technical issues which threaten to disrupt work
- trade skills relevant to the restoration work being undertaken.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- conservation processes, including good conservation practice arising from principles of Burra Charter
- methods and processes relating to historic building construction, including range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture, characteristics and features of period architecture and period plastering associated with historic buildings
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by application of a recognised trade skill to a heritage restoration project. Application should include correct use of trade skills and knowledge, ongoing monitoring of own work, compliance with relevant legislation and adherence to relevant heritage restoration codes and standards as well as organisational requirements, and correct clean-up procedures at completion of the work.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes to determine restoration application and finish
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of heritage restorations
- record and identify materials used
- use appropriate techniques to provide cover protection
- use safe and effective procedures to handle hazardous materials
- identify typical faults and problems that occur and necessary action taken to rectify
- communicate interactively with others to

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information to be included in the report.	<p>1.1.Details of the <i>area of the structure</i> and information regarding <i>areas of fault</i> are identified.</p> <p>1.2.<i>General description of the building or structure</i> and its period of construction are identified.</p> <p>1.3.Surrounding area and faults are identified for <i>inspection and investigation</i>.</p> <p>1.4.Assessment of unsafe conditions is conducted and identified for investigation.</p>
2. Assess and outline possible means of restoring the areas of the structure.	<p>2.1.Assessment of conditions and degree of deterioration and disturbance are conducted and recorded using appropriate technical language.</p> <p>2.2.Possible <i>causes for deterioration</i> of condition and stability are assessed and recorded as guidelines for investigatory enquiries and restoration considerations.</p> <p>2.3.Sound construction or finish applications surrounding or adjacent to the faulted area are identified and recorded to inform restoration processes.</p> <p>2.4.Relevant information regarding unsafe conditions at or around the structure are identified and recorded.</p> <p>2.5.Advice regarding restoration techniques and work required is identified and documented based on assessment of the structure.</p>
3. Document and present the report.	<p>3.1.Method of presenting the report in a logical and sequential manner is determined with key stakeholders and implemented.</p> <p>3.2.Report is written to provide all investigated and determined information in accordance with request and agreed format.</p> <p>3.3.Report is written in a manner that will be readily understood by relevant stakeholders.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to prepare drawings and work to scale
- ability to use instruments and equipment for measuring
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to record information and prepare reports
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to set out work
- teamwork skills and the ability to work with others to ensure coordination and cooperation between self and others in the heritage restoration.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- conservation processes, including good conservation practice arising from principles of Burra Charter
- methods and processes relating to historic building construction, including range and use of building materials, structure of buildings and drafting techniques
- relevant architectural knowledge, including orders of architecture and characteristics and features of period architecture
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by determining all relevant information and preparing a written report on at least three separate categories of structure areas listed within the range of variables.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply conservation considerations and consultative processes associated with preservation of historic structures
- demonstrate understanding of preservation of fabric
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of preparing reports
- apply sound identification and recording system of investigation findings
- use appropriate processes, tools and equipment to carry out investigation examinations
- use appropriate safe techniques to use ladders and scaffolding
- demonstrate safe and effective procedures to handle hazardous materials
- apply sound and accurate techniques to prepare information for report
- select and use appropriate terminology relevant to applicable trade

EVIDENCE GUIDE

Context of and specific resources for assessment

- use sound techniques to ensure report is well written and accurate
- communicate interactively with others to ensure safe and effective work site operations.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- historic work locations appropriate to area of work
- appropriate documentation and data related to investigations
- ladder and/or scaffolding equipment
- plant, tools and equipment relevant to investigation processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Area of the structure*** includes:
- ceilings
 - doors
 - external walls
 - fences

RANGE STATEMENT

	<ul style="list-style-type: none"> • floors • footings and sub-floor structure • rood cladding • roof structure • wall cladding • wall lining • wall structure • windows.
Identification of <i>areas of fault</i> requires:	<ul style="list-style-type: none"> • location of fault, internal or external to the building or structure • nature and extent of the fault or deterioration, identified in technical terms relevant to the respective trade work required • number of separate faults.
<i>General description of the building or structure</i> includes:	<ul style="list-style-type: none"> • building description: <ul style="list-style-type: none"> • address of the structure • description of the area surrounding structure where influential to the fault • references to north and south identified and recorded in relationship to the sides of the structure • type and condition of materials used in structure, including details of any missing materials • type of structural construction building types: <ul style="list-style-type: none"> • cathedrals and churches • civic buildings • commercial and retail buildings • fences • government buildings • houses • mansions • out buildings • walls. • wharves.
<i>Inspection and investigation</i> may involve use of access and safety equipment, such as:	<ul style="list-style-type: none"> • boots • gloves • hand tools • hard hat • inspection investigations ladders

RANGE STATEMENT

- jacket
- masks and respirators
- safety glasses
- spirit levels
- straight edges
- torches
- trestles and planks.

Causes of deterioration include:

- fire damage
- storm impact from vehicles or trees and other objects
- water damage.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret refractory plans and specifications.	<p>1.1. General and detailed refractory plans are accessed and analysed to determine nature of work to be undertaken.</p> <p>1.2. Standard signs and symbols are noted, interpreted and implemented.</p> <p>1.3. Notes to the plan are observed and complied with in accordance with design requirements.</p> <p>1.4. Specified materials required are identified from the plans and obtained in accordance with organisational procedures.</p>
2. Implement safety requirements.	<p>2.1. Material safety data sheets (MSDS) are accessed and relevant safety precautions implemented.</p> <p>2.2. Organisational OHS requirements are implemented and maintained.</p>
3. Prepare refractory materials and equipment.	<p>3.1. Test certificates of materials are checked to ensure materials meet required job specifications as detailed in refractory plans.</p> <p>3.2. Tools and equipment are selected and checked for serviceability.</p> <p>3.3. Mortar is prepared and mixed to design requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
 - MSDS
 - refractory plans and specifications
 - test certificates

REQUIRED SKILLS AND KNOWLEDGE

- other relevant documentation
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- numeracy skills to interpret mathematical information, calculate material quantities and measure accurately
- organisational skills, including the ability to plan for and set out work
- teamwork skills and the ability to work with others to ensure coordination and cooperation between self and others
- technical skills to ensure ability to select and use relevant plant, tools and equipment.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- characteristics and applications of different materials used in refractory brickwork
- methods and processes relating to the use of refractory bricks and insulation materials for the construction of fire resistant structures
- organisational procedures for the acquisition of materials
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by carrying out relevant preparations for refractory work. It should include analysis and interpretation of the plans and specifications, demonstrated understanding of all aspects detailed in the plans, implementation of safety precautions and correct selection of relevant materials and equipment.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

replicate construction workplace conditions, materials, activities, responsibilities and procedures.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- demonstrate understanding of the purpose and application of refractory bricklaying
- comply with OHS regulations applicable to workplace operations
- use safe and effective procedures to handle hazardous materials
- apply organisational quality procedures and processes within context of constructing or repairing structures employing refractory materials
- read and interpret two-dimensional refractory plans and specifications
- select and use processes, tools and equipment appropriate to job requirements
- prepare materials and samples in accordance with job requirements
- identify typical faults and problems with materials and equipment that occur and necessary action to rectify
- communicate effectively with others to ensure safe work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- materials appropriate to refractory brickwork
- plant, tools and equipment relevant to refractory brickwork.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set out and prepare the base location of work.	<p>1.1. Location of the brickwork is set out to position in accordance with <i>job specifications and drawings</i>.</p> <p>1.2. Base location is prepared so that the surface is dry, horizontal, clean and flat, and in accordance with job specifications.</p>
2. Lay brickwork.	<p>2.1. Fire clay is applied to bricks to maintain joints at the specified thickness.</p> <p>2.2. Bricks are in the <i>required bond</i> and set out, method and line, level and plumb in accordance with job specifications and drawings.</p> <p>2.3. Bricks are cut to the correct length to maintain the required bond in accordance with manufacturer recommendations and job specifications.</p> <p>2.4. Brickwork is completed with surplus fire clay removed to specification requirements.</p>
3. Form a segmental arch.	<p>3.1. Span and rise of the arch are identified and located in accordance with job plans and specifications.</p> <p>3.2. <i>Adjustable props</i> are placed appropriately to support the timber arch centre, and <i>adjusted</i> as necessary.</p> <p>3.3. Position of the central key brick is established and marked for easy identification.</p>
4. Cut and lay bricks to position around the arch.	<p>4.1. Bricks are cut and laid on the centre to form an arch to specifications.</p> <p>4.2. Same sized <i>wedge shape brick</i> is maintained throughout the construction of the arch.</p> <p>4.3. <i>Measurements and placement</i> of bricks are monitored and adjusted accordingly to ensure accurate application of job requirements.</p>
5. Complete and review finished work.	<p>5.1. Props and other support materials are removed.</p> <p>5.2. Construction is finished and cleaned to meet job requirements and professional expectations.</p> <p>5.3. Intrados of the arch is cleaned and repointed with mortar as necessary.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to use tools and equipment employed in refractory work
- ability to apply materials accurately and to required tolerances and specifications
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate technical issues
 - communicate with the team
 - consult with architect and stakeholder
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan for and set out work
- relevant application techniques specific to the laying and installation of refractory materials
- teamwork skills and the ability to work with others to ensure coordination and cooperation between self and others
- technical skills to select and use relevant tools and equipment.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and other Australian standards relevant to the nature of work and materials being used
- characteristics and applications of different materials used in refractory brick work
- methods and processes relating to the use of refractory bricks and insulation materials for the construction of fire resistant structures
- organisational procedures for the acquisition and storage of materials
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by constructing a fire brick wall and arch. This work may include a 230mm fire brick wall to incorporate an opening (600mm x 600mm) with a segmental arch above, a minimum of 1.5m long and 1.2m high to the top of the arch.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- demonstrate understanding of the purpose and application of refractory bricklaying
- comply with OHS regulations applicable to workplace operations
- use safe and effective procedures to handle hazardous materials
- apply organisational quality procedures and processes within context of constructing or repairing structures employing refractory materials
- read and interpret two-dimensional refractory plans and specifications
- select and use processes, tools and equipment appropriate to the job requirements
- prepare materials and samples in accordance with job requirements
- identify typical faults and problems with materials and equipment that occur and necessary action taken to rectify
- communicate effectively with others to ensure safe work site operations.

Context of and specific resources This competency is to be assessed using standard

EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- materials appropriate to refractory brickwork
- plant, tools and equipment relevant to refractory brickwork.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Job specifications and drawings include:

- detailed plans showing aspects and sections of the structure in greater detail than the general plan
- general plans showing the entire structure to be constructed.

Required bond includes:

- header bond
- stretch bond.

Adjustable props include:

- metal props
- packers
- timber toms
- timber wedges.

Adjusted supports:

- ensure the arch centre is level at right angles to the wall face and level across the springing

RANGE STATEMENT

	line.
<i>Wedge shape bricks</i> include the following common sizes:	<ul style="list-style-type: none">• 51mm• 63mm• 69mm.
<i>Measurements and placement</i> include:	<ul style="list-style-type: none">• accurate positioning and maintenance of the centreline of the key brick is through the vertical centre line of the arch ensuring:<ul style="list-style-type: none">• all bricks are cut and laid to maintain even joints• even joint thickness around the extrados.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for operation.	<p>1.1. Applicable <i>safety (OHS), licensing, legislative</i> and <i>organisational requirements</i> relevant to operating a self-erecting tower crane are verified and complied with.</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i>.</p> <p>1.3. Type of operations to be conducted with a <i>self-erecting tower crane</i> are assessed and prepared.</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturer recommendations.</p> <p>1.5. Self-erecting tower crane operations are planned in accordance with site procedures.</p> <p>1.6. <i>Environmental protection measures</i> are adhered to in accordance with environmental plans and regulations.</p> <p>1.7. Communication with others is established and maintained in accordance with OHS requirements.</p>
2. Inspect and test self-erecting tower crane.	<p>2.1. Self-erecting tower crane is visually inspected prior to operation for any evidence of damage, structural weakness or interference according to pre-operational safety check procedures and service logbook inspection.</p> <p>2.2. <i>Pre start-up checks</i> are carried out on equipment in accordance with manufacturer recommendations and specifications.</p> <p>2.3. Self-erecting tower crane controls and functions, including manoeuvrability, emergency functions, gear and accessories are checked for serviceability and any faults are rectified or reported.</p> <p>2.4. Tower functions are checked after start-up and are monitored throughout operation.</p> <p>2.5. Site <i>hazards</i> associated with self-erecting tower crane operations are detected and documented, risks assessed and safe operating techniques used to eliminate or control risks.</p>
3. Prepare for erection.	<p>3.1. Self-erecting tower crane is positioned in accordance with work instructions, manufacturer specifications and statutory regulations.</p> <p>3.2. Ground or base is assessed to ensure it will</p>

ELEMENT**PERFORMANCE CRITERIA**

	withstand crane operation without subsidence, in accordance with engineer specifications.
	3.3. Barriers and signage are used to isolate the work area in accordance with safe work practices, load shifting requirements and the work plan.
	3.4. Self-erecting tower crane is positioned to ensure a level operating platform in accordance with manufacturer instructions and statutory regulations.
	3.5. Activities are coordinated with riggers, doggers and other crane operators.
	3.6. Self-erection system is activated to achieve the required height of operation in accordance with manufacturer specifications.
	3.7. Rig is handed over to riggers to complete erection and stability procedures.
4. Operate self-erecting tower crane.	4.1. Self-erecting tower crane is operated with ground controls to work instructions and in accordance with company operating procedures and manufacturer specifications.
	4.2. Communication practices associated with lifting and moving loads are conducted in accordance with work site procedures and are confirmed between parties.
	4.3. Start-up and shutdown procedures are performed in accordance with manufacturer specifications and site requirements.
	4.4. Weight of load is confirmed as complying with crane lifting capacity, operating radius and crane load chart.
	4.5. Lifting gear is selected, inspected, attached and used in accordance with working load limits and OHS legislation.
	4.6. Crane movements are checked for safe operation and load is prepared for lifting in accordance with crane, dogging and rigging requirements.
	4.7. Load is manoeuvred to position using the control systems to manufacturer specifications and continually monitored throughout its travel, and tasks are completed effectively.
	4.8. Load is lifted and moved in accordance with the agreed crane schedule and conventional hand and audible signals that meet OHS legislation and work site procedures.
	4.9. Load is constantly monitored to ensure safety to

ELEMENT	PERFORMANCE CRITERIA
	personnel, load and structural stability, with monitoring systems and alarms immediately acted upon in accordance with site requirements.
5. Shut down and stow self-erecting tower crane.	<p>5.1. Self-erecting tower crane is shut down and stowed using the correct sequence of procedures in accordance with manufacturer recommendations and specifications.</p> <p>5.2. Routine post-operational checks are carried out in accordance with manufacturer specifications.</p> <p>5.3. Self-erection system is lowered by activating the recoil procedure or ram in accordance with manufacturer specifications.</p> <p>5.4. Self-erecting tower crane operations and faults are <i>recorded and reported</i> to appropriate personnel.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - clarify and confirm work order with appropriate personnel
 - follow instructions
 - participate in on-site meetings
 - report faults and respond appropriately
 - read and interpret:
 - instructions
 - work orders
 - other relevant documentation
 - use a range of communication technologies and equipment
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to:

REQUIRED SKILLS AND KNOWLEDGE

- document hazards
- record and report faults relating to self-erecting tower crane operations
- comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for conducting self-erecting tower crane operations
- efficiently and safely conduct self-erecting tower crane operations
- inspect work plans (job safety analyses and safe work method statements) in accordance with legislation
- numeracy skills to calculate rated capacity, working load limits and load charts
- use and maintain relevant tools, machinery and equipment
- verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols in the workplace
- federal, state and territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for conducting self-erecting tower crane operations
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and material handling methods
- organisational and site standards, requirements, policies and procedures for conducting self-erecting tower crane operations
- procedures for recording, reporting and maintaining workplace records and information
- remote control operations and indicators
- risk assessment and management
- routine problems encountered with equipment use or adjustment and required corrective actions
- self-erecting tower crane capabilities and gear
- self-erecting tower crane operations and operating techniques
- techniques for calculating rated capacity, working load limits and load charts
- types of tools and equipment, and procedures for their use, operation and maintenance.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction

EVIDENCE GUIDE

with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by providing evidence that the candidate can safely and efficiently conduct self-erecting tower crane operations according to organisational and regulatory requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational and site policies and procedures, including quality requirements and state or territory legislation applicable to workplace operations.
- comply with OHS and environmental regulations, policies and procedures
- communicate effectively and work safely with others in the work area
- conduct effective risk assessment and management procedures
- complete the raising and lowering of the coil structure or ram
- operate a self-erecting tower crane, including all functions to their maximum extension and travel in the lifting and moving of at least three differing load types (including different sizes, shapes, weights and materials) to different locations on the site
- conduct pre and post-operational checks of the self-erecting tower crane.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials and equipment relevant to self-erecting tower crane operations
- specifications and work instructions.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- hazard control
- hazardous materials and substances
- housekeeping
- organisational first aid
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and

RANGE STATEMENT

treatments associated with:

- air monitoring equipment
- falling objects
- man-made structures
- obstructions
- recently filled trenches
- restricted access barriers
- safe parking
- security from unauthorised access or movement
- traffic control
- uneven or unstable surfaces or terrain
- underground or overhead services
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Licensing requirements include: • relevant recognition, permit, licence or permission to operate within any state or territory issued by the government regulatory authority of that jurisdiction.

Legislative requirements include: • award and organisation agreements and relevant industrial arrangements

- confidentiality and privacy requirements
- environmental issues
- equal opportunity
- industrial relations and anti-discrimination
- OHS issues
- relevant industry codes of practice
- relevant legislation from all levels of government that affect business operation.

Organisational requirements include legal, organisational and site policy, guidelines and procedures relating to:

- access and equity principles and practices
- consultative processes
- emergency and evacuation procedures
- equipment maintenance and storage procedures
- ethical standards
- OHS policies

RANGE STATEMENT

	<ul style="list-style-type: none"> • own role and responsibility • procedures and programs • quality and continuous improvement processes and standards • quality assurance or procedures manuals • recording and reporting procedures.
Work order includes:	<ul style="list-style-type: none"> • organisational work specifications and instructions issued by authorised personnel for the operation of a self-erecting tower crane and its respective tasks.
Appropriate personnel includes:	<ul style="list-style-type: none"> • client • colleague • manager • supervisor • supplier.
Self-erecting tower crane includes:	<ul style="list-style-type: none"> • cranes with bales mounted in a triangular or nested configuration for transport • driven by electric or hydraulic mechanical systems • cranes of the telescopic ram type • involvement of riggers to: <ul style="list-style-type: none"> • stabilise the self-erecting tower crane with the use of plates and packing under the footplates to adequately distribute the load, ensuring the bearing capacity of the crane standing is not exceeded • conduct other erection activities, including the boom and counterweights • self-erecting systems with: <ul style="list-style-type: none"> • automatic locking mechanisms • braking systems • operator cabins designed to ascend and descend the erected tower • outriggers • ramps • remote control • self-levelling systems • stabilisers.

<p>Doggers' role is to include:</p>	<ul style="list-style-type: none"> provision of directional signals to the crane operator on the position and security of the load.
<p>Stability is to ensure:</p>	<ul style="list-style-type: none"> self-erecting tower crane is positioned and secured so as not to topple over during operations.
<p>Ground controls include:</p>	<ul style="list-style-type: none"> pendant controls remote control devices.

RANGE STATEMENT

- Weight of load*** includes:
- that prescribed by manufacturer as not exceeding the allowable capacity of the self-erecting tower crane.
- Lifting gear*** includes:
- chains
 - flexible steel wire rope slings
 - grabs
 - spreader beams
 - other slinging equipment.
- Tasks*** include:
- operations, including:
 - boom up and boom down and operation of attachments
 - luff movements
 - outriggers
 - slew left and right
 - telescope in and out
 - trolley in and trolley out
 - winch up and down in combination
 - service operations that provide for lighting, telecommunications and raised platforms for applications, including:
 - airports
 - entertainment
 - firefighting
 - harbours
 - law enforcement
 - mining
 - oil and gas exploration
 - road construction
 - search and rescue
 - sports.
- Records and reports*** include:
- conclusions
 - costs
 - dangerous occurrences or equipment malfunctions
 - difficulties or issues faced
 - environmental issues
 - hazards
 - incidents or injuries
 - maintenance of equipment

RANGE STATEMENT

- maintenance records
- pro formas
- production reports
- recommendations, including for future work
- results
- self-erecting tower crane operations
- using logbooks.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for operation.	<p>1.1. Applicable <i>safety (OHS)</i>, <i>licensing</i>, legislative and <i>organisational requirements</i> relevant to operating a tower crane are verified and complied with.</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i>.</p> <p>1.3. Type of operations to be conducted with a <i>tower crane</i> are assessed and prepared.</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturer recommendations.</p> <p>1.5. Tower crane operations are planned in accordance with site procedures and <i>legislative requirements</i>.</p> <p>1.6. <i>Environmental protection measures</i> are adhered to in accordance with environmental plans and regulations.</p> <p>1.7. Communication with others is established and maintained in accordance with OHS requirements.</p>
2. Inspect and test tower crane.	<p>2.1. Tower crane is visually inspected prior to operation for any evidence of damage, structural weakness or interference according to pre-operational safety check procedures.</p> <p>2.2. <i>Pre start-up checks</i> are carried out on equipment in accordance with manufacturer recommendations and specifications.</p> <p>2.3. Tower crane controls and functions, including manoeuvrability, emergency functions, gear and accessories are checked for serviceability and any faults are rectified or reported.</p> <p>2.4. Tower functions are checked after start-up, and monitored throughout operation.</p> <p>2.5. Site <i>hazards</i> associated with tower crane operations are detected, risks assessed and safe operating techniques used to eliminate or control risks.</p>
3. Operate tower crane.	<p>3.1. <i>Barriers and signage</i> are used to isolate the work area in accordance with safe work practices and load shifting requirements.</p> <p>3.2. Tower crane is operated to work instructions in accordance with company operating procedures and manufacturer specifications.</p> <p>3.3. Communication practices associated with lifting and</p>

ELEMENT**PERFORMANCE CRITERIA**

	moving loads are conducted in accordance with work site procedures and are confirmed between parties.
	3.4. Crane is climbed in accordance with manufacturer specifications and safety regulations.
	3.5. Start-up and shutdown procedures are performed in accordance with manufacturer specifications and site requirements.
	3.6. Weight of load is confirmed as being within the lifting capacity and operating radius of the crane.
	3.7. Lifting gear is selected, attached and used in accordance with working load limits and OHS legislation.
	3.8. Crane movements are checked for safe operation and load is prepared for lifting in accordance with crane, dogging and rigging requirements.
	3.9. Load is manoeuvred to position using the control systems to manufacturer specifications, continually monitored throughout its travel and tasks are completed effectively.
	3.10. Load is lifted and moved in accordance with agreed crane schedule and conventional hand and audible signals that meet OHS legislation and work site procedures.
	3.11. Load is constantly monitored to ensure safety to personnel, load and structural stability with monitoring systems and alarms immediately acted upon in accordance with site requirements.
4. Shut down tower crane.	4.1. Tower crane is shut down using the correct sequence of procedures in accordance with manufacturer recommendations and specifications.
	4.2. Routine post-operational checks are carried out in accordance with manufacturer specifications.
	4.3. Tower crane operations and faults are recorded and reported to the appropriate personnel.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - clarify and confirm work order with appropriate personnel
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - participate in on-site meetings
 - read and interpret:
 - instructions
 - work orders
 - other relevant documentation
 - report faults and respond appropriately
 - use a range of communication technologies and equipment
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to document hazards and record and report faults relating to conducting tower crane operations
- compliance with legislation, regulations, standards, codes of practice and established safe practices and procedures for conducting tower crane operations
- efficiently and safely conduct tower crane operations
- numeracy skills to calculate rated capacity, working load limits and load charts
- use and maintain relevant tools, machinery and equipment
- use appropriate communication and interpersonal techniques with colleagues and others
- verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols in the workplace
- federal, and state or territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for conducting tower crane operations
- job safety analysis (JSA) and safe work method statements

REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS) and material handling methods
- organisational and site standards, requirements, policies and procedures for conducting tower crane operations
- procedures for recording, reporting and maintaining workplace records and information
- remote control operations and indicators
- risk assessment and management
- routine problems encountered with equipment use or adjustment and required corrective actions
- techniques for calculating rated capacity, working load limits and load charts
- tower crane capabilities and gear
- tower crane operations and operating techniques
- types of tools and equipment and procedures for their use, operation and maintenance.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by providing evidence of safely and efficiently conducting tower crane operations according to organisational and regulatory requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational and site policies and procedures, including quality requirements and state or territory legislation applicable to workplace operations
- comply with OHS and environmental regulations, policies and procedures
- communicate effectively and work safely with others in the work area
- conduct risk assessment and management procedures
- operate a tower crane, including all functions (including a multiple lift) to their maximum extension and travel in the lifting and moving of at least three differing load types and sizes to different locations on the site
- conduct pre and post-operational checks of the tower crane.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials and equipment relevant to tower crane operations.

Specifications and work instructions. Reasonable adjustments for people with disabilities must be made to assessment processes where required.

This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a

EVIDENCE GUIDE

combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- hazard control
- hazardous materials and substances

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for operation.	<p>1.1. Applicable <i>safety (OHS), licensing, legislative</i> and <i>organisational requirements</i> relevant to performing advanced rigging are verified and complied with.</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i>.</p> <p>1.3. Type of operations to be conducted for <i>advanced rigging</i> are assessed and prepared.</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturer recommendations.</p> <p>1.5. Advanced rigging operations are planned in accordance with site procedures.</p> <p>1.6. <i>Environmental protection measures</i> are adhered to in accordance with environmental plans and regulations.</p> <p>1.7. Communication with others is established and maintained in accordance with OHS requirements.</p>
2. Select advanced rigging equipment.	<p>2.1. Advanced rigging equipment, resources and material are visually inspected prior to operation for evidence of damage, structural weakness or interference according to pre-operational safety check procedures.</p> <p>2.2. <i>Lifting equipment</i> is inspected in accordance with manufacturer recommendations and specifications.</p> <p>2.3. Lifting equipment verified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance.</p> <p>2.4. <i>Lifting devices</i> are specified and selected in accordance with job requirements.</p> <p>2.5. <i>Hung prefabricated scaffolding</i> is specified and selected in accordance with job requirements.</p> <p>2.6. <i>Permanent guys</i> are specified and selected in accordance with job requirements.</p> <p>2.7. Site <i>hazards</i> associated with dogging operations are detected, risks are assessed and safe operating techniques are used to eliminate or control risks.</p>
3. Connect equipment.	<p>3.1. Loads are slung to ensure <i>encapsulation</i> of the whole of load.</p> <p>3.2. Part loads are slung to ensure full encapsulation of the part load.</p> <p>3.3. Whole or part loads are slung to protect loads and</p>

ELEMENT	PERFORMANCE CRITERIA
	secured to prevent uncontrolled movement.
	3.4. Tag lines are attached and used to prevent unnecessary load movement.
4. Move or remove, place and secure loads.	<p>4.1. Load lifting or shifting order is specified to minimise necessity of double lifts.</p> <p>4.2. Lifting or shifting equipment is connected to the load.</p> <p>4.3. Test lift or shift is performed in conjunction with the crane operator to ensure lift suitability.</p> <p>4.4. Load is safely moved or removed to the required destination, placed and secured in position to client specifications or job requirements and tasks are completed effectively.</p> <p>4.5. Load is constantly monitored to ensure safety to personnel, load and structural stability with monitoring systems and alarms immediately acted upon in accordance with site requirements.</p> <p>4.6. Load is directed and safe movement coordinated using communications in compliance with recognised work practices.</p>
5. Remove advanced rigging equipment and clean up.	<p>5.1. Lifting or shifting equipment and packing are dismantled, lowered and inspected for wear, and logbook and site records are completed to company requirements.</p> <p>5.2. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specifications.</p> <p>5.3. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p> <p>5.4. Work completion procedures are applied and appropriate personnel is notified that work is finished.</p> <p>5.5. Advanced rigging operations and faults are recorded and reported to the appropriate personnel.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - clarify and confirm work order with appropriate personnel
 - participate in on-site meetings
 - read and interpret:
 - instructions
 - work orders
 - other relevant documentation
 - report faults and respond appropriately
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to:
 - document hazards
 - record and report faults
- comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for performing advanced rigging operations
- efficiently and safely perform advanced rigging operations
- numeracy skills to calculate rated capacity and working load limits
- use and maintain relevant tools, machinery and equipment
- verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- advanced rigging capabilities and gear
- advanced rigging operations and operating techniques
- crane operations and limitations
- designs and functions of lifting equipment
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols in the workplace
- federal, and state or territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for performing advanced rigging operations
- job safety analysis (JSA) and safe work method statements

REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS) and material handling methods
- organisational and site standards, requirements, policies and procedures for performing advanced rigging operations
- procedures for recording, reporting and maintaining workplace records and information
- rated capacity and working load limit tags
- risk assessment and management
- safe working at heights and fall arrest
- techniques for calculating rated capacity and working load limits
- types of tools and equipment and procedures for their use, operation and maintenance
- typical routine problems encountered in the process and with equipment and adjustments required for correction
- weather and ground considerations.

Overview of assessment

This unit of competency could be assessed by providing evidence of safely and efficiently performing advanced rigging according to organisational and regulatory requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational and site policies and procedures including quality requirements and state or territory legislation applicable to workplace operations
- comply with OHS and environmental regulations, policies and procedures
- communicate effectively and work safely with others in the work area
- conduct risk assessment and management procedures
- erect and dismantle at least one lattice boom crane and fly with correct rigging and slinging techniques
- set up, erect, test, operate and dismantle a hoist, flying fox, gin pole and hung prefabricated scaffold
- conduct advanced rigging operations for a demolition project, including the deconstruction of major construction components
- apply both single and dual lifting techniques
- conduct pre and post-operational checks of advanced rigging equipment.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials and equipment relevant to performing advanced rigging
- specifications and work instructions.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- hazard control
- hazardous materials and substances
- housekeeping
- organisational first aid
- personal protective equipment (PPE)

RANGE STATEMENT

prescribed under legislation, regulations and workplace policies and practices

- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - machines
 - man-made structures
 - obstructions
 - recently filled trenches
 - restricted access barriers
 - safe parking
 - security from unauthorised access or movement
 - signage and barricades
 - surrounding structures
 - traffic control
 - underground or overhead services
 - uneven or unstable surfaces or terrain
 - work site visitors and the public
 - working at heights
 - working in proximity to others
 - use of firefighting equipment
 - use of tools and equipment
 - workplace environmental requirements and safety.
- Licensing** includes:
- relevant recognition, permit, licence or permission to operate within any state or territory issued by the government regulatory authority of that jurisdiction.
- Legislative requirements** include:
- award and organisation agreements and relevant industrial arrangements
 - confidentiality and privacy requirements
 - environmental issues
 - equal opportunity
 - industrial relations and anti-discrimination
 - OHS issues
 - relevant industry codes of practice
 - relevant legislation from all levels of government that affect business operation.
- Organisational requirements**
- access and equity principles and practices

RANGE STATEMENT

include legal, organisational and site policies, guidelines and procedures relating to:

- consultative processes
- emergency and evacuation procedures
- equipment maintenance and storage procedures
- ethical standards
- OHS policies
- own role and responsibility
- procedures and programs
- quality and continuous improvement processes and standards
- quality assurance or procedures manuals
- recording and reporting procedures.

Work order includes:

- organisational work specifications and instructions issued by authorised personnel for the performing of advanced rigging and its respective tasks.

Appropriate personnel includes:

- client
- colleague
- manager
- supervisor
- supplier.

Advanced rigging includes work involving the use of mechanical load shifting equipment and associated gear:

- to set up and dismantle cranes and hoists and demolition activities
- to ensure the stability of those members
- to move, place or secure a load using plant, equipment or members of a building or structure.

Equipment includes:

- advanced rigging lifting gear, including:
 - angle grinders
 - automatic levels
 - chains
 - drifts
 - elevated work platforms
 - explosive power tools
 - flexible steel wire ropes
 - hammers
 - laser levels
 - natural or synthetic fibre
 - oxy-acetylene equipment
 - pneumatic tools
 - podgers

RANGE STATEMENT

- rattle guns
- relevant maintenance equipment
- shifting spanners
- skids
- sledgehammers
- spanners
- spirit levels
- tape measures
- water levelling equipment
- wedges
- wrenches
- procedures:
 - for equipment lock-out protecting operators and co-workers from accidental injury by isolating the equipment
 - emergency shutdown and stopping
 - extinguishing fires
 - organisational first aid requirements
 - evacuation.

Environmental protection measures include organisational and project requirements, including:

- clean-up management
- noise and dust
- waste management.

Lifting equipment:

- includes:
 - air winches
 - chain blocks
 - chain winches
 - come alongs
 - hand operated creeper winches
 - L bolts
 - jacks
 - pulley blocks
 - shackles
 - trolleys
 - turn buckles
- may include:
 - electric chain motors
 - lifting clutches and snatch blocks

RANGE STATEMENT

	<ul style="list-style-type: none">• lifting lugs• rigging screws.
<i>Lifting devices</i> include:	<ul style="list-style-type: none">• cantilevered crane loading platforms• hoists• mast climbers.
<i>Hung prefabricated scaffolding</i> includes:	<ul style="list-style-type: none">• sections or componentry of suspended scaffolds.
<i>Permanent guys</i> include:	<ul style="list-style-type: none">• flying foxes and cable ways• gin poles• guyed derricks• shear legs.
<i>Hazards</i> include:	<ul style="list-style-type: none">• buildings• chemicals• fires• hazardous materials• movement of equipment, goods or material• structures• traffic• underground or overhead services• uneven or unstable surface or terrain.
<i>Encapsulation</i> is to ensure:	<ul style="list-style-type: none">• that the part load or whole load is fully contained within the slinging equipment.
<i>Tag lines</i> include:	<ul style="list-style-type: none">• lines to assist the directional guidance of the load.
<i>Shifting equipment</i> includes:	<ul style="list-style-type: none">• hydraulic jacks• rails• skates• winches.
<i>Cranes</i> include:	<ul style="list-style-type: none">• bridge and gantry cranes• city cranes• derrick cranes• fixed cranes• hydraulic mobile cranes• lattice boom mobile cranes• non-slewing cranes• portal cranes• slewing cranes• tower cranes, including self-erecting tower cranes.

RANGE STATEMENT

Tasks include:

- demolition activities
- erection and dismantling of lifting devices
- fixing and securing of permanent guys
- load distribution and calculation of loads
- placing and securing of hung scaffolds and prefabricated suspended scaffolds.

Records and reports include:

- advanced rigging operations and maintenance of equipment
- conclusions
- costs
- dangerous occurrences or equipment malfunctions using logbooks
- difficulties or issues faced
- environmental issues
- hazards
- incidents or injuries
- pro formas
- production reports
- recommendations and maintenance records
- recommendations for future work
- results.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to erect and dismantle advanced scaffolding, including planning and preparation for work, conducting operational checks, safely and effectively erecting and dismantling advanced scaffolding activities for a range of tasks, including erecting and dismantling hung scaffolds, suspended scaffolds, and tube and coupler scaffolding systems to provide work platforms, edge protection and access ways in accordance with designated Australian standards.

A Certificate of Competency/Licence in Intermediate Scaffolding issued by a state or territory OHS authority is a prerequisite for this unit.

Application of the Unit

Application of the unit This unit may have application in a range of industries, including civil construction, defence, electro technology, entertainment, maritime and mining, in addition to general construction.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for operation.	<p>1.1. Applicable <i>safety (OHS)</i>, licensing, <i>legislative</i> and <i>organisational requirements</i> relevant to erecting and dismantling advanced scaffolding are verified and complied with.</p> <p>1.2. <i>Work order</i> is reviewed, confirmed and clarified with <i>appropriate personnel</i>.</p> <p>1.3. Type of operations to be conducted for <i>advanced scaffolding</i> are assessed and prepared.</p> <p>1.4. <i>Equipment</i> is selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturer recommendations.</p> <p>1.5. Advanced scaffolding operations are planned in accordance with site procedures.</p> <p>1.6. <i>Environmental protection measures</i> are adhered to in accordance with environmental plans and regulations.</p> <p>1.7. Communication with others is established and maintained in accordance with OHS requirements.</p>
2. Erect scaffolding.	<p>2.1. Purpose for scaffolding is confirmed and associated work <i>tasks</i> are specified.</p> <p>2.2. Design loading on scaffold and supporting structure is verified using load tables in accordance with appropriate limits, standards and specifications.</p> <p>2.3. Site access and egress routes are verified.</p> <p>2.4. Scaffolding and components are selected and inspected with damaged components isolated, labelled, tagged and rejected.</p> <p>2.5. <i>Footings</i> are prepared in accordance with regulations, legislation, codes of practice, manufacturer specifications and engineer's instructions.</p> <p>2.6. Scaffolding is set out and <i>erected</i> in accordance with regulatory requirements and manufacturer specifications.</p> <p>2.7. <i>Lifting devices</i> are assembled and erected in accordance with manufacturer specifications and regulatory requirements.</p> <p>2.8. Site <i>hazards</i> associated with scaffolding operations are detected, risks assessed and safe operating techniques used to eliminate or control risks.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Erect ancillary scaffolding equipment.	<p>3.1. Fall protection is erected and installed in accordance with job specifications and regulatory requirements.</p> <p>3.2. Cantilevered hoist, with a lifting device working load limit not exceeding 500kg, is erected and checked for serviceability.</p>
4. Inspect, repair and alter erected scaffolding.	<p>4.1. Erected hung or suspended scaffolding and tube and coupler scaffolding are inspected for damage, corrosion, wear and compatibility prior to use.</p> <p>4.2. Faulty components are isolated, labeled, tagged, rejected or replaced immediately.</p> <p>4.3. Existing use of scaffolding is checked against original design to be in accordance with regulations and specifications.</p> <p>4.4. Scaffolding stability is inspected and confirmed in accordance with OHS regulations.</p> <p>4.5. Alterations and repairs are carried out on specified equipment or where faults are discovered to ensure regulatory compliance.</p> <p>4.6. Inspection log and handover are completed and dated.</p>
5. Dismantle scaffolding and clean up.	<p>5.1. Scaffolding is isolated and appropriately signed and barricaded to ensure safe dismantling.</p> <p>5.2. Scaffolding is dismantled using reverse procedure as for erection.</p> <p>5.3. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specifications.</p> <p>5.4. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p> <p>5.5. Work completion procedures are applied and appropriate personnel is notified that work is finished.</p> <p>5.6. Advanced scaffolding operations and faults are recorded and reported to appropriate personnel.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - clarify and confirm work order with appropriate personnel
 - follow instructions
 - participate in on-site meetings
 - read and interpret:
 - instructions
 - work orders
 - other relevant documentation
 - report faults and respond appropriately
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to:
 - complete inspection log
 - document hazards
 - record and report faults
- compliance with legislation, regulations, standards, codes of practice and established safe practices and procedures for erecting and dismantling advanced scaffolding
- efficiently and safely erect and dismantle advanced scaffolding
- numeracy skills to calculate rated capacity and working load limits
- use and maintain relevant tools, machinery and equipment.

Required knowledge

Required knowledge for this unit is:

- advanced scaffolding capabilities and gear
- designs and functions of equipment
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols in the workplace
- federal, and state or territory OHS legislation, regulations, standards and codes of practice relevant to the full range of processes for erecting and dismantling advanced scaffolding
- job safety analysis (JSA) and safe work method statements
- lifting devices and capabilities

REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS) and material handling methods
- organisational and site standards, requirements, policies and procedures for erecting and dismantling advanced scaffolding
- procedures for recording, reporting and maintaining workplace records and information
- rated capacity and working load limit tags
- risk assessment and management
- safe working at heights and fall arrest
- types of tools and equipment, and procedures for their use, operation and maintenance
- typical routine problems encountered in the process and with equipment and adjustments required for correction
- weather considerations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by providing evidence of safely and efficiently erecting and dismantling advanced scaffolding according to organisational and regulatory requirements.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational and site policies and procedures, including quality requirements and state or territory legislation applicable to workplace operations

EVIDENCE GUIDE

- comply with OHS and environmental regulations, policies and procedures
- communicate effectively and work safely with others in the work area
- conduct risk assessment and management procedures
- complete the planning, erection and dismantling of suspended and hung scaffold system, in accordance with JSA and safe work method statements and regulations, including a minimum of:
 - two bays hung
 - support suspension system for a single stage
 - edge protection
- conduct pre and post-operational checks of advanced scaffolding.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials and equipment relevant to erecting and dismantling advanced scaffolding
- specifications and work instructions.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or

EVIDENCE GUIDE

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- hazard control
- hazardous materials and substances
- housekeeping
- organisational first aid
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - machines
 - man-made structures
 - obstructions
 - recently filled trenches
 - restricted access barriers
 - safe parking
 - security from unauthorised access or movement
 - signage and barricades
 - surrounding structures
 - traffic control
 - underground or overhead services
 - uneven or unstable surfaces or terrain
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment

RANGE STATEMENT

	<ul style="list-style-type: none"> • use of tools and equipment • workplace environmental requirements and safety.
<i>Legislative requirements</i> include:	<ul style="list-style-type: none"> • award and organisation agreements and relevant industrial arrangements • confidentiality and privacy requirements • environmental issues • equal opportunity • industrial relations and anti-discrimination • OHS issues • relevant industry codes of practice • relevant legislation from all levels of government that affect business operation.
<i>Organisational requirements</i> include legal, organisational and site policy, guidelines and procedures relating to:	<ul style="list-style-type: none"> • access and equity principles and practices • consultative processes • emergency and evacuation procedures • equipment maintenance and storage procedures • ethical standards • OHS policies • own role and responsibility • procedures and programs • quality and continuous improvement processes and standards • quality assurance or procedures manuals • recording and reporting procedures.
<i>Work order</i> includes:	<ul style="list-style-type: none"> • organisational work specifications and instructions issued by authorised personnel for erecting and dismantling advanced scaffolding and respective tasks.
<i>Appropriate personnel</i> includes:	<ul style="list-style-type: none"> • client • colleague • manager • supervisor • supplier.
<i>Advanced scaffolding:</i>	<ul style="list-style-type: none"> • includes: <ul style="list-style-type: none"> • cantilevered and spurred scaffolding • cantilevered crane loading platforms • couplers • hung scaffolds (scaffold hanging from tubes, wire ropes and chains)

RANGE STATEMENT

Equipment:

- sloping platforms
- suspended scaffolds (swing stages, boatswain chairs, multiple layer, single layer and articulated layer supported by wire ropes and may include maintenance units)
- tube and fitting scaffolding systems with mast climbers, cantilevers, barrow ramps, spurs, longitudinal and transverse braces, random planks and putlogs
- may include:
 - modular scaffolding.
- includes:
 - bracket scaffolds (tank and formwork)
 - cantilevered hoists (materials only with maximum working load limit not exceeding 500kg)
 - couplers
 - fibre ropes
 - gin wheels
 - hung scaffolds
 - manual and/or motorised winches
 - modular stages (aluminium or steel)
 - safety nets
 - static lines
 - suspended scaffolds
 - tube and fitting scaffolding
- may include:
 - adjustable base plates
 - box spanners
 - braces
 - cutters
 - forklifts
 - guardrails
 - hammer drills
 - hammers
 - ledgers
 - mast climbers
 - materials hoists

RANGE STATEMENT

- mesh guards
- mid rails
- pallet trolleys
- perimeter safety screens and shutters
- podgers hammers
- prefabricated components
- relevant maintenance equipment
- scaffold belts
- scaffolding planks (including laminated)
- shovels
- sledgehammers
- spanners
- spirit levels
- stairs or ladders
- standards
- steel and aluminium tubes
- tape measures
- torpedo levels
- transoms
- wheelbarrows
- wire nips
- wrenches.

Environmental protection measures include organisational and project requirements, including:

- clean-up management
- noise and dust
- waste management.

Tasks include:

- access ways
- edge protection
- falsework
- grandstands
- provision of work platforms
- stages and covered walkways.

Footings include:

- review of JSA and safe work method statements to determine the bearing capacity of ground or working surfaces
- components, including sole boards or base plates.

Erection includes:

- levelling
- placement

RANGE STATEMENT

	<ul style="list-style-type: none"> • sequencing • squaring • tying to a structure.
<i>Lifting devices</i> include:	<ul style="list-style-type: none"> • manual or motorised winches • mast climbers cantilevered hoists and gin wheels.
<i>Hazards</i> include:	<ul style="list-style-type: none"> • buildings and structures • chemicals and hazardous materials • fires • movement of equipment, goods or material • traffic • underground or overhead services • uneven or unstable surface or terrain.
<i>Fall protection:</i>	<ul style="list-style-type: none"> • includes: <ul style="list-style-type: none"> • a full body rescue harness connected to a fall line and working platform edge protection while the scaffold is erected • static lines include: <ul style="list-style-type: none"> • static lines that can sometimes be used to form part of a travel restraint system that are horizontal lines, generally constructed from steel wire rope, to which lanyards are usually connected • static lines may be used: <ul style="list-style-type: none"> • as part of a travel restraint system where access is required close to an unprotected edge, or on a sloping or slippery surface.
<i>Cantilevered hoist</i> includes:	<ul style="list-style-type: none"> • that with a working load limit not exceeding 500kg which only moves materials and is erected subsequent to the scaffold.
<i>Alterations and repairs</i> may be required due to:	<ul style="list-style-type: none"> • accidents • misuse • process changes • storm damage.
<i>Handover</i> includes:	<ul style="list-style-type: none"> • signing of the handover certificate which certifies that scaffold is ready for service and complies with Australian standards in its entirety.
<i>Records and reports</i> include:	<ul style="list-style-type: none"> • advanced scaffolding operations and maintenance of equipment • costs

RANGE STATEMENT

- dangerous occurrences or equipment malfunctions using logbooks, pro formas, production reports and maintenance records
- difficulties or issues faced
- environmental issues
- hazards
- incidents or injuries
- logbooks, pro formas, production reports and maintenance records recording dangerous occurrences or equipment malfunctions
- recommendations for future work
- results.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details for context of fire-rated systems are obtained, confirmed and applied.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental protection requirements for the project are identified and applied in accordance with environmental plans and regulatory obligations.</p>
2. Identify authorised installation materials and techniques.	<p>2.1. Authorised materials and installation techniques for walls, partitions, ceilings, openings and penetrations are identified and confirmed from the plan, relevant standards and codes and manufacturer specifications.</p> <p>2.2. Authorised materials and installation techniques for air handling, structural encasement and fire escape systems are identified and confirmed from the plan, relevant standards and codes and manufacturer specifications.</p> <p>2.3. Most suitable system is selected to meet job specifications.</p>
3. Inspect for compliance with authorised standards.	<p>3.1. Installation is progressively inspected to confirm that materials and work comply with the authorised plan and standards and rigidly follow the test and/or sponsored investigation documents.</p> <p>3.2. Fire rating, including resistance levels and resistance to incipient spread of fire, is confirmed.</p> <p>3.3. At each stage of installation, walls, ceilings, openings, penetrations and other special needs are inspected and confirmed as being compliant.</p> <p>3.4. Steel componentry and fastener loadings are inspected and confirmed as being compliant.</p>
4. Record and report the results of inspections.	<p>4.1. Results of inspections, including certification, are completed in accordance with authorised procedures.</p> <p>4.2. Inspection findings, including non-conformance</p>

ELEMENT**PERFORMANCE CRITERIA**

sheets, are completed and reported to *appropriate authority*.

4.3. Feedback and advice are provided at the work site in accordance with authorised procedures and industry practice.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
 - codes and standards
 - documentation from a variety of sources
 - plans, specifications and drawings
- report faults
- provide feedback and advice
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to record and report results of inspections
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan for and set out work.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and Australian standards related to fire-rated lining systems
- fire technology, combustion theory and terminology relevant to the inspection of fire-rated systems
- methods for ensuring compliance with incipient spread of flame requirements
- quality systems, including inspection, compliance and reporting or recording requirements

REQUIRED SKILLS AND KNOWLEDGE

- range of materials commonly used in the installation of fire-rated lining systems
- regulatory/legislative requirements pertaining to installation of fire-rated systems
- safe work procedures related to the inspection of fire-rated systems
- types, specifications and installation techniques for fire-rated ceiling systems related to direct fix, furred, suspended and spanning types
- types, specifications and installation techniques for fire-rated wall systems related to steel stud and timber stud walls, shaft walls and timber joists
- types, specifications and installation techniques for openings, penetrations, air handling, structural encasement and fire escape systems.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by inspecting a total fire-rated system and compiling a detailed report, or by selecting a total fire-rated system which complies with all codes and standards.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- inspect and report on, or select, a total fire-rated system that complies with all codes and standards and covers, at a minimum, a commercial multi-floor site involving compartmentation, plant rooms, access ladders, escalators, lifts, shafts, columns and beams
- communicate effectively and work safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to the quality assurance of fire-rated lining systems
- tools and equipment appropriate to the quality assurance of fire-rated lining systems
- realistic activities covering the mandatory task requirements
- specifications, plans, building codes, Australian standards and work instructions.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the

EVIDENCE GUIDE

point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fire-rated systems include:

- all fire systems are to be certified in a National Association of Testing Authorities (NATA) approved laboratory
- quality assurance of fire-rated lining systems covers walls, ceilings, openings, penetrations, air handling, structural encasement, escape systems, mechanical service shafts and relief joints
- quality assurance processes are to include detail of responsibilities, types of certification and essential aspects of inspection, recording and reporting procedures
- worksheets are to include work area sheets, inspection plans and non-conformance sheets or

RANGE STATEMENT

equivalent

- fire technology includes:
 - effect and movement of smoke and combustion products
 - fire triangle
 - flash over
 - fire resistance levels and resistance to incipient spread of fire
 - char factors (timber framing)
- fire resistance level (FRL) covers the grading period in minutes determined in accordance with the specification for structural adequacy, integrity and insulation
- resistance to incipient spread of fire (RISF) covers the ability of a ceiling membrane to insulate the space between the ceiling and the roof, or ceiling and floor above, to limit the temperature rise of combustibles in this space during the standard fire test to 180C above the initial temperature, expressed in terms of 30, 60, 90 or 120 minutes resistance.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - power sources and leads
 - treatments associated with manual handling
 - trip hazards
 - working at heights

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

RANGE STATEMENT

	<ul style="list-style-type: none"> • working in confined spaces • working in proximity to others • work site visitors and the public
	<ul style="list-style-type: none"> • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • inspection support tools • measuring equipment.
<i>Environmental protection requirements</i> include:	<ul style="list-style-type: none"> • acoustic conformance • waste management.
<i>Authorised materials</i> include:	<ul style="list-style-type: none"> • fire compliant steel furring channel and suspension components • fire grade metal studs and track • fire grade plasterboard sheeting • fire sealants: <ul style="list-style-type: none"> • base compound coats • finishing coats • perforated paper tapes • vermiculite or equivalent product.
<i>Relevant standards and codes</i> include:	<ul style="list-style-type: none"> • BCA • Australian standards AS1530, 1684 and 2785 • documents detailing the responsibilities and authorities in relation to design, installation and supervision of fire-rated lining systems; they define and explain fire-rated protection, the principles of compartmentation, fire resistance levels, standard fire tests and the dangers of incompatible mix and match solutions.
<i>Walls</i> include:	<ul style="list-style-type: none"> • acoustic capabilities: <ul style="list-style-type: none"> • double wall advantages for impact sound resistance • flanking • impact of live and/or dead slab • loads deflection • staggered stud • thermal expansion of stud in fire rated partitions • weighted sound reduction index (RW) • fire rated wall systems:

RANGE STATEMENT

- chase walls
 - D-stud walls
 - exterior walls
 - partition walls
 - shaft walls
 - staggered stud partitions
 - load and non-load bearing timber and steel types and related acoustic systems and components
 - partitions and components:
 - column and beam
 - exterior
 - high performance wall
 - inter-tenancy
 - shaft.
- Ceilings*** include:
- direct fix, furred and suspended ceilings
 - impact of excessive moisture on fire-rated ceiling materials
 - methods of ensuring compliance with incipient spread of fire requirements.
- Openings*** include:
- fire doors (steel and timber framed)
 - local strengthening of walls
 - rating and fitting of windows hatches and appropriate glass
 - treatment of door heads
 - types of fire doors, which may include single hinged, double hinged and sliding
 - types of fire-rated glass, which may include glaze, borosilicate drawn and heat-treated, clear ceramic and wire glass
 - types of hatches, which may include those tested for vertical or horizontal positioning.
- Penetrations:***
- services include:
 - ducts for power and heating or cooling systems
 - metal and polyvinyl chloride (PVC) plumbing in groups or singles
 - power outlets
 - types of service penetrations include:
 - baffles

RANGE STATEMENT

- encasement/enclosures and blocking systems
- fire-rated box
- springs
- system integrity maintenance includes:
 - board
 - collars
 - impregnated foams
 - mastic
 - mortar
 - pillows
 - use of tested and approved intumescent seals.
- Other special needs* include:
 - fire escape systems, including escalators, fire tunnels and stairways
 - fire-rated air handling systems, including fire dampers, direct protection and insulation
 - fire-rated structural member encasement, which may be timber, steel or concrete and may be void or require filling.
- Fasteners* include:
 - 30mm, 40mm or 50mm D type screws
 - 30mm S type screws
 - 30mm and 40mm L type screws
 - 30mm and 45mm W type screws
 - 30 mm, 40 mm, 50mm or 60mm plasterboard nails
 - metal masonry anchors
 - wafer head screws.
- Appropriate authority* includes:
 - statutory/regulatory authorities, including federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and interpret relevant code and standard requirements.	<p>1.1. Relevant performance requirements from the BCA that apply to individual swimming pool and spa installations are identified.</p> <p>1.2. Requirements of relevant BCA deemed-to-satisfy (DTS) provisions are determined.</p> <p>1.3. Requirements of relevant Australian standards referenced in the BCA are accessed and interpreted accordingly.</p>
2. Classify the swimming pool and spa to be built.	<p>2.1. Intended use and site arrangement of swimming pool and spa are determined.</p> <p>2.2. BCA criteria to determine the defined classification are applied.</p>
3. Analyse and apply a range of solutions to a construction problem for compliance with the BCA.	<p>3.1. Range of criteria that will ensure swimming pool and/or spa construction methods comply with the performance requirements of the BCA is determined.</p> <p>3.2. Alternative solutions to a design or construction problem that will comply with BCA requirements are discussed with the clients and proposed in accordance with company policies and procedures.</p> <p>3.3. Performance-based solutions are identified and documented in accordance with BCA requirements.</p> <p>3.4. <i>Assessment methods</i> referenced in the BCA to determine whether a building solution complies with <i>performance requirements</i> or DTS provision of the BCA are analysed and applied.</p> <p>3.5. Relevant documentation is identified and completed in accordance with BCA requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and

REQUIRED SKILLS AND KNOWLEDGE

- confirm requirements, share information, listen and understand
- discuss and propose alternative solutions
- read and interpret:
 - documentation from a variety of sources, including BCA and referenced documents
 - specifications and drawings
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to complete documentation in accordance with BCA requirements
- numeracy skills to apply mathematical information included in building codes and standards.

Required knowledge

Required knowledge for this unit is:

- understanding of the BCA relating to:
 - basic design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
 - BCA performance hierarchy
 - definitions and common technical terms or usage specified under general provisions of BCA
 - general nature of materials and the effects of performance
 - interpretation and analysis of working drawings and specifications
 - relevance of Australian standards and relevant ancillary provisions in state and territory building legislation
 - relevant legislative and OHS requirements, codes and practices
 - swimming pool design and construction.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by planning a swimming and spa that meets applicable building codes and standards.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant swimming pool and spa building documentation and codes
- accurately apply BCA performance requirements relating to the design and construction of swimming pools and spas
- demonstrate understanding of some assessment methods available to determine compliance with the BCA
- identify swimming pool and spa faults and problems and proposed action to rectify.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- access to BCA and relevant documents referenced in the BCA

EVIDENCE GUIDE

- access to relevant legislation
- project documentation, including design brief, design drawings, specifications, construction schedules and other supporting documents
- research resources, including product information and data
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment methods include:

- comparison with BCA DTS provisions
- evidence of suitability as described in the BCA
- expert judgement as defined in the BCA
- verification method as defined in the BCA.

Performance requirements include:

- those contained within other legislation applicable to a specific project
- performance requirements of the BCA determined to be relevant to a specific project
- performance-based contractual requirements that must be fulfilled by any party.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply structural principles to the planning of swimming pool and spa building.	<p>1.1. Main structural principles that apply to the building of a swimming pool or spa are identified.</p> <p>1.2. Structural performance of a swimming pool or spa is described in terms of the effect of the section properties of various materials.</p> <p>1.3. Structural performance characteristics of swimming pool and spa shells in a range of materials are explained and applied to the planning of the construction work.</p> <p>1.4. Demolition of existing structures is coordinated in accordance with legislative and planning requirements and safe work practices.</p>
2. Analyse and plan for the structural integrity of indoor and outdoor permanent swimming pools and spas.	<p>2.1. Relevant industry professionals are consulted as required to provide advice regarding the design process and structural integrity of the proposed swimming pool or spa.</p> <p>2.2. Collect and analyse project documentation to assist in the analysis of plans and specifications.</p> <p>2.3. Project documentation is analysed for compliance with the BCA requirements for earthquake environments.</p> <p>2.4. New and emerging building technologies are assessed for application to the construction process and their compliance with BCA requirements and Australian standards.</p> <p>2.5. Pre-commencement site inspection is conducted to confirm analysis.</p>
3. Plan, coordinate and manage the excavation of swimming pool and/or spa site.	<p>3.1. Excavation is set out in accordance with the building's plans.</p> <p>3.2. Structural integrity of the excavation specified in the building's plan is assessed for compliance with relevant codes and accepted industry construction principles.</p> <p>3.3. Damp coursing and provision of termite barriers and other relevant techniques are planned, implemented and checked in accordance with codes, standards and industry practice.</p>
4. Plan, coordinate and manage the building of the structural and non-structural	<p>4.1. Technical construction principles and performance of materials used in the construction are identified and analysed in the planning of the building and construction project.</p>

ELEMENT	PERFORMANCE CRITERIA
swimming pool and/or spa shell.	4.2. Application of bracing requirements, tie-downs, tolerances, allowances and fixing, and installation of components are planned, implemented and checked for compliance with manufacturer specifications and relevant Australian standards and codes.
5. Plan, coordinate and manage the finishing and water integrity of swimming pool and/or spa structure.	5.1. Installation of the finishing materials as specified in the building's plan is supervised and checked for compliance with standards and accepted industry construction principles.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply Australian standards and codes and manufacturer specifications
- apply BCA structural principles to swimming pools and spas
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - consult with industry professionals
 - read and interpret project documentation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- identify and analyse relevant information
- select structural members based on project or specification requirements
- work safely to OHS regulations and site requirements.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- relevant state or territory building and construction codes, standards and government regulations applying to swimming pools and spas
- underlying mathematics related to structural analysis

REQUIRED SKILLS AND KNOWLEDGE

- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by application of appropriate structural principles to construction of a swimming pool and spa.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- assess the structural integrity of a variety of swimming pool and spa structures
- apply the structural principles behind the safe erection and demolition of a swimming pool or spa
- apply technical construction principles to the appropriate selection, integration and building in of construction elements and components
- coordinate, plan, implement and check the building of a swimming pool and/or spa.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations

EVIDENCE GUIDE

- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Structural principles include:

- behaviour of structural materials
- loads and loading
- performance of beams
- section properties
- solution of force systems.

Industry professionals include:

- architects
- draftspersons
- engineers
- quantity surveyors
- surveyors.

Project documentation includes:

- building approval plans
- contract plans
- design and specifications, including engineer's

RANGE STATEMENT

- design and specifications
- original contour survey plans
 - registered plans
 - site plans
 - soils investigation reports.
- Materials* typically used include:
- concrete
 - concrete block
 - fibreglass
 - reinforcing steel.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and evaluate the properties of swimming pool and spa building materials.	<p>1.1. Suitability of materials commonly used in the region for swimming pools and spas is identified for a given building system.</p> <p>1.2. Properties of materials, their quality and the compatibility and non-compatibility of different materials are identified.</p> <p>1.3. Environmental impacts of different materials are identified.</p> <p>1.4. Impact of allowable tolerances on the conversion of naturally occurring materials is identified.</p> <p>1.5. Tolerances for installing materials are identified and checked in regard to the nature of the work being performed and the requirements of the Australian standards and BCA.</p>
2. Ensure suitable materials are selected for application.	<p>2.1. Materials that are structurally adequate and appropriate for the building system specified in the contract are tested.</p> <p>2.2. Materials are selected for safety and suitability to the application, durability, serviceability, cost effectiveness and compliance with Australian standards.</p> <p>2.3. Short and long-term degradation of materials is considered in relation to the swimming pool and/or spa's proposed life cycle.</p> <p>2.4. Alternative materials are evaluated and selected if specified materials are unavailable or unsuitable.</p> <p>2.5. Selection of materials for use is finalised in accordance with contractual requirements and in consultation with relevant professionals and the client.</p>
3. Supervise the acceptance, safe handling and storage of materials on site.	<p>3.1. Limitations and effects of transportation on materials and components are determined and action is taken in the case of potentially damaging circumstances.</p> <p>3.2. Materials are handled correctly and safely on site using appropriate equipment and safe work practices.</p> <p>3.3. Materials are stored in accordance with manufacturer specifications and in compliance with relevant Australian standards.</p> <p>3.4. Processes are implemented for inspecting all materials delivered on site for naturally occurring and/or manufactured defects before installation.</p>

ELEMENT

PERFORMANCE CRITERIA

3.5. Personnel are aware of actions to be taken in the case of defects caused by incorrect installation, application or placement.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analysis and report preparation
- application of safe work practices and materials handling
- basic supervision of construction work teams
- communication skills to:
 - communicate with manufacturers and suppliers of materials
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - consult relevant professionals and the client
 - provide advice and information to regulatory authorities
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- develop and manage standardised processes
- apply safe work practices and materials handling.

Required knowledge

Required knowledge for this unit is:

- alternative materials
- BCA
- construction and contracting equipment and its use
- construction supply processes
- environmental effects on various swimming pool and spa construction materials
- relevant Australian standards
- swimming pool and spa construction materials and technologies

REQUIRED SKILLS AND KNOWLEDGE

- relevant state or territory building and construction codes, standards and regulations, including:
 - AS1926.1-1993 Swimming pool safety - Fencing for swimming pools
 - AS1926.2-1995 Swimming pool safety - Location of fencing for private swimming pools
 - AS1926.3-2003 Swimming pool safety - Water recirculation systems
 - AS2610.1-1993 Spa pools Part 1: Public spas
 - AS2610.2-1993 Spa pools Part 2: Private spas
 - AS/NZS3136:2001 Approval and test specification - Electrical equipment for spa and swimming pools
- testing procedures
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by planning and supervision of a system for selecting, procuring and safely storing all materials required for construction of a swimming pool and spa.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify suitable swimming pool and spa building materials specified by the project or contract
- use effective verbal and written communication with manufacturers and suppliers of materials
- apply effective and efficient testing of the materials to maintain quality standards on site
- use effective sampling and record keeping processes
- ensure safe handling and storage of materials
- comply with organisational and legislative requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be

EVIDENCE GUIDE

available in either a building or construction office

- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials commonly used in swimming pools and spas include:

- concrete
- fibreglass and plastics
- cements
- masonry units
- mortars
- paints and coatings
- ceramics
- structural steel.
- distributing copies in accordance with organisational policy

Records of materials ***tested*** are kept and reported by:

RANGE STATEMENT

Selected for *suitability* involves a range of processes including:

- following up reports that indicate departures from quality or manufacturing requirements
- obtaining appropriate records and reports for review and analysis
- providing advice and information to regulatory authorities as authorised by the organisation
- taking appropriate remedial action within the scope of individual's authority.
- analysing reports, manufacturer specifications or other reference material regarding the suitability of new swimming pool and spa building material technologies with reference to BCA requirements
- arranging industry standard, external quality tests or inspections and provision of results as necessary
- arranging relevant industry standard, on-site quality tests for products to be used in swimming pools and spas
- decision making to ensure appropriate materials are selected, including:
 - identifying materials from specifications and drawings
 - identifying specifications and standards described in the contract documents
 - selecting and ordering materials that meet those requirements
- arranging for expert advice as necessary to confirm or refute materials options
- referencing external reports and manufacturer specifications
- refusing acceptance of sub-standard or out of specification materials
- seeking expert appraisal from relevant industry professionals, including architects, designers and engineers.

Materials are handled correctly and safely includes:

- allocation of space for on-site storage of materials
- confirming products or materials are as ordered and signing off delivery documentation
- ensuring safe unloading and handling of swimming pool and spa building materials
- ensuring safe use of hazardous materials and

RANGE STATEMENT

complying with statutory or regulatory requirements

- ensuring correct materials are being delivered to correct site
- providing for adequate on-site security of materials
- undertaking quality checks within the competence of the individual.

Functional area

Functional area

CPCCBC4051A Supervise asbestos removal

Modification History

New to CPC08

Unit Descriptor

This unit of competency specifies the outcomes required to supervise the removal process for friable and non-friable asbestos containing material (ACM). The unit includes planning for and supervising the removal process, including preparing the work area and the work site, using safe and compliant removal practices, maintaining safety procedures, and supervising the decontamination and removal processes.

Ensuring compliance with the asbestos removal control plan (ARCP) is central to the effective performance of the role. This includes ensuring and documenting that required air monitoring and other testing and certification processes are conducted by licensed asbestos assessors according to legislation.

Application of the Unit

Site location for work may be either domestic or commercial, and may be a demolition site, a new work site or an existing structure being renovated, extended, restored or maintained. Project sites may be construction sites and may also include ships, soils and fences.

Licensing/Regulatory Information

Occupational licenses are required nationally.

Work must be completed according to relevant legislation, the Code of Practice for the Safe Removal of Asbestos, industry guidelines, customer and organisational requirements, including work health and safety (WHS) policies and procedures.

Regulatory mechanisms apply to this unit. This unit is required for all supervisors of the ACM removal process. Candidates are advised to check for regulatory requirements.

Pre-Requisites

CPCCOHS1001A Work safely in the construction industry

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|----------------------------|-----|--|
| 1 | Plan for asbestos removal. | 1.1 | Work instructions, other required <i>information</i> and the client's brief are obtained, clarified, confirmed and applied for planning purposes. |
| | | 1.2 | Asbestos register, if available, is obtained and reviewed to inform planning. |
| | | 1.3 | Work site is inspected to confirm requirements and inform the planning process. |
| | | 1.4 | Scope of job is identified and initial <i>preparations</i> are conducted according to workplace requirements. |
| | | 1.5 | Staffing levels required for completion of job are confirmed. |
| | | 1.6 | Required quantity of <i>materials</i> is calculated according to job specifications and <i>quality requirements</i> . |
| | | 1.7 | <i>Safety</i> requirements and data from asbestos register, project construction safety emergency plan, safe work methods statement (SWMS) for a construction site, and other information sources are identified to prepare for a safe and compliant removal process. |
| | | 1.8 | <i>Plant, tools, equipment</i> and <i>personal protective equipment</i> (PPE) to carry out the job are identified, sourced and steps taken to ensure their serviceability. |
| | | 1.9 | <i>Environmental requirements</i> are identified for the job according to environmental plans and regulatory obligations, including preparations for a clearance |

inspection by a licensed asbestos assessor.

- 1.10 Processes required to meet health-monitoring and air-monitoring requirements are identified and planned with the licensed asbestos assessor and within limits of own responsibility.
- 1.11 Occupants, neighbours and other affected parties are notified according to legislation and the code of practice and within limits of own responsibility.
- 1.12 Proper identification and handling of **asbestos containing materials** are planned and implemented according to legislative and regulatory requirements.
- 1.13 ARCP is developed within limits of own responsibility.
- 1.14 Required documentation is prepared and steps are taken to ensure authorisation according to legislative and company requirements.
- 1.15 Arrangements and work schedules are organised so that **compliant supervision** of the asbestos removal job is undertaken.

- | | | |
|---|---------------------------|--|
| 2 | Prepare site for removal. | <ul style="list-style-type: none"> 2.1 Workers' certificates of competency for the type of removal required are sighted by the supervisor and records are kept on site. 2.2 Team members are provided with instructions for the safe and compliant conduct of the job according to the ARCP. 2.3 Steps are taken to ensure the signage and barricades to delineate the work area from the work site are erected according to legislative requirements. 2.4 Notification documents for the job, copy of asbestos removal licence, and training documents are secured and steps taken to retain them on site. 2.5 Daily air-monitoring readings are posted on the work site according to legislative requirements. 2.6 Team members are provided with PPE and its proper usage and fit are checked. 2.7 Steps are taken to ensure all equipment is installed and |
|---|---------------------------|--|

- checked for serviceability according to legislation and manufacturer specifications for use.
- 2.8 Final safety checks are made of the site, including ensuring that **utilities** are deactivated and secured prior to commencing work.
- 3 Supervise testing, compliance and documentation in consultation with the licensed asbestos assessor and the asbestos removalist.
- 3.1 Communication is undertaken with the licensed asbestos assessor to ensure compliance with legislative requirements for air monitoring.
- 3.2 **Testing** of equipment and work site is supervised to ensure compliance with legislative requirements.
- 3.3 In consultation with the licensed asbestos assessor and the asbestos removalist ensure that corrective action is taken, as required, should initial test results not conform to legislative requirements.
- 3.4 On advice from the licensed asbestos assessor, steps are put in place to ensure removal does not occur until air-monitoring checks have been undertaken and documented according to legislative requirements.
- 3.5 Required **documentation** is completed and forwarded to authorities according to legislative and workplace requirements.
- 4 Oversee removal and decontamination processes.
- 4.1 Set-up and daily checking of equipment are supervised to ensure safety, efficiency and compliance with legislative requirements.
- 4.2 Removal of asbestos from the structure is supervised using **safe work methods** and according to the ARCP, regulatory requirements and codes of practice.
- 4.3 Steps are taken to ensure asbestos is contained and placed in double-lined bins or 'double-bagged' according to regulatory requirements.
- 4.4 Bags are sealed, labelled and removed from work area to designated work site area according to the ARCP.
- 4.5 Arrangements are made with removal firms and bin suppliers to ensure the timely and appropriate removal of ACM from the site, and waste facility dumping

receipts are received as evidence of compliance.

- 4.6 Supervision is provided of the facilities and processes to ensure the compliant decontamination of team members and the work area and work site.
- 4.7 Clearance inspection, including air monitoring as required, is conducted of work area, work site and equipment to ensure job is completed according to legislative and workplace requirements.
- 4.8 Site is secured according to legislative requirements until clearance inspection and air-monitoring results have been approved and clearance certificate has been received.
- 4.9 Incidents are identified and reported according to company and legislative requirements.

5 Supervise and support team members.

- 5.1 ***Appropriate training*** on site is provided to asbestos removal team workers to ensure safe and compliant operations of the job site, including use of the ARCP, company's WHS policies, and site safety plan.
- 5.2 Work is scheduled to ensure the timely and efficient completion of the job and operation of the team.
- 5.3 Processes are put in place to encourage open communication with team members regarding safety and the appropriateness of work practices.
- 5.4 Constructive feedback is provided to team members regarding work performance to improve efficiency and safe work practices.
- 5.5 Steps are taken to build and reinforce a workplace culture that supports quality, compliant operations and safety.
- 5.6 Team performance is managed according to company and legislative requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication, and appropriate level of language skills, to:
 - determine requirements
 - prepare documentation (including ARCP) that is accurate, clear and complete
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - liaise with related professionals, including occupational hygienists, assessors and testing authorities
 - reduce potential for conflict, particularly in relation to liaison with concerned neighbours, by providing clear information that gives reassurance about the process being undertaken
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
- coaching and mentoring skills to strengthen workplace culture and manage the performance of a team
- initiative and enterprise skills to:
 - evaluate own actions and make judgements about performance and necessary improvements
 - identify and report faults in tools, equipment and materials
- planning and organising skills to:
 - plan and set out work
 - set up the decontamination process
- teamwork skills to:
 - coordinate own work and supervise the work of others
 - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- self-management skills to:
 - set up the asbestos removal area according to safe work methods
 - apply general WHS requirements for work in the construction industry, including applying safe work methods for the removal of friable and non-friable asbestos
 - respond effectively to timelines, deadlines and complex work requirements
 - follow correct decontamination procedures

- use, fit and maintain PPE, decontamination equipment, hand and power tools safely

Required knowledge

- range of materials manufactured using asbestos, type and characteristics of asbestos used in each material, and usual applications associated with the material
- methods and purpose for assessing hazards relating to friable ACM, together with an understanding of:
 - health effects caused by exposure to ACM and requirement for safe handling and removal
 - health impacts on the community and requirement for safe handling and disposal
- requirements of current legislation and standards relating to asbestos safety, and the preparation of an ARCP and related documentation
- rationale for, and principles underpinning, the ARCP and related legislation
- air-monitoring procedures and testing requirements, including for interpretation of results
- general WHS procedures for construction work
- health hazards associated with friable ACM, such as:
 - weathering
 - wear and tear
 - application of tools and equipment
 - accidental damage
- licensing requirements for the use of specific equipment, such as excavators
- safe work methods for the removal of friable and non-friable asbestos
- hazards associated with using enclosures and removing friable and non-friable asbestos
- general construction terminology
- handling requirements of differing types of asbestos materials
- work site and work area procedures for the safe removal of friable and non-friable asbestos
- job safety analysis (JSA) and SWMS, if required for construction
- safety data sheets (SDS)
- materials storage and hazardous waste management in relation to asbestos products
- method of operation, and cleaning, use and maintenance requirements of equipment
- plans, drawings and specifications, asbestos registers and register amendments
- quality requirements relating to supervising asbestos removal
- risk assessment processes and contingency planning relating to supervising asbestos removal
- techniques associated with containing and removing asbestos, including:
 - use of large and small-scale enclosures for different sites
 - use of negative pressure exhaust units
 - encapsulation methods
 - use of decontamination units

- types, characteristics, uses and limitations of plant and equipment involved in enclosing and removing asbestos
- workplace and equipment safety requirements
- application of the documentation for notification and re-notification
- duties and obligations of the supervisory role, including:
 - implementing the ARCP with control monitoring and clearance inspections as required for Class A removal
 - using the certified WHS management system and emergency plan as required

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person should demonstrate the ability to:</p> <ul style="list-style-type: none"> • obtain and apply work instructions for the safe and correct removal of asbestos • plan for the safe and correct removal of asbestos, including: <ul style="list-style-type: none"> • analysing all documentation, such as the asbestos register • scoping and resourcing the work • work with and supervise the removal team to ensure the safe and correct removal of ACM • supervise and coordinate as required the testing process in strict compliance with legislation and code of practice • supervise decontamination process for workers, equipment and work site to ensure strict compliance with legislation and code of practice • complete documentation that supports the removal process within limits of own responsibility • demonstrate team supervision for the safe and compliant removal of ACM.
Context of and specific resources for assessment	<p>This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • an induction procedure and requirement • realistic tasks or simulated tasks covering the mandatory task requirements • relevant specifications and work instructions • tools and equipment appropriate to applying safe work practices • support materials appropriate to activity

	<ul style="list-style-type: none"> workplace instructions relating to safe work practices and addressing hazards and emergencies research resources, including industry-related systems information safety data sheets. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application reinforce the integration of employability skills with workplace tasks and job roles confirm that competency is verified and able to be transferred to other circumstances and environments. <p>Validity and sufficiency of evidence requires that:</p> <ul style="list-style-type: none"> competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence. <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Information to ensure the safe and correct completion of the job may include:</p>	<ul style="list-style-type: none"> • assessor's control air-monitoring report • company policies and procedures • JSA and SWMS for construction as required • operating manuals (WHS management systems) and specifications for materials and equipment • asbestos register • diagrams or sketches • instructions issued by authorised organisational or external personnel • manufacturer specifications and instructions, where specified and SDS • regulatory and legislative requirements for enclosing and removing friable and non-friable asbestos • relevant Australian standards and codes • safe work procedures relating to enclosing and removing asbestos • signage • memos, verbal and written instructions, and diagrams • work bulletins, work schedules, plans and specifications.
<p>Preparations at the commencement of the job may include:</p>	<ul style="list-style-type: none"> • preparing and implementing the ARCP • assessing conditions and hazards • determining work requirements, and safety plans and policies • consulting with local authorities (councils) and local waste management and transport authorities to determine requirements • identifying equipment defects • identifying and preparing for containing and removing asbestos from a work site according to ARCP • inspecting work site • conducting work site inductions.
<p>Materials must be relevant to the type of asbestos removed and may include:</p>	<ul style="list-style-type: none"> • acrylic paint to seal ACM • approved and branded or labelled plastic bags • duct tape • foam infill spray • gaffer tape • plastic sheeting

	<ul style="list-style-type: none"> polyvinyl alcohol (PVA) adhesive as spray / spray tack glue rags or other material wipes heavy-duty polythene bags (200 µm minimum thickness) 200 µm unused (not recycled) plastic sheeting or drop sheet drums or bins in good condition with well-fitting lids and labelled with required warning sign signs timber frames, nails, aluminium poles and other materials required for enclosures.
Quality requirements may include:	<ul style="list-style-type: none"> internal company quality policy and standards manufacturer specifications relevant regulations, including Australian standards workplace operations and procedures.
Safety procedures are to be according to state and territory legislation and regulations and project safety plan and may relate to:	<ul style="list-style-type: none"> conduct of work site induction emergency procedures, including extinguishing fires, and evacuation handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability, are a factor hazard control hazardous materials and substances organisational first aid requirements PPE prescribed under legislation, regulations and workplace policies and practices safe operating procedures according to SWMS, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> deactivating or securing utilities, including electrical, air conditioning and water services earth leakage boxes falling objects lighting plant movement power cables, including overhead service trays, cables and conduits restricted access barriers surrounding structures traffic control trip hazards work site visitors and the public working at heights working in confined spaces

	<ul style="list-style-type: none"> • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<p><i>Plant, tools and equipment</i> must be relevant to the job (whether for the removal of friable or non-friable ACM), may require separate licensing for use, and may include:</p>	<ul style="list-style-type: none"> • high efficiency particulate air (HEPA) vacuum cleaners to comply with AS3544-1988 and AS4260-1997 as amended from time to time • pipelines • anchorage points for enclosures • atomiser water bottles and hand pressure sprayer • barricades • barricade tape, including para-webbing or fencing • bars (crow and pinch) • bolt cutters • buckets • cold chisels • enclosure equipment for large-scale asbestos removal work • excavators • mini-enclosures for small-scale asbestos removal work • glove bag or wrap and cut equipment • negative air pressure enclosures or bubbles • negative pressure exhaust units • PVA adhesive as spray / spray tack glue • scaffolds • scrapers • shovels and spades • signs • smoke generators • staple guns • decontamination unit and remote decontamination units if required for large-scale removal • decontamination facilities for non-friable asbestos removal • drills (manual and low-speed only) • enclosures for large-scale asbestos removal work • flame retardant polythene • hammers • hand drills • hardboard / corex • hoses and spray fittings • ladders to comply with construction regulations.
<p><i>Personal protective equipment</i> will be</p>	<ul style="list-style-type: none"> • protective clothing, such as: <ul style="list-style-type: none"> • disposable coveralls with fitted hood and cuffs

specified to the requirements of the job and may include:	<ul style="list-style-type: none"> • safety footwear (pull-on, not lace-up) • disposable or protective gloves • determining the respiratory protection class appropriate to the type of asbestos to be removed, which may be P1, P2 or P3, or using full-face, powered, air purifying particulate respirator fitted with class P3 filter cartridge • correct face fitting and use of respiratory protective equipment • spare sets of PPE • general WHS requirements, including first aid kit locations.
Environmental requirements must fully reflect legislation and the Code of Practice for the Safe Removal of Asbestos, including:	<ul style="list-style-type: none"> • clean-up management • dust and noise management • sedimentation control • vibration management • waste management, including the safe disposal of ACMs, including waste water from decontamination unit (DCU).
Asbestos containing materials (both friable and non-friable) may include: Note: <ul style="list-style-type: none"> • Non-friable asbestos is also known as bonded asbestos • ACM notionally listed as non-friable may become friable due to weathering or damage 	<ul style="list-style-type: none"> • acoustic plaster soundproofing • adhesives and glues • asbestos cement • asbestos cement moulded guttering • asbestos cement sheets • asbestos tiles • bitumastic felts and materials • cable bandages • compressed asbestos cement panels • floor vinyl covering • gaskets • millboard • mortar • pipe lagging • electrical meter boxes and related devices • woven textiles, ropes, tapes and braids • decorative coatings • resinous backing board • sealant mastic • sprayed on fireproofing, soundproofing and thermal insulation • tape • thermal insulation.
Compliant supervision entails being:	<ul style="list-style-type: none"> • on site at all time for the removal of friable asbestos • accessible for the removal of non-friable asbestos.
Work site may include:	<ul style="list-style-type: none"> • residential, commercial, industrial and public buildings • plant, equipment and fire boards (e.g. friction plant and

	<ul style="list-style-type: none"> gaskets) demolition sites fences soil ships and other forms of transport.
Utilities may include:	<ul style="list-style-type: none"> air conditioning electricity water services.
Testing procedures:	<ul style="list-style-type: none"> must: <ul style="list-style-type: none"> conform to legislative requirements be conducted by a licensed asbestos assessor may include: <ul style="list-style-type: none"> air monitoring analysis of materials to determine presence and type of ACM smoke tests for leaks in the enclosure.
Documentation may include:	<ul style="list-style-type: none"> air-monitoring results asbestos register notification of asbestos removal work to the regulator as required asbestos removal control plan WHS management system JSA and SWMS for construction implementation and development of emergency plan health-monitoring program leak test results clearance inspections and certificates training certificates.
Safe work methods may include:	<ul style="list-style-type: none"> compliant set-up of the asbestos work area, including set-up of negative air, lighting, water and emergency supplies placing adequate signage around work site fire and emergency system requirements enclosure of the asbestos removal area and the plant, equipment and fixtures remaining in the area testing of the asbestos work area by a licensed asbestos assessor procedures for entering and leaving the asbestos work area safe techniques for removing friable and non-friable asbestos packaging, sealing and removing contaminated plant, tools and equipment cleaning and decontaminating the asbestos work area decontaminating and demobilising the work site

	<ul style="list-style-type: none">• final decontamination of personnel• disposing of asbestos waste.
<i>Appropriate training</i> for team members may include:	<ul style="list-style-type: none">• conducting on-site training, either one-on-one or small group sessions• recording the mandatory unit of competency for workers for licensed asbestos removal work• providing briefings and explaining the content of induction manuals.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and interpret relevant code and standard requirements.	<p>1.1. Relevant performance requirements from the BCA that apply to individual projects (classified as <i>medium rise</i>) are identified.</p> <p>1.2. Requirements of relevant BCA deemed-to-satisfy (DTS) provisions are determined.</p> <p>1.3. Requirements of relevant Australian standards referenced in the BCA are accessed and interpreted appropriately.</p>
2. Classify buildings.	<p>2.1. Nature of building is determined according to use and arrangement.</p> <p>2.2. BCA criteria to determine the defined classification are applied.</p>
3. Analyse and apply a range of solutions to a construction problem to ensure compliance with the BCA.	<p>3.1. Range of criteria that will ensure that construction methods comply with BCA performance requirements is determined.</p> <p>3.2. Alternative solutions to a design or construction BCA-compliance problem are discussed and proposed in accordance with company policies and procedures.</p> <p>3.3. Performance-based solutions are identified and documented in accordance with BCA requirements and organisational quality procedures and processes.</p> <p>3.4. <i>Assessment methods</i> referenced in the BCA to determine whether a building solution complies with <i>performance requirements</i> or DTS provision of the BCA are analysed and applied.</p> <p>3.5. Relevant documentation is identified and completed in accordance with BCA requirements.</p>
4. Apply fire protection requirements.	<p>4.1. Passive and active fire control elements required by the BCA and other legislation are identified.</p> <p>4.2. Level of fire resistance required for the construction of various medium rise buildings is determined.</p> <p>4.3. BCA requirements with respect to passive and active fire protection to medium rise buildings are identified and applied.</p> <p>4.4. Check of existing buildings for compliance with passive and active fire protection requirements is carried out in accordance with BCA requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analysis and interpretation skills relating to documentation from a wide range of sources, including BCA and referenced documents
- application of design concepts and principles in accordance with BCA, namely medium rise:
 - Classes 1 and 10
 - Classes 2 and 3 to a maximum of 3 storeys
 - Classes 4 to 9 to a maximum of 3 storeys, not including Type A construction
- accurate application of building codes and standards
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - discuss and propose alternative solutions
 - read and interpret:
 - documentation from a variety of sources, including BCA and referenced documents
 - specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- written skills to complete documentation in accordance with BCA requirements
- numeracy skills to apply mathematical information included in building codes and standards
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- BCA performance hierarchy
- interpretation and analysis of working drawings and specifications
- relevance of Australian standards
- relevant legislative and OHS requirements, codes and practices
- relevant licensing arrangements
- thorough understanding of the BCA, namely medium rise:
 - Classes 1 and 10

REQUIRED SKILLS AND KNOWLEDGE
<ul style="list-style-type: none">• Classes 2 and 3 to a maximum of 3 storeys• Classes 4 to 9 to a maximum of 3 storeys, not including Type A construction.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	<p>This unit of competency could be assessed by the application of design principles and solutions specified in BCA performance requirements or DTS provisions applicable to a particular building project.</p> <p>This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • comply with organisational quality procedures and processes • apply and interpret relevant documentation and codes • apply BCA performance requirements relating to design and construction of a medium rise building • demonstrate understanding of assessment methods available to determine compliance with the BCA.
Context of and specific resources for assessment	<p>This unit of competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • access to BCA and relevant documents referenced in the BCA

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • access to relevant legislation • project documentation, including design brief, design drawings, specifications and construction schedules • research resources, including product information and data • relevant computer software package and suitable hardware. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments. <p>Validity and sufficiency of evidence requires that:</p> <ul style="list-style-type: none"> • competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace • where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

	<ul style="list-style-type: none"> all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence. <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.</p>

CPCCBC5002A Monitor costing systems on medium rise building and construction projects

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to monitor building or construction costing systems. The processes and practices involved in supervising and monitoring costing systems result in the ongoing maintenance of cost control and the production of expenditure schedules and other arrangements, which ensure contracts or projects remain on budget.

In order to achieve the outcomes for this unit, knowledge of relevant legislation, codes and standards, industry estimating and costing systems, and financial principles is required.

Application of the Unit

Application of the unit

This unit of competency supports the needs of builders, senior managers in building and construction firms, and other construction industry personnel responsible for monitoring building or construction costing systems for medium rise building and construction projects.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Supervise the identification and classification of project costs.	<p>1.1. Staff members are supervised in their identification of building or construction costs and accurate estimates are made from project schedules.</p> <p>1.2. Definitive cost estimates are accurately translated into the correct cost centres appropriate to contract requirements.</p> <p>1.3. Cost centres are correctly identified and incorporated into a planned project cost network.</p> <p>1.4. Risk assessment is undertaken and estimated cost is compared with estimated risk.</p> <p>1.5. Planning ensures compliance with relevant codes of practice, standards and legislative requirements.</p>
2. Manage the preparation of a schedule of project expenditure.	<p>2.1. Draft schedules of project expenditure are prepared with critical points identified.</p> <p>2.2. Expenditure schedules are prepared using organisational processes, and hard copies are produced.</p> <p>2.3. Critical financial phases of the project are identified and cash flows are matched to expenditure.</p>
3. Prepare curves showing projected cash flow and payments.	<p>3.1. Interim payment claims and rise and fall calculations are prepared for the contractor and subcontractors.</p> <p>3.2. Projected S curve is prepared to show cash flow and resource control.</p> <p>3.3. Projected cash flow and payments using time risk and cost risk are prepared and compared.</p> <p>3.4. Cash flows using early start and late finish for pessimistic or optimistic outcomes are compared.</p> <p>3.5. Pessimistic overdraft requirements are calculated.</p>
4. Maintain continuous checks on expenditure and evaluate outcomes.	<p>4.1. Cash flow and creditor payments are monitored daily.</p> <p>4.2. Budget cost of the network is compared to actual costs in the tender calculations.</p> <p>4.3. Rise and fall clause calculations are undertaken and financial controller is advised of variations.</p> <p>4.4. Reasons for any cost variations are analysed and identified.</p> <p>4.5. Remedial action is taken and recorded as necessary to retain contract financial compliance.</p>
5. Prepare final cost	<p>5.1. Actual costs are compared with estimates at the completion of the job and a report is compiled</p>

ELEMENT

PERFORMANCE CRITERIA

report.

detailing future actions.

5.2. Organisational rates are adjusted as required, based on the *final cost report* and current movements in prices and rates.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- account keeping skills to identify cost centres and monitor cash flows
- analysis and interpretation skills to undertake financial risk assessments
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret documentation from a variety of sources
 - supervise staff members
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to prepare draft schedules of project expenditure and final cost reports
- management skills, including the ability to supervise staff
- numeracy skills to perform complex financial calculations
- preparation of schedules of expenditure and expenditure projections.

Required knowledge

Required knowledge for this unit is:

- advanced estimating and costing systems used in the building and construction industry
- expenditure evaluation methods
- financial principles and cash flows
- project financial processes and timelines
- relevant licensing arrangements
- relevant standards, codes of practice and legislation for medium rise construction projects

REQUIRED SKILLS AND KNOWLEDGE

- variations in rates occurring through rise and fall clauses and their effects.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective monitoring of a building or construction costing system.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- monitor and supervise staff who develop and consolidate costing data for Class 2 to 9 Type A building and construction projects
- compare the extent and effectiveness of actual versus estimated costs and the production of schedules of expenditure
- produce efficient and punctual financial data in the form required by the organisation
- plan and continuously revise the schedules of payments and cash flows to match contract performance and efficiency.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- documentation that would support building or construction costing systems for a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the monitoring process
- copies of appropriate awards and workplace agreements.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over

EVIDENCE GUIDE

a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Identification of building or construction costs includes:

- human resource costs, including direct employees' and subcontractors' rates
- materials, such as sand, aggregate, bitumen, concrete, bricks, roofing and reinforcing
- overhead costs, including administration

RANGE STATEMENT

	support, power, lighting, accommodation and rent
	<ul style="list-style-type: none">• plant and equipment purchase or lease and operating costs• relevant codes, standards and legislation• site services, such as temporary power, lighting and water• specialist services, such as surveying, architectural, testing and legal• temporary accommodation and shelter, including sheds, site offices and toilets.
<i>Schedules of project expenditure</i> include:	<ul style="list-style-type: none">• consumables, such as fuel and lubricants, electric power and water• costs of pre-cast and on-site production of concrete components• labour costs against estimated costs• labour hours consumed against estimates• materials• supplies, such as timber and building materials.
<i>Projected cash flow and payments</i> include:	<ul style="list-style-type: none">• progress payments in for work completed• progress payments out for work undertaken• progress payments for supplies and materials• penalties• wages and salaries• insurances, including workers' compensation premiums.
<i>Final cost report</i> includes:	<ul style="list-style-type: none">• cost-benefit analyses of overtime payments• detailed summaries of actual costs against estimates• details of cost over-runs and savings on labour and contracting out• details of savings or under-expenditure on materials or supplies• equipment performance information and efficiencies.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to supervise the planning process and organisation of on-site building or construction work projects up to and including medium rise commercial and wide span buildings (medium rise licensing classification with reference to Class 1 and 10 construction, Class 2 and 3 to a maximum of 3 storeys, Class 4 to 9 to a maximum of 3 storeys, not including Type A construction).

Successful supervision of planning and organisation requires effective interpretation of contractual and planning requirements and development of strategies for using human and physical resources effectively in order to comply with contractual obligations.

In order to achieve the outcomes for this unit, knowledge of relevant building and construction planning practices, state or territory building and construction codes, standards and regulations and human resource principles and practices is required.

Application of the Unit

Application of the unit

This unit of competency supports builders, related construction industry professionals and senior managers within building and construction firms responsible for supervising the planning of on-site building or construction work for medium rise building and construction projects.

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Appraise the contractual documentation and delegate the planning of operational requirements as necessary.	<p>1.1. Copies of building approvals and conditions relating to the medium rise building or construction project are obtained.</p> <p>1.2. Contracts are reviewed to determine any unusual aspects of construction, use of materials or penalty provisions.</p> <p>1.3. Possible design problems are identified and brought to the attention of project consultants.</p> <p>1.4. Availability of subcontractors and their suitability to meet job requirements specific to medium rise projects is reviewed.</p> <p>1.5. Availability of materials and conditions of purchase and authorised purchases are reviewed.</p> <p>1.6. Access to the site is established within requirements and on-site accommodation is located in an appropriate location.</p> <p>1.7. Contact is established and maintained with relevant statutory authorities controlling construction work.</p>
2. Initiate strategies and delegate the implementation of medium rise construction operations, as necessary.	<p>2.1. Resources supply system for controlling and recording materials entering and leaving the site is implemented and maintained.</p> <p>2.2. Procedures for recording and paying for the hire of plant equipment and authorising payment are managed.</p> <p>2.3. OHS and rehabilitation procedures, including hazard and risk management, are established.</p> <p>2.4. Procedures for the removal of existing services and hazardous materials are planned and implemented in accordance with regulatory requirements.</p> <p>2.5. Procedures required for the control of multiple projects are established.</p>
3. Supervise the preparation of project schedules.	<p>3.1. Construction operations are planned and executed in sequence.</p> <p>3.2. Entering of operations data into an appropriate scheduling system for analysis is managed.</p> <p>3.3. Project's critical path is established and revision of the project schedule is managed with new projects incorporated and documented as required.</p> <p>3.4. Strategies for avoiding and overcoming project delays are developed.</p> <p>3.5. Management is advised of cost-benefits and</p>

ELEMENT	PERFORMANCE CRITERIA
	implications of providing overtime payments.
4. Ensure the provision of all resources required for project.	<p>4.1. Adjustments to the project timeframe to take account of anticipated delays are facilitated.</p> <p>4.2. Temporary services and site accommodation needs are identified and arranged as required.</p> <p>4.3. Plant requirements, site location and installation dates are confirmed.</p> <p>4.4. On-site personnel and labour requirements are determined and documented.</p>
5. Review existing on-site buildings or structures.	<p>5.1. Condition of existing buildings or structures to be retained, and structures on adjacent site boundaries, are reviewed and recorded.</p> <p>5.2. Copies of reports are submitted to adjacent building owners prior to commencing construction work.</p>
6. Supervise staff and maintain an effective work environment.	<p>6.1. Overview of the project site or sites is maintained and staff resources are allocated according to organisational, regulatory and project needs.</p> <p>6.2. Activities of contract planning personnel are monitored and an effective work environment is maintained.</p> <p>6.3. Effective human resource practices and policies which maximise performance and productivity are employed.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- evaluation skills to review and evaluate documentation and processes and recommend changes or improvements
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - discuss problems with consultants
 - manage staff

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - contracts, project schedule and reports
 - documentation from a variety of sources
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
 - document project schedule and resource requirements
 - maintain records
 - record relevant information
- management skills, including the ability to delegate tasks and supervise staff to achieve planning outcomes
- planning skills to enable the effective planning of projects, processes and strategies which maximise the efficiency and cost-effectiveness of building or construction contracts and which effectively organise and use available resources on construction sites.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- building and construction industry subcontracting system
- building or construction practices in on and off-site management
- construction planning process
- contract documentation, quantities establishment, rates and costs related to payments and claims
- human resource principles and practices
- relevant licensing arrangements
- relevant state or territory building and construction codes, standards and government regulations for medium rise building projects
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the

EVIDENCE GUIDE

demonstration of effective supervision of planning on-site building or construction work.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- translate contract requirements into construction plans and processes
- delegate planning tasks
- apply construction planning processes that effect desired outcomes
- develop strategies that effectively maximise resource use
- establish and maintain a workplace environment representative of good management practice.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product

EVIDENCE GUIDE

literature

- a suitable work area appropriate to the process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language,

EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Contracts include:

- Australian standard contracts, including the AS2124 and AS4000 series
- Construction Industry Contract (CIC) suite
- individual organisational contracts
- Joint Contracts Committee (JCC) suite
- MBA and HIA contracts
- Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum).

Resources include:

- human resources, both organisational and subcontracted
- on-site facilities
- plant and equipment
- power, water, telephone and other resources
- pre-cut or pre-cast components
- raw materials
- temporary accommodation.

Project schedule includes:

- critical events and milestones
- labour supply and availability information
- materials supply and availability information
- plant and equipment availability information
- services provision

RANGE STATEMENT

<i>Temporary services</i> include:	<ul style="list-style-type: none">• subcontractor requirements and availability.• offices and crib rooms• on-site communications• portable generators and lighting• power poles• toilets.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and describe the properties of building materials.	<p>1.1. Suitability of materials commonly used in the region is identified for a given building system.</p> <p>1.2. Properties of materials, their standards of quality and the compatibility and non-compatibility of different materials are identified.</p> <p>1.3. Environmental impacts of different materials are identified.</p> <p>1.4. Impact of allowable tolerances on the conversion of naturally occurring materials is identified.</p> <p>1.5. Tolerances for installing and assembling materials are identified and checked in regard to the nature of the work being performed and the requirements of Australian standards.</p>
2. Ensure suitable building materials are selected for application.	<p>2.1. Selection of building materials is conducted with reference to structural requirements and suitability for the building system specified in the contract.</p> <p>2.2. Materials are selected for their safety, required fire resistance rating, serviceability and cost effectiveness.</p> <p>2.3. Short and long-term degradation of materials is considered in relation to the proposed life cycle of the building.</p> <p>2.4. Alternative materials are selected if specified materials are unavailable or unsuitable.</p>
3. Supervise the acceptance, safe handling and storage of materials on site.	<p>3.1. Organisational procedures for the acceptance, safe handling and storage of materials on site are identified and communicated.</p> <p>3.2. Limitations and effects of transportation on materials and components are determined and action is taken in the case of potentially damaging circumstances.</p> <p>3.3. Materials are handled correctly and safely on site using appropriate equipment and safe work practices.</p> <p>3.4. Materials are stored in accordance with manufacturer specifications and in compliance with the relevant Australian standards.</p> <p>3.5. Systems are implemented for inspecting all materials delivered on site for naturally occurring and/or manufactured defects before installation.</p> <p>3.6. Personnel are aware of actions to be taken in the case of defects caused by incorrect installation, application or placement.</p>

ELEMENT

PERFORMANCE CRITERIA

	3.7. Timber is preserved and ferrous and non-ferrous metals used in the construction process are protected using established methods.
4. Supervise testing of materials on site for suitability and fitness for purpose.	<p>4.1. Testing of materials, including soil, filling, compacting, surfacing, concreting and welding, is carried out to specifications and results are analysed on-site before and during installation.</p> <p>4.2. Samples of materials taken during placement or installation are accurately identified and sent for laboratory testing.</p> <p>4.3. Materials are given visual checks for suitability before building in, with materials sent off-site for testing if required.</p> <p>4.4. Processes are implemented to ensure defective materials are identified and remedial action is recorded.</p>
5. Establish records of materials testing and report on testing process conformance or otherwise.	<p>5.1. Records of tests and testing procedures are established and maintained by the organisation in accordance with its quality management obligations.</p> <p>5.2. Test results and reports are periodically evaluated to maintain integrity of organisational quality standards.</p> <p>5.3. Non-conformant on-site materials tests are immediately notified to the appropriate company officer for further action.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate organisational procedures and other information to relevant personnel

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
- report on difficulties with either supply or standards of materials
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
 - establish and maintain records of tests and testing procedures
 - record relevant information
- materials testing skills to enable materials to be tested according to relevant Australian standards or the ability to arrange for testing to be carried out independently
- reporting skills to report on difficulties with either supply or standards of materials
- supervisory skills to ensure the correct selection and installation of materials on site and secure storage of materials on site
- systems development skills to ensure systems are developed to ensure correct materials that meet appropriate standards are delivered and used on site.

Required knowledge

Required knowledge for this unit is:

- alternative materials
- building and construction materials and technologies
- construction and contracting equipment and its use
- construction supply processes
- environmental effects on various building and construction materials
- relevant licensing arrangements
- testing procedures
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective supervision and application of quality

EVIDENCE GUIDE

standards to the selection of specified construction materials.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify building and construction materials specified in the project or contract documentation
- communicate effectively both verbally and in writing with manufacturers and suppliers of materials
- test the materials to maintain quality standards on site
- apply effective sampling and record keeping processes
- use safe handling and materials storage techniques
- comply with organisational and legislative requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view

EVIDENCE GUIDE

2-D CAD drawings, run costing programs and print copies

- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured

EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials include:

- brick or concrete structures, including:
 - cavity brick
 - core filled concrete blocks
 - single skin clay block
 - tilt-up concrete panels
- cladding, including:
 - brick veneer
 - colourbond and zincalume sheeting
 - fibre cement or compressed wood panelling
 - stuccoed stud walls
 - weatherboards
- floor systems, including:
 - bearers and joists
 - brick bases
 - compressed sheet wet area flooring

RANGE STATEMENT

Selection of building materials includes:

- concrete slab floors, including slabs on ground and suspended slabs
- engineered floor Joists
- fitted (cut-in) floors
- platform floor construction
- sheet flooring
- tongue and groove flooring
- timber and timber structures.
- arranging for expert advice as necessary to confirm or refute materials options
- identifying materials from specifications and drawings
- identifying specifications and standards described in contract documents
- selecting and ordering materials that meet those requirements.

Acceptance, safe handling and storage of materials include:

- allocation of space for on-site storage of materials
- confirming products or materials are as ordered and signing off delivery documentation
- ensuring safe unloading and handling of construction materials
- ensuring correct materials are delivered to correct site
- providing for adequate on-site security of materials
- undertaking quality checks within the competence of the individual.

Testing of materials includes:

- arranging external quality tests or inspections and providing results as necessary
- arranging on-site quality and fit for purpose tests for products to be used in construction
- completing appropriate organisational records
- refusing acceptance of substandard or out of specification materials.

Records of tests and testing procedures include:

- distributing copies in accordance with organisational policy
- following up reports that indicate departures from quality or manufacturing requirements
- obtaining appropriate records and reports for review and analysis
- proving advice and information to regulatory

RANGE STATEMENT

- authorities as authorised by the organisation
- taking appropriate remedial action within the scope of individual's authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage the determination of subcontractor requirements.	<p>1.1. Subcontractor resource requirements are assessed on the basis of expected operations and reference to the business plan.</p> <p>1.2. Subcontractor requirements are managed, prioritised and documented on the basis of expected work sequence and volume.</p> <p>1.3. Task analyses are conducted and managed and competences are identified from the nature of the work to be done and organisational structure.</p> <p>1.4. Type and number of subcontractors are determined and a formal subcontractor structure is developed for the project.</p> <p>1.5. Industrial legislation and contract legal matters that impact on operations are researched to clarify workplace obligations and subcontractor rights.</p>
2. Manage the review of subcontractor performance.	<p>2.1. Existing subcontractor areas of expertise are identified or reviewed to build an operational profile for each subcontractor.</p> <p>2.2. Information is gathered and examined on previous performance of existing subcontractors, their work profiles and history.</p> <p>2.3. Reviewing subcontractor performance for the purpose of identifying strengths and weaknesses is undertaken.</p> <p>2.4. Management plan is developed for each subcontractor to enhance their ability to meet contractual obligations.</p>
3. Establish terms and conditions for subcontractor engagement.	<p>3.1. Subcontractor terms of engagement and scope of operations under the contract are developed or reviewed to ensure contract obligations can be met.</p> <p>3.2. Conditions to be met under the terms of engagement for subcontractors are reviewed and periodically reinforced with the subcontractors.</p>
4. Manage the selection and engagement of subcontractors.	<p>4.1. Subcontractor engagement strategies and processes are developed and facilitated to meet organisational timelines and contract dates.</p> <p>4.2. Processes for selection and engagement of subcontractors are managed to ensure that equal opportunity principles apply to all applicants.</p> <p>4.3. Subcontractor short-listing and qualification checking are managed to enable the selection and</p>

ELEMENT	PERFORMANCE CRITERIA
5. Evaluate subcontractor performance and compliance with contract requirements.	engagement of the most appropriate subcontractor.
	4.4. Successful and unsuccessful tenderers are notified about the outcomes of the selection process.
	4.5. Processes for commencement, induction and any required pre-engagement training are managed and implemented.
	5.1. Systems that evaluate subcontractor performance and compliance with contract requirements are developed and managed.
	5.2. Gathering of strategic information about subcontractor performance is managed under terms of confidentiality and security but within known collection parameters.
	5.3. Performance review outcomes are discussed with subcontractors on a confidential and equitable basis.
	5.4. Feedback and appeal systems are introduced and managed to ensure that subcontractors have the opportunity to challenge review outcomes.
	5.5. Remedial or disciplinary action is undertaken against the subcontractor in accordance with organisational policy and operational guidelines where appropriate.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate with subcontractors on all matters regarding selection and management
 - read and interpret:
 - industrial legislation and contract legal matters that impact on operations
 - subcontractor records and information

REQUIRED SKILLS AND KNOWLEDGE

- review tender responses
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
 - correspond with subcontractors
 - develop a management plan
 - record relevant information
- developing and managing subcontract tender and selection processes
- evaluation skills to undertake and manage subcontractor evaluations for the organisation and review subcontractor performance
- managing subcontractor resources in an equitable and non-discriminatory manner
- numeracy skills to apply calculations and estimate timeframes
- organisation and management skills to manage the development of job profiles and competency statements for subcontractor appointments.

Required knowledge

Required knowledge for this unit is:

- contracts and workplace agreements
- industrial relations structures and processes
- industry subcontracting system and industry benchmarks for subcontract personnel
- relevant licensing arrangements
- subcontractor administration and performance management systems.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective selection and management of building and construction contractors for medium rise projects against projected organisational activities and the business plan.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully

EVIDENCE GUIDE

	replicate construction workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none">• identify the subcontractor needs of the organisation based on an evaluation of organisation's projected work load and forward contractual commitments• assess the extent of effective systems introduced to review subcontractor performance and competency• implement an effective and efficient appointments process• implement an effective and efficient management of the system of subcontractor appointments to meet project timeframes• demonstrate remedial or disciplinary action for below standard subcontractor performance.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none">• documentation that should normally be available in either a building or construction office• relevant codes, standards and regulations• office equipment, including calculators, photocopiers and telephone systems• computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies• a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature

EVIDENCE GUIDE

- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to this process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Subcontractor requirements include:

- calculating number of subcontractors required by the hours within the timeframe
- calculating quantum of hours required to perform the work
- determining total hours required for each function and stage of work
- estimating project timeframe from start to finish
- identifying work sequence and nature of job roles.

Reviewing subcontractor performance includes:

- anecdotal evidence, including input from project managers and administrators
- examination of data provided by the subcontractor
- input about subcontractor performance from other organisations
- observation of the subcontractor on other project sites
- using subcontractor performance records from previous associations.

RANGE STATEMENT

Selection and engagement of subcontractors include:

- advising interviewees of the outcome of the selection process
- arranging credit checks to determine subcontractor financial viability
- ensuring selection interviews with subcontractors meet the criteria
- providing invitations to tender for subcontract opportunities
- reviewing tender responses and checking referees
- undertaking contractual arrangements between the organisation and successful subcontractors.

Subcontractor performance and compliance with contract requirements include:

- establishment of performance benchmarks within subcontracts
- participation by subcontractors in project meetings and provision of progress reports
- performance management where performance is sub-standard or inappropriate
- performance monitoring against project timelines and objectives
- regular communication with subcontractors.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set out a T-shaped or L-shaped building on a selected site with minimal profiles.	<p>1.1. Site information and dimensions are identified from site plan and checked against plan drawings.</p> <p>1.2. Survey pegs are measured to ensure correct identification occurred before pilot pegs are positioned.</p> <p>1.3. Profiles pegs are set up on site at a working distance from pilot pegs and parallel to pilot line.</p> <p>1.4. Marks to indicate outside of building or other structural members are made.</p>
2. Prepare and test levelling devices.	<p>2.1. Various components of levelling devices are identified.</p> <p>2.2. Basic tests on levelling device accuracy are performed according to manufacturer specifications.</p> <p>2.3. Effects of maladjustment in levelling devices are identified and recorded according to standard operating procedures.</p>
3. Operate levelling devices.	<p>3.1. Temporary adjustments to set up levelling equipment are carried out in accordance with standard operating procedures.</p> <p>3.2. Horizontal and vertical angles are determined using levelling devices.</p> <p>3.3. Site is set out to specifications using levelling devices.</p>
4. Identify specialised levelling and surveying equipment available on large building projects for various set-out and checking procedures.	<p>4.1. Differences between various types of specialised surveying equipment are researched and recorded.</p> <p>4.2. Survey of each level checked for vertical accuracy of 10mm using two levelling devices is carried out.</p>
5. Compute coordinates and bearings, distances related to grids and general set-out work on large building sites.	<p>5.1. Angular relationship between different bearings (whole circle) is demonstrated.</p> <p>5.2. Bearing and distance between coordinates are calculated.</p> <p>5.3. Coordinates of a point given the bearing and distance from a point with known coordinates are calculated.</p> <p>5.4. Offsets from a coordinated point given the bearing and distance from a point with known coordinates are determined.</p>

ELEMENT

PERFORMANCE CRITERIA

5.5. Information necessary to set out a structure using a site plan is determined.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of design concepts and principles to survey and site set-out
- application of measurements and calculations to survey and site set-out
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - perform survey and levelling procedures with others
 - read and interpret:
 - drawings and specifications
 - state regulatory authority requirement
 - other relevant documentation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- interpretation skills to understand documentation from a wide range of sources, including state regulatory authority requirements
- numeracy skills to apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- application of design principles
- BCA and Australian standards and manufacturer specifications
- building systems and application to survey and site set-out
- level and grade checking used to perform survey control to accuracy criteria
- OHS measures as identified by equipment manufacturers and Australian standards
- relevant legislative requirements, codes and practices
- survey and levelling devices and effect of performance on site
- work drawings and specifications.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by applying survey and site set-out procedures and selection and use of two levelling devices to survey and set out building projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- accurately apply survey and levelling principles relating to performance of site set-out
- comply with OHS and organisational quality procedures and processes
- apply and interpret relevant documentation, codes and legislation
- use levelling devices to survey and set out building projects
- identify typical faults and problems and take necessary action taken to rectify
- identify hazard categories according to Australian standards, BCA and specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation, including design brief

EVIDENCE GUIDE

drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents

- research resources, including systems information and data
- access to relevant legislation, regulations and codes of practice.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a

EVIDENCE GUIDE

combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Levelling equipment includes:

- electronic distance measuring (EDM) equipment
- laser
- optical plummets
- pegs methods
- theodolite.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Comply with the laws relating to establishing and licensing a building or construction contractor.	<p>1.1. Business registration of the organisation is secured in accordance with owner/operator preferences and legal requirements.</p> <p>1.2. Approval of licensing and registration as a contractor/supervisor is sought from appropriate government agency.</p> <p>1.3. Responsibilities of operating a construction business in accordance with legislation are met by the contractor.</p> <p>1.4. Legal documents and records are kept and carefully maintained.</p>
2. Engage personnel for the project.	<p>2.1. Relevant industrial awards are identified for the hiring of staff or labour.</p> <p>2.2. Contracts of employment are determined on a case-by-case basis and the principles and legalities of workplace agreements are implemented.</p> <p>2.3. Equal opportunity principles are applied in all aspects of recruitment and selection.</p> <p>2.4. Procedures for employment termination and redundancy are explained and followed.</p> <p>2.5. Dispute resolution processes are established, documented and implemented where necessary.</p>
3. Administer the regulations relating to OHS, welfare, workers' compensation, noise abatement and working hours.	<p>3.1. OHS and Welfare Act provisions are identified and complied with, on and off the site.</p> <p>3.2. OHS authority is contacted to determine the necessary approvals or permits prior to work commencing.</p> <p>3.3. Provisions of Workers Compensation Act are complied with and the rights and responsibilities of workers are observed to ensure a safe workplace.</p> <p>3.4. Regulations relating to noise abatement and working hours are adhered to.</p>
4. Implement rehabilitation arrangements for employees returning to work.	<p>4.1. Rehabilitation arrangements for employees returning from injury or illness are facilitated and implemented.</p> <p>4.2. Workers returning to work after injury or illness are assisted to regain full employment status as soon as practicable.</p>
5. Comply with taxation and	<p>5.1. Taxation payments are recorded, collected and made in compliance with Australian Taxation Office</p>

ELEMENT	PERFORMANCE CRITERIA
insurance requirements of federal, state and territory legislation.	requirements, including GST obligations. 5.2. Insurance policies are identified to provide appropriate cover for personnel, property and project works. 5.3. Mandatory superannuation provisions are made for employees.
6. Administer all obligations in a conscientious manner and observe fair trading practice.	6.1. Fair trading practice responsibilities are maintained effectively and efficiently. 6.2. Best interests of clients are promoted and undertaken conscientiously in accordance with the agreed contract.
7. Comply with environmental legislation and its intent.	7.1. Renewable materials are used as a primary aim wherever possible over non-renewable materials. 7.2. Low energy materials are used in preference to high energy materials, where practical. 7.3. Processes to ensure compliance with environmental protection legislation are implemented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - liaise with government agencies
 - provide information to employees
 - read and interpret:
 - contracts and regulations
 - industrial awards
 - legislation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- manage compliance with a variety of legal obligations and administer various

REQUIRED SKILLS AND KNOWLEDGE

awards and agreements

- management skills to effectively manage personnel
- numeracy skills to apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- awards and agreements applying to employees and subcontractors
- legislative requirements, including:
 - environmental legislation
 - fair trading legislation
 - taxation and insurance requirements
- licensing and builders' registration requirements
- local authority regulations
- OHS and rehabilitation requirements
- relevant licensing arrangements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective administration of legal obligations of a building or construction contract.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- conform to the legal and financial obligations of the organisation
- establish and maintain good human relations with contracted employees, subcontractors and other stakeholders
- manage organisational taxation and insurance obligations successfully
- effectively advise appropriate authorities and gain the necessary approvals or responses
- promote and work in the best interest of clients.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office

EVIDENCE GUIDE

- relevant codes, standards and regulations
- copies of appropriate awards and workplace agreements
- office equipment, including calculators, photocopiers and telephone systems
- a suitable work area appropriate to the process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate commonly used methods of water storage supply and layouts.	<p>1.1. Water supply, connection and layout are sketched for a residence connected to a town supply or a tank storage supply in accordance with relevant building regulations and standards.</p> <p>1.2. Use of pumps to maintain water levels in storage tanks is documented for single and two-stage pumping.</p> <p>1.3. Limitations of water storage tanks connected for multi-function and single function services are identified and addressed.</p>
2. Evaluate methods of sewerage and drainage disposal and their layouts.	<p>2.1. Sewerage connection and layout are sketched in accordance with relevant building regulations and standards.</p> <p>2.2. Different stack types are assessed with reference to number of fixtures and building type.</p> <p>2.3. Fixture units are identified.</p> <p>2.4. Methods used to connect main drains to local authority sewers are assessed against relevant building standards.</p> <p>2.5. Disposal of sewerage from fixtures situated below the level of the local authority sewer is assessed in accordance with relevant building regulations and standards.</p> <p>2.6. Collection, treatment and disposal of prohibited discharges are monitored for non-domestic buildings.</p>
3. Assess commonly used methods for mechanical ventilation and air distribution and their layout.	<p>3.1. Methods of mechanical ventilation and air distribution are identified and sketched.</p> <p>3.2. Mechanical ventilation and air distribution system design layout is appropriate to the building design and complementary to other services.</p>
4. Evaluate the range of hot water systems.	<p>4.1. Operating principles of various types of hot water systems are evaluated.</p> <p>4.2. Suitable hot water system is selected according to accepted and agreed requirements and specifications.</p>
5. Evaluate effective natural lighting for a range of situations.	<p>5.1. Methods of roof construction used for daylight transmission are identified and outlined in accordance with relevant building regulations and standards.</p> <p>5.2. Methods used in artificial lighting are compared for various service situations in accordance with relevant</p>

ELEMENT

PERFORMANCE CRITERIA

	building regulations and standards.
6. Ensure fire protection standards are met.	<p>6.1. Authorities involved in plan perusal and site inspection for the various building classifications are identified.</p> <p>6.2. Requirements for sprinkler systems and fire hoses for the various building classifications are identified according to legal and regulatory standards.</p> <p>6.3. Fire detector and alarm systems and the application of fire doors are addressed according to legal and regulatory standards.</p> <p>6.4. Extinguishing agents and their applications are identified.</p>
7. Outline the requirements for general electrical and electronic service installation.	<p>7.1. Electrical supply authorities and procedures for connection to site are identified and complied with.</p> <p>7.2. Electrical design and provision for services are implemented in accordance with regulations and Australian standards.</p> <p>7.3. Electronic cabling, type of service, categories of cabling, layout of equipment, safe guards, access for maintenance, repair and extensions are identified and outlined in accordance with regulations and Australian standards.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of design concepts and principles relating to service installations
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - service installation drawings and specifications
 - state regulatory authority requirements
 - use and interpret non-verbal communication

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- written skills to document relevant information
- numeracy skills to apply measurements and calculations relating to service installations.

Required knowledge

Required knowledge for this unit is:

- Australian standards and manufacturer specifications
- design concepts and principles relating to service installations
- hazards in relation to devices and systems used according to Australian standards and other codes or standard operating procedures
- installation methods
- nature of materials and effect on performance relating to service installations
- relevant licensing arrangements
- service installation terminology and definitions
- work drawings and specifications.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective performance and application of principles relating to service drawings, specifications and methods of determining requirements for services to a range of medium rise and wide span commercial constructions.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS and organisational quality procedures and processes within the context of this unit of competency
- apply and interpret relevant documentation, codes and legislation relating to performance of service installations
- accurately apply principles relating to performance of service installations
- identify typical faults and problems and take necessary action taken to rectify
- identify service installations and hazard categories according to Australian standards, Building Code of Australia (BCA) and job specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including systems information and data
- access to relevant legislation, regulations and codes of practice.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Water supply includes:

- single and two-stage pumping for multi-function and single function
- tank storage supply relative to the public water supply and reservoir heights
- town supply.

Sewerage connection and layout include:

- graded or vertical discharge pipes
- inspection shafts and overflow relief gullies (ORGs)
- local authority sewerage drainage system
- septic or biochemical treatment unit.

Methods of mechanical ventilation include:

- air conditioning applications
- air distribution, including mechanical ventilation requirements for enclosed car parks
- air filtration, including air filters, ducting and

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish site communication processes.	<p>1.1. Site communication processes are established and managed to comply with organisational quality management requirements.</p> <p>1.2. Dates and times of site meetings are organised and relevant personnel are notified.</p>
2. Establish and review OHS, welfare and risk management procedures.	<p>2.1. Organisational requirements for on-site first aid facilities are identified, established and reviewed in accordance with relevant OHS, welfare and risk management legislation and regulations.</p> <p>2.2. Plant and equipment usage policy and practices that require certificated operators are established and managed to comply with risk management procedures.</p> <p>2.3. Hazard management procedures are established and implemented, and precautionary measures are instigated.</p> <p>2.4. Responsibilities for safe handling of materials are addressed through organisational policy and procedures.</p> <p>2.5. Construction safety procedures are established and managed in accordance with OHS, welfare and risk management requirements and key personnel are identified.</p> <p>2.6. Safety induction procedures are established and managed in the event of dangerous incidents, injuries and accidents.</p> <p>2.7. Safety reporting processes and documentation are developed and implemented in accordance with organisational and legislative requirements.</p>
3. Manage supply of materials and installation of equipment.	<p>3.1. Process for placing orders for materials is established and managed to ensure the timely and cost effective supply of materials and installation of equipment.</p> <p>3.2. Procedures are established, managed and monitored for equipment hire and maintenance.</p>
4. Manage on-site operations.	<p>4.1. On-site operations are managed to implement and maintain a safe and cost-effective work environment in accordance with appropriate schedules and the contract.</p> <p>4.2. Subcontractor operations are managed and coordinated to ensure compliance with company obligations.</p>

ELEMENT**PERFORMANCE CRITERIA**

	<p>4.3. System to deal with problems and delays affecting performance is established and managed.</p> <p>4.4. Processes to manage industrial relations are established in accordance with company policy and regulatory guidelines.</p> <p>4.5. Revisions are made to project schedules when required and variations are documented to comply with quality management procedures.</p> <p>4.6. Project quality management is effectively implemented to provide for a continuous improvement environment in which safety procedures are monitored continuously, reports are analysed and procedures reviewed as required.</p> <p>4.7. Contact with statutory authorities and parties to the contract are facilitated when variations are made to approved contract drawings and specifications.</p> <p>4.8. Multi-site management plans are implemented in accordance with organisational policy and site conditions.</p>
5. Manage the processing of progress claims and payments.	<p>5.1. Progress claims are managed and approved in accordance with contract requirements.</p> <p>5.2. Project expenditure is managed and claims against scheduled projected costs are checked for accuracy.</p>

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - liaise with subcontractors, staff and clients, as well as with local or regulatory authorities on matters relating to site conditions or approvals
 - notify personnel of meetings
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- plans, specifications and drawings
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
 - complete site communication requirements
 - record and report relevant information
- establishing, implementing and maintaining a safe working environment
- financial management skills to ensure that progress payments are made on time and on the basis of work successfully completed
- management skills in order to manage personnel and resources to effectively achieve contract or project objectives
- negotiation skills to enable effective negotiation on industrial relations issues
- numeracy skills to apply calculations
- problem solving skills to effectively resolve problems relating to construction methodologies or practices.

Required knowledge

Required knowledge for this unit is:

- environmental management procedures to ensure compliance with regulatory requirements
- hazard management processes
- nature and style of building and construction industry contracts
- OHS frameworks and obligations under federal, state or territory legislation and regulations
- quality management processes and procedures as they apply to the building and construction industry
- relevant licensing arrangements
- relevant state or territory building and construction codes, standards and regulations
- risk management processes and practices
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the effective management of construction work or projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- effectively and efficiently procure resources
- communicate effectively both verbally and in writing with suppliers and subcontractors
- complete documentation to organisational standards
- deal with variations to contracts
- implement effective processes for maintaining site safety and managing risks.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems

EVIDENCE GUIDE

- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Site communication includes:

- emails and faxes
- face-to-face verbal communication
- mobile and fixed telephone contact
- site diaries
- written reports and memoranda.

OHS, welfare and risk management includes:

- adherence to organisational policies and procedures for:
 - duty of care
 - hazard identification and rectification
 - safe work practices
- compliance with federal, state and territory legislation and regulatory requirements
- rehabilitation of injured workers
- safe handling of materials and equipment.

Supply of materials and

- concrete and pre-formed concrete

RANGE STATEMENT

- installation of equipment* include:
- electrical cabling
 - fire suppression systems
 - lifting equipment
 - plumbing and gas piping systems
 - raw construction materials, such as sand, aggregate, timber and cement
 - sarking, insulation, air conditioning ducting and roofing
 - temporary lighting and power outlets
 - waste water disposal systems.
- On-site operations* include:
- allocation and management of human resources
 - communication with regulatory authorities and compliance with their requirements
 - dispersal and programming of heavy equipment, including wheeled and tracked earthmoving vehicles
 - dispute resolution
 - maintenance of environmental controls and obligations
 - managing expenditure
 - placing orders for supplies or equipment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare an environmental management plan for the organisation.	<p>1.1. Current shifts in environmental legislation or regulations are analysed in relation to their potential impact on the organisation.</p> <p>1.2. Best practice and benchmarking methods are used to determine current environmental management performance.</p> <p>1.3. Project environmental obligations and management requirements are analysed.</p> <p>1.4. Environmental management plan is prepared on the basis of available information.</p> <p>1.5. Senior management advice concerning implementation of plan is sought as required.</p>
2. Manage implementation of environmental management plan.	<p>2.1. Staff and contractors are informed of their obligations in implementing the environmental planning process and are monitored for compliance.</p> <p>2.2. Environmental data gathering systems are evaluated, changes are made as necessary, and system is managed for maximum efficiency and accuracy.</p> <p>2.3. New projects are evaluated to determine their impact on existing environmental planning obligations.</p> <p>2.4. Local authorities and regulatory bodies are contacted where the plan requires ongoing external monitoring or overseeing.</p> <p>2.5. Information concerning updates to the environmental management plan is communicated to staff and stakeholders.</p> <p>2.6. Environmental management plan evaluation strategy is developed and managed to ensure that the organisation remains on track in the event of changing circumstances.</p>
3. Monitor environmental management plan to ensure that it meets organisational legal obligations.	<p>3.1. Organisational feedback systems are implemented and managed to assist conformance and management of plan.</p> <p>3.2. Regular feedback is obtained concerning the operations of the environmental management plan to assist the organisation to meet its legal obligations.</p> <p>3.3. Where necessary, legally required auditing practices to ensure probity and accountability towards legislative requirements are managed and maintained.</p> <p>3.4. Contact with contractors is maintained and their</p>

ELEMENT

PERFORMANCE CRITERIA

	compliance with environmental management requirements is monitored.
	3.5. Emergency and remediation response strategies are implemented as necessary to assist compliance with the environmental management plan.
4. Evaluate and recommend changes to environmental management plan.	4.1. Environmental management plan is reviewed to identify areas that need improvement, and action is taken.
	4.2. Measures are introduced to assist staff to suggest more efficient procedures and innovations to improve the performance of the environmental management plan.
	4.3. Plans are redrafted to include improvements or address deficiencies found during the monitoring.
	4.4. Revised plans are submitted for endorsement by senior management and procedures are changed accordingly.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analytical skills, including the ability to assess variations in environmental management performance and identify reasons for those variations
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - liaise with subcontractors, staff and clients, as well as with local or regulatory authorities on matters relating to site conditions or approvals
 - notify personnel of meetings
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- written skills to:
 - complete site communication requirements
 - record and report relevant information
- numeracy skills to apply calculations
- evaluation skills to evaluate previous environmental management performance and identify strengths and weaknesses of the process
- management skills, including the ability to develop and implement environmental management plans that improve organisational compliance with environmental obligations and responsibilities
- problem solving skills, including the ability to identify environmental management issues and address these before they become contentious or dangerous
- staff management skills to effectively manage personnel in the administration of organisational environmental management systems.

Required knowledge

Required knowledge for this unit is:

- benchmarking and the establishment of environmental goals
- current trends in environmental management and controls
- environmental management practices and methodologies
- legal and regulatory obligations implicit in environmental requirements
- penalties for various breaches of environmental obligations and conformance requirements
- relevant licensing arrangements
- statistical analysis methodologies.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective management of building or construction environmental management practices and processes in medium rise building or construction projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop effective environmental management action plans and strategies
- determine the extent of effective environmental management advice provided to the organisation
- assess the effectiveness and efficiency of the environmental management recording and reporting systems and preparation of documentation to organisational standards
- assess variations in environmental management performance
- implement an effective process to manage improvements to organisational environmental management practices and to reduce the risk of non-conformance
- comply with relevant legislative and regulatory requirements
- research relevant current trends in environmental management and controls.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Best practice and benchmarking methods include:

- comparisons of current, previously established and external environmental management plans
- costs associated with environmental

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare an energy conservation and management plan for the organisation.	<p>1.1. Organisational policy and operational guidelines for energy conservation and management are reviewed.</p> <p>1.2. Best practice and benchmarking methods are used to determine current energy conservation and management performance.</p> <p>1.3. Opportunities for energy conservation and savings are identified within the immediate work area and on project sites.</p> <p>1.4. Staff and contractors are asked for ideas and suggestions concerning organisational energy conservation.</p> <p>1.5. Energy conservation and management plan is prepared on the basis of available information.</p> <p>1.6. Advice is sought from senior management, as required, concerning implementation of the plan.</p>
2. Manage the energy conservation and management plan.	<p>2.1. Staff and contractors are informed of their obligations in implementing the energy conservation and management plan and are monitored for compliance.</p> <p>2.2. Energy data-gathering systems are evaluated, changes are made as necessary, and system is managed for maximum efficiency and accuracy.</p> <p>2.3. New projects are evaluated to determine their impact on existing energy conservation planning obligations.</p> <p>2.4. Participation by contractors in the achievement of plan's objectives is encouraged and monitored.</p> <p>2.5. Difficulties, obstructions or factors that impact on the achievement of the energy conservation plan are identified and measures are taken to address them.</p> <p>2.6. Information concerning updates to the plan is communicated to staff and stakeholders.</p> <p>2.7. Environmental management plan evaluation strategy is developed and managed to ensure that organisational objectives are achieved.</p>
3. Monitor the energy conservation and management plan to ensure organisational objectives are being met.	<p>3.1. Organisational feedback systems are implemented and managed to assist with compliance with and management of the plan.</p> <p>3.2. Regular feedback is obtained from staff and contractors concerning the efficiency of the operations of the energy conservation and management plan.</p>

ELEMENT

PERFORMANCE CRITERIA

4. Evaluate and recommend changes to the energy conservation and management plan.	3.3. Energy savings are identified and promoted throughout the organisation.
	3.4. Energy wastage is reported and strategies are implemented as necessary to assist with compliance with the energy management plan.
	4.1. Energy conservation and management plan is reviewed to identify areas needing improvement and action is taken.
	4.2. Measures are introduced to encourage staff to suggest more efficient procedures and innovations to improve the performance of the energy conservation and management plan.
	4.3. Plans are redrafted to include improvements or address deficiencies identified during monitoring.
	4.4. Revised plans are submitted to senior management for endorsement and procedures are amended accordingly.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analytical skills, including the ability to assess variations in energy management performance and identifying reasons for those variations
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - liaise with local authorities, regulatory agencies and clients
 - provide information
 - read and interpret documents from a variety of sources
 - seek advice and feedback
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to prepare and revise an energy conservation and management plan

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to carry out statistical analysis and apply calculations
- evaluation skills to evaluate previous energy conservation and management performance and identify strengths and weaknesses of the process
- management skills, including the ability to develop and implement energy conservation and management plans that improve organisational achievements in regard to energy saving objectives
- problem solving skills, including the ability to identify energy conservation and management issues and address these before they become contentious
- staff management skills in order to effectively manage personnel in the administration of organisational energy conservation and management systems.

Required knowledge

Required knowledge for this unit is:

- benchmarking and the establishment of energy conservation goals
- current trends and factors in energy conservation and management
- energy management practices and methodologies
- organisational policies and practices supporting energy conservation and management
- relevant legislative and regulatory requirements and standards
- relevant licensing arrangements
- statistical analysis methodologies.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective management of the application and monitoring of energy conservation and management practices and processes on medium rise building and construction projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop effective energy conservation and management action plans and strategies
- assess extent of effective energy management advice provided to the organisation
- determine effectiveness and efficiency of the energy conservation and management recording and reporting systems and preparation of documentation to organisational standards
- implement effective processes to manage improvements to organisational energy conservation and management practices and reduce the non-conforming practices
- research current trends in energy conservation and management
- conform to relevant legislative, regulatory and organisational requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Best practice and benchmarking methods include:

- comparisons of current, previously established and external energy conservation and management plans
- costs associated with optimum environmental conformance
- formally or informally prepared performance

RANGE STATEMENT

	indicators against energy management objectives
	<ul style="list-style-type: none">• performance measurements against industry, local authority, regulatory or world standards• specific energy targets, including electrical power usage and fuel usage, heat loss and thermal efficiency• statistical record keeping, using at start, ongoing and at conclusion measurements.• formally or informally gathered information concerning energy issues and requirements• key people to be consulted or included in decision making• specific forms of activity to be pursued or which are subject to monitoring or evaluation• timeframes and key energy conservation benchmarks to be achieved.
<i>Energy conservation and management plan</i> includes:	
<i>Energy data-gathering systems</i> include:	<ul style="list-style-type: none">• formal and informal reports from employees and contractors• reports from supply organisations• scheduled energy conservation management meetings and briefings• conformance reporting on achievement of milestones or performance targets• statistical and analytical data in support of energy management objectives.
<i>Feedback system</i> includes:	<ul style="list-style-type: none">• feedback from supply authorities• formal and informal information gathering from employees and contractors• specifically documented processes using formal reporting arrangements• spot checks on aspects of the energy management process.

Functional area

CPCCBC5013A Develop professional technical and legal reports on building and construction projects

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to develop professional technical and legal reports on buildings and commercial construction projects.

The unit requires knowledge of relevant legislation, codes, standards and regulations, contract documentation and construction planning and practices, as well as the ability to communicate effectively.

Application of the Unit

Application of the unit

This unit of competency supports the needs of builders, senior managers, building consultants and other construction industry personnel responsible for developing professional technical and legal reports on building and commercial construction projects.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform pre-purchase property inspections and assessments.	<p>1.1. Building is inspected and <i>defects</i> are identified and documented in the agreed level of detail requested by client.</p> <p>1.2. Engineers' certificates are obtained according to the state of repair or number and type of defects.</p> <p>1.3. Rectification costs are estimated to degree of accuracy required or recommendations are made to demolish structure.</p> <p>1.4. At the direction of government agencies, financial institutions or investment houses <i>feasibility studies</i> are conducted.</p>
2. Advise and coordinate the design process and planning approval.	<p>2.1. Project brief is prepared on behalf of client.</p> <p>2.2. Site conditions and structure are assessed.</p> <p>2.3. Preliminary design drawings are produced or obtained and probable costs are estimated.</p> <p>2.4. Process is coordinated through which final design documentation will be completed and approved by client.</p> <p>2.5. Documentation is submitted to obtain authorised <i>planning approval</i> for the project.</p> <p>2.6. Planning appeals are prepared and presented to the authority if necessary.</p>
3. Review building or construction works.	<p>3.1. Contract documentation is checked to ensure client interests are protected.</p> <p>3.2. <i>Building or construction works</i> are regularly monitored and reports are provided on the progress and quality of work.</p> <p>3.3. Variations are checked and referred back to contractors as required.</p> <p>3.4. Progress claims are checked and approved.</p>
4. Provide advice on dispute resolution.	<p>4.1. Disputes are negotiated on behalf of the client.</p> <p>4.2. Impartial advice is provided to the parties involved in a building related dispute for equitable settlement.</p> <p>4.3. Referrals are provided for expert legal interpretation of contractual matters.</p> <p>4.4. Expert testimony and evidence are provided in the event of disputes going to court.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - negotiate disputes
 - provide advice and referrals
 - read and interpret documents from a variety of sources
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- written skills to:
 - document defects
 - prepare relevant documentation
- evaluation skills, including the ability to review and evaluate documentation and processes and recommend changes or improvements
- numeracy skills to apply calculations
- planning skills to ensure effective planning of projects, processes and strategies that maximise the efficiency and cost-effectiveness of building or construction contracts
- supervisor skills to ensure staff achieve planning outcomes.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- building and construction industry subcontracting system
- building and construction practices in on and off-site management
- construction planning process
- contract documentation, quantities establishment, rates and costs related to payments and claims
- human resource principles and practices
- relevant licensing arrangements
- relevant state or territory building and construction codes, standards and regulations
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective development of technical and legal reports for construction projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- effectively translate contract requirements into feasibility studies and advice on building, site use, plans and processes
- demonstrate quality construction planning processes and effective outputs
- develop strategies that maximise the effectiveness of resources
- advise and coordinate the design process and obtain planning approval
- oversee building or construction works to effect contractual outcomes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office

EVIDENCE GUIDE

- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturer's product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Defects are identified through property inspections that include:

- adjoining properties
- confirmation of boundaries
- on-site inspections of buildings, structures or features
- site access and egress
- topographical and geological surveys.
- include information relating to:
 - architectural or engineering practicalities
 - availability and quantum of finance
 - availability of services and conditions

Feasibility studies:

RANGE STATEMENT

Co-requisite units

Co-requisite units Nil

Functional area

Functional area

CPCCBC5014A Conduct asbestos assessment associated with removal

Modification History

New to CPC08

Replaces unit CPCCBC4023A Plan and undertake site inspection and assessment of asbestos products and materials

Not equivalent

Unit Descriptor

This unit of competency specifies the outcomes required for assessors to visually inspect and use a range of measuring devices to undertake the monitoring of airborne asbestos fibres in the workplace as an integral part of identifying hazards, assessing risks, monitoring the effectiveness of controls, and ensuring that the workplace is free of asbestos fibres prior to reoccupation.

The unit includes the planning of the monitoring process, the selection and use of processes and air-monitoring equipment, the conduct of the assessment process, and the proper handling and interpretation of results.

Asbestos assessment and air monitoring are required during all friable (Class A) asbestos removal and for non-friable asbestos removal where a risk assessment indicates that airborne asbestos fibres may result from the removal activity.

Application of the Unit

Site location for work may be either domestic or commercial, and may be a demolition site, a new work site or an existing structure being renovated, extended, restored or maintained.

Project sites may be construction sites and may also include ships, soils and fences.

Licensing/Regulatory Information

Occupational licenses are required nationally.

Work must be completed according to relevant legislative, code of practice, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures. Testing must conform to National Association of Testing Authorities (NATA) or other accredited laboratory requirements and standards.

Regulatory mechanisms apply to this unit. Candidates are advised to check for regulatory requirements.

Pre-Requisites

CPCCOHS1001A Work safely in the construction industry

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|--|-----|--|
| 1 | Plan for assessment process of asbestos removal. | 1.1 | Scope, timelines and budget for the project are negotiated with the client and asbestos removalist or supervisor. |
| | | 1.2 | <i>Type of asbestos containing material</i> (ACM), its location, friability and condition are identified by reference to the asbestos register and consultation with workplace personnel and client. |
| | | 1.3 | <i>Legislation, regulations, code of practice and standards</i> are researched and confirmed to inform the planning process, identify risk and ensure a compliant and <i>independent assessment</i> process. |
| | | 1.4 | Required reports are identified and undertaken in a timely manner and according to the requirements of the specific audience and the legislation, regulations, code of practice and standards. |
| | | 1.5 | <i>Characteristics</i> of and health impacts from exposure to ACM and the rationale for air-monitoring processes are researched and confirmed. |
| | | 1.6 | <i>Accreditation framework</i> and roles and responsibilities |

- of personnel involved are identified and understood.
- 1.7 Processes used in the **compliant removal** of friable and non-friable asbestos using enclosures and leak testing, decontamination units, airline respirators and negative pressure equipment are identified and understood.
 - 1.8 **Work-site documentation** is collected, reviewed and used to inform the planning process.
 - 1.9 **Areas within the work site** where measurements are to be taken are defined.
 - 1.10 Measuring equipment specific to the hazard and condition of the ACM, the environment, the activities being carried out and level of risk is selected.
 - 1.11 Limits of own expertise and available equipment are recognised and expert advice and equipment sought as appropriate.
 - 1.12 Equipment, including **personal protective equipment** (PPE), required to carry out the job is identified and sourced.
 - 1.13 Planning is documented and confirmed with the client, asbestos removalist and supervisor.
- 2 Prepare to collect site measurements and other data.
- 2.1 Arrangements are made with work site to collect information and data, including advising those involved of requirements to facilitate the measurement and monitoring process.
 - 2.2 Site visit is conducted and a visual inspection is completed according to legislation, regulations, code of practice and standards.
 - 2.3 Effective **air monitor locations** for each asbestos removal task are identified and recorded.
 - 2.4 Sampling process is defined according to the standards specified for **membrane filter method** for estimating airborne asbestos fibres and in consultation with relevant site personnel.
 - 2.5 Sampling schedule and **strategy** are defined after site inspection and in consultation with asbestos removalist and work site manager or supervisor.

- 2.6 Air-monitoring program consisting of locations and schedule is developed and provided to asbestos removalist and supervisor.
 - 2.7 **Operability** of monitoring equipment is checked according to manufacturer specifications, organisational procedures and professional standards.
- 3 Use measuring devices to collect site information and data.
 - 3.1 Air-monitoring **equipment** is selected, **calibration records are checked**, equipment is calibrated and appropriate flow rate is determined according to accredited laboratory requirements and professional standards.
 - 3.2 **Equipment** is used and maintained correctly to accurately collect data.
 - 3.3 Workplace safety procedures are followed during the collection process.
 - 3.4 Required volumes of samples are collected with minimum damage and disruption to the fabric, according to the membrane filter method, labelled and the filter holders replaced according to the sampling schedule and plan.
 - 3.5 **Information and data are collected** and results recorded noting where samples were taken and ensuring compliance with chain of custody protocols.
 - 3.6 Processes are put into place and checks made to ensure all data is collected under the control of a NATA or other accredited laboratory and according to industry standards and legislative requirements.
 - 3.7 Equipment is dismantled, decontaminated and parts or equipment disposed of according to regulations, code of practice and workplace procedures.
 - 3.8 Equipment is stored correctly or made ready for re-use.
 - 3.9 Sampling equipment is serviced and maintained according to professional standards and manufacturer specifications.

- | | | | |
|---|--|-----|---|
| 4 | Complete the monitoring process. | 4.1 | Filter is labelled and prepared for despatch to the laboratory, ensuring correct handling procedures for filters and chain of custody requirements. |
| | | 4.2 | Confirmation of the exact nature of fibres is sought where necessary. |
| | | 4.3 | Samples are retained and stored in labelled containers. |
| | | 4.4 | Site set-up, removal, breakdown and decontamination procedures are overseen according to legislative and code of practice requirements. |
| | | 4.5 | Documentation and processes to ensure the compliant transportation of samples are implemented. |
| 5 | Evaluate and document results of monitoring process according to accredited laboratory requirements. | 5.1 | Results received from the NATA or other accredited laboratory are interpreted and evaluated against the recognised standard. |
| | | 5.2 | Further calculations are performed as required on the technical data received from the NATA or other accredited laboratory. |
| | | 5.3 | Outcomes from the technical analysis are documented. |
| | | 5.4 | Concise, logical and accurate report is prepared that addresses regulatory requirements and is in the form required by audience . |
| | | 5.5 | Work site is visually inspected to ensure compliance with procedures prior to issuing a clearance certificate. |
| | | 5.6 | Clearance certificate is completed according to legislative, regulatory and code of practice requirements. |
| | | 5.7 | Recommendations are made regarding exposure and control monitoring processes. |
| | | 5.8 | Results and records are retained and stored in a readily retrievable format according to regulatory requirements and standards. |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication, and appropriate level of language skills, to:
 - determine requirements
 - prepare documentation (including air-monitoring report) that is accurate, clear and complete
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - liaise with related professionals, including facility managers, building owners, building surveyors and testing authorities
 - manage conflict between internal and external stakeholders
 - read and interpret:
 - complex testing results and reports from NATA or other accredited laboratories
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
- initiative and enterprise skills to identify and report faults in tools, equipment and materials
- planning and organising skills to plan and set out work
- teamwork skills to:
 - coordinate own work
 - liaise with workplaces
 - supervise the work of others
 - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- self-management skills to:
 - work independently and respond effectively to timelines, deadlines and complex work requirements
 - check and evaluate the asbestos removal area according to the safe work method
 - use, fit and maintain PPE, decontamination equipment, hand and power tools safely
 - apply general WHS requirements for work in the construction industry
 - apply safe work methods for the removal of testing samples of friable and non-friable asbestos
 - apply inspection, sample collection, testing, evaluation and reporting techniques and protocols that comply with NATA and other accredited laboratory requirements and

professional standards

- apply chain of custody protocols that comply with NATA and other accredited laboratory requirements and professional standards
- follow correct decontamination procedures

Required knowledge

- range of materials manufactured using asbestos, the type and characteristics of asbestos used in each material, and the usual applications associated with the material
- methods and purpose for assessing hazards relating to friable ACM, together with an understanding of:
 - health effects caused by exposure to ACM and requirement for safe handling and removal
 - health impacts on the community and requirement for safe handling and disposal
- requirements of current legislation and standards relating to asbestos safety, the preparation of an asbestos removal control plan (ARCP), and issuance of air-monitoring clearance certificates and related documentation, including:
 - understanding the trigger points for stopping work
 - detailed knowledge of the membrane filter method
 - detailed understanding of the clearance certificate
- rationale for, and principles underpinning, the ARCP, air monitoring and related legislation
- requirements for professional indemnity and other insurances required by legislation and to mitigate business risk
- air-monitoring procedures and testing requirements, including interpretation of results
- asbestos removal methodologies and work practices for both friable and non-friable asbestos
- general WHS procedures for construction work
- health hazards associated with friable ACM and circumstances that may change the nature of ACM from non-friable to friable, such as:
 - weathering
 - wear and tear
 - application of tools and equipment
 - accidental damage
- safe work methods for the removal of friable and non-friable asbestos
- hazards associated with using enclosures and removing friable and non-friable asbestos
- general construction terminology
- handling requirements of differing types of asbestos materials
- work site and work area procedures
- job safety analysis (JSA) and safe work method statements (SWMS) if required for construction
- safety data sheets (SDS)
- materials storage and hazardous waste management
- plans, drawings and specifications, asbestos registers and register amendments

- quality requirements relating to asbestos assessment associated with removal
- risk assessment processes and contingency planning relating to asbestos assessment associated with removal
- scientific techniques for measuring, testing and evaluating air-monitoring results and reports, including:
 - principles of fibre counting
 - analysis of bulk samples
- techniques associated with containing and removing asbestos, including:
 - use of large and small-scale enclosures for different sites
 - use of negative pressure exhaust units
 - encapsulation methods
 - use of decontamination unit
- testing methodologies (in particular air monitoring) and protocols associated with the sampling process, handling, gathering and transport of ACM
- types, characteristics, uses and limitations of plant and equipment involved in enclosing and removing asbestos
- workplace and equipment safety requirements
- documentation required for clearance inspections following application of rigorous professional assessment and using specified wording defined in regulations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person should demonstrate the ability to:</p> <ul style="list-style-type: none"> • plan for the asbestos removal assessment process by ensuring access to required documentation and consultation with the client and workplace • interpret and apply the requirements of relevant legislation, regulations, codes of practice and standards to ensure the safe and correct assessment of the removal of ACM • demonstrate understanding of the scientific and technical principles that underpin the ACM removal assessment process • undertake preparations for collecting samples, including identification of sampling areas, the sampling process, sampling schedule, air-monitoring plan and strategy • collect samples from site and handle in a manner that ensures the integrity of the sample, including use of protocols for the chain of custody • prepare samples for analysis and transporting to a NATA or other accredited laboratory • interpret and analyse laboratory results • conduct site inspections, prepare advice to clients and provide clearance certification.
Context of and specific resources for assessment	<p>This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • an induction procedure and requirement • realistic tasks or simulated tasks covering the mandatory task requirements • relevant specifications and work instructions • tools and equipment appropriate to applying safe work

	<p>practices</p> <ul style="list-style-type: none"> • support materials appropriate to activity • workplace instructions relating to safe work practices and addressing hazards and emergencies • research resources, including industry-related systems information • safety data sheets. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments. <p>Validity and sufficiency of evidence requires that:</p> <ul style="list-style-type: none"> • competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace • where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge • all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence. <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Type of asbestos containing materials</i> (both friable and non-friable) may include:</p> <p>Note:</p> <ul style="list-style-type: none"> • Non-friable asbestos is also known as bonded asbestos • ACM notionally listed as non-friable may become friable due to weathering or damage 	<ul style="list-style-type: none"> • acoustic plaster soundproofing • adhesives and glues • asbestos cement • asbestos cement moulded guttering • asbestos cement sheets • asbestos tiles • bitumastic felts and materials • compressed asbestos cement panels • floor vinyl covering • gaskets • mortar • pipe lagging • woven textiles, ropes, tapes and braids • decorative coatings • resinous backing board • sealant mastic • sprayed on fireproofing, soundproofing and thermal insulation • tape • thermal insulation.
<p><i>Legislation, regulations, code of practice and standards</i> may include:</p>	<ul style="list-style-type: none"> • asbestos WHS legislation, regulations and codes of practice, including those relating to asbestos fibre hazards • exposure standards for atmospheric contaminants in occupational environments • guidance material, such as guidance notes, guides, fact sheets, model regulations and technical reports that provide practical guidance and direction for hazard control • national Safe Work Australia codes • Australian standards • biological exposure indices.
<p><i>Independent assessment</i> is a:</p>	<ul style="list-style-type: none"> • requirement that is achieved by the licensed asbestos removalist and asbestos assessor being contracted independently to the client or project manager in order to avoid conflicts of interest.

<i>Characteristic</i> and health impacts of exposure to ACM include:	<ul style="list-style-type: none"> • range of diseases • how it is absorbed into the body • how it affects specific parts of the body, such as extent of damage to tissue • dose factors relating to concentration and time.
<i>Accreditation framework</i> must include:	<ul style="list-style-type: none"> • role of NATA and other accredited laboratories • accreditation processes • accreditation status of the assessor • requirements for sampling, testing and reporting for planning purposes • role relationships with and of the accredited assessor.
<i>Compliant removal</i> of asbestos by specialist removalists requires application of methodologies and processes, including:	<ul style="list-style-type: none"> • decontamination of: <ul style="list-style-type: none"> • worker • tools and equipment • work area and work site • installation, use and disassembly of decontamination units • leak test enclosures • use, maintenance and construction of enclosures • use of: <ul style="list-style-type: none"> • ARCP • negative air extraction units • PPE.
<i>Work-site documentation</i> may include:	<ul style="list-style-type: none"> • ARCP • building plans and specifications • building surveys.
<i>Areas within the work site</i> where measurements are to be collected are determined by factors, including:	<ul style="list-style-type: none"> • area or space available • location of removal work area or work site • movements of people and equipment • number of persons occupying area • physical features of equipment, such as emitting sources • tasks or activities being undertaken • type, quantity and location of asbestos in buildings and other sites • waste disposal pathways.
<i>Personal protective equipment</i> used in the monitoring process may include:	<ul style="list-style-type: none"> • protective clothing, such as: <ul style="list-style-type: none"> • disposable coveralls with fitted hood and cuffs • safety footwear (pull-on, not lace-up) • disposable or protective gloves • respiratory protection class appropriate to the type of asbestos to be removed, which may be P1, P2 or P3 • correct face fitting and use of respiratory protective equipment

	<ul style="list-style-type: none"> • spare sets of PPE.
<i>Air monitor locations</i> may include:	<ul style="list-style-type: none"> • before asbestos removal activities inside asbestos removal areas • during asbestos removal activities: <ul style="list-style-type: none"> • areas adjacent to and above and below asbestos removal site • areas of high occupancy in the locality • for removal of friable asbestos: <ul style="list-style-type: none"> • area near (but not directly behind) negative air exhaust • clean decontamination area • area where underclothes are laundered • after asbestos removal and final cleaning inside the contained work area and work site.
<i>Membrane filter method</i> must conform to the:	<ul style="list-style-type: none"> • requirements of the current edition of the NOHSC Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres.
<i>Strategy</i> for sampling may include consideration of:	<ul style="list-style-type: none"> • accessibility and other practical considerations • bulk sampling analysis • fibre counting • frequency of exposure • location of nearby sensitive receptors • size of the workforce (i.e. individual worker or groups of workers) • work shift times.
<i>Operability</i> of equipment checks may include:	<ul style="list-style-type: none"> • battery serviceability • accuracy of calibrated devices • availability of appropriate attachments, leads, filters, etc. • pump fault lights • rejection criteria for flow rate fluctuations • pump back pressure tests • ensuring equipment is NATA or other accredited laboratory tested and certified, with certificate of currency as appropriate.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • air-monitoring stands • air monitors • battery charges • field sheets • filter cassettes • rotameters • screwdrivers • stopwatches • tubing.

Calibration records are checked for equipment, including:	<ul style="list-style-type: none"> • pumps • rotameters • stopwatches.
Equipment:	<ul style="list-style-type: none"> • is used according to manufacturer specification and professional guidelines • entails processes that include checking the time and flow rate at the start and end of the sample collection period.
Information and data are collected and may include:	<ul style="list-style-type: none"> • conditions, such as activities and number of people present when measurements were made • date, time and duration of collection • locations where information and data were collected • readouts and measurements taken • required field blanks • sampling method, such as grab, longitudinal or continuous • specifications of equipment used.
Report containing required information and data may be required for or contain:	<ul style="list-style-type: none"> • exposure monitoring for the purpose of determining the PPE required • control and clearance air-monitoring report • where, when and why measurements were taken • sampling process: <ul style="list-style-type: none"> • how measurements were taken • specifications of equipment used • locations where samples were taken • conditions at time of sampling, including whether the sampling period represented normal operating conditions • table of results • interpretation and discussion of results • evaluation of results with reference to appropriate standards • completion of the clearance certificate • areas not accessed.
Audience for the report may include:	<ul style="list-style-type: none"> • client • NATA or other accredited laboratory staff • neighbours • occupiers of site • owners and managers • principal/managing contractors • removalists • supervisors • WHS committee or WHS representatives • WHS regulatory bodies.

CPCCBC5018A Apply structural principles to the construction of medium rise buildings

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency specifies the outcomes required to apply structural principles to the building of medium rise buildings. The design and construction of medium rise buildings require the input of a range of skilled professionals, including architects and engineers. The building and construction professional plays a significant role within this project team and requires the ability to communicate effectively with building design professionals, and develop sound and safe practices in relation to structural procedures on site.
------------------------	--

Application of the Unit

Application of the unit	This unit of competency supports builders, project managers and related construction industry professionals responsible for ensuring the structural integrity of materials as well as building and construction work so that site safety and quality control measures are maintained during residential and commercial projects.

-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply structural principles to planning the erection or demolition of a structure.	<p>1.1. Main <i>structural principles</i> that apply to the erection of <i>medium rise buildings</i> are identified.</p> <p>1.2. Performance characteristics of the structural elements, including <i>materials</i> identified in the building's plan, are identified, analysed and applied to the planning of the construction work.</p> <p>1.3. Demolition of existing structures is undertaken in accordance with legislative and planning requirements and safe work practices.</p>
2. Coordinate and manage site and job set-up assessment.	<p>2.1. Processes are put in place to analyse the stability of soils and capacity of the site to support the construction loads.</p> <p>2.2. Structural requirements for retaining walls are identified in conjunction with related industry professionals and applied to the planning process.</p> <p>2.3. Structural function and requirements for <i>temporary structural elements</i> are analysed and applied to the planning process.</p>
3. Coordinate and manage construction of footing systems.	<p>3.1. Set-out of building is checked for compliance with documented building plans.</p> <p>3.2. Structural performance of footings specified in the building plan is assessed for compliance with relevant codes and accepted industry construction principles.</p> <p>3.3. Footings specified in the building plan are laid and checked for compliance with relevant codes and accepted industry construction principles.</p> <p>3.4. Damp coursing and provision of termite barriers and other relevant techniques are planned, implemented and checked in accordance with codes, standards and industry practice.</p>
4. Coordinate and manage structural elements of the construction process.	<p>4.1. Technical construction principles and performance characteristics of the construction materials are identified and analysed in the planning of project.</p> <p>4.2. Building plans and relevant standards and codes are identified and implemented to ensure appropriate allowances have been made for plumbing, electrical conduits and other services to be installed.</p> <p>4.3. Processes for the construction of structural elements are identified and confirmed as compliant with relevant Australian standards and codes and</p>

ELEMENT	PERFORMANCE CRITERIA
	manufacturer specifications, with reference to specialists as required, and then implemented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of design concepts and principles
- communication skills to:
 - consult with industry professionals
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - codes and standards
 - legislative and planning requirements
 - plans, specifications and drawings
 - other relevant documentation from a wide range of sources
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- applications of structural principles in buildings
- Building Code of Australia (BCA) and Australian standards
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- interpretation and analysis of work drawings and specifications
- nature of materials and the effect on performance
- OHS and organisational quality procedures and processes.

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	<p>This unit of competency could be assessed by the application of structural design principles to a medium rise building and construction project, including demolition of existing buildings and communication of the selection, positioning and sizing of all structural members that form fixed or temporary building structures for the project.</p> <p>This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and implement the erection or demolition of buildings in compliance with relevant legislation • interpret and apply relevant documentation and codes • accurately apply design principles relating to performance • identify typical faults and problems and the action required to rectify them.
Context of and specific resources for assessment	<p>This unit of competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • documentation, including design brief drawings, specifications, codes, design

EVIDENCE GUIDE

	<p>concepts, construction schedules and other necessary supporting documents</p> <ul style="list-style-type: none"> • research resources, including timber product information and samples • access to relevant legislation, regulations and codes of practice, including the BCA • relevant computer software package and suitable hardware. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments. <p>Validity and sufficiency of evidence requires that:</p> <ul style="list-style-type: none"> • competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace • where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

	<ul style="list-style-type: none"> all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence. <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.</p>
--	--

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Structural principles relate to factors that include:

- dead and live load calculations and characteristics
- fire resistance of materials
- impact of thermal effects
- impact of time-dependent effects, including creep and shrinkage
- impact of wind, snow, ground water, earthquake, liquid pressure, rainwater and earth pressure actions
- structural resistance of forms of construction
- structural resistance of materials.

Medium rise buildings as described within the BCA are:

- Classes 1 and 10
- Classes 2 and 3 to a maximum of 3 storeys
- Classes 4 to 9 to a maximum of 3 storeys, not including Type A construction.

RANGE STATEMENT	
Materials include:	<ul style="list-style-type: none"> • aluminium • composite steel and concrete • concrete, including reinforced, pre-stressed concrete and tilt-up panels • masonry • steel, including cold-formed steel.
Temporary structural elements include:	<ul style="list-style-type: none"> • bracing • close sheeting • formwork props • pressure-resistant formwork • scaffolding sole plates • shields • shoring collar sets • soldier sets • ties.

Competency field

Competency field	Building services
-------------------------	-------------------

CPCCBC6001A Apply building codes and standards to the construction process for large building projects

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to access, interpret and apply relevant building codes and standards applicable to the construction processes of large, high rise and complex buildings (open' licensing classification with special reference to Type A buildings).

To successfully comply with relevant standards and codes in large constructions requires a thorough knowledge of the purpose of the Building Code of Australia (BCA) coupled with the ability to interpret specific standards in relation to the design and specifications of building projects.

Application of the Unit

Application of the unit

This unit of competency supports builders, project managers and related construction industry professionals responsible for ensuring compliance with building codes and standards in the residential and commercial construction industry.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and interpret relevant code and standard requirements.	<p>1.1.Relevant clauses from the BCA that apply to individual projects (classified as <i>open</i>) are identified.</p> <p>1.2.Prescriptive requirements of relevant BCA clauses for <i>standard construction</i> are determined for the <i>scope of work</i>.</p> <p>1.3.Requirements of relevant Australian standards referenced in the BCA are accessed and interpreted appropriately.</p>
2. Classify buildings.	<p>2.1.Nature of a building is determined according to use and arrangement.</p> <p>2.2.BCA criteria to determine the defined classification are applied.</p> <p>2.3.BCA requirements for multiple classifications are identified and interpreted.</p>
3. Analyse and apply a range of solutions to a construction problem for compliance with the BCA.	<p>3.1.Range of criteria that will ensure construction methods comply with intent of the BCA is determined.</p> <p>3.2.Alternative solutions to a construction problem that will comply with BCA requirements are discussed and proposed in accordance with company policies and procedures and <i>standard specifications</i>.</p> <p>3.3.Performance-based solutions are identified and documented in accordance with BCA requirements.</p> <p>3.4.<i>Assessment methods</i> used by authorities to determine whether a building solution complies with <i>performance requirements</i> or deemed-to-satisfy (DTS) provisions of the BCA are analysed and applied.</p> <p>3.5.BCA assessment methods are identified as appropriate to meet DTS provisions of BCA.</p> <p>3.6.Relevant documentation is identified and completed in accordance with performance requirements of the BCA.</p>
4. Apply fire protection requirements.	<p>4.1.Fire resistance required for the construction of all classes and types of buildings is determined.</p> <p>4.2.BCA requirements with respect to passive and active fire protection to all classes and types of buildings are identified and applied.</p> <p>4.3.Check of existing buildings for compliance with passive and active fire protection requirements is carried out in accordance with BCA requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Implement strategy to manage compliance with BCA for large, complex and high rise buildings.	<p>5.1. Processes are established and implemented to coordinate the work of professionals involved in the development and management of the building process.</p> <p>5.2. Effective design solutions for buildings of more than three storeys are sought to meet the needs of clients and ensure compliance with BCA.</p> <p>5.3. Quality assurance processes are designed and implemented to ensure effective and compliant management of the construction process.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accurate application of building codes and standards
- application of design concepts and principles in accordance with Australian standards
- application of design concepts and principles in accordance with BCA
- analysis and interpretation skills relating to documentation from a wide range of sources, including BCA and Australian standards
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - discuss and propose alternative solutions
 - read and interpret specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to complete documentation in accordance with BCA requirements
- numeracy skills to apply mathematical information included in building codes and standards.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- application of BCA, namely:
 - low rise:
 - Class 1 and 10
 - Class 2 to 9 with a gross floor area not exceeding 2000 square metres, not including Type A or Type B construction
 - medium rise:
 - Class 1 and 10
 - Class 2 to 9 to a maximum of 3 storeys, not including Type A construction
 - open:
 - all classes of building and types of construction
- application of relevant Australian standards
- BCA performance hierarchy
- definitions and common technical terms or usage specified under general provisions of BCA
- design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
- nature of materials and effects of performance
- relevant legislative and OHS requirements, codes and practices
- work drawings and specifications.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of design principles and solutions specified in the deemed-to-satisfy and performance-based concept of BCA criteria applied to a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- accurately apply BCA codes and standards relating to performance of and compliance with building project work
- demonstrate understanding of the assessment methods available to determine whether a building solution complies with performance requirements or DTS provisions of BCA.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- BCA, Class 2 to 9 buildings and Guide to BCA
- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including product information and data
- access to relevant legislation, regulations and codes of practice; like BCA, National Timber Framing Code, AS1684, AS4055 and other Australian standards required to meet the purpose of intended use
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment

EVIDENCE GUIDE

support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Open*** is classified as:
- classes of building and types of construction within the BCA with special reference to the construction of buildings of more than 3 storeys.
- Standard construction*** includes:
- BCA
 - Australian standards relative to the scope and context of large building construction.
- Scope of work*** includes:
- characteristics
 - compatibility
 - dimensions
 - location
 - patterns
 - quantities
 - sizes
 - surfaces
 - type of product or service.
- Standard specifications*** include:
- detailed specifications addressing specific components, such as:
 - electrical
 - mechanical
 - structural
 - other requirements
 - developed specifications
 - preliminary and outline specifications.
- Assessment methods*** include:
- comparison with DTS provisions
 - evidence of suitability
 - expert judgement
 - verification method.
- Performance requirements***
- cost
 - detail relating to materials and quality of work

RANGE STATEMENT

include:

- milestones
- nominated subcontractors
- provision of site access and facilities
- quality assurance
- standard procedures
- standards of work
- work schedules.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify potential new projects.	<p>1.1. Organisation's project history is examined to identify projects with successful or above average outcomes for characteristic evaluation.</p> <p>1.2. Property and construction market is reviewed for available sites and buildings with development potential.</p> <p>1.3. New trends in development and construction are monitored.</p> <p>1.4. Available statistical data on possible areas of project development is analysed.</p> <p>1.5. Network contacts are used to source businesses requiring new or upgraded facilities.</p> <p>1.6. Most promising projects are short-listed and preliminary costings and returns are prepared.</p>
2. Formulate development proposals and feasibility studies.	<p>2.1. Short-listed projects are reviewed to facilitate selection of preferred options for detailed design work.</p> <p>2.2. Project briefs are developed.</p> <p>2.3. Environmental impact of projects is reviewed and any existing Environmental Impact Statement is assessed.</p> <p>2.4. Feasibility studies are carried out on the project's commercial viability, and capacity to generate income through the various alternatives is ascertained.</p> <p>2.5. Accurate costings are generated for each proposal.</p> <p>2.6. Discussions are held with potential clients and investors and the benefits and risks of each project are explained.</p> <p>2.7. Decision to proceed is taken once client and investor agreement is obtained.</p>
3. Negotiate project approvals.	<p>3.1. Project plans are submitted to relevant authorities to seek their reaction to project and any impediments to approval.</p> <p>3.2. Project plan is revised to comply with authorities' directives.</p> <p>3.3. Plans are resubmitted for formal planning approval as necessary.</p>
4. Obtain project finance.	<p>4.1. Finance institutions or investors are approached for financial support.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. <i>Suitable finance package</i> is obtained for the project from institutions or investors.
	4.3. Possible joint partners for the project are identified and approached, and interest is determined.
5. Manage the commissioning of a project.	5.1. Project consultants are appointed and retained.
	5.2. Documentation for proposed project is prepared, checked against the brief and sent for formal building approval.
	5.3. Detailed costing of approved documentation is completed.
	5.4. Modifications are made to the project to bring it within or under budget if required.
	5.5. Final decision is made to proceed with the project or defer to a future date.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - approach institutions and investors
 - conduct discussions with clients and investors
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - network with others
 - read and interpret documents from a variety of sources
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to:
 - document relevant information
 - prepare project briefs and plans
- conceptualisation of unique solutions to complex problems and situations
- facilitation skills to develop new projects
- interpretation of strategic and often ambiguous information to ensure logical and

REQUIRED SKILLS AND KNOWLEDGE

practical decisions

- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in the new project development process
- numeracy skills to interpret statistical data and apply calculations
- supervisory skills to monitor and oversee the performance of the project development systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- industry's industrial relations climate and practices
- legislative, regulatory, and administrative obligations incumbent on the building and construction industry for OHS, environmental, employment and financial practices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the generation of new project developments and their effective direction. Effective performance includes the ability to ensure ongoing positive organisation and customer relationships that result in increased contractual success.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

replicate construction workplace conditions, materials, activities, responsibilities and procedures.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- tender for and construct a variety of new projects
- use effective project development procedures and frameworks supported and directed by strong and decisive leadership
- select and deploy correct human and physical resources, which enable new projects to be developed
- implement project management practices, which result in a high level of staff productivity
- interact effectively with personnel both within and external to the organisation
- demonstrate conceptual and strategic problem solving and systems development
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and

EVIDENCE GUIDE

print copies

- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Projects include:

- commercial constructions
- earthworks
- high and low rise structures
- provision of electrical, plumbing and gas, waste disposal, environmental clean-up and other services
- residential construction.

Feasibility studies include:

- detailed analyses of markets and opportunities
- examination of possible extensions to existing projects
- gathering data from government or private sector publications
- personal investigation of opportunities
- socioeconomic and urban studies.

Suitable finance package

- bank or finance company loans

RANGE STATEMENT

includes:

- customer or client funding
- overdrafts
- personal venture capital
- speculative funds provided for investment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish and implement contract administration procedures and frameworks.	<p>1.1. Contracts administration team is established comprising persons of wide experience and knowledge in the building and construction industry.</p> <p>1.2. Overview of the organisation's current legal and administrative climate is developed and communicated to contracts administration team.</p> <p>1.3. Strategic plan is developed for construction contract administration procedures and frameworks.</p> <p>1.4. Information gathering mechanisms that draw strategic performance advice from all parts of the organisation are established.</p> <p>1.5. <i>Quality assurance measures</i> are developed and implemented as part of the contracts administration process.</p> <p>1.6. Reporting and feedback structures through which advice and action instructions can be conveyed to employees and subcontractors are developed and established.</p> <p>1.7. Benchmarks for contract performance are established and a management framework is introduced for achieving, maintaining and exceeding those parameters.</p> <p>1.8. Measures are developed and introduced through which contract defaulters can be managed back into contract compliance.</p>
2. Maintain contract administration procedures and frameworks.	<p>2.1. Policy and administrative guideline documentation is introduced that supports the contract administration process.</p> <p>2.2. Evaluation and review methods are developed and implemented to ensure administration procedures and frameworks are effective.</p> <p>2.3. Internal feedback systems and methods are initiated to ensure that difficulties with administration of contracts are resolved within organisational guidelines.</p> <p>2.4. Measures which ensure the safety and security of contract administration documentation are introduced.</p> <p>2.5. Overall corporate contract administration framework comprising employees, subcontractors, client and management is maintained.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Review contract administration procedures.	<p>3.1. Review, recording and evaluation system is developed, implemented and managed to ensure probity and effectiveness of the contract administration system.</p> <p>3.2. Regular scheduled and unscheduled reviews of contract administration procedures are implemented and managed.</p> <p>3.3. Formal evaluation of the contract and administration system is undertaken regularly in consultation with organisation's legal advisors.</p> <p>3.4. Operating procedures are reviewed and clarified.</p> <p>3.5. Contract documentation processes are reviewed and feedback is provided to those preparing contracts.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with team
 - consult with legal advisors
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - provide and seek feedback and information
 - read and interpret documents from a variety of sources
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- written skills to:
 - develop a strategic plan
 - document relevant information
- conceptualisation and envisaging of unique solutions to complex problems and situations
- facilitation skills to implement new and modified contract administration systems
- interpret mathematical information, including benchmarking

REQUIRED SKILLS AND KNOWLEDGE

- interpret strategic and often ambiguous information to ensure logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in contracts administration process
- supervisory skills to monitor and oversee the performance of contract administration systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices
- legislative, regulatory, and administrative obligations incumbent on the building and construction industry for OHS, environmental, employment and financial practices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by demonstration of the effective establishment, maintenance and review of an organisation's contract administration procedures.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement effective contract administration procedures and frameworks supported and directed by strong and decisive leadership
- manage practices that result in a high level of staff productivity
- interact effectively with personnel both within and external to the organisation
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be

EVIDENCE GUIDE

available in either a building or construction office

- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Contract administration procedures and frameworks include:

- Australian standard contracts, including the AS2124 and AS4000 series
- authorised courses of action
- contracts include:
 - Construction Industry Contract (CIC) suite
 - dispute resolution procedures
 - document and contract distribution
 - individual organisational contracts

RANGE STATEMENT

	<ul style="list-style-type: none"> • in-house rules about document preparation, completion and handling • internal and external communication models • Joint Contracts Committee (JCC) suite • Master Builders Association (MBA) and Housing Industry Association (HIA) contracts • organisation administration models • progress and contract performance reviews. • response times • Simple Building Works (SBW), including series 1 and series 2 (SBW2 Lump Sum) • staff roles and organisational procedures.
<i>Quality assurance measures include:</i>	<ul style="list-style-type: none"> • distributing information • establishing performance benchmarks for system • maintaining a quality dialogue with all parties to the construction process • managing within organisational policy • monitoring internal expenditures and funding allocations • obtaining adequate feedback from clients, subcontractors and suppliers • providing feedback and developing remediation procedures • responding to external legislation and regulation requirements.
<i>Measures which ensure the safety and security of contract administration documentation include:</i>	<ul style="list-style-type: none"> • confidentiality in contract handling • documentation security identification • limitations on contract access • limitations on contract circulation • limitations on document distribution • security in contract and document filing and storage.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage compliance with laws relating to establishing and licensing of a building contractor.	<p>1.1. Company employees are aware of and comply with requirements of laws relating to establishing and licensing of a building contractor.</p> <p>1.2. Company takes necessary steps to obtain the necessary building or construction licenses.</p> <p>1.3. Changes to licensing arrangements are identified and responded to in a timely manner.</p> <p>1.4. Staff members are advised of the consequences of non-compliance with relevant legal obligations.</p>
2. Manage relationships on legal matters.	<p>2.1. Processes are introduced and managed which enable the company to obtain such legal advice as may be required in relation to particular contracts.</p> <p>2.2. Systems are introduced and managed through which legal interpretations of contract clauses or clauses within tender documents may be obtained before submission of the tender.</p> <p>2.3. Mechanisms for dialogue are established and managed between the company and the client to improve communication and facilitate conciliation.</p>
3. Manage the administration of regulations relating to OHS and welfare, workers' compensation, noise abatement and working hours.	<p>3.1. Administration systems that facilitate the organisation conforming to its obligations and regulations under OHS and welfare, workers' compensation, noise abatement and working hours, are developed and managed.</p> <p>3.2. Records demonstrating organisational compliance with legal obligations are maintained and managed.</p> <p>3.3. Administrative guidelines and facilities for the proper and secure storage of organisational legal documentation are established and managed.</p>
4. Manage company compliance with taxation and insurance requirements of federal, state and territory legislation.	<p>4.1. Systems that support and maintain organisational capacity to meet legal obligations with regard to insurance and taxation are instigated and managed.</p> <p>4.2. Personnel receive appropriate training and instruction in matters relating to insurance and taxation and are made aware of their responsibilities.</p>
5. Manage organisational obligations and observe fair trading practice.	<p>5.1. Practices and policies are developed and implemented which facilitate the organisation meeting its obligations to its clients, subcontractors and employees.</p> <p>5.2. Codes of conduct are established and enforced for</p>

ELEMENT

PERFORMANCE CRITERIA

	all employees and subcontractors.
	5.3. Remedial action is taken where evidence of non-compliance with fair trading principles is identified.
6. Manage compliance with environmental legislation.	6.1. Mechanisms to gather information in relation to the organisational environmental management plan are established and managed.
	6.2. Supply and removal of subcontract works and materials are managed and subject to constant scrutiny to ensure compliance with environmental standards.
	6.3. Changes to legislation or environmental requirements are recorded and organisational activities and systems altered to ensure ongoing compliance.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - communicate with clients
 - provide information and training to staff
 - read and interpret legislation, contracts and other relevant documentation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to maintain records
- conceptualisation and envisaging of unique solutions to complex problems and situations
- facilitation skills to implement new and modified contract management systems
- interpretation of strategic and often ambiguous information to ensure logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional

REQUIRED SKILLS AND KNOWLEDGE

guidelines and direct the activities of personnel involved in the contracts management process

- supervisory skills to monitor and oversee the performance of the contract management systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- appropriate sector of the building and construction industry and the nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices
- legislative, regulatory, and administrative obligations incumbent on the building and construction industry for OHS, environmental, employment and financial practices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the development and implementation of policies, practices and administrative measures which ensure an organisation meets its legal obligations in a timely manner.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement an effective contract management and monitoring system, supported and directed by strong and decisive leadership
- implement management practices that result in a high level of staff productivity
- interact effectively with personnel both within and external to the organisation
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- documentation normally available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Laws relating to establishing and licensing of a building contractor include state laws such as:

- Builders Registration Act 1939 and the Home Building Contracts Act 1991 in Western Australia
- Home Building Act and Regulations 1989 in New South Wales.

Regulations include:

- federal, state or territory environmental protection legislation
- local government Acts and the by-laws derived from them

RANGE STATEMENT

Legal obligations with regard to insurance and taxation include:

- state and federal industrial relations legislation
- state codes of practice applicable to the various regulations
- state laws, such as the Workers Compensation and Rehabilitation Act 1981 in Western Australia
- state OHS legislation and regulations.
- appropriate business and project insurances
- Fringe Benefits Tax Act 1986
- Goods and Services Tax Act 1999
- Income Tax Assessment Act 1987
- Insurance Contracts Act 1984
- pay-as-you-go (PAYG) taxes
- payroll tax
- stamp duty
- workers' compensation.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to manage tender developments for major projects. It covers the facilitation, implementation and management of the tender development system in a building and construction organisation involved in residential and/or commercial projects.

It supports the production of tenders that are based on sound economic, business, and human and physical resource data in accordance with the necessary organisational guidelines.

Application of the Unit

Application of the unit This unit of competency supports the needs of builders and senior managers in building, construction and services, typically working in larger organisations and managing more complex projects and processes, responsible for managing tender developments for major residential and commercial projects.

It is essential that competence is demonstrated in relevant aspects of management of the ongoing tender development process, extensive background data provision, risk analysis and comprehensive evaluation of the tender prior to submission by the organisation. Knowledge of financial and business administration principles, human resource practices, industrial relations and legislative and regulatory requirements is essential.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate contract risk.	<p>1.1. Invitation to tender is reviewed and analysed.</p> <p>1.2. Contract documents pertinent to the project are obtained and examined in detail.</p> <p>1.3. Conditions of contract are examined and confirmed in accordance with legislative and organisational requirements.</p> <p>1.4. Organisation's current work load is verified to determine capacity to meet contract timelines.</p> <p>1.5. Risk analysis is conducted and degree of risk in the project is investigated and established.</p> <p>1.6. Management team is consulted in relation to likely construction approach and resources.</p> <p>1.7. Client is advised of the intention or otherwise to submit a tender response.</p>
2. Manage the tender process.	<p>2.1. Staff members are allocated to tender preparation process.</p> <p>2.2. Contact made by staff with subcontractors and suppliers to obtain quotations for services or physical resources is supervised.</p> <p>2.3. Development of pre-tender construction or project schedule is managed and supervised.</p>
3. Manage the development of human and physical resource costs.	<p>3.1. Determining current equipment and materials charge-out rates is monitored.</p> <p>3.2. Establishment of labour rates for elements of work is monitored and managed.</p> <p>3.3. Project elements are analysed to ensure they conform to organisational contracting processes.</p> <p>3.4. Rates to be applied to elements of the work are arbitrated on, to ensure these are compared to relevant existing records of costs.</p> <p>3.5. Staff members are supervised to ensure appropriate rates are applied to the bill of quantities.</p> <p>3.6. Extensions of human and physical resource costs are reviewed and monitored to ensure their accurate translation into the estimate summary.</p> <p>3.7. Staff are monitored as they calculate and extend values for preliminaries and overheads.</p> <p>3.8. Staff are monitored to ensure they are calculating and including all supplementary costs.</p>
4. Prepare complete	<p>4.1. Conditions of contract are reviewed and assessed to</p>

ELEMENT	PERFORMANCE CRITERIA
tender documentation and operating margins.	<p>ensure there are no variations to the tender.</p> <p>4.2.Subcontractor quotes are reviewed and assessed to ensure there are no variations to the tender.</p> <p>4.3.Availability of plant and equipment is checked and confirmed.</p> <p>4.4.Delivery schedules are confirmed and material suppliers are followed up.</p>
5. Evaluate tender documentation prior to submission.	<p>5.1.Staff preparation of the schedules, which detail the sequence of work, is supervised and managed.</p> <p>5.2.Progress of the tender development is monitored for timeliness and accuracy.</p> <p>5.3.Documentation is reviewed to ensure that tender is finalised in standard industry format for the client.</p> <p>5.4.Final tender documentation is appraised for completeness and allocation of critical rates and allowances prior to its submission.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - consult management team
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - liaise with client
 - read and interpret:
 - contract documents
 - invitation to tender
 - legislation
 - subcontractor quotes
 - tender documentation
 - other relevant documentation
 - use and interpret non-verbal communication

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- written skills to maintain records
- conceptualising and envisaging unique solutions to complex problems and situations
- delegating tasks within specific functional guidelines
- directing the activities of personnel involved in the tender development process
- facilitating the implementation of new and more appropriate information systems
- interpreting strategic and often ambiguous information and reaching logical and practical decisions
- monitoring and overseeing the performance of systems and individuals involved in the process
- numeracy skills to apply calculations
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisation's needs
- human resource practices and the industry's industrial relations climate and practices
- relevant state or territory building and construction codes, standards and regulations
- socioeconomic and political factors which determine the climate in that sector of the building and construction industry.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective management of tender developments for major projects.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop tenders that comprehensively address project requirements
- implement management practices that result in a high level of strategic input and accuracy
- manage data acquisition from within and external to the organisation
- demonstrate conceptual and strategic problem solving and organisation of resources
- communicate effectively both verbally and in writing with owners, senior management and employees
- comply with legislative and regulatory requirements, standards and codes of practice.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office to

EVIDENCE GUIDE

comply with legislation and organisation policies

- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction to support underpinning knowledge and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the tendering process
- client file for information and review.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Conditions of contract*** include:
- contract clauses and intentions
 - dispute resolution
 - general conditions of contract
 - legislative and regulatory requirements
 - liabilities
 - parties' obligations under contracts.

RANGE STATEMENT

Risk analysis includes:

- analysis and revision of data
- critical incident analysis and reporting
- proposing solutions and recovery scenarios
- risk management practices
- scheduling and planning for contingencies.

Human and physical resource costs include:

- developing and introducing costing methods and systems
- development of subcontracting and organisational contracting arrangements
- establishing methods of calculating standard times for work activities
- establishing personnel review and evaluation processes
- evaluation of work practices and industrial relations arrangements
- human resource processes, including:
 - legislative and regulatory requirements
 - maintaining accuracy and legitimacy of the tender process
 - management of material costs and information concerning availability
 - management of work practices and staff discipline
 - performance appraisal
 - selection and training of personnel to deal with the tender function.

Tender documentation includes:

- drawings and specifications
- form of tender
- head and sub contracts
- pre-contract documentation
- tendering codes of practice and standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Direct the resource acquisition process.	<p>1.1.Organisational strategic resource procurement and acquisition processes are managed in accordance with company policies and procedures.</p> <p>1.2.Staff members responsible for procurement and acquisition of resources are informed of organisational resource requirements.</p> <p>1.3.Financial and business principles are applied to the resource acquisition process.</p>
2. Maintain financial and administrative control over the resource acquisition process.	<p>2.1.Administration system of financial and administrative control through which resources are procured and acquired is monitored for its effectiveness.</p> <p>2.2.Financial and corporate responsibility is exercised over the procurement and acquisition system and its maintenance.</p> <p>2.3.Procurement reports are evaluated in preparation for management team meetings.</p> <p>2.4.Schedules of staff duties are prepared for setting up of each site.</p> <p>2.5.Staff are allocated to specific tasks within the procurement process.</p> <p>2.6.Regular meetings are facilitated and conducted between team members and the client to report on progress.</p>
3. Manage industrial relations matters related to the procurement and acquisition of resources.	<p>3.1.Industrial relations practices within the building and construction industry are monitored to ensure compliance.</p> <p>3.2.Industrial relations disputes emanating from either the supply or delivery of physical resources are addressed and resolved according to company policy.</p> <p>3.3.Industrial relationships between the organisation's personnel and subcontractors are maintained.</p>
4. Initiate and supervise the evaluation and moderation of the resource procurement and acquisition process.	<p>4.1.Procurement process evaluation and moderation systems are developed and managed in accordance with company policy.</p> <p>4.2.Evaluations of the resource procurement system and related processes are initiated and monitored to identify possible system improvements.</p> <p>4.3.Strategic information relating to the procurement or acquisition of resources is gathered and evaluated.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.4. Reports on trends in costs and quality of the resources provided to organisational work sites by suppliers are evaluated.
	4.5. Orders for resources using approved company documentation and procedures are scrutinised and evaluated to ensure compliance.
5. Administer the provision and withdrawal of resources from site.	5.1. System for the effective supply and withdrawal of resources from sites is established and maintained.
	5.2. Strategic information on the usage and movement of resources on site is managed.
	5.3. <i>Communications principles and policies</i> between on-site personnel and providers of physical resources are established and maintained.
	5.4. Feedback from sites is obtained and monitored at commencement, during and on completion of the project.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - address and resolve disputes
 - allocate tasks
 - conduct and facilitate meetings
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - provide information to staff
 - read and interpret:
 - orders for resources
 - reports
 - strategic information
 - other relevant documentation
 - use and interpret non-verbal communication

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- written skills to:
 - prepare schedule of staff duties
 - record communications and action taken
- conceptualisation skills to envisage unique solutions to complex problems and situations
- facilitation skills to implement new and modified systems
- interpreting strategic and often ambiguous information and reaching logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in the procurement and acquisition of resources
- supervisory skills to monitor and oversee the performance of systems and individuals involved in the process
- technological skills to enable effective administration and monitoring of procurement system and processes.

Required knowledge

Required knowledge for this unit is:

- building and construction industry contracts
- factors that contribute to the provision of physical and human resources in a construction environment
- financial and business principles as they apply to the building and construction industry
- human resource and industrial relations practices within the building and construction industry
- organisational strategic and operational activities and the mechanisms through which they are addressed
- relevant building and construction codes, standards and regulations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by establishing and conducting a review and evaluation of processes that ensure the ongoing effectiveness of a procurement system.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- strategically focus on the procurement process and system to handle activities on more than one site
- overcome obstacles to procurement of human and physical resources
- effectively deal with delays
- evaluate the system and recommend and implement remedial or improvement-based changes
- develop resource supply schedules and prioritise events, allowing for possible contingencies
- communicate information, including OHS regulations applicable to workplace.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Financial and business principles include:

- accountability and integrity
- accurate and timely development and maintenance of financial records
- compliance with all legal and financial obligations
- probity and honest dealing
- transparency of financial processes.

Financial and administrative

- agreements with subcontractors and material suppliers

RANGE STATEMENT

<i>control</i> over the procurement process includes:	<ul style="list-style-type: none">• authorising payment for services provided• generation of procurement documentation• managing the raising of purchase orders.
<i>Industrial relations</i> within the procurement process include:	<ul style="list-style-type: none">• associations and industrial relationships between the organisation and subcontractors• associations and industrial relationships between the organisation and material suppliers• dispute resolution between on-site personnel involved in the procurement process• dispute resolution involving disagreements between the organisation and subcontractors• engaging on-site labour• negotiating payments under awards, agreements and workplace agreements• proactive communication and incident avoidance.
<i>Communications principles and policies</i> include:	<ul style="list-style-type: none">• form of responses to meet circumstantial requirements• quality and veracity of responses• recording of communication details and action taken• responsibilities for follow-up action• status or level of respondents• timeliness of responses.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Quantify and qualify the factors to be included in the organisational environmental management system.	<p>1.1. Strategic factors impacting on organisational compliance with environmental obligations are identified and quantified.</p> <p>1.2. Range and scope of activities being undertaken by the organisation within environmental guidelines and obligations are quantified.</p> <p>1.3. Government, including local government, publications and information are monitored to identify and maintain knowledge of environmental issues.</p> <p>1.4. Strategic and operational factors impinging on organisational environmental management process are qualified and measured.</p>
2. Establish and implement the organisational environmental management plan and system.	<p>2.1. Design and development of the organisational environmental planning system is directed and managed.</p> <p>2.2. Criteria for implementing and maintaining systems concerned with managing the environmental requirements of construction sites are developed.</p> <p>2.3. Methods are developed to gather and monitor environmental management information essential to the construction process.</p> <p>2.4. Environmental management process is regularly evaluated to ensure accuracy and compliance with policy.</p>
3. Establish and implement an environment management control system.	<p>3.1. Environment control system quality is managed in accordance with sound management principles and practices.</p> <p>3.2. Methods for determining effectiveness of the major elements of the environmental management system are introduced.</p> <p>3.3. Staff are trained and managed to ensure that quality assurance practices are applied to the environmental management process on a daily basis.</p> <p>3.4. Routine monitoring of environmental benchmarks is conducted.</p>
4. Facilitate the introduction of systems to manage organisational environmental	<p>4.1. Organisational policies and procedures for environmental management are developed and introduced.</p> <p>4.2. Policies and routines are documented for future reference.</p>

ELEMENT	PERFORMANCE CRITERIA
policies and practices.	4.3. Policy guidelines and obligations are circulated within the organisation and sign-off by staff, employees and contractors is obtained. 4.4. Compliance of all staff with environmental policy is monitored.
5. Implement an environmental conformance feedback system.	5.1. Processes to monitor and report on environmental issues and procedures are developed and introduced. 5.2. Feedback systems are developed, circulated and maintained to ensure all stakeholders can support the environmental management process.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to facilitate the implementation of new and modified environmental management and review systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - obtain agreement on guidelines and obligations
 - seek feedback
 - train staff
 - read and interpret:
 - information
 - publications
 - other relevant documentation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to develop and document policies and procedures
- interpretation of strategic and often ambiguous information to ensure logical and practical decisions
- conceptualisation of unique solutions to complex problems and situations
- management skills, including the ability to delegate tasks within specific functional

REQUIRED SKILLS AND KNOWLEDGE

guidelines and direct the activities of personnel involved in the environmental management and review process

- supervisory skills to monitor and oversee the performance of the management and review systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- environmental issues that impact on the organisation and its practices
- financial and business administration principles commensurate with organisational needs
- factors to be considered in assessing the environmental risk inherent in different types of building and site utilisation projects
- key factors that influence decisions on environmental issues and decision making
- legislative, regulatory and administrative obligations incumbent on the building and construction industry for environmental practices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the development, implementation and maintenance of an environmental management system within an organisation.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop an effective environmental conformance strategy
- develop identifiable roles and responsibilities for organisation personnel involved in that strategy
- implement management practices that result in a high level of conformance by the organisation to environmental obligations
- strategically plan to meet environmental obligations and effectively interact with personnel both within and external to the organisation
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate environmental legislation and regulations
- strategic building and construction market information
- a technical reference library with current publications on design, building construction and manufactures product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability

EVIDENCE GUIDE

skills with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

Strategic factors impinging on organisational environmental obligations include:

- federal, state or territory environmental legislation
- local authority by-laws, Acts or regulations concerning environmental issues
- location and nature of the construction activity
- scope of operations and activities of the organisation
- types of licences and permits held or needing to be held by the organisation.

Strategic and operational factors impinging on the organisational environmental management process include:

- management commitment to the environmental management process
- organisation policy and operating guidelines
- public liabilities and exposure to risk
- risk management strategies and policies
- structure of the management team and apportionment of responsibilities.

Environment control system quality principles and practices include:

- ensuring availability of appropriately qualified personnel to deal with environmental issues
- maintenance of agreed expenditure for environmental management compliance
- obtaining timely and relevant expert advice as required by the project
- organisational compliance with appropriate legislation and regulations
- periodic review of environmental management practices and processes
- preventative maintenance of environmental management practices and processes.

Feedback systems include:

- emergency or process breakdown advisory channels
- formal meetings between staff, employees and contractors on a regular basis
- programmed appraisals of compliance with environmental policy involving organisation staff, employees and contractors
- programmed reporting and environmental conformance statements and timetables
- verbal, electronic and hard copy information communications systems.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to develop and implement an appropriate estimating and tendering system. It covers the facilitation, implementation and maintenance of an estimating and tendering system in a building and construction organisation involved in residential and/or commercial projects. It supports the establishment of the human resources and facilities necessary to produce accurate and successful tenders in accordance with contractual guidelines.

Application of the Unit

Application of the unit This unit of competency supports the needs of builders and senior managers within building, construction and services firms, typically working in larger organisations and managing more complex projects and processes, responsible for developing and implementing estimating and tendering systems for residential or commercial projects.

Knowledge of financial and business administration principles, and factors that determine the risks inherent in the organisation's range of construction types, is required. Ability to identify and interpret strategic information which could affect the organisation's financial viability and direct personnel effectively is essential.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Quantify and qualify factors to be included in the organisational tendering system.	<p>1.1.Strategic economic and social factors impacting on the organisation are quantified and qualified.</p> <p>1.2.Range and scope of activities to be undertaken by the organisation and their impact are strategically quantified and qualified.</p> <p>1.3.Strategic operational and financial structures within the organisation are reviewed and qualified regarding their information needs.</p>
2. Establish and implement tendering system in the organisation.	<p>2.1.Design and development of the organisational estimating and tendering system are facilitated and implemented in accordance with legislative and organisational requirements.</p> <p>2.2.Strategic criteria for personnel and processes concerned with estimating and tendering are established and disseminated.</p> <p>2.3.Endorsement of senior management for implementation of the system is obtained.</p> <p>2.4.Staff with the necessary expertise and industry knowledge to excel at the tasks involved are appointed.</p>
3. Establish and implement a tendering quality control system.	<p>3.1.Appropriate financial structures which underpin the tendering process are identified and applied.</p> <p>3.2.Review and feedback system using company project records and performance criteria is facilitated and implemented.</p>
4. Develop and implement a client feedback system.	<p>4.1.Communication system to enable effective contact with clients is established and implemented.</p> <p>4.2.Client feedback system based on price, performance, progress and other strategic factors is planned and strategically implemented.</p>
5. Establish a recording and evaluation system.	<p>5.1.Tender recording system which meets organisational needs for ongoing evaluation of tender performance is designed and implemented.</p> <p>5.2.Strategic balances and checks which enable the ongoing maintenance of quality of the estimating and tendering system are developed and implemented.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- communication skills to:
 - appoint staff
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - obtain senior management endorsement
 - read and interpret documents from a variety of sources
 - seek feedback
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to complete relevant documentation
- conceptualising and envisaging unique solutions to complex problems and situations
- delegating tasks within specific functional guidelines
- directing the activities of personnel involved in the estimating and tendering process
- facilitating the implementation of new and modified systems
- interpreting strategic and often ambiguous information and reaching logical and practical decisions
- monitoring and overseeing the performance of systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- appropriate sector of the building and construction industry and the nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices
- relevant state or territory building and construction codes, standards and regulations

REQUIRED SKILLS AND KNOWLEDGE

- socioeconomic and political factors which determine the climate in that sector of the building and construction industry.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective development and implementation of an estimating and tendering system for an organisation.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement an effective estimating and tendering system, supported and directed by strong and decisive leadership
- develop conceptual and strategic problem solving and systems
- implement management practices which result in high level staff productivity
- interact effectively with personnel within and external to the organisation
- communicate effectively both verbally and in writing with senior management, employees, clients and regulatory authorities
- comply with legislative and regulatory requirements and codes of practice.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- suitable project work applicable to the building and construction process
- appropriate equipment, materials and documentation to comply with OHS legislation and other organisational policies
- related learning resources in support of the underpinning knowledge and skills acquisition required by this unit of competency.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured

EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Tendering system*** factors include:
- legislative and regulatory requirements and codes of practice
 - market rates, trends and technological improvements and variations
 - materials and labour cost determination
 - range of contracts employed by the organisation
 - standard organisational documentation
 - tendering methods, processes and timeframes
 - timeframes and scheduling arrangements.
