RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Structural members required in ceiling and roof framing:

- includes evaluation and identification of structural members used in:
 - ceiling and roof framing
 - floor bearer and joist installing
 - timber stumping
 - timber wall framing
- suitable for the building design in compliance with:
 - BCA
 - design specifications
 - legislative requirements
 - maintenance specifications
 - relevant legislation.

Building categories include:

- all timber-framed domestic scale buildings up to and including two storeys.

Assessment of timber-framed designs:

- includes the identification and recording and reporting of faults, in accordance with workplace providers, in verbal or written format
- timber-framed designs include:
 - floor framing, such as loose set single storey timber structures and two storey suspended upper floor level construction
 - overhang framing with soffits and eaves, attached carport, attached veranda and attached patio
 - roof framing, such as skillion, gable, hip and valley and cathedral
 - wall framing of various sizes, bracing locations and tie downs.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the significance of the macro and micro climates in the construction process.	<p>1.1. Climate zones and their characteristics are identified and recorded for <i>design projects requiring review of energy efficiencies</i>.</p> <p>1.2. Methods for establishing characteristics of specific climates are established and documented.</p> <p>1.3. Construction materials and methods suited to specific climates are determined.</p>
2. Assess design criteria for energy efficient construction.	<p>2.1. Characteristics and location-specific requirements to establish a design are identified and listed.</p> <p>2.2. Appropriate form of construction is selected and documented according to established specifications.</p> <p>2.3. Prevailing hot and cool wind directions are identified and recorded.</p> <p>2.4. Sun path for the location is identified and documented.</p> <p>2.5. Building orientation is established and documented.</p>
3. Assess building designs.	<p>3.1. Accommodation within the building is assessed and recorded.</p> <p>3.2. Effective zoning within the building is established.</p> <p>3.3. Floor plan is sketched and recorded.</p> <p>3.4. Suitability of design in relation to cross-ventilation and shadow lines is determined and recorded.</p> <p>3.5. Impacts of <i>energy efficiency design principles</i> are identified and recorded for architectural and services design in accordance with state and territory legislation and the BCA.</p>
4. Identify that energy consumption practices are incorporated into design briefs.	<p>4.1. Energy appliances of the building and their consumption are established and recorded.</p> <p>4.2. Recommended best practice to conserve energy is identified and documented in energy audits.</p> <p>4.3. Selection and use of energy efficient fittings and services are determined and included in design brief.</p> <p>4.4. Energy budget principles for building fabric and services are identified and applied in accordance with standard industry practice.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - BCA
 - legislation
 - other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - develop recommendations and strategies for the implementation of energy efficient design principles
 - report data and findings
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- effects of fossil fuels on the atmosphere
- energy consumption relative to construction processes
- greenhouse gas emissions
- impact of construction process on the atmosphere
- impacts of national greenhouse strategy and Kyoto protocol on construction
- macro and micro climates
- nature of materials and effect on performance
- ozone depletion theories
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- R values (overall thermal resistance) for construction material

REQUIRED SKILLS AND KNOWLEDGE

- relevant federal, state or territory legislation and local government policy and procedures
- services design concepts
- site topography.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- evaluate and report on data, findings, recommendations and strategies for the implementation of energy efficient design principles for at least one building development project and in compliance with the applicable local government authority, relevant legislation and the BCA
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Design projects requiring review of energy efficiencies*** include:
- evaluation of building designs for the purposes of applying appropriate construction methods to reduce energy consumption.
- Energy efficiency design principles*** include:
- application and assessment of BCA performance-based solutions
 - best practice to conserve energy:
 - appliance usage
 - building location and orientation
 - choice and product performance
 - compliance with legislation pertinent to conserving energy
 - living practices that maximise benefit
 - climate conditions:
 - climate zones in Australia specified in BCA

RANGE STATEMENT

- micro climates associated with a specific area
- energy consumption:
 - low energy lighting
 - solar hot water systems
 - star rated appliances
 - utilities and showerhead restriction fittings
 - window coverings and glazing
- energy efficient construction:
 - construction methods
 - efficient design briefs
 - geography and topography of site
 - location
 - materials used
 - method of application
- star rating systems:
 - Building Energy Rating Scheme (BERS) computer model
 - First Rate computer model
 - National Housing Energy Rating Scheme (NatHERS) computer model.

procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - drawings
 - legislation
 - plans and specifications
 - other relevant documentation
 - report faults to other parties and conduct meetings with stakeholders
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - draft notices
 - prepare reports
 - take notes and minutes
- organisational and time management skills to arrange and conduct meetings to timelines
- planning and organisational skills to collect, organise and analyse information
- problem solving skills to identify faults and problems, to use and apply data for decision making and to review meeting feedback and take appropriate action
- teamwork skills to work with diverse individuals and groups
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation, and local government policy and procedures
- research methods
- structural, design and construction principles of buildings
- terminology, definitions and hazard identification.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- apply building surveying procedures to produce an accurate proposal outlining the status of approval, compliance with regulations, determination of safety procedures, laws abided with, survey findings, and recommendations and strategies for at least one residential building project
- provide reports to appropriate body/individual as determined by the project brief. and according to workplace procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify structural requirements and loads commonly used in structural design.	<p>1.1. Structural requirements relating to equilibrium, stability, strength, functionality, economy and aesthetics are determined in adherence to legislative requirements.</p> <p>1.2. Different types of loading and loading methods and the effect on structures are identified and documented in accordance with BCA, relevant Australian standards, suppliers' technical data and empirical methods.</p>
2. Analyse the effects of force and moments on structural elements.	<p>2.1. Force, moments and equilibrium of force and the effects on structures are identified and analysis is conducted and recorded.</p> <p>2.2. Equilibrium of forces for co-planar systems in consideration of stability is identified and compared for performance.</p>
3. Analyse properties and behaviour of structural materials.	<p>3.1. Effect of force on materials in tension, compression, stress, strain and elasticity is identified and recorded.</p> <p>3.2. Structural properties and performances are differentiated for common materials and recorded.</p>
4. Identify section properties of structural elements and their effect on structural performance.	<p>4.1. Cross-sectional geometry and common structural shapes are identified.</p> <p>4.2. Section properties and the relationship between first and second area moments, section modules and gyration and deflection of beams are identified and compared for performance.</p> <p>4.3. Section properties' values for I (moment of inertia), Z (section modulus) and R (radius) for common sections are determined using tables or standard formulas and compared for performance.</p>
5. Compare the performance and properties of spanning elements.	<p>5.1. Structural considerations of loaded spanning elements for bending moments, shear forces, deflection and torsion are determined and compared for performance.</p> <p>5.2. Bending behaviour and performance of loaded support beams of various types, shapes, spans and loads are determined and compared for performance.</p> <p>5.3. Effect that connections have upon the structural performance of beams is identified and compared for performance.</p> <p>5.4. Principles of slab behaviour in relation to spans and stress distribution are identified and compared for</p>

ELEMENT	PERFORMANCE CRITERIA
	performance.
6. Determine performance criteria for columns.	<p>6.1. Effect of slenderness ratio that changes in length, cross-sections, connections and materials will have on the strength of a column are determined and compared for performance.</p> <p>6.2. Eccentric and axial load effect on the strength of column section and materials are determined and compared for performance.</p>
7. Identify factors affecting design of connections between structural elements.	<p>7.1. Transmission of forces between structural elements are determined and compared for performance.</p> <p>7.2. Methods of distributing stresses in connections between structural elements are determined and compared for performance.</p>
8. Outline how loads of various types occur and impinge on a building structure.	<p>8.1. Differences between types of loading, including dead load, live load, wind load, earthquake load and other load, causing actions are determined and compared for performance.</p> <p>8.2. Dead and live loads using BCA and relevant Australian standards are determined.</p> <p>8.3. Indication of direction of wind pressures on the various surfaces of buildings specified in BCA and relevant Australian standards are determined.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - BCA

REQUIRED SKILLS AND KNOWLEDGE

- relevant Australian standards
- other relevant documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to report findings and provide reports
- numeracy skills to analyse and apply complex mathematical information
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- nature of materials and effect on performance
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural and design principles for buildings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- assess, identify and report on findings for the design, positioning and sizing of structural members of at least one domestic scale building project or equivalent
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity

EVIDENCE GUIDE

- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and

EVIDENCE GUIDE

supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment of ***structural requirements***:

- includes:
 - analysis of engineering drawings
 - evaluation of site physicality
 - identification of safe structural practices
- may require actual site visits.
- domestic scale buildings (similar in characteristics to those of residential dwellings in terms of loading, construction and size and may include small industrial, commercial and public buildings).

Adherence to legislative requirements is limited to:

Analysis includes:

- 'I' (moment of inertia) values
- base unit mass, density, velocity, acceleration, force and stress
- column changes in length, cross-sectional, restraints, material and eccentricity
- cross-sectional geometry and common structural shapes
- deflections for symmetrically loaded, simply supported timber beams of various shapes,

RANGE STATEMENT

- spans and loads
- directions of wind pressure loads
- force on materials in tension, compression, stress, strain and elasticity
- forces associated with levers identified by direction and value
- forces for co-planar non-current force systems
- load differences, including:
 - dead load
 - live load
 - wind load
 - earthquake load
- minimum bracing requirements
- removal of trusses
- restraints for use with beams
- second area moments and deflection of beams
- simple roof truss transmission force
- structural properties differentiated for common materials
- symmetrically loaded simply supported situations for:
 - bending moments
 - deflection
 - shear forces
 - torsion
- tension and compression stresses of roof members
- wind forces and wind velocity for bracing.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare comprehensive checklist schedule to investigate, plan and set up sites.	<p>1.1. Relevant factors for project scheduling, investigation, planning and site establishment for buildings are analysed and determined.</p> <p>1.2. Capabilities of builder's plant and equipment for single and multi-building projects are identified and documented in compliance with <i>construction principles for buildings</i>.</p> <p>1.3. Authorities' requirements and procedures to connect temporary services are identified and documented.</p> <p>1.4. OHS requirements for site amenities/services and emergency safety procedures are established and documented.</p> <p>1.5. Effects of the Disability Discrimination Act (DDA) regarding access for people with a disability are researched and documented.</p>
2. Research and comply with relevant state or territory legislation and local government requirements.	<p>2.1. Effects of relevant state or territory building and planning legislation and local government planning and building requirements are investigated, interpreted and communicated to others throughout design and construction of the specified building project.</p> <p>2.2. Planning and construction effects of the BCA and the construction requirements of the various relevant Australian standards are researched and documented.</p> <p>2.3. Effects of state or territory, local government and service supply authorities' regulations on design and construction are researched and documented.</p> <p>2.4. Environmental issues and controls relating to the construction site are evaluated and recorded.</p>
3. Investigate and evaluate building site establishment.	<p>3.1. Available site services and records of the salient features of a building site are appraised and recorded.</p> <p>3.2. Soil engineer assessment of foundations, test bore results and sketches of footing systems used, suited to various foundation designs, selection and behaviour in wet, dry and earthquake conditions, are interpreted.</p> <p>3.3. Types, principles and construction practices of shoring, underpinning, rock anchors used in rock and soil foundations, de-watering, ground stabilisation, footing systems, basements, tanking and retaining wall construction are identified, documented and</p>

ELEMENT**PERFORMANCE CRITERIA**

	sketched.
	3.4.Principles and practices of site establishment and different types and uses of builders' plant and equipment are identified and evaluated.
	3.5.Demolition procedures, standards and safety requirements for site preparation, including marking locations of services, providing se access and general site clearing, are identified and evaluated as appropriate.
4. Determine stages and sequencing practices for structural systems.	<p>4.1.Stages and sequencing appropriate to the different forms of project construction are identified and described, including <i>characteristics, uses, maintenance and selection of materials</i>.</p> <p>4.2.Structural systems commonly used in different forms of project construction are identified and described.</p> <p>4.3.Types, principles and relevant regulations, including BCA, construction standards and practices are identified in accordance with relevant design and construction of structural systems.</p> <p>4.4.Sub-structure of different forms of project construction from the foundation up to ground level are detailed and documented.</p> <p>4.5.Options available for fenestration design, based on bracing design, are investigated and described.</p> <p>4.6.Tilt-up construction process, application, standards and practices are identified and described in accordance with relevant design and construction of structural systems.</p> <p>4.7.Drawings of service core layouts are prepared in accordance with relevant design and construction of structural systems.</p> <p>4.8.Purposes for dimensional coordination and its benefits to the planning and construction of buildings are evaluated.</p> <p>4.9.Shop drawings used for the manufacturing of various, most commonly used structural systems are reviewed.</p>
5. Determine requirements for scaffolding systems.	5.1.Various scaffolding systems are identified and selected in accordance with relevant legislation and Australian standards.
6. Select suitable methods for rubbish	6.1.Rubbish removal methods suitable for a specified medium/high rise building in accordance with

ELEMENT	PERFORMANCE CRITERIA
removal from building sites.	relevant legislation and Australian standards are identified and selected.
7. Select suitable cranes and other modes of material handling.	7.1. Correct and safe methods of material handling systems are identified and selected in accordance with relevant legislation and Australian standards.
8. Identify and apply earthquake resistant construction to building.	<p>8.1. Major building elements designed to resist earthquakes are defined.</p> <p>8.2. Major structural concepts used to resist earthquakes are identified.</p> <p>8.3. Applications are sketched of structural and cladding details to resist earthquakes using appropriate drawing protocol.</p> <p>8.4. Factors effecting material selection and installation are nominated.</p>
9. Evaluate construction standards and practices.	<p>9.1. Types, construction standards and practices for the installation/application used for claddings, linings, finishes and coatings are identified and evaluated.</p> <p>9.2. Detail drawings of the various types of cladding systems and their fixings are prepared in accordance with relevant design specifications.</p> <p>9.3. Suitability of various partition systems for use in office landscaping and layouts are evaluated and deemed appropriate to the function of the office.</p> <p>9.4. Preparation of drawings of typical office layouts and selection criteria with specific emphasis on materials choice and functional office design are investigated and deemed appropriate.</p> <p>9.5. Types, principles, construction standards and practices of window, door and joinery fabrication and installation are identified and evaluated in accordance with relevant design and construction of structural systems.</p> <p>9.6. Basic principles and integration of building services into the building are identified and evaluated in accordance with standard practices and service supply authority legislation.</p> <p>9.7. Structural principles and the use of these principles are identified.</p> <p>9.8. Types, standards and practices for the installation of the services are identified and described in accordance with different forms of project construction.</p>

ELEMENT	PERFORMANCE CRITERIA
10. Plan for continuing maintenance on a construction project.	<p>10.1. Design principles required for consideration to accommodate and facilitate ongoing maintenance are identified and documented.</p> <p>10.2. Key services areas of a building project requiring ongoing maintenance are nominated and described.</p> <p>10.3. Approaches for entering into maintenance agreements for the provision of subsequent services are identified and documented.</p> <p>10.4. Responsibilities of the various parties involved in a building project during the construction, defects liability and service life periods are identified and documented.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - communicate legislation and local government requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - BCA
 - plans, specifications and drawings
 - other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - document and record issues regarding site establishment, requirements, construction methods and maintenance
 - prepare checklist schedule

REQUIRED SKILLS AND KNOWLEDGE

- evaluate own actions to make judgements about performance and necessary improvements
- numeracy skills to analyse and apply complex mathematical information
- organisational and time management skills to arrange and conduct meetings to timelines
- planning and organisational skills to collect, organise and analyse information
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- access requirements for people with a disability and the requirements of the DDA with regard to access
- authorities and powers of a building surveyor
- design and construction principles of buildings
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- apply the principles of construction, standards and services, design and maintenance specifications, correct terminology; and the associated reporting of data, findings, recommendations and strategies for at least one commercial, industrial or residential building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scheduling, investigation, planning and site establishment include:

- builders' construction plant and equipment
- contractual arrangements relevant to state or territory building control legislation
- temporary builders' site services.

Buildings are limited to:

- three storeys
- a maximum floor area not exceeding 2000 square metres.

Construction principles for buildings include:

- adherence to legislative requirements for Building Code 7 of Australia Class 2 to 9 buildings
- design specifications
- evaluation and identification of construction methods
- maintenance specifications

RANGE STATEMENT

Characteristics, uses, maintenance and selection of materials include:

- standards and services in compliance with relevant legislation.
- barriers
- cost effectiveness
- cranes and hoists
- dangerous materials
- environmental safety
- evaluation and assessment of new materials
- gantries
- installation
- manufacture
- new technologies
- recycling
- rubbish removal
- scaffolding systems
- site shed locations
- testing
- transport problems and restrictions, including hoardings.

Types, principles and relevant regulations, including BCA, construction standards and practices include:

- cladding systems, such as:
 - aluminium
 - brick and paving for pedestrians and vehicular traffic
 - brickwork and blockwork
 - bronze
 - coated steel
 - curtain wall
 - fibre reinforced cement
 - glass
 - glass-reinforced polyester resin (GRP)
 - granite
 - in situ concrete (i.e. off-the-form or textured)
 - marble
 - metal and epoxy resin laminates
 - non-load bearing
 - permanent formwork
 - plastics
 - pre-cast concrete (load bearing)

RANGE STATEMENT

- sandwich panels
- stainless steel
- tiles and mosaics
- veneer facings (sandstone)
- dimensional coordination and general principles of:
 - component dimensions
 - controlling dimensions
 - joints and tolerances between control joints and construction joints (vertical and horizontal)
- footing systems, such as:
 - car park construction
 - de-watering
 - grillage
 - ground stabilisation
 - grouted anchors
 - mechanical anchors
 - pad and pedestal footings
 - pier and beam (bored piers and driven piles)
 - piles and cap
 - retaining walls
 - shoring
 - tanking and basement construction
 - underpinning
- plant and equipment, such as:
 - back hoes
 - concrete kipples and skip
 - concrete pumps
 - crane and grab cranes
 - gantries and similar overhead protection systems
 - generators
 - hoardings
 - hoists
 - pumps, including submersible pumps
 - rock breakers
 - scaffolding

RANGE STATEMENT

- shovels and buckets
- skimmers and scrapers
- temporary lighting systems
- temporary support systems
- well points
- service core construction, such as:
 - ceilings
 - damp proof courses
 - demountable formwork
 - flashings
 - jump formwork
 - membranes
 - openings (floors and roofs)
 - sarking and insulations
 - slip formwork
 - wall and floor cladding
 - walls
- services, such as:
 - communication systems
 - electricity
 - fire services, including fire hydrants and fire hose reels
 - gas
 - heating and cooling systems
 - mechanical ventilation
 - roof water plumbing and drainage
 - sewerage/septic or similar systems of plumbing and drainage
 - smoke control systems
 - sprinklers and similar systems
 - surface drainage
 - telephone
- structural fit-out systems and fixing, such as:
 - cupboard joinery and finishes
 - floor
 - mouldings
 - wall and ceiling finishes and coatings
 - wall and ceiling linings

RANGE STATEMENT

- wet area floor detailing
- structural openings, such as:
 - braced frame and core
 - diagonal bracing superimposed over frame or tube structure.
 - door types for internal and external use
 - fenestration design based on bracing design
 - fire doors
 - rigid frame and core
 - timber and aluminium-framed windows and doors
 - tube structure
 - vehicle access doors
- structural systems, such as:
 - structural floor systems
 - structural roof systems
 - structural wall systems
- termite control:
 - which can be mechanical and chemical
 - may include other control systems.

Structural principles relate to:

- loads and forces
- stresses and strains applied to:
 - arches
 - beams
 - braces
 - columns
 - concrete floor slabs
 - load-bearing walls
 - roof frames, including trusses
 - structural footings
 - ties.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and interpret plans and specifications.	<p>1.1. Interrelationships between <i>plans and specifications</i> are identified and interpreted.</p> <p>1.2. Location and interpretation of key information are identified according to drawings and specifications.</p> <p>1.3. Drawing responses are identified in accordance with <i>relevant Australian standards</i>.</p> <p>1.4. Application of all documentation is identified and interpreted.</p>
2. Produce draft working drawings.	<p>2.1. Requirements and criteria for draft working drawings are identified and interpreted.</p> <p>2.2. <i>Draft working drawings</i> with annotated construction details are completed in accordance with BCA, relevant state or territory legislation and Australian standards.</p>
3. Produce a set of working drawings for a factory and office complex.	<p>3.1. Requirement and criteria for working drawings are identified and interpreted.</p> <p>3.2. Working drawings are based on research and are in accordance with relevant legislation including the BCA and Australian standards.</p> <p>3.3. <i>Building drawings</i> include detailed specifications and are completed to architectural conventions and demonstrate consideration of creativity and innovation.</p> <p>3.4. Documentation is compiled to satisfy approval requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
 - BCA
 - legislation
 - plans, specifications and drawings
 - relevant Australian standards
 - other relevant documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- creative and innovative approaches in relevant drawing tasks
- numeracy skills for the production of drawings
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- drafting and drawing protocols
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- structural, design and construction principles of buildings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- produce two and three-dimensional drawings for buildings up to three storey and not exceeding a maximum floor area of 2000 square metres, including at least one orthographic, one isometric and one perspective drawing
- provide drawings to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plans and specifications:

- plans include:
 - building plans
 - details
 - sections and three-dimensional sketches relating to main components of construction
 - finishes and specification notes to a standard suitable for building approval
- specifications include:
 - structural engineering drawings
 - soil tests
 - shop drawings (steel fabrication)
 - survey plans and levels plans for temporary structures and works.

RANGE STATEMENT

Relevant Australian standards include:

- AS1100 Architectural drawing and supplement
- AS1720 Timber structures
- AS3600 Concrete structures
- AS3700 Masonry
- AS4100 Steel structures.

Draft working drawings include:

- area analysis
- BCA Class 2 to 9 buildings
- computer-generated or paper-based presentations
- construction notes
- details
- elevations
- floor plans
- general notes
- location or neighbouring buildings
- plan and specification interpretation
- projections
- sections
- services
- site plans
- two and three-dimensional drawings
- up to three storey buildings not exceeding a floor area of 2000 square metres.

Building drawings:

- banks and landscaping
- base structure - timber and masonry
- certificate of title to land
- complex roof and wall shapes
- composite construction (e.g. steel and timber)
- conversion of plans and specifications to architectural and building detail
- drawing protocols, including:
 - abbreviations
 - legends
 - lettering standards
 - numbering
 - paper size
 - scale
 - standard units of measurement
 - symbols
- electrical connections plan

RANGE STATEMENT

- excavation cut and fill
- flashings and box gutters
- general plumbing services plan
- glazing, including window and door schedules
- insulation and sarking
- internal and external wall claddings
- joinery
- land surveyor plans
- large span timber beams and connections, including glue laminated beams
- levels and contours
- research journal in accordance with project aims, comprising:
 - photographs
 - record of site visits
 - sections
 - three-dimensional sketches
- retaining walls
- roof construction
- sewerage connection and easement plan
- soil classification and tests
- stairs
- stormwater connection and easements plan
- timber and masonry
- upper floor construction
- wall construction.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and analyse construction faults on building sites up to three storeys.	<p>1.1. Information is collected relating to the specific building construction problem.</p> <p>1.2. Construction problem for the type of construction is identified relative to original specifications and building material.</p> <p>1.3. Construction faults are communicated to appropriate personnel and documented in accordance with standard work practices.</p> <p>1.4. Problem solving techniques are used, typical faults and problems are identified and action to rectify is deemed to be in accordance with the BCA.</p>
2. Identify construction techniques, methods and materials nominated in relevant legislation in the BCA and Australian standard.	<p>2.1. Building terminology is used accurately in the communication of issues.</p> <p>2.2. Working drawings and specifications are examined and existing or designed construction problems are identified and evaluated.</p> <p>2.3. Alternative methods and materials to meet construction aims and objectives are prepared to the specification nominated in relevant legislation in the BCA and Australian standards.</p> <p>2.4. Detailed sketches of available alternative methods and materials available to meet the construction aims and objectives are prepared to specification.</p>
3. Resolve construction faults in construction techniques and methods.	<p>3.1. Project working drawings and specifications identifying existing or designed construction problems are evaluated.</p> <p>3.2. Report identifying available alternative methods and materials to meet the construction aims and objectives is prepared to specification.</p> <p>3.3. Detailed sketches of available alternative methods and materials available to meet the construction aims and objectives are prepared to specification.</p>
4. Resolve construction faults using alternative construction methods.	<p>4.1. Suitable methods from available alternative solutions are evaluated and recommended to resolve the problem in accordance with project aims and objectives.</p> <p>4.2. Selected methods are integrated into the project in order to resolve the construction problems in accordance with project aims.</p> <p>4.3. Evaluation of available alternative forms of construction is carried out in accordance with project</p>

ELEMENT	PERFORMANCE CRITERIA
	aims.
5. Resolve common on-site faults with building materials.	5.1. Commonly occurring on-site problems with building materials and their causes are evaluated. 5.2. Corrective and preventative measures are identified and implemented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - communicate construction problem to appropriate personnel
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - evaluate own actions to make judgements about performance and necessary improvements
 - read and interpret:
 - Australian standards
 - BCA
 - legislation
 - reports
 - specifications
 - working drawings
 - use accurate terminology
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - to document construction problem
 - report identifying alternative methods/materials
- teamwork skills to work effectively with others.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- access requirements for people with a disability and the requirements of the Disability Discrimination Act (DDA) with regard to access
- authorities and powers of a building surveyor
- design and construction principles of buildings
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.
- terminology, definitions and hazard identification.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- assess construction faults in buildings, determine a rectification strategy and consider alternative construction methods; and the associated reporting of data, findings, recommendations and strategies for at least one residential building project and one commercial building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Building construction includes:

- design specifications
- evaluation and identification of construction faults and the determination of alternative methods
- maintenance specifications and adherence to legislative requirements for BCA Class 2 to 9 buildings
- standards and services in compliance with relevant legislation.

Type of construction includes:

- residential, industrial and commercial medium rise buildings
- wide span buildings, limited to three storeys and a maximum floor area not exceeding 2000 square metres.

RANGE STATEMENT

- Building material*** includes:
- concrete
 - masonry and autoclaved aerated concrete (AAC)
 - steel-framed
 - timber-framed.
- Construction faults*** include:
- installation
 - refurbishing
 - renovation
 - restoration.
- Australian standards*** include:
- AS1288 Installation of glass in buildings
 - AS1684 Residential timber framed construction
 - AS2050 Fixing of roof tiles
 - AS2180 Metal rainwater goods, selection and installation
 - AS2208 Safety glazing materials for use in buildings
 - AS3500 National plumbing
 - AS3600 Concrete structures
 - AS3660 Protection of buildings from subterranean termites
 - AS3700 Masonry
 - AS3740: 2004 Waterproofing of wet areas in residential buildings
 - AS4349 Inspection of buildings.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluation of slope instability.	<ul style="list-style-type: none">1.1. Effect of soil and rock strength on slope instability is evaluated and recorded.1.2. Modes and mechanics of slope instability are researched and documented.1.3. Methods to stabilise slopes are researched and documented according to <i>standard specifications</i>.
2. Analyse retaining wall requirements according to the structure.	<ul style="list-style-type: none">2.1. Retaining structures and systems suitable for various situations and <i>soil types</i> are identified adhering to <i>legislative requirements</i> and the <i>application of footings and geomechanical principles</i>.2.2. Active and passive earth pressure and water pressure applicable to various retaining structures is determined.2.3. Earth pressures on a gravity retaining wall are determined and analysed according to required structure for stability.
3. Determine footing design requirements according to situation.	<ul style="list-style-type: none">3.1. Net safe bearing pressure for a <i>footing</i> on a clay soil is calculated without error.3.2. Allowable bearing pressures for footings on granular soil from in-site penetration test results are calculated without error.3.3. Long-term consolidation effects for footings on clay soils are analysed and recorded.3.4. Behaviour of footings on soils under earthquake conditions is researched and documented.
4. Determine requirements for compaction of soil fill.	<ul style="list-style-type: none">4.1. Maximum <i>soil properties</i>, including dry density and moisture content relationship, for a soil is analysed and recorded.4.2. Techniques for compaction control and performance of compaction plant in consideration of <i>maintenance requirements</i> are identified and documented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - evaluate own actions to make judgements about performance and necessary improvements
 - read and interpret:
 - BCA
 - reports
 - specifications
 - working drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to report evaluations
- numeracy skills to interpret and apply complex mathematical information
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- design principles and concepts for footings
- geomechanical engineering principles
- nature of materials and effect on performance
- nature of soil mechanics and effect of performance in problem soils
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural design principles in buildings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- assess footing requirements, for at least one commercial building project or equivalent, which includes advice on positioning and sizing
- analyse and report on the soil types and properties for at least two building projects or equivalent
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Standard specifications include industry-standard specifications and may be:

- detailed specifications, addressing specific components such as structural or other requirements
- developed specifications
- preliminary and outline specifications.

Soil types include:

- clay soils
- rock
- saturated granular soils.

Legislative requirements are limited to:

- buildings up to three storeys and not exceeding a maximum floor area of 2000 square metres
- adhering to legislative requirements for BCA relating to Class 2 and 9 buildings.

Application of footings and geomechanical principles

- assessment of geomechanical and footing design for residential and commercial

RANGE STATEMENT

includes:	buildings
	<ul style="list-style-type: none">• identification of the nature, composition, classification and distribution of soil type.
<i>Footing</i> must be suitable for:	<ul style="list-style-type: none">• building type• site conditions.
<i>Soil properties</i> include:	<ul style="list-style-type: none">• bulk density• degree of saturation• dry density• moisture content• porosity• void ratio.
<i>Maintenance requirements</i> include identification of:	<ul style="list-style-type: none">• ground water• surface water• tree root systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate layouts of water supply for general and fire fighting use.	<p>1.1. Water supply, connection and layout are identified, evaluated and recorded for <i>residential and commercial building projects requiring evaluation of services layout</i> connected to a town supply or a tank storage supply in accordance with BCA, relevant legislation and Australian standards and the <i>application of evaluative and corrective methods for services' layout</i>.</p> <p>1.2. Installation of water <i>services</i> supplying fire hydrants, fire hose reels and fire sprinkler systems is identified, evaluated and recorded in accordance with BCA, relevant legislation and Australian standards and <i>adherence to legislative requirements</i>.</p> <p>1.3. Interconnection of water tanks for fire services is emulated in the intent of non-return to original tanks and the results are evaluated.</p>
2. Evaluate sewerage and drainage disposal methods and their layouts.	<p>2.1. Sewerage connection and layout are identified, evaluated and recorded in accordance with the BCA, relevant legislation and Australian standards.</p> <p>2.2. Connection methods of main drains to local authority sewers for open ground, and within buildings taking up the whole site, are identified, evaluated and recorded.</p> <p>2.3. Disposal of sewerage from fixtures situated below the level of the local authority sewer for both domestic and commercial buildings are evaluated in accordance with BCA, relevant legislation and Australian standards.</p> <p>2.4. Methods for disposing of stormwater drainage systems are evaluated and documented in accordance with the BCA, relevant legislation and Australian standards.</p> <p>2.5. Design and installation of stormwater drainage systems are evaluated and documented in accordance with BCA, relevant legislation and Australian standards.</p>
3. Evaluate commonly used methods for smoke hazard management, mechanical ventilation and	<p>3.1. Terms used in mechanical ventilation are clearly recorded stating how ventilation, volume, velocity and content may be controlled.</p> <p>3.2. Methods of mechanical ventilation, air distribution and smoke hazard management are identified, evaluated and recorded in accordance with BCA,</p>

ELEMENT	PERFORMANCE CRITERIA
air-conditioning, methods of air filtration and system layout.	relevant legislation and Australian standards.
	3.3. Air conditioning and mechanical ventilation and basic elements of air conditioning are identified, evaluated and documented, including the function of air conditioning and applications for various types of occupancy in buildings.
4. Evaluate hot water systems and factors affecting selection.	4.1. Hot water systems are identified and evaluated according to design factors, types of system, height of installation, area to be serviced, number of outlets and available energy sources. 4.2. Operating principles of various types of hot water systems are evaluated and documented.
5. Identify natural lighting for varying situations and evaluate suitable lighting fixtures for a range of operations.	5.1. Natural lighting and general aims of design are identified in accordance with authorities and governing regulation requirements. 5.2. Artificial lighting and types of light sources are compared to recommended service luminance for various service situations in accordance with BCA, relevant legislation and Australian standards.
6. Evaluate fire fighting and fire detection services.	6.1. Authorities involved in plan perusal and site inspection for the various building classifications and their roles and functions are identified. 6.2. Requirements for sprinkler systems, fire hydrants and fire hoses for the various building classifications are identified and evaluated in accordance with BCA, relevant legislation and Australian standards. 6.3. Fire detection and alarm systems are identified and evaluated in accordance with BCA, relevant legislation and Australian standards.
7. Determine the requirements for general electrical and electronic service installation.	7.1. Electrical supply authorities and the relevant legislation are identified and recorded. 7.2. Procedures for electrical supply and connection to site are documented. 7.3. Electrical design and provision for services and electronic cabling are identified, evaluated and recorded. 7.4. Design and installation of emergency warning systems, emergency lighting and exit signage systems are evaluated and recorded in accordance with the BCA and relevant Australian standards.
8. Evaluate methods for vertical transportation	8.1. Methods of vertical transportation are identified, evaluated, recorded and sketched in accordance with

ELEMENT

PERFORMANCE CRITERIA

and layout.

BCA, relevant legislation and Australian standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - evaluate own actions to make judgements about performance and necessary improvements
 - read and interpret:
 - Australian standards
 - BCA
 - legislation
 - specifications
 - working drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to report evaluations and record requirements
- numeracy skills to calculate workplace requirements
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- design concepts and principles in relation to service installations
- general services installation terminology, definitions, installation methods and hazards
- nature of materials and effect on performance
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation

REQUIRED SKILLS AND KNOWLEDGE

- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- terminology and methods of roof construction used for daylight transmission
- terminology and methods used in artificial lighting
- terminology with reference to items and services that may be used in plumbing, sewerage and drainage systems
- terminology with reference to vertical transportation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- evaluate the services layout, connection methods and rectification actions for at least one residential and one commercial building project or equivalent, which includes advice on hot and cold water supply, sewerage layout, electrical and electronic installation lighting systems, vertical transportation requirements, and smoke and fire detection and prevention systems
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Residential and commercial building projects requiring evaluation of services layout include:

- processing of applications
- project milestones
- provision of site access/facilities
- work schedules.

Application of evaluative and corrective methods for services' layout includes:

- electric and electronic installations
- hot and cold water supply
- natural lighting options
- sewerage layout
- smoke and fire preventative systems
- smoke hazard management
- ventilation and air conditioning
- vertical transportation.

RANGE STATEMENT

Services include:

- firefighting services, such as:
 - fire and smoke detection and alarm systems (BCA deemed-to-satisfy [DTS] provisions)
 - fire hose reels and fire extinguishers
 - fire hydrants
 - installation of fire stopping and fire collars
 - sprinkler systems (BCA DTS provisions)
- general electric and electronic service systems, including:
 - electrical supply authorities connection to site and distribution facilities (switch room and sub-stations)
 - type of service (emergency power and alternative power sources)
- categories of cabling:
 - computers
 - data
 - emergency lighting and exit signage systems
 - emergency warning and intercommunication systems
 - fire stopping
 - layout of equipment for telephones
 - lift controls and power supplies
 - repair and extension
 - service system safeguards
 - service systems access for maintenance
 - telecommunications connection to site and distribution facilities
- hot water systems, covering:
 - area to be serviced
 - height of installation
 - number of outlets and energy sources available
 - type of occupancy
 - type of system
- lighting systems, covering:
 - brightness
 - emergency and exit signage systems

RANGE STATEMENT

- intensity
- lifespan and installation of fire stopping
- locations for installation
- natural and artificial lighting
- reflections
- terms, including control of glare
- mechanical ventilation
- air-conditioning and air filtration, such as:
 - air conditioning applications
 - air distribution, including mechanical ventilation requirements for enclosed car parks
 - air filtration, including air filters
 - air intake systems
 - ducting and main filter types
 - fire dampers
 - fume discharge systems
 - installation of fire stopping
 - smoke control and exhaust systems
 - warm water and cooling towers
- sewerage connection, such as:
 - graded or vertical discharge pipes
 - inspection shafts and overflow relief gullies (ORGs)
 - local authority sewerage drainage system
 - septic or biochemical treatment unit
- specialised services for:
 - hospitals
 - laboratories
 - smart buildings
- stormwater, covering:
 - connection to local government water drains
 - design
 - downpipes and unground or concealed piping
 - installation and disposal
 - location and construction requirements for eaves and box gutters
 - size

RANGE STATEMENT

Adherence to legislative requirements:

- use of soakage pits and on-site water detection systems
- vertical transportation systems, such as:
 - escalators
 - hoists and pedestrian movers
 - lifts
- water supply, such as:
 - single and two stage pumping for multi-function and single function connected services
 - tank storage supply relative to the public water supply and reservoir heights
 - town supply.
- is limited to residential and commercial buildings up to three storeys and not exceeding a maximum floor area of 2000 square metres
- BCA requirements for Class 2 and 9 buildings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse properties, characteristics, constituents and mix design of concrete.	<ul style="list-style-type: none">1.1. Plastic concrete properties are stated and documented in consideration of <i>concrete types, properties and characteristics</i>.1.2. Hardened concrete properties are stated and described.1.3. Types of hydraulic cement are listed.1.4. Properties and uses of cements are listed and described.1.5. Hydration process is recorded.1.6. Sources of aggregate are listed and properties of each are recorded.1.7. Effects of impurities are recorded.1.8. Manufacture and testing of concrete is identified, <i>evaluated</i> and recorded in accordance with appropriate Australian standards.
2. Assess the requirements for concrete handling, placement, compaction, finishing and curing methods.	<ul style="list-style-type: none">2.1. Effects of site access on the selection and distribution methods listed are documented.2.2. Methods of distribution of concrete are listed and recorded.2.3. Correct placement methods for level slabs, sloping slabs and vertical walls are recorded.2.4. Reasons and effects of compaction on both plastic and hardened concrete are identified and listed.2.5. Immersion, surface and form vibration are compared and recorded.2.6. Causes of surface defects during concrete placement and compaction are identified and recorded.2.7. Finishing process and surface treatments to slab concrete are compared and documented.2.8. Type of curing methods and detrimental effects of poor or no curing are identified and recorded.
3. Identify concrete faults and repair methods.	<ul style="list-style-type: none">3.1. Live and dormant cracks are identified and reported.3.2. Repair methods for cracked concrete are established and reported.3.3. Causes of concrete cancer are identified and recorded.3.4. Repair methods for concrete cancer are established and reported.3.5. Diagnosis of faults in concrete are identified and

ELEMENT	PERFORMANCE CRITERIA
	recorded.
4. Assess the effect of fire on concrete.	<p>4.1.Detrimental effects of fire and heat on reinforced concrete are documented.</p> <p>4.2.Properties of concrete as an insulator to steel are documented.</p> <p>4.3.Fire test results are used to determine behavioural performance of concrete in fire.</p> <p>4.4.Methods of fire protection to concrete elements are recorded.</p> <p>4.5.Methods of repair to fire damaged concrete are identified and reported.</p>
5. Identify environmental issues and new technologies that affect concrete.	<p>5.1.Environmental impact on the use of concrete in buildings relating to sustainability and supply of materials, cost, life cycle of concrete, thermal mass of concrete and recycling is documented.</p> <p>5.2.New technologies in concrete are recorded.</p> <p>5.3.Performance characteristics of concrete in fire resistant construction are identified and documented in accordance with acceptable standards of practice.</p>
6. Determine cost-effectiveness and environmental issues when dealing with recycled materials.	<p>6.1.Cost-effectiveness of using recycled materials and related environmental considerations are identified and selected in accordance with acceptable standards of practice.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and

REQUIRED SKILLS AND KNOWLEDGE

- confirm requirements, share information, listen and understand
- evaluate own actions to make judgements about performance and necessary improvements
- read and interpret:
 - Australian standards
 - BCA
 - legislation
 - other relevant documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
 - provide an evaluation
 - report data, findings, recommendations and strategies
- numeracy skills to calculate workplace requirements
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural and design principles for buildings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify structural requirements and loads commonly used in structural design.	<p>1.1. Assessment of <i>structural requirements</i> relating to equilibrium, stability, strength, functionality, economy and aesthetics is undertaken.</p> <p>1.2. Different types of loading and unloading methods and the effect on structures are identified and documented in accordance with BCA, relevant Australian standards, suppliers' technical data and empirical methods and <i>adherence to legislative requirements for BCA Class 2 to 9 buildings</i>.</p>
2. Analyse effects of force and moments on structural elements.	<p>2.1. Force, moments and equilibrium of force and the effects on structures are identified and recorded.</p> <p>2.2. Equilibrium of forces for co-planar systems in consideration of stability is identified and compared for performance.</p>
3. Analyse properties and behaviour of structural materials.	<p>3.1. Effect of force on materials in tension, compression, stress, strain and elasticity is identified and recorded.</p> <p>3.2. Structural properties and performances are differentiated for common materials and recorded.</p>
4. Identify section properties of structural elements and their effect on structural performance.	<p>4.1. Cross-sectional geometry and common structural shapes are identified.</p> <p>4.2. Section properties and the relationship between first and second area moments, section models and gyration and deflection of beams are identified and compared for performance.</p> <p>4.3. Section properties' values for I (moment of inertia), Z (section modulus) and R (radius) for common sections are determined using tables or standard formulas and compared for performance.</p>
5. Compare performance and properties of spanning elements.	<p>5.1. Structural considerations of loaded spanning elements for bending moments, shear forces, deflection and torsion are determined and compared for performance.</p> <p>5.2. Bending behaviour and performance of loaded support beams of various types, shapes, spans and loads are determined and compared for performance.</p> <p>5.3. Effects that connections have upon the structural performance of beams are identified and compared for performance.</p> <p>5.4. Principles of slab behaviour in relation to spans and stress distribution are identified and compared for performance.</p>

ELEMENT	PERFORMANCE CRITERIA
6. Compare performance criteria for columns.	<p>6.1. Effect of slenderness ratio that changes in length, cross-sections, connections and materials will have on the strength of a column is determined and compared for performance.</p> <p>6.2. Eccentric and axial load effect on the strength of column section and materials are determined and compared for performance.</p>
7. Compare methods of stress distribution in connections between structural elements.	<p>7.1. Transmission of forces between structural elements are identified and interpreted.</p> <p>7.2. Methods of distributing stresses in connections between structural elements are identified and compared for performance.</p>
8. Determine how loads of various types occur and impinge on a building structure.	<p>8.1. Differences between <i>types of loading</i>, including dead load, live load, wind load, earthquake load and other load, causing actions are determined and compared for performance.</p> <p>8.2. Dead loads are determined using BCA and relevant Australian standards.</p> <p>8.3. Indication of direction of wind pressures on the various surfaces of buildings specified in BCA and relevant Australian standards are determined.</p>
9. Evaluate design of high performance structural elements.	<p>9.1. Factors that determine the form of long span structural elements, including bending movement, deflection and shear forces, are researched, considered and evaluated.</p> <p>9.2. Performance in <i>high performance structural elements</i> is identified and evaluated.</p> <p>9.3. <i>Use of steel to reinforce concrete</i> is investigated and evaluated and the outcomes or results are recorded.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and

REQUIRED SKILLS AND KNOWLEDGE

contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - evaluate own actions to make judgements about performance and necessary improvements
 - read and interpret:
 - BCA
 - legislation
 - relevant Australian standards
 - other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to report findings and provide reports
- numeracy skills to analyse and apply complex mathematical information
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- grading processes and grade markings used to categorise timber and timber products
- nature of materials and effect on performance
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural and design principles for buildings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- assess, identify and report on findings for the design, positioning and sizing of structural members of at least one three storey building project or equivalent
- provide reports to appropriate body/individual as determined by the project brief
- apply design principles relating to performance of structural members.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment of ***structural requirements***:

- includes:
 - analysis of engineering drawings
 - evaluation of site physicality
 - identification of safe structural practices
- may require actual site visits.
- three storey buildings
- not exceeding a maximum floor area of 2000 square metres.

Adherence to legislative requirements for BCA Class 2 to 9 buildings is limited to:

Types of loading include:

- static
- dead
- dynamic
- earthquake
- settlement
- snow
- thermal.

RANGE STATEMENT

High performance structural elements include:

- castellated beams
- connections
- fire resistance
- laminated beams
- prestressed beams and slabs
- trusses
- waffle slabs.

Evaluation of *use of steel to reinforce concrete* includes:

- bond stress and development length
- carry over movements
- compression reinforcement
- eccentric loading
- location of steel in relation to shear stress
- location of steel in relation to tensile stress
- reinforcement ratio.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the purpose and basic intent of the BCA.	<p>1.1. Objectives of the BCA are analysed for construction in residential and commercial buildings.</p> <p>1.2. Conditions of the BCA and the purpose of the respective components are evaluated and documented for relevant <i>building categories</i> and <i>building surveying procedures</i>.</p> <p>1.3. Deemed-to-satisfy (DTS) concept for construction to meet BCA requirements is evaluated and documented.</p>
2. Locate and interpret code or standard requirements that are applicable to particular projects.	<p>2.1. Clauses from the BCA that apply to particular projects are identified and recorded.</p> <p>2.2. Prescriptive requirements of relevant BCA clauses are determined.</p> <p>2.3. Standards that are referenced in the BCA are identified and recorded.</p> <p>2.4. Special requirements that may apply to specific areas are identified and recorded.</p>
3. Classify buildings.	<p>3.1. Nature of a building is determined, with regard to use and arrangement.</p> <p>3.2. BCA criteria are applied to determine the defined classification.</p> <p>3.3. BCA requirements are interpreted for multiple classifications.</p>
4. Apply solutions to construction problems for compliance with the BCA.	<p>4.1. Criteria that will ensure construction methods comply with the BCA are determined.</p> <p>4.2. Alternative approaches to a construction problem that will comply with the requirements of the BCA are reported.</p> <p>4.3. Appropriate assessment methods used to determine whether a building solution complies with performance requirements and/or DTS provisions of the BCA are chosen and applied.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - evaluate own actions to make judgements about performance and necessary improvements
 - read and interpret:
 - BCA
 - Australian standards
 - other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - document building requirements
 - report alternative approaches to construction problems
- numeracy skills to analyse and apply complex mathematical information
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- access requirements for people with a disability and the requirements of the Disability Discrimination Act (DDA) with regard to access
- authorities and powers of a building surveyor
- BCA and primary referenced Australian standards
- criteria for Class 2 to 9 buildings and Guide to BCA
- design, construction and structural principles of buildings
- DTS provisions
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- terminology and definitions in relevant documentation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- classify building construction through the evaluation and interpretation of compliance with the BCA, and associated reporting of data, findings, recommendations and strategies for at least one residential building project and one commercial building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate performance-based designs.	<ul style="list-style-type: none">1.1. Role of regulation of buildings and the built environment within society are identified and applied.1.2. Societal goals related to the construction and use of buildings are interpreted.1.3. BCA hierarchy and the role of objectives, functional statements and performance requirements are identified and recorded.1.4. Differences between public policy and professional judgement are identified and recorded.
2. Apply the performance-based BCA.	<ul style="list-style-type: none">2.1. Various assessment methods for performance-based codes, risk assessment and risk management principles contained in the BCA and their application are identified and applied for building projects requiring assessment and management of risk.2.2. Methodologies for determining correct performance requirements for buildings to be satisfied are demonstrated.2.3. Processes for involving relevant parties in the decision making process are determined.2.4. Fire safety engineering brief (FSEB) process is identified and applied.2.5. Assessment report for a performance-based solution is prepared.2.6. Importance of documentation and record keeping for performance-based solutions is identified and applied.2.7. Impacts of a performance-based solution on building maintenance and alterations are identified and reported.
3. Evaluate risk assessment.	<ul style="list-style-type: none">3.1. Methods of determining and assessing risks are identified and applied.3.2. Consequences of various forms of risk are identified and reported.3.3. Basic probabilistic analysis, including use of event trees, is applied in accordance with risk assessment principles for fire safety engineering.3.4. Statistics used in risk assessment practices are interpreted.3.5. Research data sources for risk assessment and management are identified and applied.

ELEMENT	PERFORMANCE CRITERIA
4. Evaluate fire safety engineering.	<ul style="list-style-type: none">4.1.Potential fire hazards and causes of fire are identified and reported.4.2.Fire loads and fire growth characteristics are identified and interpreted.4.3.Research data sources for fire safety engineering are identified and interpreted.4.4.Principles of fire detection, suppression and extinguishment are applied.4.5.Tenability limits and effects and toxicity of smoke on building occupants are identified and listed in accordance with fire engineering principles.4.6.Human behaviour and movement principles are identified and applied.4.7.Fire brigade activities and intervention principles are recorded.4.8.Compute software applications used in fire safety engineering are identified and their limitations of use assessed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate smoke control in buildings.	<p>1.1. Psychological effects of smoke on people exposed to building fires are researched.</p> <p>1.2. Mechanisms of smoke movement in building are identified and recorded.</p> <p>1.3. Smoke control systems identified to meet the requirements for buildings are documented in accordance with legislative requirements.</p> <p>1.4. Application of computer-packaged smoke control systems is analysed and reported.</p>
2. Analyse passive fire protection systems for buildings.	<p>2.1. Compartmentation purposes are reported.</p> <p>2.2. Separation requirements for buildings from other buildings and structures are identified and recorded.</p> <p>2.3. Requirements for escape from buildings are documented according to BCA requirements.</p>
3. Determine suitability of fire detection systems for buildings.	<p>3.1. Range of devices for active fire protection, such as alarms and detectors, is identified and selected for purpose use.</p> <p>3.2. Acts and building regulations that govern the installation of active fire protection systems are identified and recorded for building projects requiring assessment of fire technology systems.</p> <p>3.3. Requirements for fire detection systems in <i>buildings</i> are identified and selected.</p> <p>3.4. Requirements for fire detection systems for buildings that present unusual fire hazards are identified and documented.</p> <p>3.5. Agencies responsible for maintenance of <i>fire safety systems</i> in buildings are identified and listed according to state or territory legislation.</p>
4. Determine the requirements for a range of firefighting equipment in buildings.	<p>4.1. Legislation that governs the installation of firefighting equipment is identified and documented.</p> <p>4.2. Extinguishing mediums used by firefighting agencies and their applications are identified and recorded.</p> <p>4.3. Properties of extinguishment for the various mediums are identified and documented.</p>
5. Check and identify fire alarms.	<p>5.1. Various alarm systems and their operating conditions are identified and documented.</p> <p>5.2. Various forms of detection and suppression systems are identified in accordance with BCA and relevant</p>

ELEMENT	PERFORMANCE CRITERIA
	Australian standards and are assessed for compliance.
	5.3. Components and their function in the operation of a sprinkler system are checked for pertinence in accordance with BCA and relevant Australian standards.
6. Determine the requirements for sprinklers and drenchers in buildings.	<p>6.1. Functions of sprinkler and drencher systems are recorded.</p> <p>6.2. Sources of water supply to a sprinkler system are identified and documented in accordance with BCA.</p> <p>6.3. Components and their function in the operation of a sprinkler system are interpreted.</p>
7. Integrated active fire protection systems and passive fire protection are evaluated to ensure a safe and economical building.	<p>7.1. Active and passive fire protection systems are identified and selected.</p> <p>7.2. Building examination is carried out to determine the effectiveness of the active and passive fire protection systems according to BCA.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - BCA
 - legislation
 - other relevant documentation
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication
- written skills to:
 - provide an evaluation
 - report data, findings, recommendations and strategies
- innovation skills to develop creative and responsive approaches
- numeracy skills to calculate workplace requirements
- planning and organisational skills to research, collect, organise and understand information relating to the design of fire-compliant hydraulic systems and to take initiative and make decisions
- problem solving skills to analyse requirements, carry out tests, consider options and design an appropriate system.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- Factory Mutual (FM) approved material specifications
- fire safety engineering guidelines
- fire technology principles in buildings
- National Fire Protection Association (NFPA) specifications
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- evaluate and report data, findings and recommendations for the implementation of fire technology strategies for at least one building development project up to three storeys, including smoke detection systems, fire prevention systems, protection and control systems, firefighting equipment, active and passive fire protection systems, sprinkler systems and drencher systems, with respect to compliance with the applicable local government authority, relevant legislation and the BCA
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Installation of active fire protection systems includes:

- new and proposed buildings, for the purposes of highlighting fire technology requirements and solutions in compliance with the BCA.

Building projects requiring assessment of fire technology systems include:

- calculation and processing of application or inspection fees
- project milestones
- provision of site access/facilities
- work schedules.

Buildings are limited to:

- three storeys and a maximum floor area not exceeding 2000 square metres, complying with

RANGE STATEMENT

- Fire safety systems* include:
- the BCA Class 2 to 9 buildings.
 - active and passive fire protection systems
 - drencher systems
 - firefighting equipment
 - fire prevention systems
 - protection and control systems
 - smoke detection systems
 - sprinkler systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Distinguish between common law, judicial precedent and legislation.	<p>1.1. Common law in the <i>Australian legal system</i> is analysed and documented.</p> <p>1.2. Binding and persuasive precedent is analysed and interpreted.</p> <p>1.3. Relationship between common law and <i>statute law</i> is analysed and documented.</p> <p>1.4. Delegated legislation and authorities' allocated specific powers are documented.</p> <p>1.5. Legal practice of reading case law and law updates are appraised and noted.</p>
2. Identify and interpret the court hierarchy and the civil/criminal jurisdictions of each court.	<p>2.1. Civil/criminal court hierarchy is analysed and documented.</p> <p>2.2. Details of the <i>types of courts</i> for civil/criminal jurisdiction of each court are analysed and documented.</p> <p>2.3. System of civil/criminal appeals is identified and documented.</p> <p>2.4. Jurisdiction that the coroner's court has in regulatory practice and its role in legislative reform are identified and documented.</p> <p>2.5. Role of legal personnel in the court system is identified and documented.</p>
3. Identify and interpret courtroom procedures.	<p>3.1. Court examination procedures are identified and documented.</p> <p>3.2. Role of a judge and jury in a civil/criminal trial and eligibility to attend for jury service are identified and documented.</p> <p>3.3. Format of a prosecution brief is identified and documented.</p> <p>3.4. Appropriate manner of entering in to and departing courts or tribunals is adhered to.</p> <p>3.5. Appropriate manner of addressing courts or tribunals is adhered to.</p> <p>3.6. Relevant legal language is applied.</p>
4. Identify types of offences and defences within criminal law.	<p>4.1. Presumption of innocence in a criminal case and the burden of proof are analysed and documented.</p> <p>4.2. General principles of criminal liability are determined.</p> <p>4.3. Differences between summary and indictable offences are analysed and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.4.Types of defences are analysed and documented.
5. Detail types of evidence admissible in a civil/criminal trial.	5.1. <i>Types of evidence</i> are analysed and documented. 5.2.Differences between types of evidence in a court of law are defined and outlined. 5.3.Evidence rules are identified and documented.
6. Identify the rules of statutory interpretation.	6.1.Acts of parliament and subordinate legislation as a source of law are analysed and documented. 6.2.Extrinsic and intrinsic material as they relate to <i>federal, state or territory</i> Interpretation Acts are identified and documented. 6.3. <i>Syntactical presumptions</i> are analysed and documented. 6.4.General approaches to <i>statutory interpretation</i> are identified and analysed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - address courts/tribunals
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - legislation
 - other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to record relevant information.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- Australian legal system and applications of law and legal principles in building surveying
- building policy and legislation
- legal terminology, definitions, processes and procedures used in standard court operations
- processes for the administration and preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research processes and strategies.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- perform research, interpretation and analysis together with attendance and involvement in at least one civil law case and at least one criminal law case impacting on building control legislation, all in accordance with the professional code of conduct and ethics applicable to building control
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Australian legal system includes:

- Australian common law system
- laws applicable to building surveying
- professional code of ethics.

Statute law includes:

- common law
- judicial precedent
- legislation.

Types of courts include:

- civil and criminal jurisdictions.

Types of evidence include:

- admissible and inadmissible evidence
- direct
- documented
- hearsay
- oral
- real
- secondary.

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Devise strategies and models of consultation.	<p>1.1. Suitable consultation strategy is selected for consulting with communities.</p> <p>1.2. Consultation strategy is selected, enabling interactions to occur between building surveyors and interested parties, including community groups involved in community issues.</p>
2. Facilitate community consultations.	<p>2.1. Interest groups involved in consultation are briefed on process.</p> <p>2.2. Community resources to develop and facilitate consultation are assessed for suitability.</p> <p>2.3. Clear, accurate information is prepared and distributed to interest groups involved in consultation process.</p>
3. Record analyse and report on outcome of consultations.	<p>3.1. Consultation process responses are validated against design criteria specified in community goals.</p> <p>3.2. Responses are collated into categories to facilitate desired outcomes.</p> <p>3.3. Responses are formatted for decision making process to proceed.</p> <p>3.4. Summary of responses and adopted recommendations are recorded and forwarded to interest groups.</p> <p>3.5. Accurate reports on community consultation process are prepared, including recommendations to enable informed decisions to be made.</p> <p>3.6. Overall effectiveness of consultation strategy is reviewed, evaluated and actioned by building surveyor.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as

REQUIRED SKILLS AND KNOWLEDGE

current work site environmental and sustainability frameworks or management systems

- communication skills to:
 - address individuals and groups and gain their feedback
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret client and other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to record relevant information.

Required knowledge

Required knowledge for this unit is:

- local factors affecting community development and consultation processes
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- strategies for consultation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- perform a leadership role in the identification and implementation of at least one significant community development consultation process or equivalent
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity

EVIDENCE GUIDE

- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Consultation strategy includes:

- door-to-door visits
- meetings of peak bodies
- public meetings
- surveys.

Interested parties:

- include:
 - existing community groups
 - government agencies
 - individuals and special interest groups
- may include:
 - emergency services
 - private sector businesses.

Information includes:

- computer simulations
- display plans
- graphics
- handouts
- models
- software presentations

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish refurbishment and inspection requirements.	<p>1.1.Existing property inspection reports, where available, are used to advise client of the cost benefits associated with <i>asset refurbishment process</i>.</p> <p>1.2.Inspection method and criteria are consistent with the purpose of the inspection, client requirements and building type.</p> <p>1.3.Relevant documentation is obtained and reviewed to clarify inspection requirements.</p> <p>1.4.Inspections are arranged to minimise disruption to building users.</p> <p>1.5.Access arrangements are confirmed prior to entry and where appropriate, agreement is secured with building tenant and owner for intrusive inspection.</p>
2. Evaluate and report inspection outcomes.	<p>2.1.Clear, concise and accurate inspection report is prepared in a timely manner and in an appropriate format and style consistent with statutory requirements.</p> <p>2.2.Inspection outcomes are advised promptly to nominated parties and accurately recorded according to workplace procedures.</p> <p>2.3.Processes involved in reaching objectives are evaluated for quality, added value and contribution to further refurbishment management opportunities.</p>
3. Implement services contracts.	<p>3.1.Team input consistent with achieving project objectives is coordinated through the enterprise to the satisfaction of subcontractors and the client.</p> <p>3.2.Performance in relation to timelines and budgets is regularly monitored.</p> <p>3.3.Necessary variations or adjustments are negotiated with subcontractors and the client, and agreed outcomes are documented.</p> <p>3.4.<i>Asset refurbishments</i> are completed according to plan within budget and time constraints to client and statutory requirements.</p> <p>3.5.Reports and administrative procedures are completed to client specifications.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - provide advice to client, confirm access arrangements, coordinate team and negotiate with clients and subcontractors
 - read and interpret property inspection reports and other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to report inspection outcomes
- interpret and apply mathematical information.

Required knowledge

Required knowledge for this unit is:

- administration and preparation of documentation
- procedures to establish asset refurbishment of commercial buildings
- processes for the interpretation of status or inspection reports, dilapidation reports and refurbishment evaluation processes
- processes for the interpretation of working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural, design and construction principles of buildings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate legislation pertaining to land use planning.	<p>1.1. Statutes and common law impacting upon <i>planning and management of land use</i> are researched and analysed.</p> <p>1.2. Appeals procedures under present legislation are interpreted.</p>
2. Plan land development and control processes.	<p>2.1. Formal planning and approval process is identified through legislation.</p> <p>2.2. Document appeals procedure is identified through legislation.</p> <p>2.3. Legal requirements governing the introduction of planning schemes are identified and interpreted.</p> <p>2.4. Public consultation measures available under legislation are defined and planned.</p>
3. Evaluate the effects of transport and infrastructure on land use management decisions.	<p>3.1. Specific site requirements for transportation, infrastructure systems and design effects on land use management practices are evaluated and reported.</p> <p>3.2. Historical urban development assessments of the impact of transport requirements on land use patterns are researched and reported.</p>
4. Apply spatial organisation factors to the land development process.	<p>4.1. Scale and scope of the land development are determined through the land development process.</p> <p>4.2. Factors determining positioning of buildings on lots are identified.</p> <p>4.3. Provision of adequate space in a development is justified through spatial organisation factors.</p> <p>4.4. Streetscape construction as part of the development process is identified and established.</p>
5. Determine strategies for the use of land.	<p>5.1. Scope of land use in relation to principles of land use management is evaluated.</p> <p>5.2. Extent of existing constraints influencing decision making process of land management is identified.</p> <p>5.3. Criteria for prioritising land use area are established according to sustainable development principles.</p> <p>5.4. Rural land use and any special considerations for the land management process are established according to sustainable development principles.</p> <p>5.5. Strategies for effective land use management are identified through review of management models.</p>

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret legislation other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to report relevant information.

Required knowledge

Required knowledge for this unit is:

- land use management models and concepts
- legal control and appeal system for land use
- local market conditions and availability of residential and commercial building development areas
- processes for the administration and preparation of documentation
- processes for the interpretation of inspection reports, working drawings and specifications
- processes for the interpretation of socioeconomic data
- relevant federal, state or territory legislation and local government policy and procedures for land use
- research methods
- urban zoning procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Planning and management of land use includes:

- commercial, industrial and urban land, and may include rural and bush land
- evaluation of land and inspection for the purposes of future planned development projects and the reporting of inspection outcomes
- topographical issues, such as flood liability, bushfire prone areas and the impact of local land legislation.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare a research plan.	<p>1.1. Views and interests of stakeholders are reflected in a research methodology compatible with ethical considerations.</p> <p>1.2. Research methodology is selected in accordance with needs, purposes and resources to maximise credibility of research outcomes.</p> <p>1.3. Research strategies are selected and used that are appropriate to client group, information being researched, resources available and outcomes sought.</p> <p>1.4. Strategies for validating research outcomes are incorporated into the research plan.</p>
2. Implement research strategies.	<p>2.1. Resources needed to conduct research are determined and allocated.</p> <p>2.2. Relevant information is collected in a timely manner and recorded and stored to ensure validity, confidentiality and security.</p> <p>2.3. A representative range of people and groups with an interest in the identified issues are consulted to ensure validity of outcomes.</p> <p>2.4. Consultation is undertaken according to the agreed practices and protocol of own and other agencies in accordance with organisational practices and protocols.</p> <p>2.5. Consideration of cultural sensitivities and ethical issues is embedded in all consultation.</p>
3. Organise and analyse information.	<p>3.1. Information is organised in an analytical format suitable for the purpose of the research.</p> <p>3.2. Patterns and explanations developed are derived from the data to ensure validity and reliability.</p>
4. Report the findings.	<p>4.1. Details of the research findings are documented.</p> <p>4.2. Opportunities are provided for the validation of the research findings.</p> <p>4.3. Results of the research are reported and made available to all relevant stakeholders in the appropriate document format.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - carry out consultations
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - prepare a research plan
 - record relevant information
 - report finding
- interpret data from information collected.

Required knowledge

Required knowledge for this unit is:

- building policy and legislation
- consultation methods, including cultural considerations
- environmental planning and design
- federal, state or territory legislation and local government policy and procedures relevant to building surveying
- heritage preservation
- manual and electronic information systems
- performance measures
- processes for the administration and preparation of documentation
- research processes and strategies.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- perform research design, and analyse, consult and report findings for at least one major building project in accordance with standard research practices
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity

EVIDENCE GUIDE

- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and

EVIDENCE GUIDE

supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Research methodology*** includes:
- consultation
 - definitions
 - historical data
 - material safety data sheets (MSDS)
 - reports
 - written records.
- Research*** includes:
- building policy and legislation
 - design and construction of buildings
 - fire engineering
 - geomechanics
 - heritage preservation
 - performance evaluation
 - planning and design.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate documents submitted with an application for building and land use.	<p>1.1. Plans, specifications and structural drawings for commercial and medium rise residential buildings are evaluated for compliance with building application process and <i>application of building surveying procedures to commercial and residential medium rise buildings</i>.</p> <p>1.2. Application/proposal is evaluated against legislative requirements for <i>commercial, industrial and residential medium rise buildings</i>.</p> <p>1.3. Components of the application for <i>medium rise building projects requiring building surveying</i> requiring referral to other agencies or departments are identified and forwarded according to <i>building surveying procedures</i>.</p> <p>1.4. Common faults with application are identified, noted and reported to relevant parties.</p> <p>1.5. Notice of decision, including approval, conditional approval or refusal, is drafted and processed according to workplace procedures.</p>
2. Determine compliance of a new building with approved plans, relevant legislation and standards during its construction.	<p>2.1. Approved plans are examined and any critical components requiring inspection and compliance checks are identified.</p> <p>2.2. Critical components identified are inspected on site for compliance with approved documentation.</p> <p>2.3. On-site problems and suggested rectification methods to achieve compliance are reported in writing according to workplace procedures.</p> <p>2.4. Rectified work is checked and formally reported to the relevant authorities to confirm compliance with statutory requirements.</p> <p>2.5. Installed services in buildings are identified for compliance.</p>
3. Compile report on an existing building of not more than three storeys and with a floor area not exceeding 2000 square metres for compliance with relevant legislation.	<p>3.1. Classification of an existing building is determined.</p> <p>3.2. Requirements of a particular class of building are determined and an inspection report is compiled for breach of requirements of the building.</p> <p>3.3. Possible effects to the public of the breach are determined.</p> <p>3.4. Inconsistent elements and the extent of rectification required for compliance is compiled in the report.</p> <p>3.5. Local and state or territory government legislative</p>

ELEMENT

PERFORMANCE CRITERIA

requirements for upgrade works are identified and reported.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - drawings
 - legislation
 - plans and specifications
 - other relevant documentation
 - report faults with application
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - report on problems and methods to achieve compliance
 - provide reports to relevant authorities.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures for building surveying
- research methods

REQUIRED SKILLS AND KNOWLEDGE

- structural, design and construction principles of buildings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- apply building surveying procedures and the associated reporting of data, findings, recommendations and strategies for at least one commercial or medium rise residential building project or equivalent
- produce an accurate proposal outlining status of approval, compliance with regulations, and determination of safety procedures for one commercial, industrial or medium rise residential building project
- provide reports to appropriate body/individual as determined by the project brief. and according to workplace procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application of building surveying procedures to commercial and residential medium rise buildings includes:

- evaluation and interpretation of plans, progressive inspection of building work, preparation of reports and adherence to legislative requirements for BCA Class 2 to 9 buildings.

Commercial, industrial and residential medium rise buildings are limited to:

- three storeys and a maximum floor area not exceeding 2000 square metres.

Medium rise building projects requiring building surveying include:

- processing of applications
- project milestones
- provision of site access/facilities

RANGE STATEMENT

Building surveying procedures
include:

- work schedules.
- construction
- electrical
- mechanical
- structural
- other services.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for the design.	<p>1.1. Workplace health and <i>safety (OHS)</i> requirements, including ergonomic and personal protection needs are observed throughout the work.</p> <p>1.2. An outline action plan taking into account <i>scope of work</i> to be done, available time and a critical issues timeline is prepared.</p> <p>1.3. Equipment and materials, including available computing systems, required for the work are identified and obtained or scheduled.</p> <p>1.4. Detail of the design requirement is identified from a prepared client brief and relevant <i>information</i>.</p> <p>1.5. Details of preferred construction materials are confirmed with the client.</p> <p>1.6. Details of services, inclusions and <i>quality requirements</i> are confirmed with the client.</p>
2. Prepare the first draft design.	<p>2.1. Design software is selected capable of producing required results.</p> <p>2.2. Design system is prepared for use following authorised set-up procedures.</p> <p>2.3. Design parameters and other relevant information for the proposed structure is progressively placed into the computer system.</p> <p>2.4. Design information is modified within the system as anomalies and errors become apparent and the transactions are recorded for subsequent discussion with the client.</p> <p>2.5. First draft design is completed and prepared for presentation to the client.</p>
3. Refine and confirm the design requirements.	<p>3.1. First draft design, together with justifications for departure from the client brief, are negotiated with the client.</p> <p>3.2. Variations to the design are discussed, negotiated and agreed with the client.</p>
4. Finalise the design.	<p>4.1. The agreed variations to the first draft design are converted to usable data that meets <i>statutory and regulatory authority</i> requirements.</p> <p>4.2. Variations are incorporated into the design using software capabilities.</p> <p>4.3. Required explanatory information and margin note detail are incorporated into the design.</p>

ELEMENT**PERFORMANCE CRITERIA**

4.4. Design is finalised, titled and presented in both plan and elevation form to the client.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - present design plan and to negotiate and agree on plan
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to prepare an outline action plan and develop and finalise a design
- creative design, drawing and drafting skills, including use of drafting equipment
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations, including basic calculations of height, areas, volumes and grades
- planning and organisational skills, including the ability to:
 - ensure coordinated development of sketches and drawings
 - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- basic calculations of height, areas, volumes and grades
- commonly used construction terminology, symbols and abbreviations
- commonly used residential construction materials and their applications
- computer-aided design (CAD) software systems and user techniques
- features of plans and elevations, including orientation, direction, scale, key, contours, symbols and abbreviations
- fundamentals of design in terms of space, access, flow and function
- impact on design of environmental requirements
- impact on design of quality requirements
- project quality requirements
- techniques for reading and interpreting plans.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with OHS regulations and state and territory legislation applicable to the design function
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- design a minimum of a full size one bedroom

EVIDENCE GUIDE

Context of and specific resources for assessment

home or equivalent (including a bedroom, lounge, kitchen and bathroom of not less than 30 square metres), including:

- interpret and confirm a client brief
- produce, using a CAD system, a first draft design
- negotiate final design requirements with the client
- finalise the design and its presentation, in both plan and elevation form, to the client.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services

EVIDENCE GUIDE

Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures related to the design function, including extinguishing fires, organisational first aid requirements and evacuation
- personal protective equipment prescribed under legislation, regulation and workplace policies and practices
- state or territory legislation and regulations and organisational safety policies and procedures, which include:
 - ergonomics
 - personal protective clothing
 - use of materials and equipment
 - workplace environment and safety.

Scope of work includes:

- CAD software that accepts and manipulates data to present design options and outcomes, with results possibly represented in two or three dimensional form
- client brief that is a definitive and documented description of the user requirements in terms of functional rooms, dimensions, services, construction materials and other defined requirements
- plans that include a title panel, amendment detail, orientation, legend information, industry symbols and abbreviations, material information and relevant finishes/standards of work
- services in the client brief that include power systems, plumbing systems and major equipment, such as refrigeration/freezer, audiovisual and air conditioning/heating
- simple domestic or residential structure of a minimum of a full size one bedroom home or equivalent (including a bedroom, lounge, kitchen and bathroom) of not less than 30 square metres.

RANGE STATEMENT

Information includes:

- CAD software packages and related user information
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions for major equipments
- maps
- memos
- regulatory and legislative requirements pertaining to design of residential structures
- relevant Australian standards
- safe work procedures related to design work
- verbal, written and graphical instructions.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details for the project planning are obtained, confirmed and applied from relevant information.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Prepare materials for use on a simple construction project.	<p>2.1. Required materials are selected for the project from project plans and specifications.</p> <p>2.2. Materials are checked for quality in accordance with the specifications.</p>
3. Determine component requirements and assembly sequence.	<p>3.1. Component parts are identified from working drawings and specifications.</p> <p>3.2. Processes for manufacture, assembly or other construction techniques and components are selected and applied in accordance with working drawings, specifications and established work procedures.</p> <p>3.3. Construction process is determined.</p> <p>3.4. Component parts are checked for accuracy, quality and suitability for the project according to plans, drawings, specifications and established work procedures.</p>
4. Operate hand tools.	<p>4.1. Hand tools are identified and checked for serviceability and operation in accordance with OHS legislation.</p> <p>4.2. Equipment to hold or support material during the operation of tools is selected and applied in accordance with standard work practices.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3. Hand tools are used in accordance with OHS legislation.
5. Use equipment safely.	5.1. Equipment is selected and checked for serviceability and operation in accordance with OHS legislation. 5.2. Equipment is safely and effectively operated in accordance with OHS legislation, and used to construct basic project.
6. Construct a simple project.	6.1. Work area requirements are prepared in accordance with working drawings, specifications and established work procedures. 6.2. Set out, levelling, construction and erection or installation of project are implemented in accordance with application and requirements for line, level and plumb in construction projects. 6.3. Construction project is completed to specification and quality and is checked for conformity to plans and design specifications.
7. Clean up.	7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 7.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic construction techniques
- construction materials
- construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- material sizes
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plumb, line and level
- processes for the calculation of material requirements
- quality requirements
- tools and equipment types, characteristics, uses, limitations and maintenance
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- complete a basic construction project to specifications, complying with OHS requirements, correct and safe use of hand tools and equipment.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Project planning includes:

- assessment of conditions
- determining work requirements
- equipment defect identification
- hazards
- work site inspection.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to undertaking a basic construction project

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- relevant Australian standards
- safe work procedures relating to undertaking a basic construction project
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- those appropriate to the project.

Materials include:

- those appropriate to the project.

RANGE STATEMENT

Environmental requirements
include:

- noise and dust
- vibration and clean-up management
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools, plant and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Confirm the penetration and flashing requirement.	<p>2.1. Type of penetration and flashing is selected to match the particular need and host materials.</p> <p>2.2. Location of the penetration is identified, set out and confirmed.</p> <p>2.3. Tools, plant and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability, and any faults are rectified or reported prior to commencement.</p>
3. Complete the penetrations and flashings.	<p>3.1. Penetrations are completed safely and with minimal modification or damage to the host materials.</p> <p>3.2. Flashings are completed safely and with minimal modification or damage to the host materials.</p> <p>3.3. Casings, housings or other terminating points are installed and connections made in accordance with state and territory requirements.</p> <p>3.4. Proprietary sealants or caulking compounds are applied to restore the integrity of the wall or ceiling system.</p> <p>3.5. Surfaces are prepared for finishing.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation,</p>

ELEMENT**PERFORMANCE CRITERIA**

regulations, codes of practice and job specification.

4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- penetration and flashing techniques
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- services locating techniques
- systems and techniques for safe handling of materials
- types of services and purposes for which penetrations and flashings are required
- types, characteristics, uses and limitations of wall and ceiling lining materials
- types, characteristics, uses and limitations of hand and power tools for wall and ceiling lining
- wall and ceiling industry terminology
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete a minimum of three penetration and flashing tasks, including:
 - one for electrical services
 - one for communication services.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- hand and power tools and equipment

EVIDENCE GUIDE

appropriate to the completion of penetrations and flashings

- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<ul style="list-style-type: none">1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.1.3. Signage and barricade requirements are identified and implemented.1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.
2. Prepare work area for installation processes.	<ul style="list-style-type: none">2.1. Work area and substrate are prepared for application of sheeting.2.2. Timber or steel wall and ceiling framing are checked for consistency of curve and any faults are rectified or reported.2.3. Equipment and materials are checked against work order or manufacturers' specification and positioned in preparation for the work.2.4. Thermal and acoustic batt insulation for walls and ceilings are selected to manufacturer specifications (RW rating).
3. Install batt system insulation.	<ul style="list-style-type: none">3.1. Insulation batts are installed firmly between framing member and against lining material in accordance with manufacturer specifications.3.2. Batts are abutted with closed joints and end of run completed with batt cut to size and fitted.3.3. Insulation batts are installed firmly in the wall framing, ensuring clearance of framing to fix plaster sheeting.3.4. Batts are installed to ceiling framing to a tight fit, ensuring full coverage between joists.

ELEMENT	PERFORMANCE CRITERIA
4. Fix plasterboard and fibre cement products to walls and ceilings.	<p>4.1. Materials are pre-conditioned for the application in accordance with manufacturer specifications.</p> <p>4.2. Materials are measured and marked to ensure compliance with work requirements and minimal wastage.</p> <p>4.3. Wall and ceiling sheets are cut to fit specified locations with clearance to manufacturer specifications.</p> <p>4.4. Wall and ceiling sheets are fixed to specified locations with mechanical fastenings or combined adhesive and fasteners, to manufacturer specifications and relevant standards.</p> <p>4.5. All work is carried out to manufacturer specifications and relevant Australian standards.</p>
5. Joint and finish materials.	<p>5.1. Compounds for backblocking and jointing are prepared to manufacturer specifications.</p> <p>5.2. Backblocks are applied to specification.</p> <p>5.3. Additional design details and features are identified.</p> <p>5.4. Beading is installed to design requirements.</p> <p>5.5. Jointing and <i>finishing</i> of plasterboard and fibre cement sheeting is completed in accordance with manufacturer specifications.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Insulation batts are installed firmly in the wall framing ensuring clearance of framing to fix plaster sheeting.</p> <p>3.4. Batts are installed to ceiling framing to a tight fit ensuring full coverage between joists.</p>
4. Fix plasterboard and fibre cement products to arches.	<p>4.1. Materials are pre-conditioned for the application in accordance with the manufacturer specifications.</p> <p>4.2. Materials are measured and marked to ensure</p>

ELEMENT	PERFORMANCE CRITERIA
	compliance with work requirements and minimal wastage.
	4.3. Sheets are cut to fit specified arch locations with clearance to manufacturer specifications.
	4.4. Sheets are fixed to specified arch locations with mechanical fastenings or combined adhesive/ fasteners to manufacturer specifications and relevant standards.
	4.5. All work is carried out to manufacturer specifications and relevant Australian standards.
5. Joint and finish materials.	5.1. Compounds for backblocking and jointing are prepared to manufacturer specifications.
	5.2. Backblocks are applied to specification.
	5.3. Additional design details and features are identified.
	5.4. Beading is installed to design requirements.
	5.5. Jointing and finishing of plasterboard and fibre cement sheeting is completed in accordance with manufacturer specifications.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- recognise procedures
- report faults
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- arch types, options, uses and limitations
- job safety analysis (JSA) and safe work method statements
- material safety data sheets
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- techniques for fixing materials to steel and timber frames
- techniques for the application and sanding of topping compound
- techniques for the handling and mixing plaster bag material
- the types, uses and limitations of materials used in installation and fixing tasks
- wall and ceiling terminology
- wall and ceiling tools and equipment types, characteristics, uses and limitations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- install and finish to specification, one plasterboard arch including:
 - a minimum of two sheets
 - wall and corner junctions
 - application of arch beads, and
 - either mechanical or adhesive fixing systems
- set out to specification of a minimum of one each of segmental, gothic, elliptical, Tudor and ogee arches.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to installation and finishing operations
- hand and power tools and equipment appropriate to installation and finishing operations
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to the installation and finishing of

RANGE STATEMENT

	plasterboard and fibre cement sheeting
	<ul style="list-style-type: none"> • relevant Australian standards • safe work procedures relating to the installation and finishing of plasterboard and fibre cement sheeting • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • lighting • manual handling • noise, dust and ventilation • power equipment • power sources and cables • traffic control • trip hazards • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.

RANGE STATEMENT

Tools and equipment include:

- broad knives
- cement sheet cutters (electric and hand)
- electric screw guns
- hand saws
- internal angle taping tools
- keyhole saws (electric and hand)
- measuring tapes and rules
- mechanical finishing tools
- mixers (electric and hand)
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- sanding floats (electric and hand)
- taping knives
- trestles and scaffold planks
- T-squares.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- adhesives
- arch beads
- base
- casing beads
- corner beads
- fibre cement sheets
- finishing materials
- insulation batts
- perforated paper tape
- plasterboard
- shadowline beads.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Framing includes:

- battened masonry surfaces
- steel framing
- steel furring channels
- timber framing
- timber or steel battens.

RANGE STATEMENT

Material *application* is in accordance with:

- manufacturer specifications for fibre cement sheeting
- relevant Australian standard (for plasterboard).

Arches include:

- elliptical
- gothic
- may include
- ogees
- segmental
- semi-circular
- three-centred.

Finishing is to achieve:

- a smooth, flat, scratch and blemish-free surface.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Line a timber stud wall using a fire-rated system.	<p>2.1. Structure of the timber wall for load or non-load bearing is established.</p> <p>2.2. Fire-rating design is selected for the timber stud wall.</p> <p>2.3. Materials are set out to manufacturers' fire-rated test.</p> <p>2.4. Fixings are spaced in accordance with manufacturer specifications.</p> <p>2.5. Material is fixed using correct procedures and fixing.</p> <p>2.6. Penetrations are completed safely and in accordance with manufacturers' design and job specifications.</p> <p>2.7. Joints are finished to exposed face layers of sheeting using recommended materials and procedures.</p>
3. Construct steel stud fire-rated partition system.	<p>3.1. Fire-rating design is selected for the steel stud wall.</p> <p>3.2. Correct fixing requirements are established for the steel stud wall as designated by the manufacturer and in accordance with relevant fire test criteria.</p> <p>3.3. Deflection heads are secured and sealant is applied in accordance with the fire-rated system design.</p> <p>3.4. Material is set out in accordance with manufacturers' fire-rated test.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Construct a fire-rated shaft wall system.	<p>3.5. Fixings are spaced in accordance with manufacturer specifications.</p> <p>3.6. Material is fixed using correct procedures and fixings.</p> <p>3.7. Penetrations are completed safely and in accordance with manufacturers' design and job specifications.</p> <p>3.8. Joints are finished to exposed face sheet layers using recommended materials and procedures.</p> <p>4.1. Material is selected in accordance with manufacturer specifications.</p> <p>4.2. Components are fixed to exact clearances to manufacturer specifications.</p> <p>4.3. Materials are set out in accordance with manufacturers' design and job specifications.</p> <p>4.4. Penetrations are completed safely and in accordance with specifications.</p> <p>4.5. Joints are finished to exposed face sheet layers using recommended materials and procedures.</p>
5. Line a timber joist ceiling using fire-rated system.	<p>5.1. Ceiling joist substrate is prepared to be flat and straight to accommodate lining of the required fire-rated system.</p> <p>5.2. Fixings are selected in accordance with manufacturers' design.</p> <p>5.3. Lining is applied in accordance with manufacturers' design.</p> <p>5.4. Fixings are spaced at correct intervals.</p> <p>5.5. Penetrations are completed safely and in accordance with job specifications.</p>
6. Construct a suspended ceiling with a fire-rating system.	<p>6.1. Materials are selected for required fire-rated ceiling according to manufacturer specifications.</p> <p>6.2. Fixings are chosen in accordance with manufacturers' design.</p> <p>6.3. Ceiling is constructed to be flat, true, level and structurally sound.</p> <p>6.4. Joints are finished to exposed face sheet layers using recommended materials and procedures.</p> <p>6.5. Penetrations are completed safely and in accordance with specifications.</p>
7. Clean up.	<p>7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p>

ELEMENT**PERFORMANCE CRITERIA**

7.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones

REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic combustion theory
- dry wall passive fire-rated T-systems installation techniques and processes
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- range of materials commonly used in the installation of dry wall passive fire-rated systems
- regulations and building codes related to dry wall passive fire-rated systems
- tools and equipment used in the installation of dry wall passive fire-rated systems
- types and specifications for dry wall passive fire-rated systems related to steel stud and timber stud walls, shaft walls, timber joists and suspended ceilings
- wall and ceiling terminology
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- install to specification a minimum of three dry wall passive fire-rated systems with:
 - one for a steel stud wall
 - one covering columns and beams
 - one comprising a multiple layer system.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace

EVIDENCE GUIDE

- materials relevant to the installation of dry wall passive fire-rated systems
- hand and power tools and equipment appropriate to the installation of dry wall passive fire-rated systems
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,

EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the installation of dry wall passive fire-rated systems
- relevant Australian standards
- safe work procedures relating to the installation of dry wall passive fire-rated

RANGE STATEMENT

	systems
	<ul style="list-style-type: none"> • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Set out.	<p>2.1. Ceiling grid is set out to job drawings and in accordance with manufacturer specifications.</p> <p>2.2. Alignment levels for ceiling are set out as shown on job drawings.</p>
3. Install suspension system.	<p>3.1. Suspension rods are fixed to underside of soffit and structural members with masonry anchors, bolts and screws at prescribed centres and to manufacturers' instructions.</p> <p>3.2. Suspended framework is assembled and connected to suspension rods in accordance with specifications and manufacturers' instructions.</p> <p>3.3. Suspension system is fastened and checked for looseness and rattles.</p> <p>3.4. Bridging framework is fixed to both sides of service ducts to support suspension system.</p>
4. Install lining materials.	<p>4.1. Lining materials are installed according to design pattern set out on job drawings, and to specifications.</p> <p>4.2. Edges of lining materials are cut, concealed or finished to match pre-finished edges.</p> <p>4.3. Openings and penetrations for lighting, diffuser, hatches and sprinkler heads are provided as shown on</p>

ELEMENT	PERFORMANCE CRITERIA
	the job drawings.
	4.4. Trims and beads are fixed at junctions with other building elements and surfaces as shown on job drawings.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current

REQUIRED SKILLS AND KNOWLEDGE

- work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- suspended ceiling installation techniques and processes, including levelling
- suspended ceiling installation, tools and equipment types, uses and limitations
- suspended ceiling materials and their preparation and applications
- wall and ceiling terminology
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the installation of suspended ceilings
- relevant Australian standards
- safe work procedures relating to the installation of suspended ceilings
- signage
- verbal, written and graphical instructions

RANGE STATEMENT

Planning and preparation include:

- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - manual handling
 - noise, dust and ventilation
 - power equipment
 - power sources and cables
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
 - electric screw guns
 - hammers
 - manual levelling devices
 - measuring tapes and rules
 - nail bags
 - power drills

RANGE STATEMENT

- power leads
- power saws
- spanners
- spirit levels
- squares
- trestles
- may include:
 - air compressors and hoses
 - laser levelling devices
 - nail guns
 - planks
 - pop riveters
 - system scaffolding.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- base coats
- fibre cement sheeting
- finishing coats
- infill panels and various surfaces
- insulation materials
- plasterboard
- suspended ceiling components.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Suspension systems include:

- concealed or exposed
- components, including:
 - anchors and bolts
 - cross beams, rails and runners
 - droppers and suspension rods
 - furring channels
 - main beams, rails and runners
 - spacer bars.

Support structures include:

- reinforced concrete ceiling and floor slabs
- timber and steel floor, ceiling and rod framing.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Receive, sort and distribute wall and floor tiling materials.	<p>2.1. On delivery to site, wall and floor tiling products, material and components are identified and checked for conformity to material schedule, plans and specifications.</p> <p>2.2. Handling characteristics of wall and floor tiling material and components are identified and safe and effective handling techniques are applied in accordance with safe work method statements and OHS workplace operations.</p> <p>2.3. Wall and floor tiling adhesives are handled, proportioned, mixed and stored in preparation for application in accordance with supervisor's instructions and manufacturer recommendations.</p> <p>2.4. Wall and floor tiling bedding mortar material is handled, proportioned, mixed and stored in preparation for application in accordance with supervisor's instructions and manufacturer specifications.</p> <p>2.5. Wall and floor tiling material and components are sorted to suit material type and size, stacked for ease of identification and retrieval for task sequence.</p> <p>2.6. Wall and floor tiling material and components are</p>

ELEMENT	PERFORMANCE CRITERIA
	distributed to job location.
3. Handle and remove surplus wall and floor tiling material.	<p>3.1. Materials are handled according to material safety data sheets (MSDS) and requirements of <i>statutory and regulatory authorities</i>.</p> <p>3.2. Hazardous material is identified for separate handling by authorised personnel.</p> <p>3.3. Wall and floor tiling material and components are handled, recovered and transferred from job location and stored in designated storage area according to MSDS and workplace requirements.</p>
4. Clean up.	<p>4.1. Work area is cleared and <i>waste materials</i> are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion

REQUIRED SKILLS AND KNOWLEDGE

procedures

- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- handling wall and floor tiling materials techniques
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS and hazards associated with solvents, adhesives and cement and epoxy-based grouts
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- wall and floor tiling materials, their qualities and applications
- wall and floor tiling processes and sequences
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications for a bathroom wall and floor to be tiled, receive and confirm quantity and quality compliance; handle, sort, stack and distribute the tiles, materials and components to support the performance of the task; prepare and mix the required adhesives and mortar, grouting and finishes required for the job; and clean up and store or dispose of excess and waste materials on the completion of the job, ensuring:
 - correct identification of tiling requirement
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and

EVIDENCE GUIDE

Context of and specific resources for assessment

processes.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to handling wall and floor tiling materials
- hand and power tools, plant and equipment appropriate to handling wall and floor tiling materials
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and

EVIDENCE GUIDE

environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling wall and floor tiling materials
- relevant Australian standards
- safe work procedures relating to handling wall and floor tiling materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others

RANGE STATEMENT

Tools and equipment:

- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - scissors
 - cutting blades
 - wheelbarrows
 - ladders
 - elevated work platforms
 - brooms
 - forklifts
 - pallet jacks
 - buckets
- may include:
 - scaffolds
 - concrete mixers
 - adhesive mixers.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- adhesives
- caulking compound
- cement mortar (with and without additives)
- grout
- tiles.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Tiling products include:

- ceramic
- glass
- granite
- marble
- porcelain
- stone
- terracotta.

Statutory and regulatory

- federal, state and local authorities

RANGE STATEMENT

authorities include: administering the applicable Acts, regulations and codes of practice.

Waste materials include:

- banding straps
- broken or damaged goods
- cardboard
- excess materials
- packing pieces
- paper
- plastic.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify hand and power tools.	<p>2.1. Hand and power tools, their functions, operations and limitations are identified.</p> <p>2.2. OHS requirements for using hand tools are recognised and adhered to.</p> <p>2.3. OHS requirements for using power tools are recognised and adhered to.</p>
3. Select tools for project.	<p>3.1. Tools and equipment are selected consistent with job and quality requirements.</p> <p>3.2. Tools, including leads and hoses, are checked for current tags, serviceability and safety and any faults reported in accordance with workplace procedures.</p> <p>3.3. Power tools guards, couplings, gauges and controls are checked and maintained in accordance with manufacturer recommendations and workplace procedures.</p> <p>3.4. Equipment to hold or support material during operation is selected.</p> <p>3.5. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed in accordance with manufacturer recommendations.</p>
4. Use tools.	<p>4.1. Power and compressed air supply is connected to work area.</p> <p>4.2. Start-up and shut-down procedures are performed in accordance with workplace procedures.</p> <p>4.3. Tools are safely and effectively used according to manufacturer recommendations and regulatory and workplace requirements.</p> <p>4.4. Tools are safely located and switched when not in immediate use.</p>
5. Select plant and	<p>5.1. Functions and limitations of plant and equipment</p>

ELEMENT	PERFORMANCE CRITERIA
equipment.	<p>used in wall and floor tiling are identified.</p> <p>5.2. Method of operation of plant and equipment is identified.</p> <p>5.3. Plant and equipment are checked for safety, and faults reported to supervisor in accordance with workplace procedures.</p> <p>5.4. Plant and equipment requirements for guarding, cut off switches, couplings, gauges and controls are checked in accordance with workplace procedures.</p> <p>5.5. Plant and equipment are selected consistent with hazard minimisation and needs of job.</p> <p>5.6. Requirements for operating and using plant and equipment are recognised and adhered to in accordance with workplace procedures.</p>
6. Use plant and equipment.	<p>6.1. Plant and equipment are safely and effectively used.</p> <p>6.2. Plant and equipment are safely located and switched off when not in immediate use.</p> <p>6.3. Tools and equipment are inspected, maintained, tagged and faults reported in accordance with workplace procedures.</p>
7. Clean up.	<p>7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>7.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare materials for tiling application.	<p>2.1. Floor and wall tiling materials are checked for product suitability, conformity to specification and compatibility with surface material, preparation and installation technique.</p> <p>2.2. Activities for material preparation are identified from specifications, and manufacturers' or supervisor's instructions.</p> <p>2.3. Material preparation is carried out to satisfy the requirements of the application process.</p>
3. Prepare underlay and sheeting substrate.	<p>3.1. Assistance with underlay preparation is provided under instructions and supervision.</p> <p>3.2. Substrate surface is finished to approved surface standards with joints flush and sealed.</p>
4. Prepare render substrate surface.	<p>4.1. Surface-mounted construction units and attachments are safely detached, removed or arranged for removal from area and stored.</p> <p>4.2. Substrate structure is identified and surfaces are cleaned to remove all contaminants and loose material in accordance with supervisor's instructions.</p> <p>4.3. Materials for splash coat are proportioned and mixed to instructions ready for application to wet surface.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Horizontal and vertical surrounds are prepared for tiling process in accordance with <i>type of tile</i> and specified finish.</p> <p>4.5. Materials for render coat are proportioned and mixed to instructions ready for application.</p> <p>4.6. <i>Surface</i> is scratched, rendered, cured and dried to instructions in accordance with specifications for tile application.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements

REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems

- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum (using a combination of underlay, render and mechanical and chemical techniques), prepare a bathroom work area for wall and floor tiling; prepare a timber bathroom floor and pointed fibre cement sheet wall for tiling; and prepare a concrete bathroom floor and pointed fibre cement sheet wall for tiling, ensuring:
 - correct identification of requirement and completion of the preparation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific

This competency is to be assessed using standard

EVIDENCE GUIDE

resources for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to preparing surfaces for tiling
- hand and power tools, plant and equipment appropriate to preparing surfaces for tiling
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions,

RANGE STATEMENT

	where specified
	<ul style="list-style-type: none"> • MSDS • memos • regulatory and legislative requirements pertaining to preparing surfaces for tiling • relevant Australian standards • safe work procedures relating to preparing surfaces for tiling • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • concealed services (water, power and gas) • lighting • traffic control • restricted access barriers • trip hazards • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.

RANGE STATEMENT

Tools and equipment include:

- brooms
- brushes
- buckets
- caulking guns
- cement sheet cutters
- concrete mixers
- electrical leads
- hammers
- hose and water sprays
- ladders
- levelling equipment
- lump hammers
- measuring tapes and rules
- mortar boards
- nippers
- pointed grouters
- power drills and screwdrivers
- power grinders and sanders
- rags
- rubber mallets
- sanding blocks
- saws
- scrapers
- shovels
- spacers and wedges
- spatulas
- sponges
- squares
- squeegees
- straight edges
- stringlines
- trowels
- wet and dry diamond saws
- wheelbarrows
- wire brushes
- wooden floats
- work platforms.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications

RANGE STATEMENT

Materials:

- workplace operations and procedures.
- include:
 - adhesives
 - caulking compound
 - cement mortar (with and without additives)
 - clouts
 - cornice adhesive
 - fixings and fasteners
 - patching materials
 - plasterboard nails
 - pre-mixed and mixed fillers
 - sand and cement
 - self-tapping screws
 - soft sheet nails
 - wall board adhesive
- may include:
 - acoustic underlay material
 - crack suppression membrane.

Environmental requirements
include:

- clean-up management
- dust and noise
- sedimentation control
- vibration
- waste management.

Underlay material may be:

- acoustic
- in sheet or liquid form
- provide for crack suppression (in membrane form).

Substrate preparation includes:

- chemical and mechanical preparation of surfaces
- rendering to provide a flat surface
- use of underlay material.

Substrate surface materials
include:

- fibre cement sheets or other lining material or cladding of a similar nature
- painted surfaces
- pre-cast cladding
- solid plaster
- stone, concrete, timber, waterproof plasterboard, masonry and brick/block
- terrazzo

RANGE STATEMENT

Surface-mounted construction includes:

- wall and floor tiles.
- aluminium framework fixing
- attachment of steel brackets or fabricated units
- brick or block walls or abutments
- curtain walling fixing
- fitment units
- formwork and falsework construction
- light steel partition walls
- stair installations
- timber partition walls.

Types of tiles include:

- ceramic
- glass
- granite
- marble
- porcelain
- stone
- terracotta.

Surfaces include:

- blockwork
- brickwork
- ceramic or fibro cement underlay
- concrete walls
- fibre cement sheet
- rendered surfaces
- timber
- other approved waterproof surfaces.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Set out tiling job.	<p>2.1. Area to be tiled is prepared to requirements of job specification in accordance with workplace procedures.</p> <p>2.2. Tiles are checked for conformity to size, patterns, colours and characteristics in accordance with plans and specifications.</p> <p>2.3. Tile work is set out to be symmetrical and balanced, and to produce minimal waste in accordance with specifications and standards.</p> <p>2.4. Waterproof membrane is fitted and laid in wet areas to conform to manufacturer specifications and regulatory requirements.</p>
3. Cut tiles as required.	<p>3.1. Tiles are cut without jagged, flaid edges or damage to tile surfaces or finish, in accordance with workplace procedures and manufacturer recommendations.</p> <p>3.2. Recess hole or curve is cut by hand or machine to shape and size and to specified tolerance.</p> <p>3.3. Tile jolly is edged to form a mitre so that biscuit is not exposed at the joint in accordance with workplace procedures and manufacturer recommendations.</p>
4. Lay and fix floor	<p>4.1. Floor is checked for level/falls and square and</p>

ELEMENT	PERFORMANCE CRITERIA
tiles.	<p>membranes or underlay are installed in accordance with workplace procedures and manufacturer recommendations.</p> <p>4.2. Substrate surface is prepared free from contaminants and residues to receive adhesive or screeded mortar in accordance with plans and specifications.</p> <p>4.3. Tiles are checked for conformity to size, patterns, colours and characteristics in accordance with plans and specifications.</p> <p>4.4. Adhesive is matched with tile and substrate material and mixed according to usage, climatic conditions and manufacturer specifications.</p> <p>4.5. Cement mortar is prepared to appropriate consistency and floor is slurried and screeded to specifications.</p> <p>4.6. Tiles are laid and fixed in conformance to standards and specifications, maintaining bond with joints that are uniform in size and a finished surface that is flat and smooth or to fulls.</p> <p>4.7. Control joints are inserted in accordance with manufacturer specifications.</p>
5. Tile treads, risers, steps and thresholds.	<p>5.1. Step rises and goings are determined from formed concrete steps/stairs.</p> <p>5.2. Steps are set out for uniform rise and make even cut on both sides of steps.</p> <p>5.3. Step riser packing or render support is fixed where applicable and riser tiles are fixed to true alignment and uniform set out.</p> <p>5.4. Treads infill and thresholds are fixed in line with the top edge of risers within specified tolerances.</p>
6. Grout and seal tiles.	<p>6.1. Joints are cleaned and prepared to receive grout according to manufacturer specifications.</p> <p>6.2. Grout is mixed and applied in accordance with workplace and manufacturer specifications and to meet job requirements.</p> <p>6.3. Tiles are cleaned and polished with dry cloth to specifications, removing all dust from surface and joints.</p> <p>6.4. Tiles are sealed and protected in accordance with manufacturers' instructions and job specifications.</p>
7. Clean up.	<p>7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p>

ELEMENT	PERFORMANCE CRITERIA
	7.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones

REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- control joints
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques in fixing tiles to floors and step/stairs, including preparation of substrates
- tiling materials, including tiles, adhesives, mortar, grouting and substrates, their qualities, characteristics, preparation, techniques, applications, limitations and finishing
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
 - tile 4 square metres of a concrete bathroom floor using a sand and cement mortar mix
 - tile 4 square metres of a timber floor, laid on the diagonal with a half tile border, using adhesive
 - tile 4 square metres of a concrete floor with marble tiles, using adhesive
 - tile a minimum of three steps of 900mm width and 115mm risers and treads, including an expansion joint
- ensuring:
 - correct identification of requirement and completion of the tiling
 - correct selection and use of appropriate processes, tools and equipment

EVIDENCE GUIDE

Context of and specific resources for assessment

- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to fixing floor tiles
- hand and power tools, plant and equipment appropriate to fixing floor tiles
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to fixing floor tiles
- relevant Australian standards
- safe work procedures relating to fixing floor tiles
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others

RANGE STATEMENT

Tools and equipment:

- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - brooms
 - brushes
 - buckets
 - caulking guns
 - cement sheet cutters
 - hammers
 - hose and water sprays
 - ladders
 - levelling equipment
 - lump hammers
 - measuring tapes and rules
 - mortar boards
 - nippers
 - pointed grouters
 - power drills
 - power leads
 - rags
 - rubber mallets
 - sanding blocks
 - saws
 - scrapers
 - shovels
 - spacers and wedges
 - spatulas
 - sponges
 - squares
 - squeegees
 - straight edges
 - stringlines
 - tile cutters and scribes
 - trowels
 - wet and dry diamond saws
 - wheelbarrows

RANGE STATEMENT

	<ul style="list-style-type: none">• wire brushes• wooden floats• may include:<ul style="list-style-type: none">• concrete mixers• masonry drill bits• power grinders• power sanders.

Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Set out tiling job.	<p>2.1. Area to be tiled and substrate are prepared to requirements of job specification and in accordance with workplace procedures.</p> <p>2.2. Tiles are checked for conformity to size, patterns, colours and characteristics in accordance with plans and specifications.</p> <p>2.3. Tile work grid patterns are determined and set out to be symmetrical and balanced, and to produce minimal waste in accordance with specifications and standards.</p> <p>2.4. Waterproof membrane is fitted and laid in wet areas to conform to manufacturer specifications and regulatory requirements.</p>
3. Cut tiles as required.	<p>3.1. Tiles are cut without jagged, flaid edges or damage to tile surfaces or finish, in accordance with workplace procedures and manufacturer recommendations.</p> <p>3.2. Recess hole or curve is cut by hand or machine to shape and size and to specified tolerance.</p> <p>3.3. Tile jolly is edged to form a mitre so that biscuit is not exposed at the joint in accordance with workplace procedures and manufacturer recommendations.</p>
4. Fix wall tiles.	<p>4.1. Mortar and/or adhesive is prepared and applied to tile</p>

ELEMENT	PERFORMANCE CRITERIA
	surface in accordance with manufacturer recommendations.
	4.2. Tiles are prepared and fixed, with pad tiles set to level alignment.
	4.3. Horizontal joint is checked for straightness, and tile edges and surface alignment are checked for conformity.
	4.4. Tiles are fixed to alignment maintaining designed pattern to specification.
	4.5. Even margins are shown around openings, frames and fittings to specification.
	4.6. Bottom course is cut and fixed to create a rake or square corner in accordance with drawings and specifications.
	4.7. Splayed, manufactured, formed coves are fixed in accordance with drawings and specifications.
	4.8. Vertical tiles are finished plumb and true to square corners.
	4.9. Joints are maintained straight and uniform in width with due allowance for tolerance of tile sizes.
	4.10. Control joints are built in, in accordance with specifications and manufacturer recommendations.
	4.11. Mitre joints are made, maintaining glazing on mitre without damage to tile surfaces or finish and maintaining uniformity of mitre in accordance with company procedures and manufacturer recommendations.
5. Tile external corners.	5.1. Setting out for plumb, level and square is checked to be within specified tolerance.
	5.2. External corners are checked to ensure surface intersections are straight.
	5.3. Curved bead angle trim or tiles are fixed so that external return and bead are square and measurements are accurate to junction with tiles and set out, where applicable.
	5.4. Tiles are fixed with minimum voids in tile bed while maintaining fully bedded alignment to specifications.
	5.5. Corner is kept square within specified tolerance and finish to specifications.
6. Tile internal corners.	6.1. Internal corner is checked to ensure surfaces are flat and intersection is straight.
	6.2. Tiles are cut where required and fixed to one wall to

ELEMENT	PERFORMANCE CRITERIA
	maintain alignment in accordance with set out and specifications.
	6.3. Tiles are cut where required and fixed abutting adjacent wall tiles to line, set out and specifications.
	6.4. Joints for abutting tiles are made in accordance with designed margin for grouting or for expansion joint, where applicable, to specifications.
	6.5. Coved tile or trim is installed to coved internal wall or wall and floor junctions.
	6.6. Coved tile or trim is installed so that line is straight and, where applicable, aligned with set out.
	6.7. Tiles are fixed to cove tile or trim and finish to alignment and specifications.
7. Grout wall tile face.	7.1. Joints are cleaned and prepared to receive grout according to manufacturer specifications.
	7.2. Grout is mixed and applied in accordance with workplace and manufacturer specifications and to meet job requirements.
	7.3. Tiles are cleaned and polished with dry cloth to specifications, removing all dust from surface and joints.
8. Clean up.	8.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	8.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- recognise procedures
- report faults
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- control joints
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques in fixing tiles to walls and corners, including preparation of substrates
- tiling materials, including tiles, adhesives, mortar, grouting and substrates, their qualities, characteristics, preparation, techniques, applications, limitations and finishing

REQUIRED SKILLS AND KNOWLEDGE

- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
 - tile the front and return of a standard 1500mm timber framed bath, including a straight hob between the bath and wall, using adhesive to fix the tiles; tiles are not to be proud of the bath and coving to floor is to allow for control joints as required
 - tile the front and return of a standard 1500mm bricked bath, including a straight hob between the bath and wall, using mortar to fix the tiles; tiles are not to be proud of the bath and coving to floor is to allow for control joints as required
- work to be completed ensuring:
 - correct identification of requirement and completion of the tiling
 - correct selection and use of appropriate

EVIDENCE GUIDE

Context of and specific resources for assessment

processes, tools and equipment

- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to fixing wall tiles
- hand and power tools, plant and equipment appropriate to fixing wall tiles
- realistic activities covering the mandatory task requirements

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills

EVIDENCE GUIDE

with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to fixing wall tiles
- relevant Australian standards
- safe work procedures relating to fixing wall tiles
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights

RANGE STATEMENT

Tools and equipment:

- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - brooms
 - brushes
 - buckets
 - caulking guns
 - cement sheet cutters
 - hammers
 - hose and water sprays
 - ladders
 - levelling equipment
 - lump hammers
 - measuring tapes and rules
 - mortar boards
 - nippers
 - pointed grouters
 - power drills
 - power leads
 - rags
 - rubber mallets
 - sanding blocks
 - saws
 - scrapers
 - shovels
 - spacers and wedges
 - spatulas
 - sponges
 - squares
 - squeegees
 - straight edges
 - stringlines
 - tile cutters and scribes
 - trowels

RANGE STATEMENT

	<ul style="list-style-type: none">• wet and dry diamond saws• wheelbarrows• wire brushes• wooden floats• may include:<ul style="list-style-type: none">• concrete mixers• masonry drill bits• power grinders• power sanders.
Quality requirements include relevant regulations, including:	<ul style="list-style-type: none">• Australian standards• internal company quality policy and standards• manufacturer specifications• workplace operations and procedures.
Materials include:	<ul style="list-style-type: none">• adhesives• caulking compound• cement mortar (with and without additives)• grout• tiles.
Environmental requirements include:	<ul style="list-style-type: none">• clean-up management• dust and noise• vibration• waste management.
Substrate includes:	<ul style="list-style-type: none">• approved waterproof substrates• blockwork• brickwork• concrete• fibre cement sheet• rendered surfaces• timber.
Types of tiles include:	<ul style="list-style-type: none">• ceramic• glass• granite• marble• porcelain• stone• terracotta.
Tiles may be fixed using:	<ul style="list-style-type: none">• adhesives• cement mortar• cement mortar with adhesive additive.

RANGE STATEMENT

- Grout** may be:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Repair damaged tilework.	<p>2.1. Damaged or defective tiles are removed avoiding damage to surrounding tiles.</p> <p>2.2. Old bedding is cleaned and cleared to allow placement of replacement tile.</p> <p>2.3. Replacement tiles are selected and cut where applicable to match existing face, size, colour and pattern.</p> <p>2.4. Tiles are fitted and fixed to maintain alignment with joints to uniform spacing.</p> <p>2.5. Grouting is carried out and tile face cleaned to specified finish.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management

REQUIRED SKILLS AND KNOWLEDGE

- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques in removing and replacing tiles to walls and floors
- tiling materials, including tiles, adhesives, mortar, grouting and substrates, their qualities, characteristics, preparation, techniques, applications, limitations and finishing
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum remove and replace a quantity of damaged wall tiles, which are fixed with adhesive bedding; and remove and replace a quantity of damaged floor tiles, which are fixed with mortar bedding, ensuring:
 - correct identification of requirement and replacement of the tiles
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to repairing floor and wall tiles
- hand and power tools, plant and equipment appropriate to repairing floor and wall tiles
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

Tools and equipment:

- regulatory and legislative requirements pertaining to repairing wall and floor tiles
- relevant Australian standards
- safe work procedures relating to repairing wall and floor tiles
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - brooms

RANGE STATEMENT

- brushes
- buckets
- caulking guns
- cement sheet cutters
- hammers
- hose and water sprays
- ladders
- levelling equipment
- lump hammers
- measuring tapes and rules
- mortar boards
- nippers
- pointed grouters
- power drills
- power leads
- rags
- rubber mallets
- sanding blocks
- saws
- scrapers
- shovels
- spacers and wedges
- spatulas
- sponges
- squares
- squeegees
- straight edges
- stringlines
- tile cutters and scribes
- trowels
- wet and dry diamond saws
- wheelbarrows
- wire brushes
- wooden floats
- may include:
 - concrete mixers
 - masonry drill bits
 - power grinders

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- power sanders.
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- adhesives
- caulking compound
- cement mortar (with and without additives)
- grout
- tiles.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Damages and defects include:

- chips or dents
- cracks and splits
- holes
- loose and flaked surface materials
- material drumming
- missing, cracked or damaged substrate or tiles
- rough imperfect surfaces
- surface depressions or dents.

Types of **tiles** include:

- ceramic
- glass
- granite
- marble
- porcelain
- stone
- terracotta.

Tiles may be **fixed** using:

- adhesives
- cement mortar
- cement mortar with adhesive additive.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare pattern and materials for tiling.	<p>2.1. Suitable architectural or historical period is identified and a range of appropriate patterns is produced.</p> <p>2.2. Style of tile is selected to conform with the elements of design.</p> <p>2.3. Colour and shape of tile are selected to conform with specifications and the geometry of the project.</p> <p>2.4. Details of pattern and selected tiles are confirmed with client.</p>
3. Form decorative design.	<p>3.1. Tiles are set out to required shape and size to conform to pattern and decorative design.</p> <p>3.2. Examples of border, beading and strip returns are laid out.</p> <p>3.3. Tiles are cut, as necessary, to complete the pattern set out.</p> <p>3.4. Wall and floor tile joints are aligned plumb and square and cut tiles are positioned.</p>
4. Prepare substrate.	<p>4.1. Substrate surfaces are prepared to specification and standard.</p> <p>4.2. Location of tiles is set out or marked directly onto</p>

ELEMENT	PERFORMANCE CRITERIA
	the surface in accordance with job drawings and specification.
5. Fix tiles.	<p>5.1. Adhesive/mortar is applied to set out area.</p> <p>5.2. Wall tiles are laid from a selected position to ensure correct set out.</p> <p>5.3. Floor tiles are set out and laid from the centre, if necessary, to even set out.</p> <p>5.4. Border tiles are laid and adjusted to suit set out.</p> <p>5.5. Surface is finished in accordance with job specifications.</p>
6. Grout tiles.	<p>6.1. Tiled surface is cleaned free of dust and adhesive.</p> <p>6.2. Grout is mixed and applied in accordance with manufacturer specifications and to meet job requirements.</p> <p>6.3. Finished surface is cleaned and polished with dry cloth to specifications.</p>
7. Clean up.	<p>7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>7.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures

REQUIRED SKILLS AND KNOWLEDGE

- report faults
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- decorative tiling materials, including tiles, adhesives, mortar, grouting and substrates, their characteristics, preparation, methods, application and finishing
- decorative tiling techniques
- design reproduction and application methods
- general construction terminology
- heritage tiles and patterns
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, select, set out and lay heritage style wall tiles and decorative strips to a 2 square metre wall finished to differing heights; and select, set out and lay tessellated floor tiles and a decorative border to an L-shaped area of approximately 1.5 square metres, ensuring:
 - correct identification of requirement and completion of the tiling
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to decorative tiling
- hand and power tools, plant and equipment appropriate to decorative tiling
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- memos
- regulatory and legislative requirements pertaining to decorative tiling
- relevant Australian standards
- safe work procedures relating to decorative tiling
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare materials.	<p>2.1. Work area for mosaic fixing is prepared for the requirements of the task.</p> <p>2.2. Mosaic sheets are checked for conformity to size, pattern, colour and characteristics in accordance with plans and specifications.</p> <p>2.3. Mosaic work is set out to be symmetrical, balanced and produce minimal waste in accordance with specifications and standards.</p> <p>2.4. Adhesive is selected, prepared and mixed in accordance with standard work practices, manufacturer recommendations and specifications.</p>
3. Prepare substrate.	<p>3.1. Substrate surfaces are prepared for application of render.</p> <p>3.2. Render is mixed to specification.</p> <p>3.3. Substrate surfaces are rendered to specified thickness, standard and finish.</p> <p>3.4. Surface is cleaned free of contaminants and loose material ready for tile application.</p>
4. Fix mosaic to flat surfaces.	<p>4.1. Prepared mosaic sheets or tiles are marked to identify the section of application.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Appropriate fixing medium is selected to ensure light coloured tiles are not darkened.</p> <p>4.3. Fixing medium is applied to substrate and mosaic sheets or tiles are laid in accordance with manufacturer specifications, maintaining alignment to set out lines and face surface of tiles, to the specified finish.</p> <p>4.4. Mosaic tiles are positioned prior to final set and adjusted to ensure the specified mosaic lines and spaces are consistent.</p> <p>4.5. Surface is finished so that the face of tiles is flush and the surface is flat.</p>
5. Fix mosaic to curved surfaces.	<p>5.1. Extent of curve is established from site inspection.</p> <p>5.2. Datum line is set out around wall.</p> <p>5.3. Tiles are set out to determine design balance and to identify any cutting requirement.</p> <p>5.4. Template is made to form the finished curve of the tiled surface.</p> <p>5.5. Tile laying method is determined, and the location of the first tile is identified.</p> <p>5.6. Render is mixed to specifications.</p> <p>5.7. Substrate surfaces are rendered to specified thickness and finished to prepared template.</p> <p>5.8. Mortar and/or adhesive is prepared to manufacturer specifications.</p> <p>5.9. Tiles are fixed level, plumb, flush and square in accordance with specifications.</p> <p>5.10. Horizontally laid tiles are set out to grid with perimeter tiles marked and cut to fit curve lines.</p>
6. Fix mosaic to a circular column.	<p>6.1. Surface is prepared and cleaned for render application.</p> <p>6.2. Template is prepared for the diameter profile of column.</p> <p>6.3. Render is mixed to specifications.</p> <p>6.4. Render is applied to specified thickness and finished to prepared template.</p> <p>6.5. Template is prepared for diameter profile of finished tiled face.</p> <p>6.6. Mosaic sheet or tiles are fixed to column, maintaining an even spacing and plumb and level finish, to specification.</p>

ELEMENT	PERFORMANCE CRITERIA
7. Grout tile face.	7.1.Tiled surface is cleaned free of dust and adhesive. 7.2.Oxides are selected and grout is mixed and applied to mosaic surface in accordance with manufacturer specifications and to meet job requirements. 7.3.Finished mosaic surface is cleaned and polished with dry cloth to specifications.
8. Clean up.	8.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 8.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools,

REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- mosaic tiling materials, including tiles, adhesives, mortar, grouting and substrates, their characteristics, preparation, methods, application and finishing
- mosaic tiling methods and set out procedures
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, prepare and lay 2 square metres of mosaic tile (half in adhesive and half in render and lay) for a bathroom wall; prepare and lay mosaic tile to a hob and return; and prepare and lay paper-based mosaic tile to a column of more than 360mm radius and at least 1m high, ensuring:
 - correct identification of requirement and completion of the tiling
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

resources for assessment

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to mosaic tiling
- hand and power tools, plant and equipment appropriate to mosaic tiling
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

Tools and equipment:

- memos
- regulatory and legislative requirements pertaining to mosaic tiling
- relevant Australian standards
- safe work procedures relating to mosaic tiling
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - buckets

RANGE STATEMENT

- caulking guns
- levelling equipment
- lump hammers
- measuring tapes and rules
- nippers
- pointed grouters
- power drills
- rags
- rubber mallets
- scrapers
- shovels
- spacers and wedges
- sponges
- squares
- squeegees
- straight edges
- stringlines
- tile cutters and scribes
- trowels
- wooden floats
- may include:
 - concrete mixers
 - masonry drill bits.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- adhesives
- caulking compound
- cement mortar (with and without additives)
- grout
- mosaic sheet
- paper
- paper-faced mosaic
- tiles.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration

RANGE STATEMENT

Substrates:

- waste management.
- include:
 - blockwork
 - brickwork
 - concrete walls
 - fibre cement sheet
 - timber
- may include:
 - approved waterproof surfaces.

Tiles may be ***fixed*** using:

- adhesives
- cement mortar
- cement mortar with adhesive additive.

Surfaces include:

- circular
- curved horizontal
- curved vertical
- flat horizontal
- flat vertical.

Tiles include:

- ceramic
- glass
- granite
- marble
- porcelain
- stone
- terracotta.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Tile curved wall and floor surfaces.	<p>2.1. Extent of curve is established from site inspection.</p> <p>2.2. Levelling equipment is used for intermediate marking to level line set out around wall.</p> <p>2.3. Location of tiles is set out to determine balanced design and identify cutting requirements.</p> <p>2.4. Template is made to form an accurate curve line for tiled surface around wall.</p> <p>2.5. Required method of laying tiles is determined by identification of location of first tile.</p> <p>2.6. Mortar and/or adhesive is prepared where applicable to manufacturer specifications.</p> <p>2.7. Pad tiles are fixed to level set out, template curve and specifications.</p> <p>2.8. Minimum voids are maintained in mortar tile beds and tiles are fixed level, plumb (wall), flush and square.</p> <p>2.9. Floor tiles are laid to set out grid with perimeter tiles marked and cut to fit curved wall.</p> <p>2.10. Grout is mixed and applied to joints according to specifications, to provide flush and smooth finish.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Tile circular columns, walls and arches.	<p>2.11. Tiled surface is polished to specifications.</p> <p>3.1. Template is set out and cut to ensure conformity to tile surface for curve.</p> <p>3.2. Pad tiles are positioned accurately and fixed to line, to maintain uniform spacing.</p> <p>3.3. Tiles are marked out accurately where applicable and fixed into place, to specifications.</p> <p>3.4. Tiles are fixed on walls, plumb, maintaining levels and curvature of wall to specifications.</p> <p>3.5. Line and curvature are maintained to specifications when fixing tiles to archways.</p> <p>3.6. Grout is mixed and applied to joints, and tile surface is finished to specifications.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- measurement and calculations
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques for setting out and fixing tiles to curved surfaces
- tiling materials, including tiles, adhesives, mortar, grouting and substrates, their qualities, characteristics, preparation, techniques, applications, limitations and finishing
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tile a circular concrete column of a minimum of 360mm diameter and 1m high abutting a concrete flat wall, continuing the tiling to the floor (to 150mm radius) from the column; and tile a standard door archway in a fibre cement sheet wall, including vertical returns and soffit; ensuring:
 - correct identification of requirement and completion of the tiling
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

resources for assessment

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Set out tiling job.	<p>2.1. Levels of pool or spa are identified and established in accordance with specifications.</p> <p>2.2. Size of tile to be used is determined in accordance with curvature of pool or spa.</p> <p>2.3. Pool or spa surface is divided into sectional shapes involving whole tiles and cut tiles.</p> <p>2.4. Sections are determined by considering sheet sizes of tiles and maintaining straight lines where possible.</p> <p>2.5. Cross-centre lines are marked out on pool or spa surface.</p> <p>2.6. Curved surface is set out to form regular shapes running down and through base.</p> <p>2.7. Tapered sections are set out in highly curved and concave areas, whereby tiles are cut leading to and into the base.</p>
3. Tile straight lines and full sheet sections of surface.	<p>3.1. Paper patterns are marked and cut to shape of section or layout directed to prepare sheets or tiles.</p> <p>3.2. Spacing is determined and adjusted to ensure minimum cutting in these sections.</p> <p>3.3. Prepared sheets or tiles are marked to identify with</p>

ELEMENT	PERFORMANCE CRITERIA
	section of application.
	3.4. Specified waterproof adhesive is prepared for application to manufacturer specifications.
	3.5. Tiles are laid working from coping down, maintaining parallel to cross-centre lines and regular face alignment.
4. Lay tiles to tapered sections.	4.1. Tapered areas are set out where applicable, to allow for full tile at top.
	4.2. Tile sizes and shapes are determined and set out.
	4.3. Shaped tiles are cut to designed set out and to specified tolerance.
	4.4. Adhesive is applied and tiles are laid maintaining alignment to set out lines and surface of tiles.
5. Lay tiles to curved sections.	5.1. Template is set out and cut to ensure conformity to tile surface for curve in both dimensions.
	5.2. Pad tiles are positioned accurately and fixed to line, to maintain uniform spacing and taper.
	5.3. Adhesive is applied and tiles are laid maintaining alignment to template line and surface of tiles.
	5.4. Tiles are fixed to walls, plumb, maintaining levels and curvature of wall in both dimensions to specifications.
6. Tile surface.	6.1. Tile spacings are cleaned and excess adhesive is removed from surface to receive grout.
	6.2. Specified grout is mixed and applied according to manufacturer specifications.
	6.3. Tiled surface is cleaned and polished with dry cloth to specifications.
7. Clean up.	7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	7.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- measurement and calculations

REQUIRED SKILLS AND KNOWLEDGE

- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- pool and spa tiling materials
- processes for the calculation of material requirements
- quality requirements
- techniques in tiling pools and spas
- tiling curved and tapered surfaces
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tile a three dimensional corner of a pool or spa with the wall coving into the floor; the floor is to fall (1 in 10) in one direction, with detail including copers and a mosaic water line, ensuring:
 - correct identification of requirement and completion of the tiling
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to tiling pools and spas
- hand and power tools, plant and equipment appropriate to tiling pools and spas
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- pertaining to tiling pools and spas
 - relevant Australian standards
 - safe work procedures relating to tiling pools and spas
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.
 - assessment of conditions and hazards
 - determination of work requirements and safety plans and policies
 - equipment defect identification
 - work site inspection.
 - emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
 - hazard control
 - hazardous materials and substances
 - organisational first aid
 - PPE prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - use of firefighting equipment
 - use of tools and equipment
 - workplace environmental requirements and safety.
- Tools and equipment*** include:
- brooms
 - brushes
 - buckets

RANGE STATEMENT

- hose and water sprays
- ladders
- levelling equipment
- lump hammers
- measuring tapes and rules
- nippers
- pointed grouters
- rags
- rubber mallets
- scrapers
- spacers/wedges
- spatulas
- sponges
- squares
- squeegees
- straight edges
- stringlines
- templates
- tile cutters and scribes.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- tiles
- adhesives
- cement mortar with adhesive additive
- grout.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Pool or spa surfaces may be:

- curved in two dimensions
- flat
- tapered.

Types of tiles include:

- ceramic
- glass
- granite
- marble
- porcelain
- stone

RANGE STATEMENT

- Templates* may be made from:
- terracotta.
 - plywood
 - hardboard
 - sheet metal.
- Tiles are fixed* using:
- adhesives
 - cement mortar with adhesive additive.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Manually handle waterproofing materials.	<p>2.1. Materials and components are identified and checked for conformity to material schedule, plans and specifications.</p> <p>2.2. Handling characteristics of waterproofing materials and components are identified and safe and effective handling techniques are applied.</p> <p>2.3. Waterproofing materials and components are sorted, stored/stacked and located for support of the job in accordance with supervisor's instructions and manufacturer specifications.</p> <p>2.4. Waterproofing materials and components are protected against physical damage and stored clear of trafficways.</p>
3. Prepare for mechanical handling of materials.	<p>3.1. Waterproofing materials and components are prepared and positioned for mechanical handling in accordance with type of material, plant and equipment to be used.</p> <p>3.2. Materials and components are loaded, unloaded, moved, located and/or installed in accordance with workplace procedures.</p> <p>3.3. Waterproofing materials and components are safely</p>

ELEMENT	PERFORMANCE CRITERIA
	handled with assistance of mechanical lifting devices/hoists in accordance with workplace requirements.
4. Handle and remove waste materials.	<p>4.1. Waste waterproofing materials and components are handled in accordance with material safety data sheets (MSDS) and regulatory requirements.</p> <p>4.2. Hazardous material is identified for separate handling.</p> <p>4.3. Non-toxic waste materials are removed and disposed of using appropriate procedures.</p> <p>4.4. <i>Dust suppression procedures</i> are used to minimise health risk to work personnel and others.</p>
5. Clean up.	<p>5.1. Work area is cleared and <i>waste materials</i> disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- communication processes - verbal and signalling
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- MSDS and hazards associated with waterproofing materials
- materials storage and environmentally friendly waste management
- measurement and calculation
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- techniques of handling waterproofing materials
- waterproofing materials associated with application systems
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications for the application of a waterproofing system (either internal, external, below ground or remedial):
 - confirm the adequacy and condition of the materials required to prepare for the application
 - safely and effectively manually and mechanically handle them before and during the application
 - dispose or recycle waste and surplus materials for the project.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to the handling of the specific waterproofing applications
- hand and power tools, plant and equipment appropriate to the handling of waterproofing materials
- realistic tasks covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- regulatory and legislative requirements pertaining to handling waterproofing materials
- relevant Australian standards
- safe work procedures relating to handling waterproof materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces

RANGE STATEMENT

Tools and equipment required for the handling of waterproofing material is dependent on the waterproofing system being applied and may include:

- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- angle grinders
- brooms
- brushes
- buckets
- caulking guns
- chisels, including cold chisels
- cutting blades
- dumpy, laser and water levels
- electric drills and screwdrivers
- electric hammers
- extension leads
- fusion rollers
- gas burners and torches
- hammers
- hoses
- measuring tapes and rules
- mixers and mixing apparatus
- moisture meters
- nylon rollers
- plant, including:
 - excavating equipment
 - heat welders
 - high pressure water equipment
 - hot air welders
 - impact drills
 - pumps
- pressure injection equipment, including:
 - cartridge applications
 - compressors
 - pumps
 - vacuum pumps
- pressure rollers
- scissors
- seam probes
- solvent applicators

RANGE STATEMENT

	<ul style="list-style-type: none"> • spirit levels • straight edges • trowels • vacuum cleaners • wood floats.
Quality requirements include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications • workplace operations and procedures.
Environmental requirements include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater management • vibration • waste management.
Materials include:	<ul style="list-style-type: none"> • cement-based waterproofing systems • hot mix bituminous felt material membranes • injected materials • liquid sealants or sealant devices • sheet and sprayed material membranes.
Waterproofing materials required to prepare for waterproofing are dependent upon the system of waterproofing being applied and include:	<ul style="list-style-type: none"> • waterproofing material or membrane for the application which may be: <ul style="list-style-type: none"> • drainage cells • geotech fabric • liquid applied, including: <ul style="list-style-type: none"> • acrylic • cementitious-based • injection • polyurethane • primers and adhesives • protection boards • sheet: <ul style="list-style-type: none"> • bentonite composites • butanol • ethylene cop bitumen (ECB) • ethylene propylene diene monomer rubber (EPDM) • polyvinyl chloride (PVC).

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify hand and power tools.	<p>2.1. Types and functions of hand and power tools to be used in the waterproofing work are identified.</p> <p>2.2. Methods of operation of hand and power tools are identified from specifications, standards and manufacturers' instructions.</p> <p>2.3. Specific OHS requirements for specific hand and power tools are identified and applied.</p> <p>2.4. Personal protective equipment (PPE) required for operation of the tools is identified in accordance with regulatory and workplace requirements.</p>
3. Select tools for work.	<p>3.1. Tools and equipment are selected consistent with job requirements.</p> <p>3.2. Tools, including leads and hoses, are checked for tags, serviceability and safety and any faults are reported to supervisor.</p> <p>3.3. Power tools guards, guides and controls are checked and maintained in accordance with manufacturer recommendations.</p> <p>3.4. Equipment to hold or support material during operation is selected and inspected for faults.</p> <p>3.5. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed in accordance with manufacturer recommendations.</p>
4. Use tools.	<p>4.1. Power and compressed air supply to work area are connected to the area of work in accordance with regulatory and workplace requirements and codes of practice.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Identify and select plant and equipment.	<p>4.2. Start-up and shut-down procedures are observed.</p> <p>4.3. Tools are used safely and effectively according to manufacturer recommendations and regulatory requirements.</p> <p>4.4. Tools are safely switched off and located when not in use.</p> <p>5.1. Function and limitations of waterproofing hand and power tools, plant and equipment used for waterproofing systems and waterproofing tasks are identified.</p> <p>5.2. Method of operation of plant and equipment is identified from specifications, standards and manufacturers' instructions.</p> <p>5.3. OHS requirements for specific plant and equipment, including requirements for guarding, guiding and controls, are identified and applied.</p> <p>5.4. PPE required for the operation of plant and equipment is identified in accordance with regulatory and workplace requirements.</p> <p>5.5. Items of plant and equipment are selected consistent with hazard minimisation and needs of the job.</p> <p>5.6. Plant and equipment are checked for safety, and faults are reported to supervisor in accordance with workplace procedures.</p> <p>5.7. OHS requirements for operating and using plant and equipment are recognised and adhered to.</p>
6. Use plant and equipment.	<p>6.1. Start-up and shut-down procedures are observed.</p> <p>6.2. Plant and equipment are used safely and effectively according to manufacturer recommendations and regulatory requirements.</p> <p>6.3. Plant and equipment are safely switched off and located when not in use.</p>
7. Clean up.	<p>7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>7.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- applications, limitations and method of operation and maintenance of hand and power tools, plant and equipment applicable to waterproofing tasks
- communication processes - verbal and signalling
- general construction terminology
- job safety analysis (JSA) and safe work method statements

REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS) and hazards associated with the use of waterproofing tools, plant and equipment
- materials storage and environmentally friendly waste management
- measurement and calculation
- plans, drawings and specifications
- quality requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, follow work instructions and operating procedures to safely and effectively use appropriate tools, plant and equipment for the preparation of the substrate for waterproofing and the application of at least one of the following applications:
 - an internal wet area
 - an external wet area
 - a below ground level wet area
 - a remedial waterproofing project
- ensuring:
 - correct selection and use of appropriate processes, tools and equipment
 - no damage to tools, plant and equipment
 - completing all work to specification
 - compliance with regulations, standards and

EVIDENCE GUIDE

Context of and specific resources for assessment

organisational quality procedures and processes.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- hand and power tools, plant and equipment appropriate to waterproofing tasks
- realistic tasks covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify design concepts and processes.	<p>2.1. Plans and specifications are examined for work area identification, product description, performance requirements and design requirements.</p> <p>2.2. Work site is visited and work requirements are confirmed.</p> <p>2.3. Waterproof process is referenced and identified as conforming to regulations.</p> <p>2.4. Practices and principles of waterproof design for construction of wet areas are identified as conforming to codes and standards.</p> <p>2.5. Appropriateness of the system of waterproofing for the structure or work is determined in relation to structural elements.</p> <p>2.6. Potential for and consequences of water penetration and methods of water exclusion are identified and outlined.</p> <p>2.7. Method of waterproofing installation is identified.</p> <p>2.8. Identified waterproofing materials are confirmed for product suitability and conformity to codes and specification, and are compatible with substrate required finishes, installation technique and building</p>

ELEMENT	PERFORMANCE CRITERIA
	schedule.
	2.9. Application of bond-breaker/fillet system forming part of the waterproofing installation is identified as fit for purpose.
	2.10. Potential faults, and contingencies and techniques to address them are identified.
3. Select and prepare materials.	<p>3.1. Waterproofing material is checked for conformity to specification and compatibility with substrate material and that the proposed application is in accordance with manufacturer specifications.</p> <p>3.2. Substrates to be waterproofed are prepared to manufacturer specification.</p> <p>3.3. Substrates are prime coated with waterproofing material in line with manufacturer specification.</p> <p>3.4. Flashings are prepared to job requirements and ready for placement and fixing to job specifications.</p> <p>3.5. Reinforcing material is set out and cut to requirements of area waterproofing junctions and surface requirements, in accordance with manufacturer specifications and job requirements.</p> <p>3.6. Waterproofing membrane is prepared for installation to wet area surface in accordance with job and manufacturer specifications.</p> <p>3.7. Waterproofing material is mixed or prepared for application to surface in accordance with manufacturer specifications and job requirements.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- building structures and work scheduling
- characteristics and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations and requirements
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and the handling of hazardous materials
- materials storage and environmentally friendly waste management
- plans, drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- plant, tools and equipment types, characteristics, uses and limitations
- preparation for waterproofing processes and waterproofing techniques
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- waterproofing process materials, including durability, compatibility, applications and protection requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications of a waterproofing construction process:
 - read and interpret the plans to assess the specified product's suitability for the work
 - identify the structure and building process, building program and site constraints
 - plan the waterproofing process, identifying the materials and the tools and equipment specifically required for the selected process or membrane
 - confirm plans and specifications on site, including measurements and levels
 - interpret and apply MSDS and manufacturers' instructions and codes
 - prime the substrate and prepare for the application of the membrane, ensuring:

EVIDENCE GUIDE

Context of and specific resources for assessment

- correct identification of requirement and preparation for the installation
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to preparing for waterproofing construction processes
- hand and power tools, plant and equipment appropriate to preparing for waterproofing construction processes
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning

EVIDENCE GUIDE

knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to preparation for the waterproofing construction process
- relevant Australian standards
- safe work procedures relating to preparation for the waterproofing construction process
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes

RANGE STATEMENT

	<ul style="list-style-type: none"> • lighting • power cables, including overhead service trays, cables and conduits • restricted access barriers • surrounding structures • traffic control • trip hazards • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> required to prepare for waterproofing:	<ul style="list-style-type: none"> • include: <ul style="list-style-type: none"> • measuring tapes and rules • mixer and mixing apparatus • moisture meters • spirit levels • straight edges • may include: <ul style="list-style-type: none"> • brushes • cutting blades • dumpy, laser and water levels • evacuating equipment and pumps • fans • floodlights • rollers • scissors • vacuum cleaners.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications • workplace operations and procedures.
<i>Materials</i> required to prepare for waterproofing include:	<ul style="list-style-type: none"> • adhesives • primers • sheet:

RANGE STATEMENT

	<ul style="list-style-type: none"> • bentonite composites • butanol • ethylene cop bitumen (ECB) • ethylene propylene diene monomer rubber (EPDM) • polyvinyl chloride (PVC) • waterproofing material or membrane for the application may be liquid applied: <ul style="list-style-type: none"> • acrylic • cementitious-based • injection • polyurethane.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • vibration • waste management.
<i>Performance requirements</i> include:	<ul style="list-style-type: none"> • cost • detail relating to materials • provision of site access and facilities • quality assurance • quality and standards of work • standard procedures and practices • work schedules.
<i>Design requirements</i> include:	<ul style="list-style-type: none"> • making an assessment of suitability for the construction process • selection and preparation of identified materials.
<i>Work site visit</i> permits liaison with others and the confirmation of details such as:	<ul style="list-style-type: none"> • levels • measurements • moisture content • risk assessment • schedules • structure • substrates • termination requirements.
<i>Waterproofing process</i> may be applied:	<ul style="list-style-type: none"> • below ground • externally • internally.
<i>Wet areas</i> include:	<ul style="list-style-type: none"> • bathrooms

RANGE STATEMENT

- decks
- en suites
- food preparation areas
- foundation works
- kitchens
- laundries
- lift pits
- patios
- planter boxes
- retaining walls
- roofs
- showers
- slabs
- stair wells.

Structural considerations include:

- design principles
- drainage requirements
- environmental factors:
 - allowing water flow
 - slope, fall and grade of surfaces
 - water run-off and impact on adjoining property
- hydrostatic pressures
- substrate type and condition
- waterproofing protection.

Considerations in **water exclusion** include:

- capillary action
- causes of water penetration:
 - leakage through wall and floor finishes
 - penetration at joints and junctions
 - movement from shrinkage
 - accumulated drainage
 - failure of or damage to waterproofing system corners and terminations
- curing times of compounds and their applications
- damp proof courses and flashings
- direction of fall of substrate or decorative finish
- hydrostatic pressure
- impact of environmental conditions
- joining

RANGE STATEMENT

	<ul style="list-style-type: none">• shelf life of waterproofing products• surface applications and protection requirements• use of bond-breakers• use of sealants• waste allowances• perimeter treatment, including:<ul style="list-style-type: none">• pressure seals• over flashing• thermal shrinkage (expansion and contraction).
<i>Waterproofing installation</i> may be applied as:	<ul style="list-style-type: none">• a liquid• a sheet• injected material.
<i>Substrates</i> include:	<ul style="list-style-type: none">• aerated autoclaved concrete materials:<ul style="list-style-type: none">• Hebel• Thermolite• blockwork• brickwork• cement render• ferrous and non-ferrous piping• fibrous cement sheeting• pre-cast concrete• PVC• reinforced in situ concrete• timber and timber-based products• wet area plasterboard.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant <i>information</i>, confirmed and applied for <i>planning and preparation</i> purposes.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. <i>Tools and equipment</i> selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and <i>quality requirements</i>.</p> <p>1.6. <i>Materials</i> appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare work area.	<p>2.1. Area to be waterproofed is identified from plans and specifications.</p> <p>2.2. <i>Surface</i> to be waterproofed is <i>inspected and tested</i> to determine appropriateness of the installation and any contaminants, moisture or incompatible materials.</p> <p>2.3. Ventilation is provided in accordance with material safety data sheets (MSDS).</p> <p>2.4. Run-off and environmental controls are provided in accordance with regulatory and workplace requirements.</p> <p>2.5. Work area is prepared for the <i>waterproofing</i> processes in accordance with manufacturer specifications.</p> <p>2.6. Surface mounted <i>wet area</i> construction units, fixtures and attachments are detached, removed or arranged for removal from the work area and stored.</p> <p>2.7. Building structure service penetrations, cavities or knockout sections are cleaned of unwanted materials or debris in accordance with good building practice.</p> <p>2.8. Cross cavity flashings and overlapping are inspected for damage and fitness for purpose.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Prepare and repair substrate.	2.9. Work surface of the building structure is cleaned free of unwanted materials in accordance with good building practice.
	3.1. Surface or area to be prepared and repaired is assessed for defects to ascertain responsibility for repair, referring areas of concern to supervisor or structural engineer.
	3.2. Tools are selected to prepare and repair the surface consistent with surface condition and work to be undertaken.
	3.3. Appropriate tools are used and applied safely to remove loose or protruding material to specification.
	3.4. Surface is prepared for repair in accordance with manufacturer specifications and workplace procedures.
	3.5. Method of repairing surface defects is determined in accordance with manufacturer specifications and is consistent with type of material surface, size of defect, compatibility of materials and specified finish.
	3.6. Repair medium materials are selected, prepared and applied in accordance with manufacturers' and supervisor or structural engineer specifications and consistent with type of material, surface, size of defect, compatibility of materials and specified finish.
	3.7. Appropriate water stops/hobs and bond breakers/fillets are installed in accordance with manufacturer specifications, drawings and finish levels.
	3.8. Substrate to be waterproofed is prepared to manufacturer specification.
	3.9. Substrate is prime coated with waterproofing material in line with manufacturer specification.
	3.10. Primed surface area is cleaned free of unwanted materials to provide a smooth and uniform surface in accordance with specifications, manufacturer recommendations and good building practices.
	3.11. Surface is protected until the application of the waterproof membrane in accordance with workplace procedures.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations and codes of practice and job

ELEMENT**PERFORMANCE CRITERIA**

specification.

4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- building structures and work scheduling
- characteristics, compatibility and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations and requirements
- contaminants in waterproofing processes
- flashing and termination detailing
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levels and falls
- material safety data sheets (MSDS) and the handling of hazardous materials
- materials handling, storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- preparation surfaces for waterproofing application techniques
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- waterproofing process materials, including durability, compatibility, applications and protection requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, prepare for the waterproofing of a bathroom on a suspended concrete slab, with fibrous cement sheeted walls at the corner junction of a masonry wall, ensuring:
 - correct identification of requirement and preparation for the work
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to preparing surfaces for the waterproofing application
- hand and power tools, plant and equipment appropriate to preparing surfaces for the waterproofing application
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to preparation of surfaces for the waterproofing application
- relevant Australian standards

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- safe work procedures relating to preparation of surfaces for the waterproofing application
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment

RANGE STATEMENT

Tools and equipment include:

- workplace environmental requirements and safety.
- angle grinders
- brooms
- brushes
- buckets
- caulking guns
- chisels, including cold chisels
- cutting blades
- dumpy levels, laser and water levels
- electric drills and screwdrivers
- electric hammers
- evacuating equipment
- extension leads
- floodlights and fans
- hammers
- high pressure water equipment
- measuring tapes and rules
- mixers and mixing apparatus
- moisture meters
- pump
- rollers
- scissors
- spirit levels
- straight edges
- trowels
- vacuum cleaners
- wood floats.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- acid etching compounds
- brick, block and stone
- caulking compounds
- cleaning and degreasing agents
- concrete
- fibreglass
- masonry
- metal (ferrous and non-ferrous)

RANGE STATEMENT

	<ul style="list-style-type: none">• non-metallic• plaster• primers• proprietary fillers and binders• sand and cement• sheet material• timber.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• dust and noise• sand clean-up management• vibration• waste management.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify waterproofing system.	<p>2.1. Below ground area to be waterproofed is identified from job drawings and specifications or diagnosed for damp fault area.</p> <p>2.2. Area is inspected for structural and surface defects in accordance with job and manufacturer specifications.</p> <p>2.3. Appropriate waterproofing systems and products are identified, analysed and selected for water exclusion in accordance with job and manufacturer specifications and with material safety data sheet (MSDS) directions.</p> <p>2.4. Range of waterproofing materials is checked for product suitability, conformity to specification and compatibility with surface material, preparation and waterproofing installation technique.</p> <p>2.5. Type of waterproofing material is identified in accordance with job specification, state of structure and job safety requirements of MSDS directions.</p>
3. Prepare for waterproofing installation.	<p>3.1. Below ground wet area site set out, building alignment and finished levels are checked to conform with specified location, structure and dimensions in</p>

ELEMENT**PERFORMANCE CRITERIA**

	<p>accordance with drawings and specifications.</p> <p>3.2. Moisture content in substrate is identified.</p> <p>3.3. Appropriateness of the system of waterproofing selected for the structure or work is confirmed.</p> <p>3.4. Below ground wet area site levels are checked for conformity to drawings and specifications.</p> <p>3.5. Requirement for shoring of the work site is identified and arranged.</p> <p>3.6. Access to installation area is assessed for adequacy and safety to allow for the installation over the full surface of the work area.</p> <p>3.7. Provision for drainage is identified and confirmed with supervisor or hydraulic consultant as being appropriate for the installation.</p> <p>3.8. Existing flashings, new flashings and termination seals are prepared to job requirements and made ready for placement and fixing to job and manufacturer specifications.</p> <p>3.9. Waterproofing material, quantity and product type are confirmed as conforming to job specification, state of structure and job safety requirements, and MSDS direction.</p> <p>3.10. Substrate is prepared to a smooth and uniform finish with fillets and falls fitted in accordance with manufacturers' instructions and good building practices.</p> <p>3.11. Surface of structure to be waterproofed is prepared and primed ready for waterproofing application in accordance with job specification and manufacturers' specifications and recommendations.</p>
4. Apply waterproofing.	<p>4.1. Waterproofing system is applied to primed surface of structure to correct thickness and in accordance with manufacturers' job specification.</p> <p>4.2. Bond breaker/fillets are installed in accordance with manufacturer specifications.</p> <p>4.3. Waterproofing material/system is installed using methods and materials consistent with manufacturers' specifications.</p> <p>4.4. Termination seals are installed using methods and materials consistent with manufacturers' specifications.</p> <p>4.5. Completed below ground waterproofing installation is checked for conformity to manufacturer</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications.
	4.6. Waterproofing material/system is protected and drained using methods and materials consistent with manufacturers' specifications and good building practice.
	4.7. Final inspection of site is undertaken and sign-off and handover of work is carried out in accordance with workplace requirements.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements

REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- below ground level waterproofing materials, processes and techniques
- characteristics and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- MSDS
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- shoring techniques and requirements
- termination and overflashing detailing
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum waterproof a basement wall excavated in a clay work site, with:
 - the wall of masonry block and with a concrete column at mid span
 - the wall and column supported on a strip concrete footing
 - a cavity wall above the block wall
 - the site is to be backfilled and access to the bottom edge of the footing currently not available
 - the appropriate root resistant waterproofing material selected
 - drainage and protection of the waterproofing provided
 - ensuring:
 - correct identification of requirement and installation of the waterproofing system

EVIDENCE GUIDE

Context of and specific resources for assessment

- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- proposed termination detailing.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to waterproofing below ground level wet areas
- hand and power tools, plant and equipment appropriate to waterproofing below ground level wet areas
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills

EVIDENCE GUIDE

with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining waterproofing below ground level wet areas
- relevant Australian standards
- safe work procedures relating to waterproofing below ground level wet areas
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers

RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- angle grinders
- brooms
- brushes
- buckets
- caulking guns
- chisels, including cold chisels
- cutting blades
- dumpy, laser and water levels
- electric drills and screwdrivers
- electric hammers
- excavating equipment
- extension leads
- gas burners and torches
- hammers
- high pressure water equipment
- measuring tapes and rules
- mixers and mixing apparatus
- moisture meters
- pumps
- rollers
- scissors
- shoring equipment
- spirit levels
- straight edges
- trowels
- vacuum cleaners
- wood floats.

Quality requirements include

- Australian standards
- internal company quality policy and standards

RANGE STATEMENT

relevant regulations, including:

- manufacturer specifications
- workplace operations and procedures.

Waterproofing *materials* include:

- adhesives
- drainage cells
- drainage piping
- for below ground application, which may be:
 - liquid applied, including:
 - acrylic
 - bituminous
 - cementitious-based
 - injection
 - polyurethane
 - sheet, including:
 - bentonite composites
 - butanol
 - ethylene cop bitumen (ECB)
 - ethylene propylene diene monomer rubber (EPDM)
 - polyvinyl chloride (PVC)
- waterproofing materials, including:
 - geotech fabric
 - protection board
 - substrate primer.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Below ground applications include:

- external and internal vertical walls constructed below ground level and under slab waterproofing barriers
- foundation work
- lift pits
- pools and ponds
- retaining walls
- retention tanks
- stair wells
- tanks
- water storage areas
- underground residential and commercial

RANGE STATEMENT

	spaces, such as:
	<ul style="list-style-type: none"> • basements • car parks • storage areas.
Inspection and identification of the waterproofing system include:	<ul style="list-style-type: none"> • preparation of the substrate and waterproofing material • application to a below ground level wet area • the process: <ul style="list-style-type: none"> • testing • drainage • protection of the membrane system and flashings.
Structural considerations include:	<ul style="list-style-type: none"> • below ground environmental factors, including: <ul style="list-style-type: none"> • water run-off and impact on adjoining property • allowing water flow • slope, fall and grade of surfaces • design principles • drainage requirements • hydrostatic pressures • structural movement • substrate type and condition • waterproofing protection.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify waterproofing system.	<p>2.1. Internal area to be waterproofed is identified from job drawings and specifications.</p> <p>2.2. Area of structure to be waterproofed is inspected for defects and soundness in accordance with job and manufacturer specifications.</p> <p>2.3. Appropriate waterproofing systems and products are identified, analysed and selected for water exclusion in accordance with job and manufacturer specifications, and with material safety data sheet (MSDS) directions.</p> <p>2.4. Range of waterproofing materials is checked for product suitability; conformity to specification; and compatibility with surface material, preparation and waterproofing installation technique.</p> <p>2.5. Termination detailing is determined.</p> <p>2.6. Type of waterproofing material is identified in accordance with job specification, state of structure, and job safety requirements with MSDS directions.</p>
3. Prepare for waterproofing installation.	<p>3.1. Internal wet area and wet area fitment or fixtures are checked for specific measurements and set out in accordance with drawings and specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Substrate is checked for soundness of fit, curing compounds, moisture content and other contaminants, and reported or remedied as required.</p> <p>3.3. Flooring installation levels and falls to waste outlets are checked for conformity to specification.</p> <p>3.4. Corner flashing is installed in accordance with manufacturer recommendations.</p> <p>3.5. Points of connection, termination detailing and over flashings as required are checked to be in place and secure.</p> <p>3.6. Rebates for baths and basins are checked for compliance with standards.</p>
4. Prepare substrate.	<p>4.1. Defects are corrected and made good in accordance with manufacturer specifications, to bring substrate to a smooth and uniform finish.</p> <p>4.2. Surface of structure to be waterproofed is prepared to manufacturers' specification, including fixings and belling out around taps.</p> <p>4.3. Water stops and hobs are installed in required location in compliance with standards and good building practice.</p> <p>4.4. Prepared surface of structure is prime coated to manufacturers' specification, where applicable.</p>
5. Apply waterproofing.	<p>5.1. Waterproofing membrane is applied to primed surface of structure to correct thickness and in accordance with manufacturers' job specification.</p> <p>5.2. Appropriate bond breakers and fillets are applied as required in accordance with manufacturer specifications.</p> <p>5.3. Waterproofing membrane is cured in accordance with manufacturers' specification and workplace requirements.</p> <p>5.4. Flood testing of installation is conducted if required.</p> <p>5.5. Waterproofing system and materials are protected using methods and materials consistent with manufacturers' specification, workplace requirements and good building practice.</p> <p>5.6. Final inspection of site is undertaken in accordance with certifying authority's requirements and sign-off and handover of work is carried out in accordance with workplace requirements.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of,</p>

ELEMENT**PERFORMANCE CRITERIA**

reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- assessment and appreciation of moisture content in substrate materials
- characteristics and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations
- general construction terminology
- internal waterproofing materials, processes and techniques
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- termination and flashing principals
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
 - waterproof a bathroom incorporating:
 - lap up a wall
 - appropriate penetrations
 - wastes and hobs
 - install and detail a hobless frame shower enclosure and a bath that abuts a masonry connection wall, ensuring:
 - correct identification of requirement and installation of the waterproofing
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - correct termination and overflashing.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to waterproofing internal wet areas
- hand and power tools, plant and equipment appropriate to waterproofing internal wet areas
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

- and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to waterproofing internal wet areas

RANGE STATEMENT

Planning and preparation
include:

- relevant Australian standards
- safe work procedures relating to waterproofing internal wet areas
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes

Tools and equipment include:

- use of tools and equipment
- workplace environmental requirements and safety.
- angle grinders
- brooms
- brushes
- buckets
- caulking guns
- chisels, including cold chisels
- cutting blades
- electric drills and screwdrivers
- fans
- floor scrapers
- hammers
- heat welders
- hot air welders
- lights
- measuring tapes and rules
- moisture meters
- nylon rollers
- pressure rollers
- fusion rollers
- scissors
- seam probes
- solvent applicators
- spirit levels
- straight edges
- vacuum cleaners.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials for internal application include:

- adhesives
- drainage cell
- liquid applied, including:
 - acrylic
 - cementitious-based
 - injection
 - polyurethane
- protection board

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify waterproofing system.	<p>2.1. Area to be waterproofed is identified from job drawings and specifications or diagnosed for damp fault area.</p> <p>2.2. Area is inspected for structural and surface defects in accordance with job and manufacturer specifications.</p> <p>2.3. Appropriate waterproofing systems and products are identified, analysed and selected for water exclusion in accordance with job and manufacturer specifications and with material safety data sheet (MSDS) directions.</p> <p>2.4. Range of waterproofing materials is checked for product suitability, conformity to specifications and compatibility with surface material, preparation and waterproofing installation technique.</p> <p>2.5. Type of waterproofing material is identified in accordance with job specification, state of structure and job safety requirements with MSDS directions.</p>
3. Prepare for waterproofing installation.	<p>3.1. Wet area site set-out, building alignment and finished levels are checked to conform with specified location, structure and dimensions in accordance</p>

ELEMENT**PERFORMANCE CRITERIA**

	with drawings and specifications.
	3.2. Moisture content in substrate is identified.
	3.3. Appropriateness of the system of waterproofing selected for the structure or work is confirmed.
	3.4. Wet area site levels are checked for conformity to drawings and specifications.
	3.5. Access to installation area is assessed for adequacy and safety to allow for installation over the full surface of the work area.
	3.6. Provision for drainage is identified and confirmed with supervisor or hydraulic consultant as being appropriate for the installation.
	3.7. Existing flashings, new flashings and termination seals are prepared to job requirements and made ready for placement and fixing to job and manufacturer specifications.
	3.8. Waterproofing material, quantity and product type are confirmed as conforming to job specification, state of structure and job safety requirements, and MSDS directions.
	3.9. Substrate is prepared to a smooth and uniform finish with fillets and falls fitted in accordance with manufacturers' instructions and good building practices.
	3.10. Surface of structure to be waterproofed is prepared and primed ready for waterproofing application in accordance with job specification and to manufacturers' specification and recommendations.
4. Apply waterproofing.	4.1. Waterproofing system is applied to primed surface of structure to correct thickness and in accordance with manufacturers' job specification.
	4.2. Bond breaker/fillets are installed in accordance with manufacturer specifications.
	4.3. Waterproofing material and system are installed using methods and materials consistent with manufacturer specifications.
	4.4. Termination seals are installed using methods and materials consistent with manufacturer specifications.
	4.5. Completed waterproofing installation is checked for conformity to manufacturer specifications.
	4.6. Waterproofing system is water tested to confirm its

ELEMENT	PERFORMANCE CRITERIA
	fitness for purpose.
	4.7. Waterproofing materials and system are protected and drained using methods and materials consistent with manufacturers' specification and good building practice.
	4.8. Final inspection of site is undertaken and sign-off and handover of work are carried out in accordance with workplace requirements.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements

REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- below ground level waterproofing materials, processes and techniques
- characteristics and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- MSDS
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- termination, cross cavity and overflashing requirements
- testing procedures for waterproof membrane systems
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
 - waterproof a concrete slab balcony in a cavity brick building with an integrated rendered brick planter box
 - waterproof a fibrous cement balcony in a cavity brick building where the structural floor levels have a step down of no less than 100mm from internal to external; the balcony is to cross fall to a gutter or drainage and detailing is to be provided through threshold cross-section, indicating how waterproofing would terminate at handrail posts (which are through bolted to the floor frame under the deck)
 - both tasks are to be undertaken ensuring:
 - correct identification of requirement and installation of the waterproofing
 - correct selection and use of appropriate

EVIDENCE GUIDE

Context of and specific resources for assessment

processes, tools and equipment

- completing all work to specification
- correct termination and flashing detailing
- appropriate membrane testing and application of protection techniques.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to waterproofing external wet areas
- hand and power tools, plant and equipment appropriate to waterproofing external wet areas
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

EVIDENCE GUIDE

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

<p>Information includes:</p>	<ul style="list-style-type: none"> • diagrams or sketches • instructions issued by authorised organisational or external personnel • manufacturer specifications and instructions, where specified • MSDS • memos • regulatory and legislative requirements pertaining to waterproofing external wet areas • relevant Australian standards • safe work procedures relating to waterproofing external wet areas • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<p>Planning and preparation include:</p>	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<p>Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:</p>	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances, including cement and curing agents • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • lighting • power cables, including overhead service trays, cables and conduits • restricted access barriers

RANGE STATEMENT

Tools and equipment:

- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - angle grinders
 - brooms
 - brushes
 - buckets
 - caulking gun
 - chisels, including cold chisels
 - cutting blades
 - electric drills and screwdrivers
 - electric hammers
 - extension leads
 - gas burners and torches
 - hammers
 - laser and water levels
 - measuring tapes and rules
 - mixer and mixing apparatus
 - moisture meter
 - rollers
 - scissors
 - spirit level
 - straight edge
 - torches
 - trowels
 - vacuum cleaner
 - wood float
- may include:
 - automatic levels

RANGE STATEMENT

	<ul style="list-style-type: none">• excavating equipment• high pressure water equipment• pumps.
Quality requirements include relevant regulations, including:	<ul style="list-style-type: none">• Australian standards• internal company quality policy and standards• manufacturer specifications• workplace operations and procedures.
Materials for below ground application may be:	<ul style="list-style-type: none">• liquid applied, including:<ul style="list-style-type: none">• acrylic• cementitious-based• injection• polyurethane• sheet, including:<ul style="list-style-type: none">• bentonite composites• butanol• ethylene cop bitumen (ECB)• ethylene propylene diene monomer rubber (EPDM)• polyvinyl chloride (PVC)• waterproofing materials, including:<ul style="list-style-type: none">• adhesives• drainage cell• geotech fabric• protection board• substrate primer.
Environmental requirements include:	<ul style="list-style-type: none">• clean-up management• dust and noise• vibration• waste management.
Identification includes:	<ul style="list-style-type: none">• preparation of the substrate and the waterproofing material• application to an external wet area• process, including testing, drainage and protection of the membrane system and flashings.
Waterproofing systems include:	<ul style="list-style-type: none">• cement-based waterproofing systems.• hot mix bituminous felt material membranes• liquid sealants or sealant devices• sheet and sprayed material membranes.

RANGE STATEMENT

Considerations in *water exclusion* include:

- capillary action
- causes of water penetration, including:
 - leakage through wall and floor finishes
 - penetration at joints and junctions
 - movement from shrinkage
 - accumulated drainage
 - failure of or damage to waterproofing system
- damp proof courses and flashings
- corners and terminations
- curing times of compounds and their applications
- direction of fall of substrate or decorative finish
- hydrostatic pressure
- impact of environmental conditions
- joining
- perimeter treatment, including:
 - pressure seals
 - cross cavity
 - over flashing
 - thermal shrinkage (expansion and contraction)
- shelf life of waterproofing products
- surface applications and protection requirements
- use of bond-breakers
- use of sealants
- waste allowances.

External *wet area* applications include:

- awnings
- balconies
- external vertical walls
- planter boxes
- roofs.

Substrates include:

- aerated autoclaved concrete materials:
 - Hebel
 - Thermolite
- blockwork
- brickwork
- cement render

RANGE STATEMENT

- ferrous and non-ferrous piping
 - fibrous cement sheeting
 - pre-cast concrete
 - PVC
 - reinforced in situ concrete
 - timber and timber-based products
 - wet area plasterboard.
- Structural* considerations include:
- design principles
 - drainage requirements
 - hydrostatic pressures
 - structural movement
 - substrate type and condition
 - environmental factors, including:
 - allowing water flow
 - slope, fall and grade of surfaces
 - water run-off and impact on adjoining property
 - waterproofing protection.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify waterproofing system.	<p>2.1. Area to be waterproofed is identified from a technical report or diagnosed damp fault area and inspected for defects and soundness in accordance with job and manufacturer specifications.</p> <p>2.2. Area of structure for waterproofing surface application is inspected for defects and soundness in accordance with job and manufacturer specifications.</p> <p>2.3. Appropriate remedial waterproofing systems and products are identified, analysed and selected in accordance with job and manufacturer specifications and with material safety data sheet (MSDS) directions.</p> <p>2.4. Range of waterproofing materials is checked for product suitability, conformity to specification and compatibility with surface material, preparation and waterproofing installation technique.</p> <p>2.5. Type of waterproofing material is identified in accordance with type of substrate, job specification, state of structure and job safety requirements with MSDS directions.</p>
3. Prepare for	<p>3.1. Site to be repaired is confirmed to be in accordance</p>

ELEMENT	PERFORMANCE CRITERIA
waterproofing process.	with drawings, specifications and manufacturers' specification.
4. Apply waterproofing using injection.	<p data-bbox="572 376 1318 488">3.2. Construction/installation site is set out to specified location, structure and dimensions in accordance with drawings and specifications.</p> <p data-bbox="572 506 1201 607">4.1. Injection hole set-out spacings and depth are determined and measured in accordance with manufacturer recommendations.</p> <p data-bbox="572 622 1193 723">4.2. Materials are prepared for injection method application in accordance with manufacturer recommendations.</p> <p data-bbox="572 739 1270 840">4.3. Injection equipment is prepared and set up for injection process in accordance with manufacturer recommendations.</p> <p data-bbox="572 855 1294 922">4.4. Injection system is tested and flushed in accordance with manufacturer specifications.</p> <p data-bbox="572 938 1310 1043">4.5. Damp course is made water resistant and capped using injection method in accordance with manufacturer recommendations and to specifications.</p>
5. Apply waterproofing using hydrostatic barrier coatings.	<p data-bbox="572 1066 1302 1133">5.1. Area to be repaired is located from job instructions, drawings and specifications.</p> <p data-bbox="572 1149 1289 1249">5.2. Materials are prepared for remedial coating method application in accordance with manufacturer recommendations.</p> <p data-bbox="572 1265 1302 1366">5.3. Application equipment is prepared and set up for application process in accordance with manufacturer recommendations.</p> <p data-bbox="572 1382 1294 1449">5.4. Injection system is tested and flushed in accordance with manufacturer specifications.</p> <p data-bbox="572 1464 1302 1603">5.5. System is connected to tubing caps and damp course is made water resistant and capped using injection method in accordance with manufacturer recommendations and to specifications.</p>
6. Clean up	<p data-bbox="572 1626 1278 1727">6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p data-bbox="572 1742 1278 1888">6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of remedial waterproofing materials
- construction systems and waterproofing considerations
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management

REQUIRED SKILLS AND KNOWLEDGE

- MSDS
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- remedial waterproofing materials, processes and testing techniques
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
 - repair a crack in a concrete basement wall or a suspended car park slab, identifying remedial waterproofing method to be used, determining the type of material to be used and the repair requirement (e.g. spacing of injection ports/packers if using an injection method), and testing the application
 - inject a chemical damp course into a solid 230 brick wall/party wall and a cavity brick wall, plugging each procedure with epoxy plug, ensuring:
 - correct identification of requirement and installation of the waterproofing
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources

This competency is to be assessed using standard and

EVIDENCE GUIDE

for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to remedial waterproofing processes
- hand and power tools, plant and equipment appropriate to remedial waterproofing processes
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and

EVIDENCE GUIDE

- the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to remedial waterproofing processes

RANGE STATEMENT

Planning and preparation
include:

- relevant Australian standards
- safe work procedures relating to remedial waterproofing processes
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment

RANGE STATEMENT

	<ul style="list-style-type: none"> • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • angle grinders • chisels • electric drills and screwdrivers • hammers • impact drills • measuring tapes and rules • mixing equipment • pressure injection equipment, including: <ul style="list-style-type: none"> • cartridge applications • compressors • hoses • pumps • vacuum pumps • spirit levels • straight edges.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications • workplace operations and procedures.
Remedial injection <i>materials</i> include:	<ul style="list-style-type: none"> • cementitious products • epoxies • expanding polyurethane foam • polyurethane resin systems • silicon, silane and siloxane products • single and dual component resins.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • vibration • waste management.
<i>Identification</i> includes:	<ul style="list-style-type: none"> • preparation of the waterproofing material • application to a structural substrate.
<i>Defects</i> that may be addressed using injection methods include:	<ul style="list-style-type: none"> • cracks in concrete walls and floors • damp or wet areas occurring in structures.
<i>Waterproofing surface applications</i> include:	<ul style="list-style-type: none"> • floor surfaces • roof surfaces • standard wet areas

RANGE STATEMENT

Remedial waterproofing systems include:

- wall surfaces.
- barrier of silicon to stop rising damp
- concrete crystallisation or by injection
- concrete repair injection hydrostatic barrier coatings
- membranes
- saturants on an external wall (in case of flood).

Substrates include:

- aerated autoclaved concrete materials:
 - Hebel
 - Thermolite
- blockwork
- brickwork
- cement render
- ferrous and non-ferrous piping
- fibrous cement sheeting
- pre-cast concrete
- polyvinyl chloride (PVC)
- reinforced in situ concrete
- timber and timber-based products
- wet area plasterboard.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the strategic and operational needs of the project during the planning phase.	<p>1.1. The project's <i>strategic context</i> and requirements are identified and considered.</p> <p>1.2. The organisation's strategic and business plans and their output requirements are identified and considered.</p> <p>1.3. Client requirements and the impact of <i>legislation and industry codes and standards</i> are identified and fully explored.</p> <p>1.4. A <i>risk management analysis</i> is conducted and a risk management plan is developed and documented.</p>
2. Prepare the project plan.	<p>2.1. Precise <i>specifications and terms of reference</i> for the project are defined and documented.</p> <p>2.2. Project budget is identified, specified to a level that can be used for the management of sub-tasks, and documented.</p> <p>2.3. Skills needed for the successful completion of the project are defined.</p> <p>2.4. Physical and other resources required to support the project are defined, documented and secured.</p> <p>2.5. Timelines, schedules and critical path for the project are developed and documented, taking into consideration contingencies and planning for time slippages.</p> <p>2.6. A consultation strategy or process that will be used to inform clients, contractors and other interested parties of the project's progress, and seek their input as required, is defined and documented.</p>
3. Assemble the project team and commence work.	<p>3.1. Appropriate project team members are secured and briefed regarding the project, their roles, levels of delegated responsibility and the outcomes to be achieved.</p> <p>3.2. Effective communication processes are put in place to coordinate work and inform team members of progress.</p> <p>3.3. Clear reporting processes for team members are identified and communicated.</p>
4. Manage the project.	<p>4.1. Project progress is monitored according to project plan requirements, using appropriate <i>project management tools</i> and methodologies.</p> <p>4.2. Team members are supported and their output is managed against the key performance indicators</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>identified in the project plan.</p> <p>4.3. Corrections, changes and additions are made to the project plan in light of changing circumstances to ensure project aims and outcomes are met.</p> <p>4.4. Resourcing to support the project is monitored and corrections are made to reflect changing circumstances.</p> <p>4.5. Reporting of overall project progress is made to senior management and/or funding bodies as required and in line with the project plan.</p>
5. Finalise the project.	<p>5.1. The project is finalised in line with the project plan.</p> <p>5.2. Required handover to staff members responsible for the ongoing implementation or maintenance of project products or services is conducted efficiently, effectively and in line with organisational procedures.</p> <p>5.3. Project team members and relevant stakeholders are debriefed about the conduct of the project and the outcomes achieved.</p> <p>5.4. A report is prepared analysing the strengths and weaknesses of the project plan and the conduct of the project.</p>
6. Use the project to contribute to improved policies and processes.	<p>6.1. Opportunities for wider organisational learning, including changes to processes or policies generated by the project, are identified and analysed.</p> <p>6.2. Opportunities for future further developments following project completion are forwarded for consideration by senior management.</p> <p>6.3. The strategic impact of the project is considered and fed into the organisation's ongoing strategic planning processes.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- project planning and execution

REQUIRED SKILLS AND KNOWLEDGE

- risk management planning
- time management
- high level written and oral communication
- human resource management
- team leadership
- numeracy skills for budgeting and financial management
- proactive thinking
- decision making
- high level problem solving
- research
- critical and analytical thinking
- comparative analysis
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
- skills specific to fire systems design, including:
 - operating computer software packages and systems, including:
 - proprietary project management software
 - proprietary hydraulic calculation software
 - proprietary estimating software
 - parametric modelling software
 - language and literacy skills for:
 - searching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
 - updating knowledge of products, software systems and technology
 - reading and interpreting drawings, plans and specifications, including architectural, structural, mechanical, hydraulic and electrical
 - researching and evaluating competing technologies in new products and systems
 - reviewing and commenting on reports (e.g. consultant fire engineer), including building, insurance and corporate

Required knowledge

- budgets and financial plans
- concepts of risk management planning and processes
- tools and models of project management
- reporting mechanisms
- relevant legislation, codes, standards, and sustainability requirements and ratings,

REQUIRED SKILLS AND KNOWLEDGE

including:

- energy conservation
- water conservation
- organisational frameworks and functions, including:
 - industry associations
 - enterprises
 - government bodies
- knowledge specific to fire systems design, including:
 - fire engineering principles, including:
 - engineered solutions
 - innovative fire systems
 - fire modelling
 - roles and responsibilities of relevant building project personnel, including:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
 - computer software functions and operation, including relevant proprietary software
 - relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
 - passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
 - water-based fire systems technology and components, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems

REQUIRED SKILLS AND KNOWLEDGE

- early suppression fast response (ESFR)
- hydrants, hose reels and monitors
- water supply tanks
- fire pump sets
- detection and warning systems technology and components, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
- technology and components of special hazard fire systems, including:
 - foam systems (low expansion, medium expansion and high expansion)
 - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
 - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
- chemical systems' technology and components, including:
 - powder
 - wet chemical

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	<p>This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.</p> <p>This unit could be assessed as an activity involving the management of a complex project and should include establishing, using and evaluating effective project management processes.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.</p> <p>In particular the person should demonstrate:</p> <ul style="list-style-type: none"> the successful design, implementation, management and finalisation of a complex project, including the management of planning processes, scheduling, human resources, reporting and response to contingencies the ability to ensure projects undertaken are aligned with and support organisational strategies and requirements the ability to learn from project outcomes and refine and improve future project management processes.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> access to codes and standards access to legislation relevant to the jurisdiction and the project being undertaken project documentation, including design or

EVIDENCE GUIDE	
	<p>project brief, drawings, specifications, construction schedules and other supporting documents</p> <ul style="list-style-type: none"> • research resources, including product information and data • theoretical texts and other information to support the assessment of the unit's required skills and knowledge • relevant computer software packages and suitable hardware.
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p>

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT

work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

The ***strategic context*** for the project will include the operating environment in which the project will be conducted. For example:

- fire systems design sector, including the development of high risk and high value fire systems design projects.

Legislation and industry codes and standards that may impact on the project design and delivery will be sector specific. For the fire systems design sector they may include:

- building Acts
- building regulations
- infrastructure supply regulations
- the Building Code of Australia
- Australian standards for fire systems
- international standards for fire systems
- other fire system standards commonly required by building insurers, including the U.S. National Fire Protection Association (NFPA) standards.

Risk management analysis may include consideration of:

- public liability
- safety of staff
- workers compensation claims
- business continuity (e.g. emergency plans for activities to continue in the event of loss of building, equipment or systems)
- property development and maintenance
- changing government policy or funding arrangements
- environmental concerns (e.g. pollution, hazardous waste, tree retention policies).

Specifications and terms of reference for the project may include an accurate and complete:

- definition of the project aims
- description of the outcomes to be achieved using, wherever possible, the nomination of clear metrics
- description of all stakeholders
- description of the project parameters (scope of operations, flexibilities involved, etc.)
- identification of the budget
- specification of the timescale
- specification of the communication strategy to be used.

RANGE STATEMENT

Project management tools
typically will be computer-based
and may:

- be in-house or proprietary software
- use critical path analysis
- incorporate the use of Gantt or PERT charts
- incorporate scheduling and reporting templates.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish the parameters for the delivery of a quality project or process.	<p>1.1. <i>Concepts, principles and tools of quality management and continuous improvement</i> are researched and analysed.</p> <p>1.2. Extensive research is undertaken to determine the current and future service requirements of customers.</p> <p>1.3. Recommended or anticipated changes to services and processes are communicated to senior management for review.</p>
2. Establish and implement performance measurement strategies.	<p>2.1. Financial and <i>non-financial</i> performance measures and evaluation criteria for the specific project or service delivery are established and agreed upon by relevant stakeholders and communicated to relevant staff and service providers.</p> <p>2.2. Appropriate financial and non-financial benchmarks are determined and agreed to by relevant stakeholders.</p> <p>2.3. Project and services are monitored to ensure they meet identified needs and service expectations.</p> <p>2.4. Feedback from customers is communicated to relevant areas within the organisation and incorporated into performance reviews.</p> <p>2.5. Trends in <i>customer/stakeholder satisfaction</i> and service usage are monitored to identify opportunities for improvements to services or processes.</p> <p>2.6. Issues of responsiveness and accessibility are reviewed and reported.</p>
3. Facilitate accountability for project and service outcomes.	<p>3.1. Project management systems, <i>reporting mechanisms</i> and processes are established and communicated to staff and <i>service providers</i>.</p> <p>3.2. The results of service reviews against desired targets are reported according to standard organisational procedures.</p> <p>3.3. Tenders and contracted works are regularly monitored and adverse variations in established performance targets are immediately addressed.</p> <p>3.4. Quality and efficiency of operational processes are measured and documented.</p> <p>3.5. Service shortfalls are analysed and resolved in line with company policies and procedures, including customer service standards.</p>
4. Develop and	4.1. The need for change in organisational processes and

ELEMENT	PERFORMANCE CRITERIA
implement change management processes.	<p>work culture to support project or service delivery is identified.</p> <p>4.2. A change process to address the need is identified or developed, and implemented.</p> <p>4.3. Changes to operational processes, projects or services delivered are recommended and communicated to appropriate personnel with supporting information.</p> <p>4.4. Staff members are adequately informed of improvement plans, their goals and changes to operational procedures.</p> <p>4.5. Appropriate methods are employed to gain commitment for change.</p> <p>4.6. Improvement projects are implemented within agreed timelines and coordinated effectively.</p> <p>4.7. The effectiveness and benefits of implemented changes are monitored and reported.</p> <p>4.8. Outcomes of improvements are reviewed and used for further learning and continuous improvement by being shared across the company.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- high level management and leadership skills
- ability to identify and evaluate potential obstacles to change
- analysis of organisational systems, processes and activities
- problem solving and creative thinking skills to develop a range of possible options
- developing a range of possible options in solving problems
- numeracy skills for:
 - calculating measures of performance
 - analysing financial reports
- language and literacy skills for:
 - communicating service requirements and recommended improvement plans
 - researching

REQUIRED SKILLS AND KNOWLEDGE

- accessing, reading, interpreting and applying current relevant legislation, codes and standards
- computer skills for:
 - word processing
 - spreadsheets
 - emails
 - internet searching
- negotiation and conflict management

Required knowledge

- change management processes
- continuous improvement processes
- computer software functions and operation
- knowledge specific to fire systems design, including:
 - relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
 - passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
 - water-based fire systems technology and components, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems technology and components, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems

REQUIRED SKILLS AND KNOWLEDGE

- smoke control systems
- emergency lighting systems
- technology and components of special hazard fire systems, including:
 - foam systems (low expansion, medium expansion and high expansion)
 - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
 - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
- chemical systems' technology and components, including:
 - powder
 - wet chemical

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the establishment and implementation of performance parameters and measures to ensure the accountability and effective delivery of projects and processes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- knowledge of the concepts, principles and tools used in quality management and continuous improvement processes
- knowledge of the concepts, principles and tools of change management
- the mathematical ability to calculate benchmarks and monitor performance
- research skills
- analytical and report writing skills
- leadership skills that facilitate quality outcomes and organisational change
- the ability to learn from project outcomes and refine and improve future processes.

Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- access to relevant codes and standards
- access to legislation relevant to the jurisdiction and the project being undertaken

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • project, process or service documentation • research resources, including product, process or technology information and data applicable to the workplace • theoretical texts and other information to support the assessment of the unit's required skills and knowledge • relevant computer software packages and suitable hardware.
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating</p>

RANGE STATEMENT	
conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<i>Concepts, principles and tools of quality management and continuous improvement</i> include:	<ul style="list-style-type: none"> • Total Quality Management (TQM), including Six Sigma • ISO 9000 and the processes for certification • failure mode and effects analysis • benchmarking • continuous improvement methodologies, including Kaizen • 'lean transformation' processes, sometimes known as the 'Toyota Lean Model' or the 'Toyota Production Model'.
<i>Non-financial</i> performance indicators may include:	<ul style="list-style-type: none"> • customer satisfaction ratings • completion times for projects measured against project plans • volume of repeat business • number of business referrals • demonstrated compliance of work with codes and standards • industry awards received • performance in industry benchmarking studies.
Methods of measuring <i>customer/stakeholder satisfaction</i> include:	<ul style="list-style-type: none"> • gap analysis approach • customer satisfaction monitoring (CSM) approach, e.g. telephone, questionnaires, face-to-face interview or in-depth interview • developing customer-focused key performance indicators (KPI) to support customer monitoring procedures.
<i>Reporting mechanisms</i> may include:	<ul style="list-style-type: none"> • non-financial and financial system reports, including budgets • informal reporting methods, such as regular team and departmental meetings.
<i>Service providers</i> may include:	<ul style="list-style-type: none"> • contractors • suppliers of materials.
The <i>change process</i> should be planned and monitored and may entail:	<ul style="list-style-type: none"> • processes to plan for the change • processes to implement the change • processes to reinforce the change • steps to support staff during the change, including:

RANGE STATEMENT

	<ul style="list-style-type: none">• coaching and mentoring• training interventions• revised process documentation• feedback and appraisal processes• reward and recognition processes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply oral communication.	<p>1.1.Oral instructions are received, clarified and confirmed.</p> <p>1.2.Oral communication with others is clear, accurate and in a language suitable to the workplace.</p> <p>1.3.Oral communication uses accepted industry terminology.</p> <p>1.4.Oral communication using telephone or radio follows industry convention.</p> <p>1.5.All oral communication is confirmed and acknowledged.</p>
2. Apply visual communication.	<p>2.1.Visual communication used follows accepted industry practice or social convention.</p> <p>2.2.Attention of the communicating parties is obtained, confirmed and acknowledged.</p> <p>2.3.Intention of the visual communication is clarified and confirmed at each step.</p> <p>2.4.Visual communication that is unclear or ambiguous is questioned or visually cancelled.</p> <p>2.5.Instances of unclear visual communication are followed up to avoid repeated problems.</p>
3. Apply written communication and signage.	<p>3.1.Written communication is accessed.</p> <p>3.2.Instructions for job or daily activities are accessed and clarified.</p> <p>3.3.Regulatory authorities' and workplace documentation required to record and report work to be undertaken is completed in accordance with workplace procedures for quality, time and detail.</p> <p>3.4.Technical instructions relating to job process, criteria and equipment operations are accessed, interpreted and applied.</p> <p>3.5.Regulatory and work signage is identified, clarified and responded to correctly.</p> <p>3.6.Written detail is provided to maintain the individual's personal records.</p> <p>3.7.Information bulletins, circulars or equivalent that impact on the individual are accessed and interpreted.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - complete written reports and other relevant documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - negotiate with employers
 - read and interpret:
 - documentation from a variety of sources
 - material safety data sheets (MSDS)
 - signs
 - work safety procedures and instructions
 - report hazards, risks and faults in equipment
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- how instructions are conveyed in the workplace
- how work schedules, charts, bulletins and memos are used
- industry terminology
- job safety analysis (JSA) and safe work method statements (SWMS)
- personnel records and their maintenance
- phone and two-way radio communication requests
- standardised signage
- visual signalling procedures
- workplace documentation requirements

REQUIRED SKILLS AND KNOWLEDGE

- workplace English.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- accessing and interpreting written work safety procedures, job instructions, job processes, equipment and operator instructions
- adapting and applying oral communications when using a phone or radio
- completing workplace documentation in relation to work, stores and tools and equipment and personal and workplace administration
- communicating effectively using mandatory visual methods, including:
 - establishing communication
 - lateral and vertical movement direction
 - request for a face-to-face meeting
 - stop or cancel last communication
- communicating with others in a clear and accurate manner
- receiving, clarifying and confirming oral work instructions
- reviewing personnel records and completing personal information input proformas.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Oral communication with others is an integral part of routine work that includes communication with supervisors, contractors, co-workers and clients. It:

- may include:
 - languages other than English
 - oral (face to face or remote)
 - signage
 - visual or written
- must include:
 - acknowledgments
 - oral communications media, including:

RANGE STATEMENT

- face to face
 - indirect method, such as phone or two-way radio
 - requests for information
 - safety briefings
 - work instructions.
- Visual communication* must include:
- establishing communication
 - lateral and vertical movement direction
 - other signals appropriate to the task and workplace
 - request for a face-to-face meeting
 - stop or cancel last communication.
- Written communication* may include:
- dockets and order forms
 - equipment logs
 - equipment operator instructions
 - input and output documents
 - personnel records
 - plans, drawings and specifications
 - schedules and rosters
 - servicing checklists
 - site safety statistics
 - training records
 - work instructions and procedures
 - work safety procedures or equivalent
 - work signage.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to use and interpret plans and specifications associated with construction work, and accurately complete measurements and calculations to establish quantities of materials for plumbing work.

The unit requires the interpretation of plans, drawings and specifications to interpret requirements, and making measurements and calculations to determine quantities of plumbing materials.

Application of the Unit

Application of the unit This unit of competency supports skills to read and interpret plans for a variety of plumbing applications.

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained. It may be a customer's premises or employer's workplace, either on or off-site.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1.Plans, drawings, specifications and standards are obtained and required calculations are identified.</p> <p>1.2.Safety (OHS) requirements associated with reading plans, calculating plumbing requirements and the workplace environment are adhered to throughout the work.</p> <p>1.3.Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4.Work area and materials are prepared to support the efficient reading of plans and the calculation of plumbing requirements.</p>
2. Identify types of drawings and their functions.	<p>2.1.Main types of plans and drawings used in the plumbing industry are identified.</p> <p>2.2.Key functions of each type of drawing are identified.</p> <p>2.3.Key users of drawings are identified.</p>
3. Recognise commonly used scales, symbols and abbreviations.	<p>3.1.Commonly used scales, symbols and abbreviations are applied.</p> <p>3.2.Function of legend is understood and identified.</p>
4. Locate and identify key features on a services plan.	<p>4.1.Key features and dimensions of sectional details and elevations in a plan are identified and located.</p> <p>4.2.Location and types of services are identified.</p> <p>4.3.General and structural features and major horizontal and vertical measurements are located.</p>
5. Read and interpret job specifications.	<p>5.1.Purpose of job specification is identified.</p> <p>5.2.Details in job specification are obtained.</p> <p>5.3.Job specifications are read in conjunction with plans.</p>
6. Obtain measurements and perform calculations.	<p>6.1.Work measurements are obtained.</p> <p>6.2.Quality assurance requirements associated with calculations are applied.</p> <p>6.3.Measurements and dimensions are obtained from plans.</p> <p>6.4.Simple calculations are carried out.</p>
7. Calculate material quantities.	<p>7.1.Material quantities are calculated from job instructions.</p> <p>7.2.Information from plans, specifications and work area are obtained from job instructions.</p> <p>7.3.Measurements are correctly identified and recorded.</p>

ELEMENT	PERFORMANCE CRITERIA
	7.4. Quantities of <i>materials</i> suitable for work are calculated and recorded according to job instructions.
8. Clean up.	8.1. Work area is cleared in accordance with workplace procedures.
	8.2. <i>Tools and equipment</i> are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	8.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - request relevant documentation and information
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written communication skills to:
 - complete other relevant workplace documentation
 - record calculations, measurements and material quantities
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- plan-reading skills, including:
 - boundaries
 - covenants

REQUIRED SKILLS AND KNOWLEDGE

- easements (stormwater, etc.)
- existing services
- orientation
- pedestrian and vehicular access
- preservation orders
- set backs
- site features
- site geography, including levels
- surrounding buildings and fences
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- common industry calculations
- job safety analysis (JSA) and safe work method statements (SWMS)
- measurements, calculations and quantities
- range of drawings and specifications relevant to the plumbing industry
- relevant Acts, regulations and codes of practice
- symbols, dimensions, terminology and key features of plans
- tools, equipment and materials relative to plans, drawings and specifications
- work schedules, work plans, charts, work bulletins and memos
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for reading plans and calculating plumbing quantities
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications for a project, complete the following in respect of interpreting the plans and determining quantities:
 - identify type and purpose of the plan and drawing
 - identify its dimensions, symbols, abbreviations, key features, title and reference date (as current version)
 - identify required specifications and their impact and influence on the plumbing requirements of the project
 - draw a freehand sketch of the plumbing requirement of the project
- from measurement and calculation, indicating items of plumbing material required, ensuring:
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and

EVIDENCE GUIDE

with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Types of **drawings** may include:

- elevations and sections
- floor plans
- mechanical services and drainage plans
- sanitary plans
- sewerage plans
- site plans
- specifications.

Key features of detailed **plans and elevations** may include:

- boundaries
- building lines
- cross-sections of construction details
- easements
- layout of rooms
- location of works relative to other buildings
- orientation
- service locations
- shape of building and structure
- type of construction
- type of structure, including structural members
- vertical and horizontal measurements.

Measurements:

- are to be in metric scale
- cover all dimensions used in plumbing
- involve the use of:

RANGE STATEMENT

Calculations:

- calipers
- dividers
- rulers
- squares
- tape measures
- may involve laser or similar technology.
- are to be performed manually and with the aid of a calculator
- are to include:
 - area
 - circumference
 - diameter
 - force
 - length
 - mass
 - perimeter
 - pressure
 - ratios (e.g. ingredients, elements and triangulation)
 - scales
 - volume
- require numeracy skills to apply the basic arithmetic calculations of addition, subtraction, multiplication and division in order to estimate simple projects and determine consumables required for a task.

Information may include:

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- organisation work specifications and requirements
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing and gasfitting authority regulations
- relevant Australian standards

RANGE STATEMENT

- safe work procedures relating to reading plans and calculating plumbing requirements
 - verbal, written and graphical instructions, including:
 - charts and hand drawings
 - diagrams or sketches
 - job drawings
 - material safety data sheets (MSDS)
 - memos
 - plans and specifications
 - signage
 - work bulletins
 - work schedules.
- Key features of *specifications* may include:
- material details
 - preferred suppliers
 - quality of finishes
 - quantities
 - skill requirements.
- Materials* for reading plans and calculating plumbing quantities include:
- drawings
 - plans
 - specifications.
- Tools and equipment* include:
- calculators
 - laser measuring devices
 - logarithmic tables
 - regulatory authority approved tables and formulas
 - rulers, dividers, tape measures or squares.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify first aid needs.	<p>1.1. Safety of injured person, bystanders and self in an accident situation is assessed in accordance with first aid procedures.</p> <p>1.2. Safety (OHS) requirements associated with applying first aid in the workplace and workplace environmental requirements are adhered to.</p> <p>1.3. Quality assurance requirements of company operations are recognised and adhered to.</p> <p>1.4. Condition of injured or ill person is assessed in accordance with first aid procedures.</p>
2. Provide first aid for workplace injuries, illnesses or accidents within regulatory requirements.	<p>2.1. Workplace injuries, illnesses or accidents and hazards to the patient are identified and appropriate action is taken to prevent further injury.</p> <p>2.2. Symptoms and appropriate first aid treatment are identified.</p> <p>2.3. Common injuries and minor disorders are managed until medical assistance is available in accordance with first aid procedures.</p> <p>2.4. Emergency is dealt with in accordance with workplace procedures.</p> <p>2.5. One-person and two-person cardiopulmonary resuscitation (CPR) is performed following safety procedures.</p> <p>2.6. Techniques for moving sick and injured persons are used.</p> <p>2.7. Referrals to appropriate internal personnel or external medical services are made.</p> <p>2.8. Cultural differences in the workplace are considered in the approach taken to provide first aid.</p>
3. Follow workplace procedures for first aid.	<p>3.1. Support from other first aid personnel or external providers and for reporting incidents and emergency situations is accessed in accordance with workplace procedures.</p> <p>3.2. Action is taken to complete reports within regulatory requirements and in accordance with workplace procedures.</p> <p>3.3. Records of affected personnel, including names, nature of injury or illness and follow-up treatment are made and filed by the workplace, maintaining appropriate confidentiality.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<ul style="list-style-type: none">4.1. First aid equipment is recovered if practical, cleaned, inspected and tested, refurbished, replaced and stored as appropriate.4.2. Medical waste is disposed of in accordance with workplace requirements.4.3. Equipment faults are rectified and reported in accordance with workplace procedures.4.4. Information is accessed and documentation completed as required by legislative, regulatory and workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - complete reports, records and other workplace documentation
 - effectively and assertively communicate in an incident and call for medical assistance as required
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to provide first aid
- providing appropriate first aid for a workplace injury, illness or accident
- numeracy skills to apply measurements and calculations
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media

REQUIRED SKILLS AND KNOWLEDGE

- use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- expired air resuscitation (EAR) and CPR
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of initial patient management
- priorities for life support (danger, response, airway, breathing, ventilation and circulation [DRABC] model)
- relevant agreements, codes of practice and other legislative requirements in relation to first aid
- reporting responsibilities and requirements
- symptoms of and treatment for workplace injuries and illnesses
- workflow in the area in which first aid is being administered.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the provision of first aid
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to demonstrate correct first aid treatment for the following workplace injuries and illnesses:
 - asphyxiation and breathing difficulties
 - burns and scalds
 - collapsed or unconscious patient (including EAR and CPR)
 - drowning
 - electrocution
 - external bleeding and open wounds
 - eye injuries
 - fractures and spinal injuries
 - nausea
 - shock
 - soft tissue injuries
 - venomous bites
- treatment should ensure:
 - correct identification of symptoms and treatment
 - correct application of treatment and use of

EVIDENCE GUIDE

Context of and specific resources for assessment

appropriate equipment

- maintenance of patient's comfort and wellbeing
- compliance with regulations, standards and organisational procedures and processes
- communicating and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to

EVIDENCE GUIDE

confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised**

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Workplace injuries, illnesses or accidents include:

- asphyxiation and breathing difficulties
- burns and scalds
- drowning and collapsed or unconscious patient
- EAR and CPR
- electrocution
- external bleeding
- eye injuries
- fractures

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to prepare for and sustain effective work within the plumbing and services sector of the building and construction industry. It requires the ability to accept instructions, work with others, plan activities and perform tasks, as well as participate in workplace planning and meetings. Outcomes include effective participation in a plumbing and services workplace to promote a harmonious and efficient work environment.

The unit covers the identification and clarification of the sector work context and setting, acceptance of workplace responsibility by the individual, working in a team, individual career path improvement and participation in meetings.

Application of the Unit

Application of the unit

This unit of competency supports understanding of the structure and employment conditions in the sector, and its regulatory and other requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the industry work context and setting.	<p>1.1. Nature and scope of plumbing and services functions, activities, economic importance, employment opportunities and career paths are identified.</p> <p>1.2. Plumbing and services sector employment conditions, responsibilities and obligations are identified.</p> <p>1.3. Trends in technology (including IT) and processes likely to impact on the plumbing and services sector are identified.</p> <p>1.4. Requirements of relevant plumbing legislation, regulations, standards and codes of practice are accessed through a variety of mediums, understood and implemented.</p> <p>1.5. Specific OHS requirements of the plumbing industry are understood and implemented.</p> <p>1.6. Quality assurance and workplace quality requirements are understood and implemented.</p>
2. Organise and accept responsibility for own workload.	<p>2.1. Priorities and deadlines are established in consultation with others and recorded.</p> <p>2.2. Work activities are planned with appropriate time management and progress of work is communicated to others whose personal work plans and timelines may be affected.</p> <p>2.3. Work is completed to the standard expected in the workplace and in accordance with guidelines, directions, instructions and organisational requirements.</p> <p>2.4. Variations and difficulties affecting work requirements are identified through regular reviews and action is taken to report these issues to appropriate personnel.</p> <p>2.5. Additional support or modification of arrangements to improve work outcomes is communicated clearly to appropriate personnel.</p>
3. Work in a team.	<p>3.1. Workplace goals and the contributions to be made by teams are identified.</p> <p>3.2. Individual contributions to team activities are identified, agreed and reviewed periodically with the team.</p> <p>3.3. Defined roles and strengths of other team members are identified.</p> <p>3.4. Assistance and encouragement are provided to other</p>

ELEMENT	PERFORMANCE CRITERIA
	team members wishing to enhance their role and the role of the team.
	3.5. Ground rules for team operations are reviewed and changes are made through team consultative processes.
	3.6. Team improvements are initiated and encouraged from team members.
	3.7. Causes of disharmony and other barriers to achievement are promptly resolved or referred to the appropriate party for resolution.
4. Participate in identifying and pursuing own development needs and processes.	4.1. The competencies for the workplace are identified.
	4.2. Organisational structure, career paths and own development opportunities appropriate to the workplace are identified.
	4.3. Steps are taken, in consultation with appropriate personnel, to identify <i>own learning needs</i> for future work requirements.
	4.4. Appropriate opportunities to learn and develop required competencies are identified and pursued with the appropriate people.
5. Participate in workplace meetings.	5.1. <i>Meeting</i> procedures and objectives are identified and applied.
	5.2. Points of view and comments, including agreement and dissent are presented in a logical, persuasive and orderly manner.
	5.3. Points of view of other members are given due consideration.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand in order to

REQUIRED SKILLS AND KNOWLEDGE

- consult with colleagues, communicate work progress, report problems, request support, work in a team and participate in meetings
- interpret information from a variety of sources
- record work priorities and deadlines
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use mobile communication technology
 - access and understand site-specific instructions in a variety of media.

Required knowledge

Required knowledge for this unit is:

- basic conflict management
- basic job and skill analysis techniques
- interpersonal communication
- job safety analysis (JSA) and safe work method statements (SWMS)
- meeting procedures
- plumbing and services streams and career structure and requirements, including business opportunities and requirements
- regulatory, legislative, standards and codes of conduct pertaining to the plumbing and services sector
- relevant industrial awards and agreements
- relevant legislative provisions covering discrimination and equal employment opportunity
- site and team work structure and methods
- training and development opportunities
- work communication procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- communicating and working effectively and safely with others
- complying with OHS regulations and state and territory legislation applicable to workplace operations
- complying with organisational policies and procedures, including quality assurance requirements
- explaining to others scope, employment and economic importance of the plumbing and services sector
- identifying personal development needs
- identifying standards and codes of conduct applicable to their particular streams
- identifying work employment conditions and source of these conditions
- indicating an awareness of regulatory requirements and manner of their adoption and management within the workplace
- locating, interpreting and applying relevant information, standards and specifications, which may include the ability to use computers and download relevant information
- participating in workplace meetings
- responding to personal conflict situations
- setting personal and team work goals.

Context of and specific

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

resources for assessment

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plumbing and services sector employment conditions must include:

- bulletins and newsletters
- enterprise agreements
- enterprise procedures for handling industrial disputes and grievances

RANGE STATEMENT

Responsibilities and obligations must include:

- industrial awards
- industry and workplace codes of practice
- workplace agreements.
- codes of conduct
- job description and employment arrangements
- organisation's policy relevant to work role
- skills, training and competencies
- supervision and accountability requirements, including OHS
- team structures.

OHS requirements are to be in accordance with state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Organisational requirements may be included in:

- access and equity principles and practices
- anti-discrimination and related policy
- business and performance plans
- ethical standards
- goals, objectives, plans, systems and processes
- legal and organisation policy, guidelines and requirements
- quality and continuous improvement processes
- standards and defined resource parameters.

Team:

- site work organisation
- may be known locally as crews, gangs, shifts or other industrially and historically acceptable terms.

Team members may include:

- coach or mentor
- employee representative
- peers and work colleagues
- supervisor or manager
- team, enterprise and other members of the organisation.

Own learning needs include:

- assessment processes
- competency achievement and maintenance

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to carry out OHS requirements through safe work practices in a plumbing and services work environment.

The unit requires the performance of work in a safe manner through awareness of risks, work requirements and the planning and performance of safe work practices with concern for personal safety and the safety of others.

It includes the initial response to workplace emergencies and the safe use of electricity.

Application of the Unit

Application of the unit This unit of competency supports safe work practices for the plumbing and services industry.

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure or fitting being renovated, extended, restored or maintained. It could also be conducted in an on or off-site workshop or at a customer's premises.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Participate in workplace induction.	<p>1.1. Workplace induction is received.</p> <p>1.2. Location of emergency equipment is identified.</p> <p>1.3. Current workplace emergency and evacuation procedures are identified.</p> <p>1.4. Identify safe working conditions with employer</p> <p>1.5. Identify employee and employer rights and responsibilities regarding safe working conditions.</p>
2. Assess risks.	<p>2.1. Hazards in the work area are identified, assessed and reported to designated personnel.</p> <p>2.2. OHS issues and risks in the work area are identified, assessed and reported to designated personnel.</p> <p>2.3. Safe work practices, procedures and instructions are followed.</p> <p>2.4. OHS, hazard, accident or incident reports are completed according to workplace procedures and statutory and regulatory authorities and legislation.</p>
3. Plan and prepare for safe work practices.	<p>3.1. Quality assurance requirements of company operations and safe work practices are recognised and adhered to.</p> <p>3.2. Personal protective equipment (PPE) is selected, correctly fitted and used in accordance with the requirements of the job.</p> <p>3.3. Tools and equipment are selected consistent with safe work practice requirements, checked for serviceability, and any faults are reported to supervisor.</p> <p>3.4. Required barricades, hoardings and signage are determined and erected at job location.</p> <p>3.5. Material safety data sheets (MSDS) are identified and applied.</p> <p>3.6. Sustainability principles and concepts are applied to work preparation and application.</p>
4. Use safe work practices to carry out work.	<p>4.1. Work is carried out safely and according to state or territory statutory requirements and company policy.</p> <p>4.2. Safety hazards and common workplace accidents and incidents are identified in the course of work and reported in accordance with policy.</p> <p>4.3. Industry, site and personal safety rights and responsibilities are applied.</p> <p>4.4. Firefighting equipment is selected and used</p>

ELEMENT	PERFORMANCE CRITERIA
	according to type of fire and correct operating procedures..
	4.5.Current site emergency and first aid procedures are followed.
5. Maintain safety of self and others.	<p>5.1.Safety signs, identified in terms of colour and shape, symbols and alarms, are adhered to.</p> <p>5.2.Hazardous chemicals and materials are identified, handled and stored, maintaining the safety to self, others and the environment.</p> <p>5.3.Incidents are reported according to legislative requirements and workplace procedures.</p> <p>5.4.Common causes of accidents in the industry are identified and prevention measures implemented in line with site induction.</p> <p>5.5.Site area is maintained to prevent incidents and accidents and protect self and others.</p>
6. Use electricity safely.	<p>6.1.Safest supply and route for electrical supply are determined.</p> <p>6.2.Leads are supported and placed in accordance with regulations.</p> <p>6.3.Power board visual check is conducted.</p> <p>6.4.Leads and equipment are checked for tags and visual damage.</p> <p>6.5.Electrical hazards are identified and reported.</p>
7. Apply emergency response.	<p>7.1.Emergencies are identified.</p> <p>7.2.Emergency response is provided in accordance with company procedures and requirements.</p> <p>7.3.Details of actions taken are reported in accordance with company procedures and requirements using appropriate communications.</p>
8. Clean up work site area.	<p>8.1.Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.</p> <p>8.2.Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.</p> <p>8.3.Information is accessed and documentation completed according to company requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - complete written reports and other relevant documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - MSDS
 - work safety procedures and instructions
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating safety issues in the workplace and determining appropriate action
- identifying and accurately reporting to appropriate personnel any faults in tools or materials
- recognising and reporting hazards, risks and faults in equipment
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use a range of mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements (SWMS)
- manual handling techniques
- MSDS
- relevant legislation, regulations and workplace requirements relating to OHS, including hazard reduction and personal safety
- requirements for working in confined spaces and at height, including on rooves
- risk assessment
- safe working practices in normal working environment
- workplace and equipment safety requirements
- workplace hazards and their precautions and reduction
- workplace response to emergencies.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for applying safe work practices in the workplace
- applying safety requirements throughout the performance of work sequences, including electrical requirements and personal protective clothing and equipment
- as a minimum, the ability to:
 - apply sustainability principles and concepts
 - undertake site and workplace induction
 - assess risk and interpret and apply safe working practices
 - understand workplace requirements for emergency response, including evacuation procedures
 - correctly locate and identify workplace firefighting and other safety equipment and appliances
 - correctly select and use appropriate processes, tools and equipment
 - safely complete all work to specification
 - comply with regulations, standards and workplace instructions, procedures and processes, including reporting and documentation
 - communicate and work effectively and safely with others.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Workplace induction may include:

- first aid officers and kits
- site induction work site locations

RANGE STATEMENT

Safe work practices are to be in accordance with state and territory legislation and regulations and may include:

- specific site OHS issues
- specific site requirements.
- handling of materials
- hazard control procedures and procedures for handling hazardous materials and substances
- PPE prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Statutory and regulatory authorities include:

Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
 - selecting appropriate components and material
 - choosing efficient products
 - using material efficiently.

Safety hazards may include:

- hazards and risks associated with tools and equipment
- inflammable materials and fire hazards
- lifting practices
- lighting, gases, electricity and water
- spillage, waste and debris
- toxic and hazardous substances
- working at heights
- working in confined spaces.

Emergencies may include:

- accidents
- fires
- injuries
- sudden illness.

Emergency response may include:

- common site signs
- equipment tags
- facility or location signs
- safety barricades and warning signs
- site direction

RANGE STATEMENT

- traffic signs
- workplace evacuation involving staff and customers.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to safely handle and store plumbing materials and to identify and address environmental concerns and associated hazards, including the disposal of waste.

It addresses OHS and environmental requirements to minimise risk to the health and safety of personnel and to the environment.

Application of the Unit

Application of the unit The unit applies to work conducted in a stores holding facility, a work vehicle or on a work site.

Site location for work application may be a new construction site, an existing structure being renovated or extended, service restoration or maintenance, an on or off-site workshop, a work vehicle or a customer's premises.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Safety (OHS) requirements associated with handling and storage of plumbing materials, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.2. Personal protective equipment (PPE) is selected, correctly fitted and used in accordance with the requirements of the job.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Environmental and waste management requirements are recognised and applied.</p> <p>1.5. Tools and equipment for handling materials and goods, non-toxic waste and liquids are selected for the job requirements, checked for serviceability and any faults reported to supervisor.</p> <p>1.6. Run-off devices are installed and the maintenance process is determined.</p> <p>1.7. Material safety data sheets (MSDS) are located and interpreted for plumbing materials to be handled.</p>
2. Identify hazard and risk control information and measures.	<p>2.1. Hazards are recognised and reported to designated personnel according to workplace procedures.</p> <p>2.2. Procedures, instructions and information for controlling hazards and risks are identified and adhered to.</p> <p>2.3. Procedures for dealing with accidents, fires and emergencies are adhered to.</p>
3. Handle, sort and stack materials.	<p>3.1. Materials are identified and selected for sorting, stacking and stockpiling according to supervisor instructions or workplace requirements.</p> <p>3.2. Handling characteristics of materials are identified and safe manual handling techniques are applied.</p> <p>3.3. Specific handling requirements and protection for non-hazardous materials and chemicals are applied.</p> <p>3.4. Materials are stored, stacked, stockpiled and protected, clear of traffic ways, for ease of identification, retrieval, prevention of damage and cross-contamination in accordance with workplace requirements.</p> <p>3.5. Signage and barricades are erected to isolate stored materials from workplace traffic or access.</p> <p>3.6. Hazardous material is identified for separate handling</p>

ELEMENT	PERFORMANCE CRITERIA
	by authorised persons.
	3.7.Dust suppression procedures are used to minimise health risk to personnel in the workplace vicinity.
4. Store and transport materials.	<p>4.1.Materials are stored and transported correctly and safely according to MSDS and statutory and regulatory authorities' requirements.</p> <p>4.2.Hazardous material is identified for separate storage, transport and handling by authorised persons.</p> <p>4.3.Materials, including flammable liquid and material, gases, bulk liquids and petroleum products are stored in their allocated areas and identified bins and containers in accordance with workplace requirements.</p> <p>4.4.Hazardous materials are transported and handled in accordance with regulatory requirements, including appropriate signage, markings and safety precautions.</p> <p>4.5.Stormwater system is protected.</p>
5. Clean up.	<p>5.1.Tools, equipment and signage are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>5.2.Work area is cleared and materials are disposed of or recycled in accordance with state and territory legislation and workplace procedures.</p> <p>5.3.Spilt liquids and waste material are removed and disposed of in accordance with environmental and safety plans and workplace requirements.</p> <p>5.4.Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- complete written workplace documentation
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret drawings, specifications and documentation from a variety of sources
- report hazards and follow instructions
- use and interpret non-verbal communication, such as hand signals
- use language and concepts appropriate to cultural differences
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- identifying handling and storage requirements for materials used in a plumbing work environment, including identifying, handling and disposing of toxic and non-toxic waste
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- categories of materials and their safe handling, storage and transport requirements
- environmental plans, air and water contamination, erosion and sedimentation
- job safety analysis (JSA) and safe work method statements (SWMS)
- MSDS
- OHS and environmental legislation and requirements
- types of waste and their disposal, including an awareness only of the requirements for asbestos handling and disposal
- workplace hazard reporting and hazard handling procedures
- workplace processes and procedures
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for handling and storing plumbing materials
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to complete the following in respect of handling and storing plumbing materials:
 - identify categories of toxic and non-toxic waste and indicate specific handling and disposal requirements
 - indicate the requirement for handling and storing toxic materials
 - indicate the requirement for transporting hazardous materials, such as oxy-acetylene cylinders
 - plan the lay out of a facility for the storing and stacking of pipes, fittings, components, non-toxic liquids and flammable liquids, and materials in a workshop and a work site
 - plan the lay out of a work vehicle for the carriage of plumbing materials
- carrying out the above work, ensuring:
 - correct identification of handling, storing and disposal procedures
 - correctly addressing OHS and environmental concerns

EVIDENCE GUIDE

Context of and specific resources for assessment

- correct selection and use of appropriate processes, tools and equipment
- completion of all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communication and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or

EVIDENCE GUIDE

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- hazards, including:
 - airborne contamination
 - faulty or damaged components or fittings
 - fires
 - gas leaks
 - toxic waste, such as asbestos
 - unsafe storage of materials
 - unsafe work practices
 - water contamination
 - water egress
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Environmental requirements are to address:

- air pollution precautions
- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hand and power tools.	<p>1.1. Safety (OHS) requirements associated with the use of plumbing hand and power tools, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.2. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.3. Types of hand and power tools and their functions are identified.</p> <p>1.4. Power sources and access to power supply are recognised.</p>
2. Select appropriate hand tools.	<p>2.1. Hand tools are selected consistent with the needs of the job.</p> <p>2.2. Hand tools are checked for serviceability and safety and any faults reported to supervisor in accordance with workplace requirements.</p> <p>2.3. Equipment is selected to hold, position or support material for hand tools application.</p>
3. Use appropriate hand tools.	<p>3.1. Material is located and held in position for hand tool application.</p> <p>3.2. Hand tools are safely and effectively used according to their intended use.</p> <p>3.3. Hand tools are safely located when not in immediate use.</p>
4. Select appropriate power tools.	<p>4.1. Appropriate personal protective equipment is selected, correctly fitted and used.</p> <p>4.2. Power tools are selected consistent with the needs of the job in accordance with conventional work practice.</p> <p>4.3. Power tools are visually checked for tags, serviceability and safety in accordance with OHS requirements and any faults are reported to supervisor in accordance with enterprise procedures.</p> <p>4.4. Equipment is selected to hold, position or support materials for power tool application.</p>
5. Use appropriate power tools.	<p>5.1. Material is located and held in position for power tool application.</p> <p>5.2. Power tools are safely and effectively used in application processes.</p> <p>5.3. Power tools are safely switched and located when not in use.</p>

ELEMENT	PERFORMANCE CRITERIA
6. Clean up work area.	<p>6.1. Work area is cleared in accordance with workplace procedures.</p> <p>6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>6.3. Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults and follow instructions
 - use language and concepts appropriate to cultural differences

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- function and purpose of hand and power tools used in plumbing applications
- job safety analysis (JSA) and safe work method statements (SWMS)
- workplace safety requirements and OHS legislation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- demonstrating compliance with OHS regulations applicable to workplace operations
- adopting and carrying out correct procedures prior to, during and after use of hand and power tools
- following work instructions, operating procedures and inspection practices to use the listed plumbing hand and power tools for their appropriate application, ensuring:
 - there is no damage to materials, tools or equipment
 - all work is completed to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

and may include:

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Appropriate plumbing **hand tools** may include:

- battery operated drills
- caulking guns
- copper tube cutters
- copper tube expanders
- customised tools to meet manufacturer specifications
- files and rasps
- hacksaws
- ladders
- other specialist tools for water services
- oxy-acetylene
- pipe benders
- pipe dies
- pipe wrenches
- pop riveters
- screwdrivers
- spirit levels
- squares
- tin snips
- tube benders
- tube flaring tools
- wood saws.

Appropriate plumbing **power tools** may include:

- compactor (wacker)
- compressed air
- drop saw
- electric dies (up to 100mm)
- electric drills
- electric nibbler
- generator
- grinder
- hydraulic tools and equipment
- large rotary drills

RANGE STATEMENT

Information may include:

- petrol diamond saws
- power saws.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Requirements of the job are determined and various levels are obtained.</p> <p>1.2. Safety (OHS) requirements associated with levelling activities and workplace environmental requirements are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p>
2. Perform levelling.	<p>2.1. Height to be transferred is identified from drawings, plans or instructions.</p> <p>2.2. Levelling equipment is set up in accordance with manufacturer instructions and workplace procedures.</p> <p>2.3. Laser levels are operated in accordance with the relevant Australian standards.</p> <p>2.4. Levels are shot, recorded and marked in accordance with job requirements and workplace procedures within the required tolerance and specifications.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials are disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.</p> <p>3.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>3.3. Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - complete workplace documentation
 - determine requirements, follow instructions and access information
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- operating levelling equipment to read, record, establish and check:
 - levels, both horizontal and vertical used for the placement of pipe and piping
 - recording levels at specific points along a set out
 - recording and checking levels in drainage and sanitary excavations and plumbing operations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- different types of levelling equipment, their applications and their method of operation
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of establishing, recording and checking levels and alignment
- relevant statutory and authority requirements related to establishing, recording and checking levels
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for the establishment, recording and checking of levels
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to:
 - use either a pipe or rotary laser and either a boning rod or string line
 - grade a pipe (or equivalent) over 10 metres on a grade to a tolerance of + and - 5mm, ensuring:
 - correctly identifying, recording and checking level
 - correctly selecting and using appropriate processes, tools and equipment
 - completing all work to specification
 - complying with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or

EVIDENCE GUIDE

Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at

EVIDENCE GUIDE

different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control and hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Environmental requirements covers water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

RANGE STATEMENT

<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none"> • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • hand tools • measuring equipment • string line.
<i>Levelling equipment</i> may include:	<ul style="list-style-type: none"> • boning rods • rotating laser level and pipe laser level • spirit level • tripod mounted automatic level • water level (U tube).
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • state or territory statutory authority • statutory plumbing authority.
<i>Information</i> may include:	<ul style="list-style-type: none"> • building codes • charts and hand drawings • diagrams or sketches • instructions issued by authorised organisational or external personnel • job drawings • manufacturer specifications and instructions • material safety data sheets (MSDS) • memos • OHS and environmental requirements • organisation work specifications and requirements • regulatory and legislative requirements, particularly those pertaining to plumbing and gasfitting authority regulations • relevant Australian standards • safe work procedures relating to handling and storing plumbing materials, including the disposal of waste • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans, drawings and specifications are obtained from supervisor for planned work activity.</p> <p>1.2. Safety (OHS) requirements associated with cutting and joining sheet metal and workplace environmental requirements are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient cutting and joining of sheet metal.</p>
2. Identify joining requirements.	<p>2.1. Selected sheet metal is checked for compliance with plans and specifications.</p> <p>2.2. Joining materials are selected to comply with plans and specifications.</p> <p>2.3. Sealants, fixing materials and sheet metal materials are checked for compatibility and are appropriate for the job.</p>
3. Cut and join sheet metal.	<p>3.1. Sheet metal is marked out in accordance with plans and specifications.</p> <p>3.2. Sheet metal is cut to pattern using appropriate cutting tool.</p> <p>3.3. Laps are measured and shaped for joining using appropriate tools and equipment in accordance with plans and specifications.</p> <p>3.4. Surface is prepared and cleaned of grease and other contaminants.</p> <p>3.5. Sheet metal is joined to comply with plans and specifications, avoiding damage to surrounding surfaces.</p> <p>3.6. Joins are cleaned and visually inspected ensuring materials are correctly aligned, joined and sealed.</p> <p>3.7. Sustainability principles and concepts are applied throughout the cutting and joining process.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or</p>

ELEMENT**PERFORMANCE CRITERIA**

recycled in accordance with state or territory *statutory and regulatory authority* legislation and workplace procedures.

4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.

4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- cutting and joining sheet metal in the fabrication of plumbing components and selecting suitable joins and sealants for the application and material
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a

REQUIRED SKILLS AND KNOWLEDGE

range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- appropriateness of different fastening methods for different applications
- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- characteristics of various metal materials and their compatibility with different joining methods
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- organisational quality procedures and processes within the context of cutting and joining of sheet metal
- SI system of measurement
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for cutting and joining sheet metal

EVIDENCE GUIDE

- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications:
 - cut and join items of sheet metal demonstrating a range of commonly used joining techniques and the use of approved sealants
 - plan the layout, fabricate and assemble a sheet metal product incorporating at least three joining techniques, ensuring:
 - application of sustainability principles and concepts
 - correct identification of requirements and details of proposed joins and assemblies
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and

EVIDENCE GUIDE

emergencies

- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control and hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Environmental requirements may include:

- clean-up protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:

- guillotines
- hand and power tools
- measuring equipment
- other special joining tools and machines
- soldering equipment

RANGE STATEMENT

Materials may include:

- tin snips.
- rivets
- self-drilling and tapping fasteners
- sheet metal, including:
 - colour coated
 - copper
 - galvanised
 - zincalume
 - aluminium
 - lead
 - zinc

Types of **joins** may include:

- silicon and other sealants.
- grooved seam
- knock up
- lap
- Pittsburgh lock
- resistance (spot) weld
- riveted and screwed
- solder.

Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
 - selecting appropriate components and material
 - choosing efficient products
 - using material efficiently.

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory plumbing authority.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- marking out and accurately cutting mild steel up to 8mm thick and mild steel pipe up to 100mm diameter without manual force
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental

REQUIRED SKILLS AND KNOWLEDGE

abilities

- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- application of organisational quality procedures and processes within the context of oxy welding
- dangers of high pressure settings with oxy-LPG-acetylene equipment
- job safety analysis (JSA) and safe work method statements (SWMS)
- operating principles of oxy-LPG-acetylene equipment
- potential fumes and health and safety risks from high temperatures on fluxes and materials
- properties of materials and the effect of heat on the properties of metal
- relevant OHS regulations and PPE requirements
- SI system of measurement.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to cutting with oxy-LPG-acetylene
- applying safety requirements throughout the work sequence, including the use of PPE
- as a minimum the ability to, given the plans and specifications, mark out and cut the following items of plumbing material:
 - using hand-held oxy acetylene cutting equipment, cut 150mm x 150mm sheet of mild steel sheet (up to 8mm thick) into three equal pieces
 - using hand-held oxy acetylene cutting equipment cut up to 8mm mild steel disc to fit a DN40 to DN100 diameter mild steel pipe
 - using hand-held oxy acetylene cutting equipment, cut holes to fit three up to DN50 branch pipes into a length of up to DN100 diameter mild steel pipe
- marking out and cutting should ensure:
 - a clean cut and fit of the materials
 - correct identification of requirements and details of proposed cuts
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained from job supervisor and job requirements are determined.</p> <p>1.2. Safety (OHS) requirements associated with the marking out of materials, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient marking out of materials.</p>
2. Determine job requirements.	<p>2.1. Selected materials are checked for compliance with plans and specifications.</p> <p>2.2. Quantity and type of material required are calculated from plans and specifications.</p> <p>2.3. Job requirements and development methods are determined from plans and specifications.</p>
3. Mark out job.	<p>3.1. Dimensions for fabrication and assembly are determined and transferred.</p> <p>3.2. Relevant standards, codes and symbols are interpreted.</p> <p>3.3. Selected development method is applied as appropriate and in accordance with workplace procedures.</p> <p>3.4. Calculations are performed to specified job requirements.</p> <p>3.5. Material is marked out in conformance with specified measurements.</p> <p>3.6. Dimensions are checked for accuracy and compliance with plans and specifications.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked,</p>

ELEMENT**PERFORMANCE CRITERIA**

maintained and stored in accordance with manufacturer recommendations and workplace procedures.

4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- marking out plumbing materials according to plans and specifications for the fabrication of plumbing components and applications
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- identification and correct use of measuring and marking out equipment
- impact of accurate marking out on fabrication process, work time and finished work quality
- job safety analysis (JSA) and safe work method statements (SWMS)
- operation requirements of equipment used for measuring and calculating
- processes of marking out plumbing materials
- relevant OHS regulations and PPE requirements
- SI system of measurement
- sources of information on characteristics and applications of materials being marked out
- workplace operating procedures, including required standards for marking out.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- giving instructions
- locating, interpreting and applying relevant information, standards and specifications to marking out materials
- applying safety requirements throughout the work sequence, including the use of PPE
- as a minimum the ability to, given the plans and specifications and using any of the three development methods, mark out and measure the following items of plumbing material:
 - roofing sheets
 - copper tubing
 - polymer pipe
 - steel pressure pipe
 - and one of the following:
 - a square and a round penetration in a roofing sheet
 - sheet metal square to round ducting transition
 - develop a sheet metal cone
 - develop a piece of duct work using parallel line method
- all the above carried out, ensuring:
 - correct identification of requirements and details of proposed markings
 - correct selection and use of appropriate processes, tools and equipment

EVIDENCE GUIDE

Context of and specific resources for assessment

- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning

EVIDENCE GUIDE

knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

RANGE STATEMENT

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - dangerous materials
 - surrounding structure and facilities
 - trip hazards
 - underground services
 - work site visitors and the public
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.
- clean-up protection
- waste management.

Environmental requirements cover:

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment include:

- adjustable bevels
- dividers
- protractors
- rulers
- scribes
- squares
- tape measures.

Development methods may be:

- parallel line development
- radial line development
- triangulation.

RANGE STATEMENT

Materials may include:

- cladding and timber
- insulating materials for roofing, piping and ducting
- piping (metal and non-metallic)
- roof sheeting (metal, fibreglass and plastic)
- sheet metal
- steel sections.

Statutory and regulatory authorities include:

- gasfitting authority
- state or territory statutory authority
- statutory plumbing authority.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained from job supervisor.</p> <p>1.2. Safety (OHS) requirements associated with oxy-acetylene welding tasks, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Personal protective equipment applicable to oxy-acetylene welding is selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient welding with oxy-acetylene equipment.</p>
2. Prepare materials and welding equipment.	<p>2.1. Weld requirements are identified from specifications or given information.</p> <p>2.2. Materials to be welded are identified and selected in accordance with workplace procedures.</p> <p>2.3. Material is cleaned and prepared using appropriate tools and techniques in accordance with workplace procedures.</p> <p>2.4. Welding equipment, including cylinders and regulators, are assembled and set up in accordance with workplace procedures.</p> <p>2.5. Welding tips, settings and consumables are selected to meet job requirements and welding procedures in accordance with workplace procedures.</p>
3. Perform welding.	<p>3.1. Materials are welded to job requirements using safe welding practices.</p> <p>3.2. Appropriate action is taken to report or remedy defects in materials or welding equipment, including adjustments to settings and welding technique.</p> <p>3.3. Welds are cleaned in accordance with workplace requirements.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked,</p>

ELEMENT**PERFORMANCE CRITERIA**

maintained and stored in accordance with manufacturer recommendations and workplace procedures.

4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- numeracy skills to apply measurements and calculations
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology

REQUIRED SKILLS AND KNOWLEDGE

- welding mild steel plate, non-ferrous materials and pipe by oxy-acetylene welding.

Required knowledge

Required knowledge for this unit is:

- dangers associated with oxy-acetylene welding in the fabrication and installation of plumbing systems
- effect of heat on the properties and shape of welded metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- operating principles of oxy-acetylene welding equipment
- organisational quality procedures and processes within the context of oxy-acetylene welding
- SI system of measurement
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for oxy-acetylene welding
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, weld two of the following:
 - a flat butt weld up to 6mm mild steel plate, 150mm long
 - a vertical butt weld up to 6mm mild steel plate, 150mm long
 - a rotated butt weld around up to DN100 mild steel pipe located in a horizontal position and rotated during welding
 - silver braze fabricated non-ferrous pipes, fittings and components
- welding should ensure:
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific

This competency is to be assessed using standard

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth,

- handling of materials
- hazard control and hazardous materials and

RANGE STATEMENT

state and territory legislation and regulations and may include:

- substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - pressurised and inflammable gases
 - surrounding structure and facilities
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.
- clean-up protection
- waste management.

Environmental requirements include:

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Materials include:

- copper
- copper alloy
- low carbon mild steel (plate and pipe)
- oxy-LPG-acetylene.

Statutory and regulatory authorities include:

- statutory gasfitting authority
- state or territory statutory authority
- statutory plumbing authority.

Tools and equipment may include:

- clamps
- hand and power tools
- jigs
- measuring equipment
- oxy-acetylene welding equipment.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for arc welding
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications and using arc welding equipment:
 - weld butt joint in mild steel plate up to 8mm, 150mm long
 - fillet weld mild steel plate up to 8mm, 150mm long
 - pad weld mild steel plate up to 8mm, 150mm long
- welding should ensure:
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Job requirements are determined and various levels are obtained.</p> <p>1.2. Safety (OHS) requirements associated with levelling activities and workplace environmental requirements are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p>
2. Place concrete.	<p>2.1. Concrete mixture is prepared to meet manufacturer requirements.</p> <p>2.2. Formwork or excavation area is cleaned of excess material and debris prior to concrete placement.</p> <p>2.3. Concrete is safely transported by an approved method.</p> <p>2.4. Concrete is placed in formwork or placement site to specified depth ensuring all cavities are filled.</p> <p>2.5. Concrete is screeded to the alignment of formwork and project specified datums.</p> <p>2.6. Surface of concrete is finished according to specifications.</p>
3. Place rendering.	<p>3.1. Render mixture is prepared to meet manufacturer requirements.</p> <p>3.2. Render is safely transported by an approved method.</p> <p>3.3. Render is applied in the required location.</p> <p>3.4. Surface of render is finished in accordance with specifications.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - report hazards
 - use and interpret non-verbal communication, such as hand signals
 - use language and concepts appropriate to cultural differences
- contributing to workplace responsibilities, such as current work site environmental or sustainability frameworks, or management systems
- evaluating own actions and making judgements about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures
- responding to change
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- basic levelling techniques
- categories of materials and their safe handling, storage and transport requirements
- concrete and plastering materials
- concreting and plastering techniques
- job safety analysis (JSA) and safe work method statements (SWMS)

REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS)
- OHS and environmental legislation and requirements
- plans, drawings and specifications
- processes for the calculation of material requirements
- simple formwork and reinforcing componentry
- types of waste and their disposal, including an awareness only of the requirements for asbestos handling and disposal
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications as required to carry out concreting and rendering to a simple form
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, carry out one of the following:
 - bench an access chamber
 - install thrust blocks
 - pipe penetration through a floor or wall
 - place concrete as required within AS/NZS3500 National plumbing and drainage set: Part 1.2 Water supply - acceptable solutions
 - pour a concrete slab up to 600mm square
 - repair concrete up to 600mm square
 - repair pipe chases in a brick wall
- all activities carried out should ensure:
 - correct identification of location, design and details of proposed tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to plans and specification

EVIDENCE GUIDE

Context of and specific resources for assessment

- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

EVIDENCE GUIDE

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

RANGE STATEMENT

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Environmental requirements cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:

- brooms
- bull floats
- edging tools
- hand floats (steel and wood)
- levels
- shovels
- stipple devices
- trowels
- wheel barrows.

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory plumbing authority.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)

RANGE STATEMENT

- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing and gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to handling and storing plumbing materials, including the disposal of waste
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work safety requirements.	<p>1.1. Scope of task and proposed work practices and activities are identified and documented in accordance with workplace procedures, statutory and regulatory authority requirements and relevant information.</p> <p>1.2. Safety (OHS) requirements associated with working safely on roofs, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Site is inspected to determine layout and physical condition, condition of structure, prevailing weather conditions, equipment requirements and potential hazards.</p> <p>1.5. Safety equipment is identified, selected and checked for serviceability in accordance with workplace requirements.</p> <p>1.6. Certification of suitability of structure to support the safety system is obtained.</p>
2. Prepare for work.	<p>2.1. Work procedures and instructions for the task are identified.</p> <p>2.2. Materials, tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>2.3. Fall protection and perimeter protection equipment is inspected and installed, ensuring adequacy for work and conformance to regulatory requirements.</p> <p>2.4. Roof safety system is installed in accordance with workplace and regulatory requirements.</p> <p>2.5. Appropriate signage and barricades are selected and installed.</p>
3. Perform work on roof.	<p>3.1. Access from ground to work area is checked to ensure it is safe and in accordance with regulatory requirements.</p> <p>3.2. Fall protection and personal safety requirements are applied in accordance with regulatory requirements.</p> <p>3.3. Manual handling of materials and equipment is undertaken in accordance with regulatory requirements.</p> <p>3.4. Roof materials and equipment are located on roof,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>ensuring that they are safely secured and distributed to eliminate risk of distorting or collapsing the building framework.</p> <p>3.5. Safety system is checked periodically for compliance with regulations in accordance with workplace procedures, and <i>faults are reported</i>.</p> <p>3.6. Risk control measures are monitored to ensure that they are effective and appropriate to the task and work environment.</p> <p>3.7. Risk control measures are reassessed, as required, in accordance with changed work practices and/or site conditions, and alterations are undertaken within scope of authority.</p>
4. Clean up.	<p>4.1. Safety system is dismantled in accordance with sequence and removed from work site.</p> <p>4.2. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.</p> <p>4.3. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.4. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - document scope of work and work practices
- conducting a safety assessment of a roof work site
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- providing necessary safety measures, including the installation of a roof safety system
- technological skills to:
 - access and understand site-specific instructions in a variety of media
- use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements (SWMS)
- nature of work undertaken on roofs
- processes of providing for safe working practices
- relevant statutory and regulatory authority requirements related to working safely on roofs
- roof safety equipment and systems and considerations to facilitate working safely on roofs
- SI system of measurement.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for working safely on roofs
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, for the roof working area of a corner, extending at least 4 metres in either direction and greater than 1.8m high, provide for erection, maintenance and dismantling of the fall and perimeter protection requirements for the site, incorporating handrails and footwalk or harnesses and harness fixing points for safe personal and stores access to the roof, stores and equipment locations; and risk assessment, ensuring:
 - correct identification of risks and safety requirements
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific

This competency is to be assessed using standard

EVIDENCE GUIDE

resources for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
- Validity and sufficiency of evidence requires

EVIDENCE GUIDE

that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Guidance information for assessment

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory plumbing authority.

RANGE STATEMENT

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to working on roofs
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- clean-up protection

Environmental requirements may

RANGE STATEMENT

include:

- ozone protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment include:

- fall protection
- ladders
- lifting and load shifting equipment, including:
 - chain blocks
 - cranes
 - elevated work platforms
 - forklifts
 - hand trolleys
 - hoists and jacks
 - rollers
 - scaffolds
- perimeter protection
- signage and barricades.

Roof safety systems include:

- footwalks
- handrails
- harness fixing points
- kickboards
- safety harness
- scaffolds.

Fault reporting include:

- may be written or verbal
- is to be in accordance with company's workplace procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained from job supervisor and site inspection.</p> <p>1.2. Safety (OHS) requirements associated with the flashing of penetrations through roofs and walls, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient flashing of penetrations through roofs and walls.</p>
2. Identify flashing requirements.	<p>2.1. Roof and wall penetrations are identified from drawings and specifications.</p> <p>2.2. Penetrations are assessed as required to allow for the location of existing and future services.</p> <p>2.3. Material requirements are calculated from the job specification, in compliance with standards.</p> <p>2.4. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials and equipment are checked for compliance with docket and order form, and for acceptable condition.</p>
3. Flash penetrations.	<p>3.1. Fabrication is undertaken in accordance with plans and specifications.</p> <p>3.2. Penetration is positioned and cut in compliance with plans, specifications and site measurements.</p> <p>3.3. Structural supports are installed in accordance with plans and specifications.</p> <p>3.4. Opening is prepared in compliance with specifications, manufacturer recommendations and regulations.</p> <p>3.5. Proprietary or purpose-made flashing is fitted in accordance with standards, plans, specifications and regulations.</p> <p>3.6. Sealant is applied in compliance with specifications</p>

ELEMENT	PERFORMANCE CRITERIA
	and manufacturer recommendations.
	3.7. Penetration is performance tested to ensure correct fit of completed installation, and remedied as required.
4. Clean up.	4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - record material quantities
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals

REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- characteristics of various roofing and wall cladding materials and their compatibility with different joining methods
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of flashing roof and wall penetrations
- relevant OHS regulations and fall protection codes and requirements
- relevant statutory and authority requirements related to the flashing of roof and wall penetrations
- SI system of measurement.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the flashing of penetrations through roofs and walls
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, set out, cut and flash openings within a range of up to 300mm diameter and a minimum up to 300mm square through a roof and wall for the installation of ventilation and flue pipe, ensuring:
 - correct identification of requirements and details of the proposed penetration
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Job drawings and specifications are obtained from job supervisor and job requirements.</p> <p>1.2. Safety (OHS) requirements associated with the fusion welding of PE pipes, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools, equipment and materials for the fusion welding of approved polymer pipes, including personal protective equipment (PPE), are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient fusion welding of approved polymer pipes.</p>
2. Identify welding requirements.	<p>2.1. Welding requirements are identified from specifications or given information.</p> <p>2.2. Welding equipment is assembled and checked for correct operation in accordance with manufacturer instructions.</p>
3. Weld and pressure test pipes.	<p>3.1. Joints are prepared using tools and techniques in accordance with standards and job specifications.</p> <p>3.2. Test welds are undertaken and verified in accordance with job specifications.</p> <p>3.3. Fusion welds are carried out in accordance with standards, plans and specifications.</p> <p>3.4. Fusion welds are visually inspected for conformance to standards.</p> <p>3.5. Pipe joints are pressure tested and inspected in accordance with standards and job specifications.</p> <p>3.6. Test details and monitored results are checked for accuracy and documented in accordance with requirements of regulatory authority and plans and specifications.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked,</p>

ELEMENT**PERFORMANCE CRITERIA**

maintained and stored in accordance with manufacturer recommendations and workplace procedures.

4.3. **Information** is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - record material quantities
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- fusion welding PE pipes and testing joints in approved polymer pipes up to DN300
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- access and understand site-specific instructions in a variety of media
- use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- application of organisational quality procedures and processes within the context of fusion welding of PE
- dangers associated with fusion welding of PE
- effect of heat on the properties of PE pipe
- job safety analysis (JSA) and safe work method statements (SWMS)
- operating principles of fusion welding equipment
- relevant OHS regulations and PPE requirements
- SI system of measurement.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to perform fusion welding of approved polymer pipes
- applying safety requirements throughout the work sequence, including the use of PPE
- as a minimum the ability to, given the plans and specifications, butt weld up to four joints and weld with electro-fusion sockets up to two joints in up to DN300 approved polymer pipes, using appropriate fusion welding processes with all welds being in horizontal or vertical and tested to manufacturer recommendations, ensuring:
 - correct identification of requirements and details of proposed cuts
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including

RANGE STATEMENT

	<p>recognising and preventing hazards associated with:</p> <ul style="list-style-type: none"> • dangerous materials • surrounding structure and facilities • trip hazards • use of PE welding equipment • work site visitors and the public • working in confined spaces • working in proximity to others • use of firefighting equipment • use of first aid equipment • use of tools and equipment • workplace environment and safety.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications and any special instructions are obtained.</p> <p>1.2. Safety (OHS) requirements associated with the fabrication and installation of non-ferrous pressure piping, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient fabrication and installation of non-ferrous pressure piping.</p>
2. Identify installation requirements.	<p>2.1. Pipework configuration is identified from authorities' requirements, plans and specifications.</p> <p>2.2. Position of pipes and equipment is determined from plans and specifications, site requirements and so as not to cause damage or interference to surrounding structures or fittings.</p> <p>2.3. Measurements for fabrication or assembly are determined and transferred.</p> <p>2.4. Quantity and type of materials required are calculated from plans and specifications in accordance with regulatory authorities and workplace requirements.</p> <p>2.5. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.6. Materials are checked for compliance with docket and order form, and for acceptable condition.</p>
3. Fabricate, install and test pipe system.	<p>3.1. System is set out in compliance with design drawings or instructions.</p> <p>3.2. Fixings and supports are installed to manufacturer requirements, job plans, specifications and workplace requirements.</p> <p>3.3. Pipe system is fabricated and jointed in accordance with job plans and specification, and manufacturer requirements for mechanical type joints.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Pipe system is installed in specified location without damage or distortion to pipework or surrounding environment or other services.
	3.5. Pipe system is tested and documented to comply with job specification, authorities' requirements, standards, codes of practice and workplace requirements.
4. Clean up.	4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory <i>statutory and regulatory authority</i> legislation and workplace procedures.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. <i>Information</i> is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - record material quantities

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- joining non-ferrous pipe materials by mechanical and manual means, the prefabrication of components and the fixing and testing of the system for soundness
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- fabrication, installation and testing process for non-ferrous pressure pipe systems
- job safety analysis (JSA) and safe work method statements (SWMS)
- properties and characteristics of conveyed materials, including pressure, flow rates and temperature implications
- relevant statutory authority requirements and standards related to the fabrication, installation and testing of non-ferrous pressure pipe systems
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for the determination of requirements, fabrication, installation and testing of non-ferrous pressure pipe systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, fabricate, install and test a DN20 copper line from a supply point to outlets with two changes in direction, using both silver brazing and mechanical joints supported and clipped in accordance with relevant standards and with a branch to be fabricated for testing purposes, as well as branches connecting at least two other non-ferrous materials, ensuring:
 - diameters are correct and system is manufactured to required dimensions and branches, bends and flanges are square
 - correct identification of design and details of proposed non-ferrous pressure pipe system
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - use of fabrication tools and equipment
 - dangerous materials
 - service lines
 - surrounding structure and facilities
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- clean-up protection
- waste management.

Environmental requirements include:

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment:

- include:
 - hand and power tools
 - heating equipment
 - ladders
 - mechanical bending equipment
 - silver brazing equipment
 - testing equipment
- may include:

RANGE STATEMENT

- elevated work platforms
- lifting and load shifting equipment, including:
 - chain blocks
 - forklifts
 - hand trolleys
 - hoists and jacks
 - rollers
 - scaffolding.

Pipes may convey:

- compressed air
- condensate
- fuel oil
- medical gas
- water and other liquids.

Materials may include:

- aluminium tubes
- copper
- copper alloy
- polymer pipes
- stainless steel
- other approved materials.

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory plumbing authority.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to determining, fabricating, installing and testing non-ferrous

CPCPCM4001A Carry out work based risk control processes

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to carry out work-based risk control processes. It covers the identification of hazards, the assessment of risk, the identification of unacceptable risk and the determination, preparation and completion of a course of action.

This unit is strongly related to the unit BSBCMN416A Identify risk and apply risk management processes.

Application of the Unit

Application of the unit This unit is to be applied by employees with responsibility for the safety of others, including work activity coordinators, plant operators or equivalent who coordinate workplace activities, team leaders, supervisors and managers.

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure or fitting being renovated, extended, restored or maintained.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify hazards.	<p>1.1. Site conditions and functions are analysed to identify and recognise potential hazards.</p> <p>1.2. Relevant <i>safety systems information</i> is accessed and analysed to eliminate situations covered by existing and adequate procedures.</p> <p>1.3. Type and scope of unresolved <i>hazards</i> and their likely impact are recognised.</p>
2. Assess risk.	<p>2.1. <i>Likelihood</i> of the event happening is considered and determined.</p> <p>2.2. Consequence if the event should occur is evaluated and determined.</p> <p>2.3. <i>Risk</i> level (likelihood and consequence combined) is considered and determined.</p>
3. Identify unacceptable risk.	<p>3.1. Criteria for determining the acceptability and unacceptability of the risk are identified or sought from appropriate authority.</p> <p>3.2. Risk is evaluated against criteria to identify if it warrants unacceptable risk status, and is either actioned or referred to the appropriate person.</p>
4. Identify and decide on course of action.	<p>4.1. Range of actions and controls which may eliminate or minimise the risk are identified.</p> <p>4.2. All possible options for resolution of the problem and dealing with the risk are identified and considered.</p> <p>4.3. Feasible options are subject to detailed analysis, including the identification of resource requirements.</p> <p>4.4. Most appropriate action for dealing with the situation is selected.</p>
5. Take action.	<p>5.1. Course of action is planned and prepared in detail.</p> <p>5.2. Resources required for course of action are acquired or obtained.</p> <p>5.3. Safety information and procedures are accessed and applied throughout the operation.</p> <p>5.4. Course of action is implemented.</p>
6. Complete records and reports.	<p>6.1. <i>Information</i> on course of action and implementation of <i>safe operating procedures</i> is communicated to relevant people.</p> <p>6.2. All hazards and actions from personal risk assessment are recorded as specified by <i>statutory and regulatory authority</i> legislative and workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements.
7. Review effectiveness of risk control measures.	7.1. Risk control measures are periodically reviewed. 7.2. Review findings are used as the basis for adjustment of control measures. 7.3. Information is accessed and documentation and risk management processes are adjusted as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- applying the three steps of identifying work-based hazards, assessing the risk and determining unacceptable risk situations
- accurately referring critical unacceptable risk situations to others
- communication skills to:
 - access and analyse safety systems information
 - communicate with others
 - complete records and reports and other relevant workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use and interpret non-verbal communication, such as hand signals
 - use language and concepts appropriate to cultural differences
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- identifying courses of action, initiating action and completing records and reports.

Required knowledge

Required knowledge for this unit is:

- industry terminology
- job safety analysis (JSA) and safe work method statement.
- materials safety data sheets (MSDS)
- materials handling methods
- personal risk assessment and control processes (hazard identification through to action)

REQUIRED SKILLS AND KNOWLEDGE

- personal safety measures
- processes for interpreting plans, specifications, drawings and sketches
- quality assurance systems and standards
- regulatory requirements related to obligations and risk management
- reporting and recording procedures
- risk management theory, including the hierarchy of controls on treatments
- work access and traffic control responsibilities
- workplace and equipment safety requirements
- workplace communication methods
- workplace rules, policies, procedures and regulations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications
- complying with OHS regulations and state and territory legislation applicable to workplace operations
- complying with organisational policies and procedures, including quality assurance requirements
- individually or as a member of a team, participating in two different circumstances requiring:
 - conduct of a work site risk assessment to identify the acceptability and unacceptability of risk
 - development and implementation of a site-based risk control activity and action
- in each case ensuring:
 - recording and reporting of the risk control process and outcomes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety systems information include:

- information that may be contained in:
 - legislation and regulations
 - relevant Australian standards
 - management plans
 - manager's rules
 - OHS policy
 - codes of practice
 - manufacturer instructions

RANGE STATEMENT

Hazards:

- safe working or job procedures (or equivalent)
- workplace policy, objectives, rules, procedures and assessment techniques that will vary between work locations
- risk assessment terminology, including:
 - being a loss, injury, disadvantage or gain
 - consequence is the outcome of an event or situation expressed qualitatively or quantitatively.
- are a source of potential harm or a situation with a potential to cause loss
- controls for hazards should be considered using option types in sequence, from eliminating the hazard, substitution, engineering controls, administrative controls (procedures, etc.) and finally personal protective equipment
- frequency is a measure of likelihood expressed as the number of occurrences of an event in a given time
- records and reports for risk assessment may include:
 - hazard reporting forms
 - incident reports
 - near miss reports
 - shift reports
 - supervisor reports.

Likelihood:

- likelihood is used as a qualitative description of probability and frequency
- probability is:
 - expressed as a number between 0 and 1, with 0 indicating an impossible outcome and 1 indicating an outcome is certain
 - likelihood of a specific outcome, measured by the ratio of specific outcomes to the total number of possible outcomes.

Risk:

- criteria for acceptable risk must be determined by the organisation's internal policy, goals and objectives
- in the absence of other authorities, risk management processes must conform with the

RANGE STATEMENT

Information may include:

- relevant and current Australian standard
- is measured in terms of consequences and likelihood
- is the chance of something happening that will have an impact upon objectives
- risk assessment is the process used to determine risk management priorities by evaluating and comparing the level of risk against predetermined standards, target risk levels or other criteria
- risk identification is the process of determining what can happen, why and how.
- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- maps
- MSDS
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements pertaining to work and the environment
- relevant Australian standards
- safe work procedures relating to work in the plumbing and services sector
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- emergency procedures, such as:
 - evacuation
 - fire fighting
 - medical and first aid
- recognising and preventing hazards associated with:
 - electricity
 - fire
 - gas
 - other machines

Safe operating procedures include:

RANGE STATEMENT

- overhead services
- personnel
- restricted access barriers
- traffic control
- water
- work site visitors and the public
- working at heights
- working in proximity to others
- safe work access, including ensuring that:
 - access ways are clear
 - equipment and machinery are away from overhangs and refuelling sites
 - safe distances are maintained from excavations
 - safety systems are installed on roofs
 - work areas are secured from unauthorised access or movement.

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory plumbing authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information.	<ul style="list-style-type: none">1.1.Details of customer requirements are obtained through discussion with customer or from information supplied.1.2.Plans and specifications are accessed and site is inspected.1.3.Details of products and services to be provided are developed.1.4.Delivery point and methods of transportation are determined where necessary.1.5.Details are recorded in accordance with workplace procedures.
2. Estimate materials, labour and time.	<ul style="list-style-type: none">2.1.Work, including preparatory tasks, is planned and sequenced.2.2.Types and quantities of materials required for product work are <i>estimated</i>.2.3.Labour requirements to perform work are estimated.2.4.Time requirements to perform work are estimated.
3. Calculate costs.	<ul style="list-style-type: none">3.1.Total materials, labour and overhead costs are calculated in accordance with workplace procedures using appropriate <i>equipment</i>.3.2.Total work cost is calculated, including overheads and mark-up percentages.3.3.Final cost for work is calculated.
4. Document and verify details.	<ul style="list-style-type: none">4.1.Details of costs and charges are documented in accordance with workplace procedures.4.2.Costs, calculations and other details are verified in accordance with workplace procedures.4.3.Customer quotation and tender are prepared.4.4.Details are documented for future reference in accordance with workplace procedures and using relevant <i>information</i>.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - identify customer requirements
 - prepare quotes and tenders
 - record details, including costs and charges
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- estimating materials and labour required for a work activity
- determining costs for the provision of a quotation or tender in the plumbing and services industry
- numeracy skills to apply calculations.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- estimating and calculating processes
- impact of time on wages and other costs
- job safety analysis (JSA) and safe work method statements (SWMS)
- process for estimating and costing work
- relevant statutory and authority requirements related to estimating and costing work
- SI system of measurements
- standards applicable to the work to be undertaken
- tendering and contracting processes
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the estimation and costing of work
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to estimate and cost three varied jobs in at least Class 1 buildings, including:
 - estimating quantities of material required
 - determining types and amount of labour required to complete the work
 - estimating time required to complete the work
 - estimating overheads associated with the job
 - providing a written quotation and tender for each of the work requirements
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Factors for *estimation* and costing include:

- labour
- materials
- overheads.

Equipment may include:

- calculators
- computers running appropriate software to estimate and calculate necessary details
- measuring equipment appropriate to work
- stationery.

Information may include:

- charts and hand drawings
- diagrams or sketches

RANGE STATEMENT

- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to estimating and costing work
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to produce two-dimensional (2-D) architectural drawings using computer-aided design (CAD) software under limited supervision.

Application of the Unit

Application of the unit This unit of competency supports the needs of project managers, site managers, estimators, forepersons and other plumbing and services and building and construction industry personnel who have a responsibility for preparing architectural drawings from project briefs, sketches, drawings and plans for residential and commercial construction projects. The drawings produced and notations included should conform to Australian standards and drawing protocols.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Create a drawing template file.	1.1. Basic drawing environment is set up. 1.2. Suitable layering strategy is created. 1.3. Suitable architectural library is created. 1.4. Suitable text and dimension styles are created.
2. Produce architectural drawings to relevant Australian standards.	2.1. Drawing requirements are clarified and confirmed. 2.2. Drawings are produced using appropriate layers. 2.3. Notation that complies with Australian standards and drawing protocols is added to the drawings as required. 2.4. Dimensions, using appropriate scales in accordance with Australian standards and drawing protocols, are added to the drawings as required.
3. Edit drawing components.	3.1. Elements that are not required are deleted from an existing drawing. 3.2. Editing commands are used to modify drawing elements and existing text.
4. Plot CAD drawings.	4.1. Page layout for the drawing file is set to suit plotting requirements. 4.2. Print parameters for the plotter are set. 4.3. Drawings are plotted on the correct media.
5. Save and back up files.	5.1. Suitable file directories are created for the drawing project. 5.2. Drawing files are saved and backed up correctly to specified drives or directories. 5.3. Saved files are retrieved, renamed and edited as required.
6. Import files.	6.1. Drawing files are inserted correctly into other software applications. 6.2. Text files are imported into CAD drawings from other software applications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - prepare written quotes and tenders
 - record details, including costs and charges
 - read and interpret:
 - plans, drawings, specifications and design briefs
 - documentation from a variety of sources
 - seek clarification
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- creative design, drawing and drafting skills, including use of drafting equipment and CAD
- numeracy skills to apply measurements and make calculations
- planning and organisational skills to ensure coordinated development of sketches and drawings.

Required knowledge

Required knowledge for this unit is:

- building materials and techniques
- building services
- construction technology
- document controls
- drafting and drawing protocols
- relevant industry standards and codes of practice
- general OHS principles and responsibilities
- requirements for the production of working drawings
- structural systems
- types and uses of working drawings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparation of CAD drawings, including construction detailing and material identification, for a range of typical Building Code of Australia (BCA) Type C structures (reference: Table C1.1 BCA).

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- correctly identifying dimensions, symbols, abbreviations and key features of architectural drawings
- correctly identifying styles, characteristics, technologies and decorative styles
- correctly identifying particular styles of architecture, including period and type of materials used
- sound understanding of the structural function of elements
- correctly identifying the relationship between architectural styles and structures
- applying CAD software.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Drawing requirements include:

- details, including:
 - area analysis
 - construction notes
 - general notes
 - location of neighbouring buildings
 - services
- types of drawing, including:
 - elevations or projections
 - floor plans

RANGE STATEMENT

- Drawing protocols* include:
- sections
 - site plans.
 - abbreviations
 - commonly used symbols
 - legends
 - lettering standards
 - numbering
 - paper size
 - scale
 - standard units of measurement.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to make sketches and drawings.	<p>1.1. <i>Types of drawings required</i> and <i>key features to be recorded</i> are identified through consultation and reference to relevant job documentation and in conformity with the scope and standard practice of the <i>relevant industry sector</i>.</p> <p>1.2. <i>OHS requirements</i> on site are identified and followed.</p> <p>1.3. <i>Tools and equipment</i> required for inspection and measurement and for producing the drawings are gathered and checked for safety and serviceability.</p>
2. Create simple sketches and drawings.	<p>2.1. Inspection of the relevant area is carried out and required measurements are taken and recorded.</p> <p>2.2. Any incursions into the fabric of the building for inspection and measuring purposes are made with the least amount of disruption and made good to the relevant standards and finish.</p> <p>2.3. Suitable views are selected and simple sketches and drawings created using standard drawing conventions and incorporating relevant codes and standards.</p> <p>2.4. Sectional drawings of structural elements are created using standard drawing conventions.</p>
3. Notate and process drawings.	<p>3.1. Essential information is recorded on the drawing with symbols and abbreviations according to standard drawing conventions.</p> <p>3.2. Drawings are labelled, dated and processed according to organisational administration and quality procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- confirm job specifications and requirements orally and in writing
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret a range of documents, such as design briefs, sketches, drawings and plans
- read, interpret and apply relevant standards and codes
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- creative design, drawing and drafting skills, including use of drafting equipment
- drawing techniques
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- planning skills to ensure coordinated development of sketches and drawings
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- drawing conventions and features, including direction, scale, key, contours, symbols and abbreviations
- requirements of relevant codes, standards, statutory and authority requirements
- safe work methods
- other services and penetrations to be considered.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in a workplace or closely simulated workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- producing clear and effective drawings and sketches with appropriate notations and labelling by creating a set of sketches and drawings for a small work project in the relevant field of expertise, including:
 - measurements and details of components, sub-assemblies, products and models
 - correct calculations of required dimensions
 - other drafting details based on measurements and other relevant information
 - notations and labelling.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity

EVIDENCE GUIDE

- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and

EVIDENCE GUIDE

supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Types of drawings required include:

- floor plans
- land boundaries and footprint of building
- orthographic drawings
- schematic drawings of wiring and pipework
- sectional views.

Key features to be recorded may include:

- for building and construction sketches:
 - ceiling heights and variations
 - doors
 - light fittings and power supplies
 - services
 - wall penetrations
 - walls
- for plumbing services sketches:
 - drains
 - equipment locations
 - fittings
 - incoming water supplies

RANGE STATEMENT

- lighting and power supplies
 - obstructions
 - service penetrations
 - for fire services sketches:
 - incoming water supplies
 - layout of automatic fire detection and alarm systems
 - lighting
 - location of hydrants and hose reels
 - obstructions
 - passive fire protection
 - power supplies
 - service penetrations
 - for mechanical services sketches:
 - air conditioning requirements
 - ceilings
 - doors
 - lighting and power supplies
 - obstructions
 - walls
 - windows (opening and non-opening).
 - all classes of buildings as defined in the Building Code of Australia:
 - commercial
 - domestic
 - industrial
 - residential
 - plumbing services work, including:
 - gas
 - hydrant and hose reel systems
 - residential and domestic fire sprinkler systems
 - sanitary plumbing and drainage
 - stormwater systems
 - water supply and distribution
 - fire services work, including:
 - alarm and detection systems
 - commercial and industrial fire sprinklers
- Relevant industry sectors*** and their requirements include 2-D and 3-D manual sketches and drawings of building and construction work, including:

RANGE STATEMENT

systems

- emergency evacuation
- hydrant and hose reel systems
- intercommunication warning systems
- passive protection
- residential and domestic fire sprinkler systems
- smoke and heat venting and air control systems
- special hazards
- mechanical services work, including:
 - air handling systems
 - air conditioning systems
 - refrigeration systems
 - smoke and heat venting systems.

OHS requirements may include:

- details of power supplies
- details of all services
- installation of scaffolding
- understanding of hazards located in the area
- use of personal protective equipment.

Tools and equipment include:

- recording devices, such as:
 - computers
 - digital cameras
 - pen and paper.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for complex sanitary plumbing and drainage systems for wide span and high-rise building projects.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.</p> <p>1.4. Statutory and regulatory requirements for the design of complex sanitary plumbing and drainage systems are interpreted.</p> <p>1.5. Australian and New Zealand standards for the design of complex sanitary plumbing and drainage systems are analysed and applied.</p> <p>1.6. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.7. Additional research including a desktop study is conducted.</p> <p>1.8. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Layout of pipework systems and type and location of fittings and valves are planned.</p> <p>2.2. Manholes and gullies are designed and detailed.</p> <p>2.3. Pipe sizes, pipe grades, and trapping and ventilation requirements are calculated for a range of applications.</p> <p>2.4. Anchor blocks are designed for a range of applications.</p> <p>2.5. Pipe fixings are designed for a range of applications.</p> <p>2.6. Pumpwell, pump and pump control requirements are sized and detailed.</p> <p>2.7. Approved materials, jointing methods and installation requirements for complex sanitary plumbing and drainage systems are specified.</p>
3. Design and size systems.	<p>3.1. Complex sanitary plumbing and drainage systems are designed for a range of wide span and high-rise building applications.</p> <p>3.2. Rising main systems are designed.</p> <p>3.3. Complex sanitary plumbing and drainage systems are designed and sized using computer software packages.</p>
4. Prepare	<p>4.1. Plans are prepared for a range of complex sanitary</p>

ELEMENT	PERFORMANCE CRITERIA
documentation.	<p>plumbing and drainage systems.</p> <p>4.2. <i>Specification</i> for complex sanitary plumbing and drainage systems is prepared.</p> <p>4.3. Testing and commissioning schedule is prepared.</p> <p>4.4. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- clear and direct communication, using questioning to:
 - identify and confirm requirements
 - listen and understand
 - share information
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- communication skills to confirm job specifications and client requirements and to communicate with others to ensure safe and effective work practices
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- innovation skills to develop creative and responsive approaches
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of complex sanitary and plumbing drainage systems
 - take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system
- reading skills, including the ability to read and interpret:
 - manufacturer requirements and manuals
 - plans, specifications, drawings and design briefs
 - standards
 - statutory and regulatory requirements
- written communication skills to:
 - prepare documentation, including plans, specifications and schedules

REQUIRED SKILLS AND KNOWLEDGE

- produce an operation and maintenance manual
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- AS/NZS3500 National plumbing and drainage set
- AS2200 Design charts for water supply and sewerage
- common terminology and definitions used in design of complex sanitary plumbing and drainage systems for all classes of building
- other standards, codes or standard operating procedures
- principles of technology in the design of hydraulic systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving carrying out the effective performance and application of drainage principles and detailing system components used in the drainage industry.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of complex sanitary plumbing and drainage systems
- planning and detailing system components, including:
 - manholes
 - gullies
 - anchorage blocks
 - pumpwells
 - piping systems
- designing and sizing a complex sanitary plumbing and drainage system
- applying drainage principles in the design and sizing of a complex elevated pipe system
- designing and sizing a rising main
- designing and sizing a fully vented or fully vented modified system
- designing and sizing a single stack or single stack modified system
- preparing plans to industry standards for a

EVIDENCE GUIDE

range of complex sanitary plumbing and drainage systems

- preparing a specification for a complex sanitary plumbing and drainage system
- preparing a testing and commissioning schedule
- preparing an operation and maintenance manual
- complying with OHS regulations applicable to workplace operations
- interactive communication with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

EVIDENCE GUIDE

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Scope of work:***
- includes:
 - interpretation of plans and specifications
 - sizing and documenting layout of complex sanitary plumbing and drainage systems for applications, including residential, commercial and industrial
 - may be for:
 - existing structure being renovated, extended, restored or maintained
 - new projects.
- Design requirements*** may include:
- architectural specifications
 - builder specifications
 - owner requirements
 - specialist water use applications.
- Cost-benefit analysis*** may include:
- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of the project.
- Statutory and regulatory requirements*** include:
- Acts and regulations
 - local and state government policies.
- Australian and New Zealand standards*** may include:
- AS/NZS3500 National plumbing and drainage set: Parts 1.1 and 1.2
 - AS2200 Design charts for water supply and sewerage
 - Building Code of Australia.
- Manufacturer requirements*** may include:
- material specifications
 - pump tables
 - sizing tables
 - technical and trade manuals.
- Performance requirements***
- flow, velocity, pressure and discharge requirements, established using Australian and

RANGE STATEMENT

include:	New Zealand standards and local authority plans.
<i>Layout of pipework systems</i> may include:	<ul style="list-style-type: none"> • dual feed • ring main • single pipe.
<i>Fittings and valves</i> may include:	<ul style="list-style-type: none"> • fittings: <ul style="list-style-type: none"> • bends • elbows • tees • unions • valves: <ul style="list-style-type: none"> • backflow prevention • excess pressure • isolating • pressure limiting • pressure reduction • strainers.
<i>Manhole</i> details may include:	<ul style="list-style-type: none"> • benching requirements • connections to and from • flow • gradient requirements • inspection chambers • lids • open and closed channel • sizing.
<i>Gullies</i> can cover details such as size, location, bedding and concrete support, and also include:	<ul style="list-style-type: none"> • boundary traps • disconnector gullies (DG) • overflow relief gullies (ORG).
<i>Calculations</i> for complex sanitary plumbing and drainage systems may include:	<ul style="list-style-type: none"> • determination of flow and fixture loadings • gradient calculations • interpretation of design charts and tables • pipe sizing calculations • reduced level calculations.
<i>Anchor blocks</i> design elements may include:	<ul style="list-style-type: none"> • flow forces to be resisted • keying and anchorage points • sizes • soil characteristics.
<i>Pipe fixings</i> may include:	<ul style="list-style-type: none"> • anchors • bedding

RANGE STATEMENT

Pumpwell, pump and pump control requirements may include:

- bracket spacing
- concrete support
- corrosion protection
- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.
- automatic controls
- capacity
- chains
- corrosion-resistant materials
- detailing
- high and low-level water controls and alarms
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- ladder access
- macerator requirements
- pump selection
- pump sizing
- pumpwell sizing
- space requirements
- step irons
- valve requirements
- warning system.

Materials include:

- cast iron
- concrete
- copper
- earthenware
- high density polyethylene (HDPE)
- unplasticised polyvinyl chloride (PVC-U)
- fittings and fixtures, including:
 - measures to prevent the spread of fire
 - sound attenuation requirements.

Jointing methods may include:

- brazing and threading
- gluing
- mechanical joints
- rubber ring
- solvent cement welding.

RANGE STATEMENT

- Installation requirements*** include:
- bedding
 - clipping
 - concrete support
 - installation details
 - jointing requirements
 - level of workmanship.
- Rising main systems*** may include:
- approved pressure pipe and fittings
 - calculated rise and pump delivery requirements
 - pump sizing to meet calculated flow conditions.
- Plans:***
- may include:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections
 - may be produced using:
 - computer generation
 - Indian ink
 - pencil
 - pigment liner.
- Specification*** may include:
- bedding
 - clipping
 - concrete support and detailing specialised components
 - jointing
 - manholes
 - manufacturer requirements
 - materials
 - workmanship.
- Testing*** may include:
- air pressure test
 - drainage inspection
 - hydrostatic test
 - quality assurance (QA) audit.
- Commissioning schedule*** may include:
- charging traps
 - checking leaks

RANGE STATEMENT

Operation and maintenance manual may include:

- cleaning grates.
- check for blockages
- leak detection
- pump maintenance
- water auditing
- yearly inspection
- yearly maintenance requirements.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for the distribution of complex cold water systems for wide span and high-rise building projects.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Cost-benefit analysis is conducted, comparing a range of pipe materials and system designs.</p> <p>1.4. Statutory and regulatory requirements for the design of complex cold water distribution systems are interpreted.</p> <p>1.5. Australian and New Zealand standards for the design of complex cold water distribution systems are analysed and applied.</p> <p>1.6. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.7. Additional research, including a desktop study, is conducted to outline design parameters.</p> <p>1.8. Flow and pressure tests are conducted.</p> <p>1.9. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Layout of pipework systems and type and location of fittings and valves are planned.</p> <p>2.2. Type, location and requirements for backflow prevention devices are detailed.</p> <p>2.3. Flush valve system types and operation are specified.</p> <p>2.4. Pipe sizes, velocities, flows and pressures are calculated for a range of applications.</p> <p>2.5. Cold water system components are detailed or designed.</p> <p>2.6. Pump, pump controls and pumproom requirements are sized and detailed.</p> <p>2.7. Approved materials, jointing methods and installation requirements for complex cold water distribution systems are specified.</p>
3. Design and size systems.	<p>3.1. Complex cold water distribution systems are designed for a range of wide span and high-rise building applications.</p> <p>3.2. Flush valve distribution systems are designed.</p> <p>3.3. Range of delivery systems is designed.</p> <p>3.4. Complex cold water distribution systems are</p>

ELEMENT	PERFORMANCE CRITERIA
	designed and sized using computer software packages.
4. Prepare documentation.	<p>4.1.Plans are prepared for a range of complex cold water distribution systems.</p> <p>4.2.Specification for a cold water distribution system is prepared.</p> <p>4.3. Testing and commissioning schedule is prepared.</p> <p>4.4. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - confirm job specifications and client requirements
 - communicate with others to ensure safe and effective work practices
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - prepare documentation, including plans, specifications and schedules
 - produce operation and maintenance manual
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- innovation skills to develop creative and responsive approaches
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of complex cold water systems
 - take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an

REQUIRED SKILLS AND KNOWLEDGE

appropriate system

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- AS/NZS3500 National plumbing and drainage set
- AS2200 Design charts for water supply and sewerage
- common terminology and definitions used in design of cold water reticulation systems
- nature of materials used and effects of performance under various conditions
- other standards, codes or standard operating procedures
- principles of technology used in design of cold water reticulation and hydrant and hose reel systems for all classes of building
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving effective performance and application of drainage principles and detailing of system components used in the drainage industry.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of complex sanitary plumbing and drainage systems
- applying regulatory, manufacturer and Australian and New Zealand requirements for a range of complex cold water distribution systems
- planning and detailing system components, including:
 - flush valves
 - backflow prevention devices
 - meter assemblies
 - thrust blocks
 - piping systems
- complying with OHS regulations applicable to workplace operations
- applying organisational quality procedures and processes
- designing and sizing a range of cold water distribution and delivery systems
- designing and sizing a range of flush valve

EVIDENCE GUIDE

systems

- preparing plans for a range of complex cold water distribution systems
- preparing a specification for a cold water distribution system
- preparing a testing and commissioning schedule
- preparing an operation and maintenance manual
- applying correct design principles and techniques
- identifying typical faults and problems that occur and taking action necessary to rectify
- interactive communication with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources,

EVIDENCE GUIDE

and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training

EVIDENCE GUIDE

staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- includes interpretation of plans and specifications
- includes sizing and documenting layout of complex cold water systems for applications including residential, commercial and industrial
- may be for new projects or an existing structure being renovated, extended, restored or maintained.

Design requirements may include:

- architectural specifications
- builder specifications
- owner requirements
- specialist water use applications.

Cost-benefit analysis may include:

- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising the integrity of the project.

Statutory and regulatory requirements may include:

- Acts and regulations
- local and state government policies.

Australian and New Zealand standards may include:

- AS/NZS3500 National plumbing and drainage set: Parts 1.1 and 1.2
- AS2200 Design charts for water supply and sewerage
- Building Code of Australia.

Manufacturer requirements may include:

- material specifications
- pump tables
- sizing tables

RANGE STATEMENT

Desktop study can include collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none"> • technical and trade manuals. • architectural and building plans • council plans • developer plans • other documents and reports as available.
Flow and pressure tests include:	<ul style="list-style-type: none"> • on-site measurement of flow (l and s), velocity (m and s) and pressure (kPa) • interpretation of flow and pressure tests conducted by a contractor.
Performance requirements may include:	<ul style="list-style-type: none"> • flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards and local authority plans.
Layout of pipework systems may include:	<ul style="list-style-type: none"> • dual feed • ring main • single pipe.
Fittings and valves may include:	<ul style="list-style-type: none"> • fittings: <ul style="list-style-type: none"> • bends • elbows • tees • unions • valves: <ul style="list-style-type: none"> • backflow prevention • excess pressure • isolating • pressure limiting • pressure reduction • strainers.
Backflow prevention devices may include:	<ul style="list-style-type: none"> • break tanks • property and individual protection • testable and non-testable devices • zone protection.
Flush valve system types may include:	<ul style="list-style-type: none"> • backflow prevention requirements • gravity • mains pressure • pipe sizing requirements • storage requirements.
Cold water system components cover:	<ul style="list-style-type: none"> • meter assemblies, including: <ul style="list-style-type: none"> • direct and indirect

RANGE STATEMENT

- electronic
- inferential
- magnetic
- thrust blocks and their design elements, including:
 - design details for tees, elbows, valves and meter assemblies
 - keying and anchorage points
 - sizes
 - soil characteristics
 - velocity and flow forces to be resisted
- pipe fixings, including:
 - anchors
 - bedding
 - bracket spacing
 - corrosion protection
 - cover
 - hanging brackets
 - material requirements
 - saddles
 - wall and ceiling brackets
- water storage systems, including:
 - automatic controls
 - inlet valve design and sizing
 - outlet sizing
 - overflow requirements
 - safe tray requirements
 - tank sizes.

Pump, pump controls and pumphouse requirements may include:

- automatic controls
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- pump selection
- pump sizing
- space requirements
- valve requirements.

Materials include:

- acrylonitrile butadiene styrene (ABS)
- composite pipework
- copper

RANGE STATEMENT

- cross-linked polyethylene
- fittings and fixtures
- polybutylene
- protective coatings
- steel.
- Jointing methods* may include:
 - brazing
 - compression
 - flaring
 - mechanical joints
 - rubber ring joints
 - screwing
 - soldering.
- Installation requirements* include:
 - bedding
 - clipping
 - installation details
 - jointing requirements
 - level of workmanship.
- Delivery systems* may include:
 - constant flow variable speed pumps
 - downfeed
 - hydropneumatic
 - pressure ratio
 - upfeed.
- Plans* include:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections.
- Specification* may include:
 - bedding
 - clipping
 - jointing
 - manufacturer
 - materials
 - specialised components
 - valve selection
 - workmanship.
- Testing* may include:
 - air pressure test
 - defect inspection
 - hydrostatic test

RANGE STATEMENT

Commissioning schedule may include:

- mains pressure test
- quality assurance (QA) audit.
- flow test
- leak check
- pressure test
- system purge
- valve operation.

Operation and maintenance manual may include:

- leak detection
- pump maintenance
- valve maintenance
- water auditing
- yearly inspection
- yearly maintenance requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Client requirements are determined from plans, specifications and client briefs.</p> <p>1.2. Local government, Environment Protection Authority (EPA), and Australian and New Zealand standards for the design of complex stormwater and roof drainage systems are interpreted.</p> <p>1.3. Regulatory requirements for design of complex stormwater and roof drainage systems are analysed and applied.</p> <p>1.4. Other documentation relevant to the design is researched, evaluated and applied.</p>
2. Plan system components.	<p>2.1. Layout of system components is planned according to design parameters and site limitations, and is coordinated with other services.</p> <p>2.2. Stormwater diversion valve systems and first-flush stormwater systems are planned and evaluated.</p> <p>2.3. Most suitable methods of preventing backflow of sub-soil and stormwater into buildings are determined and specified.</p> <p>2.4. Treatment and disposal options for stormwater discharge are evaluated and planned.</p>
3. Design and size systems.	<p>3.1. Rainfall intensities are determined and volumes of water are estimated using measurements of different catchment areas.</p> <p>3.2. Methods of collection and disposal of surface run-off water are specified.</p> <p>3.3. Strategies for harvesting and re-using rainwater are identified and evaluated.</p> <p>3.4. Sub-soil water types are determined and stormwater drainage systems are designed, sized and detailed using appropriate software applications.</p> <p>3.5. System components are selected, designed, sized and detailed using appropriate software applications and appropriate approved materials are analysed and selected.</p> <p>3.6. Stormwater systems requiring pumping are identified and designed using appropriate software applications, with pump and discharge pipe sizes calculated and specified.</p> <p>3.7. Correct installation, laying and jointing procedures for materials and components are specified.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Prepare documentation.	<p>4.1.<i>Plans</i> are prepared for a range of complex stormwater and roof drainage systems.</p> <p>4.2.<i>Specification</i> for a complex stormwater and roof drainage system is prepared.</p> <p>4.3. Testing and commissioning schedule is prepared.</p> <p>4.4. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to apply design concepts and principles
- communication of graphical representations and plans
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- innovation skills to develop creative and responsive approaches
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of complex stormwater and roof drainage systems
 - take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system
- reading and interpretation skills to interpret:
 - charts and hand drawings
 - job drawings
 - manufacturer specifications and instructions
 - material safety data sheets
 - memos

REQUIRED SKILLS AND KNOWLEDGE

- organisational work specifications
- regulatory requirements
- requirements and instructions issued by authorised organisational or external personnel
- signage
- work bulletins
- work schedules and plans
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- relevant Australian and New Zealand standards, including:
 - AS/NZS3500 National plumbing and drainage set
 - Building Code of Australia
 - manufacturer specifications
 - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in hydraulic design
- installation methods used in hydraulic systems
- hazards associated with devices and systems used in the hydraulic sector
- environmental requirements, including:
 - clean-up protection
 - stormwater protection
 - waste management
 - water quality management
- quality assurance requirements, including:
 - EPA
 - internal company quality assurance policy and risk management strategies
 - International Standards Organisation
 - site safety plan
 - workplace operations and procedures
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
 - safe work procedures relating to planning, sizing and documenting layout of pipework and fixtures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving production of designs, plans, specifications and supporting documentation for a complex stormwater and roof drainage system.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- collecting, analysing and evaluating research, including:
 - survey plans
 - existing services
 - building plans
 - site plans
 - civil drawings
 - reduced levels
 - contour levels
- preparing a plan coordinated with other services for the layout of piping, pits, gullies and other system components in accordance with design parameters and site limitations
- calculating stormwater detention basins' sizes and capacities
- calculating roof catchment areas and surface run-off volumes
- determining specifications for guttering requirements and size of downpipes
- designing sub-soil drainage systems, including sizing for collection, containment and discharge

- creating detail drawings, including long sections and cross-sections
- creating a design, including size and detail for complex stormwater and roof drainage systems, including:
 - grade of drains
 - holding pits
 - collection sumps
 - detention basins
 - manholes
 - other system components
- applying appropriate software in order to design, size and detail selected stormwater systems
- preparing plans for a range of complex stormwater and roof drainage systems
- preparing a specification for a complex stormwater and roof drainage system
- preparing a testing and commissioning schedule
- preparing an operation and maintenance manual.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related

systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Clients may include:

- architects
- builders
- property owners
- statutory bodies.

Local government, Environment Protection Authority, and Australian and New Zealand standards requirements cover:

- local government requirements, including:
 - Integrated Planning Act (IPA)
 - other regulatory requirements
 - standard drawings and details
 - town planning requirements
 - urban design manuals
- treatment requirements, such as:
 - screens
 - silt traps
 - solid removal systems
- environmental requirements to cover water quality management, including:
 - clean-up protection
 - stormwater protection
 - waste management
- Australian and New Zealand standards, including:
 - AS/NZS3500 National plumbing and drainage set:
 - Part 3.1 Stormwater drainage -

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for heated water supply and distribution systems for wide span and high-rise building projects.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.</p> <p>1.4. Statutory and regulatory requirements for the design of complex (non-solar) heated water supply and distribution systems are analysed and applied.</p> <p>1.5. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.6. Additional research, including a desktop study is conducted.</p> <p>1.7. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Layout of pipework systems and type and location of fittings and valves are planned.</p> <p>2.2. Thermostatic mixing valves, tempering valves and valve trains are detailed for a range of applications and appropriate symbols are used.</p> <p>2.3. Circulating heated water supply systems are designed and detailed.</p> <p>2.4. Heat trace systems are designed and detailed.</p> <p>2.5. Warm water systems are designed and detailed, and disinfection and bio-control measures are specified.</p> <p>2.6. Calculations for sizing water heaters are conducted and methods for the control of expansion are detailed.</p> <p>2.7. Pipe sizes are calculated and pipe fixings designed for a range of applications.</p> <p>2.8. Manifolding heated water units are detailed for a range of water heaters and safe trays and overflows are specified.</p> <p>2.9. Approved materials and jointing methods, insulation materials and installation requirements for a range of water heaters and heated water systems are specified.</p>
3. Design and size systems.	<p>3.1. Complex (non-solar) heated water supply and distribution systems are designed for a range of wide span and high-rise building applications.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.2. <i>Circulating systems</i> are designed and detailed.
	3.3. Complex (non-solar) heated water supply and distribution systems are designed and sized using computer software packages.
4. Prepare documentation.	4.1. <i>Plans</i> are prepared for a range of complex (non-solar) heated water supply and distribution systems.
	4.2. <i>Specification</i> for a heated water supply and distribution system is prepared.
	4.3. <i>Testing</i> and <i>commissioning schedule</i> is prepared.
	4.4. <i>Operation and maintenance manual</i> is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - confirm job specifications and client requirements
 - communicate with others to ensure safe and effective work practices
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - prepare written documentation, including plans, specifications and schedules
 - produce an operation and maintenance manual
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- innovation skills to develop creative and responsive approaches
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of

REQUIRED SKILLS AND KNOWLEDGE

complex (non-solar) heated water systems

- take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system
- technical skills, including the ability to apply design concepts and principles
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- application of Australian and New Zealand standards and manufacturer specifications
- common terminology and definitions used in design of complex (non-solar) heated water systems
- installation methods and hazards identified in relation to devices and systems used according to Australian and New Zealand standards and other codes or standard operating procedures
- nature of materials used and effects of performance under various conditions
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving effective performance and application of principles used to design complex (non-solar) heated water systems.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of heated water supply and distribution systems
- planning and detailing system components, including:
 - tempering valves
 - manifolding systems
 - insulation requirements
 - flow and return systems
- complying with OHS regulations applicable to workplace operations
- applying organisational quality procedures and processes within context of designing complex heated water systems
- designing and sizing a range of heated water supply and distribution systems
- designing and sizing a range of circulating systems
- sound preparation of plans for a range of heated water supply and distribution systems
- sound preparation of a specification for a heated water supply and distribution system

EVIDENCE GUIDE

Context of and specific resources for assessment

- sound preparation of a testing and commissioning schedule
- preparing an operation and maintenance manual
- interactive communication with others to ensure safe and effective work site operations.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning

EVIDENCE GUIDE

knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- includes interpretation of plans and specifications
- includes sizing and documenting layout of heated water supply and distribution systems for applications including residential, commercial and industrial
- may be for new projects or an existing structure being renovated, extended, restored or maintained.

Design requirements may include:

- architectural specifications
- builder specifications
- owner requirements
- specialist heated water use applications.

Cost-benefit analysis refers to comparison of a range of factors to enable cost-effective choices to be made without compromising the integrity of the project, which may include:

- design styles
- durability and available design life
- energy costs
- labour costs
- material costs
- safety factors
- speed of installation
- suitable materials
- system choices.

Statutory and regulatory requirements may include:

- Acts and regulations
- Australian and New Zealand standards, including AS/NZS3500 National plumbing and drainage set: Parts 4.1 and 4.2
- Building Code of Australia
- local and state government policies, including group and strata titling.

Manufacturer requirements may include:

- material specifications
- pump tables
- sizing tables
- technical and trade manuals.

Desktop study can include collection and interpretation of existing data for design purposes from:

- architectural and building plans
- council plans
- developer plans
- other documents, including:
 - applications

RANGE STATEMENT

	<ul style="list-style-type: none"> • forms • sewer detail maps • other reports as available.

RANGE STATEMENT

- compression
- flaring
- mechanical joints
- threading.
- Insulation materials* may include:
 - density
 - diameter
 - felt
 - fibre glass
 - foam
 - heat losses
 - heat transmission processes
 - rock wool
 - thickness.
- Installation requirements* may include:
 - clipping
 - installation details
 - jointing requirements
 - level of workmanship.
- Circulating systems* may include:
 - approved pressure pipes and fittings
 - calculated rise and pump delivery requirements
 - pump sizing to meet calculated flow conditions.
- Plans:*
 - may include:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections
 - may be produced using:
 - computer generation
 - Indian ink
 - pencil
 - pigment liner.
- Specification* may include:
 - bedding
 - clipping
 - concrete support
 - jointing

RANGE STATEMENT

Testing may include:

- manholes
- manufacturer requirements
- materials
- workmanship.
- air pressure test
- hydrostatic test
- quality assurance (QA) audit.

Commissioning schedule may include:

- balancing the system
- checking and flushing the system
- temperature setting.

Operation and maintenance manual may include:

- check for blockages
- leak detection
- pump maintenance
- water auditing
- yearly inspection
- yearly maintenance requirements.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare and implement sewer contracts.	1.1.Sewer contracting procedures are implemented. 1.2.Required qualifications, and roles and responsibilities of local authority personnel and contracted parties, are negotiated and documented.
2. Evaluate design parameters.	2.1. Scope of work is established for sewer systems. 2.2. Design requirements are determined from plans, specifications and client briefs. 2.3. Cost-benefit analysis is conducted comparing a range of pipe materials and system designs. 2.4.Statutory and regulatory requirements and Australian and New Zealand standards for the design of sewer systems are analysed and applied. 2.5. Manufacturer requirements and trade and technical manuals are interpreted. 2.6.Additional research, including a desktop study is conducted to outline design parameters. 2.7.Safety procedures and regulations for trench safety are specified. 2.8.Performance requirements are established.
3. Plan and detail system components.	3.1.Soils are tested and classified and characteristics of soil types are analysed. 3.2. Trenching safety procedures are detailed and backfilling and compaction methods are specified. 3.3.Layout of pipework systems and type and location of fittings and valves are planned. 3.4. Pipelaying , dewatering and testing procedures for pipework of varying sizes are specified. 3.5.Pipe size, pipe grade and ventilation requirement calculations are performed for a range of applications. 3.6.Sewer connections, manholes , bedding material and concrete support are detailed. 3.7.Pump station, pump and pump control requirements are sized and detailed. 3.8.Approved materials, jointing methods and installation requirements for sewer systems are specified.
4. Design and size systems.	4.1.Sewer systems are designed for a range of applications.

ELEMENT	PERFORMANCE CRITERIA
	4.2.Sewer long sections are designed and detailed.
	4.3.Rising main systems are designed.
	4.4.Pump stations are designed.
	4.5.Sewer systems are designed and sized using <i>computer software packages</i> .
5. Prepare documentation.	5.1. <i>Plans</i> are prepared for a range of sewer systems.
	5.2. <i>Specification</i> for a sewer system is prepared.
	5.3.Testing and commissioning schedule is prepared.
	5.4.Operation and maintenance manual is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - prepare written documentation, including plans, specifications and schedules
 - produce an operation and maintenance manual
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- innovation skills to develop creative and responsive approaches
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of sewer systems

REQUIRED SKILLS AND KNOWLEDGE

- take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in the design of sewer systems for all classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of sewer systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparation of designs for two sewer systems for different applications, including plans, specifications and all associated documentation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of sewer systems
- specifying soil identification and trench safety procedures
- planning and detailing sewer system components, including:
 - manholes
 - piping systems
 - pump stations
- designing and sizing a range of sewer systems
- designing and sizing a rising main
- designing a sewer long section
- preparing plans for a range of sewer systems to industry standards
- preparing specifications for sewer systems
- preparing testing and commissioning schedules
- preparing operation and maintenance manuals.

Context of and specific resources This competency is to be assessed using standard

EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Sewer contracting procedures include:

- acceptance of work
- contract administration

RANGE STATEMENT

	<ul style="list-style-type: none"> • documentation • initial survey • invitation to tender • preparation of plans. • includes: <ul style="list-style-type: none"> • interpretation of plans and specifications • sizing and documenting layout of sewer systems for residential, commercial and industrial applications • may be for either new projects or existing sewer mains being renovated, extended, restored or maintained.
<i>Scope of work:</i>	
<i>Design requirements</i> include:	<ul style="list-style-type: none"> • architectural specifications • builder specifications • owner requirements • specialist applications.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising the integrity of the project.
<i>Statutory and regulatory requirements and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts, regulations and local and state government policies, including group and strata titling • AS/NZS3500 National plumbing and drainage set: Parts 2.1 and 2.2 • AS2200 Design charts for water supply and sewerage • Building Code of Australia.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none"> • material specifications • pump tables • sizing tables • technical and trade manuals.
<i>Desktop study</i> includes collecting and interpreting existing data for design purposes from:	<ul style="list-style-type: none"> • architectural and building plans • council plans • developer plans • other documents, including: <ul style="list-style-type: none"> • forms • applications • sewer detail maps • other reports as available.

RANGE STATEMENT

Safety procedures and regulations for trench safety:

- include:
 - analysing factors that determine tunnelling
 - assessing and identifying types of soil requiring tunnel excavation and shoring procedures
 - defining methods of trench installation
 - defining procedures for trench rescue
- specify safety procedures with reference to:
 - advisory standards
 - compliance standards
 - industry standards
 - Occupational Health and Safety Act
 - OHS regulations
 - other Acts, codes or regulations relating to trench protection.

Performance requirements are established using Australian and New Zealand standards and local authority plans and may include:

- discharge requirements
- durability
- longevity
- self-cleaning ability
- sufficient capacity.

Trenching safety procedures include:

- conditions affecting trench stability
- condition of soils disturbed by previous excavations
- effect of water on excavations
- effects of moisture content on excavated trenches
- traffic and vibrations
- confined space safety requirements, e.g. for exhaust emissions
- prevention of trench collapse
- trench collapse procedures
- trench inspection procedures
- trench excavation methods used for different:
 - backfilling methods
 - bedding methods
 - depth
 - slope
 - support systems
 - types.

RANGE STATEMENT

Layout of pipework systems
include:

- gravity systems
- pumped and rising mains
- layout, which should:
 - not unduly affect building integrity and aesthetic appeal
 - have principles of economy, serviceability, durability and fit for use applied.

Fittings and valves include:

- access openings
- bends
- junctions.

Pipelaying may include:

- cutting, handling and storage procedures for each pipe material
- fittings used for sewerage work
- jointing methods and procedures for each material
- laying procedures for pipework of varying sizes
- methods of dewatering trenches before and during pipelaying
- methods of grading and maintaining pipe direction and reduced levels
- methods of placing bedding materials, encasing pipes, backfilling and compacting
- methods of testing sewer and branch sewer drains.

Pipe size, pipe grade and ventilation requirement calculations include:

- determination of flow and loadings
- gradient calculations
- interpretation of design charts and tables
- pipe sizing calculations
- projected flows
- stormwater infiltration reduced level calculations.

Manhole details include:

- benching requirements
- connections to and from
- flow and gradient requirements
- inspection chambers
- lids
- open and closed channel
- sizing.

Pump station, pump and pump

- automatic controls
- capacity

RANGE STATEMENT

<i>control requirements</i> include:	<ul style="list-style-type: none">• chains• corrosion-resistant materials• detailing• high and low-level water controls and alarms• impeller sizing• inlet and outlet design requirements• installation and mounting requirements• ladder access• macerator requirements• pump selection• pump sizing• pump station sizing• space requirements• step irons• valve requirements• warning system.
<i>Materials</i> include:	<ul style="list-style-type: none">• cast iron• concrete• earthenware• high density polyethylene (HDPE)• unplasticised polyvinyl chloride (PVC-U).
<i>Jointing methods</i> include:	<ul style="list-style-type: none">• gluing• mechanical joints• rubber ring• solvent cement welding• threading.
<i>Installation requirements</i> include:	<ul style="list-style-type: none">• bedding• clipping• concrete support• installation details• jointing requirements• level of workmanship.
<i>Rising main systems</i> include:	<ul style="list-style-type: none">• approved pressure pipe and fittings• calculated rise and pump delivery requirements• pump sizing to meet calculated flow conditions.
<i>Computer software packages</i> include:	<ul style="list-style-type: none">• manufacturers' software• proprietary design software.

RANGE STATEMENT

Plans:

- may include:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections
- may be produced to industry standards and in accordance with regulatory and manufacturer requirements using:
 - computer generation
 - Indian ink
 - pencil
 - pigment liner.

Specification may include:

- bedding
- clipping
- concrete support
- descriptions
- details of specialised components
- jointing
- manholes
- manufacturer requirements
- materials
- workmanship.

Testing may include:

- air pressure test
- hydrostatic test
- quality assurance (QA) audit
- visual and site inspection.

Commissioning schedule
includes:

- checking leaks
- flushing.

Operation and maintenance manual may include:

- check for blockages
- leak detection
- pump maintenance
- water auditing
- yearly inspection
- yearly maintenance requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained from job supervisor.</p> <p>1.2. Safety (OHS) requirements associated with locating and clearing blockages and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient locating and clearing of blockage.</p>
2. Locate and clear blockage.	<p>2.1. Section containing blockage is located and isolated and its material identified.</p> <p>2.2. Blockage clearing equipment is selected in accordance with the job.</p> <p>2.3. Where necessary, mechanical drain clearing equipment is assembled and used in accordance with manufacturer instructions.</p> <p>2.4. Blockage is cleared without causing damage to pipework and fittings.</p> <p>2.5. Pipework is tested to confirm blockage is cleared from pipe system.</p> <p>2.6. Pipework is repaired and resealed to permit normal use.</p> <p>2.7. Authorities are advised of work completion.</p>
3. Clean up.	<p>3.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation.</p> <p>3.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>3.3. Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- locating and clearing blockages, such as tree roots and other refuse, from sanitary plumbing, water and sewerage pipe installations and drainage and roof installations using:
 - mechanically operated drain clearing machines and attachments
 - manually operated drain cleaning tools and equipment
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- application of mechanical and hydraulic principles for clearing blockages
- characteristics of different pipes, fittings and fixture supports, including fixing and joining techniques
- correct materials handling processes
- effective isolation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of clearing blockages
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to locate and clear blockages
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to locate and clear blockages from drainage pipework using both manual tools and mechanical equipment, ensuring:
 - correct identification of location and clearance process
 - correct selection and use of appropriate tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - blockage clearance tools and equipment

RANGE STATEMENT

	<ul style="list-style-type: none"> • dangerous materials • other machines • recently filled trenches • services • surrounding structure and facilities • traffic control • trip hazards • work site visitors and the public • working in confined spaces • working in proximity to others
	<ul style="list-style-type: none"> • use of tools and equipment • workplace environment and safety • use of firefighting equipment • use of first aid equipment.
<i>Environmental requirements</i> cover water quality management and may include:	<ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none"> • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • hacksaw • hand and power tools • heating equipment • manually operated drain cleaning, including plungers and rods • measuring equipment • mechanically operated drain clearing machines and attachments, including the use of a sanitary snake • pipe cameras • pipe locating equipment • plungers • rods.
<i>Materials</i> may include:	<ul style="list-style-type: none"> • cast iron pipework • concrete • high density polyethylene (HDPE)

RANGE STATEMENT

Statutory and regulatory authorities include:

- unplasticised polyvinyl chloride (PVC-U)
- vitrified clay
- other approved products.
- state or territory statutory authority
- statutory plumbing authority.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to locating and clearing blockages
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans, drawings and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing domestic treatment plants and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of domestic treatment plants.</p>
2. Identify installation requirements.	<p>2.1. Position of domestic treatment plant is determined in accordance with plans and specifications and site requirements, and does not cause damage or interference to surrounding structures or services.</p> <p>2.2. Design and capacity of plant are confirmed to comply with relevant Australian standards and requirements of regulatory authorities, the installation and the site.</p> <p>2.3. Quantity and type of materials required are calculated from plans, drawings and specifications.</p> <p>2.4. Materials are ordered and checked for compliance with docket and order form, and for acceptable condition.</p>
3. Install domestic treatment plant.	<p>3.1. Size and location of excavation are marked out to comply with drawings and specifications, installation and site requirements.</p> <p>3.2. Site is excavated and preparation for installation is undertaken in accordance with installation requirements for the plant, plans, permits and site requirements, ensuring minimal damage to surrounding structures or environment.</p> <p>3.3. Domestic treatment plant is installed and secured in specified position to prevent movement or damage to plant in compliance with requirements of responsible authority for the installation and inspection of domestic treatment plants.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. <i>Sustainability principles and concepts</i> are applied to work preparation and application.
	3.5. Plant is filled with water to prevent flotation as required.
	3.6. Excavation is backfilled to specifications.
4. Clean up.	4.1. Work area is cleared, with materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. <i>Information</i> is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- correctly installing an approved prefabricated domestic treatment plant

REQUIRED SKILLS AND KNOWLEDGE

- excavating plant site for installation purposes
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different pipe fittings and fixture supports, including fixing and jointing techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- load lifting and handling procedures
- principles and techniques of effluent treatment and disposal
- regulations and requirements of regulatory authorities regarding effluent disposal and the installation of domestic treatment plants
- SI system of measurements
- standards applicable to the installation
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install a domestic treatment plant
- applying safety requirements throughout the work sequence, including electrical requirements and personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, mark out, plan work and install an approved domestic treatment plant, ensuring:
 - application of sustainability principles and concepts
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control and hazardous materials and substances
- other machines
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- recently filled trenches

RANGE STATEMENT

	<ul style="list-style-type: none"> • safe operating procedures, including recognising and preventing hazards associated with: <ul style="list-style-type: none"> • dirt mounds • electricity • excavation equipment and plant • pits • poles • surrounding structure and facilities • trip hazards • underground services • uneven and unstable terrain • work site visitors and the public • working in confined spaces • working in proximity to others • traffic control • use of firefighting equipment • use of first aid equipment • use of tools and equipment • workplace environment and safety.
<i>Environmental requirements</i> cover water quality management and may include:	<ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none"> • Environment Protection Authority (EPA) • environment policy • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • excavation plant and equipment • hand and power tools • ladders • lifting and load shifting equipment • manual excavation equipment • measuring equipment.
<i>Materials</i> may include:	<ul style="list-style-type: none"> • polymer • concrete • other approved materials.

RANGE STATEMENT

Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
 - disposing of waste material to ensure minimal environmental impact
 - selecting material that has minimal environmental impact
 - using and recycling material efficiently
 - using energy and water efficiently.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing domestic treatment plants
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with maintaining effluent disinfection systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient maintenance of the effluent disinfection system.</p>
2. Identify system requirements.	<p>2.1. Request for maintenance approval is submitted to regulatory authorities in accordance with their requirements.</p> <p>2.2. Site is inspected to confirm compliance with standards and authorities' requirements for effluent drainage systems.</p> <p>2.3. Detention capacity, effluent flow and effluent disinfection flow in the contact chamber are checked for compliance with regulatory authorities' requirement for effluent disinfection.</p> <p>2.4. Quantity and type of materials required are calculated from design drawings and specifications in compliance with standards, local authorities' and manufacturer requirements, and job plans and specifications.</p> <p>2.5. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.6. Materials are checked for compliance with docket and order form, and for acceptable condition.</p>
3. Maintain effluent disinfection system.	<p>3.1. System is maintained in accordance with standards and authorities' requirements to ensure effluent is thoroughly mixed, discharge meets treatment requirements and access is maintained.</p> <p>3.2. Effluent is tested for total chlorine, and dosage rate is adjusted to achieve the levels and stability required by standards and regulatory authorities.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Inspection chamber is returned to normal operation.
	3.4. Relevant authorities are advised of the completion of the work and of any continuing inspection and maintenance requirements.
4. Clean up.	4.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Information is accessed and documentation, including advice of completion and subsequent inspection and maintenance requirements of the system, is completed in accordance with regulatory authorities and workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- maintaining an effluent disinfection system for the treatment of secondary effluent in a domestic treatment plant or installations identified by regulatory authorities as requiring an effluent disinfection system
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- written skills to:
 - complete documentation, including advice of completion of work and continuing inspection and maintenance requirements
 - submit request for maintenance approval
 - complete other relevant workplace documentation
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- inspection and assessment procedures for effluent disinfection systems
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of drainage design
- principles of effluent chlorine disinfection and the operation of effluent chlorine disinfection systems, including their adjustment to meet necessary output measures
- relevant statutory and authority requirements related to the installation of effluent disinfection systems
- SI system of measurements
- standards applicable to the installation
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

3. Install stormwater and sub-soil drainage.	<p>3.1. Size and location of excavation are marked out to comply with drawings and specifications, and installation and site requirements.</p> <p>3.2. Site is excavated in accordance with drawings and specifications, site requirements and relevant Australian standards, ensuring minimum damage to surrounding structures or environment.</p> <p>3.3. Pipework and stormwater and sub-soil drainage system are installed in accordance with drawings and specifications, site requirements or job instructions and relevant Australian standards, with consideration to existing pipework and other services.</p> <p>3.4. Sustainability principles and concepts are applied</p>

ELEMENT	PERFORMANCE CRITERIA
	to work preparation and application.
	3.5. Installation is tested to comply with relevant Australian standards and relevant <i>statutory and regulatory authorities'</i> requirements.
	3.6. Inspection openings and covers are fitted in accordance with relevant Australian standards and job specifications.
	3.7. Excavation is back-filled in accordance with relevant Australian standards and job specifications.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. <i>Tools and equipment</i> are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. <i>Information</i> is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing a drainage system to take stormwater from a downpipe or surface collection pit, and groundwater to a legal point of discharge
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different pipe fittings and fixture supports, including fixing and jointing techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of installing stormwater and sub-soil drainage systems
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to installing stormwater and sub-soil drainage systems
- SI system of measurements
- standards applicable to the installation
- water and air test systems and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to set out, install and test stormwater and sub-soil drainage systems
- applying safety requirements throughout the work sequence, including electrical requirements and personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, install a stormwater and sub-soil drainage system, including:
 - a stormwater drain which is to connect from a downpipe to an approved point of discharge
 - a subsoil drain which is to connect to a disposal and collection pit
- both drains are to be at least 4 metres in length, ensuring:
 - application of sustainability principles and concepts
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes

EVIDENCE GUIDE

- communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and

EVIDENCE GUIDE

environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth,

- handling of materials
- hazard control

RANGE STATEMENT

state and territory legislation and regulations and may include:

- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - dirt mounds
 - electricity
 - excavation equipment and plant
 - hazardous materials
 - other machines
 - pits
 - poles
 - recently filled trenches
 - surrounding structure and facilities
 - traffic control
 - trip hazards
 - underground services
 - uneven and unstable terrain
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Environmental requirements

cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Legal point of discharge may be:

- gutter
- on-site storage tank or disposal pit

RANGE STATEMENT

<i>Materials</i> may include:	<ul style="list-style-type: none"> • stormwater drain or easement • sub-soil distribution system or soak well. • unplasticised polyvinyl chloride (PVC-U), reinforced concrete, cast iron and vitreous clay pipes • other approved materials.
<i>Sustainability principles and concepts:</i>	<ul style="list-style-type: none"> • cover the social, economic and environmental use of resources to meet current and future needs • may include: <ul style="list-style-type: none"> • appropriate component selection that has minimal environmental impact • correct handling of hazardous materials • disposal of waste material to ensure minimal environmental impact • efficient and legal point of water discharge • efficient energy and water use • efficient use and recycling of material.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • compression cutters • dropsaws • files • grinders • hacksaws • hand and power tools • hand excavating tools • levelling equipment • measuring equipment • mechanical excavating equipment • testing equipment • trench shoring equipment.
<i>Information</i> may include:	<ul style="list-style-type: none"> • charts and hand drawings • diagrams or sketches • instructions issued by authorised organisational or external personnel • manufacturer specifications and instructions • material safety data sheets (MSDS) • memos

RANGE STATEMENT

- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing stormwater and sub-soil drainage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPDR2015A Drain work site

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to remove water from a work site, either temporarily or permanently, through stormwater and sub-soil drainage systems. It includes the installation of submersible and non-submersible type pumps, suitable for pumping unscreened roof water, sub-soil water and surface water.

Application of the Unit

Application of the unit This unit of competency supports development of skills for draining work sites before and during plumbing work.

Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with draining a work site, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient draining of the work site.</p>
2. Identify installation requirements.	<p>2.1. Proposed location of stormwater connection points, sumps, wells and pumps are determined from drawings and specifications.</p> <p>2.2. Quantity and type of materials and equipment required are calculated from design drawings and specifications and comply with standards and local authorities' requirements.</p> <p>2.3. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Materials and equipment are checked for compliance with docket and order form, and for acceptable condition.</p>
3. Prepare and excavate site.	<p>3.1. Excavation site is set out to comply with drawings and specifications, installation and consideration for the location of existing services.</p> <p>3.2. Site is excavated in accordance with drawings and specifications, site requirements and standards, ensuring minimum damage to surrounding structures and environment.</p> <p>3.3. Sedimentation controls are constructed and positioned in accordance with specifications.</p>
4. Install permanent drainage.	<p>4.1. Sumps and wells are constructed at specified levels and locations.</p> <p>4.2. Suction inlet point is prepared in accordance with drawings, specifications and manufacturers' requirements.</p> <p>4.3. Appropriate pumps are installed, in specified</p>

ELEMENT	PERFORMANCE CRITERIA
	locations.
	4.4. Pipework and hoses are connected and fitted to pumps in accordance with drawings and specifications, manufacturers' requirements and site drainage specifications.
5. Operate drainage system.	<p>5.1. Pumps are activated to lower water level by specifications.</p> <p>5.2. Pump control system is adjusted to meet specification requirements.</p> <p>5.3. Pumps are maintained in accordance with manufacturer specifications and workplace requirements.</p>
6. Clean up.	<p>6.1. Ground area is restored and work area is cleared, with materials disposed of or recycled in accordance with state or territory <i>statutory and regulatory authority</i> legislation.</p> <p>6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>6.3. Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions

REQUIRED SKILLS AND KNOWLEDGE

- plan and sequence tasks with others
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- removing water from a work site, which may be a trench, pit or well, using a pump
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics of stormwater installations, including capacity and installation procedures
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- positioning and construction of sedimentation and scouring controls
- principles of drainage and installation processes
- process of draining a site
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to draining work sites
- SI system of measurements
- standards applicable to the work
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to drain a work site
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, drain water from a pit, trench or excavation containing water to a depth of at least half a metre, using a submersible pump; the site must remain effectively drained for the duration of the job, ensuring:
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including

RANGE STATEMENT

recognising and preventing hazards associated with:

- dangerous materials
- dirt mounds
- other machines
- pits
- plant and equipment
- poles
- recently filled trenches
- site drainage tools
- surrounding structure and facilities
- traffic control
- trees
- trip hazards
- underground services
- uneven and unstable terrain
- work site visitors and the public
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.
- clean-up protection
- stormwater protection
- waste management.

Environmental requirements

cover water quality management and may include:

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.
- may be:
 - sludge pumps
 - submersible
 - surface
 - vacuum
- pump installation may be for temporary or permanent drainage.

Pumps:

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing a prefabricated inspection opening and enclosure in a drainage system, including the connection of inlet and outlet pipes
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- access and understand site-specific instructions in a variety of media
- use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics and the application of pipe fittings and fixture supports, including fixing and jointing techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of installing prefabricated inspection openings and enclosures
- relevant statutory and authority requirements related to the installation of prefabricated inspection openings and enclosures
- SI system of measurement
- sources of information and processes for calculating material requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to set out, assemble, install and test prefabricated inspection openings and enclosures
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, install an approved prefabricated inspection opening or enclosure, including the connection of the inlet and outlet pipes, ensuring:
 - application of sustainability principles and concepts
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific

Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - confirm job specifications and client requirements
 - communicate with others to ensure safe and effective work practices
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- interpreting a design to plan the layout of a sanitary drainage system for residential buildings, connecting to the authority's sewer or on-site disposal system
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- application of various sanitary fixtures and appliances
- characteristics and application of different pipe systems, including their fittings and fixture supports and fixing and joining techniques
- design concepts and performance measures for sanitary drainage installations
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of drainage design

REQUIRED SKILLS AND KNOWLEDGE

- process of planning the layout of sanitary drainage systems
- properties and characteristics of sewage, including temperature implications and discharges
- pumped discharges
- relevant statutory and authority requirements related to sanitary drainage systems
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information may include:

- charts and hand drawings
- diagrams or sketches and graphics
- instructions issued by authorised

RANGE STATEMENT

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to the design of sanitary drainage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- handling of materials
- hazard control
- protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - dangerous materials and hazardous substances
 - electricity
 - services
 - surrounding structure and facilities
 - trip hazards
 - work site visitors and the public
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

RANGE STATEMENT

<i>Environmental requirements</i> may include:	<ul style="list-style-type: none"> • clean-up protection • waste management.
<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none"> • Environment Protection Authority (EPA) • environment policy • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • approved testing equipment • chain blocks • forklifts • hand and power tools • hand excavation tools • hand trolleys • hoists and jacks • levelling equipment • lifting and load shifting equipment • measuring equipment • mechanical excavation equipment • rollers • trench shoring equipment.
<i>Sustainability principles and concepts:</i>	<ul style="list-style-type: none"> • cover the social, economic and environmental use of resources to meet current and future needs • may include: <ul style="list-style-type: none"> • appropriate component selection that has minimal environmental impact • efficient energy and water use • efficient use and recycling of material • correct handling of hazardous materials • disposal of waste material to ensure minimal environmental impact.
<i>Materials</i> may include:	<ul style="list-style-type: none"> • drawing instruments • measuring equipment and plans, including building plans • sanitary plans and drainage plans.
<i>Fixtures</i> may include:	<ul style="list-style-type: none"> • all approved residential fixtures in AS/NZS3500 National plumbing and drainage set.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing sanitary drainage systems and workplace environmental requirements are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of sanitary drainage systems.</p>
2. Identify installation requirements.	<p>2.1. Quantity and type of materials required are calculated from existing installations, plans, specifications and site inspections.</p> <p>2.2. Allowances for fabrication and assembly are correctly determined and transferred.</p> <p>2.3. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.</p>
3. Install sanitary drainage systems.	<p>3.1. Pipework is set out in accordance with drawings and specifications, site requirements or job instructions, with consideration to the location of existing services, including sewage authority utility points.</p> <p>3.2. Pipework is installed in accordance with plans, specifications, standards and workplace procedures and without damage to surrounding environment, existing pipework or other services.</p> <p>3.3. Connections for alterations, additions, relining or repair to existing systems are made in accordance with standards and manufacturer specifications.</p> <p>3.4. Installation is checked for compliance with design drawings, specifications, site requirements, standards and authorities' requirements.</p> <p>3.5. Installation is tested to comply with standards and relevant authorities' requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Installation is backfilled in accordance with standards and work area is cleared, with materials disposed of or recycled in accordance with state or territory <i>statutory and regulatory authority</i> legislation.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. <i>Information</i> is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing and testing below ground sanitary drains
- transferring sewage from sanitary fixtures to a sewage authority's point

REQUIRED SKILLS AND KNOWLEDGE

- making alterations to existing sanitary drainage
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures
- hazardous materials
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials relevant to sanitary drainage
- principles of drainage design
- process of installing and testing sanitary drains
- relevant statutory and authority requirements related to the installation and fitting off of sanitary fixtures
- SI system of measurements
- sources of information and processes for calculating material requirements
- standards applicable to the installation
- water and air test systems and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test sanitary drainage systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, install and test a below ground sanitary drain to connect a bathroom, WC, kitchen, laundry and soil or waste stack (to a minimum of 30 fixture units), where the drain is to be at least 10 metres long and terminate at ground level
- cutting in a branch to connect a new water closet and fixture, ensuring:
 - correct identification of location, design and details of the proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of the on-site disposal system.</p>
2. Identify work requirements.	<p>2.1. Position of on-site disposal system is determined in accordance with plans, specifications, authorities' requirements and relevant Australian standards.</p> <p>2.2. Quantity and type of materials required are calculated from design drawings and specifications in compliance with relevant Australian standards and local authorities' requirements.</p> <p>2.3. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Materials are checked for compliance with docket and order form, and for acceptable condition.</p>
3. Install on-site disposal system.	<p>3.1. Set out is checked for compliance with plans, specifications and authorities' requirements.</p> <p>3.2. Underground services within excavation area are identified and marked.</p> <p>3.3. Site is excavated in accordance with requirements for system, plans, permits and site requirements, ensuring minimum damage to surrounding structures or environment.</p> <p>3.4. On-site effluent disposal system is installed in accordance with plans, specifications, relevant Australian standards and regulatory requirements.</p> <p>3.5. Sustainability principles and concepts are applied throughout the installation.</p> <p>3.6. System is checked for compliance with relevant Australian standards and regulatory authorities'</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	requirements and correct operation.
	4.1. Excavation is backfilled to specifications and work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Information is accessed and documentation completed in accordance with responsible authority and workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing perforated pipe in an absorption trench to act as an on-site effluent disposal system from a septic sewerage tank.

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and the application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- principles and techniques of effluent treatment and disposal
- principles of drainage design
- regulations and requirements of regulatory authorities regarding effluent disposal and the installation of on-site disposal systems
- SI system of measurements
- soil testing requirements and procedures
- Australian standards applicable to the installation
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install on-site disposal systems
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, determine the requirements for and install:
 - a transpiration or an absorption trench, with the trench being at least three metres in length, running from a distribution pit or outlet of a domestic treatment plant; or a surface or sub-surface irrigation on-site disposal system, ensuring:
 - application of sustainability principles and concepts throughout the installation of on-site disposal systems
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational

EVIDENCE GUIDE

Context of and specific resources for assessment

quality procedures and processes

- communicating and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for planning.	<p>1.1. Nature and scope of planning task are identified and confirmed.</p> <p>1.2. Safety (OHS) requirements associated with the installation of sanitary drainage systems and workplace environmental requirements are adhered to throughout the work.</p> <p>1.3. Work is organised and sequenced in conjunction with others involved in or affected by work.</p> <p>1.4. Tools and equipment required for planning, sizing and documenting the layout of sanitary drainage systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.5. Work area in which the planning process is to be conducted is prepared.</p>
2. Identify system requirements.	<p>2.1. Information and specifications for the required work are obtained and confirmed, if necessary by site inspection.</p> <p>2.2. Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.</p> <p>2.3. Quantity, location and type of take off points and legal points of discharge are determined from development drawings, plans and specifications.</p> <p>2.4. System is sized according to relevant Australian standards and statutory and regulatory authorities' and workplace requirements.</p> <p>2.5. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Design system layout.	<p>3.1. Design sanitary drainage systems according to development plans, specifications, relevant Australian standards and workplace procedures.</p> <p>3.2. Materials required are specified and optimised from proposed design according to relevant Australian standards.</p> <p>3.3. Plans are recorded in accordance with regulatory authorities' and workplace requirements.</p>
4. Restore work area.	<p>4.1. Work area is restored in accordance with workplace procedures.</p> <p>4.2. Tools and equipment used in the process are refurbished and left in accordance with workplace procedures.</p>

ELEMENT**PERFORMANCE CRITERIA**

- 4.3. Information is accessed and documentation, including work backup, is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation, including recording written plans and completing other relevant workplace documentation, such as work backups
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements, including system requirements
 - organise and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - regulations and relevant Australian standards
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- interpreting plans and specifications of a multi-unit development to plan, size and document layout of required sanitary drainage system
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media

REQUIRED SKILLS AND KNOWLEDGE

- use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics and application of different pipe systems, including their fittings and fixture supports and fixing and joining techniques
- computer use, including computer-aided design software for plumbing and construction systems
- design concepts and performance measures for sanitary drainage systems
- handling of hazardous waste
- how to find and access necessary specifications and related information
- infectious diseases relevant to working with plumbing systems
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of drainage
- process of planning, sizing and documenting layout of sanitary drainage systems
- process of treating trade waste to acceptable levels for discharge
- properties and characteristics of sewage, including temperature implications, trade waste requirements and discharge levels
- relevant statutory and authority requirements related to planning, sizing and documenting sanitary drainage systems
- SI system of measurements
- Australian standards applicable to sanitary drainage systems
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence

A person who demonstrates competency in this unit

EVIDENCE GUIDE

required to demonstrate competency in this unit

must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to planning, sizing and documenting the layout of a sanitary drainage system
- applying safety requirements throughout the work sequence, including electrical, personal protective clothing and equipment
- as a minimum, given the development plans and specification, the ability to design, size and document the layout details of a sanitary drainage system for a residential unit development comprising at least five two-storey (Class 1) units; and a commercial (Class 6) building, incorporating trade waste to an approved point of discharge or on-site disposal system, ensuring:
 - application of sustainability principles and concepts
 - correct identification of details of the plan
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards, and organisational quality procedures and processes
 - correct identification of trade waste and appropriate treatment processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - other machines
 - surrounding structure and facilities
 - trip hazards
 - underground services
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment

RANGE STATEMENT

Environmental

requirements cover water quality management and may include:

- workplace environment and safety.
- clean-up protection
- stormwater protection
- waste management.

Tools and equipment may include:

- computer-aided design (CAD) software
- drawing instruments
- measuring equipment.

Information may include:

- charts and hand drawings
- diagrams or sketches
- job drawings
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements, particularly those pertaining to:
 - Building Code of Australia
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards, including AS/NZS3500 National plumbing and drainage set: Part 2 Sanitary plumbing and drainage - Acceptable solutions
- safe work procedures relating to planning, sizing and documenting the layout of sanitary drainage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Legal points of discharge may include:

- gravitational sewer
- on-site disposal system
- vacuum sewer.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
 - correctly handling hazardous materials
 - incorporating efficient use of material into the design, including recycling material

RANGE STATEMENT

- using efficient design principles throughout to minimal environmental impact
 - using energy and water efficiently.
- Materials* may include:
- drafting materials
 - relevant development plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for planning.	<p>1.1. Nature and scope of the planning task are identified and confirmed.</p> <p>1.2. Safety (OHS) requirements associated with installation of stormwater drainage systems and workplace environmental requirements are adhered to throughout the work.</p> <p>1.3. Work is organised and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.4. Tools and equipment required for planning, sizing and documenting the layout of stormwater drainage systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.5. Work area in which planning process is to be conducted is prepared.</p>
2. Identify system requirements.	<p>2.1. Information and specifications for required work are obtained and confirmed, if necessary by site inspection.</p> <p>2.2. Regulations and relevant Australian standards relevant to the work are consulted and applied to all aspects of the work.</p> <p>2.3. Design criteria are determined from relevant Australian standards and proposed method of installation.</p> <p>2.4. Stormwater catchment and flow requirements are identified.</p> <p>2.5. Stormwater pipe size is determined to conform to regulatory authorities' main or street kerb and relevant Australian standards.</p> <p>2.6. Stormwater retention pit size, silt and flotation arrestor pit size, rainwater tank size and stormwater overflow discharge locations are determined to suit job requirements.</p> <p>2.7. System type is selected to suit collection and disposal requirements.</p> <p>2.8. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Design system layout.	<p>3.1. Layout of stormwater drainage system is planned in accordance with plans, specifications, relevant Australian standards, and workplace procedures.</p> <p>3.2. Stormwater disposal system is specified in accordance with job requirements.</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|-----------------------|--|
| | 3.3. Materials required are specified and optimised from proposed design according to relevant Australian standards. |
| | 3.4. Plans are recorded in accordance with statutory and regulatory authorities' and workplace requirements. |
| 4. Restore work area. | 4.1. Work area is restored in accordance with workplace procedures. |
| | 4.2. Tools and equipment used in the process are refurbished and left in accordance with workplace procedures. |
| | 4.3. Information is accessed and documentation, including work backup, is completed in accordance with workplace requirements. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - record written plans and complete other relevant workplace documentation, including work backups
 - identify requirements, including system requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - organise and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - regulations and relevant Australian standards
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools,

REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- interpreting plans and specifications to plan, size and document the layout of a surface and sub-soil stormwater drainage system, incorporating downpipes, pits, tanks and overflow discharge.
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- catchment, rainfall intensity and run-off calculations
- characteristics and application of different pipe systems, including their fittings and fixture supports and fixing and joining techniques
- design concepts and performance measures for stormwater and sub-soil drainage systems
- determining levels
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of water flow and stormwater and sub-soil drainage
- process of planning, sizing and documenting the layout of stormwater and sub-soil drainage systems using relevant sources of information
- relevant statutory and authority requirements related to planning, sizing and documenting stormwater and sub-soil drainage systems
- SI system of measurements
- Australian standards applicable to stormwater drainage systems
- stormwater installation techniques
- use of computers and relevant computer-aided design (CAD) software
- water tank installation
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the

EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to planning, sizing and documenting the layout of a stormwater drainage system
- applying safety requirements throughout the work sequence, including electrical, personal protective clothing and equipment
- as a minimum, given the development plans and specification, the ability to design, size and document the layout details of a surface and sub-soil stormwater drainage system for a residential unit development comprising at least five two-storey (Class 1) units; and a commercial (Class 6) building, which includes drainage to the legal point of discharge to the external stormwater drainage network, ensuring:
 - application of sustainability principles and concepts
 - correct identification of plan details
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will

EVIDENCE GUIDE

usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

- where the assessment is part of a structured learning experience the evidence collected must relate to a

EVIDENCE GUIDE

number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - other machines
 - surrounding structure and facilities
 - trip hazards

RANGE STATEMENT

Stormwater drainage systems will:

- underground services
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- be gravity, pumped and displacement operated
- terminate at point of connection with external stormwater drainage network, including:
 - disposal pit
 - easement
 - gutter
 - on-site storage tank
 - stormwater drain
 - sub-soil disposal system.

Environmental requirements cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Tools and equipment may include:

- CAD software
- drawing instruments
- ladders
- laser measuring devices
- measuring equipment.

Information relating to stormwater disposal plans may include:

- authority mains or kerb
- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- maximum discharge rates allowed
- memos
- organisation work specifications and requirements
- possible locations of stormwater components

RANGE STATEMENT

- regulatory and legislative requirements, particularly those pertaining to:
 - Building Code of Australia
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards, including AS/NZS3500 National plumbing and drainage set: Part 3 Stormwater drainage
- safe work procedures relating to planning, sizing and documenting the layout of stormwater drainage systems
- signage
- site relative levels
- stormwater flow rates
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- drafting and drawing materials
- relevant plans and specifications.

Materials may include:

Statutory and regulatory authorities include:

Sustainability principles and concepts:

- commonwealth, state and local authorities administering application Acts, regulations and codes of practice.
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
 - correctly handling hazardous materials
 - disposing of waste material to ensure minimal environmental impact
 - harvesting rainwater
 - incorporating efficient use of material into the design, including recycling material
 - preventing environmental contamination
- using efficient design principles throughout to minimal environmental impact
 - using energy and water efficiently.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for planning.	<p>1.1. Nature and <i>scope of planning task</i> are identified and confirmed.</p> <p>1.2. <i>Safety (OHS)</i> requirements associated with installation of domestic treatment plant disposal systems and workplace <i>environmental requirements</i> are adhered to throughout the work.</p> <p>1.3. Work is organised and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.4. <i>Tools and equipment</i> required for planning, sizing and documenting layout of domestic treatment plant disposal systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.5. Work area in which the planning process is to be conducted is prepared.</p>
2. Identify system requirements.	<p>2.1. <i>Information</i> and specifications for required work are obtained and confirmed, if necessary, by site inspection.</p> <p>2.2. Regulations and Australian standards relevant to work are consulted and applied to all aspects of the work.</p> <p>2.3. System requirements, including capacity, method of disposal, types of system, treatment system performance requirements and processes are determined from specifications.</p> <p>2.4. Information on the assessment of land capability for on-site land application of effluent are obtained and confirmed.</p> <p>2.5. Information for a suitable location for the land application area and reserve area is obtained and confirmed.</p> <p>2.6. System is sized in accordance with relevant Australian standards, regulatory authorities and workplace requirements.</p>
3. Design system layout.	<p>3.1. Disposal system is planned in accordance with specifications, Environment Protection Authority (EPA) and regulatory authorities' requirements, relevant Australian standards and workplace procedures.</p> <p>3.2. Plans are developed to accord with relevant Australian standards, regulatory authorities'</p>

ELEMENT**PERFORMANCE CRITERIA**

	requirements, maintenance, site topography and landscape application areas.
	3.3. <i>Sustainability principles and concepts</i> are applied to work preparation and application.
	3.4. <i>Materials</i> required are specified and optimised in accordance with relevant Australian standards from proposed design.
	3.5. Plans are recorded in accordance with <i>statutory and regulatory authorities'</i> and workplace requirements.
4. Restore work area.	4.1. Work area is restored in accordance with workplace procedures.
	4.2. Tools and equipment used in the process are refurbished and left in accordance with workplace procedures.
	4.3. Information is accessed and documentation, including work backup, is completed in accordance with workplace requirements.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete other relevant workplace documentation, including work backups
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements, including system requirements
 - organise and sequence tasks with others
 - record written plans
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings

REQUIRED SKILLS AND KNOWLEDGE

- regulations and relevant Australian standards
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- interpreting plans and specifications to design layout and operational details of a domestic treatment plant disposal system
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- design concepts and performance measures for domestic treatment plant disposal systems
- handling of hazardous waste
- infectious diseases
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of the assessment of land capability for application of effluent
- principles, techniques and characteristics of effluent treatment and disposal
- process of designing domestic treatment plant disposal systems
- properties and characteristics of landscape application areas with suitable plants and vegetation, including:
 - hardiness
 - high and low water requirements
 - maintenance requirements
 - native to the local area implications
 - phosphorus tolerance
- properties and characteristics of soil, including:
 - percentages of sand, silt and clay
 - absorption capacity implications
- relevant statutory and authority requirements related to design of domestic treatment plant disposal systems
- SI system of measurements
- sources of information

REQUIRED SKILLS AND KNOWLEDGE

- Australian standards applicable to the treatment system
- use of computers and relevant computer-aided design (CAD) software
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the design of domestic treatment plant disposal systems
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum and given the development plans and specification, design, size and document the layout of a treatment system for a domestic dwelling, which is compliant with current and relevant environmental and legislative requirements, ensuring:
 - application of sustainability principles and concepts
 - identification, evaluation and incorporation of sustainability principles and concepts into the design
 - correct identification of plan details
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with connection of static storage tanks and workplace environmental requirements are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment for connecting static storage tanks, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient connection of static storage tanks.</p>
2. Identify installation requirements.	<p>2.1. Materials required for the installation are determined from plans and specification.</p> <p>2.2. Materials are selected that comply with standards and job specifications.</p> <p>2.3. Quantities of materials required are calculated from plans.</p> <p>2.4. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.</p>
3. Install and test storage tank.	<p>3.1. Storage tank and associated pipework are set out in accordance with drawings, specifications and job instructions.</p> <p>3.2. Pipe supports and fixings, compliant with standards, are installed to plans and manufacturer specifications.</p> <p>3.3. Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - drawings and specifications
 - documentation from a variety of sources
 - record test results in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- determining system requirements, and installing and testing a water distribution system from a static storage tank to a fire protection system
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures
- function and operation of a range of taps and valves
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- operation and components of fire sprinkler systems
- pressure test systems and procedures
- process of connecting static storage tanks
- relevant statutory and authority requirements related to the connection of static storage tanks
- SI system of measurement
- structural systems, building materials and building services
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to connect static storage tanks
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- relating the connection of static storage tanks to backflow protection competencies
- as a minimum the ability to, given the plans and specifications of a fire protection system, connect and test an approved static storage tank to a water distribution pipe system, ensuring:
 - correct identification of requirements, design and details of the proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including

RANGE STATEMENT

recognising and preventing hazards associated with:

- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- clean-up protection
- stormwater protection
- waste management.

Environmental requirements

cover water quality management and may include:

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.
- chain blocks
- cutting and threading equipment
- elevated work platforms
- forklifts
- hand and mechanical excavation equipment
- hand and power tools
- hand trolleys
- hoists and jacks
- ladders
- lifting and load shifting equipment
- rollers
- scaffolds
- testing equipment
- trench shoring equipment
- welding equipment.

Tools and equipment may include:

Materials may include:

- copper, brass, PVC and cement lined cast iron

RANGE STATEMENT

	pipes
	<ul style="list-style-type: none">• fibre glass and steel and polyurethane storage tanks• galvanised and black steel pipes• other approved materials.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none">• state or territory statutory authority• statutory plumbing authority.
<i>Information</i> may include:	<ul style="list-style-type: none">• charts and hand drawings• diagrams or sketches• instructions issued by authorised organisational or external personnel• manufacturer specifications and instructions• material safety data sheets (MSDS)• memos• organisation work specifications and requirements• regulatory and legislative requirements, particularly those pertaining to:<ul style="list-style-type: none">• building codes• OHS and environmental requirements• plumbing regulations• relevant Australian standards• safe work procedures relating to connecting static storage tanks• signage• verbal, written and graphical instructions• work bulletins• work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with the installation of portable fire equipment, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment for installing portable fire equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of portable fire equipment.</p>
2. Identify installation requirements.	<p>2.1. Portable fire extinguisher requirements, including extinguishing agents and materials, are identified from job design criteria and specifications.</p> <p>2.2. Portable fire equipment is ordered and collected in accordance with workplace procedures.</p> <p>2.3. Portable fire equipment is checked for compliance with standards, docket and order form, and for acceptable condition.</p>
3. Install portable fire equipment.	<p>3.1. Portable fire equipment is installed to authorities' requirements, and plans and specifications.</p> <p>3.2. Supports, fixings and signage are installed in accordance with plans, specifications and manufacturer instructions.</p>
4. Clean up.	<p>4.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Information is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - record test results in writing

Computations and other supporting evidence are appropriately documented to support design.</p> <p>3.7. Fabrication sheets and material lists are prepared.</p>
4. Clean up.	<p>4.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation.</p>

ELEMENT**PERFORMANCE CRITERIA**

-
- 4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
- 4.3. **Information** is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- collecting design data, spacing sprinkler heads, sizing pipework using charts and tables and arranging pipework
- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - document computations and other supporting evidence
 - prepare fabrication sheets, material lists and other relevant workplace documentation
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- preparing layout drawings, fabrication sheets and material lists for the installation of the system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- function, specifications and operation of system components
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual Performance based codes of practice
- process of designing fire sprinkler systems using pre-calculated charts and tables
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to the design and installation of fire sprinkler systems
- SI system of measurement
- sources of information on performance characteristics of fire sprinkler systems, including theory underpinning pre-calculated charts and tables, and hydraulic calculations
- structural systems, building materials and building services
- technologies for fire sprinkler systems, measurements and drawings
- workplace design standards and safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to test and maintain automatic fire sprinklers
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications for an office complex (requiring at least 15 sprinkler heads and two branches), using pre-calculated charts and tables, design a fire sprinkler system indicating the spacing of sprinkler heads, the size and arrangement of pipework to include layout drawings, fabrication sheets and material lists, ensuring:
 - correct identification of the requirement, design and details of the proposed system
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Design drawings and job specifications are obtained from relevant authority.</p> <p>1.2. Safety (OHS) requirements associated with fabricating and installing fire hydrant and hose reel systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment for fabricating and installing fire hydrant and hose reel systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient fabrication and installation of fire hydrant and hose reel systems.</p>
2. Identify installation requirements.	<p>2.1. System requirements are identified from job design criteria, specifications and standards.</p> <p>2.2. Piping and materials are selected in accordance with standards, design drawings, job specifications and authorities' requirements.</p> <p>2.3. Below ground piping and materials are checked to ensure compliance with standards and authorities' requirements.</p> <p>2.4. Required materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.</p>
3. Fabricate, install and test system.	<p>3.1. System is set out in accordance with drawings, specifications and job instructions.</p> <p>3.2. Pipe supports and fixings are installed to plans and manufacturer specifications.</p> <p>3.3. Piping and materials are installed in accordance with design drawings, job specifications and standards.</p> <p>3.4. Pipework is connected to the water source in accordance with standards and authorities' requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. Piping system is tested in accordance with standards and job specifications.
	3.6. Test data is recorded in format required by job specifications and quality assurance procedures.
4. Clean up.	4.1. Work area is cleared and materials are disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - record test results in writing
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals

REQUIRED SKILLS AND KNOWLEDGE

- fabricating, installing and testing fire hydrant pipework from a main, or branch into main, to a hose reel system
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials and assemblies relevant to installation of fire hydrant and hose reel systems
- pressure test systems and procedures
- process of fabricating and installing fire hydrant and hose reel systems
- relevant statutory and authority requirements related to fabrication and installation of fire hydrant and hose reel systems
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to fabricate and install fire hydrant and hose reel systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications of a fire hydrant and hose reel system, install a leak-free hydrant and hose reel system from an existing branch in a water supply, using approved materials to design criteria and standards, ensuring:
 - correct identification of location, design and details of proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated

RANGE STATEMENT

with:

- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements

cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:

- chain blocks
- elevated work platform
- forklifts
- hand and power tools
- hand trolleys
- hoists and jacks
- ladders
- levelling equipment
- lifting and load shifting equipment
- manual excavation equipment
- measuring equipment
- mechanical excavation equipment
- rollers
- scaffolds
- trench shoring equipment
- welding equipment.

Materials may include:

- any approved materials.

RANGE STATEMENT

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory plumbing authority.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- National Fire Protection Association (NFPA) and Factory Mutual Performance based codes of practice
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to fabricating and installing fire hydrant and hose reel systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Approved plans and specifications are obtained from relevant authority.</p> <p>1.2. Safety (OHS) requirements associated with installing <i>distribution and range pipes</i>, and workplace <i>environmental requirements</i>, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment for installing distribution and range pipes, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of distribution and range pipes.</p>
2. Identify installation requirements.	<p>2.1. System requirements are identified from job design criteria, specifications and standards.</p> <p>2.2. Quantities of materials required are calculated from plans and specifications.</p> <p>2.3. Allowances for fabrication and assembly are correctly determined and transferred.</p> <p>2.4. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.</p>
3. Install and test piping system.	<p>3.1. Pipework is set out in accordance with drawings, specifications and job instructions.</p> <p>3.2. Pipe supports and fixings are installed to plans, manufacturer specifications and <i>extinguishing materials</i>.</p> <p>3.3. Piping and materials are installed in accordance with the design drawings, job specifications and standards.</p> <p>3.4. Mechanical jointing systems are compliant with standards.</p> <p>3.5. Pipes are subjected to pressure testing in accordance with standards or job specification.</p> <p>3.6. Test data is recorded in format required by the job</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications and quality assurance procedures.
	3.7. Installation is backfilled in accordance with specifications.
4. Clean up.	4.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Information is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record test results in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- installing and testing above ground distribution and range pipe system, fitted with branches, to supply water to a sprinkler system
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials relevant to installation of distribution and range pipes
- pressure test systems and procedures
- process of installing and testing distribution and range pipes
- relevant statutory and authority requirements related to installation of distribution and range pipes
- SI system of measurement
- structural systems, building materials and building services
- workplace and equipment safety requirements.

Pipe supports and fixings are installed to plans and manufacturer specifications.</p> <p>3.3. Assemblies, devices, alarms, piping and materials are installed in accordance with standards, plans and specifications.</p> <p>3.4. Jointing systems are installed in compliance with standards.</p> <p>3.5. Installed system is subjected to pressure testing in accordance with standards, plans and specifications.</p> <p>3.6. Test data is recorded in format required by job specifications and quality assurance procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory <i>statutory and regulatory authority</i> legislation.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. <i>Information</i> is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record test results in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing and testing control valve assemblies, actuating devices and alarms for an automated fire sprinkler system
- numeracy skills to apply measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- function and operation of a range of taps and valves
- job safety analysis (JSA) and safe work method statements (SWMS)
- materials relevant to installation of control valve assemblies, actuating devices and local alarms
- pressure test systems and procedures
- process of installing control valve assemblies, actuating devices and local alarms
- relevant statutory and authority requirements related to installation of control valve assemblies, actuating devices and local alarms
- SI system of measurement
- structural systems, building materials and building services
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test control valve assemblies, actuating devices and local alarms
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications of an automated fire sprinkler system, install and test a control valve assembly, two actuating devices and an alarm to design criteria and standards, ensuring:
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated

RANGE STATEMENT

with:

- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- clean-up protection
- waste management.

Environmental requirements
cover water quality management
and may include:

Quality assurance requirements
may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.
- cutting and threading equipment
- elevated work platforms
- hand and power tools
- ladders
- testing equipment
- welding equipment.

Tools and equipment may
include:

Materials may include:

- actuating devices
- control valve assemblies
- local alarms
- pipes or other approved materials.

***Statutory and regulatory
authorities*** include:

- statutory gasfitting authority
- statutory plumbing authority
- state or territory statutory authority.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel

RANGE STATEMENT

- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing control valve assemblies, actuating devices and local alarms
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Approved plans and specifications are obtained from relevant authority.</p> <p>1.2. Safety (OHS) requirements associated with testing fire protection systems for pressure, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools, equipment and materials for testing fire protection systems for pressure, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient testing of fire protection systems for pressure.</p>
2. Identify testing requirements.	<p>2.1. Test requirements are determined from plans, specifications, and system pressure and flow specifications.</p> <p>2.2. Appropriate testing equipment is identified and prepared for application in accordance with standards and workplace requirements.</p>
3. Test fire protection systems.	<p>3.1. Test equipment is connected to system and pressure tested in accordance with standards and job specification.</p> <p>3.2. Test data is recorded in format required by the job specification and quality assurance procedures.</p>
4. Clean up.	<p>4.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Information is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology
 - testing of a fire protection system for pressure, using air and water test to design parameters as testing media.

Required knowledge

Required knowledge for this unit is:

- components and operation of fire sprinkler systems and fire hydrant systems
- functions and operation of a range of taps and valves
- job safety analysis (JSA) and safe work method statements (SWMS)
- properties and characteristics of water pressure and flow rates
- relevant statutory and authority requirements related to testing fire protection

REQUIRED SKILLS AND KNOWLEDGE

systems for pressure

- SI system of measurement
- test procedures for sprinkler and hydrant systems
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to test fire protection systems for pressure
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given a fire sprinkler system and a fire hydrant system, conduct an air pressure test on one and a water pressure test on the other to achieve design and performance specifications of each system, ensuring:
 - correct identification of requirements, design and details of the systems
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing special hazard extinguishing systems and workplace environmental requirements are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Knowledge and understanding of ODS and SGG legislative and industry requirements are applied to install activities for special hazard fire suppression systems.</p> <p>1.5. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.6. Tools and equipment for installing special hazard extinguishing systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.7. Work area is prepared to support efficient installation of special hazard extinguishing systems.</p>
2. Identify installation requirements.	<p>2.1. System requirements are identified from job design criteria, specifications and standards.</p> <p>2.2. Components for special hazard system are selected in accordance with plans, specifications, standards, manufacturer recommendations and job requirements.</p> <p>2.3. Components and other materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Components are checked for compliance with standards, docket and order form, and for acceptable condition.</p>
3. Decommission gaseous agent containers and actuation devices.	<p>3.1. Gaseous agent containers and actuation devices are decommissioned according to decommissioning guidelines; organisational, customer, legislative and industry requirements; and manufacturer specifications.</p> <p>3.2. All interface actuation control devices are confirmed and isolated; and appropriate signage, documentation and lock-off are put in place.</p> <p>3.3. Manual, electrical and mechanical actuation</p>

ELEMENT	PERFORMANCE CRITERIA
	<p><i>control devices</i> are disconnected.</p> <p>3.4. Pneumatic actuation control devices, and pilot and slave tubes and fittings are identified and disconnected.</p> <p>3.5. Transport caps on actuation outlets, plugs and locking devices are connected.</p> <p>3.6. Container bank manifold connection components are disconnected.</p> <p>3.7. Transport caps on valve outlets are connected.</p> <p>3.8. Removal and transportation of gaseous agent containers to storage or reclaim facility are organised in accordance with legislative requirements and OHS policies and procedures.</p> <p>3.9. Documentation and decommissioning sign-off requirements are completed and confirmed with relevant persons.</p>
4. Install and test special hazard systems.	<p>4.1. System is set out in accordance with drawings, specifications and job instructions.</p> <p>4.2. Fixings are installed to plans and manufacturer specifications.</p> <p>4.3. Pipe supports are compliant with standards, plans and specifications.</p> <p>4.4. Pipes, fittings and components are installed in accordance with plans, specifications and standards.</p> <p>4.5. Piping system is subjected to pressure testing in accordance with standards, plans and specifications.</p> <p>4.6. Test data is recorded in format required by plans, specifications and authorities' requirements.</p>
5. Clean up.	<p>5.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation.</p> <p>5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>5.3. Information is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record test results in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- installing and testing special hazard protection system consisting of an extinguishing agent, piping, actuating devices and sprinkler delivery
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- function and operation of system components
- hazard categories, classes of fire hazard, extinguishing agents and application methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual Performance

REQUIRED SKILLS AND KNOWLEDGE

based codes of practice

- pressure test systems and procedures
- process of installing and testing special hazard systems
- relevant statutory and authority requirements related to installation of special hazard systems
- SI system of measurement
- structural systems, building materials and building services
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test special hazard systems
- applying safety requirements throughout work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and system specifications of a special hazard fire suppression system, identify the requirements and install one special hazards fire suppression system (not prescribed ODS or SGG extinguishing agent), incorporating a high pressure carbon dioxide (CO₂) gas storage cylinder, connected by piping to a simple distribution system with one actuating device, to design criteria and standards, ensuring:
 - correct identification of requirement, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment, including those for use with installed gaseous agent containers and actuation devices
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes, including ODS and SGG regulations, standards, order requirements and organisational quality procedures and processes

EVIDENCE GUIDE

Context of and specific resources for assessment

- decommissioning installed gaseous agent containers and actuation devices using decommissioning guidelines
- communicating and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills

EVIDENCE GUIDE

with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements cover water quality management and may include:

- clean-up protection
- complying with ODS and SGG legislation, codes and regulations, e.g. Ozone Protection and Synthetic Greenhouse Gas Management Act 1989
- preventing emissions of prescribed ODS and SGG extinguishing agents
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:

- angle grinders
- cutting and threading equipment
- elevated work platforms
- hand and power tools
- ladders
- scaffolds

RANGE STATEMENT

Special hazard extinguishing systems include:

- testing equipment
- welding equipment.
- carbon dioxide and other gases (such as inergen and argonite)
- chemical reaction and explosion suppression systems
- dry chemical
- foam
- prescribed ODS and SGG extinguishing agents (such as halon and NAF S-III)
- water
- water mist.

Materials include:

- actuating devices
- extinguishing agents, including prescribed ODS and SGG materials or other approved materials
- pipes
- sprinkler and delivery systems.

Actuation control devices (also known as actuators) may include:

- electrical operation by signal generated from control and indicating equipment (CIE) panel as part of a fire alarm detection system
- manual operation by direct push lever or pull cable system
- mechanical operation via signal from local control station or fire detector
- pneumatic operation from fire detector (typically heat).

Documentation may include:

- corrective action reports
- customer recommendation forms
- equipment recommendation forms
- expense claims
- job cards
- maintenance record system
- manufacturer system documentation
- product documentation
- service agreements
- test results and test reports.

Statutory and regulatory authorities include:

- statutory gasfitting authority
- statutory plumbing authority
- state or territory statutory authority.

RANGE STATEMENT

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- NFPA and Factory Mutual Performance based codes of practice
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing special hazard systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing domestic and residential life safety sprinkler systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment for installing domestic and residential life safety sprinkler systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of domestic and residential life safety sprinkler systems.</p>
2. Identify installation requirements.	<p>2.1. System requirements are identified from plans, specifications and standards.</p> <p>2.2. Materials selected are to comply with standards.</p> <p>2.3. Quantities of materials required are calculated from plans and specifications.</p> <p>2.4. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.</p>
3. Install and test system components.	<p>3.1. System is set out in accordance with plans, specifications and job instructions.</p> <p>3.2. Pipe supports are to comply with standards, plans and specifications.</p> <p>3.3. Fixings are installed to plans, specifications and manufacturer specifications.</p> <p>3.4. Assemblies, devices, alarms, piping and materials are installed in accordance with standards, plans and specifications.</p> <p>3.5. Jointing systems are installed in compliance with standards.</p> <p>3.6. Installed system is subjected to pressure testing in accordance with standards, plans and specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.7. Test data is recorded in format required by plans, specifications and quality assurance procedures.
4. Clean up.	<p>4.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory <i>statutory and regulatory authority</i> legislation.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. <i>Information</i> is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record test results in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- installing and testing a fire sprinkler system, including piping, control valve assemblies, actuating devices, alarms and sprinkler heads
- numeracy skills to apply to measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- components and materials relevant to installing domestic and residential life safety sprinkler systems
- function and operation of a range of alarms, actuating devices, sprinkler heads and valves
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual Performance based codes of practice
- pressure test systems and procedures
- process of installing domestic and residential life safety sprinkler systems
- relevant statutory and authority requirements related to installing domestic and residential life safety sprinkler systems
- SI system of measurement
- structural systems, building materials and building services
- understanding of fire rating
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test domestic and residential life safety sprinkler systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications of domestic fire sprinkler system for a single storey dwelling, install and test a domestic and residential life safety sprinkler system consisting of a water supply, piping, control valves, actuating devices, alarms and sprinkler heads to design criteria and standards, ensuring:
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including

RANGE STATEMENT

recognising and preventing hazards associated with:

- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- clean-up protection
- waste management.

Environmental requirements

cover water quality management and may include:

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:

- cutting and threading equipment
- elevated work platforms
- hand and power tools
- ladders
- silver brazing equipment
- testing equipment
- welding equipment.

Materials may include:

- actuating devices
- control valve assemblies
- local alarms
- post-chlorinated PVC (PVC-C), steel or copper pipes or other approved materials
- sprinkler heads.

Statutory and regulatory authorities include:

- statutory gasfitting authority
- statutory plumbing authority
- state or territory statutory authority.

RANGE STATEMENT

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- NFPA and Factory Mutual Performance based codes of practice
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing domestic and residential life safety sprinkler systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans, specifications, maintenance manuals, previous maintenance reports and equipment data are obtained.</p> <p>1.2. Safety (OHS) requirements associated with testing and maintaining fire hydrant and hose reel installations and workplace environmental requirements are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools, equipment and materials for testing and maintaining fire hydrant and hose reel installations, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient testing and maintenance of fire hydrant and hose reel installations.</p>
2. Perform routine maintenance.	<p>2.1. Maintenance tasks detailed in maintenance schedule are performed to specification.</p> <p>2.2. Mechanical equipment and system components are checked with appropriate instruments in accordance with standards and job specifications.</p> <p>2.3. Faulty items or components are identified and appropriate service procedure is selected.</p>
3. Repair and replace faulty components and test job.	<p>3.1. Equipment is safely isolated according to regulations and health and safety requirements.</p> <p>3.2. Faulty items or components are removed using appropriate tools, equipment and procedures.</p> <p>3.3. Replaceable items are selected from manufacturers' catalogue.</p> <p>3.4. Replacement or service items are fitted in accordance with manufacturer recommendations and site specifications.</p> <p>3.5. Adjustments are made to equipment or components to ensure specifications are met.</p> <p>3.6. Operational check of system is carried out to ensure compliance with job specifications.</p> <p>3.7. Maintenance report is documented in format required by maintenance specification.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared, with materials disposed of or recycled in accordance with state or territory <i>statutory and regulatory authority</i> legislation.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. <i>Information</i> is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record test results in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- conducting operational checks to confirm system is operating to specification
- diagnosing faults and undertaking necessary repairs or replacement of faulty components
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- function and operation of system components
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual Performance based codes of practice
- process of testing and maintaining fire hydrant and hose reel installations
- relevant statutory and authority requirements related to testing and maintaining fire hydrants and hose reel installations
- SI system of measurement
- structural systems, building materials and building services
- test apparatus and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Functional area

Functional area

CPCPFS3020A Conduct basic functional testing of water-based fire-suppression systems

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to complete weekly, monthly, and six-monthly inspection and testing procedures to verify that water-based fire-suppression systems function as intended. The unit involves working safely, isolating plant and interfaces, conducting compliance tests, visually inspecting, identifying non-compliance defects, fulfilling mandatory reporting requirements, and resetting water-based fire-suppression systems.

The fire protection technician is not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state or territory regulations).

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Application of the Unit

Application of the unit

This unit of competency supports fire protection technicians responsible for functional testing of water-based fire suppression systems.

It does not apply to load or flow testing of water-based fire-suppression systems or pressure reducing or limiting valves.

Individuals operate within the scope of their defined roles and responsibilities and perform the functional tests as part of their work duties and according to work procedures and relevant Australian standards, to verify that equipment functions as intended.

The unit must be applied strictly according to relevant state or territory legislative and industry requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply compliance requirements to service operations.	<p>1.1. Legislative and industry requirements are interpreted, confirmed and applied to organisational requirements.</p> <p>1.2. Preparations are made for the conduct of functional testing according to organisational requirements.</p>
2. Conduct inspections and record results.	<p>2.1. Workplace procedures are followed and risk control measures applied when inspecting water-based fire-suppression systems.</p> <p>2.2. Key control valves are identified and their functions determined with reference to manufacturer instructions to allow routine inspection activities according to legislative and industry requirements.</p> <p>2.3. Plant and other system interfaces that must be isolated to allow the inspection activities are identified.</p> <p>2.4. Visual inspections are conducted as described in legislative and industry requirements.</p> <p>2.5. Inspection results are recorded according to legislative and industry requirements.</p> <p>2.6. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Conduct testing and record results.	<p>3.1. Test methods are implemented according to legislative and industry requirements.</p> <p>3.2. Routine testing procedures are conducted according to the required frequency schedule to verify the system functions as intended.</p> <p>3.3. Test results are compared with legislative and industry requirements.</p> <p>3.4. Results are documented according to legislative and industry requirements.</p> <p>3.5. Report is prepared and forwarded to relevant persons for action according to legislative and industry requirements.</p> <p>3.6. System is reinstated according to organisational requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- customer service skills
- language, literacy and numeracy skills to:
 - communicate with others clearly and concisely, verbally and in writing
 - record and report information neatly and legibly
 - read and apply work instructions and specifications
 - read and record measurements
- planning and organising skills to:
 - estimate time to complete activities
 - prioritise tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- technical skills to:
 - identify system components
 - operate valves, switches and levers to test system operation
 - work safely when applying workplace housekeeping procedures

Required knowledge

- basic principles of operation and purpose of components of water-based fire suppression systems:
 - accelerators and exhausters
 - alarm 'dry' (i.e. deluge) control valve assembly components
 - alarm 'wet' control valve assembly components
 - batteries
 - circulation and system pressure relief valves
 - isolation and control valves
 - pressure and flow switches
 - pressure gauges
 - pump controllers and ancillary equipment for control and indication
 - pumpsets
 - retard chambers
 - solenoid valves
 - sprinkler heads
 - system block plans
 - system pressure gauge schedules
 - water motor alarm gong
 - water supply tanks: atmospheric, pressure and suction with priming tanks

REQUIRED SKILLS AND KNOWLEDGE

- general operation of water-based systems
- general operation of a gauge
- key features of legislation, regulations and codes applicable to inspecting and testing water-based fire-suppression systems
- metric and imperial pressure gauge readings
- systems and components:
 - air compressors fitted to systems
 - circulation and system pressure relief valves
 - controls on the pumpset controller panel:
 - fuel gauges
 - indicators
 - main isolating switch
 - flow switches and associated testing equipment
 - isolating valves associated with water-based fire-suppression system
 - main water supply underground key-operated valve location
 - pressure gauges
 - pumpsets associated with water-based fire-suppression system
 - pump starting switches
 - suction inlet strainers or screen on a static water supply for the water-based fire-suppression system
 - system block plan requirements for design details of systems installed since 1972
 - system main alarm bell and/or alarm strobe indicating building entry point for emergency personnel
 - system pressure gauge schedules, where required
 - system pressure maintenance or jacking pumps
 - water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication/interface
 - water supply tanks, water level indicators and automatic inflow valves
- terminology used in relation to water-based fire-suppression system
- water supply tanks:
 - atmospheric
 - pressure
 - suction with priming tanks
- water-based systems applications, as defined in AS 2118 Automatic fire sprinkler systems

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment This unit of competency could be assessed by observation of practical demonstration of basic functional testing of a range of water-based fire-suppression systems.

If all relevant aspects of evidence cannot be demonstrated in a work environment, the remainder should be assessed through realistic simulations, projects, or oral questioning on case study scenarios.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

In particular the person should demonstrate the ability to:

- apply sustainability principles and concepts when conducting basic functional testing of water-based fire-suppression systems
- apply safety requirements throughout the work sequence, including electrical safety, personal protective clothing and equipment
- complete tasks according to the relevant Australian standard
- conduct inspection and testing tasks specified in the weekly, monthly and six-monthly frequency schedule
- perform functional testing of the following water-based fire-suppression systems:
 - alternate wet or general systems with no pumpset system
 - alternate wet or general systems with pumpset system and tank
 - residential or domestic systems
 - combined sprinkler and hydrant systems
 - deluge systems
 - pre-action or recycle systems.

Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- adequate water supply and draining or recycling arrangements to operate water-based fire-suppression systems
- operational water-based fire-suppression systems
- pictures and cut-away sections of control assemblies and valves to show operation.

Method of assessment Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPFS3021A Inspect and test fire pumpsets
- CPCPFS3022A Conduct annual functional testing of complex water-based fire-suppression systems
- CPCPFS3023A Conduct functional water flow testing.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- | | |
|---|--|
| <p><i>Legislative and industry requirements</i> may include:</p> | <ul style="list-style-type: none"> • dangerous goods regulations • licensing arrangements • environmental regulations • OHS legislation, regulations and codes • relevant commonwealth and state or territory building Acts, regulations and codes, such as Building Code of Australia (BCA) • relevant Australian standards, such as: <ul style="list-style-type: none"> • AS 1851 Maintenance of fire protection systems and equipment • note: Australian standards are frequently revised and users must always check for currency and amendments • other relevant legislation relating to fire suppression equipment, including: <ul style="list-style-type: none"> • international shipping codes • marine codes for different Australian states • requirements of Australian petroleum industry. |
| <p><i>Organisational requirements</i> may be located in quality assurance and procedures manuals and may include:</p> | <ul style="list-style-type: none"> • client-specific contractual requirements • documentation and information systems and processes • legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations • legislation relevant to service operation • use of electronic job scheduling and communication devices. |

RANGE STATEMENT

- activation small bore pipework to the alarm and control valve assembly.
- System interfaces* may include:
 - components, such as:
 - flow switches
 - pressure switches
 - tamper switches
 - valve positioning switches
 - devices that operate signals between the water-based fire-suppression system and other services, such as:
 - building heating, ventilation and cooling (HVAC) services
 - fire brigade monitoring providers
 - other life safety systems, such as:
 - warning systems
 - fire indicator panel (FIP).
- Sustainability principles and concepts:*
 - cover the social, economic and environmental use of resources to meet current and future needs
 - may include:
 - efficient use of material
 - efficient energy and water use
 - rain harvesting and disposal.
- Testing procedures* may include:
 - organisational procedures for conducting testing activities according to AS 1851 Maintenance of fire protection systems and equipment, including procedures for:
 - checking desiccant condition (air dryer or crystals, water separator bowl) and cleaning or replacing as required
 - checking oil level and visually assessing condition of oil on air compressor.
- Frequency schedules* may include:
 - schedules of work conducted at regular frequencies as defined in AS 1851 (general section) that relate to the work scope for weekly, monthly, and six-monthly inspection and testing schedules.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to complete weekly, monthly, and six-monthly inspection and testing procedures to verify that fire pumpsets function as intended. The unit covers working safely, conducting compliance tests, visually inspecting, and identifying non-compliance defects. It involves mandatory reporting requirements, as well as general isolations and resetting fire pumpsets.

The fire protection technician is not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state or territory regulations).

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Application of the Unit

Application of the unit

This unit of competency supports fire protection technicians responsible for inspecting and testing fire pumpsets.

Individuals operate within the scope of their defined roles and responsibilities and perform the inspections and testing as part of their work duties to verify that equipment functions as intended, according to work procedures and relevant Australian standards.

The unit must be applied strictly according to relevant state or territory legislative and industry requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply compliance requirements to service operations.	<p>1.1. <i>Legislative and industry requirements</i> are interpreted, confirmed and applied to <i>organisational requirements</i>.</p> <p>1.2. Location and equipment are <i>checked for compliance</i> with legislative and industry requirements, and <i>action</i> is taken according to organisational requirements.</p> <p>1.3. Preparations are made for functional inspection and testing according to organisational requirements.</p>
2. Conduct inspections and record results.	<p>2.1. Workplace procedures are followed and risk control measures are applied when inspecting fire <i>pumpsets</i>.</p> <p>2.2. Fire pumpset controls are identified and their function determined, with reference to manufacturer instructions in order to conduct inspections and tests according to legislative and industry requirements.</p> <p>2.3. Plant and other <i>system interfaces</i> that must be isolated to allow the inspection activities are identified.</p> <p>2.4. Visual inspections are conducted as described in legislative and industry requirements.</p> <p>2.5. Fire pumpset inspection results are recorded against requirements according to legislative and industry requirements.</p> <p>2.6. <i>Sustainability principles and concepts</i> are applied to work preparation and application.</p>
3. Conduct tests and record results.	<p>3.1. Methods for tests are implemented according to legislative and industry requirements.</p> <p>3.2. Routine <i>testing procedures</i> are conducted according to the required <i>frequency schedule</i> to verify that the system functions as intended.</p> <p>3.3. Test results are compared with legislative and industry requirements.</p> <p>3.4. Results are documented according to legislative and industry requirements.</p> <p>3.5. Report is completed and forwarded to relevant persons for action according to legislative and industry requirements.</p> <p>3.6. System is reinstated according to organisational requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- language, literacy and numeracy skills to:
 - communicate with others clearly and concisely, verbally and in writing
 - read and comply with work instructions and specifications
 - read and record measurements
 - record and report information neatly and legibly
- planning and organising skills to:
 - estimate time to complete activities
 - prioritise tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- customer service skills
- technical skills to:
 - operate valves, switches and levers to test system operation
 - use hand and power tools
 - work safely when performing work tasks, including workplace housekeeping procedures

Required knowledge

- application of fire pumpsets as defined in AS 2941 Fixed fire protection installations - Pumpset systems and AS 2118 Automatic fire sprinkler systems, and used in systems
- basic principles of hydraulics:
 - basic head or pressure calculation for height per metre
 - metric and imperial pressure scales
 - properties of water:
 - three states of matter
 - incompressible
- basic principles of operation and purpose of components:
 - accumulators
 - batteries
 - circulation and system pressure relief valves
 - compression ignition pumpset drivers
 - electrical pumpset drivers

REQUIRED SKILLS AND KNOWLEDGE

- engine starting and control or monitor batteries
- header tanks
- impellers
- isolating valves associated with pumpsets
- jacking or jockey pumps
- multi-stage pumps
- pressure gauges
- pump controllers and ancillary equipment for control and indications
- pump drivers
- pump glands and seals
- pump performance curves
- pump starting devices
- pumpset couplings
- safety guards
- system pressure gauge schedules
- water supply tanks:
 - atmospheric
 - pressure
 - suction with priming tanks
- general operation of pumpsets:
 - cooling systems
 - design speed requirements
 - exhaust systems
 - fuel systems
 - full load operation
 - normal running operation
 - pre-start and post-start checks
 - pumpset controllers
 - starting and stopping methods
 - suction and discharge connections and pressure readings
- terminology used in relation to pumpsets

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction

EVIDENCE GUIDE

with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment This unit of competency could be assessed by observation of practical demonstration of inspecting and testing a range of types of fire pumpsets at customers' premises.

Critical aspects for assessment and evidence required to demonstrate competency in this unit A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

In particular the person should demonstrate the ability to:

- apply sustainability principles and concepts when inspecting and testing fire pumpsets
- apply safety requirements throughout the work sequence, including electrical safety, personal protective clothing and equipment
- conduct inspection and testing for the scheduled weekly, monthly and six-monthly activities according to the relevant Australian standard and on the following pumpsets:
 - compression ignition pumpset used as a booster pumpset on a sprinkler/hydrant system fed from:
 - town mains supply
 - static water supply
 - dual drive electric and compression ignition pumpset
 - electrical pumpset used as a:
 - booster pumpset on a sprinkler/hydrant system fed from a town mains supply or a static water supply
 - jacking pump or hose reel pump.

Context of and specific resources for assessment Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- adequate water supply and draining or recycling arrangements to operate pumpsets under full load
- operational pumpsets
- pictures and cut-away sections of pumpsets to show operation.

Method of assessment Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the

EVIDENCE GUIDE

Property Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPFS3020A Conduct basic functional testing of water-based fire-suppression systems
- CPCPFS3022A Conduct annual functional testing of complex water-based fire-suppression systems
- CPCPFS3023A Conduct functional water flow testing.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative and industry requirements may include:

- dangerous goods regulations
- environmental regulations
- licensing arrangements

RANGE STATEMENT

- OHS legislation, regulations and codes
- relevant commonwealth and state or territory building Acts, regulations and codes, such as Building Code of Australia (BCA)
- relevant Australian standards, such as:
 - AS 1851 Maintenance of fire protection systems and equipment
 - note: Australian standards are frequently revised and users must always check for currency and amendments
- other relevant legislation relating to fire protection equipment, including:
 - international shipping codes
 - marine codes for different Australian states
 - requirements of Australian petroleum industry.

Organisational requirements may be located in quality assurance and procedures manuals and may include:

- client-specific contractual requirements
- documentation and information systems and processes
- legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to service operation
- use of electronic job scheduling and communication devices.

Checking for compliance may include:

- undertaking commissioning tests detailed in relevant Australian standards and manufacturers' documents to verify performance of an installed, repaired or altered piece of equipment or system
- applying inspections, tests and survey requirements to equipment and systems, according to relevant Australian standards, to determine that they are:
 - capable of operating as intended when originally installed
 - still suitable for the fire hazard or risk being protected, as no change in occupancy or use of the area protected has occurred since the equipment or system was installed or last modified
 - providing the coverage and protection needed to meet original design and performance requirements
- reviewing documentation to verify that installed systems comply with legislative and industry requirements, such as:
 - building's essential services or fire safety measures

RANGE STATEMENT

- listing
 - relevant commonwealth and state or territory building Acts, regulations and codes
 - relevant Australian standards listed on essential service listing
 - environmental regulations.
- Action** may include:
 - advising client
 - documenting non-compliance
 - making equipment safe
 - reporting, as required.
- Pumpset** types may include:
 - those used in fire protection systems that comply with Australian standards, such as:
 - AS 1851 Maintenance of fire protection systems and equipment
 - AS 2118 Automatic fire sprinkler systems
 - AS 2419 Fire hydrant installations
 - AS 2941 Fixed fire protection installations - Pumpset systems
 - AS CA-1962 Automatic sprinkler installations
 - NFPA 20 Standard for the installation of stationary fire pumps for fire protection (US).
- System interfaces** may include:
 - components, such as:
 - flow switches
 - pressure switches
 - tamper switches
 - valve positioning switches
 - devices that operate signals between the pumpset and other services, such as:
 - building monitoring services
 - other life safety systems, such as:
 - warning systems
 - fire indicator panel (FIP)
 - security monitoring services.
- Sustainability principles and concepts:**
 - cover the social, economic and environmental use of resources to meet current and future needs
 - may include:
 - efficient use of material
 - efficient energy and water use
 - rain harvesting and disposal.

RANGE STATEMENT

Testing procedures
include:

- activities that comply with requirements of AS 1851 Maintenance of fire protection systems and equipment to verify the following pump functions:
 - pump starts at correct pressure
 - pump supplies correct kPa at no flow condition requirements.

Frequency schedules
include:

- schedules of work conducted at regular frequencies as defined in AS 1851 (general section) that relate to the work scope for weekly, monthly, and six-monthly inspection and testing schedules.

PERFORMANCE CRITERIA

industry requirements.

3.6. Report is prepared and forwarded to persons for action according to legislative and industry requirements.

3.7. System is reinstated according to organisational requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- customer service skills
- language, literacy and numeracy skills to:
 - communicate with others clearly and concisely, verbally and in writing
 - read and comply with work instructions and specifications
 - read and record measurements
 - record and report information neatly and legibly
- planning and organising skills to:
 - estimate time to complete activities
 - prioritise tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- technical skills to:
 - operate valves, switches and levers to test system operation
 - work safely when applying workplace housekeeping procedures

Required knowledge

- definitions of basic principles of operation and purpose of components of complex water-based fire protection systems
- general operation of a gauge
- general operation of complex water-based fire-suppression systems
- metric and imperial pressure gauge readings
- systems:
 - air compressors fitted to systems
 - circulation and system pressure relief valves

REQUIRED SKILLS AND KNOWLEDGE

- controls on the pumpset controller panel:
 - fuel gauges
 - indicators
 - main isolating switch
- flow switches and associated testing equipment
- isolating valves associated with water-based fire-suppression system
- pressure gauges
- pressure reducing equipment
- pumpsets associated with water-based fire-suppression system
- pump starting switches
- purpose and key requirements of system block plan for installations installed since 1972
- suction inlet strainers and screens on a static water supply for water-based fire-suppression system
- system main alarm bell and/or alarm strobe indicating building entry point for emergency personnel
- system pressure gauge schedules, where required
- water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication/interface
- water supply tanks, water level indicators and automatic inflow valves
- water supply underground key-operated valve location
- terminology used in relation to water-based fire-suppression systems
- water-based fire-suppression system applications as defined in AS 2118 Automatic fire sprinkler systems or AS 2419 Fire hydrant installations

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment This unit of competency could be assessed by observation of practical demonstration of the inspection and testing procedures to verify that complex water-based fire-suppression system equipment functions as intended.

Critical aspects for assessment and evidence required to demonstrate competency in this unit A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

In particular the person should demonstrate the ability to:

- apply sustainability principles and concepts when conducting annual functional testing of complex water-based fire-suppression systems
- apply safety requirements throughout the work sequence, including electrical safety, personal protective clothing and equipment
- conduct relevant annual inspection and test requirements (other than water flow testing) according to the current Australian standard on water-based fire suppression systems, including complex components for the following systems:
 - general sprinkler systems with no pumpset system
 - general sprinkler systems with pumpset system and tank
 - combined sprinkler and hydrant systems
 - deluge systems
 - pre-action or recycle systems
 - pressure reducing valves
 - pressure relief valves
- perform an installation and design survey on a Class 5 to 9 building of at least 5 stories or greater than 10,000 square metre building to produce an inspection report on:
 - pipework external condition
 - sprinkler head condition
 - sprinkler head obstructions
 - sprinkler head location and spacing
 - sprinkler head compatibility and ambient conditions

EVIDENCE GUIDE

(RTI and sprinkler head and spray pattern)

- external sprinkler requirements
- design standard suitable for current building occupation requirements, such as classification and storage heights.

Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- adequate water supply and draining or recycling arrangements to operate water-based fire-suppression system
- necessary tools, specialist equipment, manuals and relevant documentation
- operational water-based fire-suppression system
- pictures and cut-away sections of control assemblies and valves to show operation
- training and assessment record book.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination

EVIDENCE GUIDE

with other units relevant to the job function, for example:

- CPCPFS3020A Conduct basic functional testing of water-based fire-suppression systems
- CPCPFS3021A Inspect and test fire pumpsets
- CPCPFS3023A Conduct functional water flow testing.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative and industry requirements may include:

- dangerous goods regulations
- environmental regulations
- licensing arrangements
- OHS legislation, regulations and codes
- relevant commonwealth and state or territory building Acts, regulations and codes, such as Building Code of Australia (BCA)
- relevant Australian standards, such as:
 - AS 1851 Maintenance of fire protection systems and equipment
 - note: Australian standards are frequently revised and users must always check for currency and amendments
- other relevant legislation relating to fire protection equipment, including:
 - international shipping codes
 - marine codes for different Australian states
 - requirements of Australian petroleum industry.

Organisational requirements may be located in quality assurance and procedures manuals and may include:

- client-specific contractual requirements
- documentation and information systems and processes
- legal and organisational policy and guidelines
- legislation relevant to service operation
- personnel practices and guidelines outlining work roles, responsibilities and delegations
- use of electronic job scheduling and communication devices.

RANGE STATEMENT

Checking for compliance may include:

- applying inspections, tests and survey requirements to equipment and systems, according to relevant Australian standards, to determine that they are:
 - capable of operating as intended when originally installed
 - still suitable for the fire hazard or risk being protected, as no change in occupancy or use of the area protected has occurred since the equipment or system was installed or last modified
 - providing the coverage and protection needed to meet original design and performance requirements
- reviewing documentation to verify that installed systems comply with legislative and industry requirements, such as:
 - building's essential services or fire safety measures listing
 - relevant commonwealth and state or territory building Acts, regulations and codes
 - relevant Australian standards listed on essential service listing
 - environmental regulations.

Action may include:

- advising client
- documenting non-compliance
- making equipment safe
- reporting, as required.

Annual functional testing:

- is inspection, testing and surveying according to AS 1851 Maintenance of fire protection systems and equipment for water-based fire-suppression systems
- includes:
 - annual frequency inspection, testing and surveying activities, except water flow proving testing
 - operating:
 - pressure reducing valves to verify operation is at required pressures
 - pressure relief valves to verify operation is at required pressures
 - accelerator/exhauster and double interlock valves to verify operation is at required pressures and delivery time on dry pipe or pre-action systems.

Complex components may include:

- components of a water-based fire-suppression system associated with:
 - double interlock systems
 - pressure reducing systems
 - accelerator/exhauster systems.

RANGE STATEMENT

- Water-based fire-suppression systems*** include systems defined in:
- AS 2118 Automatic fire sprinkler systems (known as the SAA code for automatic fire sprinkler systems)
 - AS 2419 Fire hydrant installations, including systems such as:
 - alternate wet and dry systems
 - combined sprinkler and hydrant systems
 - deluge systems
 - dry systems
 - hydrant systems
 - pre-action or recycle systems
 - residential and domestic systems
 - tail-end systems.
- Key control valves*** may include those:
- specified in AS 2118 Automatic fire sprinkler systems
 - installed in the:
 - associated control valve trim
 - activation small bore pipework to the alarm and control valve assembly.
- Installation and design survey*** may include:
- annual survey required by AS 1851 Maintenance of fire protection systems and equipment to determine that water-based fire-suppression system's design and installation are not impaired by changes to:
 - building structure
 - occupant use
 - environment
 - conducted from floor level to identify:
 - design standard suitable for current building occupation requirements:
 - building classification
 - storage heights
 - external sprinkler requirements
 - pipework corrosion or damage
 - sprinkler head:
 - compatibility and ambient conditions
 - head condition
 - head location and spacing
 - head obstructions
 - spray pattern
 - temperature rating and response time index (RTI).
- Sustainability principles***
- cover the social, economic and environmental use of resources to meet current and future needs

RANGE STATEMENT

and concepts:

- may include:
 - efficient use of material
 - efficient energy and water use
 - rain harvesting and disposal.

System interfaces may include:

- components, such as:
 - flow switches
 - pressure switches
 - tamper switches
 - valve positioning switches
- devices that operate signals between the water-based fire-suppression system and other services, such as:
 - building heating, ventilation and cooling (HVAC) services
 - fire brigade monitoring providers
 - other life safety systems, such as:
 - warning systems
 - fire indicator panel.

Frequency schedules are:

- schedules of work conducted at regular frequencies as defined in AS 1851 Maintenance of fire protection systems and equipment (general section) that relate to the work scope for annual inspection, and testing and survey maintenance schedules.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to complete functional water flow proving and load tests on water-based fire-suppression systems. The unit covers working safely while conducting water flow testing. It involves satisfying mandatory reporting requirements as well as general isolations and resetting the water-based fire-suppression system.

The fire protection technician is not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state or territory regulations).

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Application of the Unit

Application of the unit

This unit of competency supports fire protection technicians responsible for functional testing of water-based fire protection systems.

Individuals operate within the scope of their defined roles and responsibilities and perform the functional water flow tests as part of their work duties to verify that equipment functions as intended, according to work procedures and relevant Australian standards.

The unit must be applied strictly according to relevant state or territory legislative and industry requirements.

Employability Skills Information**Employability skills** This unit contains employability skills.**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply compliance requirements to service operations.	<p>1.1. <i>Legislative and industry requirements</i> are confirmed and applied to <i>organisational requirements</i>.</p> <p>1.2. Location and equipment are <i>checked for compliance</i> with legislative and industry requirements and <i>action</i> is taken according to organisational requirements.</p>
2. Prepare system and equipment to conduct functional water flow proving test.	<p>2.1. Workplace procedures are followed and risk control measures applied when setting up on <i>water-based fire-suppression systems</i>.</p> <p>2.2. Appropriate <i>test points</i> are identified.</p> <p>2.3. <i>Water flow test equipment</i> required is identified according to manufacturer instructions and legislative and industry requirements.</p> <p>2.4. Required water flow test equipment is attached according to manufacturer instructions and organisational requirements.</p> <p>2.5. Relevant plant and other <i>system interfaces</i> are identified and isolated according to organisational requirements.</p> <p>2.6. Water supply isolating valves are located, types of valves identified, and valves operated as required to isolate water supplies according to organisational requirements.</p> <p>2.7. <i>Sustainability principles and concepts</i> are applied to work preparation and application.</p>
3. Conduct functional water flow proving and load test, and record results.	<p>3.1. Test methods are implemented according to <i>frequency schedule</i> and legislative and industry requirements.</p> <p>3.2. Tests are conducted on each water supply, as required, to verify that systems function as intended.</p> <p>3.3. Test results are compared with legislative and industry requirements.</p> <p>3.4. Results are documented according to legislative and industry requirements.</p> <p>3.5. Report is prepared and forwarded to relevant persons for action according to legislative and industry requirements.</p> <p>3.6. System is reinstated according to organisational requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- language, literacy and numeracy skills to:
 - communicate with others clearly and concisely, verbally and in writing
 - interpret data from a range of flow testing equipment
 - read, understand and comply with work instructions and specifications
 - read, understand and record measurements
 - record and report information neatly and legibly
- planning and organising skills to:
 - estimate time to complete activities
 - prioritise tasks
- technical skills to:
 - attach flow and pressure test equipment according to manufacturer specifications
 - check test equipment for calibration and operation according to manufacturer specifications
 - interconnect test equipment into recording devices
 - operate valves, switches and levers to test system operation
 - use:
 - portable tachometer on pump shaft to read speed
 - clamp or tong current meter to read motor operating current
 - throttling control valve to control water flow
 - work safely when applying workplace housekeeping procedures

Required knowledge

- basic principles of hydraulics
- basic principles of operation and purpose of components of a water-based fire protection system:
 - alarm 'dry' (i.e. deluge) control valve assembly components
 - alarm 'wet' control valve assembly components
 - booster valve assembly
 - circulation and system pressure relief valves
 - compression ignition engine governing controls
 - differential pressure gauges
 - hand tachometers

REQUIRED SKILLS AND KNOWLEDGE

- hydrant landing valve assembly
- isolation and control valves
- manometers
- orifice plates
- Pitot tube water flow test instrument
- pressure and flow switches
- pressure gauges
- pump controllers and ancillary equipment for control and indication
- pumpsets
- solenoid valves
- system block plans
- system pressure gauge schedules
- throttling valves
- ultrasonic flow measuring equipment
- ultrasonic thickness gauges
- Venturi devices
- water supply tanks: atmospheric, pressure and suction with priming tanks
- general operation of a pumpset, covering:
 - compression ignition engine governing control devices
 - cooling systems
 - design speed requirements
 - exhaust systems
 - fuel systems
 - full load operation
 - normal running operation
 - pre-start and post-start checks
 - pumpset performance curve
 - pumpset controllers
 - starting and stopping methods
 - suction and discharge connections and pressures readings
- general operation of water-based fire-suppression systems
- terminology used in relation to water-based fire-suppression systems
- water-based fire-suppression system components:
 - air compressors fitted to control valves
 - circulation and system pressure relief valves
 - controls on the pumpset controller panel:
 - fuel gauges
 - indicators

REQUIRED SKILLS AND KNOWLEDGE

- main isolating switch
- electric motor specification plate
- flow switches and associated testing equipment
- isolating valves associated with water-based fire-suppression system
- mains water supply underground key-operated valve location
- most hydraulically disadvantaged testing point on a system hose reel and hydrant system
- pressure gauges
- pumpsets associated with water-based fire-suppression systems
- pump starting switches
- suction inlet strainers or screen on a static water supply for water-based fire-suppression system
- system block plans
- system main alarm bell or alarm strobe indicating building entry point for emergency personnel
- system pressure gauge schedules
- water supply tanks, water level indicators and automatic inflow valves
- water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication or interface
- water-based fire-suppression system applications, as defined in AS 2118

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment This unit of competency could be assessed by observation of practical demonstration of basic functional water flow testing of a range of water-based fire-suppression systems.

Critical aspects for assessment and evidence required to demonstrate competency in this unit A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

- In particular the person should demonstrate the ability to:
- apply sustainability principles and concepts when conducting functional water flow testing
 - apply safety requirements throughout the work sequence, including electrical safety, personal protective clothing and equipment
 - conduct functional water-flow testing of the following water-based fire-suppression systems:
 - deluge systems
 - hydrant systems
 - pre-action or recycle systems
 - residential and domestic systems
 - wet and general systems with no pumpset system
 - wet and general systems with pumpset system and tank.

Context of and specific resources for assessment Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- adequate water supply and draining or recycling arrangements to operate the water-based fire-suppression system
- calibrated water flow measuring and pressure gauge equipment
- operational water-based fire-suppression systems.

Method of assessment Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Property Services Training Package

EVIDENCE GUIDE

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPFS3021A Inspect and test fire pumpsets.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative and industry requirements may include:

- relevant commonwealth and state or territory building Acts, regulations and codes, such as Building Code of Australia (BCA)
- relevant Australian standards, such as:
 - AS 1851 Maintenance of fire protection systems and equipment
 - note: Australian standards are frequently revised and users must always check for currency and amendments
- relevant legislation relating to testing of fire protection

RANGE STATEMENT

equipment, including:

- dangerous goods regulations
- environmental regulations
- international shipping codes
- licensing arrangements
- marine codes for different Australian states
- occupational health and safety (OHS) legislation, regulations and codes
- requirements of Australian petroleum industry.

Organisational requirements may be located in quality assurance and procedures manuals and may include:

- client-specific contractual requirements
- documentation and information systems and processes
- legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to service operation
- using electronic job scheduling and communication devices.

Checking for compliance may include:

- undertaking commissioning tests detailed in relevant Australian standards and manufacturers' documentation to verify performance of an installed, repaired or altered piece of equipment or system
- applying inspections, tests and survey requirements to equipment and systems, according to relevant Australian standards, to determine that they are:
 - capable of operating as intended when originally installed
 - still suitable for the fire hazard or risk being protected, as no change in occupancy or use of the area protected has occurred since the equipment or system was installed or last modified
 - providing the coverage and protection needed to meet original design and performance requirements
- reviewing documentation to verify that installed systems comply with legislative and industry requirements, such as:
 - building's essential services or fire safety measures listing
 - environmental regulations
 - relevant commonwealth and state or territory building Acts, regulations and codes
 - relevant Australian standards listed on essential service listing.

Action may include:

- advising client
- documenting non-compliance
- making equipment safe

RANGE STATEMENT

Water-based

fire-suppression systems

are defined in AS 2118 Automatic fire sprinkler systems and AS 2419 Fire hydrant installations, and may include:

- reporting, as required.
- alternate wet and dry systems
- combined sprinkler and hydrant systems
- deluge systems
- dry systems
- hydrant systems
- pre-action or recycle systems
- residential and domestic systems
- tail-end systems
- alternate wet and general systems.

Test points are:

- specific locations where test equipment can be attached to measure and record water flow and pressure to meet legislative and industry requirements.

Water flow test equipment ***may include:***

- differential pressure gauges
- hand tachometers
- manometers
- orifice plates
- Pitot tube water flow test instrument
- ultrasonic flow measuring equipment
- ultrasonic thickness gauges
- Venturi devices.

System interfaces may include:

- components such as flow, pressure, tamper and valve positioning switches that operate signals between the water-based fire-suppression system and other services, such as:
 - building heating, ventilation and cooling (HVAC) services
 - fire brigade monitoring providers
 - other life safety systems, such as:
 - warning systems
 - fire indicator panel.

Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
 - efficient use of material
 - efficient energy and water use
 - rain harvesting and disposal.

Frequency schedules ***include:***

- schedules conducted at regular frequencies, as defined in AS 1851, and relating to weekly, monthly, and six-monthly inspection and testing activities.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with the workplace environment and commissioning fire alarm and detection systems are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools and equipment for commissioning fire alarm and detection systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient commissioning process.</p>
2. Identify system requirements.	<p>2.1. System design requirements are identified and confirmed from job specifications and in accordance with relevant standards.</p> <p>2.2. Requirements of fire alarm and detection system commissioning are identified in accordance with relevant Australian standards, statutory and regulatory authority requirements and job specifications.</p>
3. Test and commission system.	<p>3.1. Fire alarm and detection systems are checked to ensure type and installation conform to relevant Australian standard, job specifications, manufacturer recommendations and authorities' requirements.</p> <p>3.2. Operation of system is tested in accordance with job specifications, manufacturer recommendations and authorities' requirements and adjusted as required.</p> <p>3.3. System is commissioned and maintained to ensure correct operation in accordance with relevant standards, and manufacturer and job specifications.</p>
4. Clean up work area.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with federal, state and territory legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p>

ELEMENT**PERFORMANCE CRITERIA**

4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to be able to coordinate and action tasks, work with others and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- components and materials of fire alarm and detection systems
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing, testing and commissioning fire alarm and detection systems
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to commissioning fire alarm and detection systems, including automatic smoke and heat venting systems, air handling systems, and emergency warning and intercommunication systems
- SI system of units
- sources of information and processes for calculating material requirements
- standards applicable to the service
- systems operations and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing, planning and conducting system commissioning procedures for one fire alarm and detection system and completing all associated documentation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to commissioning fire alarm and detection systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- commissioning one fire alarm and detection system, including one smoke and one heat detector, plus an actuator and control and indicating panel, ensuring:
 - correctly identifying location, design specification and details of the system
 - correctly selecting and using appropriate processes, tools and equipment
 - completing all work to specification
 - complying with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials, including hazardous materials and substances
- hazard control
- personal protective equipment, including that prescribed under legislation, regulations and workplace policies and practices

RANGE STATEMENT

- safe operating procedures, including recognising and preventing hazards associated with:
 - other machines
 - surrounding structure and facilities
 - trip hazards
 - underground services
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - use of firefighting equipment
 - use of first aid equipment
 - workplace environment and safety.
- Quality assurance*** requirements may include:
- Environment Protection Authority
 - internal company quality assurance policy and risk management strategy
 - International Standards Organisation
 - site safety plan
 - workplace operations and procedures.
- Tools and equipment*** may include:
- hand and power tools
 - test equipment.
- Commissioning fire alarm and detection systems*** covers:
- testing and commissioning fire alarm and detection systems, including:
 - alarm volume
 - annunciators
 - audible, visible and combination alarms
 - controls
 - coordination of alarm signals with other services
 - dispatching systems
 - heat and smoke detectors
 - public reporting systems
 - signal transmission
 - tactile alarm appliances for people with disabilities
 - zone alarms.
- Relevant standards*** include:
- AS1670 Fire detection, warning, control and

RANGE STATEMENT

<i>Statutory and regulatory authority</i> includes:	intercom systems - system design, installation and commissioning
	• AS2220 Emergency warning and intercommunication systems in buildings
	• AS4428 Fire detection, warning, control and intercom systems - control and indicating equipment.
	• Building Code of Australia
	• state or territory regulations.

Tools and equipment for commissioning firefighting appliances, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient commissioning process.</p>
2. Identify system requirements.	<p>2.1. Equipment requirements are identified and confirmed from job specifications and in accordance with relevant standards.</p> <p>2.2. Requirements of firefighting appliance commissioning are identified in accordance with standards, statutory and regulatory authority requirements and job specifications.</p>
3. Test and commission system.	<p>3.1. Firefighting appliances are checked to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.</p> <p>3.2. Operation of appliances is tested in accordance with standards, job specifications, manufacturer recommendations and authorities' requirements and is adjusted as required.</p> <p>3.3. Appliances are commissioned and maintained to ensure correct operation in accordance with standards, and manufacturer and job specifications.</p>
4. Clean up work area.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with federal, state and territory legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p>

ELEMENT**PERFORMANCE CRITERIA**

4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- Australian standards applicable to relevant appliances
- components and materials of firefighting equipment and appliances
- job safety analysis (JSA) and safe work method statements (SWMS)
- pressure requirements of hose reel systems
- process of installing, testing and commissioning firefighting equipment and appliances
- relevant statutory and authority requirements related to commissioning firefighting equipment and appliances
- SI system of units
- sources of information and processes for the calculation of requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing, planning and conducting commissioning procedures for firefighting appliances for a residential building of four storeys and completing all associated documentation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the commissioning of firefighting appliances
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- commissioning firefighting appliances, including portable fire appliances, wheeled fire extinguishers, delivery lay flat hose and fire hose reel systems, ensuring:
 - correctly identifying location, design specification and details of system
 - correctly selecting and using appropriate processes, tools and equipment
 - completing all work to specification
 - complying with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with federal, state and territory legislation and regulations and may include:

- handling of materials, including hazardous materials and substances
- hazard control
- personal protective equipment, including that prescribed under legislation, regulations and workplace policies and practices

RANGE STATEMENT

	<ul style="list-style-type: none"> • safe operating procedures, including recognising and preventing hazards associated with: <ul style="list-style-type: none"> • other machines • surrounding structure and facilities • trip hazards • underground services • use of tools and equipment • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of first aid equipment • workplace environment and safety.
Quality assurance requirements may include:	<ul style="list-style-type: none"> • Environment Protection Authority • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
Tools and equipment may include:	<ul style="list-style-type: none"> • hand and power tools • test equipment.
Commissioning firefighting appliances covers testing and commissioning firefighting appliances, including:	<ul style="list-style-type: none"> • delivery lay flat fire hose • fire blankets • fire hose reel systems • portable fire appliances • wheeled fire extinguishers.
Relevant standards include:	<ul style="list-style-type: none"> • AS/NZS1841 Portable fire extinguishers - general requirements • AS/NZS1850 Portable fire extinguishers - classification, rating and performance testing • AS1851 Maintenance of fire protection systems and equipment • AS2441 Installation of fire hose reels • AS2444 Portable fire extinguishers and blankets -selection and location • AS/NZS3504 Fire blankets • AS3565 Meters for water supply • AS4077 Fire protection - fire extinguishing

RANGE STATEMENT

<i>Statutory and regulatory authority</i> includes:	media: halogenated hydrocarbons
	• AS4078 Fire protection - fire extinguishing media: carbon dioxide
	• AS4265 Wheeled fire extinguishers
	• AS/NZS4353 Portable fire extinguishers - aerosol type.
	• Building Code of Australia
	• state or territory regulations.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with commissioning domestic and residential fire suppression sprinkler systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools, equipment and materials for commissioning domestic and residential fire suppression sprinkler systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient commissioning process.</p>
2. Identify system requirements.	<p>2.1. System design requirements are identified and confirmed from job specifications and in accordance with standards.</p> <p>2.2. Commissioning requirements for domestic and residential fire suppression sprinkler systems are identified in accordance with standards, authorities' requirements and job specifications.</p>
3. Test and commission system.	<p>3.1. Sprinkler systems are checked to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.</p> <p>3.2. Operation of system is tested in accordance with job specifications, manufacturer recommendations and authorities' requirements and is adjusted as required.</p> <p>3.3. System is commissioned and maintained to ensure correct operation in accordance with standards, and manufacturer and job specifications.</p>
4. Clean up work area.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace</p>

ELEMENT**PERFORMANCE CRITERIA**

procedures.

4.3. **Information** is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.
- testing and commissioning domestic and residential fire suppression sprinkler systems.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- components and materials of fire suppression sprinkler systems
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual Performance based codes of practice
- pressure test systems and procedures
- process of installing, testing and commissioning domestic and residential fire suppression sprinkler systems
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to commissioning domestic and residential fire suppression sprinkler systems
- SI system of measurements
- standards applicable to the service
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - hazardous materials and substances
 - other machines
 - surrounding structure and facilities
 - trip hazards
 - underground services
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment

RANGE STATEMENT

Environmental requirements

cover water quality management and may include:

- workplace environment and safety.
- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:

- hand and power tools
- test equipment.

Materials may include:

- actuating devices
- alarms
- control valve assemblies
- unplasticised polyvinyl chloride (PVC-U), steel or copper pipes and other approved materials
- sprinkler heads.

Domestic and residential fire suppression sprinkler systems include:

- actuating devices
- alarms
- control valve assemblies
- piping
- sprinkler heads.

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory plumbing authority.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:

RANGE STATEMENT

- building codes
- OHS and environmental requirements
- plumbing regulations
- relevant Australian standards, including AS2118 Automatic fire sprinkler systems
- safe work procedures relating to testing and commissioning domestic and residential fire suppression sprinkler systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained.</p> <p>1.2. <i>Safety (OHS)</i> requirements associated with commissioning special hazard fire suppression systems, and the workplace <i>environmental requirements</i>, are adhered to throughout the work.</p> <p>1.3. <i>Quality assurance</i> requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Apply knowledge and understanding of ODS and SGG legislative and industry requirements to commission, inspect, test and maintain activities for special hazard fire suppression systems.</p> <p>1.5. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.6. <i>Tools, equipment</i> and <i>materials</i> for commissioning and maintaining <i>special hazard fire suppression systems</i>, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.7. Work area is prepared to support efficient commissioning process.</p>
2. Identify system requirements.	<p>2.1. Service design requirements are identified and confirmed from job specifications and are in accordance with standards.</p> <p>2.2. Testing and commissioning requirements of special hazard fire suppression systems are identified in accordance with standards, authorities' requirements and job specifications.</p>
3. Test and commission system.	<p>3.1. Special hazard fire suppression systems are checked to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.</p> <p>3.2. Operation of system is tested in accordance with job specifications, manufacturer recommendations and authorities' requirements, including ODS and SGG legislative requirements, and is adjusted as required.</p> <p>3.3. System is commissioned to ensure correct operation in accordance with standards, and manufacturer and job specifications.</p>
4. Maintain system.	<p>4.1. Service and maintenance requirements are identified from manufacturer specifications or authorities' requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. Replacement components are checked and fitted periodically and as required in accordance with specifications.
	4.3. Maintenance and repair of system are conducted observing maintenance schedule described in current Australian standard, and manufacturer and/or authorities' requirements, including ODS and SGG legislative requirements.
5. Clean up work area.	5.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.
	5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	5.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions

 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology
- testing and commissioning a fire system pump set.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual Performance based codes of practice
- performance measures for fire system pump sets
- process of installing, testing and commissioning fire system pump sets
- properties of water, including pressure, flow rates and atmospheric pressure
- relevant statutory and authority requirements related to commissioning fire system pump sets
- SI system of measurements
- standards applicable to installing and commissioning fire system pump sets
- test systems, equipment and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to testing and commissioning fire system pump sets
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to test and commission one fire system pump set, ensuring:
 - correct identification of location, design specification and details of proposed set
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - hazardous materials and substances
 - other machines

RANGE STATEMENT

	<ul style="list-style-type: none"> • surrounding structures and facilities • trip hazards • underground services • use of tools and equipment • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of first aid equipment • workplace environment and safety.
<p><i>Environmental requirements</i> cover water quality management and may include:</p>	<ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<p><i>Quality assurance</i> requirements may include:</p>	<ul style="list-style-type: none"> • Australian standards • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<p><i>Tools and equipment</i> may include:</p>	<ul style="list-style-type: none"> • hand and power tools • test equipment.
<p><i>Materials</i> include:</p>	<ul style="list-style-type: none"> • fire pump sets.
<p><i>Fire system pump sets</i> may include:</p>	<ul style="list-style-type: none"> • centrifugal • close coupled, long coupled with mechanical joints or belt driven by an electric or petrol and diesel motor • multi-stage turbine • positive displacement • submersible and electric and compression ignition driven pumps.
<p><i>Pump controls</i> may be:</p>	<ul style="list-style-type: none"> • automatic, including float, level, flow or pressure switches • manual.
<p><i>Statutory and regulatory authorities</i> include:</p>	<ul style="list-style-type: none"> • state or territory statutory authority • statutory plumbing authority.

RANGE STATEMENT

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards, including AS2118 Automatic fire sprinkler systems
- safe work procedures relating to testing and commissioning fire system pump sets
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for design process.	<p>1.1. Nature and scope of design task are identified and confirmed.</p> <p>1.2. Safety (OHS) requirements associated with designing residential and domestic fire sprinkler systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Work is organised and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.5. Tools, equipment and materials required for designing domestic and residential fire sprinkler systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area in which the design process is to be conducted is prepared.</p>
2. Determine system requirements.	<p>2.1. Information and specifications for the required work are obtained and confirmed, if necessary by site inspection.</p> <p>2.2. Regulations and standards relevant to the work are consulted and applied to all aspects of the work.</p> <p>2.3. Relevant data is extracted from plans and specifications.</p> <p>2.4. Building classification and hazard ratings are established in accordance with standards and other relevant regulations.</p>
3. Design sprinkler system.	<p>3.1. Water supply needs are established and graphs are drawn for the automatic fire sprinkler system.</p> <p>3.2. Pipework is sized to manufacturer specifications and standards using hydraulic calculations.</p> <p>3.3. Sprinkler system is designed to meet plans, specifications, standards, manufacturer recommendations and water supply data.</p> <p>3.4. Sprinkler heads are selected for appropriate size, spray pattern, temperature and finish.</p> <p>3.5. Sprinklers are spaced in accordance with manufacturer specifications, standards and relevant statutory and regulatory authority regulations.</p> <p>3.6. Pipe layout drawings are prepared in accordance with standards and workplace requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.7. Computations and other supporting evidence are appropriately documented to support design. 3.8. Materials required are specified and optimised in accordance with standards from the proposed design. 3.9. Fabrication sheets and material lists are prepared. 3.10. Plans are recorded in accordance with regulatory authorities' and workplace requirements.
4. Restore work area.	4.1. Work area is restored in accordance with workplace procedures. 4.2. Tools and equipment used in the design process are refurbished and left in accordance with workplace procedures. 4.3. Information is accessed and documentation, including work backup, is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- collecting design data, spacing sprinkler heads, and sizing and arranging pipework using hydraulic calculations
- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals

REQUIRED SKILLS AND KNOWLEDGE

- written skills to:
 - document computations and other supporting evidence
 - prepare fabrication sheets, material lists and other relevant workplace documentation
- developing domestic and residential fire sprinkler system designs using hydraulic calculations
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- preparing layout drawings, fabrication sheets and material lists for system installation
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

- accessing information and the processes for calculating material requirements
- calculating and measuring techniques and their application
- components and materials of fire suppression sprinkler systems and their operating characteristics
- design techniques and technology
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual Performance based codes of practice
- process of designing fire sprinkler systems
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to commissioning domestic and residential fire suppression sprinkler systems
- SI system of measurements
- standards applicable to the design
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the design of domestic and residential fire sprinkler systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, using hydraulic calculations, design a fire sprinkler system for a residential complex containing a minimum of a communal catering and living area and multiple residential quarters (or equivalent) and also a fire sprinkler system for a domestic residence containing a minimum of two rooms, ensuring:
 - correct identification of location, design specification and details of proposed service
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to use tools and equipment, including:
 - computer-aided design (CAD) software
 - drawing instruments
 - measuring equipment
- applying design principles relating to hydraulic systems
- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret drawings, specifications and documentation from a variety of sources, including:
 - Australian standards
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and reports
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- innovation skills to develop creative and responsive approaches
- numeracy skills to:
 - apply measurements and calculations
 - interpret data
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of fire-compliant hydraulic systems
 - take initiative and make decisions
- problem solving skills to:
 - analyse requirements
 - consider options
 - design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- requirements of state regulatory authorities, Australian standards and manufacturer specifications
- application of terminology, definitions, installation methods and hazards identified in relation to devices and systems used, according to:
 - AS/NZS3500 National plumbing and drainage set
 - environmental requirements
 - manual of authorisation procedures for plumbing and drainage products (MP52)
 - other standards, codes or standard operating procedures
- quality assurance requirements, including:
 - Environment Protection Authority
 - internal company quality assurance policy and risk management strategy
 - International Standards Organisation
 - nature of materials used and effects of performance under various conditions
 - site safety plan
 - workplace operations and procedures
- variety of applications of technology principles in design of fire-compliant hydraulic services for all classes of building
- workplace safety requirements, including relevant statutory regulations, codes and

REQUIRED SKILLS AND KNOWLEDGE

standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing designs and associated documentation for fire-compliant hydraulic services for two different categories of wide span and high-rise buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer, BCA and Australian and New Zealand standard requirements for a range of fire-compliant hydraulic services
- planning and detailing system components, including:
 - conducting a compliance inspection
 - designing fire-compliant hydraulic systems
 - designing fire-compliant systems for fire-rated materials
 - designing fire-compliant systems for non fire-rated materials
 - ducts
 - fire check collars
 - insulation and filler materials
 - penetrations
 - preparing a compliance report
 - preparing a specification for fire-compliant hydraulic services
 - preparing an operation and maintenance manual.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for design of fire sprinkler systems for wide span and high-rise building projects.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.</p> <p>1.4. Fire department, statutory, regulatory, Australian and New Zealand standards and relevant building code requirements for the design of fire sprinkler systems are interpreted and applied.</p> <p>1.5. Manufacturer requirements and trade and technical manuals are interpreted and applied.</p> <p>1.6. Flow and pressure requirements are established, flow and pressure tests are conducted and council main flows and pressures are established.</p> <p>1.7. Additional research, including a desktop study, is conducted and performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Layout of pipework systems and type and location of fittings and valves are planned.</p> <p>2.2. Type, location and requirements for backflow prevention devices and alarm and valve assemblies are detailed.</p> <p>2.3. Pipe sizes, velocities, flows and pressures are calculated for a range of applications.</p> <p>2.4. Approved materials, jointing methods and sprinkler heads for fire sprinkler systems are specified.</p> <p>2.5. Smoke alarm systems, booster assemblies, booster relay and jacking pumps are designed and detailed.</p> <p>2.6. Pipe fixings are designed for a range of applications.</p> <p>2.7. Water storage systems and pump, pump controls and pumphouse requirements are sized and detailed.</p> <p>2.8. Test points and associated drainage systems are designed and sized.</p> <p>2.9. Installation requirements are specified, including exit signage.</p>
3. Design and size systems.	<p>3.1. Fire sprinkler systems are designed for a range of wide span and high-rise building applications.</p> <p>3.2. Combined water supply, fire hydrant and hose reel</p>

ELEMENT	PERFORMANCE CRITERIA
	and sprinkler systems are designed for a range of wide span and high-rise building applications.
	3.3. Sprinkler systems for Grades 1, 2 and 3 water supplies are designed.
	3.4. Range of sprinkler system configurations is designed.
	3.5. Fire sprinkler systems are designed and sized using computer software packages.
4. Prepare documentation.	4.1. Plans are prepared and detailed for a range of fire sprinkler systems.
	4.2. Specification for a fire sprinkler system is prepared.
	4.3. Testing and commissioning schedule is prepared.
	4.4. Operation and maintenance manual is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- applying design principles relating to hydraulic systems
- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret drawings, specifications and documentation from a variety of sources, including:
 - Australian standards
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals

REQUIRED SKILLS AND KNOWLEDGE

- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and reports
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- innovation skills to develop creative and responsive approaches
- numeracy skills to:
 - apply measurements and calculations
 - interpret data
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of fire sprinkler systems
 - take initiative and make decisions
- problem solving skills to analyse requirements, carry out tests, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology
- using tools and equipment, including drawing instruments, measuring equipment and computer-aided design (CAD) software.

Required knowledge

Required knowledge for this unit is:

- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including:
 - AS/NZS2118 Automatic fire sprinkler systems - general requirements
 - AS/NZS3500 National plumbing and drainage set
 - AS2200 Design charts for water supply and sewerage
 - environmental requirements
 - hazards associated with devices and systems used in the hydraulic sector
 - installation methods used in hydraulic systems
 - other standards, codes or standard operating procedures
 - terminology and definitions used in hydraulic design
- quality assurance requirements, including:
 - Environment Protection Authority
 - internal company quality assurance policy and risk management strategy

REQUIRED SKILLS AND KNOWLEDGE

- International Standards Organisation
- nature of materials used and effects of performance under various conditions
- site safety plan
- workplace operations and procedures
- variety of applications of technology principles in design of fire sprinkler, hydrant and hose reel systems for all classes of building
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing designs and associated documentation for fire sprinkler systems for two different categories of wide span and high-rise buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, fire authority, regulatory, manufacturer, BCA and Australian and New Zealand standard requirements for a range of fire sprinkler systems
- planning and detailing system components, including:
 - alarm and valve assemblies
 - preparing a specification for a fire sprinkler system
 - preparing a testing and commissioning schedule
 - preparing an operation and maintenance manual
 - preparing plans for a range of fire sprinkler systems
 - sprinkler heads
 - water storage systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- includes interpretation of plans and specifications
- includes sizing and documenting layout of fire sprinkler systems for applications, including residential, commercial and industrial.

Design requirements include:

- architectural specifications
- builder specifications

RANGE STATEMENT

	<ul style="list-style-type: none"> owner requirements specialist design applications.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising project integrity.
<i>Fire department, statutory, regulatory, Australian and New Zealand standards and relevant building code requirements</i> include:	<ul style="list-style-type: none"> relevant Acts, regulations and local and state government policies AS2200 Design charts for water supply and sewerage AS/NZS2118 Automatic fire sprinkler systems - general requirements AS2419 Fire hydrant installations - system design, installation and commission material and authorisation standards specified by: <ul style="list-style-type: none"> Building Code of Australia (BCA) local authority statutory plumbing authority.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none"> material specifications pump tables sizing tables technical and trade manuals.
<i>Flow and pressure tests</i> include:	<ul style="list-style-type: none"> interpretation of flow and pressure tests conducted by a contractor on-site measurement of flow (l and s), velocity (m and s) and pressure (kPa).
<i>Desktop study</i> includes collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none"> architectural and building plans council requirements developer requirements regulatory requirements other documents and reports as available.
<i>Performance requirements</i> include:	<ul style="list-style-type: none"> flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards and local authority plans.
<i>Layout of pipework systems:</i>	<ul style="list-style-type: none"> covers: <ul style="list-style-type: none"> dual feed range systems ring main single pipe

RANGE STATEMENT

	<ul style="list-style-type: none"> • should have principles of economy, serviceability, durability and fit for use applied • should not unduly affect building integrity and aesthetic appeal.
<i>Fittings and valves:</i>	<ul style="list-style-type: none"> • fittings: <ul style="list-style-type: none"> • bends • elbows • tees • unions • valves: <ul style="list-style-type: none"> • backflow prevention • excessive pressure • isolating • pressure limiting • pressure reduction • strainers.
<i>Backflow prevention devices</i> include:	<ul style="list-style-type: none"> • break tanks • individual protection • property protection • testable and non-testable devices • zone protection.
<i>Alarm and valve assemblies</i> include:	<ul style="list-style-type: none"> • clapper valves • excess flow valves • manual and electrical alarms.
<i>Calculations</i> include:	<ul style="list-style-type: none"> • pressure • rate of discharge • temperature • velocity • volume.
<i>Materials</i> include:	<ul style="list-style-type: none"> • acrilonitrile butadiene styrene (ABS) • composite pipework • copper • cross-linked polyethylene • fittings and fixtures • polybutylene • protective coatings • steel.
<i>Jointing methods</i> include:	<ul style="list-style-type: none"> • brazing • compression

3. Design and size systems.	<p>3.1. Fire hydrant and hose reel systems are designed for a range of wide span and high-rise building applications.</p> <p>3.2. Combined water supply, fire hydrant, hose reel and sprinkler systems are designed for a range of wide span and high-rise building applications.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Prepare documentation.	3.3. Range of <i>delivery systems</i> is designed.
	3.4. Fire hydrant and hose reel systems are designed and sized using computer software packages.
	4.1. <i>Plans</i> are prepared for a range of fire hydrant and hose reel systems.
	4.2. Block plan is prepared for booster cabinet in accordance with Australian and New Zealand standards.
	4.3. <i>Specification</i> for a fire hydrant and hose reel system is prepared.
	4.4. Testing and commissioning schedule is prepared.
	4.5. Operation and maintenance manual is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and reports
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- innovation skills to develop creative and responsive approaches
- numeracy skills to:
 - apply measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- interpret data
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of fire-compliant hydraulic systems
 - take initiative and make decisions
- problem-solving skills to:
 - analyse requirements
 - carry out tests
 - consider options
 - design an appropriate system
 - identify typical faults and action required to rectify problems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills, including the ability to apply design concepts and principles relating to hydraulic systems
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- Australian and New Zealand standards, manufacturer specifications, BCA and other applicable codes or standard operating procedures relevant to the sector
- hazards associated with devices and systems used in the hydraulic sector
- installation methods used in hydraulic systems
- nature of materials used and effects of performance under various conditions
- terminology and definitions used in hydraulic design
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving effective performance and application of principles used to design fire hydrant and hose reel systems.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- establishing and evaluating design parameters for a range of fire hydrant and hose reel systems
- planning system components for a range of fire hydrant and hose reel systems, including:
 - booster assemblies
 - hose reels
 - hydrants
 - storage tanks
 - thrust blocks
- complying with OHS regulations applicable to workplace operations
- applying organisational quality procedures and processes within context of restoring plastered surfaces to conservation requirements
- designing and sizing a range of fire hydrant and hose reel systems
- developing a checklist with all information and formulas required to carry out flow and pressure tests
- preparing plans for a range of fire hydrant and hose reel systems
- preparing a specification for a fire hydrant and

confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT

work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- interpretation of plans and specifications
- sizing and documenting layout of fire hydrant and hose reel systems, including:
 - combined domestic fire hydrant and hose reel systems
 - combined hydrant and hose reel systems
 - emergency egress
 - separate hydrant and hose reel systems
- equipment that may be for residential, commercial and industrial projects and for a new or an existing structure being renovated, extended, restored or maintained.

Design requirements may include:

- architectural specifications
- builder specifications
- owner requirements
- specialist water use applications.

Cost-benefit analysis may include:

- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising project.

Statutory and regulatory requirements may include:

- Acts and regulations
- local and state government policies.

Australian and New Zealand standards may include:

- AS/NZS3500 National plumbing and drainage set: Parts 1.1 and 1.2
- AS2419 Fire hydrant installations - system design, installation and commission
- AS/NZS1221 Fire hose reels
- AS/NZS2118 Automatic fire sprinkler systems - general requirements
- AS2200 Design charts for water supply and sewerage
- BCA.

Manufacturer requirements may include:

- material specifications
- pump tables
- sizing tables
- technical and trade manuals.

RANGE STATEMENT

Desktop study collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none"> • architectural and building plans • council plans • developer plans • other documents and reports as available.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to install liquefied petroleum gas (LPG) storage facilities with a storage capacity up to 500 litres for consumer piping systems.

The unit requires the selection, location and installation of LPG storage facilities with a storage capacity of up to 500 litres, either single tank or multiple cylinder installations and the testing of the associated piping system. The storage is connected to consumer piping systems with operating pressures less than 200kPa.

The design requirements of this unit are limited to the application of the design to layout and installation.

Application of the Unit

Application of the unit

Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify LPG storage requirements.	<p>1.1. Design, drawings, specifications and any special instructions are obtained.</p> <p>1.2. Safety (OHS) requirements associated with the installation of LPG storage facilities, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.</p> <p>1.5. Storage capacity is calculated in compliance with regulatory authority and workplace requirements.</p> <p>1.6. Type of storage is determined in accordance with job and workplace requirements.</p> <p>1.7. Containers and type of system (one or two stage) are selected in accordance with standards, job and workplace requirements.</p> <p>1.8. Appropriate regulators are determined to meet capacity and load of the system in accordance with workplace requirements.</p> <p>1.9. Appropriateness of selected location to provide the required service is established in conformance to standards and workplace requirements.</p> <p>1.10. Quantity of materials required is calculated from design, drawings and specifications in conformance to workplace requirements.</p>
2. Prepare for installation.	<p>2.1. Materials and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.</p> <p>2.2. Appropriate tools and equipment for storage facility installation, including personal protective equipment, are identified, selected and checked for serviceability.</p> <p>2.3. Appropriate testing apparatus is selected.</p> <p>2.4. Work is planned in conjunction with others involved in or affected by the work.</p> <p>2.5. Work area and materials are prepared to support efficient installation of the system.</p>
3. Install and test LPG storage system.	<p>3.1. Container supports and base, piping, fittings and components are selected in conformance to standards</p>

ELEMENT**PERFORMANCE CRITERIA**

	and workplace requirements.
	3.2. Size and method of connection are selected in conformance to standards and workplace requirements.
	3.3. Tank is purged in accordance with standards.
	3.4. System from cylinder outlet is tested, purged and regulator adjusted to be gas-tight, in conformance to regulatory authority and workplace requirements.
	3.5. Test data is recorded in format required by regulatory authority and workplace requirements.
4. Clean up.	4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory <i>statutory and regulatory authority</i> legislation and workplace procedures.
	4.2. <i>Tools and equipment</i> are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. <i>Information</i> is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan work with others
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- record test data in writing
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing gas storage facilities
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to installing and testing gas storage facilities
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and select, locate, install and test LPG storage systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, determine the LPG storage requirements, and install and test two LPG storage facilities of less than 500 litre capacity, one being a multiple cylinder installation, ensuring:
 - correct identification of location, design and details of proposed storage installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated

RANGE STATEMENT

	with:
	<ul style="list-style-type: none"> • hazardous materials and substances • service lines • surrounding structures and facilities • trip hazards • use of tools and equipment • work site visitors and the public • working at heights • working in proximity to others
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • use of firefighting equipment • use of first aid equipment • workplace environment and safety. • clean-up protection • waste management.
<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none"> • Australian standards • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<i>Materials</i> for installing LPG storage facilities:	<ul style="list-style-type: none"> • may include: <ul style="list-style-type: none"> • container supports and bases • copper tubing • fitting and fixing materials • gas cylinders and storage tanks • gas regulators • non-metallic hose assemblies • stainless steel • other approved materials • are to comply with job specifications and appropriate standards for the storage of LPG.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • state or territory statutory authority • statutory gasfitting authority • statutory plumbing authority.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • chain blocks • forklifts • grinders

RANGE STATEMENT

Information may include:

- hacksaws
- hand and power tools
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- manual brazing equipment
- measuring equipment
- rollers
- testing equipment.
- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing and gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to determining requirements, and installing and testing LPG storage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to install and commission liquefied petroleum gas (LPG) systems in caravans, mobile homes, water craft and mobile workplaces.

The unit requires the determination of requirements, the installation and commissioning of LPG systems with an operating pressure not exceeding 2.75kPa in caravans, mobile homes, water craft and mobile workplaces.

The design requirements of this unit are limited to the application of the design to layout and installation.

Application of the Unit

Application of the unit Site location for work application may be a purpose-built workshop or customer's premises.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify LPG system requirements.	<ul style="list-style-type: none">1.1. Plans, specifications and any special instructions are obtained.1.2. Safety (OHS) requirements associated with installing and commissioning LPG systems in caravans, mobile homes, water craft and mobile workplaces, and workplace environmental requirements, are adhered to throughout the work.1.3. Quality assurance requirements for company operations are identified and adhered to.1.4. Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.1.5. System capacity is calculated to ensure adequacy for the required load and compliance with standards and workplace requirements.1.6. Appropriate regulator and piping are identified in terms of size, connection sizes and capacity, in accordance with standards and workplace requirements.1.7. Location of cylinders, appliances and piping set out is identified in accordance with job requirements and in compliance with standards and workplace requirements.1.8. Quantity of piping, components and fittings are estimated in compliance with standards and workplace requirements.
2. Prepare for installation.	<ul style="list-style-type: none">2.1. Materials, equipment, appliances and cylinders are ordered and checked for compliance with docket and order form, and for acceptable condition.2.2. Appropriate tools and equipment for installing and commissioning LPG systems in caravans, mobile homes, water craft and mobile workplaces, including personal protective equipment, are identified and selected.2.3. Work is planned in conjunction with others involved in or affected by the work.2.4. Work area and materials are prepared to support efficient installation of the system.
3. Install LPG system, including flue and ventilation.	<ul style="list-style-type: none">3.1. Cylinders, regulators, associated pipework, appliances and fixings are installed in compliance with manufacturer requirements, standards and

ELEMENT

PERFORMANCE CRITERIA

	workplace requirements.
	3.2. Compliance plates are located and fitted in accordance with <i>statutory and regulatory authority</i> requirements, standards and workplace requirements.
4. Test and commission LPG system.	4.1. Appropriate test equipment is selected. 4.2. System is tested in accordance with standards and workplace requirements. 4.3. System is adjusted to provide required flow pressure in conformance to standards and workplace requirements. 4.4. Test data is recorded in format required by regulatory and workplace requirements.
5. Clean up.	5.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures. 5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures. 5.3. <i>Information</i> is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions

REQUIRED SKILLS AND KNOWLEDGE

- inform relevant authorities and supervisors of completion of job
- plan work with others
- record data in writing
- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- determining requirements, and installing and commissioning LPG systems
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and commissioning gas systems in caravans, mobile homes, water craft and mobile workplaces
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to installing and testing gas storage facilities
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and install and commission LPG systems in caravans, mobile homes, water craft and mobile workplaces
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, determine the requirements, install and commission LPG systems in either a caravan, mobile home or mobile workplace and a water craft (or simulated environment) by determining the gas load and storage capacity requirements for two gas appliances in both a caravan and a water craft and installing and commissioning the gas systems for the installations, ensuring:
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to install and commission gas control and regulating equipment for consumer gas piping carrying natural gas (NG), liquefied petroleum gas (LGP), or tempered liquefied petroleum gas (TLPG) up to 200kPa.

This unit requires the determination of the requirements for gas control and regulating equipment (for pressures up to 200kPa), and its installation, testing and commissioning in accordance with standards.

The design requirements of this unit are limited to the application of the design to layout and installation.

Application of the Unit

Application of the unit Site location for work application may be a customer's premises.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements for gas pressure control equipment.	<p>1.1. Plans, specifications and any special instructions are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing gas pressure control and regulating equipment, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Gas load and design requirements are determined from design drawing or workplace instructions.</p> <p>1.5. Available gas pressure is measured and suitability of supply determined.</p> <p>1.6. Calculations are recorded in format required by job specification or workplace requirements.</p> <p>1.7. Selected gas pressure controls and regulator, specified locations and venting requirements are checked for compliance against standards and workplace requirements.</p> <p>1.8. Quantity and type of materials are estimated from design drawing or on-site dimensions.</p> <p>1.9. Materials, pipe fittings and components are selected to comply with standards and regulatory authorities' requirements.</p>
2. Prepare for installation.	<p>2.1. Materials, equipment and cylinders are ordered and checked for compliance with docket and order form, and for acceptable condition.</p> <p>2.2. Appropriate tools and equipment for the installation, including personal protective equipment, are identified and selected.</p> <p>2.3. Work is planned in conjunction with others involved in or affected by the work.</p> <p>2.4. Work area and materials are prepared to support efficient installation of equipment.</p>
3. Install and commission control and regulating equipment.	<p>3.1. Gas control and regulating equipment is installed in compliance with standards and statutory and regulatory authority requirements.</p> <p>3.2. Appropriate test apparatus is selected for commissioning the control and regulating equipment.</p> <p>3.3. Commissioning is carried out in accordance with standards, and authorities' and manufacturer requirements, and the commissioning data is</p>

ELEMENT	PERFORMANCE CRITERIA
	recorded in format required by the authority or job specification.
	3.4. Pressure is correctly adjusted to comply with standards and job specification.
4. Clean up.	4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - inform relevant authorities and supervisors of completion of job
 - plan work with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record data in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals

REQUIRED SKILLS AND KNOWLEDGE

- determining requirements for gas control and regulating equipment (for pressures up to 200kPa)
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing, testing and commissioning gas control and regulating equipment in accordance with standards
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- electrical safety and requisite precautions
- gas pressure control equipment
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for installing and testing gas pressure control and regulating equipment
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to installing and commissioning gas control and regulating equipment
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and install and commission gas pressure control equipment
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications for the installation of gas pressure control and regulating equipment, determine the requirements, and install, test and commission a single and a two stage gas regulator, ensuring:
 - it operates to appropriate reduced pressure
 - correctly identifying requirements, and installing and commissioning pressure control and regulating equipment
 - correctly selecting and using appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising

RANGE STATEMENT

and preventing hazards associated with:

- electricity
- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements may include:

- clean-up protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- chain blocks
- drills
- flaring tools
- forklifts
- grinders
- hacksaws
- hand and power tools
- hand trolleys
- hoists and jacks
- ladders
- lifting and load shifting equipment
- limited height scaffolding

RANGE STATEMENT

Type A gas flues:

- measuring equipment
- rollers
- spanners
- testing equipment and instruments
- tin snips
- wrenches.
- may include:
 - balanced
 - individual appliance
 - multiple flues
 - natural draught
 - other approved fluing methods
- may be required by:
 - decorative heaters
 - ducted heating systems
 - heated water storage
 - instant heated water heaters
 - space heaters
 - wall ovens.

Materials include Type A gas appliance flue components and materials that:

- include:
 - flashing materials, including lead and sheet metal or other approved materials
 - stainless steel and fibre cement
 - twin wall flues
- may include proprietary flashings
- are to comply with appropriate Australian standards for installing and testing Type A gas appliance flues.

Sustainability principles and concepts:

- Cover the current and future social, economic and environmental use of resources
- may include:
 - appropriate component selection that has minimal environmental impact
 - efficient energy use
 - efficient use and recycling of material
 - correct handling of hazardous materials
 - disposal of waste material to ensure minimal environmental impact.

Information may include:

- charts and hand drawings

RANGE STATEMENT

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing and gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to installing and testing Type A gas appliance flues
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

- hand trolleys
- hoists
- jacks
- lifting and load shifting equipment
- manual metal arc welding equipment
- measuring equipment
- metal inert gas (MIG) and tungsten inert gas (TIG) welding equipment

RANGE STATEMENT

Type B appliances:

- oxy welding cutting equipment
- restricted height scaffolding and elevated work platform
- rollers
- tin snips.
- are complex gas installations of greater than 10 megajoules (MJ) rating for which there is no approval scheme
- flue materials and installation of Type B appliance flues are to conform to relevant Australian standards.

Type B flue *materials*:

- may include:
 - fibre cement
 - mild steel
 - stainless steel
 - other approved materials
- are to comply with the relevant Australian standards for Type B gas appliance flues.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
 - selecting appropriate components and material
 - efficient energy use
 - efficient use and recycling of material
 - correct handling of hazardous materials
 - disposal of waste material to ensure minimal environmental impact.

***Information* may include:**

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements

RANGE STATEMENT

- plumbing and gasfitting authority regulations
- recognised formulas or tables accepted by the regulatory authority
- relevant Australian standards
- safe work procedures relating to installing Type B appliance flues
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for purging.	<p>1.1. Design drawing and specification are obtained.</p> <p>1.2. Safety (OHS) requirements associated with purging consumer gas piping systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Work is planned in conjunction with others involved in or affected by the work.</p> <p>1.5. Appropriate tools and equipment for the conduct of purging, including personal protective equipment, are identified, selected and checked for serviceability.</p> <p>1.6. Work area and materials are prepared to support efficient purging of consumer gas piping system.</p>
2. Identify purge requirements.	<p>2.1. Installation is checked to ensure compliance with standards and relevant specifications.</p> <p>2.2. Volume of piping system is determined from design drawing and standards, and calculations are recorded in format required by job specification.</p> <p>2.3. Method of purging is selected in compliance with standards and authorities' requirements.</p> <p>2.4. Purge medium is selected in compliance with standards, and calculations of the purge medium volume are recorded in format required by job specification.</p>
3. Carry out and test purge operation.	<p>3.1. Outlet point for purge gas is located and purge site is checked for ignition sources.</p> <p>3.2. Purge is carried out in accordance with standards or statutory and regulatory authority requirements.</p> <p>3.3. Completion of purge is verified by test equipment, or by recognised and approved workplace testing procedures.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Information is accessed and documentation</p>

ELEMENT**PERFORMANCE CRITERIA**

completed in accordance with workplace requirements.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - inform relevant authorities and supervisors of completion of job
 - plan work with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record data in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- determining purging requirements of a consumer gas piping system in terms of volume, method and medium of purge
- conducting purging and testing for its completeness
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media

REQUIRED SKILLS AND KNOWLEDGE

- use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics of materials used in the purging process
- effect of heat on the materials used during the purging and testing process
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for purging gas piping systems, including isolation processes and procedures
- properties of gas, gas safety, combustion principles, ignition principles, pressure and flow rates
- relevant statutory and authority requirements related to purging gas piping systems
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for determining requirements, and purging and testing consumer gas piping systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment and the elimination of possible ignition sources
- as a minimum the ability to, given the plans and specifications, conduct purging, testing and recording of the purge operations (one to be a fuel and inert purge and the other to be an inert and fuel purge) for a consumer gas piping system of greater than 0.03 cubic metres, which includes a subsidiary meter, ensuring:
 - correct identification of method, medium, calculations and procedures to purge the piping system
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Appliance specifications and servicing and manufacturer manuals are obtained for planned work activity.</p> <p>1.2. Safety (OHS) requirements associated with maintenance of <i>Type A gas appliances</i>, and workplace <i>environmental requirements</i>, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Tools and equipment are selected consistent with <i>maintaining Type A gas appliances</i>, checked for serviceability, and any faults are reported to supervisor.</p> <p>1.5. Tasks are planned in conjunction with others involved in or affected by the work.</p> <p>1.6. Work area is prepared and materials identified to support the efficient conduct of maintenance of Type A gas appliances.</p>
2. Identify maintenance requirements.	<p>2.1. Appliance is checked to ensure installation complies with standards and manufacturer requirements.</p> <p>2.2. Electrical safety check is carried out in accordance with authorities' procedures and data is recorded in format required by job specification.</p> <p>2.3. Test equipment is used to support visual inspection and to conduct testing in accordance with statutory and regulatory authority requirements.</p>
3. Conduct maintenance.	<p>3.1. Maintenance tasks are carried out in accordance with specifications and manufacturer requirements.</p> <p>3.2. Appliances are checked for operation in accordance with specifications, standards and manufacturer recommendations.</p> <p>3.3. Faults and malfunctions are identified and reported in accordance with workplace requirements.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Information is accessed and documentation</p>

completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - inform relevant authorities and supervisors of completion of job
 - plan work with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record data in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology
- undertaking routine basic maintenance on Type A gas appliances, including gas, mechanical and appliance construction components.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- documentation and reporting requirements
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for maintaining and testing Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to maintaining Type A gas appliances
- SI system of measurements
- workplace and equipment safety requirements.

RANGE STATEMENT

Maintenance of Type A gas appliances:

- spanners
- test equipment and instruments, including:
 - manometers
 - multi-meters
 - neon testers
 - volt sticks
- wrenches.
- includes cleaning or adjusting gas components, including:
 - burners
 - pilots
 - regulators
 - thermocouples
 - thermostats
 - temperature and pressure relief (TPR) valves
- also includes rectifying simple gas supply problems, including meters and regulators
- is to comply with appropriate Australian standards.

Materials for the maintenance of Type A gas appliances:

- may include:
 - piping materials
 - regulators and meters
 - Type A gas appliances
 - other approved materials
- are to comply with appropriate standards for maintaining Type A gas appliances.

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory gasfitting authority
- statutory plumbing authority.

Information may include:

- charts and hand drawings
- diagrams, sketches or graphics
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Appliance and equipment specifications and appropriate manufacturer manuals are obtained.</p> <p>1.2. Safety (OHS) requirements associated with disconnecting and reconnecting Type A gas appliances, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Tools, equipment and materials are selected consistent with disconnecting and reconnecting services, are checked for serviceability, and any faults are reported.</p> <p>1.5. Appropriate test equipment is selected for the job.</p> <p>1.6. Tasks are planned in conjunction with others involved in or affected by the work.</p>
2. Identify appliance requirements.	<p>2.1. Appropriate appliance for gas supply type is selected in accordance with job specification.</p> <p>2.2. Appliance installation is checked to ensure its compliance with relevant Australian standards.</p> <p>2.3. Appliance is checked for safe operation and its performance is checked against specification.</p> <p>2.4. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Disconnect and reconnect equipment.	<p>3.1. Electrical safety check is carried out in accordance with state or territory authorities' procedures and statutory and regulatory authority requirements.</p> <p>3.2. Safety-check data is recorded in format required by job specification.</p> <p>3.3. Appliance is isolated from gas service in accordance with statutory and regulatory requirements.</p> <p>3.4. Work is carried out in accordance with job instruction without damage to surrounding equipment or structures.</p>
4. Test operation of equipment.	<p>4.1. Mechanical services, gas, water and other service connections are checked for leaks.</p> <p>4.2. Appliance is operated to ensure it conforms to appliance specification.</p> <p>4.3. Mechanical services equipment is adjusted in accordance with specification.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of,</p>

ELEMENT	PERFORMANCE CRITERIA
	reused or recycled according to legislation, regulations, codes of practice and job specification.
	5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	5.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - inform relevant authorities and supervisors of completion of job
 - plan work with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record data in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- disconnecting and reconnecting Type A gas appliances from mechanical services, gas, water, air and other services to allow replacement, repair or maintenance
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- application of ignition and combustion principles relating to conveyed materials or materials used in confined work spaces
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for disconnecting and reconnecting Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to disconnecting and reconnecting Type A gas appliances
- SI system of measurements
- workplace and equipment safety requirements.

RANGE STATEMENT

Materials may include:

- wrenches.
- piping materials
- Type A gas appliances.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
 - appropriate component selection that has minimal environmental impact
 - efficient energy and water use
 - efficient use and recycling of material
 - correct handling of hazardous materials
 - disposal of waste material to ensure minimal environmental impact.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing and gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to disconnecting and reconnecting Type A gas appliances
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Design drawings, specifications and any special instructions are obtained.</p> <p>1.2. Safety (OHS) requirements associated with calculating and installing natural ventilation for Type A gas appliances, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Appropriate work notices and required documentation are completed and dispatched in accordance with authorities' requirements.</p> <p>1.5. Tasks are planned in conjunction with others involved in or affected by the work.</p> <p>1.6. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.7. Work area is prepared to support efficient calculation and installation of natural ventilation for Type A gas appliances.</p>
2. Identify natural ventilation requirements.	<p>2.1. Gas load and design requirements are determined from design drawings, plans, specifications and given information.</p> <p>2.2. Source and path of air supply are determined to comply with standards, plans and specifications of the job.</p> <p>2.3. Free ventilation area is calculated in required format and confirmed as being in accordance with standards, plans and specifications.</p> <p>2.4. Ventilation openings are calculated in required format and positioned in compliance with standards.</p> <p>2.5. Quantity and type of materials and other components required are estimated from design drawing or on-site dimensions and ordered in accordance with workplace requirements.</p>
3. Install ventilation and test appliance.	<p>3.1. Ventilation is installed in compliance with standards.</p> <p>3.2. Installation is completed without damage to the building structure, surrounding environment or other services.</p> <p>3.3. Appliance and flues are tested for operation and compliance with standards and adjusted.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory statutory and regulatory authority legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- calculating, installing and testing natural ventilation for Type A gas appliances
- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - inform relevant authorities and supervisors of completion of job
 - plan work with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record data in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- mechanical ventilation and associated interlocks
- procedures for calculating, installing and testing natural ventilation for Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to natural ventilation requirements for Type A gas appliances
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for calculating, installing and testing natural ventilation for Type A gas appliances
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, calculate natural ventilation for a water heater, space heater and a cooking appliance, ensuring:
 - correct identification of location, design and details of proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - hazardous materials and substances

RANGE STATEMENT

	<ul style="list-style-type: none"> • service lines • surrounding structures and facilities • trip hazards • use of tools and equipment • work site visitors and the public • working at heights • working in proximity to others • use of firefighting equipment • use of first aid equipment • workplace environment and safety.
Ventilation:	<ul style="list-style-type: none"> • may be natural or mechanical • may be required for: <ul style="list-style-type: none"> • decorative heaters • ducted heating systems • gas stoves and hot plates • heated water storage • instant heated water heaters • space heaters.
Environmental requirements include:	<ul style="list-style-type: none"> • clean-up protection • waste management.
Quality assurance requirements may include:	<ul style="list-style-type: none"> • Australian standards • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
Tools and equipment may include:	<ul style="list-style-type: none"> • grinders • hand and power tools • ladders • measuring equipment • restricted height scaffolding • test equipment and instruments.
Materials:	<ul style="list-style-type: none"> • are to comply with appropriate standards for installing and commissioning Type A gas appliances • include Type A gas appliances and ventilation materials, including grills • may include louvres and ducting.

RANGE STATEMENT

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory gasfitting authority
- statutory plumbing authority.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing and gasfitting authority regulations
- recognised formulas or tables accepted by the regulatory authority
- relevant Australian standards
- safe work procedures relating to calculating and installing natural ventilation for Type A gas appliances
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify gas piping system requirements.	<p>1.1. Plans, specifications and any special instructions are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installation of subsidiary gas meters, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Gas load requirements are determined from specifications or given information.</p> <p>1.5. Size of meter is determined in accordance with standards, statutory and regulatory authority and workplace requirements.</p> <p>1.6. Meter is located in accordance with specifications or instructions, and complies with standards, and authorities' and workplace requirements.</p> <p>1.7. Quantity and type of materials to conform to authorities' requirements and appropriate standards are estimated from specifications or on-site dimensions.</p>
2. Prepare for installation.	<p>2.1. Meter and materials are ordered and checked for compliance with docket and order form, and for acceptable condition.</p> <p>2.2. Appropriate tools and equipment for installing meter, including personal protective equipment, are identified, selected and checked for serviceability.</p> <p>2.3. Appropriate testing equipment is selected.</p> <p>2.4. Work is planned in conjunction with others involved in or affected by the work.</p> <p>2.5. Work area and materials are prepared to support efficient installation of meter.</p>
3. Install and test subsidiary gas meter.	<p>3.1. Support and installation method, including any fixings, are selected to comply with manufacturer instructions, standards and workplace requirements.</p> <p>3.2. Pipe section is isolated.</p> <p>3.3. Meter is installed in accordance with specifications or instructions, and complies with standards and authorities' requirements.</p> <p>3.4. Installation is purged in accordance with standards.</p> <p>3.5. Meter is tested and pressure set in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
	standards and authorities' requirements.
	3.6.If required, leaks are located and repaired, and installation is retested.
	3.7.Test data is recorded in format required by regulating authority and workplace requirements.
4. Clean up.	4.1.Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.
	4.2.Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - inform relevant authorities and supervisors of completion of job
 - plan work with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record data in writing
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing, setting pressure regulator and testing subsidiary gas meters for domestic residences
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing subsidiary gas meters
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to the installation and testing of subsidiary gas meters
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for installing and testing subsidiary gas meters
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, install, test and commission a subsidiary gas meter for a domestic residence, ensuring:
 - correct identification of location and operation of the meter
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify gas piping system requirements.	<p>1.1. Building plans and specifications and any special instructions are obtained.</p> <p>1.2. Safety (OHS) requirements associated with the installation of gas piping systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Gas load and design requirements are determined from design drawing or given information.</p> <p>1.5. Size of piping is calculated in accordance with relevant Australian standards, authorities' and workplace requirements.</p> <p>1.6. Set out of piping systems is in accordance with design drawing or instruction and complies with relevant Australian standards, authorities' and workplace requirements.</p> <p>1.7. Quantity and type of materials to conform to appropriate relevant Australian standards are estimated from design drawings or on-site dimensions.</p>
2. Prepare for installation.	<p>2.1. Materials and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.</p> <p>2.2. Appropriate tools and equipment for piping system installation, including personal protective equipment, are identified, selected and checked for serviceability.</p> <p>2.3. Appropriate testing equipment is selected.</p> <p>2.4. Work is planned in conjunction with others involved in or affected by the work.</p> <p>2.5. Work area and materials are prepared to support efficient installation of the system.</p>
3. Install and test piping system.	<p>3.1. Support system and installation method, including fixings, are selected to comply with manufacturer instructions, relevant Australian standards and workplace requirements.</p> <p>3.2. Pipe system is installed and jointed in accordance with design drawing or instruction and complies with relevant Australian standards and workplace requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. System is tested in accordance with job requirements, relevant Australian standards and workplace requirements.</p> <p>3.4. Leaks are located and repaired and system is retested.</p> <p>3.5. <i>Sustainability principles and concepts</i> are applied throughout the installation.</p> <p>3.6. System is purged of air in accordance with relevant Australian standards.</p> <p>3.7. Test data is recorded in format required by regulating authority and workplace requirements.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specifications.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. <i>Information</i> is accessed and documentation completed in accordance with regulatory and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan work with others
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- record test data in writing
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- determining pipe requirements and installing and testing gas piping systems where the installation conforms to relevant Australian standards or requirements of the local regulatory authority
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics of piping materials, joining methods, fittings and sealants
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing gas piping systems, including brazing and mechanical pipe jointing
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to installing and testing gas piping systems
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to determine requirements, and installing and testing consumer gas piping systems
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, determine the requirements, install and test two gas piping systems, each comprising at least two materials and serving two Type A gas appliances; one being an NG pipeline from the outlet of a meter and the other being an LPG pipeline from a storage cylinder or tank, ensuring:
 - application of sustainability principles and concepts throughout
 - correct identification of design and details of proposed piping system
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - communicating and working effectively

EVIDENCE GUIDE

Context of and specific resources for assessment

and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements

environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in

- handling of materials

RANGE STATEMENT

accordance with commonwealth, state and territory legislation and regulations and may include:

- hazard control
- identification and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of installation tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements may include:

- clean-up protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Materials may include:

- acceptable fittings and joints
- copper
- corrosion control materials
- mechanical jointed steel
- polyethylene (PE) and composite pipes
- unplasticised polyvinyl chloride (PVC-U)
- other approved materials.

Tools and equipment may

- chain blocks

RANGE STATEMENT

include:

- crimpers
- flaring tools and silver brazing equipment
- hacksaws
- hand and power tools
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment and ladders
- measuring equipment
- oxy and arc welding equipment
- pipe benders
- rollers
- spanners
- test instruments
- testing equipment
- threading equipment
- wrenches.

Sustainability principles and concepts:

- Cover the current and future social, economic and environmental use of resources
- may include:
 - appropriate component selection that has minimal environmental impact
 - choice of energy and water efficient appliances
 - efficient use and recycling of material
 - correct handling of hazardous materials
 - disposal of waste material to ensure minimal environmental impact.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:

RANGE STATEMENT

- building codes
- OHS and environmental requirements
- plumbing and gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to installing and testing gas piping systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements.	<p>1.1. Installation requirements are determined from plans, load and specifications or site inspection.</p> <p>1.2. Safety (OHS) requirements associated with sizing consumer piping systems, and the workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Piping materials are selected in compliance with appropriate standards, workplace and statutory and regulatory authority requirements.</p> <p>1.5. Gas loads and pipe lengths or instructions are calculated and determined from design drawings, instructions or site inspection.</p>
2. Size gas piping systems.	<p>2.1. Pressure drop is selected in accordance with standards, regulating authorities' requirements, specifications and workplace requirements after authorities have been contacted for information regarding capacity of gas main and available meter outlet pressure.</p> <p>2.2. Appropriate sizing table is selected for gas supply type, piping material and pressure drop.</p> <p>2.3. Sizing procedure is undertaken consistent with standards, regulating authorities' requirements, specifications and workplace requirements.</p>
3. Clean up.	<p>3.1. Work area is cleared.</p> <p>3.2. Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - seek information from relevant authorities
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- sizing consumer gas piping supplying appliances at an operating pressure not exceeding 200 kPa
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- appliance pressure requirements and gas consumption requirements
- characteristics of piping materials, joining methods, fittings and sealants
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for sizing consumer gas piping systems
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to sizing consumer gas piping systems
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements and design of gas piping systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, size consumer gas piping systems of at least two materials for up to five appliances each, at least one of them being a two stage LPG system, ensuring:
 - correctly identifying the sizing requirements of proposed piping system
 - correctly selecting and using appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Building plans and specifications and any special instructions are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing and commissioning Type A gas appliances, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Appropriate work notices and required documentation are completed and dispatched in accordance with the authorities' requirements.</p> <p>1.5. Tasks are planned in conjunction with others involved in or affected by the work.</p> <p>1.6. Tools and equipment and materials, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.7. Work area is prepared to support efficient installation of Type A gas appliances.</p>
2. Identify appliance requirements.	<p>2.1. Appropriate appliance for the gas supply type is selected in accordance with the job specification, ensuring the currency of the Australian Gas Association (AGA) or Australian Liquefied Petroleum Gas Association (ALPGA) approval number.</p> <p>2.2. Existing piping is checked to ensure its compliance with relevant Australian standards and that its capacity is adequate for the additional load.</p> <p>2.3. Appliance is located in conformance to regulatory requirements and relevant Australian standards, and is appropriate for appliance use and for piping, flue and ventilation requirements.</p>
3. Determine installation requirements.	<p>3.1. Appropriate pipe fittings and components for the installation are selected in accordance with relevant Australian standards.</p> <p>3.2. Size of branch line is calculated in accordance with regulating authorities' requirements.</p> <p>3.3. Ventilation openings and source of air supply are determined in conformance to relevant Australian standards and format required by the job specifications.</p> <p>3.4. Quantity and type of materials and other</p>

ELEMENT	PERFORMANCE CRITERIA
	components required are estimated from design drawing or on-site dimensions.
	3.5. Requirements for natural gas or LPG appliance regulator installation are determined.
4. Install appliance.	<p>4.1. Piping system is installed in accordance with design drawing or instruction and relevant Australian standards.</p> <p>4.2. Pipe system is tested in accordance with relevant Australian standards and regulatory authorities' requirements.</p> <p>4.3. Appliance is installed in accordance with relevant Australian standards and manufacturer instructions and without damage or distortion to surrounding environment or other services.</p> <p>4.4. <i>Sustainability principles and concepts</i> are applied throughout the installation.</p>
5. Commission appliance.	<p>5.1. Electrical safety check is conducted.</p> <p>5.2. Consumer piping is purged and joints are reconnected in accordance with workplace requirements.</p> <p>5.3. Appropriate testing instrument is selected and operated, with data being recorded in accordance with workplace requirements.</p> <p>5.4. Pipe system is tested in accordance with relevant Australian standards and statutory and regulatory authority requirements.</p> <p>5.5. Appliance is adjusted and reassembled and operation is checked in accordance with manufacturer specifications.</p> <p>5.6. Operation of appliance is explained to customer.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>6.3. <i>Information</i> is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete work notices and other relevant documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan work with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - record test data in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and commissioning Type A gas appliances, including flashing and requirements for flues and ventilation

REQUIRED SKILLS AND KNOWLEDGE

- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to installing and commissioning Type A gas appliances
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine the requirements for the installation and commissioning of Type A gas appliances
- applying safety requirements throughout the work sequence, including electrical requirements and personal protective clothing and equipment
- as a minimum and given the plans and specifications, the ability to install and commission a water heater, space heater, and cooking appliance; at least one of which is to be a domestic installation, one a commercial installation, and one a fan assisted flued appliance, ensuring:
 - application of sustainability principles and concepts
 - correct identification of location, design and details of proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify LPG storage requirements.	<p>1.1. Design, drawings, specifications and any special instructions are obtained.</p> <p>1.2. Safety (OHS) requirements associated with the installation of LPG storage facilities, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.</p> <p>1.5. Storage capacity is calculated in compliance with regulatory authority and workplace requirements.</p> <p>1.6. Type of storage is determined in accordance with job and workplace requirements.</p> <p>1.7. Containers and type of system (one or two stage) are selected in accordance with standards, job and workplace requirements.</p> <p>1.8. Appropriate regulators are determined to meet capacity and load of the system in accordance with workplace requirements.</p> <p>1.9. Appropriateness of selected location to provide the required service is established in conformance to standards and workplace requirements.</p> <p>1.10. Quantity of materials required is calculated from design, drawings and specifications in conformance to workplace requirements.</p>
2. Prepare for installation.	<p>2.1. Materials and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.</p> <p>2.2. Appropriate tools and equipment for storage facility installation, including personal protective equipment, are identified, selected and checked for serviceability.</p> <p>2.3. Appropriate testing apparatus is selected.</p> <p>2.4. Work is planned in conjunction with others involved in or affected by the work.</p> <p>2.5. Work area and materials are prepared to support efficient installation of the system.</p>
3. Install and test LPG storage system.	<p>3.1. Container supports and base, piping, fittings and components are selected in conformance to standards</p>

ELEMENT**PERFORMANCE CRITERIA**

	and workplace requirements.
	3.2. Size and method of connection are selected in conformance to standards and workplace requirements.
	3.3. Tank is purged in accordance with standards.
	3.4. System from cylinder outlet is tested, purged and regulator adjusted to be gas-tight, in conformance to regulatory authority and workplace requirements.
	3.5. Test data is recorded in format required by regulatory authority and workplace requirements.
4. Clean up.	4.1. Work area is cleared and materials disposed of or recycled in accordance with state or territory <i>statutory and regulatory authority</i> legislation and workplace procedures.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Information is accessed and documentation completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan work with others
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- record test data in writing
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing gas storage facilities
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to installing and testing gas storage facilities
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and select, locate, install and test LPG storage systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, determine the LPG storage requirements, and install and test two LPG storage facilities of less than 500 litre capacity, one being a multiple cylinder installation, ensuring:
 - correct identification of location, design and details of proposed storage installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated

RANGE STATEMENT

	with:
	<ul style="list-style-type: none"> • hazardous materials and substances • service lines • surrounding structures and facilities • trip hazards • use of tools and equipment • work site visitors and the public • working at heights • working in proximity to others
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • use of firefighting equipment • use of first aid equipment • workplace environment and safety. • clean-up protection • waste management.
<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none"> • Australian standards • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<i>Materials</i> for installing LPG storage facilities:	<ul style="list-style-type: none"> • may include: <ul style="list-style-type: none"> • container supports and bases • copper tubing • fitting and fixing materials • gas cylinders and storage tanks • gas regulators • non-metallic hose assemblies • stainless steel • other approved materials • are to comply with job specifications and appropriate standards for the storage of LPG.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • state or territory statutory authority • statutory gasfitting authority • statutory plumbing authority.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • chain blocks • forklifts • grinders

RANGE STATEMENT

Information may include:

- hacksaws
- hand and power tools
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- manual brazing equipment
- measuring equipment
- rollers
- testing equipment.
- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing and gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to determining requirements, and installing and testing LPG storage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS3035A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL

Modification History

ISC upgrade. Unit code updated from CPCPGS3015A to CPCPGS3035A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to select, locate, install and test liquefied petroleum gas (LPG) storage facilities with a storage capacity of more than 500 litres but less than 8KL.

The storage is connected to consumer piping systems with an operating pressure not exceeding 140kPa.

The design requirements of this unit are limited to the application of the design to layout and installation.

Application of the Unit

Application of the unit Site location for work application may be a customer's premises.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify installation requirements.	<ul style="list-style-type: none">1.1. Building plans and specifications and any special instructions are obtained.1.2. Safety (OHS) requirements associated with installation of LPG storage facilities, and workplace environmental requirements, are adhered to throughout the work.1.3. Quality assurance requirements for company operations are identified and adhered to.1.4. Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.1.5. Storage capacity is calculated in compliance with regulatory authority and workplace requirements, ensuring adequacy to meet load details.1.6. Regulator size and size of connections to cylinders are determined to meet capacity and load of the system in accordance with workplace requirements.1.7. Appropriateness of selected location to provide required service is established in conformance to standards, design instruction and workplace requirements.1.8. Quantity of cylinders and materials required is estimated from design instruction and selected to comply with standards and authorities' requirements.
2. Prepare for installation.	<ul style="list-style-type: none">2.1. Materials and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.2.2. Appropriate tools and equipment for installation of storage facility, including personal protective equipment, are identified, selected and checked for serviceability.2.3. Appropriate testing apparatus is selected.2.4. Work is planned in conjunction with others involved in or affected by the work.2.5. Work area and materials are prepared to support efficient installation of system.
3. Install and test LPG storage system.	<ul style="list-style-type: none">3.1. LPG cylinders and tank, piping, fittings and components are installed in conformance to standards and workplace requirements.3.2. Regulator and associated pipework are installed in compliance with standards and workplace

ELEMENT

PERFORMANCE CRITERIA

	requirements.
	3.3.Regulator is adjusted to provide flow pressure in conformance to standards and workplace requirements.
	3.4.System is purged in accordance with standards.
	3.5.System is tested in conformance to standards and workplace requirements.
	3.6.Test equipment is removed and test data recorded in format required by regulatory authority and workplace requirements.
4. Clean up.	4.1.Work area is cleared and materials disposed of or recycled in accordance with state or territory <i>statutory and regulatory authority</i> legislation and workplace procedures.
	4.2.Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Information is accessed and documentation completed in accordance with workplace requirements.
	4.4.Relevant authorities and supervisors are advised of job completion in conformance to regulatory and workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- inform relevant authorities and supervisors of completion of job
- plan work with others
- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- record data in writing
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- selecting, locating, installing and testing LPG storage facilities
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing gas storage facilities
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to installing and testing gas storage facilities
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and select, locate, install and test LPG storage systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications for a gas storage facility of capacity greater than 500 litres (but less than 8KL), determine the requirements, install and test first and second stage piping installation from an LPG storage cylinder located and installed to specifications, ensuring:
 - correct identification of location, design and details of proposed storage installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to install, commission and service Type B gas appliances, from the gas isolation valve and electrical isolation switch to the flue spigot on the appliance, in accordance with current and relevant standards.

Before satisfying this unit, the candidate requires a restricted electrical licence or equivalent to connect and disconnect appliances in accordance with the requirements of the particular State or Territory.

Application of the Unit

Application of the unit

This unit of competency supports the needs of experienced plumbers with a responsibility for interpreting and applying pre-existing design specifications; gaining approvals from authorities; preparing for work; installing gas system components and associated electrical or electronic components and controls; testing, adjusting, commissioning and servicing Type B gas appliances; and completing work finalisation processes, including formal recording and reporting requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain authority to undertake work on Type B gas appliances.	<p>1.1. Design specification for Type B gas appliance to be installed and commissioned is accessed, analysed, interpreted and confirmed through a detailed site inspection.</p> <p>1.2. Design specification matters requiring clarification are resolved through liaison with designer and gas authorities.</p> <p>1.3. Formal authority to proceed with installation and commissioning is obtained before commencing work, in accordance with regulatory and code of practice requirements.</p> <p>1.4. Regulatory and code of practice recording and reporting requirements are satisfied at appropriate times throughout the work sequence.</p>
2. Prepare for work.	<p>2.1. Safety (OHS) requirements associated with the workplace environment and installing, commissioning and servicing Type B gas appliances are accessed, interpreted and followed throughout the work.</p> <p>2.2. Gas system components, electrical or electronic components and controls, and other required installation materials are identified from the design specification and obtained for the work.</p> <p>2.3. Component specifications and manufacturer servicing manuals are obtained for planned work activity.</p> <p>2.4. Tasks are planned in conjunction with others involved in or affected by the work.</p> <p>2.5. Tools and equipment, including personal protective equipment, are selected consistent with installation, commissioning and servicing needs and checked for serviceability, and any faults are rectified or reported.</p> <p>2.6. Quality assurance requirements for the work sequences are identified and followed.</p> <p>2.7. Work area is prepared to support efficient installation, commissioning and servicing of Type B gas appliance.</p> <p>2.8. Gas system and electrical safety checks and isolation procedures are completed and recorded to manufacturer and other authority requirements before commencing work.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Install Type B gas appliances.	<p>3.1. Appliance components, including valve trains, burners and associated pipework and flue systems, are installed in accordance with approved design specifications.</p> <p>3.2. Ventilation systems are installed in accordance with approved design specifications.</p> <p>3.3. Electrical components, including terminations, are installed in accordance with design specifications and regulatory requirements.</p> <p>3.4. Electrical wiring and wiring enclosures are installed in accordance with design specifications and regulatory requirements.</p> <p>3.5. Installations are visually inspected at each stage of the work to ensure compliance with specifications and absence of damaged or faulty equipment and materials.</p>
4. Commission and test Type B gas appliances.	<p>4.1. Testing and servicing equipment appropriate to the requirement is selected, checked and prepared for use.</p> <p>4.2. Gas and electrical safety checks and isolation procedures, including purging, are completed and recorded to manufacturer and other authority requirements before testing and commissioning are commenced.</p> <p>4.3. Operational parameters of individual components are tested and adjusted to conform to specifications.</p> <p>4.4. Appliance operations are tested first without and then with fuel, adjustments are completed as necessary and results recorded in accordance with approving authority requirements.</p> <p>4.5. Flue gases are analysed in accordance with recognised industry practice and other authority requirements.</p>
5. Service Type B gas appliances.	<p>5.1. Nature and possible cause of faults or out of specification performance are identified from defect reports or operational records.</p> <p>5.2. Electrical and gas safety checks and isolation procedures are completed and recorded to manufacturer and other authority requirements before servicing work is commenced.</p> <p>5.3. Plans and diagrams are read and correctly interpreted to identify potential gas system and electrical fault pathways and locations.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.4. Appropriate testing techniques, procedures and equipment are selected and applied to diagnose system faults or discrepancies.</p> <p>5.5. Cause of fault or out of specification performance is identified and confirmed.</p> <p>5.6. Options for correction are thoroughly analysed and most appropriate corrective action is selected.</p> <p>5.7. Repair, replacement or adjustment is made in accordance with manufacturer specifications or service manuals.</p> <p>5.8. Appliance is assessed to ensure compliance with relevant standards and manufacturer specifications prior to recommissioning and returning to service.</p>
6. Clean up work area.	<p>6.1. Work area is cleared and materials disposed of or recycled in accordance with federal, state and territory legislation and workplace procedures.</p> <p>6.2. Tools and equipment are cleaned, checked, serviced and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>6.3. Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - liaise with designer and authorities
 - plan work with others

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - defect reports
 - design specification
 - documentation from a variety of sources
 - operational records
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - record test results
 - submit work notices
- following safe work procedures relating to the installation, commissioning and servicing of Type B appliances
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- interpreting information, including:
 - charts and hand drawings
 - diagrams or sketches and graphics
 - instructions issued by authorised organisational or external personnel
 - job drawings
 - manufacturer specifications and instructions
 - maps
 - material safety data sheets (MSDS)
 - memos
 - organisation work specifications and requirements
 - plans, diagrams and specifications
 - signage
 - verbal or written and graphical instructions
 - work bulletins
 - work schedules
- numeracy skills to interpret and apply mathematical information
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- Australian standards, including the use of tables:

REQUIRED SKILLS AND KNOWLEDGE

- AS3814 (AG501) Industrial and commercial gas appliances
- AS5601 (AG601) Gas installations
- relevant aspects of AS1375 Industrial fuel fired appliances, AS2593 Boilers - unattended and limited attendance and AS/NZS3000 Electrical installations
- basic electrical theory, including:
 - Ohm's law
 - current flow
 - conduction
 - insulation
 - ignition systems
 - characteristics of fuses, circuit breakers, residual current devices and earthing systems
 - characteristics of electromotive force (EMF)
 - electrical safety, including isolation procedures and requisite precautions
 - electrical terminology and conventional symbols
- flue gas analysis techniques and processes
- gas terminology and conventional symbols
- gas safety, including:
 - isolation procedures
 - combustion characteristics and effects
- job safety analysis (JSA) and safe work method statements (SWMS)
- programmable logic controller (PLC) systems, including remedial programming techniques
- purging requirements, techniques and critical calculation processes
- SI system of units
- sources of information and processes for the calculation of material requirements
- types and properties of fuel gas, including pressure and flow rates
- types, characteristics, uses and limitations of electrical and electronic componentry and control systems
- types, characteristics, uses and limitations of Type B gas appliance components
- ventilation techniques and calculation processes
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving planning and conducting the installation of at least one significant Type B gas appliance.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating interpreting and applying relevant information, standards and specifications to determine requirements of and maintain Type B appliances
- applying safety requirements throughout the work sequence, including:
 - using personal protective clothing and equipment
 - isolating appliances from gas and electrical services
 - planning and conducting installation of at least one significant Type B appliance, which includes:
 - obtaining required authorities
 - planning work
 - installing gas, ventilation and electrical componentry
 - installing electrical control system
 - completing all required tests and sequences
 - commissioning the appliance
 - completing all required documentation
 - communicating and working effectively and safely with others.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Design specification may include:

- air controls
- combustion air blowers
- flame safe guards
- gas pressure regulation
- gas valve trains
- manual shut-off valves
- markings and instructions

RANGE STATEMENT

Type B gas appliances:

- materials
- over-pressure protection systems
- process controls
- safety shut-off valve systems.
- include those above 10 megajoules (MJ) with no Australian Gas Association (AGA) approval scheme and no specific standards to cover type and scope of operation
- Type B appliances may use:
 - combination fuels
 - liquefied petroleum gas
 - natural gas
 - simulated natural gas
 - tempered liquefied petroleum gas
 - town gas
- with special requirements for design and operation, including:
 - after burners - process
 - air gas mixing machines and mixing blowers
 - atmosphere generators and special atmospheres
 - direct gas fired air heaters
 - high input gas fired appliances
 - incinerators and generators
 - multi-fuel firing systems
 - ovens - direct fired
 - smoke ovens - direct fired
 - stationary gas engines and turbines
 - steam and heated water boilers
 - water heaters
- Type B appliance operation specifications will include:
 - flame establishment periods
 - interlocks
 - operation of gas appliance and burners
 - operational sequences
 - start gas rates
- planning installation of a Type B gas appliance will include determination of site suitability

RANGE STATEMENT

Regulatory and code of practice requirements include:

- and confirmation of the appropriateness of:
 - electrical supply
 - gas supply and sizing
 - proposed appliance security and lighting measures
 - proposed component handling and positioning measures
 - proposed foundation and supports
- commissioning procedure for a Type B appliance, including:
 - preliminary inspection
 - activation run without fuel
 - activation run with fuel
 - operation and completion stages.
- statutory and regulatory authority requirements that may include:
 - statutory plumbing authority
 - statutory gasfitting authority
- state or territory and local statutory regulatory authority and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing and gasfitting authority regulations
- environmental regulatory requirements may include:
 - air pollution
 - clean-up protection
 - waste management
- relevant Australian standards, including:
 - AS1375 Industrial fuel fired appliances
 - AS2593 Boilers - unattended and limited attendance
 - AS/NZS3000 Electrical installations
 - AS/NZS4836 Safe working on low-voltage electrical installations
 - AS5601 (AG601) Gas installations
 - AS3814 (AG501) Industrial and commercial gas appliances.

RANGE STATEMENT

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials, including hazardous materials and substances
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electrical components and safety
 - gas fires and explosions
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Tools and equipment include:

- hand tools, such as wrenches and spanners
- measuring equipment
- power tools
- testing equipment and instruments, including:
 - manometer
 - multi-meter
 - dual probe voltage tester
 - flue gas analysis equipment
 - hand pump pressure kit
 - Pitot tube
 - megohmmeter
 - power point tester
 - neon tester
 - volt stick
- lifting and load shifting equipment, including:
 - hand trolleys
 - rollers
 - forklifts

RANGE STATEMENT

	<ul style="list-style-type: none"> • chain blocks • hoists and jacks.
<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none"> • Australian Gas Authority (AGA) requirements • Environment Protection Authority • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<i>Valve trains</i> include:	<ul style="list-style-type: none"> • flow and ratio controls • gas pressure regulators and controllers • manual isolation valves • safety shut-offs.
<i>Burners</i> include:	<ul style="list-style-type: none"> • atmospheric • nozzle • oxygen enhanced • packed power • pre-mix.
<i>Testing and servicing</i> of Type B gas appliances will require:	<ul style="list-style-type: none"> • use of a hand-held programmer to monitor circuit conditions and to edit program (to make minor changes) • materials that comply with appropriate standards for the maintenance of Type B gas appliances.
<i>Operational parameters of individual components</i> include:	<ul style="list-style-type: none"> • air flows • all safety and operating controls • combustion conditions • gas rates • purge times.

Functional area

CPCPGS4011A Design and size consumer gas installations

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to design, size and document a consumer's gas installation, including consumer piping operating up to a pressure of 200kPa, fluing, ventilation and appliance installation associated with natural gas (NG), simulated natural gas (SNG), liquefied petroleum gas (LPG) and tempered liquefied petroleum gas (TLPG) for a building of minimum four floors and multiple buildings supplied through one gas source (billing meter or storage tank).

It covers preparing for work, determining gas installation design requirements, detailed planning of the layout, and completing work finalisation processes, including records and documentation.

Work associated with this unit is undertaken within the scope of AS5601 Gas installations and local licensing requirements (gas, electrical and plumbing).

Application of the Unit

Application of the unit Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for planning.	<p>1.1. Nature and scope of planning task are identified and confirmed.</p> <p>1.2. Safety (OHS) requirements associated with planning, sizing and documenting layout of gas installations, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Work is organised and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.4. Tools and equipment required for planning, sizing and documenting layout of gas installations, including personal protective equipment, are selected and checked for serviceability, and faults are rectified or referred for action.</p> <p>1.5. Work area in which planning process is to be conducted is prepared.</p>
2. Identify system requirements.	<p>2.1. Information and specifications for required work are obtained and confirmed, if necessary by site inspection.</p> <p>2.2. Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.</p> <p>2.3. Quantity, location and type of take-off materials and fixtures are determined from plans and specifications.</p> <p>2.4. Gas installations are sized in accordance with relevant Australian standards, and statutory and regulatory authority and workplace requirements.</p>
3. Plan system layout.	<p>3.1. Layout of gas installations is planned in accordance with building plans, relevant Australian standards and workplace procedures.</p> <p>3.2. Materials required are specified and optimised in accordance with relevant Australian standards from proposed design.</p> <p>3.3. Plans are recorded in accordance with regulatory authorities' and workplace requirements.</p> <p>3.4. Sustainability principles and concepts are applied to work preparation and application.</p>
4. Restore work area.	<p>4.1. Work area is restored in accordance with workplace procedures.</p> <p>4.2. Tools and equipment used in the process are refurbished and left in accordance with workplace</p>

ELEMENT**PERFORMANCE CRITERIA**

procedures.

4.3. Information is accessed and documentation, including work backup, is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements, including system requirements
 - organise and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - regulations, relevant Australian standards, plans, specifications and drawings
 - record plans in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- planning, sizing and documenting layout of gas installations for single and multiple buildings consisting of a minimum of four floors
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- access and understand site-specific instructions in a variety of media
- use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- AS5601 Gas installations, including the use of tables
- building and construction industry terminology
- drawing and sketching techniques, including the use of conventional symbols
- gas safety, including combustion characteristics and effects
- general electrical safety requirements
- impact of ventilation on design
- job safety analysis (JSA) and safe work method statements(SWMS)
- planning, sizing and layout of gas installations
- relevant statutory and authority requirements related to planning, sizing and layout of gas installations
- SI system of measurement
- types and properties of fuel gas, including pressure and flow rates
- types, characteristics, uses and limitations of gas pipe work and reticulation materials, including joining techniques and systems
- use of computers and computer-aided design (CAD) software
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to the planning, sizing and layout of gas installations
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to design, size and document the layout of three gas installations which are to include any combinations covering:
 - pipe sizing and pressures up to 200kPa
 - at least one NG installation
 - at least one LPG installation
 - at least one domestic installation
 - at least one commercial installation
 - a caravan installation
 - a marine installation, including the installation of an LPG leak detection system in a mono hull vessel
- installations planned and documented shall include:
 - multiple buildings
 - a two stage LPG system
 - five or more gas appliances
 - domestic and commercial Type A gas

EVIDENCE GUIDE

	<ul style="list-style-type: none"> appliances <ul style="list-style-type: none"> a common flue system a minimum of three piping materials an over-pressure protection device a subsidiary meter plans and documentation should ensure: <ul style="list-style-type: none"> application of sustainability principles and concepts identification, evaluation and incorporation of sustainability principles and concepts into the design correct identification of location, design and details of proposed services correct selection and use of appropriate processes, tools and equipment completion of all work to specification compliance with regulations, relevant Australian standards and organisational quality procedures and processes communicating and working effectively and safely with others.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> an induction procedure and requirement realistic tasks or simulated tasks covering the minimum task requirements relevant specifications and work instructions tools and equipment appropriate to applying safe work practices support materials appropriate to activity workplace instructions relating to safe working practices and addressing hazards and emergencies material safety data sheets

EVIDENCE GUIDE

- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electrical components and safety
 - gas fires and explosions
 - hazardous materials and substances
 - other machines
 - surrounding structure and facilities
 - trip hazards
 - underground services
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

RANGE STATEMENT

- Gas installations*** may include:
- liquefied petroleum gas
 - natural gas
 - simulated natural gas
 - tempered liquefied petroleum gas.
- Environmental requirements*** may include:
- air pollution
 - clean-up protection
 - environmental protection
 - waste management.
- Tools and equipment*** may include:
- computers running appropriate CAD software
 - drawing instruments
 - measuring equipment.
- Information*** may include:
- charts and hand drawings
 - diagrams or sketches
 - instructions issued by authorised organisational or external personnel
 - job drawings
 - manufacturer specifications and instructions
 - material safety data sheets (MSDS)
 - memos
 - organisation work specifications and requirements
 - regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - gas regulations
 - OHS and environmental requirements
 - plumbing regulations
 - relevant Australian standards, including Gas installations
 - safe work procedures relating to planning, sizing and documenting the layout of gas installations
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.
- Statutory and regulatory authorities*** include:
- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.
- Materials*** may include:
- building plans and specifications.

RANGE STATEMENT

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
 - use of efficient design principles to ensure minimal environmental impact
 - incorporation of efficient use of material into the design, including recycling of material
 - choice of efficient energy and water appliances
 - correct handling of hazardous materials
 - disposal of waste material to ensure minimal environmental impact.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Appliance specifications and servicing and manufacturer manuals are obtained for planned work activity.</p> <p>1.2. Safety (OHS) requirements associated with servicing Type A gas appliances, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Tools, equipment and materials are selected consistent with servicing needs, checked for serviceability, and faults are rectified or referred for action.</p> <p>1.5. Tasks are planned in conjunction with others involved in or affected by the work.</p> <p>1.6. Work area is prepared to support efficient conduct of servicing the Type A gas appliance.</p> <p>1.7. Electrical safety checks and isolation procedures are completed and recorded to manufacturers' and other statutory and regulatory authority requirements before servicing work is commenced.</p>
2. Disassemble and assemble Type A gas appliances.	<p>2.1. Appliance specifications and servicing and manufacturer manuals are obtained and analysed to confirm assembly and disassembly techniques and sequences.</p> <p>2.2. Preliminary diagnosis is completed to focus and minimise disassembly requirement.</p> <p>2.3. Disassembly and reassembly are carried out safely and in a sequential manner.</p> <p>2.4. Appliance is assessed to ensure it complies with relevant standards and manufacturer specifications prior to commissioning and return to service.</p>
3. Diagnose and remedy electrical and electronic circuitry faults.	<p>3.1. Electrical safety checks and isolation procedures are completed and recorded to manufacturer and other authority requirements before servicing work is commenced.</p> <p>3.2. Electrical circuit and wiring diagrams are read and correctly interpreted to identify potential fault pathways and locations.</p> <p>3.3. Appropriate testing techniques, procedures and equipment are selected and applied to diagnose</p>

ELEMENT	PERFORMANCE CRITERIA
4. Diagnose and remedy gas system faults on Type A gas appliances.	<p>faults in circuit wiring, components and ignition systems.</p> <p>3.4. Cause of fault is determined and confirmed.</p> <p>3.5. Most appropriate corrective action is selected after a complete analysis of options.</p> <p>3.6. Repair, replacement and adjustment action is taken in accordance with manufacturer specifications or service manuals.</p> <p>3.7. Appliance is assessed to ensure it complies with relevant standards and manufacturer specifications prior to commissioning and return to service.</p> <p>4.1. Electrical and gas safety checks and isolation procedures are completed and recorded to manufacturers' and other authority requirements before servicing work is commenced.</p> <p>4.2. Gas system plans and diagrams are read and correctly interpreted to identify potential fault pathways and locations.</p> <p>4.3. Appropriate testing techniques, procedures and equipment are selected and applied to diagnose gas system faults.</p> <p>4.4. Flue gases are analysed in accordance with recognised industry practice and local authority requirements.</p> <p>4.5. Cause of fault is determined and confirmed.</p> <p>4.6. Most appropriate corrective action is selected after a complete analysis of options.</p> <p>4.7. Repair, replacement and adjustment action is taken in accordance with manufacturer specifications or service manuals.</p> <p>4.8. Appliance is assessed to ensure it complies with relevant standards and manufacturer specifications prior to commissioning and return to service.</p>
5. Clean up work area.	<p>5.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.</p> <p>5.2. Tools and equipment are cleaned, checked, serviced and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>5.3. Information is accessed and documentation completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements, including system requirements
 - organise and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - regulations, standards, plans, specifications and drawings
 - record plans in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- preparation for the work, fault diagnosis, disassembly, repair and replacement, reassembly and completion of work finalisation processes
- servicing equipment and completing job records
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements

REQUIRED SKILLS AND KNOWLEDGE

- AS5601 (AG601) Gas installations, including the use of tables
- basic electrical theory, including:
 - characteristics of electromotive force (EMF)
 - characteristics of fuses, circuit breakers, residual current devices and earthing systems
 - conduction
 - current flow
 - ignition systems
 - insulation
 - Ohm's law
- burners and burner adjustment
- characteristics of conversion from one gas type to another
- classification of appliances and identification of related components
- electrical safety, including isolation procedures and requisite precautions
- gas appliance regulators
- gas appliance thermostats
- gas safety, including:
 - combustion characteristics and effects
 - isolation procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- operation of flame failure systems used in Type A gas appliances
- SI system of measurement
- types and properties of fuel gas, including pressure and flow rates
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements and maintain Type A gas appliances
- applying safety requirements throughout the work sequence, including the use of equipotential bonding procedures, and personal protective clothing and equipment; and isolation of appliances from gas and electrical services
- as a minimum, the ability to perform the following servicing activities and functions:
 - disassembly, reassembly, testing and recommissioning of a minimum of two different Type A gas appliances
 - conduct evaluative tests on electrical and electronic components, including central processing units, printed circuit boards and associated parts, in order to diagnose and remedy faults and malfunctions
 - conduct evaluative tests on gas systems to diagnose and remedy faults and malfunctions on the components listed in the range statement
 - convert a Type A gas appliance to operate on another gas type, in accordance with AS5601, any local utility's requirements and manufacturer specifications
- servicing activities and function should ensure:

EVIDENCE GUIDE

Context of and specific resources for assessment

- correct selection and use of appropriate processes, tools and equipment
- completion of all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or

EVIDENCE GUIDE

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identification and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electrical components and safety
 - gas fires and explosions
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- are badged appliances of less than 500 megajoules (MJ) for which an Australian Gas Authority (AGA) and Australian Liquefied Petroleum Gas Association (ALPGA) approval scheme exists
- include:
 - decorative heaters
 - ducted heating systems
 - gas stoves and hot plates
 - heated water storage
 - instant heated water heaters
 - space heaters

Type A gas appliances:

RANGE STATEMENT

Statutory and regulatory authorities include:

- the maintenance of Type A gas appliances.
- statutory electrical authority
- statutory gasfitting authority
- statutory plumbing authority
- other relevant state or territory and local statutory authorities.

Testing techniques:

- de-energised and energised tests may include:
 - capacitors
 - electric motors
 - heat activated switches
 - ignition systems (basic, ignition and re-ignition, flame safeguard systems, hot surface ignition)
 - printed circuit boards
 - relay time delay and conventional
 - solenoid coils
 - thermistors
 - thermostats, direct and indirect wired
 - time clocks, mechanical and electronic
 - transformers.

Adjustment and calibration are to include:

- dip switches
- fan limit controls
- fan speed settings
- heat anticipators
- thermostats.

Corrective action such as component removal and replacement is to include:

- burners
- combination controls
- fans
- pilots
- rail cocks, thermostats and associated components
- solenoid valve regulators
- thermocouples.

Information may include:

- charts and hand drawings
- diagrams or sketches and graphics
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps

RANGE STATEMENT

- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing and gasfitting authority regulations
- relevant Australian standards, including AS/NZS3000 Electrical installations, AS/NZS4836 Safe working on low-voltage electrical installations, AS5601 (AG601) Gas installations
- safe work procedures relating maintaining Type A gas appliances
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Site survey is conducted of proposed irrigation area in accordance with client requirements.</p> <p>1.2. Safety (OHS) requirements associated with design of domestic irrigation systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for preparing basic irrigation designs and drawings, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient design of domestic irrigation systems.</p>
2. Identify drawing requirements.	<p>2.1. Areas requiring irrigation and system design components are identified.</p> <p>2.2. Information is obtained on the soil type, ground slope, contours and prevailing wind.</p> <p>2.3. Underground cables and services, buildings, paths and other permanent structures are located and noted.</p> <p>2.4. Water supply is located and its influence on design requirements is determined.</p> <p>2.5. Appropriate emitters are selected to suit function and design requirements.</p>
3. Install and commission irrigation system.	<p>3.1. Site plan is drawn to include structures, paths and property boundaries.</p> <p>3.2. Garden areas are sketched to include locations of lawns, garden beds, trees, vegetable patches or ferneries.</p> <p>3.3. Pipe runs and water emitters are sketched to design requirements.</p> <p>3.4. Sizes of pipes are calculated using standard data and information is recorded in required format.</p> <p>3.5. List of materials is compiled to include number and type of water emitters, control valves, quantities of pipes, fittings and components.</p> <p>3.6. Drawing and design are submitted to client for</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	approval and adjusted.
	4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - compile list of materials
 - complete workplace documentation
 - record information
- designing and drawing a domestic urban irrigation system, including:
 - identifying material requirements

REQUIRED SKILLS AND KNOWLEDGE

- selecting and locating components
- site layout
- site requirements and structures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- process and workplace requirements for basic irrigation design
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to drawing and installing irrigation systems
- SI system of measurement
- specifications of the range of irrigation products available
- standards applicable to the installation
- technologies for irrigation measurement and drawings
- various types of irrigation systems, including types of materials and components used
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the design of domestic irrigation systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the site plan and customer requirements for the irrigation of a 500m² garden (of lawn, shrubs, trees and flowers), design and prepare a drawing of the system, incorporating automatic timers and controls, varying sprinkler heads and zones, and indicating the materials required (by number and type), ensuring:
 - correct identification of location, design and details of proposed system
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials, including hazardous materials and substances
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment

RANGE STATEMENT

	<ul style="list-style-type: none"> • use of first aid equipment • use of tools and equipment • workplace environment and safety.
<p><i>Environmental requirements</i> cover water quality management and may include:</p>	<ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<p><i>Quality assurance</i> requirements may include:</p>	<ul style="list-style-type: none"> • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<p><i>Statutory and regulatory authorities</i> include:</p>	<ul style="list-style-type: none"> • state or territory statutory authority • statutory plumbing authority.
<p><i>Tools and equipment</i> may include:</p>	<ul style="list-style-type: none"> • calculator • computer design software • drawing and drafting equipment • laser measuring devices • measuring equipment.
<p><i>System design components</i> include:</p>	<ul style="list-style-type: none"> • backflow prevention devices • controls • pipework • valves • water emitters, which may include: <ul style="list-style-type: none"> • hear drive • impact • in-line turbo drippers • mist sprays • oscillating • pop up (full circle, half, quarter) • pulsating • selection of water emitters, based on: <ul style="list-style-type: none"> • automatic control systems • manufacturer specifications • physical site conditions • site requirements • types of plants requiring irrigated water.
<p><i>Information</i> may include:</p>	<ul style="list-style-type: none"> • charts and hand drawings

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with setting out, installing and commissioning irrigation systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for setting out, installing and commissioning irrigation systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient setting out, installation and commissioning of irrigation systems.</p>
2. Identify installation requirements.	<p>2.1. Irrigation system requirements are identified from plans, specifications and relevant information.</p> <p>2.2. Underground cables, pipes and other existing services are located and allowed for.</p> <p>2.3. Flow rate is correctly measured from water meter or other available source.</p> <p>2.4. Water pressure (static head) is determined at source of supply.</p> <p>2.5. Piping and system components are selected to comply with standards, plans and specifications.</p> <p>2.6. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.7. Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.</p>
3. Install and commission irrigation system.	<p>3.1. Irrigation pipes are set out in accordance with plans, specifications and site requirements.</p> <p>3.2. Pipe trenches are excavated in accordance with plans and specifications.</p> <p>3.3. Pipe system is installed in accordance with plans, specifications, site requirements, manufacturer recommendations and standards.</p> <p>3.4. Pipelines are flushed of air and foreign matter to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>installation standard.</p> <p>3.5. Backflow prevention device is installed in accordance with standards.</p> <p>3.6. Water emitters are installed and adjusted to produce required spray pattern.</p> <p>3.7. Control valves are installed, operated and adjusted to achieve specified flow rate.</p> <p>3.8. Installation is tested to comply with standards and authorities' requirements, and is adjusted.</p> <p>3.9. Trenches are backfilled in accordance with plans and specifications and ground surface is reinstated.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources

REQUIRED SKILLS AND KNOWLEDGE

- drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to:
 - compile list of materials
 - complete workplace documentation
 - record information
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing pipework, controls, valves, backflow prevention devices and water emitters for an irrigation system and its commissioning
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of setting out, installing and commissioning irrigation systems
- properties of water, including pressure and flow rates
- protection of potable water supplies
- relevant statutory and authority requirements related to installing and commissioning irrigation systems
- SI system of measurement
- standards applicable to the installation
- various types of irrigation systems, including types of materials and components used
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to set out, install and commission irrigation systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans or specifications determine the system requirements, set out, install and commission an irrigation system sourced from an isolating valve to supply four water emitters of varying type and requiring a solenoid valve, ensuring:
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- safe work procedures relating to setting out, installing and commissioning irrigation systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Materials include:

- copper tube, polyethylene, stainless steel and PVC-U pipes
- joints and components
- system components, including:
 - automatic controls
 - back flow prevention devices
 - low voltage solenoid valves
 - water emitters
- water emitters, which may include:
 - hear drive
 - impact
 - in-line turbo drippers
 - mist sprays

RANGE STATEMENT

- oscillating
- pop up (full circle, half, quarter)
- pulsating
- selection of water emitters, based on:
 - automatic control systems
 - manufacturer specifications
 - physical site conditions
 - site requirements
 - types of plants requiring irrigated water.

legislation and workplace procedures.

4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.

4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- fabricating and assembling mechanical services components prior to installation in heating, cooling and ventilation systems
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental

REQUIRED SKILLS AND KNOWLEDGE

abilities

- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- application of mechanical and hydraulic principles
- characteristics of materials used in the required assembly
- classification of assembly types and identification of assembly components
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- OHS regulations relevant to assembly of irrigation components
- personal protective equipment characteristics and use
- operation requirements of equipment used for fabricating and assembling components
- SI system of measurement
- types of fasteners, fixings and sealants
- workplace operating procedures, including required standards for assembly.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to assemble mechanical services components
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, assemble and connect a heating coil to a boiler and a fan and duct work for a warm air heating system, ensuring:
 - correct identification of requirements and details of assembly
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - hazardous materials and substances
 - service lines

RANGE STATEMENT

	<ul style="list-style-type: none"> • surrounding structures and facilities • traffic control • trip hazards • use of tools and equipment • work site visitors and the public • working in proximity to others • use of firefighting equipment • use of first aid equipment • workplace environment and safety.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans, specifications and any special instructions are obtained.</p> <p>1.2. Safety (OHS) requirements associated with fabricating and installing steel pressure piping, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4. Work is planned in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment are identified, selected and checked for serviceability.</p> <p>1.6. Work area and materials are prepared to support efficient fabrication and installation of steel pressure piping.</p>
2. Identify installation requirements.	<p>2.1. Pipework configuration is identified from authorities' requirements, plans, specifications and relevant information.</p> <p>2.2. Allowances for fabrication and/or assembly are determined and transferred.</p> <p>2.3. Quantity and type of materials required are calculated from plans and specifications in accordance with regulatory authorities' and workplace requirements.</p> <p>2.4. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials are checked for compliance with docket and order form and for acceptable condition, and faults are reported.</p>
3. Fabricate, install and test pipe system.	<p>3.1. System is set out in compliance with design drawings or instructions.</p> <p>3.2. Fixings and supports are installed to manufacturer requirements, job plans, specifications and workplace requirements.</p> <p>3.3. Pipe system is fabricated and jointed in accordance with job plans, specifications and manufacturer requirements for mechanical type joints.</p> <p>3.4. Pipe system is installed in specified location without damage or distortion to pipework or surrounding environment or other services.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. <i>Sustainability principles and concepts</i> are applied throughout the installation.
	3.6. Pipe system is tested and documented to comply with job specification, authorities' requirements, relevant Australian standards, codes of practice and workplace requirements.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification..
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation

REQUIRED SKILLS AND KNOWLEDGE

- document pipes system test
- cutting and welding with oxy-acetylene and arc welding
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mechanical bending, jointing, fixing and testing of mild steel pressure piping systems
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- fabrication, installation and testing process for pressure pipe systems
- job safety analysis (JSA) and safe work method statements (SWMS)
- properties of conveyed materials, including pressure, flow rates and temperature requirements
- relevant statutory authority requirements and Australian standards related to fabricating, installing and testing pressure pipe systems
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine requirements, and fabricate, install and test pressure pipe systems
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, apply pipe cutting and welding skills by using oxy-acetylene and arc welding equipment for piping up to DN50 to include:
 - butt welding a pipe joint in DN40 piping in the fixed horizontal position
 - welding DN40 and 50 mild steel branch joints
 - constructing a DN80 header with DN20, 40 and 50 branch joints using the oxy-acetylene method
 - welding 50mm and 80mm flanges to mild steel pipe
 - welding blank ends into DN80 mild steel pipe
- fabricating, installing and testing a DN40 steel pipeline from a flanged header to mechanical plant, incorporating two changes of direction with one position butt welded with oxy

EVIDENCE GUIDE

	<p>welding, plus an arc welded flange incorporating a branch for testing purposes</p> <ul style="list-style-type: none"> completed task is to be tested to the required pressure, and the soundness of all joints and the system, ensuring: <ul style="list-style-type: none"> application of sustainability principles and concepts throughout the installation correct diameters are used, system is manufactured to required dimensions, and branches, bends, flanges, etc. are square correct identification of design and details of proposed pressure pipe system correct selection and use of appropriate processes, tools and equipment completion of all work to specification compliance with regulations, relevant Australian standards and organisational quality procedures and processes communicating and working effectively and safely with others.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> an induction procedure and requirement realistic tasks or simulated tasks covering the minimum task requirements relevant specifications and work instructions tools and equipment appropriate to applying safe work practices support materials appropriate to activity workplace instructions relating to safe working practices and addressing hazards and emergencies material safety data sheets research resources, including industry related systems information.

EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identification and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances

 - trip hazards
 - use of tools, plant and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- clean-up protection
- ozone protection

Environmental requirements may include:

RANGE STATEMENT

Quality assurance requirements may include:

- waste management.
- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- hand and power tools
- mechanical bending equipment and threading equipment
- ladders
- lifting and load shifting equipment, including:
 - chain blocks
 - elevated work platforms
 - forklifts
 - hand trolleys
 - hoists and jacks
 - rollers
 - scaffolding
- oxy and arc welding equipment
- testing equipment.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- selecting and installing appropriate thermal insulation sheathing to sections of both hot and cold piping, fittings and vessels associated with refrigeration and cooling and heating systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- correct waste disposal and recycling processes
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials handling processes
- OHS regulations relevant to insulation and sheathing
- personal protective equipment requirements and use
- processes of selecting and insulating pipes, fittings and vessels
- SI system of measurement
- techniques for cutting, fabricating and assembling metal sheathing
- techniques for fixing insulating materials to piping and vessels.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to select and install insulating sheathing to piping, fittings and vessels
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, insulate 2 metres of small bore heating line with at least one change in direction; 2 metres of refrigeration line with at least one change in direction, and metal sheath at least 2 metres of pipework with at least one change in direction, ensuring:
 - correct identification of requirements and details of proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing small bore heating systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of small bore heating systems.</p>
2. Identify system requirements.	<p>2.1. Configuration of pipework is checked for compliance with plans, specifications, authorities' requirements and other relevant information.</p> <p>2.2. Position of pipes and heating units is determined from plans, specifications or site requirements, so as not to cause damage or interference to surrounding structures.</p> <p>2.3. Allowances for fabrication or assembly are determined and transferred.</p> <p>2.4. Quantity and type of piping materials and other materials required are calculated from plans and specifications.</p> <p>2.5. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.6. Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and faults are reported.</p>
3. Fabricate, install and commission heating system.	<p>3.1. System is set out to comply with plans and specifications.</p> <p>3.2. Fixings and supports are installed to manufacturer recommendations, and plans and specifications.</p> <p>3.3. Pipe system is installed and jointed in compliance with plans, specifications and manufacturer requirements for mechanical type joints.</p> <p>3.4. Heating system unit is installed in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
	plans, specifications and manufacturer requirements.
	3.5. Heating system is installed in specified location without damage or distortion to pipework, surrounding environment or other services.
	3.6. <i>Sustainability principles and concepts</i> are applied throughout the installation.
	3.7. Heating system is tested to comply with job specification, regulatory authorities' requirements, relevant Australian standards and codes of practice, and details are recorded in required format.
	3.8. Heating system is checked and adjusted for correct operation and balance, including the setting of nominated temperature and adding appropriate inhibitor.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - document heating system test
- determining system requirements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing and commissioning a heating system
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics and application of different fixing and joining techniques and methods
- effective isolation processes and procedures
- electrical and electronic principles and safety requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- OHS regulations relevant to installation of small bore systems
- personal protective equipment requirements and use
- processes of installing and commissioning small bore heating systems
- properties of water, including pressure and flow rates
- SI system of measurement
- statutory and authority requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to install and commission small bore heating systems
- applying safety requirements throughout the work sequence, including electrical requirements and personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications and using a combination of copper tube and non-metallic piping, install a two pipe heating system to either a panel radiator, skirting convector or a unit heater; the installation should have a minimum of DN20 flow and return with DN15 branches, connected to a boiler and heat exchanger and heating source, ensuring:
 - application of sustainability principles and concepts throughout the installation
 - correct identification of requirements and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - communicating and working effectively

EVIDENCE GUIDE

Context of and specific resources for assessment

and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and

EVIDENCE GUIDE

environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in

- handling of materials

RANGE STATEMENT

accordance with commonwealth, state and territory legislation and regulations and may include:

- hazard control
- identification and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements are to cover:

- clean-up protection
- ozone protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- hand and power tools
- heating and bending equipment
- ladders
- lifting and load shifting equipment, including:
 - chain blocks
 - elevated work platforms

RANGE STATEMENT

Information may include:

- forklifts
- hand trolleys
- hoists and jacks
- rollers
- scaffolding
- measuring equipment
- silver brazing equipment
- welding equipment.
- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing small bore heaters
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Piping materials may include:

- copper tubes
- polybutylene pipes
- polyethylene pipes
- steel pipe
- other approved materials.

Materials may include:

- fixings and supports
- heaters (panel, skirting and unit)
- pipe materials
- other approved materials.

Fault reporting:

- may be written or verbal
- is to be in accordance with company's

RANGE STATEMENT

<i>Heating system</i> may include:	workplace procedures. <ul style="list-style-type: none">• panel radiators• skirting convectors• unit heaters.
<i>Sustainability principles and concepts:</i>	<ul style="list-style-type: none">• cover the current and future social, economic and environmental use of resources• may include:<ul style="list-style-type: none">• appropriate component selection that has minimal environmental impact• efficient energy and water use• efficient use and recycling of material• correct handling of hazardous materials• disposal of waste material to ensure minimal environmental impact.

	plans and specifications.
	3.7. Insulation materials are installed in specified location without damage to surrounding environment and in accordance with plans, specifications, standards and manufacturer recommendations.
	3.8. <i>Diffusers and terminal devices</i> are installed in accordance with plans and specifications and with no damage to ceiling or finished surfaces.
4. Test duct work system.	4.1. Test requirements are determined from plans and specifications.
	4.2. Appropriate test equipment is selected for specified tests.
	4.3. Duct system is tested under pressure in accordance with instructions and workplace procedures.
	4.4. Leak sources are identified and repaired using specified procedures and materials, to ensure correct flow operation.
	4.5. Details of test data are recorded in format required by the specification.
5. Clean up.	5.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.
	5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	5.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information

REQUIRED SKILLS AND KNOWLEDGE

- determine requirements
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- plan and sequence tasks with others
- report faults
- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - document ducting system test
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing, insulating and testing ducting for ventilation, heating, cooling and exhaust systems, including in-duct equipment
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- applicable Australian standards
- application of flow rates, pressure and volume principles to testing procedures
- characteristics of materials used in the system being tested
- electrical and electronic principles and safety requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- OHS regulations relevant to the work activity
- personal protective equipment requirements and use
- processes of installing, insulating and testing ducting
- SI system of measurement
- statutory and authority requirements

REQUIRED SKILLS AND KNOWLEDGE

- system types and identification of system components
- techniques for setting out, assembling, fixing and jointing duct work systems and components, including insulation and acoustic materials
- types of repairs for detected leaks in the duct work system.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test small ducting systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, install, insulate, test and balance from a plenum box or chamber a supply of heated air to three outlet grills; the installation shall incorporate hard and flexible duct work, including one transition piece and dampeners, ensuring:
 - correct identification of requirements and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated

RANGE STATEMENT

with:

- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- clean-up protection
- ozone protection
- waste management.
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.
- state or territory statutory authority
- statutory gasfitting authority
- statutory plumbing authority.
- hand and power tools
- in-duct equipment, including:
 - fire dampers
 - noise attenuation fittings
 - volume control dampers
- ladders
- lifting and load shifting equipment, including:
 - chain blocks
 - elevated work platforms
 - forklifts
 - hand trolleys
 - hoists and jacks
 - rollers
 - scaffolds
- measuring equipment

Environmental requirements are to cover:

Quality assurance requirements may include:

Statutory and regulatory authorities include:

Tools and equipment may include:

RANGE STATEMENT

- test equipment, including:
 - manometers
 - micro-manometers.
- Ducting system materials:*
 - include:
 - diffusers
 - ducting
 - fixings and supports
 - in-duct equipment
 - insulation
 - joints
 - plenum box and chamber
 - terminal devices
 - may be:
 - flexible
 - sheet metal
 - a combination.
- Information* may include:
 - charts and hand drawings
 - diagrams or sketches
 - instructions issued by authorised organisational or external personnel
 - manufacturer specifications and instructions
 - material safety data sheets (MSDS)
 - memos
 - organisation work specifications and requirements
 - regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
 - relevant Australian standards
 - safe work procedures relating to installing and testing ducting heaters
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.
- Materials:*
 - may include:
 - ducting:

RANGE STATEMENT

- fixings and supports
- sheet metal:
 - flexible
 - combination
- in-duct fittings:
 - plastic
 - sheet metal
- insulation
- insulation and acoustic materials may be:
 - acoustic and non-acoustic materials
 - externally insulated
 - fibreglass tissue factory bonded to the insulation
 - flexible aluminium laminate fabric
 - perforated double-sided aluminium foil factory bonded to the insulation
 - perforated zincanneal or other metal sheet fixed in the duct so that continuous insulation is obtained
 - resin-bonded mineral wool or glass fibre in faced or unfaced semi-rigid batt or board form, weight 20 to 100kg and m³
 - sheet materials
 - surface facings of PVC-coated fibreglass mesh factory bonded to the insulation
 - thermal and acoustic insulation for duct work and air handling equipment, handling air between 2 and 65°C
 - thermal insulation and sound absorption materials of resin-bonded mineral wool or glass fibre in unbound flexible blanket form, weight 20 to 65 kg and m³.

Fault reporting:

- may be written or verbal
- is to be in accordance with company's workplace procedures.

Diffusers and terminal devices include:

- combined diffusers
- control devices
- cushion heads
- grills
- light fittings
- outlets taken directly from duct and on flexible

RANGE STATEMENT

branch

- pressure-reducing devices
- registers
- variable air volume (VAV) boxes.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing and testing air handling units, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation and testing of air handling units.</p>
2. Identify installation requirements.	<p>2.1. Requirements for fabricated components and materials are determined from plans, specifications and relevant information.</p> <p>2.2. Assembly methods are identified from plans and specifications.</p> <p>2.3. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Materials and equipment are checked for compliance with standards, and docket and order form, and for acceptable condition and faults are reported.</p>
3. Set out, assemble and test air handling units.	<p>3.1. Air handling unit is set out in compliance with plans and specifications.</p> <p>3.2. Fabricated components and equipment are positioned in accordance with plans and specifications.</p> <p>3.3. Equipment is installed in accordance with job and manufacturer specifications.</p> <p>3.4. Assembly is checked for compliance with plans and specifications.</p> <p>3.5. Air handling unit is tested for correct operation.</p> <p>3.6. Details of test data are recorded in required format.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.</p>

ELEMENT**PERFORMANCE CRITERIA**

-
- 4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
- 4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - document pipeline system pressure test
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing and testing an air handling plenum, which is part of an air heating, cooling and ventilation system
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a

REQUIRED SKILLS AND KNOWLEDGE

range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- effect of machinery vibrations on structures, ducts and fittings
- electrical and electronic principles and safety requirements
- equipment installation techniques that limit the transfer of vibrations from plant and equipment to other components
- job safety analysis (JSA) and safe work method statements (SWMS)
- OHS regulations relevant to the work activity
- personal protective equipment requirements and use
- processes of installing and testing air handling units
- SI system of measurement
- statutory and authority requirements
- techniques for setting out, assembly and fixing and jointing requirements for duct work systems
- testing, balancing and commissioning of air handling units.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install air handling units
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, install a plenum chamber that includes a fan, coil, filter and dampers, including supports and brackets and any fixing requirements, allowing for anti-vibration and ensuring:
 - correct identification of requirements and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing split air conditioning, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of split air conditioning.</p>
2. Identify installation requirements.	<p>2.1. Quantity and type of material required for installation are determined from plans, specifications and relevant information.</p> <p>2.2. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.3. Requirements for other services are identified and connection is planned in accordance with regulatory requirements.</p> <p>2.4. Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition and faults are reported.</p>
3. Install and test system.	<p>3.1. Installation is set out in compliance with plans and specifications.</p> <p>3.2. Existing services are located and installation process is adjusted accordingly to avoid any disturbance.</p> <p>3.3. Preparatory work is carried out to specifications without unnecessary damage to surrounding structures or environment.</p> <p>3.4. Structural supports are installed in compliance with plans and specifications.</p> <p>3.5. Ducting and control panels are installed in accordance with authorities' requirements, manufacturer recommendations, plans and specifications.</p> <p>3.6. System is installed to manufacturer</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	recommendations, plans and specifications.
	3.7. Installation is tested in accordance with specifications, codes or standards for the application.
	3.8. Test results are documented in required format.
	4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
