 - document pipeline system pressure test

REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology
 - undertake preparatory work that may be needed, including penetration through building structure, installation of structural supports and installation of plinths.

Required knowledge

Required knowledge for this unit is:

- characteristics and application of different assemblies, including fixing and jointing techniques and methods
- effective isolation processes and procedures
- electrical and electronic principles and safety requirements
- environmental impact of gases and Environment Protection Authority (EPA) requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- materials handling techniques
- OHS regulations relevant to the work activity
- personal protective equipment requirements and use
- operating principles of air conditioning and refrigeration systems
- processes of installing and testing split air conditioning systems
- SI system of measurement
- statutory and authority requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install split air conditioning
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, install and pressure test a split air conditioning system, ensuring:
 - correct identification of requirements and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - hazardous materials and substances
 - service lines

RANGE STATEMENT

	<ul style="list-style-type: none">• surrounding structures and facilities• trip hazards• use of tools and equipment• work site visitors and the public• working at heights• working in proximity to others• use of firefighting equipment• use of first aid equipment• workplace environment and safety.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing air conditioning control equipment, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of air conditioning control equipment.</p>
2. Identify installation requirements.	<p>2.1. Appropriate controller and necessary materials are selected in accordance with plans and specifications, manufacturer recommendations and relevant information.</p> <p>2.2. Controller position is identified from plans and specifications and with consideration to location of existing services.</p>
3. Install control equipment.	<p>3.1. Air conditioning system is shut down and isolated according to appropriate codes of practice and OHS requirements.</p> <p>3.2. Control equipment is installed to specification or manufacturer instructions and faults are reported.</p> <p>3.3. Control equipment is positioned in specified location without damage or distortion to surrounding environment or other services.</p> <p>3.4. Manual lifting and handling equipment is used in accordance with OHS requirements.</p>
4. Calibrate and test control equipment.	<p>4.1. Control equipment is calibrated in accordance with manufacturer recommendations and job specifications.</p> <p>4.2. Correct operation of system control equipment is checked against operational specification.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory</p>

ELEMENT**PERFORMANCE CRITERIA**

legislation and workplace procedures.

5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.

5.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to complete workplace documentation
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- access and understand site-specific instructions in a variety of media
- use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- effective isolation processes and procedures
- electrical and electronic principles and safety requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- OHS regulations relevant to the work activity
- personal protective equipment requirements and use
- operating principles of air conditioning and refrigeration systems
- power and maintenance access requirements for control units
- process of installing and testing air conditioning control equipment
- SI system of measurement
- statutory and authority requirements.

with:

- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements are to cover:

- clean-up protection
- ozone protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory gasfitting authority
- statutory plumbing authority.

Tools and equipment may include:

- hand and power tools
- ladders
- lifting and load shifting equipment, including:
 - chain blocks
 - elevated work platforms
 - forklifts
 - hand trolleys
 - hoists and jacks
 - rollers
 - scaffolds
- measuring equipment
- test equipment, including:
 - multi-meters
 - pressure gauges
 - thermometers.

RANGE STATEMENT

Air conditioning control equipment includes:

- control switches
- control valves
- damper motors
- flow switches
- limit switches
- pressure switches
- solenoid valves
- thermostats.

Materials may include:

- air conditioning controls for installation.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing air conditioning control equipment
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Air conditioning may be:

- electric
- electronic
- hydraulic
- pneumatic
- self-contained
- a combination.

Fault reporting:

- may be written or verbal
- is to be in accordance with company's workplace procedures.

 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - document maintenance report
- conducting routine maintenance on air distribution and hydronic heating, ventilating and air conditioning systems
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- air-conditioning and refrigeration principles
- application of mechanical, hydraulic, electrical and electronic principles
- effect of bacteria in water, and potential impact on health
- job safety analysis (JSA) and safe work method statements (SWMS)
- OHS regulations relevant to the work activity
- personal protective equipment requirements and use
- operating principles of system components used in mechanical services equipment
- processes of maintaining mechanical services equipment
- SI system of measurement
- workplace and statutory requirements for mechanical services equipment.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - document test results
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology
- undertake associated penetration and flashing of the roof, the provision of water and the installation of the required duct work.

Required knowledge

Required knowledge for this unit is:

- characteristics and application of different assemblies, including fixing and jointing techniques and methods
- effect of bacteria in water, and health implications
- effective isolation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- materials handling techniques
- OHS regulations relevant to the work activity
- personal protective equipment requirements and use
- processes of installing and testing evaporative air cooling systems
- roof penetration and flashing
- SI system of measurement
- statutory and authority requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install evaporative units
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, install an evaporative air cooling system on a roof, including flashing the roof penetration; installing a plenum box and duct work to three diffusers; connecting cold water to an isolation valve within 1 metre of the appliance; connecting and completing installation testing, and commissioning its operation, ensuring:
 - correct identification of requirements and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including

RANGE STATEMENT

	recognising and preventing hazards associated with: <ul style="list-style-type: none">• hazardous materials and substances• manual handling• service lines• surrounding structures and facilities• trip hazards• use of tools and equipment• work site visitors and the public• working at heights• working in proximity to others
<i>Environmental requirements</i> are to cover:	<ul style="list-style-type: none">• use of firefighting equipment• use of first aid equipment• workplace environment and safety.• clean-up protection• ozone protection• waste management.
<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none">• Environment Protection Authority (EPA)• internal company quality assurance policy and risk management strategy• International Standards Organisation• site safety plan• workplace operations and procedures.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none">• state or territory statutory authority• statutory gasfitting authority• statutory plumbing authority.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none">• hand and power tools• ladders• lifting and load shifting equipment, including:<ul style="list-style-type: none">• chain blocks• elevated work platforms• forklifts• hand trolleys• hoists and jacks• rollers• scaffolds• measuring equipment• roof safety equipment• test equipment.

RANGE STATEMENT

Materials may include:

- control panels
- diffusers
- ducting materials
- evaporative air cooling systems
- grills
- insulation.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing evaporative cooling systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Preparatory work that may need to be completed includes:

- installation of piping and isolating valve in roof cavity
- installation of plinths
- installation of structural supports
- roof penetration and flashing for the installation of unit.

Other services to units may include:

- electrical connections
- water supply.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to interpret compliance requirements for domestic solid fuel burning appliance installation, plan and negotiate installation details with clients, and install appliances and flues to meet compliance and quality requirements.

Work in this area must be completed according to relevant legislative, industry, customer and organisational requirements, including occupational health and safety (OHS) policies and procedures.

Regulatory mechanisms may apply to this unit. Candidates are advised to check for regulatory limitations.

Application of the Unit

Application of the unit Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation.	<p>1.1. Installation information for domestic solid fuel burning appliances is interpreted and compliance requirements confirmed according to organisational, manufacturer and legislative requirements.</p> <p>1.2. Installation permits are checked or obtained as necessary in consultation with client and local authority.</p> <p>1.3. Installation sites are inspected and appliance installation locations confirmed as suitable or alternative locations negotiated with clients.</p> <p>1.4. Location preparation work required by other contractors is arranged in consultation with client.</p> <p>1.5. Heat sensitivities of building materials at appliance installation locations are confirmed, and heat protection strategies are confirmed with clients.</p> <p>1.6. Tasks are planned and equipment and materials are gathered and checked according to organisational requirements.</p> <p>1.7. Sustainability principles and concepts are identified for work preparation and application.</p>
2. Install appliance.	<p>2.1. Appliance location is measured and marked according to compliance requirements.</p> <p>2.2. Floor protection material is measured and cut or made up and installed according to compliance requirements.</p> <p>2.3. Appliance is positioned and clearance distances are checked to confirm compliance.</p> <p>2.4. Appliance is installed according to compliance and organisational requirements.</p>
3. Install flue.	<p>3.1. Flue dimensions and components are checked and additional sections or components obtained as required to meet compliance requirements.</p> <p>3.2. Locations and dimensions of ceiling and roof penetrations are calculated, measured, marked and checked according to compliance and organisational requirements.</p> <p>3.3. Penetrations are made with minimal damage to host materials and according to specifications and organisational requirements.</p> <p>3.4. Structural supports are installed according to plans and specifications.</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|---------------------------|---|
| | 3.5. Opening is prepared in compliance with specifications, manufacturer recommendations and regulations. |
| | 3.6. Flue and associated components are installed according to compliance and organisational requirements. |
| | 3.7. Flashings and sealants are applied to restore integrity of ceilings and roofs according to compliance and organisational requirements. |
| | 3.8. Penetration is performance tested to ensure correct fit of completed installation, and remedied as required. |
| 4. Finalise installation. | 4.1. Installed appliance and associated components are checked for complete and correct installation according to compliance and organisational requirements. |
| | 4.2. Installation site is restored and equipment is cleaned, checked and stored according to organisational requirements. |
| | 4.3. Operation of appliance is demonstrated to clients and <i>factors affecting optimum performance</i> are explained. |
| | 4.4. Conformance certificate is prepared and processed according to compliance and organisational requirements. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- language and literacy skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret instructions, specifications and standards such as:
 - AS/NZS 2918 Domestic solid fuel burning appliances - installation
 - compliance certification plates on appliances
 - guidelines and updates for legislation and regulations regarding domestic solid fuel burning appliances

REQUIRED SKILLS AND KNOWLEDGE

- manufacturer installation instructions and specifications
- report faults
- use language and concepts appropriate to cultural differences
- written skills to complete documentation, such as:
 - appliance conformance certificates
 - installation compliance certificates
 - local authority permit applications
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to:
 - work with others to action tasks
 - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

Required knowledge

- factors affecting selection of installation locations for appliances
- factors affecting compliance and non-compliance of domestic solid fuel burning appliances
- heat damage protection requirements for appliances
- legislation, regulations and standards that apply to the installation and emissions of domestic solid fuel burning appliances
- heat-response categories of construction materials:
 - heat sensitive
 - heat tolerant
 - heat resistant
- installation requirements for different types of domestic solid fuel burning appliances
- job safety analysis (JSA) and safe work method statements covering:
 - asbestos recognition and reporting requirements
 - manual handling of appliances
 - personal protective equipment (PPE) for different tasks and situations
 - working safely at heights
 - worksite housekeeping
- quality requirements
- principles and products of combustion
- requirements and methods for maintaining structural integrity of buildings, roof structures and existing roof coverings
- SI system of measurement
- structure and function of flue elements and principles of flue draw, and effects of:
 - bends and horizontal sections

REQUIRED SKILLS AND KNOWLEDGE

- climatic conditions
- surrounding buildings and trees
- types of domestic solid fuel burning appliances and methods for safe operation
- types and condition of wood used as fuel and impacts on:
 - efficiency of appliances
 - emissions

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply safety requirements throughout the work sequence, including:
 - work with or near electricity
 - select and use processes, tools and equipment
 - use PPE
 - work at heights
- communicate and work effectively and safely with others
- *apply sustainability principles and concepts* while installing solid fuel burning appliances
- locate, interpret and apply information, standards and specifications relevant to the installation of domestic solid fuel burning appliances
- install at least two different domestic solid fuel burning appliances according to client, compliance and workplace requirements; appliances may be:
 - for:
 - central-heating
 - cooking
 - space-heating
 - water-heating
 - combinations of applications
 - fireplace inserts
 - free-standing
 - in-built
 - non-tested.

Context of and specific resources for

This unit of competency is to be assessed using standard and authorised work practices, safety requirements and

EVIDENCE GUIDE

assessment

environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning

EVIDENCE GUIDE

experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Installation information*** may include:
- AS/NZS 2918 Domestic solid fuel burning appliances - installation (Australian standards are frequently revised and users must always check for currency)
 - Building Code of Australia (BCA)
 - client requirements
 - compliance certification plates on appliances
 - JSA
 - manufacturer instructions and specifications
 - safe work method statements
 - work order.
- Domestic solid fuel burning appliances*** may
- appliances for:
 - central-heating

RANGE STATEMENT

include:

- cooking
- space-heating
- water-heating
- combinations of applications
- fireplace inserts
- free-standing
- in-built
- non-tested
- tested.

Compliance requirements may include:

- Australian standards, such as:
 - AS/NZS 2918 Domestic solid fuel burning appliances - installation
 - AS/NZS 3500 Plumbing and drainage (set)
- BCA
- clearance distances to heat sensitive materials, including:
 - ceilings
 - curtains
 - furniture
 - timbers
 - walls
- codes of practice, such as HB39 Installation code for metal roof and wall cladding
- emissions compliance certification plate
- manufacturer specifications
- types and dimensions of floor protection.

Legislative requirements may include:

- local, state, territory or federal legislation and regulations relating to:
 - emissions
 - installation permits
 - occupational health and safety.

Inspection of installation sites may include:

- assessing height and proximity of neighbouring buildings and trees
- determining structural elements and building materials, especially in regard to presence of asbestos; areas to be assessed include:
 - ceilings
 - floors
 - roofs
 - walls

RANGE STATEMENT

- measuring dimensions of furniture and fittings close to appliance locations
 - finding and noting locations of:
 - electricity
 - power points
 - rooftop outlets for heating, ventilation and air-conditioning (HVAC) systems
 - structural elements of buildings.
- Appliance installation locations*** should:
- allow clearance distances and accessibility clearance according to manufacturer specifications or AS/NZS 2918 Domestic solid fuel burning appliances - installation
 - be suitable for installation of flue according to manufacturer specifications or AS/NZS 2918 Domestic solid fuel burning appliances - installation
 - be suitable for operation of fans, if required
 - comply with emissions compliance requirements
 - comply with health and safety requirements
 - minimise discomfort caused by cool air draught
 - provide optimum heat circulation.
- Heat protection strategies:***
- should include:
 - compliant floor protection
 - compliant clearance distances
 - may include:
 - additional shielding
 - reduced compliant clearance distances.
- Equipment and materials*** may include:
- appliances and associated components
 - drills
 - flashing roof materials, including:
 - fibreglass
 - laminate
 - metal roof covers of concealed or pierce fixed types
 - plastic building sheets for walls and roofs
 - polyethylene
 - rainwater goods
 - straw or wool
 - thermal insulation of reflective foil
 - fixings, which may include:
 - metal self drilling and tapping screws

RANGE STATEMENT

- rivets
 - sealants such as silicon and solder
 - grinders
 - hammers
 - ladders
 - PPE
 - rivet gun
 - saws
 - sealant applicators
 - sealants
 - steel tape
 - tile cutters
 - tin snips.
- Sustainability principles and concepts:*
- cover the current and future social, economic and environmental use of resources
 - may include:
 - appropriate material selection that has minimal environmental impact
 - efficient use and recycling of material
 - efficient energy and water use
 - disposal of waste material to ensure minimal environmental impact.
- Factors affecting optimum performance may include:*
- general cleaning and maintenance requirements
 - type and condition of fuel used in appliances.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to test and commission air and water heating and cooling systems.

It covers preparing for the work, determining testing requirements, preparing systems for balancing, and the physical balancing, testing and commissioning of the systems and completion of work finalisation processes, including recording.

Application of the Unit

Application of the unit This unit applies to:

ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75kPa and a maximum velocity of 12.5 metres per second

pipework systems conveying heating and chilled water operating at a maximum pressure of 700kPa or a maximum temperature of 100°C, with a maximum output of 50kW and total air quantities not exceeding 950 litres per second.

Site location for work application will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Information, plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with testing and commissioning air and water systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for testing and commissioning air and water systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient testing and commissioning process.</p>
2. Determine testing requirements.	<p>2.1. Equipment is checked for safe operation and correct functioning.</p> <p>2.2. Equipment performance data is checked against plans, specification requirements and other relevant information.</p> <p>2.3. Instruments and associated equipment suitable for measuring quantities are selected in accordance with job specification.</p>
3. Prepare system for balancing.	<p>3.1. Dampers are set in the open or specified position and operational check of system-related fans and ducting is carried out in accordance with workplace procedures.</p> <p>3.2. Automatic control devices are energised to provide maximum demand for airflow.</p> <p>3.3. Piping system is checked for flow direction and leaks, and operational check of system and related pumps is carried out.</p> <p>3.4. All manual and automatic valves are set in the specified position.</p>
4. Balance, test and commission system.	<p>4.1. Valves or throttling devices are adjusted to achieve specified water flow ratings.</p> <p>4.2. Air volumes moved by system fans are measured.</p> <p>4.3. Dampers and terminal devices are correctly adjusted</p>

ELEMENT**PERFORMANCE CRITERIA**

	to achieve specified airflow ratings.
	4.4. Automatic controls and devices are set to specified settings.
	4.5. Testing and balancing of system is carried out in accordance with job specification and/or manufacturer recommendations.
	4.6. Test and monitored results are documented in format required by job specification and/or manufacturer.
5. Restore work area.	5.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.
	5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	5.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals

REQUIRED SKILLS AND KNOWLEDGE

- written skills to:
 - complete workplace documentation
 - record test and monitored results
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology
- test, balance and commission air conditioning, heating and ventilation ducting and piping systems.

Required knowledge

Required knowledge for this unit is:

- application of mechanical, hydraulic, electric and electronic principles and safety requirements
- design concepts, tests and performance standards for measuring various water and air systems
- effect of bacteria in water, and potential impact on health
- environmental impact of gases and EPA requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- operating principles and characteristics of system components used in water and air systems
- performance standards for balancing systems
- processes of commissioning air and water systems
- relevant information sources for the work activity
- relevant statutory and authority requirements related to installing, testing, balancing, commissioning and operation of air and water systems
- SI system of measurements
- standards applicable to testing, balancing and commissioning air and water systems
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to testing, balancing and commissioning air and water systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to balance and commission an air conditioning system (up to 150 megajoules) for a domestic situation and a commercial air conditioning system for a structure of at least four floors, plus balance and commission a hydronic water heating system for a structure of at least four floors, ensuring:
 - correct identification of details of the plan
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated

RANGE STATEMENT

with:

- hazardous materials and substances
- other machines

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for the design of compressed air systems.</p> <p>1.2. <i>Client requirements</i> are determined from plans, specifications and client briefs.</p> <p>1.3. <i>Cost-benefit analysis</i> is conducted comparing a range of materials and system designs.</p> <p>1.4. <i>Statutory, regulatory and Australian and New Zealand Standard requirements</i> for the design of compressed air systems are interpreted, analysed and applied.</p> <p>1.5. <i>Manufacturer requirements</i> and trade and technical manuals are interpreted.</p> <p>1.6. Additional research, including a <i>desktop study</i>, is conducted to outline design parameters.</p> <p>1.7. <i>Performance requirements</i> are established.</p>
2. Plan and detail system components.	<p>2.1. <i>Layout of pipework systems</i> and the type and location of <i>fittings and valves</i> are planned.</p> <p>2.2. <i>System calculations</i> are conducted for a range of applications.</p> <p>2.3. Compressed air system <i>equipment and components</i> are sized and specified.</p> <p>2.4. Noise reduction methods are analysed and suitable methods specified.</p> <p>2.5. Approved <i>materials</i> and <i>jointing methods</i> and all <i>installation requirements</i> are specified.</p>
3. Design and size systems.	<p>3.1. Compressed air systems are designed for a range of applications.</p> <p>3.2. Compressed air systems are designed and sized using computer software packages.</p>
4. Prepare documentation.	<p>4.1. <i>Plans</i> are prepared for a range of compressed air systems.</p> <p>4.2. <i>Specification</i> for a compressed air system is prepared.</p> <p>4.3. <i>Testing</i> and <i>commissioning schedule</i> is prepared.</p> <p>4.4. <i>Operation and maintenance manual</i> is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - codes, legislation and standards
 - documentation from a variety of sources
 - drawings and specifications
 - regulatory authority requirements
 - report faults with application
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- numerical skills to apply measurements and calculations
- organisational skills, including the ability to plan for and set out work.

Required knowledge

Required knowledge for this unit is:

- nature of materials and effect of their performance in a variety of conditions
- OHS and organisational quality procedures and processes
- principles of technology in the design of compressed air systems
- terminology, definitions, installation methods, applications and hazards identified in relation to compressed air devices and systems used according to Australian and New Zealand standards and other standards, codes or standard operating procedures
- work drawings and specifications
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- evaluate and document design parameters including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of compressed air systems
- produce appropriate layouts for compressed air systems in accordance with manufacturers' and regulatory requirements
- calculate pipe sizes in accordance with regulations and manufacturers' requirements
- design and size a compressed air system using appropriate software
- prepare plans for a range of compressed air systems to industry standards
- prepare a specification for a compressed air system
- prepare a testing and commissioning schedule
- prepare an operation and maintenance manual.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Client requirements include:

- architectural specifications
- builders' specifications
- owner requirements
- specialist use applications.

Cost-benefit analysis includes:

- comparison of the range of suitable treatment and disposal options, materials, system choices, disinfection options, water savings and environmental benefits compared to initial and ongoing maintenance costs.

Statutory, regulatory and Australian and New Zealand

- Acts
- Australian and New Zealand standard

RANGE STATEMENT

<i>standard requirements</i> include:	requirements <ul style="list-style-type: none">• Building Code of Australia• industry standards• local and state government policies, including group and strata titling• regulations.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none">• material specifications• sizing tables• technical and trade manuals.
<i>Desktop study</i> includes collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none">• architectural and building plans and other documents, including:<ul style="list-style-type: none">• applications• brochures• forms• policies• reports• council plans• developer plans• manufacturers' data.
<i>Performance requirements</i> include:	<ul style="list-style-type: none">• Australian and New Zealand standards• local authority plans• operational pressures and compressed air consumption• pressure and air quality.
<i>Layout of pipework systems</i> includes:	<ul style="list-style-type: none">• building integrity and aesthetic appeal should not be unduly effected by pipework• principles of economy, serviceability, durability and fit for use should be applied.
<i>Fittings and valves</i> include:	<ul style="list-style-type: none">• bends• couplings• isolating valves• pressure relief valves• tees• unions.
<i>System calculations</i> include:	<ul style="list-style-type: none">• air consumption• compressed air volume and storage• distribution pressures• energy• interpretation of design charts and tables• pipe sizing.

RANGE STATEMENT

Equipment and components include:

- air filtering equipment, including proprietary filtering systems and air scrubbing systems
- capacity and size
- compressed air appliances, including air-operated tools, machinery and equipment
- moisture removal methods
- mounting and installation requirements
- oiling equipment
- reciprocating compressors
- single and multi-stage compressors
- valves, pressure controls and components.

Materials include:

- approved pressure-rated materials
- copper
- steel.

Jointing methods include:

- brazing
- mechanical joints
- threading.

Installation requirements include:

- clipping
- installation details
- jointing requirements
- level of workmanship.

Plans:

- include:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics
 - sections
- may be produced using:
 - computer generation
 - Indian ink
 - pencil
 - pigment liner.

Specification includes:

- appliances
- clipping
- detailing of specialised components
- jointing
- manufacturer requirements

RANGE STATEMENT

	<ul style="list-style-type: none">• materials• valves• workmanship.
<i>Testing</i> includes:	<ul style="list-style-type: none">• flow testing• inspection checklist• leak testing• pressure testing• quality assurance (QA) audit.
<i>Commissioning schedule</i> includes:	<ul style="list-style-type: none">• check fit for purpose• check for burrs and obstructions• commission appliances• purge system• remove contaminants.
<i>Operation and maintenance manual</i> includes:	<ul style="list-style-type: none">• check for blockages• leak detection• regular inspections• regular maintenance requirements.

CPCPMS4011A Design, size and lay out heating and cooling systems

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to design, size and document the layout of heating and cooling systems for multi-floor structures.

It covers preparing for the work, identifying and confirming system specifications and requirements, designing system layout, and work finalisation processes, including records and documentation.

Application of the Unit

Application of the unit This unit applies to:
ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75kPa and a maximum velocity of 12.5 metres per second piping systems conveying heating and chilled water operating at a maximum pressure of 700kPa or a maximum temperature of 100°C, and systems having a maximum output of 50kW and total air quantities not exceeding 950 litres per second.
Site location for the application of the plan will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for design.	<p>1.1. Nature and scope of design task are identified and confirmed.</p> <p>1.2. Safety (OHS) requirements associated with planning, sizing and documenting the layout of heating and cooling systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Work is organised and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.4. Tools and equipment required for designing, sizing and documenting the layout of heating and cooling systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.5. Work area in which design process is to be conducted is prepared.</p>
2. Identify system requirements.	<p>2.1. Information and specifications for required work are obtained and confirmed, if necessary by site inspection.</p> <p>2.2. Statutory and regulatory authorities' requirements relevant to work are consulted and applied to all aspects of the work, using relevant information.</p> <p>2.3. Heating and cooling requirements are determined from building drawings, plans and specifications.</p> <p>2.4. Air conditioning or small bore heating system is sized to provide for required heating and cooling load and to provide required piping and ducting in accordance with standards, and regulatory authorities' and workplace requirements.</p> <p>2.5. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Design system layout.	<p>3.1. Layout of heating and cooling system is designed in accordance with building plans, relevant standards and workplace procedures.</p> <p>3.2. Materials required are specified and optimised in accordance with standards from the proposed design.</p> <p>3.3. Plans are recorded in accordance with regulatory authorities' and workplace requirements.</p>
4. Restore work area.	<p>4.1. Work area is restored in accordance with workplace procedures.</p> <p>4.2. Tools and equipment used in the process are refurbished and left in accordance with workplace</p>

ELEMENT**PERFORMANCE CRITERIA**

procedures.

4.3. Documentation, including work backup, is completed in accordance with workplace requirements.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements, including system requirements
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - regulations, standards, plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation, including work backup
 - record plans
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- interpreting plans and specifications to design, size and document the layout of heating and cooling systems for multi-floor buildings up to a height of six floors
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics and application of different fixing and joining techniques and methods
- characteristics and application of pipe and ducting systems, including their fittings and fixture supports and fixing and joining techniques
- design concepts and performance measures for heating and cooling systems
- effective isolation processes and procedures
- electrical and electronic principles and safety requirements
- environmental impact of gases and Environment Protection Authority (EPA) requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles, operation and characteristics of heating and cooling systems
- process of designing, sizing and documenting the layout of heating and cooling systems
- properties of water and air, including pressure and flow rates
- relevant information sources for the work activity
- relevant statutory and authority requirements related to designing, sizing and documenting the layout of heating and cooling systems
- SI system of measurements
- standards applicable to heating and cooling systems
- use of computers and relevant computer-aided design (CAD) software
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to planning, sizing and documenting the layout of a heating and cooling system
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum, given the plans and specifications, to design, size and document the layout details of a domestic heating and cooling system requiring a minimum heat load of 150 megajoules (MJ) per hour plus a commercial heating and cooling system for a structure with at least four floors, ensuring:
 - application of sustainability principles and concepts
 - correct identification of details of the plan
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific

This competency is to be assessed using standard and authorised work practices, safety requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for steam distribution systems.</p> <p>1.2. Design requirements are determined from plans, specifications and client brief.</p> <p>1.3. Cost-benefit analysis is conducted comparing a range of materials and system designs.</p> <p>1.4. Statutory and regulatory requirements and Australian and New Zealand standards for the design of steam distribution systems are analysed and applied.</p> <p>1.5. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.6. Additional research, including a desktop study, is conducted to outline design parameters.</p> <p>1.7. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Layout of pipework systems and type and location of fittings and valves are planned.</p> <p>2.2. Pipe size calculations are performed for a range of applications.</p> <p>2.3. Steam appliances are specified, steam consumption is calculated and boilers required are sized and specified.</p> <p>2.4. Steam circuits are detailed and distribution pressures for a range of applications are specified.</p> <p>2.5. Steam trap types and their operation are specified and detailed.</p> <p>2.6. Steam injection systems are specified.</p> <p>2.7. Insulation is specified.</p> <p>2.8. Pipe fixings are designed for a range of applications.</p> <p>2.9. Approved materials, jointing methods and all installation requirements for steam distribution systems are specified.</p>
3. Design and size systems.	<p>3.1. Steam distribution systems and steam circuits are designed for a range of applications.</p> <p>3.2. Steam distribution systems are designed and sized using computer software packages.</p>
4. Prepare documentation.	<p>4.1. Plans are prepared for a range of steam distribution systems.</p> <p>4.2. Specification for a steam distribution system is</p>

prepared.

4.3. *Testing* and *commissioning schedule* is prepared.

4.4. *Operation and maintenance manual* is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - manufacturer requirements and manuals
 - plans, specifications, drawings and design briefs
 - statutory and regulatory requirements and standards
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - plan and set out work
 - research, collect, organise and understand information relating to the design of steam distribution systems
 - take initiative and make decisions
- preparing and specifying steam distribution system plans
- problem solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental

REQUIRED SKILLS AND KNOWLEDGE

abilities.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in design of steam distribution systems for all classes of building, including industry terminology, such as:
 - absolute pressure
 - enthalpy
 - enthalpy of evaporation and of saturated steam
 - enthalpy of saturated water
 - gauge pressure
 - heat and heat transfer
 - latent heat
 - specific enthalpy
 - specific heat capacity
- principles of technology in the design of steam distribution systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- SI system of units related to steam
- terms, including Australian and New Zealand standard definitions, manufacturer terms and naming conventions
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of steam distribution systems
- producing an appropriate layout for steam distribution systems, planned in accordance with manufacturer and regulatory requirements
- designing a steam circuit
- calculating pipe sizes in accordance with regulations and manufacturer requirements
- designing and sizing steam distribution systems using appropriate software
- preparing plans for a range of steam distribution systems
- preparing specifications for steam distribution systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- barriers to heat transfer
- effects of air in a steam system
- heat transfer
- interpretation of plans and specifications, and sizing and documenting layout of steam distribution systems for residential, commercial and industrial applications for either new projects or an existing structure

RANGE STATEMENT

being renovated, extended, restored or maintained

- principles and properties of steam systems, including:
 - characteristics of condensation
 - methods of condensate removal
- steam applications, including commercial, manufacturing, institution and machinery and equipment operation
- working with types of steam and steam quality, including:
 - dry steam
 - flash steam
 - properties of steam at varying pressures
 - superheated steam
 - wet steam.

Design requirements include:

- architectural specifications
- builder specifications
- owner requirements
- specialist water use applications.

Cost-benefit analysis includes:

- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.

Statutory and regulatory requirements and Australian and New Zealand standards include:

- Acts, regulations and local and state government policies, including group and strata titling
- Australian and New Zealand standards
- Building Code of Australia.

Manufacturer requirements include:

- material specifications
- sizing tables
- technical and trade manuals.

Desktop study includes:

- collection and interpretation of existing data for design purposes from:
 - architectural and building plans
 - council plans
 - developer plans
- other documents, including:
 - applications
 - forms

RANGE STATEMENT

	<ul style="list-style-type: none">• other reports as available.
<i>Performance requirements</i> include:	<ul style="list-style-type: none">• steam generation and consumption, and steam and pressure quality, established using Australian and New Zealand standards and manufacturers' information.
<i>Layout of pipework systems:</i>	<ul style="list-style-type: none">• should not unduly affect building integrity and aesthetic appeal• have principles of economy, serviceability, durability and fit for use applied.
<i>Fittings and valves</i> include:	<ul style="list-style-type: none">• bends• couplings• isolating valves• pressure relief valves• steam headers• steam traps• tees• unions.
<i>Pipe size calculations</i> include:	<ul style="list-style-type: none">• energy• pressure• sizing• storage• volume.
<i>Steam appliances:</i>	<ul style="list-style-type: none">• include:<ul style="list-style-type: none">• calorifiers• industrial applications• kitchen and laundry appliances• sterilisers• water heaters• details should include:<ul style="list-style-type: none">• components• construction• electronic controls• methods of temperature and pressure control.
<i>Boilers:</i>	<ul style="list-style-type: none">• include:<ul style="list-style-type: none">• coal• electric• fire tube• gas

RANGE STATEMENT

- oil
- packaged
- solid fuel
- water tube
- factors to be considered when selecting a boiler:
 - advantages and disadvantages of boiler types
 - capacity and size
 - designs based on anticipated use
 - energy sources
 - methods of reducing heat losses
 - pressure controls and components
 - storage requirement calculations
 - suitable time period between refilling
 - valves.

Steam circuits include:

- condensate return
- feed pumps
- feed tanks
- headers
- steam distribution
- water treatment.

Steam trap types and their operation:

- types include:
 - mechanical
 - thermodynamic
 - thermostatic
 - other applicable types
- operation includes:
 - installation
 - location.

Steam injection includes:

- noise control
- open ended pipe
- proprietary
- sparge pipe.

Insulation:

- includes:
 - felt
 - fibreglass
 - rock wool

RANGE STATEMENT

- insulation protection, includes:
 - plastic
 - sheet metal.
- Pipe fixings*** include:
 - anchors
 - bracket spacing
 - corrosion protection
 - hanging brackets
 - material requirements
 - saddles
 - wall and ceiling brackets.
- Materials*** include:
 - copper
 - steel
 - other approved materials.
- Jointing methods*** include:
 - brazing
 - mechanical joints
 - threading.
- Installation requirements*** include:
 - clipping
 - installation details
 - jointing requirements
 - level of workmanship.
- Designed*** includes:
 - cost relating to performance, including:
 - milestones
 - standard procedures
 - standards of work
 - work schedules
 - prescriptive designs, including detail relating to:
 - materials and quality of work
 - nominated subcontractors
 - provision of on-site facilities and site access
 - quality assurance.
- Plans*** may include:
 - axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics, which may be produced using:
 - computer generation.

RANGE STATEMENT

	<ul style="list-style-type: none"> • Indian ink • pencil • pigment liner
<i>Specification</i> includes:	<ul style="list-style-type: none"> • sections. • appliances • clipping • details of specialised components • jointing • manufacturer requirements • materials • valves • workmanship.
<i>Testing</i> includes:	<ul style="list-style-type: none"> • flow testing • inspection checklist • leak testing • pressure testing • quality assurance (QA) audit.
<i>Commissioning schedule</i> includes:	<ul style="list-style-type: none"> • checking for burrs and obstructions • commissioning appliances • confirming fit for purpose • purging system • removing contaminants.
<i>Operation and maintenance manual</i> includes:	<ul style="list-style-type: none"> • check for blockages • leak detection • regular inspection • regular maintenance requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Client requirements are determined from plans, specifications and client briefs to determine <i>work scope</i>.</p> <p>1.2. User comfort conditions and <i>specific use conditions</i> are evaluated and <i>psychometric evaluation</i> and <i>heat loads are calculated</i>.</p> <p>1.3. <i>Building heat losses</i> are evaluated.</p> <p>1.4. Distribution requirements for air conditioning and ventilation system applications are specified.</p> <p>1.5. Range of air conditioning and ventilation systems are evaluated in accordance with given applications.</p> <p>1.6. Mechanical services drawings are evaluated and interpreted.</p> <p>1.7. Health risks that may arise due to poor maintenance of air conditioning and ventilation systems are evaluated.</p> <p>1.8. Minimum performance requirements are specified for several different air conditioning and ventilation systems.</p> <p>1.9. Manufacturer specifications and technical manuals are evaluated for suitability for a range of design applications.</p>
2. Plan system components.	<p>2.1. Appropriate zoning of air conditioning and ventilation systems is planned to comply with given specific performance objectives.</p> <p>2.2. Air conditioning units are specified for optimum performance with reference to <i>legislation, standards and other relevant documentation</i>.</p> <p>2.3. Fan types are specified for a range of applications with reference to legislation, standards and other relevant documentation.</p> <p>2.4. Air diversion systems, including registers, are planned to ensure a balanced system with reference to legislation, standards and other relevant documentation.</p> <p>2.5. Required ventilation and duct work components are planned and locations are specified with reference to legislation, standards and other relevant documentation.</p> <p>2.6. Approved materials for air conditioning and ventilation systems are <i>specified</i>.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.7.Plans and drawings are completed using Australian standard drawing symbols related to air conditioning and ventilation in accordance with legislation, standards and other relevant documentation.
3. Design and size systems.	<p>3.1.Volume air changes per hour are calculated from given floor plans and details.</p> <p>3.2.Methods for eliminating health risks from existing or proposed systems are specified with reference to legislation, standards and other relevant documentation.</p> <p>3.3.Range of air conditioning and ventilation systems for given <i>applications</i> is <i>designed and sized</i>.</p>
4. Test systems.	<p>4.1.Test procedures for air conditioning and ventilation systems are evaluated.</p> <p>4.2.<i>Tests</i> are conducted using appropriate <i>testing equipment</i>, results are recorded and report is prepared.</p> <p>4.3.Adjustments required as a result of testing are planned, designed and specified.</p>
5. Prepare documentation.	<p>5.1.Appropriate checklist, including formulas required to carry out an air balance to a given specification, is developed.</p> <p>5.2.Plans are prepared for a range of air conditioning and ventilation systems.</p> <p>5.3.Specification for an air conditioning and ventilation system is prepared.</p> <p>5.4.Testing and commissioning schedule is prepared.</p> <p>5.5.Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices

REQUIRED SKILLS AND KNOWLEDGE

- confirm job specifications and client requirements
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
 - plans, specifications, drawings and design briefs
 - manufacturer requirements and manuals
 - statutory and regulatory requirements and standards
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- innovation skills to develop creative and responsive approaches
- numeracy skills to:
 - apply formulas and calculate air displacements and returns
 - calculate heat loads
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of air conditioning and ventilation systems
 - take initiative and make decisions
- problem solving skills to analyse requirements, carry out tests, consider options and design an appropriate system
- teamwork skills to be able to work with others and action tasks and relate to people from a range of cultural ethnic backgrounds and varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- air psychometrics and the use of psychometric charts
- Australian and New Zealand standards, manufacturer specifications, Building Code of Australia and other applicable codes or standard operating procedures relevant to the sector
- compliance with OHS and organisational quality procedures and processes
- hazards associated with devices and systems used in the hydraulic sector
- heat load calculations
- installation methods used in hydraulic systems
- nature of materials and effect of performance
- terminology and definitions used in hydraulic design
- work drawings and specifications.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

This unit of competency could be assessed by:

- developing an air conditioning and ventilation system for a given project, including the schedule of works and job specification
- preparing a graphical presentation of an air conditioning or ventilation system solution with specifications.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- establishing and evaluating design parameters for a range of air conditioning and ventilation systems
- planning system components for a range of air conditioning and ventilation systems, including:
 - air conditioning units
 - ducting systems
 - fans
 - zones
- designing and sizing a range of air conditioning and ventilation systems for given applications
- developing an appropriate checklist for tests to be carried out on the system, including formulas required to carry out an air balance
- conducting tests, recording and evaluating test results and preparing a report
- preparing plans for a range of air conditioning and ventilation systems
- preparing specifications for air conditioning

EVIDENCE GUIDE

- and ventilation systems
- preparing testing and commissioning schedules for air conditioning and ventilation systems
- preparing operation and maintenance manuals for air conditioning and ventilation systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning

EVIDENCE GUIDE

knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work scope may include:

- documentation of layout of pipework and fixtures
- interpretation of plans and specifications for an appropriate building and size
- types of products and services, quantities, characteristics, sizes, patterns, dimensions, location, surfaces and compatibility.

Specific use conditions include:

- age and activity of occupants
- computer requirements
- wet-bulb and dry-bulb temperature and humidity.

Psychometric evaluation includes:

- absolute, specific and relative humidity
- air composition
- air properties, including:
 - density
 - expansion coefficient
 - kinematic viscosity
 - Prandtl number
 - specific heat
 - temperature
 - thermal conductivity
- altitude, density and volume
- determination of the air condition using a psychometric or Mollier chart, showing:
 - dewpoint temperature
 - dry-bulb temperature
 - enthalpy
 - humidity ratio
 - relative humidity
 - specific volume
 - wet-bulb temperature.

Calculation of heat loads includes:

- assessment of factors affecting heat load, including:
 - insulation
 - number of personnel
 - number of windows

RANGE STATEMENT

- room dimensions
- usage
- weather effects
- using:
 - calculation using software systems
 - heat load calculation methods and formulas
 - manual calculation.

Building heat losses may include:

- construction materials
- insulation materials
- maintaining plenum
- occupancy
- room sizes.

Legislation, standards and other relevant documentation is to be in accordance with federal, state and territory legislation and regulations and may include:

- OHS requirements, including:
 - growth and distribution of *Legionella pneumophila* bacteria and other water and airborne infectious bacterial agents
 - handling of materials, including hazardous materials and substances
 - hazard control
 - organic and inorganic contaminants
 - personal protective clothing and equipment
 - use of first aid equipment
 - use of tools and equipment
 - workplace environment and safety
- environmental requirements, including water quality management, which may include the breeding of mosquitoes
- quality assurance requirements, including:
 - AS1100 Technical drawing materials
 - AS1668 Ventilation systems: Parts 1 and 2
 - AS1677 Refrigerating systems
 - AS3666 Handling microbial systems
 - Environment Protection Authority
 - internal company quality assurance policy and risk management strategy
 - International Standards Organisation
 - site safety plan
 - workplace operations and procedures
- specifications and operational manuals for:

RANGE STATEMENT

	<ul style="list-style-type: none">• commissioning and testing• components installation• fittings• manufacturer specifications, literature and data• materials• pumps• systems• valves.
<i>Specifications</i> may include:	<ul style="list-style-type: none">• durability• fire rating requirements• longevity• type of application.
<i>Applications</i> include:	<ul style="list-style-type: none">• amenities• residential, industrial and commercial applications.
<i>Designed and sized</i> include:	<ul style="list-style-type: none">• designs that are prescriptive and include detail relating to:<ul style="list-style-type: none">• cost• materials and quality of work• milestones• nominated subcontractors• provision of on-site facilities and site access• quality assurance• standard procedures• work schedules• design parameters may include:<ul style="list-style-type: none">• client requirements• legislative requirements• OHS requirements• user requirements in relation to zoning• design and sizing to be completed:<ul style="list-style-type: none">• using appropriate software• with reference to calculations, tables, regulations and manufacturer specifications.
<i>Tests and testing equipment</i> include:	<ul style="list-style-type: none">• air pressure• air velocity

RANGE STATEMENT

- air volume
- humidity
- Pitot tubes
- sound power levels
- temperature.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for sound attenuated hydraulic services for wide span and high-rise building projects.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Sound transmission categories and levels are identified from relevant Acts, codes and standards, and are evaluated for residential, commercial and industrial premises.</p> <p>1.4. Sound transmission values of building and structural elements and materials are evaluated.</p> <p>1.5. Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.</p> <p>1.6. Building Code of Australia, and statutory and regulatory requirements and Australian and New Zealand standards for the design of sound attenuated hydraulic services are analysed and applied.</p> <p>1.7. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.8. Additional research, including a desktop study, is conducted to outline design parameters.</p> <p>1.9. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Causes of noise generation in hydraulic services are identified and analysed.</p> <p>2.2. Layout of sound attenuated pipework systems is planned.</p> <p>2.3. System calculations are performed for a range of sound attenuated hydraulic services.</p> <p>2.4. Pumped hydraulic systems are sound attenuated.</p> <p>2.5. Pipe fixings are designed for a range of applications.</p> <p>2.6. Approved materials and installation requirements for sound attenuated hydraulic services are specified.</p>
3. Design and size systems.	<p>3.1. Sound attenuated hydraulic services are designed and sized for a range of applications.</p> <p>3.2. Material combinations are identified and documented to achieve sound attenuation requirements.</p> <p>3.3. Pump installations are sound attenuated.</p> <p>3.4. Sound attenuated hydraulic services are designed</p>

ELEMENT	PERFORMANCE CRITERIA
	and evaluated using computer software packages.
4. Prepare documentation.	<p>4.1. Plans are prepared for a range of sound attenuated hydraulic services.</p> <p>4.2. Report on sound attenuated hydraulic services for a range of applications is prepared.</p> <p>4.3. Specification for a sound attenuated hydraulic services plan is prepared.</p> <p>4.4. Testing and commissioning schedule is prepared.</p> <p>4.5. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- determining relevant installation details for sound attenuated hydraulic services
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- research, collect, organise and understand information relating to the design of sound attenuated hydraulic services
- take initiative and make decisions
- preparing specifications for sound attenuated hydraulic services
- problem solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in the design of sound attenuated hydraulic services for all classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of sound attenuated hydraulic services
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of sound attenuated hydraulic services
- planning and detailing system components, including:
 - clipping
 - ducts
 - insulation
 - sound attenuated pipework
- designing and sizing a range of sound attenuated hydraulic services
- preparing plans to industry standards for a range of sound attenuated hydraulic services
- preparing reports on sound attenuated hydraulic services for a range of applications
- preparing specifications for a range of sound attenuated hydraulic services
- preparing testing and commissioning schedules
- preparing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity

System components and circuits are specified.</p> <p>2.4. Pump and compressor systems are detailed.</p> <p>2.5. Distribution flows, velocities and pressures are specified for a range of applications.</p> <p>2.6. Insulation is specified.</p> <p>2.7. Pipe fixings are designed for a range of applications.</p> <p>2.8. Approved materials, jointing methods and installation requirements for hydronic heating and cooling systems are specified.</p>
3. Design and size systems.	<p>3.1. Hydronic systems and circuits are designed for a range of applications.</p> <p>3.2. Hydronic systems are designed and sized using computer software packages.</p>
4. Prepare documentation.	<p>4.1. Plans are prepared for a range of hydronic heating and cooling systems.</p> <p>4.2. Specification for a hydronic system is prepared.</p> <p>4.3. Testing and commissioning schedule is prepared.</p> <p>4.4. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- determining relevant installation details for hydronic heating and cooling systems
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - plan and set out work
 - research, collect, organise and understand information relating to the design of hydronic heating and cooling systems
 - take initiative and make decisions
- preparing system specifications for hydronic heating and cooling systems
- problem solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in design of hydronic heating and

REQUIRED SKILLS AND KNOWLEDGE

cooling systems for all classes of building

- drafting principles
- nature of materials used in hydronic heating and cooling systems and effects of performance under various conditions
- principles of technology in the design of hydronic heating and cooling systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of hydronic heating and cooling systems
- producing an appropriate layout for hydronic heating and cooling systems, planned in accordance with manufacturer and regulatory requirements
- calculating pipe sizes in accordance with regulations and manufacturer requirements
- designing hydronic circuits
- designing and sizing hydronic systems using appropriate software
- preparing plans for a range of hydronic systems
- preparing specifications for hydronic heating and cooling systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- interpretation of plans and specifications
- principles and properties of hydronic systems, including:
 - barriers to heat transfer
 - conduction
 - convection
 - heat transfer

RANGE STATEMENT

- principles of hydronic circuits
- principles of pressure and energy related to hydronic systems
- properties of water steam and gases used for hydronic systems
- radiation
- hydronic applications, including:
 - chiller circuits for air conditioning and refrigeration applications
 - concrete floor heating circuits
 - heat removal applications
 - manufacturing and industrial applications
 - room heating circuits for residential, commercial and industrial heating applications
 - timber floor heating circuits
- sizing and documenting layout of hydronic heating and cooling systems for residential, commercial or industrial applications for either new projects or an existing structure being renovated, extended, restored or maintained.

Design requirements include:

- architectural specifications
- builder specifications
- interpretation and application of mechanical services drawings and symbols
- owner requirements
- specialist hydronic applications.

Cost-benefit analysis includes:

- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.

Statutory and regulatory requirements and Australian and New Zealand standards include:

- Acts, regulations and local and state government policies, including group and strata titling
- Australian and New Zealand standards
- Building Code of Australia
- industry standards.

Manufacturer requirements include:

- sizing tables
- specifications
- technical and trade manuals.

Desktop study includes collection

- architectural and building plans

RANGE STATEMENT

and interpretation of existing data for design purposes from:

- council plans
- developer plans
- other documents, including:
 - applications
 - forms
 - other reports as available.

Performance requirements include:

- hydronic heating and cooling system requirements, including temperature and safety requirements, established using Australian and New Zealand standards and manufacturer information.

Layout of pipework systems:

- includes compliance with hydronic principles
- should not unduly affect building integrity and aesthetic appeal
- should have principles of economy, serviceability, durability and fit for use applied.

Fittings and valves include:

- bends
- couplings
- flow and isolating valves
- pressure
- tees
- thermostats
- unions.

Pipe size requirement calculations include:

- energy
- flow and velocity
- pressure
- sizing
- temperature
- volume and storage.

System components and circuits include:

- boilers, including:
 - advantages and disadvantages of boiler types
 - capacity and size
 - coal
 - electric
 - energy sources
 - fire tube
 - gas
 - heat exchanger

RANGE STATEMENT

- methods of reducing heat losses
- oil
- packaged
- pressure controls and components
- solid fuel
- valves
- water tube
- factors to be considered when selecting a boiler hydronic circuit, include:
 - circulating pump appliances
 - flow and return pipework
 - pipework grades
 - valves and fittings
- cooling towers, including:
 - bacteriological safety
 - collection
 - construction
 - disinfection
 - fans
 - maintenance
 - size
 - sprays
- chillers and refrigerant plant, including:
 - engineered systems
 - packaged plants
 - proprietary commercial and industrial equipment and assemblies
- hydronic appliances, including:
 - calorifiers
 - components
 - concrete construction
 - electronic controls
 - heat exchangers
 - methods of temperature and pressure control
 - radiators
 - timber floor heating systems
 - types

RANGE STATEMENT

	<ul style="list-style-type: none">• water heaters.
<i>Pump and compressor systems</i> include:	<ul style="list-style-type: none">• chilled water pumps• circulating pumps• refrigeration compressors• other applications as required.
<i>Insulation</i> includes:	<ul style="list-style-type: none">• felt• fibreglass• insulation protection, including:<ul style="list-style-type: none">• plastic.• sheet metal• rock wool.
<i>Pipe fixings</i> include:	<ul style="list-style-type: none">• anchors• bracket spacing• corrosion protection• hanging brackets• material requirements• saddles• wall and ceiling brackets.
<i>Materials</i> include:	<ul style="list-style-type: none">• copper• steel• other approved materials.
<i>Jointing methods</i> include:	<ul style="list-style-type: none">• brazing• mechanical joints• threading.
<i>Installation requirements</i> include:	<ul style="list-style-type: none">• clipping• installation details• jointing requirements• level of workmanship.
<i>Plans</i> include:	<ul style="list-style-type: none">• axonometrics• cross-sections• details• elevations• isometrics• schematics, which may be produced using:<ul style="list-style-type: none">• pencil• Indian ink• pigment liner• computer generation• sections.

RANGE STATEMENT

<i>Specification</i> includes:	<ul style="list-style-type: none">• appliances• clipping• details of specialised components• jointing• manufacturer requirements• materials• valves• workmanship.
<i>Testing</i> includes:	<ul style="list-style-type: none">• flow testing• inspection checklist• leak testing• pressure testing• quality assurance (QA) audit.
<i>Commissioning schedule</i> includes:	<ul style="list-style-type: none">• checking fit for purpose• checking for burrs and obstructions• commissioning appliances• purging system• removing contaminants.
<i>Operation and maintenance manual</i> includes:	<ul style="list-style-type: none">• check for blockages• leak detection• regular inspection• regular maintenance requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for gas bulk storage systems for a range of projects.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.</p> <p>1.4. Statutory and regulatory requirements and Australian and New Zealand standards for the design of gas bulk storage systems are analysed and applied.</p> <p>1.5. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.6. Additional research, including a desktop study, is conducted to outline design parameters.</p> <p>1.7. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Layout of a liquefied petroleum gas (LPG) bulk storage installation is determined in accordance with regulatory authorities.</p> <p>2.2. Site plans for bulk installations are prepared, including layout of pipework systems.</p> <p>2.3. Fire protection systems are specified in accordance with Australian and New Zealand standards and deluge systems are detailed.</p> <p>2.4. Control valves and fittings are designed and detailed.</p> <p>2.5. Content gauges are analysed and located in accordance with code requirements, and meters and regulators are specified.</p> <p>2.6. Vaporisers are evaluated and specified and vaporisation rates are calculated.</p> <p>2.7. System calculations are performed for a range of applications in accordance with regulations and manufacturer requirements.</p> <p>2.8. Pipe fixings are designed for a range of applications.</p> <p>2.9. Approved materials, jointing methods and installation requirements for gas bulk storage systems are specified.</p>
3. Design and size systems.	<p>3.1. Gas bulk storage systems and circuits are designed for a range of applications.</p> <p>3.2. Deluge systems are designed.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Gas bulk storage systems are designed and sized using computer software packages.
4. Prepare documentation.	4.1. Plans are prepared for a range of gas bulk storage systems. 4.2. Specification for a gas bulk storage system is prepared. 4.3. Testing and commissioning schedule is prepared. 4.4. Operation and maintenance manual is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - standards and manufacturer requirements and manuals
 - plans, specifications, drawings and design briefs
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- determining relevant gas storage installation details
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of

REQUIRED SKILLS AND KNOWLEDGE

gas bulk storage systems

- take initiative and make decisions
- preparing gas storage system specifications
- problem solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in design of gas bulk storage systems for all classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of gas bulk storage systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of gas bulk storage systems
- planning and detailing system components, including:
 - meters
 - pipes
 - regulators
 - valves
 - vaporisers
- designing a deluge system
- designing and sizing gas bulk storage systems using appropriate software
- preparing plans for a range of gas bulk storage systems to industry standards
- preparing specifications for gas bulk storage system installations
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices and relevant to planning processes, including calculators
- support materials appropriate to activity, including computers and software
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over

EVIDENCE GUIDE

a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- interpretation of plans and specifications
- principles of operation of various types of LPG components and fault conditions in LPG components
- sizing and documenting layout of gas bulk

RANGE STATEMENT

	<p>storage installations, including fire protection systems, such as:</p> <ul style="list-style-type: none"> • chemical injection • extinguishers • hose reels • hydrants • monitors • portable and fixed types of firefighting equipment • spray systems.
<i>Design requirements</i> include:	<ul style="list-style-type: none"> • architectural specifications • builder specifications • owner requirements • specialist gas use applications.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
<i>Statutory and regulatory requirements and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts, regulations and local and state government policies, including group and strata titling • AS/NZS1596 The storage and handling of LP gas • AS2430 Classification of hazardous areas • AS5601 (AG601) Gas installations • Building Code of Australia.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none"> • pump tables • sizing tables • specifications • technical and trade manuals.
<i>Desktop study</i> includes collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none"> • architectural and building plans • council plans • developer plans • other documents, including: <ul style="list-style-type: none"> • applications • forms • other reports as available.
<i>Performance requirements</i> include:	<ul style="list-style-type: none"> • operational and safety requirements, established using Australian and New Zealand standards, and local and state authority plans.

RANGE STATEMENT

Layout of pipework systems should:

- not unduly affect building integrity and aesthetic appeal
- have principles of economy, serviceability, durability and fit for use applied.

Control valves and fittings may include:

- valves:
 - applications of valves and code requirements for installation
 - emergency shutdown valves
 - excess flow valves
 - hydrostatic relief valves
 - individual valve types
- fittings:
 - bends
 - inspection openings
 - junctions
 - meters
 - reflux valves
 - staged regulators
 - traps
 - vaporisers.

Meters include:

- mass flow
- positive displacement
- turbine.

System calculations include:

- determination of flow and appliance loadings
- interpretation of design charts and tables
- pipe sizing calculations.

Pipe fixings include:

- anchors
- bedding
- bracket spacing
- concrete support
- corrosion protection
- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.

Materials include:

- concrete
- copper
- fittings and valves

RANGE STATEMENT

	<ul style="list-style-type: none"> • high density polyethylene (HDPE) • measures to prevent the spread of fire.
Jointing methods include:	<ul style="list-style-type: none"> • brazing • mechanical joints • solvent cement welding • threading.
Installation requirements include:	<ul style="list-style-type: none"> • bedding • clipping • concrete support • installation details • jointing requirements • level of workmanship.
Plans include:	<ul style="list-style-type: none"> • axonometrics • cross-sections • details • elevations • isometrics • schematics, which may be produced using: <ul style="list-style-type: none"> • pencil • Indian ink • pigment liner • computer generation • sections.
Specification includes:	<ul style="list-style-type: none"> • clipping • details of specialised components • jointing • manufacturer requirements • materials • valves • workmanship.
Testing includes:	<ul style="list-style-type: none"> • air pressure test • gas leak test • quality assurance (QA) audit.
Commissioning schedule includes:	<ul style="list-style-type: none"> • flow testing • leak check • vaporisation rate check.
Operation and maintenance manual includes:	<ul style="list-style-type: none"> • leak detection • regular maintenance requirements • safety inspection

RANGE STATEMENT

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- designing industrial gas systems and components in compliance with IEC requirements
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of

REQUIRED SKILLS AND KNOWLEDGE

industrial gas systems

- take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- application of:
 - Australian standards, including AS5601 (AG601) Gas installations
 - manufacturer specifications, including hazards identified in relation to devices and systems used
 - other codes or standard operating procedures
 - state regulatory authority requirements
- common terminology and definitions used in the design of industrial gas systems
- principles of technology in the design of industrial gas systems
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including:
 - client
 - Gas Act 1965 and amendments
 - manufacturer and Australian and New Zealand standard requirements for a range of industrial gas systems
 - regulatory
- planning and detailing system components, including:
 - burners
 - controls
 - regulators
- designing and sizing industrial gas systems
- preparing plans for a range of industrial gas systems to industry standards
- preparing specifications for industrial gas systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- interpreting plans and specifications
- sizing and documenting layout of industrial gas systems for applications, including:
 - characteristics
 - compatibility

RANGE STATEMENT

	<ul style="list-style-type: none"> • dimensions • location • patterns • quantities • sizes • surfaces • types of product and service.
<i>Design requirements</i> include:	<ul style="list-style-type: none"> • architectural specifications • builder specifications • owner requirements • specialist use applications.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
<i>Statutory, regulatory requirements, codes and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts, regulations and local and state government policies, including group and strata titling • AS/NZS1596 The storage and handling of LP gas • AS5601 (AG601) Gas installations • Building Code of Australia • Gas Act 1965 and amendments • gas regulations • other Australian and New Zealand standards.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none"> • material specifications • pump tables • sizing tables • technical and trade manuals.
<i>Desktop study</i> includes collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none"> • architectural and building plans • council plans • developer plans • other documents, including: <ul style="list-style-type: none"> • forms • applications • other reports as available.
<i>Performance requirements</i> include:	<ul style="list-style-type: none"> • pipe grades, cover, flow conditions and discharge requirements, established using Australian and New Zealand standards and local authority plans.

RANGE STATEMENT

<i>Layout of pipework systems</i> should:	<ul style="list-style-type: none">• have principles of economy, serviceability, durability and fit for use applied• not unduly affect building integrity and aesthetic appeal.
<i>Fittings and valves</i> include:	<ul style="list-style-type: none">• meters• regulators• relief valves.
<i>Valve trains</i> include:	<ul style="list-style-type: none">• analysing the operation of valve components• sizing and selecting components using manufacturer data.
<i>System calculations</i> include:	<ul style="list-style-type: none">• calculation of explosion relief• calculation of purge times• determination of flow and consumption• interpretation of design charts and tables• pipe sizing calculations.
<i>Materials</i> include:	<ul style="list-style-type: none">• copper• fittings and appliances, including measures to prevent the spread of fire• high density polyethylene (HDPE).
<i>Jointing methods</i> include:	<ul style="list-style-type: none">• brazing• gluing• mechanical joints• solvent cement welding• threading.
<i>Pipe fixings</i> include:	<ul style="list-style-type: none">• anchors• bracket spacing• corrosion protection• hanging brackets• material requirements• saddles• wall and ceiling brackets.
<i>Installation requirements</i> include:	<ul style="list-style-type: none">• clipping• installation details• jointing requirements• level of workmanship.
<i>Plans</i> include:	<ul style="list-style-type: none">• axonometrics• cross-sections• details• elevations• isometrics

RANGE STATEMENT

	<ul style="list-style-type: none">• schematics, which may be produced using:<ul style="list-style-type: none">• computer generation• Indian ink• pencil• pigment liner• sections.
<i>Specification</i> includes:	<ul style="list-style-type: none">• clipping• details of specialised components• jointing• manufacturer requirements• materials• valves• workmanship.
<i>Testing</i> includes:	<ul style="list-style-type: none">• air pressure test• gas leak test• quality assurance (QA) audit.
<i>Commissioning schedule</i> includes:	<ul style="list-style-type: none">• flow testing• leak check• vaporisation rate check.
<i>Operation and maintenance manual</i> includes:	<ul style="list-style-type: none">• leak detection• regular maintenance requirements• safety inspection• yearly inspection.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for gas reticulation systems.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.</p> <p>1.4. Statutory and regulatory requirements and Australian and New Zealand standards for the design of gas reticulation systems are analysed and applied.</p> <p>1.5. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.6. Additional research, including a desktop study, is conducted to outline design parameters.</p> <p>1.7. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Layout of pipework systems and type and location of fittings and valves are planned.</p> <p>2.2. Pipe sizes are calculated for a range of applications.</p> <p>2.3. Ventilation and flue requirements are specified for a range of applications.</p> <p>2.4. Gas metering and measurement of gas consumption are conducted.</p> <p>2.5. Distribution pressures and specifications of regulators and appliances are detailed for a range of applications.</p> <p>2.6. Cylinder and tank systems are designed and detailed.</p> <p>2.7. Safety, ignition, thermostat and gas control devices are specified in compliance with relevant standards and codes.</p> <p>2.8. Pipe fixings are designed for a range of applications.</p> <p>2.9. Approved materials, jointing methods and installation requirements for gas reticulation systems are specified.</p>
3. Design and size systems.	<p>3.1. Gas reticulation systems are designed for a range of applications.</p> <p>3.2. Gas reticulation systems are designed and sized using computer software packages.</p>
4. Prepare documentation.	<p>4.1. Plans are prepared for a range of gas reticulation systems.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. <i>Specification</i> for a gas reticulation system is prepared.
	4.3. <i>Testing</i> and <i>commissioning schedule</i> is prepared.
	4.4. <i>Operation and maintenance manual</i> is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analysing and interpreting relevant gas codes and standards
- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- determining material, placement and ventilation requirements for a gas reticulation system
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of gas reticulation systems
 - take initiative and make decisions

REQUIRED SKILLS AND KNOWLEDGE

- preparing documentation for testing and commissioning a gas reticulation system
- problem solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- testing a gas reticulation system for safe operation.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in design of gas reticulation systems for all classes of building
- principles of technology used in design of gas reticulation systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of gas reticulation systems
- producing an appropriate layout for gas reticulation systems planned in accordance with manufacturer and regulatory requirements
- calculating pipe sizes in accordance with regulations and manufacturer requirements
- designing and sizing gas reticulation systems using appropriate software
- preparing plans for a range of gas reticulation systems
- preparing specifications for gas reticulation systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- includes:
 - interpretation of plans and specifications
 - sizing and documenting layout of gas reticulation systems for applications, including residential, commercial and industrial

RANGE STATEMENT

	<ul style="list-style-type: none"> • may be for new projects or an existing structure being renovated, extended, restored or maintained.
<i>Design requirements</i> include:	<ul style="list-style-type: none"> • architectural specifications • builder specifications • owner requirements • specialist use applications.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
<i>Statutory and regulatory requirements and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts, regulations and local and state government policies, including group and strata titling • AS/NZS1596 The storage and handling of LP gas • AS5601 (AG601) Gas installations • Building Code of Australia • Gas Act 1965 and amendments • gas regulations • gas utility and supplier information and requirements • industry standards • manufacturer requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for solar water heating system design.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Locations of solar collectors are assessed and effect of each location on efficiency is evaluated.</p> <p>1.4. Cost-benefit analysis is conducted comparing a range of materials and system designs.</p> <p>1.5. Environmental and community benefits of solar water heating systems are evaluated.</p> <p>1.6. Statutory and regulatory requirements and Australian and New Zealand standards for the design of solar water heating systems are analysed and applied.</p> <p>1.7. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.8. Additional research, including a desktop study, is conducted to outline design parameters.</p> <p>1.9. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Layout of pipework systems and type and location of fittings and valves are planned.</p> <p>2.2. Range configuration and application of proprietary solar heated water systems, and materials and valves to be selected, are evaluated.</p> <p>2.3. Solar water heating system calculations are performed.</p> <p>2.4. Typical configuration of a hydraulic circuit (flow and return) and its components for a pumped-storage solar water heating system is designed.</p> <p>2.5. Water quality and water pre-treatment methods are specified.</p> <p>2.6. Suitable types and levels of insulation for system components are specified and a range of methods for freezing protection is detailed.</p> <p>2.7. Pipe size, velocity, flow and pressure calculations are performed for a range of applications.</p> <p>2.8. Pipe fixings are designed for a range of applications.</p> <p>2.9. Approved materials, jointing methods and installation requirements for solar water heating systems are specified.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Design and size systems.	3.1. Solar collector is designed. 3.2. Residential, commercial and industrial solar water heating systems are designed. 3.3. Solar pre-heat systems are designed. 3.4. Solar pool and spa heating systems are designed. 3.5. Solar water heating systems are designed and sized using computer software packages.
4. Prepare documentation.	4.1. Plans are prepared for a range of solar water heating systems. 4.2. Specification for a solar water heating system is prepared. 4.3. Testing and commissioning schedule is prepared. 4.4. Operation and maintenance manual is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules

REQUIRED SKILLS AND KNOWLEDGE

- innovation skills to develop creative and responsive approaches
- numeracy skills to interpret data and to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of solar water heating systems
 - take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in design of solar water heating systems
- principles of technology used in design of solar water heating systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of solar water heating systems
- conducting a cost-benefit analysis
- planning and detailing system components, including:
 - circulating systems
 - solar collectors
 - valve and piping systems
- designing a range of residential, commercial and industrial solar water heating systems
- designing solar pre-heat systems
- designing solar pool and spa heating systems
- preparing plans for a range of solar water heating systems
- preparing specifications for solar water heating systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- interpreting plans and specifications, and sizing and documenting layout of solar water heating systems for applications including residential, commercial and industrial buildings for new

RANGE STATEMENT

	<p>projects or an existing structure being renovated, extended, restored or maintained</p> <ul style="list-style-type: none"> • heat transfer mechanism analysis, including conduction, convection and radiation (long wave and short wave), and the evaluation of transmittance, absorption and emittance properties of materials used in solar collectors • solar radiation calculations, including: <ul style="list-style-type: none"> • calculations of efficiency • calculations of radiation falling on collectors • daily, monthly and yearly calculations.
<i>Design requirements</i> include:	<ul style="list-style-type: none"> • architectural specifications • builder specifications • owner requirements • specialist water heating applications.
<i>Efficiency</i> includes:	<ul style="list-style-type: none"> • angle of collector in relation to latitude • comparison of demand and efficiency curves for various types of solar collectors • current and potential shading • direction in relation to north • efficiency in relation to: <ul style="list-style-type: none"> • ambient temperature • flow • location • pollution • prevailing wind conditions • magnetic north as opposed to true north.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • comparison and evaluation of capital cost, simple pay back and life cycle cost of solar and electric or gas heated water heaters • comparison of initial set-up costs to the energy savings available and establishment of cost-recovery period • comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
<i>Statutory and regulatory requirements and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts, regulations, and local and state government policies • Australian and New Zealand standards:

RANGE STATEMENT

- AS/NZS3500 National plumbing and drainage set
- AS2200 Design charts for water supply and sewerage
- AS2369.1 Materials for solar collectors for swimming pool heating - rubber materials
- AS2369.2 Materials for solar collectors for swimming pool heating - flexible or plasticised polyvinyl chloride
- AS2535.1 Test methods for solar collectors - thermal performance of glazed liquid heating collectors including pressure drop
- AS2712 Solar and heat pump water heaters - design and construction
- AS3634 Solar heating systems for swimming pools
- AS4234 Solar water heaters - domestic and heat pump - calculation of energy consumption
- AS4445.1 Solar heating - domestic water heating systems - performance rating procedure using indoor test methods
- DR04527 Amendment 1 to AS2712 Solar water heaters - design and construction

Manufacturer requirements include:

- Building Code of Australia.
- material specifications
- pump tables
- sizing tables
- technical and trade manuals.

Desktop study includes:

- collection and interpretation of existing data for design purposes from:
 - architectural and building plans
 - council plans
 - developer plans
 - other documents, including:
 - applications
 - forms
 - other reports as available
- comparison of performance of various types of solar water heaters in terms of design, location and predicted solar fraction.

RANGE STATEMENT

- Performance requirements*** are established using Australian and New Zealand standards and local authority plans and may include:
- discharge requirements
 - flow
 - pressure
 - velocity
 - water quality and its effect on system life.
- Layout of pipework systems:***
- includes:
 - dual feed
 - ring main
 - single pipe
 - should not unduly affect building integrity and aesthetic appeal
 - should have principles of economy, serviceability, durability and fit for use applied.
- Fittings and valves*** include:
- fittings:
 - bends
 - elbows
 - tees
 - unions
 - valves:
 - backflow prevention
 - excess pressure
 - frost protection devices
 - isolating
 - location of valves
 - over temperature
 - pressure limiting
 - pressure reduction
 - strainers.
- Proprietary solar heated water systems*** include:
- alternative supplementary fuel sources, including:
 - coal
 - electricity
 - fuel oil
 - gas
 - wood
 - circulating systems
 - clarifiers
 - close coupled, split systems
 - direct and indirect heating systems

RANGE STATEMENT

Solar water heating system calculations include:

- heat exchange systems
- heated water heaters
- pool heaters
- solar pre-heaters
- spa heaters
- storage systems
- sun track systems.
- circulation calculations
- energy balance equation
- flow calculations
- heat loss calculations, covering:
 - collector losses
 - overnight losses
 - standing losses
- temperature and energy equations
- varying inlet temperature and flow rate effect on the performance of a solar collector
- volume calculations.

Components include:

- collectors
- differential controllers
- electronics
- expansion tanks
- filters
- fittings
- flow and return pipework
- heat exchangers
- insulation
- overflows
- safe trays
- storage vessels
- suitable type and size of circulating pumps
- supplementary heat sources
- support frames
- timers and mechanical components
- valves.

Methods for freezing protection include:

- circulating systems
- dump valves
- heat trace systems.

Pipe size, velocity, flow and

- rate of discharge
- temperature

RANGE STATEMENT

- pressure calculations*** include:
- volume.
- Pipe fixings*** include:
- anchors
 - bracket spacing
 - corrosion protection
 - hanging brackets
 - material requirements
 - saddles
 - wall and ceiling brackets.
- Materials*** include:
- copper
 - fittings and fixtures
 - galvanised steel
 - glass
 - other approved pipe materials
 - polybutylene
 - protective coatings.
- Jointing methods*** include:
- brazing
 - compression
 - flaring
 - mechanical joints
 - soldering
 - threading.
- Installation requirements*** include:
- clipping
 - installation details
 - jointing requirements
 - level of workmanship
 - roof support.
- Solar collector*** design includes:
- box
 - fin and tube collectors
 - glass
 - insulation
 - pipe collectors
 - pre-heat systems
 - sun tracking systems.
- Plans*** include:
- axonometrics
 - cross-sections
 - details
 - elevations
 - isometrics
 - schematics, which may be produced using:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Calculate water usage.	<p>1.1. Scope of work is established for water auditing.</p> <p>1.2. Client requirements are identified from plans, specifications and client briefs.</p> <p>1.3. Types of meter and flow measuring devices and their use and location are specified.</p> <p>1.4. Flow and pressure tests are conducted and flows at outlets are calculated.</p> <p>1.5. Anticipated water use is compared to actual use and difference is calculated.</p> <p>1.6. Statutory and local government regulatory requirements for the use of water are interpreted and applied.</p> <p>1.7. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.8. Desktop study is conducted and performance requirements are established.</p>
2. Identify excessive water and energy usage.	<p>2.1. Leak identification processes are implemented.</p> <p>2.2. Flows are measured and evaluated against national and industry standards.</p> <p>2.3. Suitability of existing fixtures and fittings is evaluated against new technology.</p> <p>2.4. Water use times are identified and compared to optimal timing.</p> <p>2.5. Existing inefficient system conditions, such as dead legs, are identified and analysed.</p> <p>2.6. Pressure test is conducted and consequences of high and low pressures are identified and compared to industry standards.</p>
3. Evaluate measures to conserve water and energy.	<p>3.1. Flow restrictors, sensors and pressure-limiting devices are specified for a range of applications.</p> <p>3.2. Automatic systems are specified for a range of applications.</p> <p>3.3. Alternative processes and practices are evaluated for optimum water and energy usage.</p> <p>3.4. Alternative fixtures and fittings are evaluated for optimum water and energy usage.</p> <p>3.5. Rainwater harvesting techniques and processes are applied.</p> <p>3.6. Recycling and re-use processes are designed.</p>

ELEMENT**PERFORMANCE CRITERIA**

-
- | | |
|---------------------|---|
| 4. Report findings. | 4.1. <i>Cost-benefit analysis</i> is conducted, including the investment return period. |
| | 4.2. <i>Water and energy audit report</i> is prepared. |
| | 4.3. Resultant environmental benefits and water and energy savings are identified and reported. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accurately applying design principles relating to hydraulic systems, design concepts, measurements and calculations
- applying and interpreting documentation from a wide range of sources, including legislation, standards, drawings and specifications
- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare a water and energy audit report
- complying with OHS and organisational quality procedures and processes
- innovation skills to develop creative and responsive approaches to conserving water and energy
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to water use
 - take initiative and make decisions
- problem solving skills to:

REQUIRED SKILLS AND KNOWLEDGE

- analyse requirements
- carry out tests
- consider options
- recommend appropriate water and energy saving measures
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- hazards associated with devices and systems used in the hydraulic sector
- installation methods used in hydraulic systems
- nature of materials and effect of their performance in a variety of conditions
- preparation and interpretation of work drawings and specifications
- requirements of state regulatory authorities, Australian and New Zealand standards, manufacturer specifications, Building Code of Australia (BCA) and other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in hydraulic design
- variety of applications of technology principles in design of water and energy-efficient usage systems for all classes of building.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It could be assessed on its own or as part of an integrated assessment activity involving audit of water and energy use in at least two different types of building and the preparation of comprehensive reports.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- conducting a water audit
- conducting pressure and flow measurements
- interpreting and applying statutory and local government requirements for the use of water and energy
- reporting water wasting practices and processes, including leaks
- specifying sensors and automatic systems for a range of applications
- recommending recycling and re-use processes
- preparing a water and energy audit report
- conducting a cost-benefit analysis, including investment return period
- identifying and reporting on environmental benefits and water and energy savings.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- compiling reports
- identifying:
 - alternative procedures, practices and products that reduce water and energy consumption
 - wasted water
 - water-saving initiatives

RANGE STATEMENT

<i>Client requirements</i> include:	<ul style="list-style-type: none"> • producing a cost-benefit analysis. • compliance with regulatory requirements • more efficient use of water resources • reduction in water and energy costs • reserve capacity.
<i>Types of meter and flow measuring devices</i> include:	<ul style="list-style-type: none"> • applications, which may include: <ul style="list-style-type: none"> • domestic supply • irrigation • mechanical • sanitation • trade waste • direct • electronic • hand-held • indirect • in-line • mechanical.
<i>Flow and pressure tests</i> include:	<ul style="list-style-type: none"> • interpretation of flow and pressure tests conducted by a contractor • on-site measurement of flow (l and s), velocity (m and s) and pressure (kPa).
<i>Statutory and local government regulatory requirements</i> include:	<ul style="list-style-type: none"> • Acts and regulations • BCA • state and local government policies.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none"> • material specifications • pump tables • sizing tables • technical and trade manuals.
<i>Desktop study</i> includes:	<ul style="list-style-type: none"> • research and evaluation of water-saving products, processes and procedures currently available.
<i>Performance requirements</i> include:	<ul style="list-style-type: none"> • flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards, local authority plans and BCA.
<i>Leak identification processes</i> include:	<ul style="list-style-type: none"> • electronic leak detection • listening devices • metering • pipe inspection cameras.

RANGE STATEMENT

<i>Sensors</i> include:	<ul style="list-style-type: none">• energy• entry and exit• heat• high and low level• moisture• motion.
<i>Automatic systems</i> include:	<ul style="list-style-type: none">• electronic and mechanical timer• pressure-activated• sprinkler• sun-tracking• use-activated• wind-activated.
<i>Alternative processes and practices</i> include:	<ul style="list-style-type: none">• processes such as wash-down processes and order of operation• alternatives may include:<ul style="list-style-type: none">• change in materials used in a process• change in timing of a process• discontinuation of a process• modification of a process• practices include:<ul style="list-style-type: none">• running dishwashers and washing machines with full loads• testing pipe systems with air instead of water• washing teeth with the tap off• watering before sunrise and after sunset.
<i>Alternative fixtures and fittings</i> include:	<ul style="list-style-type: none">• continuous-flow gas water heaters• heat-pump heated water systems• irrigation systems• low-energy and water-use appliances, include:<ul style="list-style-type: none">• air conditioners• cisterns• cooling towers• dishwashers• freezers• low volume toilet flushing systems• refrigerators• tapware• urinals

RANGE STATEMENT

- washing machines
 - low-flow shower roses
 - outlet-flow control devices
 - solar heated water systems.
- Rainwater harvesting*** includes:
- collection, storage and distribution of rainwater, including the use of tanks and dams.
- Recycling and re-use processes*** include:
- recycling water from washing down floors
 - re-use of rinse water from washing processes
 - grey water re-use options.
- Cost-benefit analysis*** includes:
- comparison of installation and set-up costs and cost recovery period with environmental water and energy savings.
- Water and energy audit report*** is a comprehensive report written to industry standards that includes:
- methodology
 - results
 - analysis
 - conclusions
 - recommendations.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for design of grey water re-use systems for wide span and high-rise building projects.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Potential household or community health and environmental risks are identified and measures to protect public health are identified and implemented.</p> <p>1.4. Cost-benefit analysis is conducted.</p> <p>1.5. National water programs, statutory and regulatory requirements, and Australian and New Zealand standards for the design of grey water re-use systems are interpreted, analysed and applied.</p> <p>1.6. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.7. Additional research, including a desktop study, is conducted to outline design parameters.</p> <p>1.8. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Primary, secondary and advanced secondary treatment and tertiary systems are detailed.</p> <p>2.2. Layout of pipework systems and type and location of fittings, valves, indexing valves and other system components are planned.</p> <p>2.3. Changes to building drainage system are designed and detailed, and inspection requirements are identified.</p> <p>2.4. Diversion and storage options are evaluated, problems identified and solutions applied.</p> <p>2.5. Diversion to sewer options, wet weather storage options and land application options are detailed.</p> <p>2.6. Stored and pressurised wastewater systems for irrigation and toilet or urinal flushing are detailed.</p> <p>2.7. Holding tanks and gullies are designed and detailed.</p> <p>2.8. Pipe size and pump duty calculations are made and pumpwell, pump and pump control requirements are sized and detailed.</p> <p>2.9. Approved materials and jointing methods for grey water re-use systems are evaluated, pipe fixings are designed and installation requirements are specified.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Design and size systems.	<p>3.1. Grey water re-use systems are designed for a range of residential, commercial and industrial applications.</p> <p>3.2. Grey water re-use systems are designed and sized using computer software packages.</p>
4. Prepare documentation.	<p>4.1. Plans are prepared for a range of grey water re-use systems.</p> <p>4.2. Specification for a grey water re-use system is prepared.</p> <p>4.3. Testing and commissioning schedule is prepared.</p> <p>4.4. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- applying design concepts and principles relating to hydraulic systems
- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- innovation skills to develop creative and responsive approaches
- numeracy skills to:

REQUIRED SKILLS AND KNOWLEDGE

- apply measurements and calculations
- interpret data
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of grey water re-use systems in sewerred areas
 - take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system.

Required knowledge

Required knowledge for this unit is:

- Australian and New Zealand standards, manufacturer specifications, Building Code of Australia (BCA) and other applicable codes or standard operating procedures relevant to the sector
- hazards associated with devices and systems used in the hydraulic sector
- installation methods used in hydraulic systems
- nature of materials and effect of their performance in a variety of conditions
- OHS and organisational quality procedures and processes
- principles of technology in the design of grey water re-use systems for all classes of building
- terminology and definitions used in hydraulic design
- work drawings and specifications
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of grey water re-use systems
- planning and detailing system components, including:
 - holding tanks
 - indexing valves
 - piping systems
 - pumpwells
- designing and sizing a grey water re-use system
- preparing plans for a range of grey water re-use systems to industry standards
- preparing specifications for a grey water re-use system
- preparing testing and commissioning schedules
- preparing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- includes:
 - interpretation of plans and specifications
 - sizing and documenting layout of grey water re-use systems for applications, including residential, commercial and industrial

RANGE STATEMENT

- may be for new projects or an existing structure being renovated, extended, restored or maintained.
- Design requirements* include:
 - architectural specifications
 - builder specifications
 - owner requirements
 - specialist water use applications.
- Health and environmental risks* include:
 - health risks:
 - abdominal pain
 - acute enteritis
 - anaemia
 - anorexia
 - bacillary dysentery
 - chest pain
 - cholera
 - common colds
 - coughing
 - diarrhoea
 - digestive and nutritional disturbances
 - dysentery
 - fever
 - gastroenteritis
 - giardiasis
 - helminthes, including flukes and worms
 - hepatitis
 - hookworm disease
 - infectious hepatitis
 - meningitis
 - muscle aches
 - neurological symptoms, including nervousness and insomnia
 - poliomyelitis
 - respiratory infections, such as pneumonia
 - restlessness
 - salmonellosis (food poisoning)
 - taeniasis
 - toxoplasmosis
 - typhoid fever

RANGE STATEMENT

	<ul style="list-style-type: none"> • vomiting • weight loss • environmental risks: <ul style="list-style-type: none"> • algal blooms • excess nutrient loads • fish kills • oxygen depletion.
<i>Measures to protect public health</i> include:	<ul style="list-style-type: none"> • auditing • contact avoidance • contact minimisation • disinfection and sterilisation • education • legislation • licensing • maintenance • separation barriers • set back distances • timing discharges • wet weather storage.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • comparison of range of suitable treatment, disposal options, materials, system choices and disinfection options • water savings and environmental benefits compared to initial and ongoing maintenance costs.
<i>National water programs, statutory and regulatory requirements, and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts and regulations • Australian and New Zealand standard requirements, including: <ul style="list-style-type: none"> • AS/NZS1546 On-site domestic wastewater treatment units • AS/NZS1547 On-site domestic wastewater management • AS/NZS3500 National plumbing and drainage set • AS2200 Design charts for water supply and sewerage • BCA • local and state government policies, including group and strata titling.
<i>Manufacturer requirements</i>	<ul style="list-style-type: none"> • material specifications

RANGE STATEMENT

include:

- pump tables
- sizing tables
- technical and trade manuals.
- architectural and building plans
- council plans
- developer plans
- manufacturers' data
- other documents, including:
 - applications
 - brochures
 - forms
 - policies
 - other reports as available.

Desktop study includes collection and interpretation of existing data for design purposes from:

Performance requirements include:

- compliance limits for:
 - bacteria levels
 - chlorine levels
 - nutrients
 - pH
 - phosphates
- requirements established using Australian and New Zealand standards and local authority plans, including:
 - cover
 - discharge
 - flow conditions
 - pipe grades.

Layout of pipework systems:

- includes:
 - drainage systems
 - elevated pipework systems
 - gravity systems
 - pumped and rising mains
 - stack systems, including:
 - fully vented
 - fully vented modified
 - single stack
 - single stack modified
- should not unduly affect building integrity and aesthetic appeal
- should have principles of economy,

RANGE STATEMENT

	serviceability, durability and fit for use applied.
<i>Fittings, valves, indexing valves and other system components</i> include:	<ul style="list-style-type: none"> • bends • first junctions • inspection openings • reflux valves • traps.
<i>Land application options</i> include:	<ul style="list-style-type: none"> • covered surface irrigation • shallow subsurface irrigation • surface irrigation systems open to atmospheric pressure.
<i>Holding tanks</i> include:	<ul style="list-style-type: none"> • connections • pumps • sizing • switches • valves.
<i>Gullies</i> include:	<ul style="list-style-type: none"> • design and installation of gullies for the collection of grey water • diversion of gullies to holding tanks or treatment systems.
<i>Pipe size and pump duty calculations</i> include:	<ul style="list-style-type: none"> • determination of flow and fixture loadings • gradient calculations • interpretation of design charts and tables • pipe sizing calculations • reduced level calculations.
<i>Pumpwell, pump and pump control requirements</i> include:	<ul style="list-style-type: none"> • automatic controls • capacity • corrosion-resistant materials • detailing • high and low-level water controls and alarms • inlet and outlet design requirements • installation and mounting requirements • macerator requirements • pump sizing • pumpwell sizing • selection of pump type • valve requirements • warning system.
<i>Materials</i> include:	<ul style="list-style-type: none"> • concrete • earthenware • fittings

RANGE STATEMENT

	<ul style="list-style-type: none">• high density polyethylene (HDPE)• low density polyethylene (LDPE)• unplasticised polyvinyl chloride (PVC-U).

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for rainwater harvesting systems for wide span and high-rise building projects.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Potential contamination sources are analysed and solutions are applied.</p> <p>1.4. Monthly and annual rainfall patterns and required rainwater storage volumes are established.</p> <p>1.5. Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.</p> <p>1.6. Statutory, regulatory requirements and Australian and New Zealand standards for the design of rainwater harvesting systems are interpreted, analysed and applied.</p> <p>1.7. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.8. Additional research, including a desktop study, is conducted to outline design parameters.</p> <p>1.9. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Tank type and location are specified.</p> <p>2.2. Layout of pipework systems and type and location of fittings and valves are planned.</p> <p>2.3. First-flush systems are designed and detailed.</p> <p>2.4. Strainers and water contamination solutions are specified.</p> <p>2.5. Pipe size and pipe grade calculations are completed and pipe fixings are designed for a range of applications.</p> <p>2.6. Separation of services and backflow prevention devices are designed and detailed.</p> <p>2.7. Approved non-contaminating materials and jointing methods for rainwater harvesting are specified.</p> <p>2.8. Pump and pump control requirements are sized and detailed.</p> <p>2.9. Installation requirements are specified.</p>
3. Design and size systems.	<p>3.1. Rainwater harvesting systems are designed and detailed for a range of residential, commercial and industrial applications.</p> <p>3.2. Rainwater re-use systems are designed and detailed.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Rainwater harvesting systems are designed and sized using computer software packages.
4. Prepare documentation.	<p>4.1. Plans are prepared for a range of rainwater harvesting systems.</p> <p>4.2. Specification for a rainwater harvesting system is prepared.</p> <p>4.3. Testing and commissioning schedule is prepared.</p> <p>4.4. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- designing systems for the collection, storage, distribution and re-use of rainwater for potable and non-potable uses
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of

REQUIRED SKILLS AND KNOWLEDGE

rainwater collection, storage, distribution and re-use systems

- take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in the design of rainwater collection, storage, distribution and re-use
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of rainwater collection, storage, distribution and re-use for all classes of building
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used according to:
 - AS/NZS1546 On-site domestic wastewater treatment units
 - AS/NZS1547 On-site domestic wastewater management
 - AS/NZS3500 National plumbing and drainage set
 - AS2200 Design charts for water supply and sewerage
 - other standards, codes or standard operating procedures
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including rainfall, client, regulatory, manufacturer and Australian and New Zealand standard requirements and storage capacity for a range of rainwater harvesting systems
- planning and detailing system components, including:
 - filters
 - piping systems
 - pumps
 - strainers
- designing and sizing rainwater harvesting systems
- designing and sizing rainwater re-use systems
- preparing plans for a range of rainwater harvesting and re-use systems to industry standards
- preparing specifications for rainwater harvesting and re-use systems
- preparing testing and commissioning schedules
- preparing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- includes:
 - interpretation of plans and specifications
 - rainfall analysis
 - sizing and documenting layout of rainwater

RANGE STATEMENT

	<ul style="list-style-type: none"> harvesting systems for applications, including residential, commercial and industrial • volume calculations • may be for new projects or an existing structure being renovated, extended, restored or maintained.
<i>Design requirements</i> include:	<ul style="list-style-type: none"> • architectural specifications • builder specifications • owner requirements • specialist water use applications.
<i>Contamination</i> includes:	<ul style="list-style-type: none"> • bacterial • heavy metal • inorganic • odour • organic • taste • viral.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
<i>Statutory, regulatory requirements and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts and regulations • AS/NZS3500 National plumbing and drainage set • AS2200 Design charts for water supply and sewerage • Building Code of Australia • local and state government policies, including group and strata titling.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none"> • material specifications • pump tables • sizing tables • technical and trade manuals.
<i>Desktop study</i> includes collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none"> • architectural and building plans • council plans • developer plans • manufacturers' data • other documents, including: <ul style="list-style-type: none"> • applications • forms

RANGE STATEMENT

	<ul style="list-style-type: none"> • sewer detail maps • other reports as available.
<i>Performance requirements</i> include:	<ul style="list-style-type: none"> • pipe grades, cover, flow conditions and discharge requirements, established using Australian and New Zealand standards and local authority plans.
<i>Tank type and location</i> include:	<ul style="list-style-type: none"> • tank type: <ul style="list-style-type: none"> • coloured steel • concrete • fibreglass • galvanised steel • plastic • polyethylene • other approved materials • tank location: <ul style="list-style-type: none"> • above-ground • in-ground • reduced levels • site plan.
<i>Layout of pipework systems:</i>	<ul style="list-style-type: none"> • includes: <ul style="list-style-type: none"> • gravity systems • pumped systems • should not unduly affect building integrity and aesthetic appeal • should have principles of economy, serviceability, durability and fit for use applied.
<i>Fittings and valves</i> include:	<ul style="list-style-type: none"> • backflow prevention devices • bends • inspection openings • isolating valves • junctions.
<i>First-flush systems</i> include:	<ul style="list-style-type: none"> • electronic • float-activated • manual • mechanical • time-activated • volume-activated.
<i>Strainers</i> include:	<ul style="list-style-type: none"> • downpipe

RANGE STATEMENT

	<ul style="list-style-type: none"> • gutter • point of use • pump inlet • pump outlet • tank inlet • tank outlet • tap.
<i>Water contamination solutions</i> include:	<ul style="list-style-type: none"> • chlorination • disinfection • filters • ozone • reverse osmosis • screens • strainers • ultraviolet.
<i>Pipe size and pipe grade calculations</i> include:	<ul style="list-style-type: none"> • determination of flow • gradient calculations • interpretation of design charts and tables • pipe sizing calculations • reduced level calculations.
<i>Pipe fixings</i> include:	<ul style="list-style-type: none"> • anchors • bedding • bracket spacing • concrete support • corrosion protection • cover • hanging brackets • material requirements • saddles • wall and ceiling brackets.
<i>Materials</i> include:	<ul style="list-style-type: none"> • concrete • copper • fittings and fixtures • high density polyethylene (HDPE) • low density polyethylene (LDPE) • unplasticised polyvinyl chloride (PVC-U).
<i>Jointing methods</i> include:	<ul style="list-style-type: none"> • brazing • compression • gluing • mechanical joints

RANGE STATEMENT

Pump and pump control requirements include:

- solvent cement
- threading
- welding.
- automatic controls
- capacity
- corrosion-resistant materials
- detailing
- high and low-level water controls and alarms
- impeller sizing
- inlet and outlet design
- installation
- mounting
- pump selection and pump sizing, which is based on:
 - flow
 - velocity
 - lift
 - pressure requirements
- valve
- warning system.

Installation requirements include:

- bedding
- clipping
- concrete support
- independent anchoring of above-ground and in-ground tanks
- installation details
- jointing
- level of workmanship.

Rainwater re-use systems include:

- irrigation applications
- laundry applications
- potable re-use
- toilet flushing
- wash-down applications.

Plans include:

- axonometrics
- cross-sections
- details
- elevations
- isometrics
- schematics, which may be produced using:
 - pencil

RANGE STATEMENT

	<ul style="list-style-type: none"> • Indian ink • pigment liner • computer generation
<i>Specification</i> includes:	<ul style="list-style-type: none"> • sections. • bedding • clipping • concrete support • detailing specialised components • jointing • manufacturer requirements • materials • workmanship.
<i>Testing</i> includes:	<ul style="list-style-type: none"> • air pressure test • hydrostatic test • quality assurance (QA) audit.
<i>Commissioning schedule</i> includes:	<ul style="list-style-type: none"> • flow adjustments • flushing system • leak check • pressure testing • pump adjustments • water filling in-ground tanks.
<i>Operation and maintenance manual</i> includes:	<ul style="list-style-type: none"> • cleaning filters and strainers • disinfection of storage tanks • leak detection • pump maintenance • regular maintenance requirements • water auditing • yearly inspections.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. <i>Design requirements</i> and <i>work scope</i> are determined from plans, specifications and client briefs.</p> <p>1.2. <i>Cost-benefit analysis</i> is conducted comparing a range of pipe materials and system designs.</p> <p>1.3. <i>Statutory and regulatory requirements and Australian and New Zealand standards</i> for the design of irrigation systems are interpreted, analysed and applied.</p> <p>1.4. <i>Manufacturer requirements</i> and trade and technical manuals are interpreted.</p> <p>1.5. Additional research, including a <i>desktop study</i>, is conducted to outline design parameters.</p> <p>1.6. <i>Flow and pressure tests</i> are conducted.</p> <p>1.7. <i>Water sources, volumes and areas to be irrigated</i> are established.</p> <p>1.8. <i>Soil types</i> are analysed and categorised, and impacts on irrigation systems are documented.</p> <p>1.9. <i>Performance requirements</i> are established.</p>
2. Plan and detail system components.	<p>2.1. <i>Layout of pipework systems</i> and type and location of <i>fittings and valves</i> are planned.</p> <p>2.2. Type, location and requirements for <i>backflow prevention devices</i> are detailed.</p> <p>2.3. Pipe sizes, velocities, flows and pressures are calculated for a range of applications.</p> <p>2.4. Approved <i>materials</i> and <i>jointing methods</i> for irrigation systems are specified.</p> <p>2.5. <i>Sections and components of the irrigation system</i> are detailed.</p> <p>2.6. <i>Pipe fixings</i> are designed for a range of applications.</p> <p>2.7. <i>Pump, pump controls and pumphouse requirements</i> are sized and detailed.</p> <p>2.8. <i>Installation requirements</i> are specified.</p>
3. Design and size systems.	<p>3.1. Irrigation systems are designed for a range of residential, commercial, industrial and agricultural <i>applications</i>.</p> <p>3.2. Range of <i>delivery systems and patterns</i> is designed.</p> <p>3.3. Irrigation systems are designed and sized using computer software packages.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Prepare documentation.	<p>4.1. Plans are prepared for a range of irrigation systems.</p> <p>4.2. Specification for an irrigation system is prepared.</p> <p>4.3. Testing and commissioning schedule is prepared.</p> <p>4.4. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- designing irrigation systems to Australian and New Zealand standards, BCA and other relevant legislative requirements
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of irrigation systems
 - take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in the design of irrigation systems
- nature of materials used and effects of performance under various conditions
- principles of technology used in design of irrigation systems for a range of applications
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used according to:
 - AS/NZS3500 National plumbing and drainage set
 - AS2200 Design charts for water supply and sewerage
 - other standards, codes or standard operating procedures
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of irrigation systems
- planning and detailing system components, including:
 - backflow prevention devices
 - manifold and piping systems
 - stations
- designing and sizing a range of irrigation systems for specific applications
- preparing plans for a range of irrigation systems
- preparing specifications for irrigation systems
- preparing testing and commissioning schedules
- preparing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Design requirements include:

- architectural specifications
- builder specifications
- owner requirements
- specialist water use applications.

Work scope:

- includes:
 - application of the irrigation project
 - interpretation of plans and specifications
 - sizing and documenting layout of irrigation

RANGE STATEMENT

	systems, for applications including residential, commercial, industrial and agricultural
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • may be for new projects or an existing structure being renovated, extended, restored or maintained. • comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
<i>Statutory and regulatory requirements and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts and regulations • Australian and New Zealand standards, including: <ul style="list-style-type: none"> • AS/NZS3500 National plumbing and drainage set • AS2200 Design charts for water supply and sewerage • BCA • local and state government policies.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none"> • material specifications • pump tables • sizing tables • technical and trade manuals.
<i>Desktop study</i> includes collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none"> • building plans • council plans • developer plans • landscape and architectural plans • other documents and reports as available.
<i>Flow and pressure tests</i> include:	<ul style="list-style-type: none"> • interpretation of flow and pressure tests conducted by a contractor • on-site measurement of flows (l and s), velocity (m and s) and pressure (kPa).
<i>Water sources, volumes and areas to be irrigated</i> include:	<ul style="list-style-type: none"> • sources: <ul style="list-style-type: none"> • creeks • dams • lakes • mains supply • rivers • streams • tanks

RANGE STATEMENT

- volumes and areas:
 - amount and duration of water supply
 - areas to be irrigated
 - number of stations required
 - total amount and flow rate required at each station.
- Soil types* include:
 - gravels
 - light, medium and heavy clays
 - loams
 - rock
 - sands.
- Performance requirements* include:
 - flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards and local authority requirements.
- Layout of pipework systems:*
 - includes:
 - distribution
 - dual feed systems
 - range pipes
 - ring main
 - single pipe
 - station break-up
 - should not unduly affect aesthetic appeal and building integrity
 - should have principles of economy, serviceability, durability and fit for use applied.
- Fittings and valves* include:
 - fittings:
 - bends
 - elbows
 - tees
 - unions
 - valves:
 - backflow prevention
 - excess pressure
 - isolating
 - pressure limiting
 - pressure reduction
 - strainers.

RANGE STATEMENT

Backflow prevention devices include:

- break tanks
- individual protection
- property protection
- testable and non-testable devices
- zone protection.

Materials include:

- acrilonitrile butadiene styrene (ABS)
- composite pipework
- copper
- fittings and fixtures
- polybutylene
- polyethylene
- protective coatings
- steel.

Jointing methods include:

- brazing
- compression
- flaring
- mechanical joints
- rubber ring joints
- soldering
- threading.

Sections and components of the irrigation system include:

- irrigation stations:
 - number, size, area, volume of water required, delivery requirements, operation and activation of stations, sprinkler patterns, location and distribution of sprinkler heads, obstacle avoidance, water minimisation, waste minimisation and timing
- manifold systems:
 - manifolds to stations, headers, branches, timers, isolators, servo valves, electronics, power supplies and manual activation
- sensors:
 - moisture sensors, soil sensors, temperature sensors, humidity sensors, weather stations and computer automation
- automatic controls:
 - station controllers, servo valves, isolating valves, water tractors and timers
- sprinklers, drippers and irrigators:
 - sprinkler heads, sprinkler flows, impact

RANGE STATEMENT

sprinklers, gear-driven sprinklers, water tractors, water cannons, tape drippers, individual drippers, flow controlled drippers, in-ground irrigation tapes and root inhibitor systems

- sprinkler patterns:
 - head to head, square, triangular, circular, quarter overlap, half overlap, full overlap, double overlap and other overlap patterns.

Pipe fixings include:

- anchors
- bedding
- bracket spacing
- corrosion protection
- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.

Pump, pump controls and pumphoom requirements include:

- automatic controls
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- pump selection
- pump sizing
- space requirements
- valve requirements.

Installation requirements include:

- bedding
- clipping
- installation details
- jointing requirements
- level of workmanship.

Applications:

- include:
 - agricultural crops
 - garden irrigation
 - golf courses
 - greenhouses
 - lawn watering
 - nurseries
- should also cover:
 - individual crop water requirements

RANGE STATEMENT

Delivery systems and patterns include:

- types of plants and their respective crop factors.
- main delivery
- number and design of stations
- design includes:
 - avoiding obstacles
 - irregular shapes
 - minimising water wastage
 - range of irrigation applications
- range pipes
- ring mains
- size and delivery of sprinklers
- sprinkler head placement
- sprinkler patterns.

Plans include:

- axonometrics
- cross-sections
- details
- elevations
- isometrics
- schematics, which may be produced using:
 - computer generation
 - Indian ink
 - pencil
 - pigment liner
- sections.

Specification includes:

- bedding
- clipping
- jointing
- manufacturer
- materials
- specialised components
- valve selection
- workmanship.

Testing includes:

- air pressure test
- defect inspection
- hydrostatic test
- mains pressure test
- quality assurance (QA) audit.

Commissioning schedule

- flow test

RANGE STATEMENT

includes:

- leak check
- pressure test
- system flush
- valve operation.

Operation and maintenance manual includes:

- leak detection
- pump maintenance
- valve maintenance
- water auditing
- yearly inspection
- yearly maintenance requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. <i>Scope of work</i> is established for trade waste pre-treatment systems.</p> <p>1.2. <i>Design requirements</i> are determined from plans, specifications and client briefs.</p> <p>1.3. <i>Statutory and regulatory requirements and Australian and New Zealand standards</i> for the design of trade waste pre-treatment systems are analysed and applied.</p> <p>1.4. <i>Trade waste applications</i> are analysed and a <i>cost-benefit analysis</i> is conducted, comparing a range of pipe materials and system designs.</p> <p>1.5. <i>Manufacturer requirements</i> and trade and technical manuals are interpreted.</p> <p>1.6. Additional research, including a <i>desktop study</i>, is conducted to outline design parameters.</p> <p>1.7. <i>Performance requirements</i> are established.</p>
2. Plan and detail system components.	<p>2.1. <i>Layout of pipework systems</i> and type and location of <i>fittings and valves</i> are planned.</p> <p>2.2. <i>Solid removal systems</i> are planned and detailed.</p> <p>2.3. <i>Grease and oil interceptors, neutralising chambers</i> and <i>wash-down areas</i> are planned and detailed.</p> <p>2.4. <i>Diffused air flotation systems</i> are planned and detailed.</p> <p>2.5. <i>Bacterial treatment processes</i> and <i>combination and specialised treatment processes</i> are detailed for a range of commercial and industrial applications.</p> <p>2.6. <i>Stormwater diversion and first-flush systems</i> are detailed.</p> <p>2.7. <i>System calculations</i> are performed for a range of applications.</p> <p>2.8. <i>Pumpwell, pump and pump control requirements</i> are sized and detailed.</p> <p>2.9. <i>Pipe fixings</i> are designed for a range of applications.</p> <p>2.10. Approved <i>materials, jointing methods</i> and <i>installation requirements</i> for trade waste pre-treatment systems are specified.</p>
3. Design and size systems.	<p>3.1. Trade waste pre-treatment systems are designed for a range of applications.</p> <p>3.2. Trade waste pre-treatment systems are designed and sized using <i>computer software packages</i>.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Prepare documentation.	<p>4.1. Plans are prepared for a range of trade waste pre-treatment systems.</p> <p>4.2. Specification for a trade waste pre-treatment system is prepared.</p> <p>4.3. Testing and commissioning schedule is prepared.</p> <p>4.4. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of trade waste pre-treatment systems
 - take initiative and make decisions
- problem solving skills to analyse requirements, consider options and design an appropriate system

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in the design of trade waste pre-treatment systems for all classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions
- principles of technology used in the design of trade waste pre-treatment systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, trade-waste policy, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of trade waste pre-treatment systems
- planning and detailing system components, including pre-treatment systems and piping systems
- designing and sizing trade waste systems
- designing and sizing wash-down and first-flush systems
- preparing plans for a range of trade waste pre-treatment systems to industry standards
- preparing specifications for trade waste pre-treatment systems
- preparing schedules for testing and commissioning
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- interpretation of plans and specifications, and sizing and documenting layout of trade waste systems, for residential, commercial and industrial applications for either new projects or existing structures being renovated, extended, restored or maintained.

Design requirements include:

- architectural specifications
- builder specifications

RANGE STATEMENT

<p><i>Statutory and regulatory requirements and Australian and New Zealand standards</i> include:</p>	<ul style="list-style-type: none"> • owner requirements • specialist water use applications. • Acts, regulations and local and state government policies, including group and strata titling • AS/NZS3500 National plumbing and drainage set • AS2200 Design charts for water supply and sewerage • Building Code of Australia • local government trade waste policies.
<p><i>Trade waste applications</i> include:</p>	<ul style="list-style-type: none"> • chemical facilities • commercial and industrial facilities that produce a liquid waste stream • food preparation facilities • photography development facilities • wash-down facilities.
<p><i>Cost-benefit analysis</i> includes:</p>	<ul style="list-style-type: none"> • comparison of the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
<p><i>Manufacturer requirements</i> include:</p>	<ul style="list-style-type: none"> • material specifications • pump tables • sizing tables • technical and trade manuals.
<p><i>Desktop study</i> includes collection and interpretation of existing data for design purposes from:</p>	<ul style="list-style-type: none"> • architectural and building plans • council plans • developer plans • manufacturers' data • other documents, including: <ul style="list-style-type: none"> • applications • forms • sewer detail maps • other reports as available.
<p><i>Performance requirements</i> include:</p>	<ul style="list-style-type: none"> • pipe grades, cover, flow conditions and discharge requirements, established using Australian and New Zealand standards and local authority plans.
<p><i>Layout of pipework systems:</i></p>	<ul style="list-style-type: none"> • includes: <ul style="list-style-type: none"> • gravity systems

RANGE STATEMENT

	<ul style="list-style-type: none"> • pumped systems • should not unduly affect building integrity and aesthetic appeal • should have principles of economy, serviceability, durability and fit for use applied.
<i>Fittings and valves</i> include:	<ul style="list-style-type: none"> • bends • inspection openings • junctions • reflux valves • traps.
<i>Solid removal systems</i> include removal of:	<ul style="list-style-type: none"> • bone • dirt • grit • metal • paper • plastic • rubbish • sand • silt • wood • other solid contaminants.
<i>Grease and oil interceptors</i> include:	<ul style="list-style-type: none"> • coalescing plate separators • grease traps • skimmers • vertical separators.
<i>Neutralising chambers</i> include:	<ul style="list-style-type: none"> • acid neutralisation • chemical neutralisation.
<i>Wash-down areas</i> include:	<ul style="list-style-type: none"> • bin wash down • commercial and industrial wash-down processes that may or may not require stormwater diversion • floor wash down • machinery wash down.
<i>Diffused air flotation systems</i> include:	<ul style="list-style-type: none"> • removal of contaminants from commercial and industrial processes.
<i>Bacterial treatment processes</i> include:	<ul style="list-style-type: none"> • aerobic • anaerobic • facultative and specialised bacteria for the removal of grease and other contaminants.

RANGE STATEMENT

Combination and specialised treatment processes are any combination of processes, including:

- bacterial treatment processes
- diffused air flotation systems
- first-flush systems
- neutralising chambers
- solid removal systems
- specialised treatment process
- stormwater diversion.

Stormwater diversion and first-flush systems include:

- exclusion of stormwater from sewerage systems or admittance of first portion of stormwater generated by a rain event to the sewerage system.

System calculations include:

- determination of flow and fixture loadings
- gradient calculations
- interpretation of design charts and tables
- pipe sizing calculations
- reduced level calculations
- treatment system sizing.

Pumpwell, pump and pump control requirements include:

- automatic controls
- capacity
- chains
- corrosion-resistant materials
- detailing
- high and low-level water controls and alarms
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- ladder access
- macerator requirements
- pump selection
- pump sizing
- pumpwell sizing
- space requirements
- step irons
- valve requirements
- warning system.

Pipe fixings include:

- anchors
- bedding
- bracket spacing
- concrete support
- corrosion protection

RANGE STATEMENT

	<ul style="list-style-type: none">• cover• hanging brackets• material requirements• saddles• wall and ceiling brackets.
<i>Materials</i> include:	<ul style="list-style-type: none">• cast iron• concrete• copper• earthenware• fittings and fixtures, including sound attenuation requirements• high density polyethylene (HDPE)• unplasticised polyvinyl chloride (PVC-U).
<i>Jointing methods</i> include:	<ul style="list-style-type: none">• brazing• gluing• mechanical joints• rubber ring• solvent cement welding• threading.
<i>Installation requirements</i> include:	<ul style="list-style-type: none">• bedding• clipping• concrete support• installation details• jointing requirements• level of workmanship.
<i>Computer software packages</i> include:	<ul style="list-style-type: none">• proprietary design software• manufacturers' software.
<i>Plans</i> include:	<ul style="list-style-type: none">• axonometrics• cross-sections• details• elevations• isometrics• schematics, which may be produced using:<ul style="list-style-type: none">• computer generation• Indian ink• pencil• pigment liner• sections.

RANGE STATEMENT

<i>Specification</i> includes:	<ul style="list-style-type: none">• bedding• clipping• concrete support• detailing of specialised components• jointing• manholes• manufacturer requirements• materials• sewer admission limits• workmanship.
<i>Testing</i> includes:	<ul style="list-style-type: none">• air pressure test• drainage inspection• hydrostatic test• quality assurance (QA) audit.
<i>Commissioning schedule</i> includes:	<ul style="list-style-type: none">• charging traps• leak check• operational commissioning• pump commissioning• treatment system commissioning.
<i>Operation and maintenance manual</i> includes:	<ul style="list-style-type: none">• check for blockages• leak detection• pump maintenance• regular treatment system maintenance• regular water quality testing• water auditing• yearly maintenance requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and analyse a plumbing system or aspect of a plumbing system.	<p>1.1. Plumbing system or aspect of a plumbing system is selected with a view to improve or better understand the system or aspect of the system.</p> <p>1.2. Detailed and comprehensive analysis is made of the plumbing and hydraulic system or aspect of the system and impacts are identified and documented.</p>
2. Research and trial the system.	<p>2.1. Appropriate comprehensive literature review and research are undertaken.</p> <p>2.2. Alternative solutions are trialled and evaluated for suitability.</p> <p>2.3. Results from evaluations are documented.</p>
3. Evaluate and report on the system or aspect of the system.	<p>3.1. System or aspect of the system is evaluated, identifying alternatives and redundancies.</p> <p>3.2. Conclusions are drawn and changes recommended.</p> <p>3.3. Comprehensive and professional report is produced.</p> <p>3.4. Report is published to increase the body of knowledge within the plumbing and hydraulic field.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- carry out research to develop own learning and capabilities in relevant field of plumbing and hydraulics
- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals

REQUIRED SKILLS AND KNOWLEDGE

- statutory and regulatory requirements
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- hazard identification skills, including the ability to identify hazard categories according to Australian and New Zealand standards, legislation and manufacturer specifications
- planning and organisational skills to collect, organise and analyse information
- problem solving skills to analyse information and check integrity of data
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to use technology and the internet to identify and access relevant information.

Required knowledge

Required knowledge for this unit is:

- design principles relating to performance of plumbing systems and their components
- plumbing systems, including plumbing system components and impact of various components
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- analysing and evaluating plumbing systems
- trialling and evaluating alternative solutions
- complying with OHS regulations applicable to workplace operations
- applying organisational quality procedures and processes within context of analysing and reporting on technical plumbing systems
- writing a report to professional standards
- making appropriate supported recommendations
- using appropriate techniques to publish reports
- interactive communication with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings,

EVIDENCE GUIDE

specifications, codes, design concepts and construction schedules

- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plumbing system may include:

- air conditioning
- compressed air
- hose reels
- hydrants
- roofing
- sanitary plumbing and drainage
- sprinklers
- steam
- stormwater
- trade waste
- ventilation
- wastewater
- water supply.

RANGE STATEMENT

<i>Aspect of a plumbing system</i> may include:	<ul style="list-style-type: none">• backflow prevention• flows• materials• solar heating• trapping• valves• ventilation• water heating.
<i>Analysis</i> may include:	<ul style="list-style-type: none">• durability, longevity and practicality• health issues and concerns• impacts, including:<ul style="list-style-type: none">• environmental• financial• health• personal• system processes or aspect of the system• legislation• materials• needs or desired outcomes• practices and work or installation methods• safety systems and practices• sustainability.
<i>Literature review and research</i> may include:	<ul style="list-style-type: none">• industry personnel• internet• journals• legislation and standards• manufacturers' literature• textbooks• trade publications.
<i>Evaluations</i> should:	<ul style="list-style-type: none">• draw together key aspects of the project• identify interrelationships of elements identified through the analysis.
<i>Alternatives and redundancies</i> may include:	<ul style="list-style-type: none">• changes in community expectations• changes in legislation• duplication of tasks and processes• new work practices• outdated practices and systems, for example systems and processes replaced by new technologies.

RANGE STATEMENT

- Conclusions** may be drawn:
- on any or all aspects of the project but must be supported by analysis and research.
- Recommendations** should point to future directions and may include:
- changes in materials to reduce impacts on cost, health, safety and the environment
 - changes in work practices
 - deletion of old systems and procedures
 - legislation changes
 - new systems and procedures.
- Report:**
- should cover:
 - outline of the project
 - research and literature review
 - analysis
 - evaluation
 - alternative solutions
 - conclusions
 - recommendations
 - may be in any recognised and professional format
 - must be appropriately referenced.
- Report may be **published**:
- in journals
 - in textbooks
 - in trade publications
 - on the internet.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. <i>Scope of work</i> is established for pump system requirements for wide span and high-rise building projects.</p> <p>1.2. <i>Pump duties</i> are established.</p> <p>1.3. <i>Design requirements</i> are determined from plans, specifications and client briefs.</p> <p>1.4. <i>Cost-benefit and life cycle analysis</i> is conducted comparing a range of pump alternatives, materials and system designs.</p> <p>1.5. <i>Statutory and regulatory requirements</i> and <i>Australian and New Zealand standards</i> for the design of pump systems are analysed, interpreted and applied.</p> <p>1.6. <i>Manufacturer requirements</i> and trade, technical and sizing manuals are interpreted.</p> <p>1.7. Additional research, including a <i>desktop study</i>, is conducted to outline design parameters.</p> <p>1.8. <i>Flow and pressure tests</i> of hydraulic system are conducted.</p> <p>1.9. <i>Performance requirements</i> are established.</p>
2. Plan and detail system components.	<p>2.1. <i>Pump, pump controls and pumproom requirements</i> are sized and detailed.</p> <p>2.2. <i>Layout of pipework systems</i> and type and location of <i>fittings and valves</i> are planned.</p> <p>2.3. Pipe sizes, velocities, flows and pressures are calculated for a range of applications.</p> <p>2.4. <i>Energy sources</i> are specified for a range of hydraulic pumping applications.</p> <p>2.5. <i>Pump plinths</i> and <i>pump mountings</i> are designed for a range of applications.</p> <p>2.6. Pump impellers are sized and detailed.</p> <p>2.7. Approved <i>materials, jointing methods</i> and <i>installation requirements</i> are specified.</p>
3. Design and size systems.	<p>3.1. Pump systems are designed for a range of wide span and high-rise building applications.</p> <p>3.2. Net positive suction head calculations are performed.</p> <p>3.3. Design principles are applied for optimal performance of pump systems.</p> <p>3.4. Range of <i>delivery systems</i> is designed.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. Pump systems are designed and sized using computer software packages.
4. Prepare documentation.	4.1. Plans and details are prepared for a range of pump systems. 4.2. Specification for a pump system is prepared. 4.3. Testing and commissioning schedule is prepared. 4.4. Operation and maintenance manual is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - liaise with others to publish reports
 - read and interpret:
 - documents and resources identified through the literature review
 - plans, specifications and drawings
 - other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - document analysis, including impacts and evaluation results
 - produce report to a professional standard
- designing associated piping and components for hydraulic systems
- innovation skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of pump systems
 - take initiative and make decisions
- problem-solving skills, including the ability to:

REQUIRED SKILLS AND KNOWLEDGE

- identify typical faults and action required to rectify problems
- analyse requirements, consider options and design an appropriate system
- research methods, report writing and publishing, including who to contact and how to publish reports
- specifying, selecting and sizing pumps
- technical skills, including the ability to apply design concepts and principles relating to hydraulic systems and undertake a literature review.

Required knowledge

Required knowledge for this unit is:

- nature of materials used and effects of performance under various conditions
- requirements of state regulatory authorities, Australian standards and manufacturer specifications
- terminology, definitions, installation methods and hazards identified in relation to devices and systems used according to:
 - AS/NZS3500 National plumbing and drainage set
 - AS2419 Fire hydrant installations - system design, installation and commission
 - AS/NZS1547 On-site domestic wastewater management
 - AS2200 Design charts for water supply and sewerage
 - Building Code of Australia (BCA)
 - other standards, codes or standard operating procedures
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of pump systems
- planning and detailing system components, including:
 - fittings
 - impeller sizing
 - mounting
 - piping systems
 - plinths
 - valves
- complying with OHS regulations applicable to workplace operations
- applying organisational quality procedures and processes
- designing and sizing a range of pump systems
- developing a cost-benefit, life cycle analysis for a range of pump systems
- preparing plans for a range of pump systems
- preparing a specification for a pump system
- preparing a testing and commissioning schedule
- preparing an operation and maintenance manual
- interactive communication with others to

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

- Scope of work*** includes:
- interpretation of plans and specifications, and sizing and documenting layout of pump systems, for applications including residential, commercial and industrial and new projects or an existing structure being renovated, extended, restored or maintained.
- Pump*** types may include:
- centrifugal pumps
 - circulating
 - constant flow variable speed pumps
 - macerator pumps
 - motor pumps
 - multiple impeller pumps
 - piston pumps
 - solid and semi-solid pumping systems
 - submersible pumps
 - vacuum and multi-stage pumps
 - variable speed pumps
 - warm and hot water.
- Pump duties*** may include:
- delivery
 - flow
 - head
 - velocity.
- Design requirements*** may include:
- architectural specifications
 - builder specifications
 - owner requirements
 - specialist water use applications.
- Cost-benefit and life cycle analysis*** may include:
- balancing initial cost with durability, longevity maintenance and ongoing fuel and energy cost requirements
 - comparison of the range of suitable materials, pumps and system designs available to enable cost-effective choices to be made without compromising integrity of project.
- Statutory and regulatory requirements*** may include:
- Acts and regulations
 - local and state government policies.
- Australian and New Zealand standards*** may include:
- AS/NZS3500 National plumbing and drainage set
 - AS2419 Fire hydrant installations - system design, installation and commission

RANGE STATEMENT

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to coordinate services and penetrations within a building to minimise clashes with work on other building services and to ensure structural integrity.

Application of the Unit

Application of the unit This unit of competency supports development of fundamental skills and knowledge required for competent workplace performance in a consultancy, business or supervisory capacity in relation to plumbing services and construction hydraulics.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate structural, architectural and mechanical services drawings.	1.1. Plans , elevations and sections are evaluated. 1.2. Multidisciplinary terminology is applied. 1.3. Service components are located. 1.4. Cast-in services are identified and located.
2. Overlay plans to ensure feasibility of building the service.	2.1. Reduced levels are checked to ensure compliance. 2.2. Drawings are overlayed to check for building services and building element clashes. 2.3. Service clashes are identified and rectified by design modification liaising with consultants.
3. Coordinate penetrations.	3.1. Product specifications, architectural finishes and structural elements are used to position penetrations. 3.2. Design modifications are made to ensure compliance. 3.3. Plans and documentation are updated to reflect design modifications.
4. Prepare a duct and penetration plan.	4.1. Duct and penetration information is collated. 4.2. Duct and penetration plan is prepared for a complex building project. 4.3. Maintenance access and testing provisions are located.
5. Coordinate fire services and emergency exit requirements.	5.1. Penetrations are positioned within ducts. 5.2. Landing valve penetrations are positioned to ensure regulatory requirements are met. 5.3. Required clearances in fire-isolated stairways are not obstructed by fire services. 5.4. Hose reels are located to comply with regulatory requirements.
6. Compile checklists for checking quality and legislative conformity of design and drafting.	6.1. Checklists for drafting quality and conformity with sketch designs and legislative requirements are developed. 6.2. Checklists for checking design and conformity with legislation are developed. 6.3. Checklists are developed to ensure correlation between drawings and specifications. 6.4. Checklists are developed to ensure on-site supervision with regards to checking that installation is in accordance with design and specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- coordinating services and penetrations within a building to minimise clashes with work on other building services
- ensuring structural integrity of a building
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to coordinate, plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills, including the ability to draw accurate plans and develop specification lists.

Required knowledge

Required knowledge for this unit is:

- application of technical knowledge, including drafting principles and understanding of services
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- coordinating hydraulic service plans to ensure compliance and resolution of clashes
- selecting and applying appropriate techniques to prepare a penetration plan for a complex building project
- complying with OHS regulations applicable to workplace operations
- applying organisational quality procedures and processes
- preparing detailed drawings for service risers
- preparing elevation and plan details for sanitary stack connections within the duct
- preparing a detailed drawing of a service penetrating a beam
- preparing checklists for use in coordinating services
- interactive communication with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plans may include:

- architectural and base building plans
- interpretation of building services
- specifications for an appropriate building.

Service components include:

- beams
- lights
- mechanical
- registers
- ventilating.

RANGE STATEMENT

Building services include:

- air conditioning
- data and communications
- electrical
- fire
- gas
- hot and cold water supply
- mechanical
- sanitary plumbing and drainage
- stormwater
- trade waste
- ventilation.

Ducts and positioning may be affected by:

- building stress zones
- clearances
- other services
- positioning of reinforcing steel
- pre and post-tensioning bars
- regulatory requirements
- required services location
- slab thickenings.

Duct and penetration plan may include:

- cast-in pipework
- detail drawings of duct layout beam penetrations
- floor plan showing all ducts and penetrations
- highlighted potential problem areas or building set-out elements
- scale dimensions and sizes for all ducts and penetrations to gridlines.

Penetrations are positioned to take into account:

- branches
- fire collars and their operation
- junction
- other services to fit within the duct.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. <i>Scope of work</i> is established for siphonic stormwater drainage systems.</p> <p>1.2. <i>Design requirements</i> are determined from plans, specifications and client briefs.</p> <p>1.3. <i>Siphonic system attributes</i> are evaluated and <i>cost-benefit analysis</i> is conducted, comparing a range of pipe materials and system designs.</p> <p>1.4. <i>Statutory and regulatory requirements and Australian and New Zealand standards</i> for the design of siphonic stormwater drainage systems are analysed and applied.</p> <p>1.5. Stormwater design manuals, <i>manufacturer requirements</i> and trade and technical manuals are interpreted.</p> <p>1.6. Additional research, including a <i>desktop study</i>, is conducted to outline design parameters.</p> <p>1.7. <i>Performance requirements</i> are established.</p>
2. Plan and detail system components.	<p>2.1. Siphonic stormwater drainage systems are integrated with the building structure.</p> <p>2.2. Volume of roof water and stormwater is calculated using a range of approved methods.</p> <p>2.3. <i>Layout of pipework systems</i> and type and location of <i>fittings and valves</i> are planned.</p> <p>2.4. <i>Pipe size and pipe grade requirement calculations</i> are performed for a range of applications in accordance with regulations and manufacturer requirements.</p> <p>2.5. <i>Pipe fixings</i> are designed for a range of applications.</p> <p>2.6. Approved <i>materials and components, jointing methods</i> and <i>installation requirements</i> for siphonic stormwater drainage systems are specified.</p>
3. Design and size systems.	<p>3.1. Siphonic stormwater drainage systems are designed for a range of applications.</p> <p>3.2. Catchment areas are calculated, guttering requirements determined and siphonic systems sized.</p> <p>3.3. Siphonic stormwater drainage systems are designed and sized using <i>computer software packages</i>.</p>
4. Prepare documentation.	<p>4.1. <i>Plans</i> are prepared for a range of siphonic stormwater drainage systems.</p> <p>4.2. <i>Specification</i> for a siphonic stormwater drainage</p>

ELEMENT**PERFORMANCE CRITERIA**

system is prepared.

4.3. *Testing* and *commissioning schedule* is prepared.

4.4. *Operation and maintenance manual* is produced.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- determining installation details for siphonic stormwater drainage systems
- innovation skills to develop creative and responsive approaches
- numeracy skills to:
 - apply measurements and calculations
 - interpret data
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of siphonic stormwater systems
 - take initiative and make decisions
- preparing specifications for siphonic stormwater drainage systems
- problem solving skills to analyse requirements, consider options and design an

REQUIRED SKILLS AND KNOWLEDGE

appropriate system

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in design of siphonic stormwater drainage systems for all classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of siphonic stormwater drainage systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of siphonic stormwater drainage systems
- producing an appropriate layout for siphonic stormwater drainage systems, planned in accordance with manufacturer and regulatory requirements
- calculating pipe sizes in accordance with regulations and manufacturer requirements
- designing and sizing siphonic stormwater drainage systems using appropriate software
- preparing plans for a range of siphonic stormwater drainage systems
- selecting materials and components for compliance, fit for purpose, durability, compatibility and cost-effectiveness
- preparing specifications for siphonic stormwater drainage systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- calculation of rainfall intensities in given catchment areas, including:
 - average rainfall intervals
 - meteorological information

RANGE STATEMENT

	<ul style="list-style-type: none"> • rainfall intensities • roof calculations • surface and subsurface calculations • time and concentration • interpretation of plans and specifications • sizing and documenting layout of siphonic stormwater drainage systems for residential, commercial or industrial applications and for either new projects or an existing structure being renovated, extended, restored or maintained.
<i>Design requirements</i> include:	<ul style="list-style-type: none"> • owner requirements • architectural specifications • builder specifications • specialist water use applications.
<i>Siphonic system attributes</i> include:	<ul style="list-style-type: none"> • availability • cost • installation requirements • risks • site conditions.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
<i>Statutory and regulatory requirements and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts, regulations and local and state government policies, including group and strata titling • AS/NZS3500 National plumbing and drainage set • AS2200 Design charts for water supply and sewerage • Building Code of Australia.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none"> • material specifications • pump tables • sizing tables • technical and trade manuals.
<i>Desktop study</i> includes collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none"> • architectural and building plans • council plans • developer plans • other documents, including: <ul style="list-style-type: none"> • applications

RANGE STATEMENT

	<ul style="list-style-type: none"> • forms • sewer detail maps • other reports as available.
<i>Performance requirements</i> include:	<ul style="list-style-type: none"> • pipe grades, cover, flow conditions and discharge requirements, established using Australian and New Zealand standards and local authority plans.
<i>Layout of pipework systems:</i>	<ul style="list-style-type: none"> • includes consideration of: <ul style="list-style-type: none"> • amenity of the building • clipping and pipe support • fireproofing • function of the building • impingement on floor heights • materials to be used • size of penetrations • type of building structure • should not unduly affect building integrity and aesthetic appeal • should have principles of economy, serviceability, durability and fit for use applied.
<i>Fittings and valves</i> include:	<ul style="list-style-type: none"> • bends • inspection openings • junctions.
<i>Pipe size and pipe grade requirement calculations</i> include:	<ul style="list-style-type: none"> • discharge • flow • freeboard • manufacturers' tables • sizing, according to Australian and New Zealand standards • urban drainage requirements • velocity • volumes.
<i>Pipe fixings</i> include:	<ul style="list-style-type: none"> • anchors • bracket spacing • corrosion protection • cover • hanging brackets • material requirements • saddles

RANGE STATEMENT

Materials and components include:

- wall and ceiling brackets.
- appropriate materials specified, based on fit for purpose, durability, compatibility and cost-effectiveness, including:
 - high density polyethylene (HDPE)
 - polyvinyl chloride (PVC)
 - stainless steel
- components, including:
 - clips
 - fasteners
 - fittings
 - pipework
 - siphonic outlets
 - valves.

Jointing methods include:

- brazing
- gluing
- mechanical joints
- rubber ring
- solvent cement welding
- threading.

Installation requirements include:

- bedding
- clipping
- concrete support
- installation details
- jointing requirements
- level of workmanship.

Computer software packages include:

- manufacturers' software
- proprietary design software.

Plans include:

- elevations
- details
- cross-sections
- isometrics
- axonometrics
- schematics, which may be produced using:
 - pencil
 - Indian ink
 - pigment liner
 - computer generation
- sections.

RANGE STATEMENT

<i>Specification</i> includes:	<ul style="list-style-type: none">• bedding• clipping• concrete support• details of specialised components• jointing• manholes• manufacturer requirements• materials• workmanship.
<i>Testing</i> includes:	<ul style="list-style-type: none">• air pressure test• hydrostatic test• inspection• quality assurance (QA) audit.
<i>Commissioning schedule</i> includes:	<ul style="list-style-type: none">• charging traps• checking leaks• cleaning grates• purging system.
<i>Operation and maintenance manual</i> includes:	<ul style="list-style-type: none">• check for blockages• leak detection• regular inspection• regular maintenance requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design parameters.	<p>1.1. Scope of work is established for vacuum sewerage systems for wide span and high-rise building projects.</p> <p>1.2. Design requirements are determined from plans, specifications and client briefs.</p> <p>1.3. Vacuum sewerage system attributes are evaluated and a cost-benefit analysis is conducted, comparing a range of pipe materials and system designs.</p> <p>1.4. Statutory and regulatory requirements and Australian and New Zealand standards for the design of vacuum sewerage systems are analysed and applied.</p> <p>1.5. Manufacturer requirements and trade and technical manuals are interpreted.</p> <p>1.6. Additional research, including a desktop study, is conducted to outline design parameters.</p> <p>1.7. Performance requirements are established.</p>
2. Plan and detail system components.	<p>2.1. Layout of pipework systems and type and location of fittings and valves are planned.</p> <p>2.2. Sewerage loading is calculated using a range of approved methods.</p> <p>2.3. Pipe size calculations are performed for a range of applications in accordance with regulations and manufacturer requirements.</p> <p>2.4. Pipe fixings are designed for a range of applications.</p> <p>2.5. Pumpwell, pump and pump control requirements are sized and detailed.</p> <p>2.6. Approved materials, jointing methods and installation requirements for vacuum sewerage systems are specified.</p>
3. Design and size systems.	<p>3.1. Vacuum sewerage systems are designed for a range of applications.</p> <p>3.2. Vacuum sewerage systems are designed and sized using computer software packages.</p>
4. Prepare documentation.	<p>4.1. Plans are prepared for a range of vacuum sewerage systems.</p> <p>4.2. Specification for a vacuum sewerage system is prepared.</p> <p>4.3. Testing and commissioning schedule is prepared.</p> <p>4.4. Operation and maintenance manual is produced.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate with others to ensure safe and effective work practices
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans, specifications, drawings and design briefs
 - standards and manufacturer requirements and manuals
 - statutory and regulatory requirements
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to prepare documentation, including:
 - operation and maintenance manual
 - plans, specifications and schedules
- determining installation details for vacuum sewerage systems
- innovation skills to develop creative and responsive approaches
- numeracy skills to:
 - apply measurements and calculations
 - interpret data
- planning and organisational skills to:
 - research, collect, organise and understand information relating to the design of vacuum sewerage systems
 - take initiative and make decisions
- preparing specifications for vacuum sewerage systems
- problem solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- common terminology and definitions used in design of vacuum sewerage systems for all classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of vacuum sewerage systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- planning and producing an appropriate layout for the vacuum sewerage system in accordance with manufacturer and regulatory requirements
- calculating pipe sizes in accordance with regulations and manufacturer requirements
- designing and sizing vacuum sewerage systems using appropriate software
- selecting materials and components for compliance, fit for purpose, durability, compatibility and cost-effectiveness
- preparing plans for a range of vacuum sewerage systems
- preparing design specification for vacuum sewerage systems
- preparing a testing and commissioning schedule
- producing an operation and maintenance manual.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work includes:

- interpretation of plans and specifications, and sizing and documenting layout of vacuum sewerage systems, for residential, commercial and industrial applications, for either new projects or an existing structure being renovated, extended, restored or maintained.

Design requirements include:

- architectural specifications
- builder specifications
- owner requirements

RANGE STATEMENT

<i>Vacuum sewerage system attributes</i> include:	<ul style="list-style-type: none"> • specialist water use applications. • availability • cost • installation requirements • risks • sewerage loading • site conditions.
<i>Cost-benefit analysis</i> includes:	<ul style="list-style-type: none"> • comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
<i>Statutory and regulatory requirements and Australian and New Zealand standards</i> include:	<ul style="list-style-type: none"> • Acts, regulations and local and state government policies, including group and strata titling • AS/NZS3500 National plumbing and drainage set • AS2200 Design charts for water supply and sewerage • Building Code of Australia.
<i>Manufacturer requirements</i> include:	<ul style="list-style-type: none"> • material specifications • pump tables • sizing tables • technical and trade manuals.
<i>Desktop study</i> includes collection and interpretation of existing data for design purposes from:	<ul style="list-style-type: none"> • architectural and building plans • council plans • developer plans • other documents, including: <ul style="list-style-type: none"> • applications • forms • sewer detail maps • other reports as available.
<i>Performance requirements</i> include:	<ul style="list-style-type: none"> • pipe grades, cover, flow conditions and discharge requirements, established using Australian and New Zealand standards and local authority plans.
<i>Layout of pipework systems:</i>	<ul style="list-style-type: none"> • includes consideration of: <ul style="list-style-type: none"> • amenity of the building • clipping and pipe support • fireproofing • function of the building

RANGE STATEMENT

- impingement on floor heights
- materials to be used
- size of penetrations
- type of building structure
- should not unduly affect building integrity and aesthetic appeal
- should include principles of economy, serviceability, durability and fit for use should be applied.

Fittings and valves include:

- air admittance
- bends
- inspection and maintenance access
- junctions
- pressure relief
- reflux valves
- traps.

Pipe size calculations include:

- determination of flow and fixture loadings
- interpretation of design charts and tables
- pipe sizing calculations
- reduced level calculations.

Pipe fixings include:

- anchors
- bracket spacing
- corrosion protection
- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.

Pumpwell, pump and pump control requirements include:

- automatic controls
- capacity
- corrosion-resistant materials
- detailing
- high and low-level water controls and alarms
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- macerator requirements
- pump selection
- pump sizing
- pumpwell sizing

RANGE STATEMENT

- space requirements
 - vacuum pump systems
 - valve requirements
 - warning system.
- Materials** include:
- appropriate materials specified based on:
 - compatibility
 - cost effectiveness
 - durability
 - fit for purpose
 - high density polyethylene (HDPE)
 - polyvinyl chloride (PVC)
 - stainless steel.
- Jointing methods** include:
- brazing
 - gluing
 - mechanical joints
 - rubber ring
 - solvent cement welding
 - threading.
- Installation requirements** include:
- bedding
 - clipping
 - concrete support
 - installation details
 - jointing requirements
 - level of workmanship.
- Computer software packages** include:
- manufacturers' software
 - proprietary design software.
- Plans:**
- include:
 - appropriate design, sizing, notes and legend
 - compliance with industry conventions
 - production to industry standards and in accordance with regulatory and manufacturer requirements
 - being produced by using:
 - computer generation
 - Indian ink
 - pencil
 - pigment liner
 - may also include:

RANGE STATEMENT

- axonometrics
- cross-sections
- details
- elevations
- isometrics
- schematics
- sections.

Specification includes:

- bedding
- clipping
- concrete support
- details of specialised components
- fittings
- installation methods
- installation standards
- jointing
- manufacturer requirements
- materials
- pipework
- vacuum sewerage components
- vacuum sewerage fixtures
- valves
- workmanship.

Testing includes:

- compressed air test
- flow testing
- hydrostatic test
- inspection checklist
- quality assurance (QA) audit.

Commissioning schedule
includes:

- checking for:
 - burrs and obstructions
 - fitness for purpose
- flushing system
- removing contaminants
- checking vacuum leaks.

Operation and maintenance manual includes:

- checking for blockages
- leak detection
- maintenance intervals
- operation guidelines
- required maintenance
- system inspection checklist

RANGE STATEMENT

- vacuum pump maintenance.

Unit Sector(s)

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Specify pipe and service locating equipment and procedures.	<p>1.1. <i>Applications for pipe and service locating equipment</i> are specified.</p> <p>1.2. Pipe and service <i>locating equipment</i> is specified for specific applications.</p> <p>1.3. <i>Operating procedures</i> are specified for the selected equipment.</p> <p>1.4. <i>Safety procedures</i> are specified for the selected equipment.</p>
2. Specify pipe-freezing equipment and procedures.	<p>2.1. Applications for <i>pipe-freezing equipment</i> are specified.</p> <p>2.2. Pipe-freezing equipment is specified for specific applications.</p> <p>2.3. Operating procedures are specified for the selected equipment.</p> <p>2.4. Safety procedures are specified for the selected equipment.</p>
3. Specify sewer and drain camera equipment and procedures.	<p>3.1. Applications for <i>sewer and drain camera</i> equipment are specified.</p> <p>3.2. Sewer and drain camera equipment is specified for specific applications.</p> <p>3.3. Operating procedures are specified for the selected equipment.</p> <p>3.4. Safety procedures are specified for the selected equipment.</p>
4. Specify under-road boring equipment and procedures.	<p>4.1. Applications for <i>under-road boring equipment</i> are specified.</p> <p>4.2. Under-road boring equipment is specified for specific applications.</p> <p>4.3. Operating procedures are specified for the selected equipment.</p> <p>4.4. Safety procedures are specified for the selected equipment.</p>
5. Specify robotic sewer repair and chemical grout systems and procedures.	<p>5.1. Applications for robotic sewer repair and chemical grout systems are specified.</p> <p>5.2. <i>Robotic sewer repair and chemical grout systems</i> are specified for specific applications.</p> <p>5.3. <i>Trenchless pipe repair systems</i> are specified for specific applications.</p> <p>5.4. 	equipment.
	5.5. Safety procedures are specified for the selected equipment.
6. Specify high-pressure drain cleaning equipment and procedures.	6.1. Applications for <i>high-pressure drain cleaning equipment</i> are specified.
	6.2. High-pressure drain cleaning equipment is specified for specific applications.
	6.3. Operating procedures are specified for the selected equipment.
	6.4. Safety procedures are specified for the selected equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - confirm job specifications and client requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret drawings, specifications and documentation from a variety of sources
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- maintaining piping systems
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- specifying procedures to locate piping systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- common terminology and definitions used in the specification of piping system maintenance procedures
- nature of materials used and effects of performance under various conditions
- principles of technology in the specification of piping system maintenance procedures
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- specifying equipment and procedures to be used for the location of pipes and services
- specifying pipe-freezing equipment and procedures
- specifying sewer and drain camera equipment and procedures
- specifying under-road boring equipment and procedures
- specifying robotic sewer repair and chemical grout systems and procedures
- specifying high-pressure drain cleaning equipment and procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Applications for pipe and service locating equipment include:

- burst water pipes
- excavations where existing services may be located
- locating existing services for new connections.

Locating equipment includes:

- electronic detection equipment
- metal detectors
- sound detection equipment.

Operating procedures include:

- defining the application, equipment operation and equipment limitations.

Safety procedures include:

- access restrictions
- electrical safety
- equipment safety requirements
- excavation safety
- personal protective equipment.

RANGE STATEMENT

- | | |
|--|---|
| <i>Pipe-freezing equipment</i> include: | <ul style="list-style-type: none">• applications where interruption to water supply is not an option• burst water mains• maintenance• repairs. |
| <i>Sewer and drain camera</i> uses include: | <ul style="list-style-type: none">• inspection of pipework• location of damaged pipework• root intrusion identification. |
| <i>Under-road boring equipment</i> uses include: | <ul style="list-style-type: none">• installation of new services where damage to roads and structures is undesirable or cost prohibitive• replacement of services. |
| <i>Robotic sewer repair and chemical grout systems</i> include re-lining of: | <ul style="list-style-type: none">• damaged sewers• stormwater drains• water mains. |
| <i>Trenchless pipe repair systems</i> include: | <ul style="list-style-type: none">• polyethylene sleeves• stainless steel sleeves• other pipelining materials. |
| <i>High-pressure drain cleaning equipment</i> includes blocked: | <ul style="list-style-type: none">• manholes• sewers• stormwater drains. |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Specify local authority inspection requirements.	<p>1.1. Local authority inspection requirements for hydraulic systems are specified in accordance with legislation and standards.</p> <p>1.2. Approved materials are specified for different applications.</p> <p>1.3. Installation requirements are specified in compliance with manufacturer manuals and regulatory requirements.</p>
2. Develop inspection procedures.	<p>2.1. Administrative procedures for inspection projects are developed.</p> <p>2.2. Inspection checklists are developed.</p>
3. Conduct inspections.	<p>3.1. Communication channels are established with relevant site personnel and stakeholders.</p> <p>3.2. Inspection routes and schedules are planned and detailed.</p> <p>3.3. OHS guidelines are applied to inspections, and personal protective equipment is worn.</p> <p>3.4. Inspections are conducted to assess compliance with regulatory requirements and professional workmanship standards.</p> <p>3.5. On-site as-constructed plans are hand sketched and measurements are taken.</p> <p>3.6. Dispute-resolution techniques are implemented as necessary when non-compliance is identified.</p> <p>3.7. Testing procedures are implemented.</p> <p>3.8. Inspection and testing results are accurately recorded.</p>
4. Prepare reports.	<p>4.1. Inspection reports are prepared using on-site records, including as-constructed plans.</p> <p>4.2. Recommendations are detailed and reported.</p> <p>4.3. Rectification schedules are produced.</p>
5. Enforce compliance.	<p>5.1. Breaches of relevant regulation or standard are detailed.</p> <p>5.2. Infringement notices are issued and relevant follow-up procedures are implemented.</p> <p>5.3. In cases of non-compliance, enforcement action is implemented with infringement notices.</p>
6. Maintain records.	<p>6.1. Inspection diary is maintained.</p> <p>6.2. Inspection records are processed according to</p>

ELEMENT**PERFORMANCE CRITERIA**

established administrative procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - establish communication channels
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - manufacturers' manuals and regulations
 - plans, specifications and drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - develop administrative procedures and checklists
 - issue infringement notices
 - maintain records
 - prepare inspection reports
 - record inspection and testing results
- inspecting hydraulic systems for a range of residential, commercial and industrial buildings to ensure compliance with Australian and New Zealand standards and local authority and operational performance requirements
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in the design of plumbing and drainage systems
- nature of materials used and effects of performance under various conditions

REQUIRED SKILLS AND KNOWLEDGE

- principles of technology used in the design of plumbing and drainage systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- specifying local authority inspection requirements for hydraulic systems in accordance with legislation and standards
- developing administrative procedures for inspection projects
- implementing dispute-resolution techniques
- conducting compliance inspections
- taking relevant measurements and sketching on-site as-constructed plans
- implementing testing procedures
- preparing inspection reports
- detailing breaches to regulations or standards
- maintaining an inspection diary.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings,

EVIDENCE GUIDE

specifications, codes, design concepts and construction schedules

- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hydraulic systems include:

- fire services
- gas services
- mechanical services
- sanitary plumbing and drainage
- stormwater drainage
- trade waste
- water supply.

Approved materials are identified from Australian and New Zealand standards and include:

- fittings
- fixtures
- pipes.

Administrative procedures include:

- file management
- inspection allocation

RANGE STATEMENT

<i>Inspection projects</i> include:	<ul style="list-style-type: none">• inspection records• logging inspections.• hydraulic consultant• local authority• plumbing supervisor.
<i>Inspection checklists:</i>	<ul style="list-style-type: none">• include:<ul style="list-style-type: none">• approved installation methods• authorised materials• project section• are in compliance with:<ul style="list-style-type: none">• Australian and New Zealand standards• Building Code of Australia• distances• limitations• other regulatory requirements.
<i>As-constructed plans</i> include layout of:	<ul style="list-style-type: none">• fire services pipework• gas pipework• mechanical services pipework• sanitary plumbing and drainage pipework• stormwater pipework• trade waste drainage systems• water supply pipework.
<i>Dispute-resolution techniques</i> include:	<ul style="list-style-type: none">• active listening techniques• non-threatening body language• power neutral relationships• other recognised dispute avoidance and resolution techniques.
<i>Testing procedures</i> include:	<ul style="list-style-type: none">• air pressure tests• compliance checklist• gas leak detection• hydrostatic tests• mirror tests• quality assurance (QA) audit• sound testing.
<i>Inspection reports</i> include:	<ul style="list-style-type: none">• defect• inspection• performance• quality assurance.

RANGE STATEMENT

- Enforcement action* include:
- fines
 - legal action
 - notification to plumbing licensing body
 - penalties.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained from site inspection.</p> <p>1.2. Safety (OHS) requirements associated with selecting and installing roof sheeting and wall cladding, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient selection and installation of roof sheeting and wall cladding.</p>
2. Identify insulation requirements.	<p>2.1. Level of insulation from rain and other noise, condensation control and heat transfer reduction is determined.</p> <p>2.2. Installation method, insulation supports and insulation materials are identified to meet performance requirements, plans, specifications, regulatory authorities' requirements and relevant information.</p> <p>2.3. Quantity and type of insulation materials required are calculated from design drawings and specifications in compliance with local authorities' requirements.</p>
3. Select sheeting, cladding and non-metallic materials.	<p>3.1. Appropriate roof sheeting and wall cladding are identified to comply with design specifications.</p> <p>3.2. Quantity and type of manufactured roof coverings and/or fittings required are calculated from design drawings and specifications in compliance with local authorities' requirements.</p> <p>3.3. Manufactured non-metallic roof materials are identified from plans and specifications and verified as compliant with design requirements and regulatory authorities' requirements.</p> <p>3.4. Proposed roof and wall coverings, sealant, non-metallic materials, fixing materials, roofing and</p>

ELEMENT	PERFORMANCE CRITERIA
	catchments are selected and checked for compatibility.
	3.5. Materials , including insulation, are identified, ordered and collected in accordance with workplace procedures.
	3.6. Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and faults are reported .
4. Install roof sheeting or wall cladding.	4.1. Safety mesh and thermal insulation are fixed in accordance with relevant Australian standards, job specification and manufacturers' requirements.
	4.2. Sheets are marked and trimmed prior to fixing and cut edges are treated according to manufacturer specifications.
	4.3. Sheets, cladding and non-metallic materials are fixed in compliance with relevant Australian standards and manufacturer specifications.
	4.4. Sustainability principles and concepts are applied throughout the installation
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification..
	5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	5.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information

REQUIRED SKILLS AND KNOWLEDGE

- determine requirements
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - document scope of work and work practices
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- selecting and installing non-metallic roof materials associated with metal roofing (excluding roof tiles and slate) and insulation materials.
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of selecting and installing roof sheeting and wall cladding
- relevant OHS regulations and fall protection codes and requirements
- relevant statutory and authority requirements related to installing roof sheeting and wall cladding, including non-metallic materials
- SI system of measurement
- types of fasteners, fixings and sealants and their application to the installation of roof coverings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to selecting and installing roof coverings and wall cladding
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, calculate the requirements and select and install roof sheeting, wall cladding and insulation for two roof structures, each roof structure being a minimum of 4 square metres area, one of which incorporates 2 square metres of non-metallic roof sheeting
- both installations may include insulation, flashings and cappings, using the pierced and concealed fastening methods, ensuring:
 - application of sustainability principles and concepts throughout the installation
 - correct identification of requirements and details of proposed installation
 - correct fit of the completed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- elevated work platforms
- fall protection equipment
- hand and power tools
- ladders
- lifting and load shifting equipment, including:

RANGE STATEMENT

	<ul style="list-style-type: none"> • chain blocks • cranes • forklifts • hand trolleys • hoists and jacks • restricted height scaffolds • rollers
Roof sheeting may include:	<ul style="list-style-type: none"> • measuring equipment. • metal and non-metallic (clear and coloured) sheets • other approved materials.
Installation may include:	<ul style="list-style-type: none"> • fitting safety mesh and rainwater fittings.
Information may include:	<ul style="list-style-type: none"> • charts and hand drawings • diagrams or sketches • instructions issued by authorised organisational or external personnel • manufacturer specifications and instructions • material safety data sheets (MSDS) • memos • organisation work specifications and requirements • regulatory and legislative requirements, particularly those pertaining to: <ul style="list-style-type: none"> • building codes • OHS and environmental requirements • plumbing regulations • relevant Australian standards • safe work procedures relating to selecting and installing roof sheeting and wall cladding • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.

Materials for selecting and installing roof sheeting and wall	<ul style="list-style-type: none"> • approved roof battens • cappings

RANGE STATEMENT

cladding may include:

- fixings and fasteners
- flashings
- insulation, including:
 - fibreglass
 - laminate
 - polyethylene
 - reflective foil
 - straw
 - wool
- insulation supports, including:
 - plaster board
 - timber board
 - wire mesh
- metal roof covers of concealed or pierce fixed types
- moulds
- plastic building sheets for walls and roofs
- rain water goods, including:
 - aluminium
 - copper
 - fibreglass
 - polycarbonate
 - stainless steel
 - steel
 - zincalume
- rivets and sealants
- self drilling and tapping screws
- trims
- other approved materials.

Fault reporting:

- may be written or verbal
- is to be in accordance with company's workplace procedures.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
 - appropriate component selection that has minimal environmental impact
 - efficient energy use
 - efficient use and recycling of material

RANGE STATEMENT

- disposal of waste material to ensure minimal environmental impact.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify water storage system requirements.	<p>1.1.Plans, specifications and any special instructions are obtained.</p> <p>1.2.Safety (OHS) requirements associated with collection and storage of roof water, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3.Quality assurance requirements for company operations are identified and adhered to.</p> <p>1.4.Site's annual rainfall is determined from meteorological or other relevant data.</p> <p>1.5.Roof catchment area is determined from plans or site inspection.</p> <p>1.6.Water consumption requirements for the installation are determined.</p> <p>1.7.Total water storage requirements for the installation are determined.</p> <p>1.8.Criteria for storage tanks, gutters, downpipes and other system components are determined in accordance with relevant Australian standard and other information.</p>
2. Plan and prepare for installation.	<p>2.1.Required materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.2.Work is planned in conjunction with others involved in or affected by the work.</p> <p>2.3.Materials are checked for compliance with docket and order form and for acceptable condition, and faults are reported.</p> <p>2.4.Work area and materials are prepared to support efficient installation.</p> <p>2.5.Sustainability principles and concepts are applied to work preparation and application.</p>
3. Install storage system.	<p>3.1.Set out complies with design drawings or instructions.</p> <p>3.2.Preparatory work, including installation of tank stand or standing, is carried out to specification without damage to surrounding structures or existing services.</p> <p>3.3.System is installed in accordance with job specification and statutory and regulatory authority's requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan work with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to:
 - apply calculations and measurements
 - interpret data
- organisational skills, including the ability to plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for commissioning water storage tanks for use
- properties of water, including:
 - effect of gravity and atmospheric pressure
 - procedures for maintaining water quality
 - sources of contamination and impurities
- regulations and requirements pertaining to collecting and storing drinking water and non drinking water
- relevant statutory and authority requirements related to collecting and storing roof water
- SI system of measurements
- water storage installation processes
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications for determining requirements, planning and installing storage tanks for drinking water
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, complete the following in respect of roof water collection and storage systems:
 - calculate the water catchment area of a roof, the gutter and downpipe materials required and the amount of water storage required for a given job
 - determine system requirements from plans and specifications in accordance with local authority requirements
 - plan the layout and install a storage tank of not less than 1000 litres capacity, incorporating an inlet connection and a first flush device from a roof catchment area, and an overflow to be connected to an approved stormwater point of discharge, ensuring:
 - application of sustainability principles and concepts
 - correct identification of location, design and details of proposed storage

EVIDENCE GUIDE

Context of and specific resources for assessment

- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to

EVIDENCE GUIDE

confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
- drinking or non drinking purposes.

Roof water collected and stored may be for:

Environmental requirements cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.
- any authorised material.

Storage tanks may be of:

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel

RANGE STATEMENT

	<ul style="list-style-type: none"> • manufacturer specifications and instructions • material safety data sheets (MSDS) • memos • organisation work specifications and requirements • regulatory and legislative requirements, particularly those pertaining to: <ul style="list-style-type: none"> • building codes • OHS and environmental requirements • plumbing regulations • relevant Australian standards • safe work procedures relating to determining, preparing and installing collection and storage systems for roof water • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
Materials for installing storage tanks are to include:	<ul style="list-style-type: none"> • water storage tanks, and components of authorised materials that comply with local authority requirements, such as: <ul style="list-style-type: none"> • coated steel materials • metal guttering • PVC • sealants • tank stand.
Fault reporting:	<ul style="list-style-type: none"> • may be written or verbal • is to be in accordance with company's workplace procedures.
Sustainability principles and concepts:	<ul style="list-style-type: none"> • cover the current and future social, economic and environmental use of resources • may include: <ul style="list-style-type: none"> • appropriate component selection that has minimal environmental impact • efficient energy use • rainwater harvesting • efficient use and recycling of material • disposal of waste material to ensure minimal environmental impact.
Installation covers:	<ul style="list-style-type: none"> • both gravity and pump retrieval systems.

RANGE STATEMENT

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- hand and power tools
- ladders
- levelling equipment
- lifting and load shifting equipment, including:
 - chain blocks
 - excavation equipment forklifts
 - hand trolleys
 - hoists and jacks
 - rollers
- measuring equipment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained for component to be designed and fabricated.</p> <p>1.2. Safety (OHS) requirements associated with the design and fabrication of curved roof coverings, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability and faults are reported.</p> <p>1.6. Work area is prepared to support efficient design and fabrication of curved roof coverings.</p>
2. Design covering.	<p>2.1. Roofing material is selected that is suitable for the fabrication process, job requirements and relevant information.</p> <p>2.2. Curvature of roof covering is ascertained and used to determine the starting and finishing points of curves.</p> <p>2.3. Design and freehand sketch of roof covering are created to form the basis of fabrication patterns.</p> <p>2.4. Fabrication patterns are drawn based on design and freehand sketch of roof covering.</p>
3. Fabricate covering.	<p>3.1. Material list is determined from patterns and calculations.</p> <p>3.2. Method of fabrication, tools and machinery for fabrication are determined to suit job requirements.</p> <p>3.3. Roof covering is marked out in accordance with drawings, patterns, or calculations and prefabricated.</p> <p>3.4. Components are marked and packaged for delivery to point of installation.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace</p>

ELEMENT**PERFORMANCE CRITERIA**

procedures.

4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - to develop materials list
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- characteristics of various metals and finishes
- design concepts and performance measures for curved roof coverings
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of designing and fabricating curved roof coverings
- relevant statutory and regulatory authority requirements related to metal roofs
- SI system of measurement.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for the design and fabrication of curved roof coverings
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications of a bull nosed verandah roof incorporating one internal and one external angle, design and fabricate the curved roof coverings, ensuring:
 - correct identification of design criteria and fabrication requirements
 - fabrication conforms with the design requirements
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained and confirmed by site visit.</p> <p>1.2. Safety (OHS) requirements associated with materials handling, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tools and equipment, including personal protective equipment and barricades and signs, are selected and checked for serviceability.</p> <p>1.5. Work area is prepared to support efficient receipt of roofing materials.</p>
2. Plan delivery.	<p>2.1. Plans, specifications, material quantity details and other relevant information are interpreted to determine amount and type of material to be delivered to site.</p> <p>2.2. Site is visited to determine capacity, identify risks and hazards, and identify load-handling methods and techniques.</p> <p>2.3. Spot load limits on roof frame structure are obtained from structural engineer.</p> <p>2.4. Loads are sequenced in accordance with job requirements and work site capacity.</p> <p>2.5. Orders are placed specifying items, quantities and sequence of delivery of each load.</p> <p>2.6. Deliveries are planned and sequenced in conjunction with others involved in or affected by their arrival.</p>
3. Receive delivery of materials.	<p>3.1. Employees are informed of delivery process.</p> <p>3.2. Access to site for crane and other support vehicles and equipment is cleared and provided.</p> <p>3.3. Delivery sites and spot load sites and material securing equipment are prepared.</p> <p>3.4. Safety barricades and signs are positioned.</p> <p>3.5. Loads are moved from delivery vehicle to spot load positions or other determined site location.</p> <p>3.6. Loads are covered and secured to prevent damage in accordance with standards and manufacturer requirements, and faults are reported.</p>
4. Clean up.	<p>4.1. Safety barricades and signs are removed.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation, <i>statutory and regulatory authority</i> requirements and workplace procedures.</p> <p>4.3. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.4. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - inform employees of delivery process
 - plan and sequence deliveries with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- coordinating receipt of deliveries of roofing materials to a work site
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- relocating materials and securing them within the site
- sequencing the delivery of materials
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- application of relevant regulations and workplace procedures
- deployment of relevant human and physical resources and facilities
- identification and correct use of equipment, processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- methods of working and correct selection and use of equipment relevant to work activity
- relevant OHS regulations and fall protection codes and requirements
- relevant statutory and authority requirements related to transportation and storage of roofing materials
- SI system of measurement
- techniques and procedures for delivery of roof plumbing materials
- workplace planning and estimation processes for delivery of roof plumbing materials.

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated

RANGE STATEMENT

	with:
	<ul style="list-style-type: none"> • hazardous materials and substances • lifting and placement of loads • service lines • surrounding structures and facilities • trip hazards • use of tools and equipment • work site visitors and the public • working at heights • working in proximity to others
<i>Environmental requirements</i> may include:	<ul style="list-style-type: none"> • use of firefighting equipment • use of first aid equipment • workplace environment and safety. • clean-up protection • waste management.
<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none"> • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • barricades and signage • fall protection equipment • ladders • lifting and load shifting equipment, including: <ul style="list-style-type: none"> • chain blocks • elevated work platforms • forklifts • hand trolleys • hoists and jacks • restricted height scaffolds • rollers.
<i>Materials</i> that may be received include:	<ul style="list-style-type: none"> • blanket and batt types • industrial roof components • laminate • metal rainwater products • metal roof covers of concealed or pierce fixed types • metal self drilling and tapping screws

RANGE STATEMENT

Information may include:

- plastic building sheets for walls and roofs
- prefabricated roofing components
- rainwater goods
- rivets and sealants (silicon and solder)
- thermal insulation of reflective foil.
- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to receiving roofing materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- may be written or verbal
- is to be in accordance with company's workplace procedures.

Fault reporting:

Statutory and regulatory authorities include:

- state or territory statutory authority
- statutory plumbing authority.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained and confirmed by site inspection.</p> <p>1.2. Safety (OHS) requirements associated with fabricating and installing roof drainage components, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support the fabrication and installation of roof drainage components.</p>
2. Identify installation requirements.	<p>2.1. Rainwater management system is identified as suitable for preventing rainwater penetration into building structure.</p> <p>2.2. Roof drainage components required for installation are identified from drawings and specifications.</p> <p>2.3. Fabrication patterns are drawn based on design and freehand sketch of roof drainage.</p> <p>2.4. Quantity, type and sizing of drainage components, rainwater materials and accessories required are calculated from drawings and specifications in compliance with relevant Australian standards and local authorities' requirements and relevant information.</p> <p>2.5. Box gutter support system is fabricated according to relevant Australian standard.</p> <p>2.6. Materials are identified from drawings, specifications, patterns and/or calculations and ordered and collected in accordance with workplace procedures.</p> <p>2.7. Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and faults are reported.</p>
3. Fabricate roof drainage	<p>3.1. Method of fabrication, tools and machinery requirements are determined to suit job requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
components.	<p>3.2. Materials are marked out from drawings to fabricate roof drainage components.</p> <p>3.3. Roof drainage components are fabricated in compliance with relevant Australian standards, drawings, specifications and site measurements.</p> <p>3.4. Components are marked, packaged and prepared for delivery and installation in accordance with workplace procedures.</p>
4. Set out and install roof drainage components.	<p>4.1. Components are checked for compliance with docket and order form and for acceptable condition, and arranged in order of installation.</p> <p>4.2. Roof drainage components are set out to comply with job specifications and site measurements.</p> <p>4.3. Structural supports are installed in compliance with job specifications.</p> <p>4.4. Roof drainage components are jointed in compliance with job specifications and relevant Australian standards.</p> <p>4.5. Roof drainage system is installed in accordance with relevant Australian standards and job specifications.</p> <p>4.6. <i>Sustainability principles and concepts</i> are applied throughout the installation</p> <p>4.7. System is performance tested for satisfactory installation and remedied.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>5.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- selecting, fabricating, jointing and installing gutter and downpipe systems to effectively drain a roof to an authorised discharge point
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- capacity of fabrication machinery involved in the production of roof drainage components
- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- characteristics of various metals and finishes
- corrosion prevention treatment requirements of cut sheets
- design concepts and performance measures for roof drainage components
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)

REQUIRED SKILLS AND KNOWLEDGE

- joining of materials
- processes of fabricating, jointing and fixing roof drainage components
- relevant OHS regulations and fall protection codes and requirements
- relevant statutory and authority requirements related to fabricating and installing roof drainage components
- SI system of measurement
- types of fasteners, fixings and sealants and their application to the fabrication and installation of roof coverings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to the fabrication and installation of roof drainage components
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications of a roof management system for a roofed area of at least 4 square metres, determine the requirements, select, fabricate and install:
 - valley gutter
 - box gutter, to include a sump or rainhead and overflow
 - eaves gutter and downpipe system, complete with gutter supports, expansion joints and caps
- ensuring:
 - application of sustainability principles and concepts throughout the installation
 - correct identification of requirements and details of proposed installation
 - correct fit of the completed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification

EVIDENCE GUIDE

Context of and specific resources for assessment

- compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

EVIDENCE GUIDE

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

RANGE STATEMENT

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- drawing equipment
- fall protection equipment
- hand and power tools
- ladders
- lifting and load shifting equipment, including:

RANGE STATEMENT

	<ul style="list-style-type: none">• chain blocks• cranes• elevated work platforms• forklifts• hand trolleys• hoists and jacks• restricted height scaffolds• rollers
<i>Roof drainage components</i> may include:	<ul style="list-style-type: none">• measuring equipment.• box gutters• downpipes• eaves gutters• gutter support system• parapet gutters• rainwater heads• siphonic drainage downpipe systems and materials• standing overflows• sumps• valley gutters.
<i>Fabrication patterns</i> may be:	<ul style="list-style-type: none">• actual size or scaled.

RANGE STATEMENT

Materials for fabricating and installing roof drainage components may include:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- fibreglass
- laminate
- metal gutter and structural supports
- metal rainwater goods
- metal roof covers of concealed or pierce fixed types
- metal self drilling and tapping screws
- plastic building sheets for walls and roofs
- polyethylene
- PVC sheet goods
- rivets and sealants
- thermal insulation of reflective foil
- roof tiles.

Fault reporting:

- may be written or verbal
- is to be in accordance with company's workplace procedures.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
 - appropriate component selection that has minimal environmental impact
 - rainwater harvesting
 - efficient energy use
 - efficient use and recycling of material
 - correct handling of hazardous materials
- disposal of waste material to ensure minimal environmental impact.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained and confirmed by site inspection.</p> <p>1.2. Safety (OHS) requirements associated with fabricating and installing external flashings, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient fabrication and installation of external flashings.</p>
2. Identify installation requirements.	<p>2.1. External flashings to be installed are identified and working drawings and patterns are developed from job drawings, plans, specifications, site measurements and relevant information.</p> <p>2.2. Materials, coatings, fixings, sealants and fasteners are checked for compliance with plans, specifications and standards and are compatible with adjacent materials and catchment.</p> <p>2.3. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and faults are reported.</p>
3. Fabricate and install external flashings.	<p>3.1. External flashings are fabricated in compliance with standards, drawings, specifications and site measurements.</p> <p>3.2. Support framework is set out where required and fixed to comply with plans, specifications and manufacturer recommendations.</p> <p>3.3. Thermal insulation, where required, is set and fixed in accordance with plans, specifications and cladding manufacturer's recommendations.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory</p>

ELEMENT**PERFORMANCE CRITERIA**

legislation and workplace procedures.

4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.

4.3. Documentation is completed in accordance with workplace requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with selecting and installing industrial roof components, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient selection and installation of industrial roof components.</p>
2. Identify installation requirements.	<p>2.1. Industrial roof components are identified from plans and specifications and are compatible with adjacent materials and other relevant information.</p> <p>2.2. Proposed sealant, fixing materials, and roofing and flashing materials are selected and checked for compliance with plans, specifications and relevant Australian standards.</p> <p>2.3. Materials are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and faults are reported.</p> <p>2.5. Sustainability principles and concepts are applied to work preparation and application.</p> <p>2.6. Location of installation and opening size are identified from plans and manufacturer specifications.</p> <p>2.7. Location is checked for obstructions that may affect the installation.</p>
3. Install roof components.	<p>3.1. Where required, the industrial component is erected to comply with manufacturer recommendations.</p> <p>3.2. Industrial roof component is set out to comply with plans, specifications and site measurements.</p> <p>3.3. Structural supports are installed to comply with plans and specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Openings are prepared to comply with plans, specifications and relevant Australian standards.</p> <p>3.5. Mullions, frames, baffles, sheeting and louvre blades are located and fixed to comply with manufacturer recommendations.</p> <p>3.6. Component is installed to comply with plans, specifications and manufacturer requirements.</p> <p>3.7. Flashing and waterproofing, including proprietary or purpose-made flashing, are installed to comply with relevant Australian standards, plans, specifications, manufacturer recommendations and regulatory authorities' requirements.</p> <p>3.8. Installation is performance tested and remedied as required.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation

determine requirements

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions

REQUIRED SKILLS AND KNOWLEDGE

- plan and sequence tasks with others

 - documentation from a variety of sources
 - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of erecting and installing industrial roof components
- relevant OHS regulations and fall protection codes and requirements
- relevant statutory and authority requirements related to installing roof components
- SI system of measurement
- types of fasteners, fixings and sealants and their application to the installation of roof components.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine requirements, plan and install industrial components in roofs
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications of an industrial roof, determine the material requirements, select and install two of the following components in a roof (one on a ridge line and another in roof sheeting), which may include insulation:
 - thermal vent or a skylight
 - non-mechanised ventilator unit
 - manual box-type louvre unit
 - continuous roof ventilator (ridge or slope mounted), ensuring:
 - application of sustainability principles and concepts
 - correct identification of requirements and details of proposed installations
 - completed installation must fit
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational

EVIDENCE GUIDE

Context of and specific resources for assessment

quality procedures and processes

- communicating and working effectively and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and

- handling of materials
- hazard control
- personal protective clothing and equipment

RANGE STATEMENT

regulations and may include:

prescribed under legislation, regulations and workplace policies and practices

- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements

cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- cranes
- fall protection equipment
- hand and power tools
- ladders
- levelling equipment
- lifting and load shifting equipment, including:
 - chain blocks
 - elevated work platforms
 - forklifts

RANGE STATEMENT

Industrial roof components may be:

- hand trolleys
- hoists and jacks
- restricted height scaffolds
- rollers
- measuring equipment
- perimeter guard rails.
- continuous frame sheet type ridge or slope mounted ventilators
- continuous louvre blades, including single, double or triple pass blades
- dome lights and thermal vents
- manual and automated box type louvre units
- non-mechanical roof ventilator units
- ridge vents.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to selecting and installing industrial components in roofs
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Materials for installing industrial components in roofs are to include:

- cappings
- fixings and fasteners
- flashings
- insulation, including:
 - batt types

RANGE STATEMENT

	<ul style="list-style-type: none"> • blanket • foil laminate • metal rainwater goods • moulds • pop rivets and sealants • roofing materials, including: <ul style="list-style-type: none"> • aluminium • colour coated steel • copper • fibreglass • polycarbonate • stainless steel • steel • zincalume • self drilling and tapping screws • trims.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained and confirmed by site inspection.</p> <p>1.2. Safety (OHS) requirements associated with installing curved roof structures, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of roof coverings to curved roof structures.</p>
2. Identify installation requirements.	<p>2.1. Quantity and type of manufactured roof covering, and fittings and equipment required, are calculated from design drawings and specifications in compliance with relevant Australian standards, local authorities' requirements and relevant information.</p> <p>2.2. Proposed sealant, fixing materials, roofing and flashing materials are selected and checked for compatibility.</p> <p>2.3. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and faults are reported.</p> <p>2.5. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Install roof coverings.	<p>3.1. Safety mesh and thermal insulation are fixed in accordance with relevant Australian standards, job specification and manufacturer requirements.</p> <p>3.2. Sheets are marked and trimmed prior to fixing and cut edges are treated according to manufacturer specifications.</p> <p>3.3. Roof covering is installed in accordance with manufacturer specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>3.4. Roof covering is performance tested and remedied.</p> <p>4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a

REQUIRED SKILLS AND KNOWLEDGE

range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of fixing covering to curved roof structures
- relevant OHS regulations and fall protection codes and requirements
- relevant statutory and authority requirements related to installing roof coverings to curved roof structures
- SI system of measurement
- types of fasteners, fixings and sealants and their application to the installation of roof coverings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for planning.	<p>1.1. Nature and scope of planning task are identified and confirmed.</p> <p>1.2. Safety (OHS) requirements associated with planning, sizing and documenting the layout of roof drainage systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Work is organised and sequenced in conjunction with others involved in or affected by the work.</p> <p>1.4. Tools and equipment required for planning, sizing and documenting the layout of roof drainage systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.5. Work area in which planning process is to be conducted is prepared.</p>
2. Identify system requirements.	<p>2.1. Information and specifications for the required work are obtained and confirmed, if necessary by site inspection.</p> <p>2.2. Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work, including statutory and regulatory authority requirements.</p> <p>2.3. Roof catchment areas and design flows are determined from rainfall data and relevant Australian standards.</p> <p>2.4. Quantity and size of gutters, sumps, rain heads and downpipes are determined in accordance with relevant Australian standards, plans and specifications.</p>
3. Plan system layout.	<p>3.1. Layout of roof drainage system is planned in accordance with development plans, specifications, relevant Australian standards and workplace procedures.</p> <p>3.2. Required materials and components of roof drainage system are specified and optimised in accordance with relevant Australian standards from the proposed design.</p> <p>3.3. Plans are recorded in accordance with regulatory authorities' and workplace requirements.</p> <p>3.4. Sustainability principles and concepts are applied to work preparation and application.</p>
4. Restore work area.	<p>4.1. Work area is restored in accordance with workplace</p>

ELEMENT**PERFORMANCE CRITERIA**

procedures.

4.2. Tools and equipment used in the process are refurbished and left in accordance with workplace procedures.

4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - organise and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - regulations, relevant Australian standards, plans, specifications and drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - record plans
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing relevant information sources for the work activity and the processes for the calculation of catchment areas and design flows
- capacity of fabrication machinery involved in the production of roof draining components
- capillary action, thermal expansion and fabrication techniques to prevent leaking
- characteristics of various metals and finishes
- computers and computer-aided design (CAD) software
- corrosion prevention treatment requirements of cut sheets
- design concepts and performance measures for various roof draining components for all types of roofs
- electrolysis and problems associated with the use of dissimilar metals
- implications of climate variations for the design of roof draining components
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of planning, sizing and documenting the layout of roof drainage systems
- relevant statutory and authority requirements related to planning, sizing and documenting the layout of roof drainage systems
- SI system of measurements
- Australian standards applicable to roof drainage
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the planning, sizing and layout of roof drainage systems
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to design, size and document the layout of a roof drainage system for three varied roof types, including at least one type incorporating eaves gutter and one type for a commercial building incorporating box gutters, sumps or rain heads, ensuring:
 - application of sustainability principles and concepts
 - correct identification of details of the plan
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Information, plans and specifications are obtained for planned work activity.</p> <p>1.2. Safety (OHS) requirements associated with planning the layout of sanitary plumbing systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for planning the layout of sanitary plumbing systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient planning of the layout of sanitary plumbing systems.</p>
2. Plan system layout.	<p>2.1. Site inspection is undertaken to determine job requirements.</p> <p>2.2. Quantity, location and type of fixtures are determined from design drawings, plans and elevations and other relevant information.</p> <p>2.3. Layout of sanitary plumbing system is planned in accordance with plans and relevant Australian standards.</p> <p>2.4. Materials and fixtures required are determined from proposed design.</p> <p>2.5. Sustainability principles and concepts are applied to work preparation and application.</p> <p>2.6. Plans are recorded in accordance with workplace requirements.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification..</p> <p>3.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>3.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - record plans
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- application of various sanitary and drainage fixtures and appliances
- characteristics and the application of different pipe systems, including their fittings and fixture supports, and fixing and joining techniques

REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of drainage
- principles of sanitary plumbing
- process of planning the layout of sanitary plumbing systems
- relevant statutory and authority requirements related to sanitary plumbing systems
- SI system of measurements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the layout of a sanitary plumbing system for a residential type building
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, plan the layout for a sanitary plumbing system of a three-storey residence, which includes a range of residential fixtures, connecting all fixtures to a legal point of discharge, ensuring:
 - correct identification of details of the plan
 - appropriate sequencing of work and identification of materials and resources required
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - application of sustainability principles and concepts
 - communicating and working effectively and safely with others.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained and fixture position is determined.</p> <p>1.2. Safety (OHS) requirements associated with installing sewage discharge pipes, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for installing sewage discharge pipes, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of sewage discharge pipes.</p>
2. Identify installation requirements.	<p>2.1. Position of discharge pipes is determined in accordance with plans and specifications, relevant Australian standards, site requirements and other relevant information and does not cause damage or interference to surrounding structures.</p> <p>2.2. Quantity and type of materials required are calculated from design drawings and specifications and comply with relevant Australian standards and authorities' requirements.</p> <p>2.3. Allowances for fabrication and assembly are determined and transferred.</p> <p>2.4. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.</p> <p>2.6. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Install and test pipe system.	<p>3.1. Pipe system is set out to comply with plans, specifications and relevant Australian standards.</p> <p>3.2. Fixings and supports are installed to manufacturer recommendations, job plans and specifications, and relevant Australian standards.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>3.3. Pipes are installed and jointed in accordance with relevant Australian standards, without damage or distortion to pipework, surrounding environment and other services.</p> <p>3.4. Pipe system is tested to comply with relevant Australian standards and adjusted.</p> <p>4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Documentation is completed in accordance with workplace requirements.</p>

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different materials, pipe fittings and supports, including fixing and joining techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of installing sewage discharge pipes
- properties and characteristics of sewage, including temperature implications and discharges
- relevant statutory and authority requirements related to installing discharge pipes
- SI system of measurements
- standards applicable to the installation
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install sewage discharge pipes
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications and using any two approved materials, install 2 fixture discharge pipes:
 - direct to a below ground drain
 - direct to drain via elevated pipework, which includes at least one expansion fitting
 - waste fixture to a drain via a gully (a combination of soil and waste fixtures must be included), ensuring:
 - correct identification of location, design and details of proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - application of sustainability principles and concepts
 - communicating and working effectively and safely with others.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained for the planned work activity.</p> <p>1.2. Safety (OHS) requirements associated with fabricating and installing sanitary plumbing systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for fabricating and installing sanitary plumbing systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient planning, fabrication and installation of sanitary plumbing systems.</p>
2. Identify installation requirements.	<p>2.1. Venting requirements are checked for compliance with requirements of relevant Australian standards, plans and specifications.</p> <p>2.2. Stack design and branch positions are checked for compliance with relevant Australian standards, authorities' requirements, job plans and specifications, and relevant information.</p> <p>2.3. Position of sanitary stacks is determined from plans, specifications, relevant Australian standards and site requirements and so as not to cause damage and interference to surrounding structures.</p> <p>2.4. Quantity and type of materials required are calculated from design drawings and specifications and comply with relevant Australian standards and local authorities' requirements.</p> <p>2.5. Allowances for fabrication and assembly are determined and transferred.</p> <p>2.6. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.7. Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.8. <i>Sustainability principles and concepts</i> are applied to work preparation and application.
3. Fabricate, install and test pipe system.	<p>3.1. <i>Plumbing system</i> is set out to comply with job plans, specifications and relevant Australian standards.</p> <p>3.2. Fixings and supports are installed to manufacturer recommendations, relevant Australian standards, plans and specifications.</p> <p>3.3. Pipes are fabricated, installed and jointed in specified location in accordance with job plans, specifications and relevant Australian standards, without causing damage or distortion to pipework or surrounding environment and other services.</p> <p>3.4. Pipe system is tested to comply with relevant Australian standards and adjusted.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - record plans
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and the application of different pipe fittings and fixture supports, including fixing and joining techniques
- classification of assembly types and identification of assembly components
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials handling processes
- performance measures and characteristics of the materials used in the required soil and waste stack assembly
- process of fabricating and installing sanitary stacks
- product and service standards applicable to the installation
- properties of soil and waste discharges, including temperature and corrosive discharges
- relevant statutory and authority requirements related to installing stacks, discharge pipes and vents
- SI system of measurements
- systems of sanitary plumbing.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- given instructions, locating, interpreting and applying relevant information, Australian standards and specifications to fabricate and install a sanitary stack for a residential building.
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, fabricate and install a sanitary stack system of plumbing, to connect future fixtures from two floor levels; fixtures are to include a WC, bath, basin, shower and floor waste gully at each floor with fabrication of at least two branches in copper tube (minimum of DN50), ensuring:
 - correct identification of location, design and details of proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - application of sustainability principles and concepts
 - communicating and working effectively

EVIDENCE GUIDE

Context of and specific resources for assessment

and safely with others.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and

- handling of materials
- hazard control
- personal protective clothing and equipment

RANGE STATEMENT

regulations and may include:

prescribed under legislation, regulations and workplace policies and practices

- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - dirt mounds
 - hazardous materials and substances
 - other machines
 - recently filled trenches
 - surrounding structure and facilities
 - traffic control
 - trip hazards
 - underground services
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements

cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- dropsaw
- hacksaw
- hand and power tools
- heating equipment

RANGE STATEMENT

Information may include:

- lifting and load shifting equipment, including:
 - chain blocks
 - elevated work platforms
 - forklifts
 - hand trolleys
 - hoists and jacks
 - restricted height scaffolding
 - rollers
- measuring equipment
- threading and bending equipment.
- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to fabricating and installing sanitary stacks
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Materials may include:

- copper
- polymer
- cast iron
- other approved materials.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
 - appropriate component selection that

RANGE STATEMENT

has minimal environmental impact

- efficient energy and water use
- efficient use and recycling of material
- correct handling of hazardous materials
- disposal of waste material to ensure minimal environmental impact.

Plumbing systems may include:

- elevated pipework
- fully vented
- fully vented modified
- revass
- single stack
- single stack modified
- other approved methods.

<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> excavation tools hand and power tools measuring equipment tools and equipment, including: <ul style="list-style-type: none"> lifting and load shifting equipment

RANGE STATEMENT

Pre-treatment facilities:

- chain blocks
- forklifts
- hand trolleys
- hoists and jacks
- mechanical excavation equipment
- rollers
- trench shoring equipment.
- may include:
 - acid traps and neutralisers
 - cooling interceptors
 - grease traps
 - plaster and clay traps
 - silt interceptors
 - solid traps
 - solvent and oil interceptors
- may be installed in such locations as:
 - butchers
 - carpark
 - dental surgeries
 - food halls and outlets
 - hospitals
 - kitchens
 - laboratories
 - mining sites
 - processors of meat, chicken, milk and smallgoods
 - vehicle servicing and repair establishments
- may be permanent or temporary (portable).

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements,

RANGE STATEMENT

Sustainability principles and concepts:

- particularly those pertaining to:
- building codes
 - OHS and environmental requirements
 - plumbing regulations
 - relevant Australian standards
 - safe work procedures relating to installing pre-treatment facilities
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.
 - cover the current and future social, economic and environmental use of resources
 - may include:
 - appropriate component selection that has minimal environmental impact
 - efficient energy and water use
 - efficient use and recycling of material
 - correct handling of hazardous materials
 - disposal of waste material to ensure minimal environmental impact.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing sewerage pump sets, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for installing sewerage pump sets, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of sewerage pump sets.</p>
2. Identify installation requirements.	<p>2.1. Location of pump is determined following site inspection.</p> <p>2.2. Pump base requirements are determined from drawings and specifications and other relevant information.</p> <p>2.3. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.</p>
3. Install sewerage pump equipment.	<p>3.1. Pump is set out to comply with drawings, specifications, site requirements or job instructions, with consideration to the location of existing services.</p> <p>3.2. Pumping equipment is installed in specified locations using recommended fixings.</p> <p>3.3. Pipework and pump controls are connected in accordance with drawings, specifications, manufacturer requirements and standards.</p> <p>3.4. Fuel tank fitting, alignment of shafts and couplings, and the use of mechanical joints comply with relevant specifications and manufacturer instructions.</p> <p>3.5. Pumping equipment and related pipework are tested in accordance with standards and manufacturer recommendations, and test data is recorded in</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	required format.
	4.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - record plans
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing and testing sewerage pumps and small bore macerators
- numeracy skills to apply measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- atmospheric pressure
- fixing techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- performance measures for various sewerage pump sets
- process of installing sewerage pump sets
- properties of sewerage, including pressure and flow rates
- relevant statutory and authority requirements related to installing sewerage pump sets
- SI system of measurement
- standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test pre-treatment facilities
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, install a small bore macerator from a water closet to an approved point of discharge up to 4 metres away, ensuring:
 - correct identification of location, design and details of the proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - dirt mounds

RANGE STATEMENT

	<ul style="list-style-type: none"> • hazardous materials and substances • other machines • recently filled trenches • surrounding structure and facilities • traffic control • trip hazards • underground services • use of tools and equipment • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others
<p><i>Environmental requirements</i> cover water quality management and may include:</p>	<ul style="list-style-type: none"> • use of firefighting equipment • use of first aid equipment • workplace environment and safety. • clean-up protection • stormwater protection • waste management.
<p><i>Quality assurance requirements</i> may include:</p>	<ul style="list-style-type: none"> • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<p><i>Statutory and regulatory authorities</i> include:</p>	<ul style="list-style-type: none"> • state or territory statutory authority • statutory gasfitting authority • statutory plumbing authority.
<p><i>Tools and equipment</i> may include:</p>	<ul style="list-style-type: none"> • hand and power tools • measuring and alignment tools • tools and equipment, including: <ul style="list-style-type: none"> • chain blocks • concreting tools • forklifts • hand trolleys • hoists and jacks • lifting and load shifting equipment • rollers.
<p><i>Sewerage pump sets</i> may include:</p>	<ul style="list-style-type: none"> • compressed air injectors

RANGE STATEMENT

Information may include:

- wet wells, including submersible pumps.
- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing sewerage pump sets
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- sewerage pump sets, motors and fittings.

Materials may include:

Pump controls may be:

- automatic controls, which may be float, level or flow switches
- manual.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for planning.	<p>1.1. Nature and scope of planning task are identified and confirmed.</p> <p>1.2. Safety (OHS) requirements associated with planning, sizing and documenting the layout of sanitary pipework and fixtures, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Work is organised and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.4. Tools and equipment required for planning, sizing and documenting the layout of sanitary pipework and fixtures, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.5. Work area in which planning process is to be conducted is prepared.</p>
2. Identify system requirements.	<p>2.1. Information and specifications for required system work are obtained and confirmed, if necessary by site inspection.</p> <p>2.2. Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.</p> <p>2.3. Quantity, location and type of fixtures are determined from design drawings, plans and elevations.</p> <p>2.4. Fixture unit loading is determined in accordance with relevant Australian standards and regulatory authorities' requirements.</p> <p>2.5. System is sized in accordance with relevant Australian standards, and regulatory authorities' and workplace requirements.</p>
3. Plan system layout.	<p>3.1. Layout of sanitary pipework and fixtures is planned in accordance with building plans, relevant Australian standards and workplace procedures.</p> <p>3.2. Materials required are specified and optimised in accordance with relevant Australian standards from the proposed design.</p> <p>3.3. Plans are recorded in accordance with regulatory authorities' and workplace requirements.</p> <p>3.4. Sustainability principles and concepts are applied to work preparation and application.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Restore work area.	<p>4.1. Work area is restored in accordance with workplace procedures.</p> <p>4.2. Tools and equipment used in the process are refurbished and left in accordance with workplace procedures.</p> <p>4.3. Documentation, including work backup, is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements, including system requirements
 - organise and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - regulations, relevant Australian standards, plans, specifications and drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation
 - record plans
- documenting the layout of sanitary pipework and fixtures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing relevant information sources for the work activity
- characteristics and the application of different pipe systems, including their fittings and fixture supports, and fixing and joining techniques
- computers and computer-aided design software
- handling of hazardous waste
- infectious diseases
- job safety analysis (JSA) and safe work method statements (SWMS)
- pipe materials and sanitary fixtures
- principles of drainage
- principles of sanitary plumbing
- process of planning, sizing and documenting the layout of sanitary pipework and fixtures
- relevant statutory and authority requirements related to planning, sizing and documenting the layout of sanitary plumbing systems
- SI system of measurements
- Australian standards applicable to the system
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| 1. Prepare for work. | 1.1. Plans and specifications are obtained.
1.2. Safety (OHS) and workplace environmental requirements associated with connecting static storage tanks to a water supply system are followed.
1.3. Quality assurance requirements are identified and followed in accordance with workplace requirements.
1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
1.5. Tools and equipment , including personal protective equipment, are selected and checked for serviceability.
1.6. Work area is prepared to support efficient connection and installation. |
| 2. Identify installation requirements. | 2.1. Required materials that comply with relevant Australian standards and job specifications are determined from plans and specification.
2.2. Sustainability principles and concepts are applied to work preparation and application.
2.3. Quantities of required materials are calculated from plans and specifications.
2.4. Materials and equipment are ordered and collected according to workplace procedures.
2.5. Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition. |
| 3. Install and test storage tank. | 3.1. Storage tank and associated pipework are set out in accordance with plans, specifications and job instructions.
3.2. Pipe supports and fixings, compliant with relevant Australian standards, are installed to plans and manufacturer specifications.
3.3. Tank, piping and materials are installed in accordance with plans, specifications and relevant Australian standards.
3.4. Jointing systems are confirmed as compliant with relevant Australian standards.
3.5. Installed system is pressure tested and commissioned in accordance with relevant |

ELEMENT**PERFORMANCE CRITERIA**

- Australian standards and job specifications.
- 3.6. Test data is recorded in format required by job specifications and quality assurance procedures.
4. Clean up.
- 4.1. Work area is cleared, and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specifications.
- 4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
- 4.3. **Information** is accessed and documentation completed in accordance with regulatory authorities and workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:
 - plans and specifications
 - documentation from a variety of sources
 - record test results in writing
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- technical skills to:
 - determine system requirements for installation of a static storage tank

REQUIRED SKILLS AND KNOWLEDGE

- identify and report faults in tools, equipment and materials
- numeracy skills to apply measurements and calculations
- organisational skills to plan and set out work
- teamwork skills to:
 - work with others to action tasks
 - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use a range of mobile communications technology

Required knowledge

- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- function and operation of a range of taps and valves
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- pressure test systems and procedures
- procedures for accessing information and processes for calculating material requirements
- process for connecting static storage tanks
- relevant statutory and authority requirements related to the connection of static storage tanks
- SI system of measurement
- structural systems, building materials and building services
- workplace and equipment safety requirements

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities,

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

responsibilities and procedures.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, Australian standards and specifications to connect static water storage tanks
- apply safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- connect residential or commercial static water storage tanks in accordance with backflow protection principles
- as a minimum, given the plans and specifications, connect and commission an approved static water storage tank to a residential or commercial water distribution pipe system to include correct air gap, operational water level, overflow requirements, minimum outlet size, tank placement, safe tray and safe waste (to meet the specified location and installation requirements) ensuring:
 - correct identification of requirements, design and details of the proposed installation
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards, and organisational quality procedures and processes
 - application of sustainability principles and concepts
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

This unit of competency is to be assessed using relevant Australian standards and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards requirements.

Resource implications for assessment include:

- an induction procedure and requirement

EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the minimum task requirements

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- MSDS
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPRF2013A Collect and store roof water
- CPCPWT3013A Install and commission water heating systems.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities

RANGE STATEMENT

- trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in proximity to others
 - use of firefighting equipment
 - use of first aid equipment
 - workplace environment and safety.
 - clean-up protection
 - stormwater protection
 - waste management.
- Environmental requirements*** cover water quality management and may include:
- Quality assurance*** requirements may include:
- Australian standards
 - Environment Protection Authority (EPA)
 - environment policy
 - internal company quality assurance policy and risk management strategy
 - International Standards Organisation
 - site safety plan
 - workplace operations and procedures.
- Tools and equipment*** may include:
- chain blocks
 - cutting and threading equipment
 - elevated work platforms
 - forklifts
 - hand and mechanical excavation equipment
 - hand and power tools
 - hand trolleys
 - hoists and jacks
 - ladders
 - lifting and load shifting equipment
 - rollers
 - scaffolds
 - testing equipment
 - trench shoring equipment
 - welding equipment.
- Materials*** may include:
- copper, brass, polymer or cement lined cast iron pipes
 - fibre glass, steel or polymer storage tanks
 - other approved pipes and materials.

RANGE STATEMENT

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
 - appropriate material selection that has minimal environmental impact
 - efficient energy and water use
 - efficient use and recycling of material, including minimising evaporation
 - siting of tank
 - overflow disposal and reuse
 - disposal of waste material to ensure minimal environmental impact.

Information may include:

- charts and hand drawings
- plans or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to connecting static storage tanks
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings, plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with setting out and installing water services, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for setting out and installing water piping systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient setting out and installation of water services.</p>
2. Identify installation requirements.	<p>2.1. Quantity and type of materials required are calculated from drawings and specifications or site inspection and comply with relevant Australian standards and other information.</p> <p>2.2. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.3. Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.</p> <p>2.4. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Install and test pipe system.	<p>3.1. Pipelines and fixture connection points are set out in accordance with drawings and specifications or job instructions, with consideration to the location of existing services.</p> <p>3.2. Trenches are excavated in accordance with relevant Australian standards and authorities' requirements.</p> <p>3.3. Installation of supports and clips are checked for compliance with job specification, authorities' requirements and manufacturer recommendations.</p> <p>3.4. Pipes are installed and jointed in accordance with job specifications, design layout and relevant Australian standards without damage or distortion to pipework, or surrounding environment and other</p>

ELEMENT	PERFORMANCE CRITERIA
	services.
	3.5. Installation to <i>point of discharge</i> is tested to comply with relevant Australian standards and authorities' requirements, and adjusted.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing pipework to carry drinking and non-drinking water from a water meter,

REQUIRED SKILLS AND KNOWLEDGE

rainwater tank, storage tank or a heated water service to points of discharge and storage

- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of installing water piping systems
- properties of water, including pressure and flow rates
- regulations and requirements for non-drinkable water installations
- relevant statutory and authority requirements related to installing water piping systems
- SI system of measurements
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to set out and install water services
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, plan the layout, size, set out, install and test water services from a meter or storage tank, to at least five heated/tempered and five cold outlets, including a water heater and from a non-drinkable water source to at least two outlets, ensuring:
 - correct identification of location, design and details of proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - application of sustainability principles and concepts
 - communicating and working effectively and safely with others.

Context of and specific

This competency is to be assessed using standard

EVIDENCE GUIDE

resources for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth,

- handling of materials
- hazard control

RANGE STATEMENT

state and territory legislation and regulations and may include:

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - other machines
 - surrounding structure and facilities
 - trees
 - trip hazards
 - underground services
 - uneven and unstable terrain
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements
cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- bending equipment
- crimping tools
- flaring tools
- hand and power tools
- hand excavation equipment

RANGE STATEMENT

- measuring equipment
- pressure testing equipment
- silver brazing equipment
- tools and equipment, including:
 - chain blocks
 - elevated work platforms
 - forklifts
 - hand trolleys
 - hoists and jacks
 - lifting and load shifting equipment
 - mechanical excavation equipment
 - rollers
 - scaffolding
 - trench shoring equipment.

Information may include:

- charts and hand drawings
- diagrams or sketches and graphics
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- maps
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to setting out and installing water piping systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Materials:

- may include those authorised for use
- factors influencing choice of materials include:
 - characteristics of materials and products

RANGE STATEMENT

- condition of ground
 - environmental factors
 - nature of water conveyed
 - type of usage.
- Point of discharge* may be:
- an isolating valve, tap or fixture.
- Sustainability principles and concepts:*
- cover the current and future social, economic and environmental use of resources
 - may include:
 - appropriate component selection that has minimal environmental impact
 - efficient energy and water use
 - efficient use and recycling of material
 - heat retention
 - correct handling of hazardous materials
 - disposal of waste material to ensure minimal environmental impact.

Pipework is flushed.</p> <p>3.3. Devices are commissioned and maintained to ensure</p>

ELEMENT	PERFORMANCE CRITERIA
	correct flow operation in accordance with relevant Australian standards, and manufacturer and job specifications.
	3.4. Customer is advised of correct operation of <i>flushing devices, control valves</i> , appliances and <i>pumps</i> .
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	4.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- installing and making basic adjustments to water flushing devices, control valves, pumps and appliances for heated and cold water services
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics of the materials and devices being installed
- effective isolation procedures
- hydraulics and mechanics
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing service controls and devices
- properties of water including pressure and flow rates
- relevant statutory and authority requirements related to installing service controls and devices and requirements for backflow prevention devices
- SI system of measurements
- Australian standards applicable to the installation
- workplace and equipment safety requirements.

Evidence Guide

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools,

REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- installing and commissioning low pressure, mains pressure, continuous flow and solar water heating systems
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different mounting fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- performance measures for various water heaters
- process of installing water heaters
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to installing water heaters
- SI system of measurements
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install water heaters
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, plan the layout, and then install and commission at least two different water heaters from the following:
 - a vented storage water heater, an unvented storage water heater, a continuous flow water heater, and a solar water heater
 - with one of these heaters being a manifold system, ensuring:
 - correct identification of location, design and details of proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - application of sustainability principles and concepts
 - communicating and working effectively and safely with others.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including

RANGE STATEMENT

recognising and preventing hazards associated with:

- electricity
- hazardous materials and substances
- other machines
- surrounding structure and facilities
- trip hazards
- underground services
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements
cover water quality management
and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements
may include:

- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

***Statutory and regulatory
authorities*** include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- flaring tools
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
 - chain blocks
 - elevated work platforms
 - forklifts
 - hand trolleys
 - hoists and jacks
 - restricted height scaffolding

RANGE STATEMENT

Water heaters may include:

- rollers
- mechanical bending equipment
- silver brazing equipment.
- electric storage heaters up to 630 litres
- heat exchange water heaters
- heat pump water heaters
- continuous flow water heaters
- other storage heaters up to 700 litres
- solar water heaters
- warm water systems
- other approved water heaters.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing water heaters
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- water heaters and fittings, including solar panels for solar water heaters.

Materials may include:

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
 - appropriate material selection that has minimal environmental impact

RANGE STATEMENT

- heat retention
- efficient use and recycling of material
- efficient energy and water use
- disposal of waste material to ensure minimal environmental impact.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with installing water treatment equipment, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for installing water treatment equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of water treatment equipment.</p>
2. Identify installation requirements.	<p>2.1. Water treatment equipment requirements and location are determined in accordance with job specifications or site inspection and relevant information.</p> <p>2.2. Water system adjacent to the equipment is tested for appropriate pressure.</p> <p>2.3. Materials and equipment are estimated from design drawings or job specification.</p> <p>2.4. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.</p> <p>2.6. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Install and test water treatment equipment.	<p>3.1. Water treatment equipment is installed in accordance with relevant Australian standards and manufacturer specifications, and complies with authorities' requirements.</p> <p>3.2. Base is provided for water treatment equipment that complies with job specification or manufacturer instructions.</p> <p>3.3. Connections to water treatment equipment are checked for compliance with authorities' requirements and relevant Australian standards.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Installation is pressure tested for leaks.
	3.5. Service lines are flushed in accordance with relevant Australian standards.
	3.6. Appliance is commissioned in accordance with manufacturer specifications.
4. Maintain water treatment equipment.	4.1. Service and maintenance requirements, including water filters , are identified from manufacturer specifications or authorities' requirements.
	4.2. Replacement components are checked and fitted in accordance with specification.
	4.3. Maintenance operations are conducted observing manufacturer and authorities' requirements.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.
	5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	5.3. Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics and application of different assemblies, including fixing and joining techniques and materials
- chemistry of water, including:
 - osmosis, filtration and purification
 - properties of hard and soft water, including sources of contamination, impurities, pressure and flow rates
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing water treatment equipment
- relevant statutory and authority requirements related to installing water treatment equipment
- SI system of measurements
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to install water treatment equipment
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, plan the layout, and then install and commission either a domestic water filter or cooler or a domestic water softener or conditioner, indicating the continuing maintenance requirement for each installation and ensuring:
 - correct identification of location, design and details of proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - application of sustainability principles and concepts
 - communicating and working effectively and safely with others.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- installing and testing water pumps and a centrifugal pump set
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- atmospheric pressure
- fixing techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- performance measures for various water pump sets
- process of installing water pump sets
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to installing water pump sets
- SI system of measurements
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install water pump sets
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, plan the layout, and then install and test a centrifugal pump, ensuring:
 - correct identification of location, design and details of proposed installations
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - application of sustainability principles and concepts
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with fitting off, connecting and commissioning heated and cold water services, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for fitting off, connecting and commissioning heated and cold water services, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient fitting off, connecting and commissioning of heated and cold water services.</p>
2. Identify installation requirements.	<p>2.1. Fit off, connections, fixtures and fittings and their location are identified in accordance with job specifications or site inspection, using relevant information.</p> <p>2.2. Materials and equipment are estimated from drawings or job specification.</p> <p>2.3. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.4. Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.</p> <p>2.5. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Make connections and test service.	<p>3.1. Final connections are made to heated and cold water services ensuring fixtures, jointing methods and appliances comply with relevant Australian standards and are made without damage to surrounding structures.</p> <p>3.2. Labels and signage are positioned for non-drinkable water services in accordance with regulatory authorities' requirements.</p> <p>3.3. Water services are hydraulically tested to ensure connections are leak free.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Valves, cisterns, taps and other components are checked for correct operation.
4. Commission water services.	<p>4.1. Service lines are flushed in accordance with relevant Australian standards and regulatory authorities' requirements.</p> <p>4.2. Water services are commissioned in accordance with regulatory authorities' requirements and manufacturer specifications, emphasising risk of the blue water symptom.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>5.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- fitting off, connecting, testing and commissioning heated and cold water services to household fixtures and appliances
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- characteristics and application of different fittings and fixtures, including fixing and joining techniques and materials
- implications of cross connections and air gaps
- isolation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- non-drinkable water processing, requirements and applications
- process of fitting off, connecting and commissioning heated and cold water services
- properties of water, including sources of contamination (blue water), impurities, pressure and flow rates
- relevant statutory and authority requirements related to fitting off, connecting and commissioning heated and cold water services
- SI system of measurement
- Australian standards applicable to the work
- use of test equipment and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to fitting off, connecting and commissioning heated and cold water services
- applying safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications, plan the layout, and then fit off, connect, test and commission heated, tempered and cold (drinking and non-drinking) water services of a house, including bathroom, kitchen, laundry and outdoor connections, ensuring:
 - correct identification of location, fit off, connections, testing and commissioning requirements
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
 - application of sustainability principles and concepts
 - communicating and working effectively and safely with others.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth,

- handling of materials
- hazard control

RANGE STATEMENT

state and territory legislation and regulations and may include:

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - other machines
 - surrounding structure and facilities
 - trip hazards
 - underground services
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements
cover water quality management and may include:

- clean-up protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- crimping tools
- hand and power tools
- flaring tools
- mechanical and bending tools
- silver brazing equipment
- testing equipment.

RANGE STATEMENT

Water services include:

- non-drinkable water services.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards
- safe work procedures relating to fitting off, connecting and commissioning heated and cold water services
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Materials are as approved for heated, tempered and cold water services and may include:

- fixtures and fittings
- heaters
- water services.

Blue water is:

- a symptom believed to occur as a result of a less than adequate commissioning process.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
 - appropriate material selection that has minimal environmental impact
 - heat retention
 - efficient use and recycling of material
 - efficient energy and water use
 - disposal of waste material to ensure minimal environmental impact.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Plans and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with connecting irrigation systems from a drinking water supply, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for connecting irrigation systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient connection of irrigation systems from a drinking water supply.</p>
2. Identify installation requirements.	<p>2.1. Connection size and hazard rating are determined from plans, specification, relevant Australian standards and/or site inspection using relevant information.</p> <p>2.2. Valve is sized in accordance with plans and specification.</p> <p>2.3. Back flow prevention devices are confirmed as being in accordance with hazard rating.</p> <p>2.4. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.</p> <p>2.6. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Connect and test system.	<p>3.1. Excavation is set out and made in accordance with plans and specifications and undertaken with consideration to existing structures and services.</p> <p>3.2. Service pipe is isolated and cut to accommodate take off branch in accordance with authorities' requirements.</p> <p>3.3. Back flow prevention device is fitted in accordance with relevant Australian standards and manufacturer specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>3.4. System is connected and flushed to required standard.</p> <p>3.5. Water supply is restored and system tested in accordance with relevant Australian standards.</p> <p>3.6. Ground surface is restored.</p> <p>4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify requirements
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- cutting into a water supply and installing a take off branch and fitting valves and backflow prevention devices for an irrigation or watering system.

REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- drinking water supplies and protection measures
- implications of cross connections and air gaps
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of connecting irrigation systems from a drinking water supply
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to connecting irrigation systems from a drinking water supply
- SI system of measurement
- Australian standards applicable to the connection
- use of test equipment and procedures
- various types of irrigation systems and types of materials used
- workplace and equipment safety requirements.

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Site plans and specifications are obtained to establish location of the main.</p> <p>1.2. Safety (OHS) requirements associated with installing of a water service, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for installing water services, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient installation of water services.</p>
2. Identify installation requirements.	<p>2.1. Location of service is determined following site inspection.</p> <p>2.2. Cables, conduits, pipes or other services are located and noted using relevant information.</p> <p>2.3. Quantity and type of materials required are calculated or determined from plans and specifications.</p> <p>2.4. Materials and equipment are identified, ordered and collected in accordance with workplace procedures.</p> <p>2.5. Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.</p> <p>2.6. Sustainability principles and concepts are applied to work preparation and application.</p>
3. Install and test water services.	<p>3.1. Pipelines and excavation areas are set out in accordance with plans and specifications.</p> <p>3.2. Trenches are excavated in accordance with relevant Australian standards and regulatory authorities' requirements, and to required size.</p> <p>3.3. Service control valve position is located.</p> <p>3.4. Main is drilled and tapped in accordance with regulatory authorities' requirements and workplace procedures.</p> <p>3.5. Service line is marked out at 90° to the main in a</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>straight line to the meter.</p> <p>3.6. Selected process for installation of service pipe under roadway is undertaken in accordance with authorities' requirements.</p> <p>3.7. Pipework is installed in accordance with job specification, authorities' requirements and design layout, including fitting designated service control valves.</p> <p>3.8. Water meter is selected and installed in accordance with authorities' requirements, surrounding environment and climatic conditions, and in consideration of servicing or cleaning requirements.</p> <p>3.9. Meter control valve is fitted at inlet in accordance with authorities' requirements.</p> <p>3.10. Installation is tested for compliance with job specifications, relevant Australian standards and regulatory authorities' requirements.</p> <p>3.11. Excavation is backfilled in accordance with specifications and authorities' requirements.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>4.3. Documentation is completed in accordance with workplace requirements.</p>

CPCPCM2023A

Carry out OHS requirements

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and relevant information, including plans, specifications, quality requirements and operational details relevant to the tasks, are obtained, confirmed and applied to the allotted task.</p> <p>1.2. Safety (OHS) requirements are obtained from the site safety plan and organisational policies and procedures, confirmed and applied to the allotted task.</p> <p>1.3. Signage requirements are identified and obtained from project traffic management plan and traffic conditions and are implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with requirements of the job, are checked for serviceability and any faults are rectified or reported.</p> <p>1.5. Environmental requirements are identified from project environmental management plan, confirmed and applied to the allotted task.</p>
2. Set out and excavate.	<p>2.1. Work area and materials are prepared to support efficient installation of the pipe work.</p> <p>2.2. Dewatering requirements are determined and applied.</p> <p>2.3. Location, alignment direction, level and grade of mains pipe system are determined from job drawings and specifications.</p> <p>2.4. Works are set out to specification.</p> <p>2.5. Plant operator is advised of excavation requirements and levels are monitored.</p> <p>2.6. Mains pipe system support mechanism is installed in accordance with plans, specifications and standards in compliance with statutory and regulatory authority requirements.</p>
3. Install mains pipeline.	<p>3.1. Pipes are lowered and placed in position according to design specifications of mains pipe system.</p> <p>3.2. Pipes are joined in accordance with manufacturer specifications using pipe joining methods.</p> <p>3.3. Pipes are placed and fittings, valves and flow control devices are fitted in accordance with drawings, specifications and installation procedures.</p> <p>3.4. Alignment level and grade are checked continuously for conformance with design plans and</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications.
	3.5.Side support or overlay is positioned beside the pipes.
	3.6.Mains pipe system support structure is checked.
	3.7.Backfill procedure is monitored to ensure work is completed to specification, where specified.
	3.8.Valve chambers
4. Test mains pipe system.	4.1. Testing is performed to relevant authority requirements as determined by specifications.
	4.2.Mains pipe system test procedures are performed, establishing pressurisation, functionality and serviceability.
	4.3.Test results are recorded and reported.
5. Clean up.	5.1.Work area is cleared and materials disposed of or recycled in accordance with project environmental management plan.
	5.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - complete written records and reports of test results
 - complete other relevant workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow and give instructions
 - plan and sequence tasks with others
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- drawings and specifications
- documentation from a variety of sources
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- concrete and concrete fabrication
- confined space entry requirements
- dewatering
- equipment types, characteristics, technical capabilities and limitations
- excavation and trench safety
- installation of booster systems
- installation of thrust blocks
- job safety analysis (JSA) and safe work method statement
- mains pipe systems and installation procedures
- mains water pressure
- materials safety data sheets (MSDS) and materials handling methods
- operational, maintenance and basic diagnostic procedures, including testing procedures
- plumbing industry terminology
- processes for interpreting engineering drawings
- processes for calculating pipeline grades and percentages
- project quality requirements
- sedimentation and erosion controls
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- valves and flow control devices
- water reticulation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications
- complying with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- complying with organisational policies and procedures, including quality requirements
- as a minimum the ability to, given the plans and specifications, install six metres of DN100 mains pressure pipe system which is to include a change of direction or tee junction
- installing a mains pipe system which, as a minimum, includes two materials and one isolation valve
- safe and effective operational use of tools, plant and equipment
- communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with

EVIDENCE GUIDE

Guidance information for assessment

- a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- MSDS
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements pertaining to the installation of mains pipe systems

RANGE STATEMENT

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations, organisational safety policies and procedures, and project safety plan, and may include:

- relevant Australian standards
- safe work procedures or equivalent relating to the installation of mains pipe systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- emergency procedures, which are to include:
 - emergency shutdown and stopping
 - extinguishing equipment for fires
 - organisational first aid requirements, including use of first aid equipment
 - evacuation
- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards and risks associated with:
 - buildings
 - cuttings
 - embankments
 - excavations
 - hazardous materials and substances
 - other machines
 - personnel
 - restricted access barriers
 - structures
 - traffic control
 - trees
 - underground services
 - uneven and unstable terrain
 - work site visitors and the public
 - working in proximity to others
- safe parking practices, including ensuring:
 - access ways are clear
 - equipment and machinery are:
 - away from overhangs and refuelling

RANGE STATEMENT

	<ul style="list-style-type: none"> sites • safe distance from excavations • secured from unauthorised access or movement
<i>Signage</i> may include:	<ul style="list-style-type: none"> • use of tools and equipment • workplace environment and safety. • barricades • highway traffic signs • signage for traffic control escort vehicles • site safety signage • temporary signage for benefit of motorists and pedestrians • traffic conditions signage.
<i>Traffic conditions</i> may include:	<ul style="list-style-type: none"> • buildings • congested urban environments • low traffic rural areas • off-road un-trafficked areas • parking sites • pedestrian areas.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • crow bars • grinders • hammers • jointing equipment • levelling equipment • lifting equipment • oxy-acetylene equipment • saws • scaffolding • shovels.
<i>Environmental requirements</i> are to include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • organisational and project environmental management plan • vibration • waste management • water quality protection.
<i>Materials</i> may include:	<ul style="list-style-type: none"> • backfill and bedding materials • concrete • pipes • other approved materials.

RANGE STATEMENT

Statutory and regulatory authorities include:

- federal, state and local authorities.

Mains pipe systems:

- may include:
 - in-ground or above ground
 - pressurised mains water pipelines (booster system)
- may be constructed from:
 - ductile iron cement lined (DICL)
 - polymer
 - steel and copper
 - other approved materials.

Pipe joining methods may include:

- arc welded and mechanical jointed
- rubber ring
- solvent welded
- other approved jointing methods.

Valves and flow control devices include:

- air release valves
- energy dissipaters
- flow control valves
- non-return valves
- pressure control valves
- stop valves.

Installation procedures:

- are to include:
 - bedding down pipes
 - checking alignment, level and grade
 - positioning pipes
 - selecting size, type and material of pipe
- may include:
 - repair work
 - bedding materials, including aggregate and sand
 - support systems, which may include:
 - bedding for in-ground trenches
 - concrete shoulders for above ground pipes.

Testing procedures may include:

- air
- ovality
- pressure
- tolerance

RANGE STATEMENT

- visual straightness
- water.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for planning.	<p>1.1. Nature and scope of planning task are identified and confirmed.</p> <p>1.2. Safety (OHS) requirements associated with planning, sizing and documenting the layout of heated, tempered and cold water services and systems, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Work is organised and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.4. Tools and equipment required for planning, sizing and documenting the layout of heated, tempered and cold water services and systems, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.5. Work area in which planning process is to be conducted is prepared.</p>
2. Identify system requirements.	<p>2.1. Information and specifications for required work are obtained and confirmed, if necessary by site inspection using relevant information.</p> <p>2.2. Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.</p> <p>2.3. Quantity, location and type of take off points and fixtures are determined from plans and specifications.</p> <p>2.4. Heated, tempered and cold water services and systems are sized in accordance with relevant Australian standards and regulatory authorities' and workplace requirements.</p>
3. Plan service and system layout.	<p>3.1. Layout of heated, tempered and cold water services and systems to point of discharge are planned in accordance with building plans, relevant Australian standards and workplace procedures.</p> <p>3.2. Materials required are specified and optimised in accordance with relevant Australian standards from the proposed design.</p> <p>3.3. Plans are recorded in accordance with regulatory authorities' and workplace requirements.</p> <p>3.4. Sustainability principles and concepts are applied to work preparation and application.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Restore work area.	<p>4.1. Work area is restored in accordance with workplace procedures.</p> <p>4.2. Tools and equipment used in the process are refurbished and left in accordance with workplace procedures.</p> <p>4.3. Documentation, including work backup, is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - organise and sequence tasks with others
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - regulations, relevant Australian standards, plans, specifications and drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- written skills to:
 - complete workplace documentation, including work backup
 - record plans
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- identifying requirements, including system requirements
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- characteristics and application of water heating systems
- characteristics and application of water pumps and water storage tanks for multiple floor buildings
- drafting techniques, which may include the use of computers and computer-aided design (CAD) software
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of designing, sizing and documenting the layout of heated, tempered and cold water services and systems
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to the designing, sizing and layout of heated, tempered and cold water services and flushing systems, fire hydrant and hose reel systems, including non-drinking water requirements
- relevant statutory and authority requirements related to the designing, sizing and layout of both mains pressure and low pressure flushing devices
- selection for installation of thermostatic mixing valves
- selection for installation of backflow prevention devices
- SI system of measurements
- Australian standards applicable to the service and system
- water treatment processes
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the design, sizing and layout of heated, tempered and cold water services and systems
- applying safety requirements throughout the work sequence, including electrical, personal protective clothing and equipment
- as a minimum, the ability to design, size the layout of:
 - a cold, heated and tempered water supply system for a building with a minimum of six floors (including a non-drinking supply)
 - a flush valve system for a multi-floor complex, for a building with a minimum of six floors
 - a hydrant and hose reel system for a building with a minimum of six floors; ensuring:
 - correct identification of location, design and details of proposed services and systems
 - correct selection and use of appropriate processes, tools and equipment
 - completion of all work to specification
 - compliance with regulations, relevant Australian standards and organisational quality procedures and processes

EVIDENCE GUIDE

- application of sustainability principles and concepts
- communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills

EVIDENCE GUIDE

with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth,

- handling of materials
- hazard control

RANGE STATEMENT

state and territory legislation and regulations and may include:

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - electricity
 - hazardous materials and substances
 - other machines
 - surrounding structure and facilities
 - trip hazards
 - underground services
 - use of tools and equipment
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements
cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Statutory and regulatory authorities include:

- commonwealth, state and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- computers running appropriate CAD software
- drawing instruments
- measuring equipment.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:

RANGE STATEMENT

	<ul style="list-style-type: none"> • building codes • OHS and environmental requirements • plumbing regulations • relevant Australian standards, including AS/NZS3500 National plumbing and drainage set • safe work procedures relating to designing, sizing and documenting the layout of heated and cold water services and systems • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Water services and systems</i> include:	<ul style="list-style-type: none"> • drinking water from a water meter or storage tank to a point of discharge or storage • fire hydrant and hose reel systems • heated and tempered water service to a point of discharge • flushing systems • non-drinking water from a source to a point of discharge or storage.
<i>Point of discharge</i> may be:	<ul style="list-style-type: none"> • fixture • isolating valve.
<i>Materials</i> may include:	<ul style="list-style-type: none"> • building plans • job specifications • manufacturer specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with testing, commissioning and maintaining backflow prevention devices, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment for testing, commissioning and maintaining backflow prevention devices, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient testing, commissioning and maintenance of backflow prevention devices.</p>
2. Identify testing and commissioning requirements.	<p>2.1. Service and system design, and testing and commissioning requirements, are identified and confirmed from job specifications and in accordance with standards and relevant information.</p> <p>2.2. Backflow prevention device specifications and necessary installation materials are identified in accordance with standards, authorities' requirements and job specifications.</p>
3. Test and commission device.	<p>3.1. Installation is checked to ensure device is appropriate and installed in accordance with standards, job specifications, manufacturer recommendations and authorities' requirements.</p> <p>3.2. Operation of device is tested in accordance with job specifications, manufacturer recommendations and authorities' requirements, and adjusted as required.</p> <p>3.3. Documentation is completed in accordance with regulating authorities' requirements.</p>
4. Maintain device.	<p>4.1. Service and maintenance requirements are identified from manufacturer specifications or authorities' requirements.</p> <p>4.2. Replacement components are checked and fitted periodically and as required in accordance with specification.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Restore work area.	<p>4.3. Maintenance and repair of devices are conducted observing manufacturer and authorities' requirements.</p> <p>5.1. Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.</p> <p>5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.</p> <p>5.3. Documentation is completed in accordance with workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- testing, commissioning and maintaining high, medium and low hazard backflow prevention devices in water services.
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- basic hydraulics and mechanics relevant to backflow prevention devices in water services
- characteristics and applications of the materials and backflow prevention devices
- effective isolation procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of testing, commissioning and maintaining backflow prevention devices
- properties of water, including pressure and flow rates
- relationship with other service controls and devices
- relevant statutory and authority requirements related to testing and commissioning backflow prevention devices
- SI system of measurements
- standards applicable to the service
- testing equipment and techniques
- workplace and equipment safety requirements.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated

RANGE STATEMENT

	with:
	<ul style="list-style-type: none"> • hazardous materials and substances • service lines • surrounding structures and facilities • trip hazards • use of tools and equipment • work site visitors and the public • working in proximity to others
<i>Environmental requirements</i> cover water quality management and may include:	<ul style="list-style-type: none"> • use of firefighting equipment • use of first aid equipment • workplace environment and safety. • clean-up protection • stormwater protection • waste management.
<i>Quality assurance</i> requirements may include:	<ul style="list-style-type: none"> • Environment Protection Authority (EPA) • internal company quality assurance policy and risk management strategy • International Standards Organisation • site safety plan • workplace operations and procedures.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • state or territory statutory authority • statutory plumbing authority.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • hand and power tools • test equipment.
<i>Backflow prevention devices</i> include:	<ul style="list-style-type: none"> • check valves • pressure type vacuum breakers • reduced pressure zone devices • registered air gaps (RAG) • registered break tanks (RBT).
<i>Information</i> may include:	<ul style="list-style-type: none"> • charts and hand drawings • diagrams or sketches • instructions issued by authorised organisational or external personnel • manufacturer specifications and instructions • material safety data sheets (MSDS) • memos • organisation work specifications and requirements • regulatory and legislative requirements,

RANGE STATEMENT

particularly those pertaining to:

- building codes
- OHS and environmental requirements
- plumbing regulations
- relevant Australian standards, including AS/NZS3500 National plumbing and drainage set: Part 1.2 Water supply - Acceptable solutions
- safe work procedures relating to commissioning backflow prevention devices
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- approved backflow prevention devices.

CPCPWT4013A Commission and maintain heated water temperature control devices

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to test, commission and maintain heated water temperature control devices, including thermostatic mixing valves in water services.

It covers preparation for work, identification of testing and commissioning requirements, physical testing and commissioning of devices, maintenance of devices and completion of work finalisation processes.

Application of the Unit

Application of the unit Site location for work application will be residential or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Drawings and specifications are obtained.</p> <p>1.2. Safety (OHS) requirements associated with testing, commissioning and maintaining heated water temperature control devices, and workplace environmental requirements, are adhered to throughout the work.</p> <p>1.3. Quality assurance requirements are identified and adhered to in accordance with workplace requirements.</p> <p>1.4. Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements.</p> <p>1.5. Tools and equipment, including personal protective equipment, are selected and checked for serviceability.</p> <p>1.6. Work area is prepared to support efficient commissioning of heated water temperature control devices.</p>
2. Identify testing and commissioning requirements.	<p>2.1. Service and system testing and commissioning requirements are identified from job specifications and in accordance with standards, using relevant information.</p> <p>2.2. Hot water temperature control device specifications and necessary materials are identified in accordance with standards, authorities' requirements and job specifications.</p>
3. Test and commission device.	<p>3.1. Service and system are checked to ensure device is appropriate and installed in accordance with standards, job specifications, manufacturer recommendations and authorities' requirements.</p> <p>3.2. Operation of device is tested for correct flow rate, operation and compliance with specifications, manufacturer recommendations and authorities' requirements, and adjusted as required.</p> <p>3.3. Documentation is completed in accordance with regulating authorities' requirements.</p>
4. Maintain device.	<p>4.1. Maintenance requirements are identified from manufacturer specifications or authorities' requirements.</p> <p>4.2. Replacement components are checked and fitted periodically and as required in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
5. Restore work area.	specification.
	4.3.Maintenance of valves is conducted observing manufacturer and authorities' requirements.
	5.1.Work area is cleared and materials disposed of or recycled in accordance with state and territory legislation and workplace procedures.
	5.2.Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures.
	5.3.Documentation is completed in accordance with workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - access information
 - complete workplace documentation
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - plan and sequence tasks with others
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- testing, commissioning and maintaining heated water temperature control devices, including thermostatic mixing valves, in heated water systems and appliances requiring temperature control
- technological skills to:
 - access and understand site-specific instructions in a variety of media
 - use mobile communication technology.

Required knowledge

Required knowledge for this unit is:

- accessing information and the processes for calculating material requirements
- bacteria in water and its effect on health
- basic hydraulics and mechanics relevant to water temperature control devices and their installation
- characteristics and applications of different types of heated water temperature control valves and devices
- characteristics of materials
- effective isolation procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of commissioning heated water temperature control devices
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to commissioning heated water temperature control devices
- SI system of measurements
- standards applicable to the service
- testing techniques
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to commission heated water temperature devices
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to test, commission and maintain three different types of thermostatic mixing valve, ensuring:
 - correct identification of location, design and details of proposed service
 - correct selection of valve for given application
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes
 - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

minimum task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning

EVIDENCE GUIDE

experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
 - hazardous materials and substances
 - service lines
 - surrounding structures and facilities
 - trip hazards
 - use of tools and equipment
 - work site visitors and the public
 - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

RANGE STATEMENT

Environmental requirements
cover water quality management
and may include:

- clean-up protection
- waste management.

Quality assurance requirements
may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.
- state or territory statutory authority
- statutory plumbing authority.

Statutory and regulatory authorities include:

Tools and equipment may
include:

- hand and power tools
- test equipment.

Information may include:

- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
 - building codes
 - OHS and environmental requirements
 - plumbing regulations
- relevant Australian standards, including AS/NZS3500 National plumbing and drainage set: Part 1.2 Water supply - Acceptable solutions
- safe work procedures relating to commissioning heated water temperature control devices
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- heated water temperature control devices, including thermostatic mixing valves.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret fire systems design concepts, briefs or specifications.	<p>1.1. Design concepts and recommendations for <i>fire systems design projects</i> are gathered and interpreted within project timelines.</p> <p>1.2. Design briefs and specifications for fire systems design projects are gathered and interpreted within project timelines.</p> <p>1.3. The nature, purpose and location of proposed fire systems are determined and outlined.</p>
2. Establish building classifications and hazard levels for fire systems design projects.	<p>2.1. Sizes and types of buildings are determined from initial project documentation.</p> <p>2.2. Functions and occupancies of buildings are determined from initial project documentation.</p> <p>2.3. Clarification of specific building details is sought from the client or relevant contractors and consultants within project timelines.</p> <p>2.4. <i>Building classifications</i> and hazard levels are researched and confirmed according to relevant <i>codes and standards</i>.</p>
3. Determine the applicable legislation, codes and standards.	<p>3.1. The <i>regulatory requirements</i> applicable to each location of fire systems design projects are determined and confirmed as correct.</p> <p>3.2. The codes and standards applicable to the locations and classifications of buildings included in fire systems design projects are determined and confirmed as correct.</p> <p>3.3. The insurance requirements impacting on applicable codes and standards for fire systems projects are determined and confirmed as correct.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- operating computer software packages and systems, including:
 - word processing

REQUIRED SKILLS AND KNOWLEDGE

- spreadsheet
- email
- internet
- proprietary project management software
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- language and literacy skills for:
 - listening to and communicating clearly with clients and contractors
 - participating in meetings, such as negotiations with fire engineering consultant, architect or builder
 - researching current relevant legislation, codes and standards
 - reading and interpreting drawings, including architectural and structural
- developing constructive and cooperative working relationships with project team members, workplace colleagues and clients
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- human psychology, especially fire avoidance behaviour
- fire engineering principles, including:
 - engineered solutions
 - innovative fire systems
 - fire modelling
- computer software functions and operation, including:

REQUIRED SKILLS AND KNOWLEDGE

- word processing
- spreadsheet
- email
- internet
- proprietary project management software
- parametric modelling software, such as Navis-Works or MEP-REVIT
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire systems standards commonly required by building insurers
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
- purpose and operation of fire systems, including:
 - layout
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements

REQUIRED SKILLS AND KNOWLEDGE

- specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the determination and establishment of the scope of a range of fire systems design projects. This would involve correctly interpreting design concepts, briefs and specifications, establishing building classifications, and identifying the relevant applicable legislation, codes and standards.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications
- an understanding of hazard levels and building classifications
- an understanding of the extent of legislation, codes, standards, as well as regulatory and insurance requirements, that may apply to fire systems design projects of different types and in different locations, including:
 - low-rise buildings
 - medium-rise buildings
 - high-rise buildings (over 25 metres)
 - buildings over 45 metres in height
- the ability to conduct research to determine which particular legislation, codes, standards, regulatory and insurance requirements apply to

EVIDENCE GUIDE	
	<p>specific fire systems designs in different types of buildings and locations, including:</p> <ul style="list-style-type: none"> • low-rise buildings • medium-rise buildings • high-rise buildings (over 25 metres) • buildings over 45 metres in height.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather and interpret project initiation documentation.	<p>1.1. Fire systems design briefs, plans and specifications are gathered and checked for currency and completeness.</p> <p>1.2. The specific requirements of engineered or innovative solutions, designed and specified by fire engineers, are interpreted.</p> <p>1.3. Relevant drawings, plans and schedules for the building project are requested, obtained and filed according to workplace and project procedures.</p> <p>1.4. Impacts of building construction and the installation of other services on fire systems design are assessed to pre-empt possible issues.</p>
2. Research the detailed requirements of relevant legislation and regulatory processes.	<p>2.1. Legislation impacting on design compliance in different project locations is investigated and variations in requirements are interpreted and noted.</p> <p>2.2. Regulatory requirements impacting on fire systems designs and project processes in different locations are investigated and specific requirements are interpreted and noted.</p>
3. Research the detailed requirements of applicable codes and standards.	<p>3.1. Applicable codes and standards are gathered and checked for currency.</p> <p>3.2. Requirements relating to specific fire systems in different types of buildings and situations are researched and interpreted.</p> <p>3.3. In situations where more than one code or standard is applicable, the most rigorous requirements are determined and applied.</p>
4. Consult and negotiate to clarify and finalise project details.	<p>4.1. The interpretation of the required fire systems design and intended layout and interconnection are confirmed with relevant personnel.</p> <p>4.2. Consultation and negotiations are undertaken with relevant personnel to resolve conflicts between the design brief and regulatory or insurance requirements.</p> <p>4.3. Consultation and negotiations are undertaken with relevant personnel to resolve conflicts between the design brief, the requirements of building construction, and the installation of the fire systems and other services.</p> <p>4.4. Aesthetic requirements relating to the location of fire system components and installation methods are</p>

ELEMENT	PERFORMANCE CRITERIA
	clarified and solutions negotiated.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
 - formal document control
 - formal amendments, including:
 - history
 - transmittal notices
- editing and creating drawings, including:
 - layout
 - section
 - detail
 - external references
 - freezing layers
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for calculating dimensions
- language and literacy skills for:
 - listening to and communicating clearly with colleagues and contractors
 - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
 - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
 - letter writing, especially to formalise:

REQUIRED SKILLS AND KNOWLEDGE

- recognition of conflicts and errors on drawings supplied by other service contractors
- agreements with other services, for example whichever service is fitted last must fit around existing services
- updating knowledge of products, software systems and technology
- reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
- researching and evaluating competing technologies in new products and systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- fire engineering principles, including:
 - engineered solutions
 - innovative fire systems
 - fire modelling

REQUIRED SKILLS AND KNOWLEDGE

- parametric modelling software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- regulatory requirements, systems and processes
- protection requirements for different buildings
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
- purpose and operation of fire systems, including:
 - layout
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation

REQUIRED SKILLS AND KNOWLEDGE

- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
 - access requirements
 - health and safety requirements
- fluid mechanics and hydraulics relating to:
 - water supply
 - pressure
 - pump selection
 - tank selection
 - pressure vessels
 - pipe range
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the establishment of the detailed design requirements of a range of fire systems design projects, including discretionary client requirements. The activity should also include researching and interpreting the specifics of applicable legislation, regulatory processes and relevant codes and standards for a range of types of buildings in different project locations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- an ability to interpret the detailed requirements of fire systems design specifications
- an understanding of the extent of compliance requirements and procedures to which fire systems design projects are subject, for a range of projects, including:
 - low-rise buildings
 - medium-rise buildings
 - high-rise buildings (over 25 metres)
 - buildings over 45 metres in height
- the ability to discern mandatory and discretionary requirements and to research the detailed compliance requirements for a range of fire systems design projects in different locations
- the ability to gather, research and interpret information that may differ in only the slightest of details from one design or location to

relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fire systems may include:

- water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
- detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems.

Engineered or innovative solutions may include those defined in the Building Code of Australia as:

- 'solutions which comply with the Performance Requirements other than by reason of satisfying the Deemed-to-Satisfy Provisions'.

Relevant drawings, plans and schedules for the building project may include:

- drawings, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
 - layout
 - section

RANGE STATEMENT	
	<ul style="list-style-type: none"> • detail • external references • project plan • project schedule • design brief • design specifications.
Legislation may include:	<ul style="list-style-type: none"> • international, state and territory, or local legislation relevant to various sites of major fire systems design projects and impacting on detailed designs for specific locations.
Regulatory requirements may include:	<ul style="list-style-type: none"> • mandatory requirements • design approval • fire brigade requirements • certification of installation • infrastructure supply regulations.
Codes and standards may include:	<ul style="list-style-type: none"> • the Building Code of Australia • the Plumbing Code of Australia • Australian standards for fire systems • international standards for fire systems • other fire system standards commonly required by building insurers.
Types of buildings and situations may include:	<ul style="list-style-type: none"> • different types of buildings, including: <ul style="list-style-type: none"> • residential • commercial • industrial • mixed classification • buildings in different locations, including: <ul style="list-style-type: none"> • local • involving more than one state or territory • international • classifications of buildings in the Building Code of Australia: <ul style="list-style-type: none"> • occupancy classes • multiple classifications • parts with more than one classification • fire hazard properties of materials and smoke growth rate • classifications of buildings specified in relevant Australian or international standards

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish relevant project management details.	<p>1.1. Project management roles, responsibilities and lines of communication for fire systems design projects are identified and agreed with project team members in line with project timelines.</p> <p>1.2. Relevant project scheduling and sequencing information is identified and confirmed.</p> <p>1.3. Project file-sharing and communication systems and tools are identified and any necessary familiarisation activities are undertaken to ensure efficient and effective operation.</p>
2. Establish procedures for initiating fire systems design projects.	<p>2.1. Project and file-naming systems are established according to workplace and project requirements.</p> <p>2.2. Efficient and effective document filing and storage systems are established according to workplace and project requirements.</p> <p>2.3. Systems for efficient tracking and filing of project communications are established according to workplace and project requirements.</p> <p>2.4. A system is established for ensuring that relevant project documentation is requested, received, named and filed according to workplace procedures.</p>
3. Develop a plan for setting up fire systems design projects.	<p>3.1. Procedures for setting up correct CAD backgrounds are established according to workplace and project requirements.</p> <p>3.2. Systematic processes for identifying and importing the correct layer drawings into CAD are established according to workplace and project requirements.</p> <p>3.3. Systematic processes for naming, notating and filing drawings are established according to workplace and project requirements.</p>
4. Develop a plan and methodology for designing fire systems.	<p>4.1. Steps and timeframes in the design process for fire systems are established according to workplace and project requirements.</p> <p>4.2. Workplace quality assurance checks to ensure accuracy and validity of design are determined and procedures are established to ensure that these are conducted.</p> <p>4.3. Stages where regulatory or other approval is required for the design are determined and procedures are established to ensure that these are obtained.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Develop a plan and methodology for finalising fire systems design projects.	<p>5.1.Steps and timeframes in the fabrication support process are established according to workplace and project requirements.</p> <p>5.2.Steps and timeframes in the installation support process are established according to workplace and project requirements.</p> <p>5.3.<i>Final drawing and documentation requirements</i> are established according to workplace and project requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate naming and filing of drawings, including:
 - formal document control
 - formal amendments, including:
 - history
 - transmittal notices
- editing and creating drawings, including:
 - layout
 - section
 - detail
 - external references
 - freezing layers
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
- numeracy skills for calculating timeframes
- language and literacy skills for:
 - listening to and communicating clearly with colleagues and contractors
 - participating in meetings, such as negotiations with fire engineering

REQUIRED SKILLS AND KNOWLEDGE

- consultant, architect, builder or other service contractors
- reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers, fitters and clients
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- computer software functions and operation, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems

REQUIRED SKILLS AND KNOWLEDGE

- purpose and operation of fire systems, including:
 - layout
 - special products and hazards
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- contractual processes

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

EVIDENCE GUIDE	
	<p>This unit could be assessed as an activity involving the development of a project plan and methodology for several different types of fire systems design projects. This should include the establishment of team member responsibilities, administrative and communications procedures, document management, scheduling, timelines and arrangements for project finalisation activities.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.</p> <p>In particular the person should demonstrate:</p> <ul style="list-style-type: none"> • an understanding of the roles of project team members • appropriate consultation and negotiation with project team members, including lead contractor, architect and other services' designers and installation contractors • an understanding of project management processes and the ability to use project management tools effectively for scheduling, communications and file sharing • the ability to plan, organise and conduct fire systems design activities, including installation support and finalisation in line with project timelines, and compliance and quality requirements for a range of fire systems design projects, including: <ul style="list-style-type: none"> • low-rise buildings • medium-rise buildings • high-rise buildings (over 25 metres) • buildings over 45 metres in height.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • project documentation, including plans, schedules, design briefs and specifications • copies of codes, standards, legislation and

3. Analyse and specify the interaction of fire systems.	<p>3.1. The required interactions for effective operation of fire systems in different types of buildings and situations are analysed and specified.</p> <p>3.2. The interfaces that affect interactions between fire systems in different types of buildings and situations are identified and examined.</p> <p>3.3. Suitable fire detection and suppression systems are selected for a range of buildings and situations and the interactions and interfaces required for effective performance are specified.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to assess performance features and suitability of system technologies and components
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary hydraulic calculation software
 - proprietary estimating software
 - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- language and literacy skills for:
 - listening to and communicating clearly with colleagues, installers, suppliers and contractors
 - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
 - updating knowledge of products, software systems and technology
 - reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
 - researching and evaluating competing technologies in new products and systems
- numeracy skills to evaluate cost-effectiveness of various systems and components
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers, manufacturers and industry professionals who may supply information relevant to research and evaluation activities
- organising own work, including creating personal systems and checklists for planning, managing and checking work

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- workplace design tools and processes
- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- computer software functions and operation, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary hydraulic calculation software
 - proprietary estimating software
 - parametric modelling software, such as Navis-Works or MEP-REVIT
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)

REQUIRED SKILLS AND KNOWLEDGE

- fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
- purpose and operation of fire systems, including:
 - layout
 - high hazard products
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- water supplies, including:
 - common water sources
 - conservation requirements
 - in-ground reticulation
 - booster configurations
- fluid mechanics and hydraulics relating to:
 - water supply
 - pressure
 - pump selection
 - tank selection
 - pressure vessels
 - pipe range
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation
- principles of organic and inorganic chemistry
- principles of physical sciences, including:
 - Boyle's Law
 - Charles' Law
 - Dalton's Law
 - Henry's Law
- principles of thermodynamics, including:
 - effects of heat

REQUIRED SKILLS AND KNOWLEDGE

- stratification of gases
- smoke and heat dynamics
- electrical and electronics theory, including:
 - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
 - effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
 - relationship between voltage drops around a circuit and applied voltage
 - definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
 - layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
 - basic operation of common electronic and electrical components used in fire detection and warning systems
 - basic operation of communication protocols on addressable systems, peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- communication technologies, including:
 - data transfer
 - networking
 - communication protocols
 - radio frequency technologies
- acoustics and speech intelligibility for occupant warning systems
- human psychology, especially fire avoidance behaviour
- financial management, including:
 - budgeting
 - cost-effectiveness

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up fire systems design drawings.	<p>1.1. Relevant <i>project drawings and documentation</i> are requested, received, named and filed according to workplace procedures.</p> <p>1.2. Drawings are cleaned to leave minimal essential information.</p> <p>1.3. Layers showing designs of other services are imported into clean architectural or structural drawings.</p> <p>1.4. Details from drawings of the floor of the level above are added, if these affect the design.</p> <p>1.5. The detailed design drawings are named, filed and backed up according to workplace procedures.</p>
2. Lay out the fire sprinkler system design.	<p>2.1. A site visit is conducted if possible to confirm dimensions and assess installation risks and constraints.</p> <p>2.2. The exact location of sprinklers is determined and notated on the drawing according to relevant <i>codes and standards</i>.</p> <p>2.3. The most <i>efficient and workable layout and location of sprinkler system components</i> are determined and notated on the drawing according to workplace procedures.</p> <p>2.4. Dimensions are calculated, checked and notated on the drawing according to workplace procedures.</p>
3. Submit drawings for approval and finalise design process.	<p>3.1. Fire sprinkler system design drawings are submitted to relevant personnel within the scheduled timeframe.</p> <p>3.2. Required amendments to design drawings are made or <i>negotiated</i> as required.</p> <p>3.3. Final approved design drawings are processed and distributed according to project and workplace requirements.</p> <p>3.4. <i>Fittings and components</i> are selected and ordered according to project and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
 - formal document control
 - formal amendments, including:
 - history
 - transmittal notices
- editing and creating drawings, including:
 - layout
 - section
 - detail
 - external references
 - freezing layers
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary hydraulic calculation software
 - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for:
 - calculating dimensions and pipe lengths
 - performing fluid mechanic calculations
- language and literacy skills for:
 - listening to and communicating clearly with colleagues, installers, suppliers and contractors
 - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
 - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
 - letter writing, especially to formalise:
 - recognition of conflicts and errors on drawings supplied by other service contractors
 - agreements with other services, for example whichever service is fitted last must fit around existing services

REQUIRED SKILLS AND KNOWLEDGE

- updating knowledge of products, software systems and technology
- reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
- researching and evaluating competing technologies in new products and systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- computer software functions and operation, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software

REQUIRED SKILLS AND KNOWLEDGE

- proprietary hydraulic calculation software
 - parametric modelling software, such as Navis-Works or MEP-REVIT
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components for water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
- purpose and operation of fire systems, including:
 - layout
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
 - architect

REQUIRED SKILLS AND KNOWLEDGE

- lead contractor
- mechanical engineer
- hydraulic engineer
- electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
 - access requirements
 - health and safety requirements
- fluid mechanics and hydraulics relating to pipe range
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
 - financial calculations, for example to assess cost-effectiveness of fire systems
 - trigonometry, for example to amend dimensions of pipe allowing for fittings
 - flow calculations, including:
 - area of operations
 - discharge rates and quantities
 - discharge times
 - pressure gain and loss
 - K-factors
 - pressure, temperature and volume relationship
 - Hazen-Williams equation
 - Darcy-Weisbach equation
 - computational fluid dynamics
- principles of organic and inorganic chemistry
- principles of physical sciences, including:
 - Boyle's Law
 - Charles' Law
 - Dalton's Law
 - Henry's Law
- principles of thermodynamics, including:
 - effects of heat
 - stratification of gases
 - smoke and heat dynamics

REQUIRED SKILLS AND KNOWLEDGE

- human psychology, especially fire avoidance behaviour
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the effective performance and application of principles relating to the design of fire sprinkler systems for a range of different types of buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to:
 - read and interpret a range of design drawings
 - create, manipulate, save, file and share design drawings
 - identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on fire sprinkler system designs
 - interpret and apply fire engineer's designs for alternative solutions
- an understanding of technical issues impacting on fire sprinkler system designs
- an understanding of the relevant regulatory approval and fire systems design certification processes
- the ability to produce fully compliant designs for fire sprinkler systems which also meet client requirements, including:
 - wet pipe
 - dry pipe

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • pre-action • early suppression fast response (ESFR) • combination systems • the ability to produce fully compliant designs for fire sprinkler systems for a range of types of sites, including: <ul style="list-style-type: none"> • low-rise buildings • medium-rise buildings • high-rise buildings (over 25 metres) • buildings over 45 metres in height.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • design briefs, drawings, plans and specifications • copies of codes, standards, legislation and regulatory requirements • access to information and communications technology - hardware and software • access to relevant manufacturer's information regarding fittings and components.
Method of assessment	<p>Assessment must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to</p>

EVIDENCE GUIDE

	<p>modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Project drawings and documentation</i> may include:	<ul style="list-style-type: none"> • architectural • structural • mechanical • electrical • hydraulic • fire engineer's or estimator's specifications.
<i>Codes and standards</i> may include:	<ul style="list-style-type: none"> • the Building Code of Australia • current relevant Australian standards for fire systems • current relevant international standards for fire systems • codes and standards stipulated by the building insurer.
<i>Efficient and workable layout and location</i> relate to:	<ul style="list-style-type: none"> • selection of cost-effective components and materials • consideration of: <ul style="list-style-type: none"> • penetrations • conflict with other services • occupational health and safety risks • access constraints • installation problems

RANGE STATEMENT	
	<ul style="list-style-type: none"> • aesthetic requirements • efficiencies to facilitate work on site and reduce labour costing.
<i>Sprinkler system components</i> may include:	<ul style="list-style-type: none"> • discharge nozzles • pipework • brackets • system valves • zone valves • fire panels • specific components for: <ul style="list-style-type: none"> • wet pipe sprinkler systems • deluge and drencher systems • dry pipe sprinkler systems • pre-action sprinkler systems • early suppression fast response (ESFR) systems.
<i>Negotiations</i> regarding amendments to design drawings may arise due to:	<ul style="list-style-type: none"> • non-compliance with applicable legislation, codes and standards • impact on installation risks and constraints • impact on cost-effectiveness.
<i>Fittings and components</i> may include:	<ul style="list-style-type: none"> • hangers • sprinkler heads • elbows • tees • control valves.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up fire systems design drawings.	<ul style="list-style-type: none">1.1. Relevant <i>project drawings and documentation</i> are requested, received, named and filed according to workplace procedures.1.2. Drawings are cleaned to leave minimal essential information.1.3. Layers showing designs of other services are imported into clean architectural or structural drawings.1.4. Details from drawings of the floor of the level above are added, if these affect the design.1.5. The detailed design drawings are named, filed and backed up according to workplace procedures.
2. Lay out the hydrant and hose reel design.	<ul style="list-style-type: none">2.1. A site visit is conducted if possible to confirm dimensions and assess installation risks and constraints.2.2. The exact location of hydrants and hose reels is determined and notated on the drawing according to relevant <i>codes and standards</i>.2.3. The most <i>efficient and workable layout and location of hydrant and hose reel system components</i> are determined and notated on the drawing according to workplace procedures.2.4. Dimensions are calculated, checked and notated on the drawing according to workplace procedures.
3. Submit drawings for approval and finalise design process.	<ul style="list-style-type: none">3.1. Fire hydrant and hose reel system design drawings are submitted to relevant personnel within the scheduled timeframe.3.2. Required amendments to design drawings are made or <i>negotiated</i> as required.3.3. Final approved design drawings are processed and distributed according to project and workplace requirements.3.4. Fittings and components are selected and ordered according to project and workplace requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
 - formal document control
 - formal amendments, including:
 - history
 - transmittal notices
- editing and creating drawings, including:
 - layout
 - section
 - detail
 - external references
 - freezing layers
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary hydraulic calculation software
 - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for:
 - calculating dimensions, pipe lengths and piping friction loss
 - performing fluid mechanic calculations
- language and literacy skills for:
 - listening to and communicating clearly with colleagues, installers, suppliers and contractors
 - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
 - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
 - letter writing, especially to formalise:
 - recognition of conflicts and errors on drawings supplied by other service contractors
 - agreements with other services, for example whichever service is fitted last must fit around existing services

REQUIRED SKILLS AND KNOWLEDGE

- updating knowledge of products, software systems and technology
- reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
- researching and evaluating competing technologies in new products and systems
- report writing
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
 - formal document control
 - formal amendments, including:
 - history
 - transmittal notices
- editing and creating drawings, including:
 - layout
 - section
 - detail
 - external references
 - freezing layers
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary estimating software
 - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- using BASIC computer programming language to write logic for electronic system interfaces
- numeracy skills for calculating:
 - voltage drops
 - battery capacity

REQUIRED SKILLS AND KNOWLEDGE

- battery back-up
- power supplies
- cabling sizes and types
- language and literacy skills for:
 - listening to and communicating clearly with colleagues, installers, suppliers and contractors
 - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
 - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
 - letter writing, especially to formalise:
 - recognition of conflicts and errors on drawings supplied by other service contractors
 - agreements with other services, for example whichever service is fitted last must fit around existing services
 - updating knowledge of products, software systems and technology
 - reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
 - researching and evaluating competing technologies in new products and systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:

REQUIRED SKILLS AND KNOWLEDGE

- fire behaviour and dynamics
- impact of fire on structures and materials
- products of combustion
- fire control strategies
- fire retardants
- fire detection technologies
- fire suppression technologies
- fire containment
- computer software functions and operation, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary estimating software
 - parametric modelling software, such as Navis-Works or MEP-REVIT
- BASIC computer programming language
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire detection and warning systems technology and components, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
- purpose and operation of fire systems, including:
 - layout
 - special products and hazards
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation

REQUIRED SKILLS AND KNOWLEDGE

- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
 - access requirements
 - health and safety requirements
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation
- mathematic principles, equations and calculation methods, including:
 - financial calculations, for example to assess cost-effectiveness of fire systems
 - electrical calculations, including:
 - voltage drops
 - battery capacity
 - battery back-up
 - power supplies
 - cabling sizes and types
- electrical and electronics theory, including:
 - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation

REQUIRED SKILLS AND KNOWLEDGE

- effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
- relationship between voltage drops around a circuit and applied voltage
- definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
- layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
- basic operation of common electronic and electrical components used in fire detection and warning systems
- basic operation of communication protocols on addressable systems, peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- communication technologies, including:
 - data transfer
 - networking
 - communication protocols
 - radio frequency technologies
- acoustics and speech intelligibility for occupant warning systems
- human psychology, especially fire avoidance behaviour
- financial management, including:
 - budgeting
 - cost-effectiveness
- contractual processes

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity

EVIDENCE GUIDE	
	<p>involving the effective performance and application of principles relating to the design of fire detection and occupant warning systems for a range of different types of buildings.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.</p> <p>In particular the person should demonstrate:</p> <ul style="list-style-type: none"> • the ability to: <ul style="list-style-type: none"> • read and interpret a range of design drawings • create, manipulate, save, file and share design drawings • identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on fire detection and warning system designs • interpret and apply fire engineer's designs for alternative solutions • a comprehensive understanding of technical issues impacting on fire detection and occupant warning system designs • a comprehensive understanding of the relevant regulatory approval and fire systems design certification processes • the ability to produce fully compliant designs which also meet client requirements for fire detection and warning systems for a range of types of sites, including: <ul style="list-style-type: none"> • low-rise buildings • medium-rise buildings • high-rise buildings (over 25 metres) • buildings over 45 metres in height.
<p>Context of and specific resources for assessment</p>	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • relevant design briefs, drawings, plans and

EVIDENCE GUIDE	
	<p>specifications</p> <ul style="list-style-type: none"> • copies of relevant codes, standards, legislation and regulatory requirements • access to relevant information and communications technology - hardware and software • access to relevant manufacturer's information regarding fittings and components.
Method of assessment	<p>Assessment must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating</p>

RANGE STATEMENT	
conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<i>Project drawings and documentation</i> may include:	<ul style="list-style-type: none"> • architectural • structural • mechanical • electrical • hydraulic • water-based fire suppression systems • fire engineer's or estimator's specifications.
<i>Codes and standards</i> may include:	<ul style="list-style-type: none"> • the Building Code of Australia • current relevant Australian standards for fire systems • current relevant international standards for fire systems • codes and standards stipulated by the building insurer.
<i>Efficient and workable layout and location</i> relate to:	<ul style="list-style-type: none"> • selection of cost-effective components and materials • consideration of: <ul style="list-style-type: none"> • penetrations • conflict with other services • interfaces with other services • occupational health and safety risks • access constraints • installation problems • aesthetic requirements • efficiencies to facilitate work on site and reduce labour costing.
<i>Detection and warning system components</i> may include:	<ul style="list-style-type: none"> • components for: <ul style="list-style-type: none"> • emergency warning and intercommunications systems (EWIS) • fire detection and alarm systems • smoke control systems • emergency lighting systems • fire alarm and control panels: <ul style="list-style-type: none"> • conventional • addressable • detectors, including:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • heat • smoke • flame sensing • spot • projected beam • aspiration type • power source • batteries • cabling.
<i>Electrical calculations</i> may include the calculation of:	<ul style="list-style-type: none"> • the voltage drop in a wiring path given the required electrical parameters • battery capacity requirements given the required performance parameters • power supply and battery charge capacity requirements given the required performance parameters • Cable Services Australia (CSA) cable size and cabling medium type given the required electrical performance parameters • total power supply consumption requirements of field equipment in normal and active (alarm) state given the required electrical performance parameters of equipment installed • the number of points, circuits and zones on a system given the required performance parameters of a wiring path.
<i>Negotiations</i> regarding amendments to design drawings may arise due to:	<ul style="list-style-type: none"> • non-compliance with applicable legislation, codes and standards • impact on installation risks and constraints • impact on cost-effectiveness.
<i>Fittings and components</i> may include:	<ul style="list-style-type: none"> • smoke alarms • smoke detectors • manual call buttons • fire alarm panels • fireproof cable • batteries • amplifiers • speakers • emergency lighting.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm water-based fire systems designs.	<p>1.1. Relevant <i>project drawings and documentation</i> are requested, received, named and filed according to workplace procedures.</p> <p>1.2. A site visit is conducted if possible to confirm details and dimensions and to assess water supply installation risks and constraints.</p> <p>1.3. The exact location of <i>fire system components</i> is notated on detailed design drawings according to relevant <i>codes and standards</i>.</p> <p>1.4. The detailed design drawings are named, filed and backed up according to workplace procedures.</p>
2. Calculate pipe sizes and pump and tank requirements.	<p>2.1. Hydraulic calculations are completed to assess correct pressure requirements for the effective operation of water-based fire systems.</p> <p>2.2. Water flow and pressure test results are conducted and/or analysed to establish the minimum levels of available supply.</p> <p>2.3. Shortfalls in pressure are determined and the sizes of pumps and tanks required are calculated.</p> <p>2.4. Options for cost-effective and efficient solutions are considered with reference to manufacturer specifications for the performance of components and according to workplace policies.</p>
3. Lay out the water supply design.	<p>3.1. The most <i>efficient and workable layout and location</i> of <i>water supply components</i> are determined and notated on the drawings according to workplace procedures.</p> <p>3.2. Dimensions are calculated, checked and notated on the drawings according to workplace procedures.</p>
4. Submit drawings for approval and finalise design process.	<p>4.1. Water supply design drawings are submitted to relevant personnel within the scheduled timeframe.</p> <p>4.2. Required amendments to design drawings are made or <i>negotiated</i> as required.</p> <p>4.3. Final approved design drawings are processed and distributed according to project and workplace requirements.</p> <p>4.4. Fittings and components are selected and ordered according to project and workplace requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
 - formal document control
 - formal amendments, including:
 - history
 - transmittal notices
- editing and creating drawings, including:
 - layout
 - section
 - detail
 - external references
 - freezing layers
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary hydraulic calculation software
 - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for:
 - calculating:
 - dimensions
 - pipe lengths
 - piping friction loss
 - tank size
 - pump capacity
 - motor output
 - performing fluid mechanic calculations
- language and literacy skills for:
 - listening to and communicating clearly with colleagues, installers, suppliers and contractors
 - participating in meetings, such as negotiations with fire engineering

REQUIRED SKILLS AND KNOWLEDGE

- consultant, architect, builder or other service contractors
- researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
- letter writing, especially to formalise:
- recognition of conflicts and errors on drawings supplied by other service contractors
- agreements with other services
- updating knowledge of products, software systems and technology
- reading and interpreting drawings, plans and specifications, including:
 - fire systems design
 - mechanical
 - hydraulic
 - electrical
- researching and evaluating competing technologies in new products and systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- computer software functions and operation, including:
 - word processing

REQUIRED SKILLS AND KNOWLEDGE

- spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary hydraulic calculation software
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
- fire system water supply technology and components, including:
 - electric pumps
 - diesel pumps
 - tanks
 - pressure vessels
 - booster configurations
- purpose and operation of fire systems, including:
 - layout
 - high hazard products
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- characteristics and limitations of products and materials used in water supplies for

REQUIRED SKILLS AND KNOWLEDGE

- fire systems and issues relating to material compatibility
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems, fire systems' water supplies and other services
- installation methods, including:
 - access requirements
 - health and safety requirements
- water supplies, including:
 - common water sources
 - conservation requirements
 - in-ground reticulation
 - booster configurations
- fluid mechanics and hydraulics relating to:
 - water supply
 - pressure
 - pump selection
 - tank selection
 - pressure vessels
 - pipe range
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
 - financial calculations, for example to assess cost-effectiveness of water supply

REQUIRED SKILLS AND KNOWLEDGE

- trigonometry, for example to amend dimensions of pipe allowing for fittings
- flow calculations, including:
 - area of operations
 - discharge rates and quantities
 - discharge times
 - pressure gain and loss
 - K-factors
 - pressure, temperature and volume relationship
 - Hazen-Williams equation
 - Darcy-Weisbach equation
 - computational fluid dynamics
- basic principles of organic and inorganic chemistry
- basic principles of physical sciences, including:
 - Boyle's Law
 - Charles' Law
 - Dalton's Law
 - Henry's Law
- contractual processes

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	<p>This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.</p> <p>This unit could be assessed as an activity involving the effective performance and application of principles relating to the design of water supplies for fire systems for a range of different types of buildings.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.</p> <p>In particular the person should demonstrate:</p> <ul style="list-style-type: none"> • an understanding of fluid dynamics, hydraulics and the calculations required for the design of water supplies for fire systems • the ability to: <ul style="list-style-type: none"> • read and interpret a range of design drawings • create, manipulate, save, file and share design drawings • identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on the design of water supplies for fire systems • interpret and apply fire engineer's designs for alternative solutions • the ability to produce fully compliant designs which meet requirements for water supplies for fire systems in a range of types of buildings, including: <ul style="list-style-type: none"> • low-rise buildings

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • medium-rise buildings • high-rise buildings (over 25 metres) • buildings over 45 metres in height.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Produce installation drawings and documentation.	<p>1.1. Approved detailed design drawings of fire systems are checked to ensure that <i>installation implications</i> of required changes have been addressed.</p> <p>1.2. Approved detailed design drawings of fire systems are used to create installation drawings.</p> <p>1.3. Detailed design specifications of fire systems are used to notate the installation drawings with the location of specific components of the fire system.</p>
2. Review drawings prior to installation.	<p>2.1. Ongoing changes to detailed structural or other services' design drawings are regularly <i>monitored</i> and recorded.</p> <p>2.2. The impact of structural and other services design changes on fire systems design and installation is considered and appropriate solutions are proposed and negotiated with relevant project team members, as required.</p> <p>2.3. Fire systems installation drawings and documentation are amended to incorporate accepted solutions according to workplace and project procedures.</p>
3. Resolve on-site installation problems.	<p>3.1. Notifications of <i>on-site installation issues</i> are recorded, prioritised and considered in line with project timeframes.</p> <p>3.2. Appropriate solutions are proposed and negotiated with relevant project team members, as required.</p> <p>3.3. Fire systems installation drawings and documentation are amended to incorporate accepted solutions.</p> <p>3.4. Solutions are communicated to on-site fire system installation team members and amended documentation is supplied according to workplace and project procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
 - formal document control
 - formal amendments, including:
 - history
 - transmittal notices
- editing and creating drawings, including:
 - layout
 - section
 - detail
 - external references
 - freezing layers
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- fluent detailed hand-drawing and sketching ability to convey information to on-site workers
- numeracy skills for performing relevant system calculations
- language and literacy skills for:
 - listening to and communicating clearly with colleagues, installers, suppliers and contractors
 - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
 - letter writing, especially to formalise:
 - recognition of conflicts and errors on drawings supplied by other service contractors
 - agreements with other services, for example whichever service is fitted last must fit around existing services
 - reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for

REQUIRED SKILLS AND KNOWLEDGE

- planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- parametric modelling software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components, such as:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems

REQUIRED SKILLS AND KNOWLEDGE

- dry pipe sprinkler systems
- pre-action sprinkler systems
- early suppression fast response (ESFR)
- hydrants, hose reels and monitors
- water supply tanks
- fire pump sets
- detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
- purpose and operation of fire systems, including:
 - layout
 - special products and hazards
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services

REQUIRED SKILLS AND KNOWLEDGE

- installation methods, including:
 - access requirements
 - health and safety requirements
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation
- mathematic principles, equations and calculation methods relevant to the system type

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the preparation of accurate documentation and provision of ongoing support for the installation of fire systems in a range of projects and buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to:
 - read and interpret a range of design drawings
 - create, manipulate, save, file and share design drawings
- an understanding of technical issues impacting

EVIDENCE GUIDE	
	<p>on the installation of fire systems</p> <ul style="list-style-type: none"> • high-level communication skills to interact with on-site installers, and other service contractors and consultants • an understanding of the relevant regulatory approval and fire systems design certification processes • the ability to problem-solve and negotiate to produce appropriate design solutions for issues and contingencies encountered at the installation phase of a range of fire systems in different buildings, including: <ul style="list-style-type: none"> • low-rise buildings • medium-rise buildings • high-rise buildings (over 25 metres) • buildings over 45 metres in height.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • design briefs, drawings, plans and specifications • copies of codes, standards, legislation and regulatory requirements • access to information and communications technology - hardware and software • access to manufacturer's information regarding fittings and components.
Method of assessment	<p>Assessment must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to

EVIDENCE GUIDE	
	be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Installation implications</i> may include:	<ul style="list-style-type: none"> on-site health and safety risks, such as: <ul style="list-style-type: none"> manual handling confined spaces working at height constraints relating to access, such as: <ul style="list-style-type: none"> height of pipe length of pipe distance from beams distance from walls.
<i>Monitoring</i> project drawings and documentation may involve:	<ul style="list-style-type: none"> regular review of project management software tools and systems regular review of emails telephone communication with project team, including: <ul style="list-style-type: none"> architect

RANGE STATEMENT	
	<ul style="list-style-type: none">• lead contractor• other service contractors.
<i>On-site installation issues</i> may include:	<ul style="list-style-type: none">• discrepancies between designed and actual structure• discrepancies between designed and actual systems for other services, including:<ul style="list-style-type: none">• mechanical• hydraulic• electrical• errors in supplied materials and components• scheduling and sequencing changes• problems with access to installation locations of fire system components.

CPCSFS5013A Support commissioning processes and finalise fire systems design projects

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit of competency specifies the outcomes required to confirm the post-installation details of fire systems and produce amended drawings and documentation, and to prepare detailed commissioning procedures and specifications. The unit also covers reviewing issues and solutions arising during fire systems design projects and making subsequent improvements to fire systems design project processes.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency supports the role of fire systems' designers with responsibility for producing 'as built' drawings, block plans, tactical fire plans, and operations and maintenance manuals for fire systems.</p> <p>Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Produce accurate final drawings for fire systems.	<p>1.1. Progressive changes to fire systems design drawings resulting from construction phase issues are documented according to workplace and project procedures.</p> <p>1.2. Site visits are conducted, if possible, to confirm and record final component sizes, locations and building dimensions.</p> <p>1.3. Accurate 'as built' drawings are prepared, named, notated, filed and submitted according to workplace procedures and project requirements.</p> <p>1.4. Appropriate block plans and tactical fire plans are produced as required.</p>
2. Prepare commissioning details, and operation and maintenance manuals for fire systems.	<p>2.1. <i>System performance requirements and commissioning procedures and specifications</i> are prepared according to workplace and project requirements.</p> <p>2.2. <i>Standard operating procedures</i> for the fire system are prepared based on relevant <i>codes and standards</i> and component manufacturer's recommendations.</p> <p>2.3. <i>Regular maintenance procedures</i> for the fire system are produced based on component manufacturer's recommendations and relevant regulatory requirements.</p> <p>2.4. Operation and maintenance <i>signage</i> is installed, as required according to relevant workplace, project and regulatory requirements.</p>
3. Review and evaluate the fire systems design process.	<p>3.1. Project documentation is reviewed and processed, and issues that arose and their solutions are noted.</p> <p>3.2. Project issues and solutions are discussed with relevant workplace personnel and process improvement strategies are explored.</p> <p>3.3. Project planning, methodologies and quality assurance systems are amended to incorporate agreed process improvement strategies.</p>

relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

System performance requirements may include:

- for water-based systems:
 - speed of response
 - time taken to reach full-flow conditions
 - area of coverage
 - nozzle locations
 - droplet profile and characteristics
 - duration of response
- for detection and warning systems:
 - correct sensors
 - sensitivity to fire size
 - speed of detection and response
 - fire location coverage.

Commissioning procedures and specifications may include:

- procedures listed in Australian standards, such as:
 - AS2118.1-2006 Section 15
 - AS1670.1-2004 Section 7
 - AS2118 Automatic fire sprinkler systems
 - AS2419 Fire hydrant installations
- U.S. National Fire Protection Association (NFPA) codes
- material safety data sheets (MSDS)
- manufacturer recommendations.

Standard operating procedures may include:

- site-specific workplace standard operating procedures

RANGE STATEMENT	
	<ul style="list-style-type: none"> • work method statements • job safety advice • quality assurance documentation.
<i>Codes and standards</i> may include:	<ul style="list-style-type: none"> • the Building Code of Australia • current relevant Australian standards for fire systems • current relevant international standards for fire systems • codes and standards stipulated by the building insurer.
<i>Regular maintenance procedures</i> may include:	<ul style="list-style-type: none"> • site-specific maintenance instructions • manufacturer's specific maintenance instructions • local government regulations, such as: <ul style="list-style-type: none"> • part 59, South Australia • Australian standards, such as: <ul style="list-style-type: none"> • AS1851-2005 • material safety data sheets (MSDS).
<i>Signage</i> may include:	<ul style="list-style-type: none"> • technical design data, including systems performance and layout on a block plan • pressure switch setting plaque • interface cause and effect drawing • operating instructions • manufacturer's technical plates or labels • signs in the pump room for water-based systems, including: <ul style="list-style-type: none"> • system pressure • town mains pressure • pump cut-in pressure • pressure gauge schedule • block plans • signage for detection and warning systems, including: <ul style="list-style-type: none"> • system interface matrix • block plans • device lists.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for annual fire systems certification inspections.	<p>1.1. Annual fire systems inspections are scheduled in a timely manner and in consultation with relevant stakeholders, as required.</p> <p>1.2. Current building plans are obtained and reviewed and modifications made to the building since the last inspection are identified and noted.</p> <p>1.3. Information regarding the current and historical legislation, codes and standards applicable to fire systems is reviewed and used to inform inspection planning.</p> <p>1.4. Information regarding the validity of fire systems' compliance documentation is reviewed and used to inform inspection planning.</p> <p>1.5. Fire systems certification inspections are planned to ensure efficient and comprehensive implementation.</p>
2. Conduct annual fire systems certification inspections.	<p>2.1. Fire systems are inspected concurrently in each area of the building in accordance with organisational and regulatory requirements.</p> <p>2.2. Each aspect of each fire system is assessed for compliance with the applicable current and historical legislation, codes and standards and findings are documented.</p> <p>2.3. The current performance level of each fire system is assessed and recorded.</p> <p>2.4. Advice is sought from relevant professional personnel, as required and according to workplace and regulatory procedures.</p>
3. Produce annual fire systems certification reports and communicate findings.	<p>3.1. The findings of inspections are analysed and works required to address shortfalls in fire systems' compliance or performance are identified and recorded according to regulatory requirements.</p> <p>3.2. Reports and certificates are produced and processed according to regulatory requirements.</p> <p>3.3. The findings of the report are communicated to relevant stakeholders according to regulatory requirements, and works required to rectify fire systems are carefully explained.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
- language and literacy skills for:
 - listening to and communicating clearly with stakeholders, colleagues and contractors
 - explaining the gravity of fire systems inspection findings to owner
 - researching, accessing, reading, interpreting and applying relevant current and historical legislation, codes and standards
 - letter writing
 - updating knowledge of products, software systems and technology
 - reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - fire systems design
 - block plans
 - tactical fire plans
 - report writing
- developing constructive and cooperative working relationships with stakeholders, colleagues and clients
- negotiation and conflict management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- inspecting multiple fire systems (with different applicable standards) concurrently, including:
 - attention to detail
 - visual acuity to perceive, for example that the distance between sprinklers is too great
- maintaining a professional detached authority

Required knowledge

- auditing processes and protocols

REQUIRED SKILLS AND KNOWLEDGE

- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- fire engineering principles, including:
 - engineered solutions
 - innovative fire systems
 - fire modelling
- computer software functions and operation, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
- relevant current and historical legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets

REQUIRED SKILLS AND KNOWLEDGE

- detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
 - special hazard fire systems, including:
 - foam systems (low expansion, medium expansion and high expansion)
 - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
 - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
 - chemical powder systems
 - wet chemical systems
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- passive fire safety elements:
 - identification of passive elements
 - requirements for safeguarding the integrity of passive fire element performance where penetrations have been made
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation
- human psychology, especially fire avoidance behaviour
- contractual processes

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE	
Overview of assessment	<p>This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.</p> <p>This unit could be assessed as an activity involving preparing for, conducting and reporting on annual fire systems inspections for a range of types of fire systems in a variety of buildings with different construction and modification histories.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.</p> <p>In particular the person should demonstrate:</p> <ul style="list-style-type: none"> • an understanding of the range of relevant current and historical legislation, codes, standards and regulatory requirements for the certification of existing fire systems • an understanding of the function and operation of the full range of fire systems, including water-based fire systems, detection and warning systems and special hazard fire systems used in a wide variety of types of buildings, including: <ul style="list-style-type: none"> • low-rise buildings • medium-rise buildings • high-rise buildings (over 25 metres) • buildings over 45 metres in height • the ability to apply the relevant current and historical compliance requirements to annual inspections of a range of fire systems installed and modified at different dates, in a variety of types of buildings • the visual acuity required to perceive anomalies in fire systems' compliance arising from building modifications, repairs or adjustments; or a lack of fire systems maintenance • the ability to report and communicate findings effectively to ensure that the

EVIDENCE GUIDE	
	gravity of non-compliance of fire systems is understood and works required to remedy the situation may be expedited.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • documents, drawings, plans and specifications • copies of codes, standards, legislation and regulatory requirements • access to information and communications technology - hardware and software.
Method of assessment	<p>Assessment must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Fire systems</i> may include:</p>	<ul style="list-style-type: none"> • water-based systems, including: <ul style="list-style-type: none"> • wet pipe sprinkler systems • deluge and drencher systems • dry pipe sprinkler systems • pre-action sprinkler systems • early suppression fast response (ESFR) • hydrants, hose reels and monitors • water supply tanks • fire pump sets • detection and warning systems, including: <ul style="list-style-type: none"> • emergency warning and intercommunications systems (EWIS) • fire detection and alarm systems • smoke control systems • emergency lighting systems • special hazard fire systems, including: <ul style="list-style-type: none"> • foam systems (low expansion, medium expansion and high expansion) • gaseous agent systems (carbon dioxide, inert gas and halocarbon gases) • water spray systems (deluge, medium/high velocity water spray and high speed deluge) • chemical systems, including: <ul style="list-style-type: none"> • powder • wet chemical.
<p><i>Relevant stakeholders</i> may include:</p>	<ul style="list-style-type: none"> • owners • agents • occupants • local authority.
<p><i>Current and historical legislation, codes and standards</i></p>	<ul style="list-style-type: none"> • current, or earlier versions of: <ul style="list-style-type: none"> • the Building Code of Australia

RANGE STATEMENT	
may include:	<ul style="list-style-type: none">• relevant Australian standards for fire systems• relevant international standards for fire systems• codes and standards stipulated by the regulatory authority or building insurer• obsolete legislation, regulations, codes and standards.
<i>Compliance documentation</i> may include:	<ul style="list-style-type: none">• fire safety schedules• inspection and testing logbooks• maintenance, repair and replacement documentation.
<i>Relevant professional personnel</i> may include:	<ul style="list-style-type: none">• fire engineer• fire brigade personnel• building surveyor• persons with regulatory authority• architect• structural engineer• fire systems' designer.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine the installation dates for fire systems.	<p>1.1. The construction dates and modification histories of buildings to be inspected are accessed, interpreted and noted.</p> <p>1.2. The types of <i>fire systems</i> installed in buildings to be inspected are identified from <i>compliance documentation</i>.</p> <p>1.3. The installation dates for individual fire systems in buildings to be inspected are identified.</p>
2. Research and interpret the applicable codes and standards.	<p>2.1. The <i>current and historical legislation, codes and standards</i> applicable to individual fire systems at the time of installation, or modification of the building are researched and identified.</p> <p>2.2. The detailed requirements of applicable historical legislation, codes and standards are researched and interpreted.</p> <p>2.3. Any disparity between historical legislation, codes and standards applicable at the installation or modification date and current fire safety requirements are noted and reported to <i>relevant stakeholders</i>.</p> <p>2.4. Checklists and notes on applicable current and historical codes and standards are prepared to assist the annual inspection process.</p>
3. Assess and report on fire system compliance documentation.	<p>3.1. Schedules for the inspection, testing and maintenance of fire safety systems are reviewed and checked for compliance with current regulatory requirements.</p> <p>3.2. Documentation for regular fire systems inspection and testing activities is reviewed and checked for currency and completeness.</p> <p>3.3. Information regarding non-compliance issues and defects is identified and noted.</p> <p>3.4. Documentary evidence of resolution of non-compliance issues and defects is requested and reviewed, if available.</p> <p>3.5. Checklists and notes on non-compliance issues and defects identified from compliance documentation are prepared to assist the annual inspection process.</p> <p>3.6. Reports detailing anomalies and omissions in fire systems' compliance documentation are prepared and processed according to workplace and regulatory</p>

	requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - design and drawing software
 - proprietary project management and project scheduling software
- language and literacy skills for:
 - listening to and communicating clearly with stakeholders, colleagues and contractors
 - explaining gravity of fire systems inspection findings to owner
 - researching, accessing, reading, interpreting and applying relevant current and historical legislation, codes and standards
 - letter writing
 - updating knowledge of products, software systems and technology
 - reading and interpreting drawings, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
 - report writing
- developing constructive and cooperative working relationships with stakeholders, colleagues and clients
- negotiation and conflict management
- organising own work, including creating personal systems and checklists for planning, managing and checking work

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- fire engineering principles, including:
 - engineered solutions
 - innovative fire systems
 - fire modelling
- computer software functions and operation, including relevant proprietary software
- relevant current and historical legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems

REQUIRED SKILLS AND KNOWLEDGE

- special hazard fire systems, including:
 - foam systems (low expansion, medium expansion and high expansion)
 - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
 - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
- chemical powder systems
- wet chemical systems
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- passive fire safety elements:
 - identification of passive elements
 - requirements for safeguarding the integrity of passive fire element performance where penetrations have been made
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation
- human psychology, especially fire avoidance behaviour
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

EVIDENCE GUIDE	
	<p>This unit could be assessed as an activity involving the establishment of the legislation, codes and standards that apply to existing fire systems in a range of buildings. The activity should include assessment of the compliance of fire safety schedules and inspection, testing and maintenance documentation.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.</p> <p>In particular the person should demonstrate:</p> <ul style="list-style-type: none"> • a comprehensive understanding of the range of relevant current and historical legislation, codes, standards and regulatory requirements for the certification of existing fire systems • an understanding of the function and operation of the full range of fire systems, including water-based fire systems, detection and warning systems and special hazard fire systems used in a wide variety of types of buildings, including: <ul style="list-style-type: none"> • low-rise buildings • medium-rise buildings • high-rise buildings (over 25 metres) • buildings over 45 metres in height • the ability to research and identify the applicable current and historical compliance requirements for a range of fire systems installed and modified at different dates, in a variety of types of buildings • the ability to assess fire safety schedules and inspection and testing documentation for currency and completeness • the ability to identify and report on anomalies and omissions in fire safety compliance documentation • the ability to produce checklists and notes regarding issues of particular interest found in fire safety documentation, to assist annual inspection processes.
<p>Context of and specific</p>	<p>Assessment of essential underpinning knowledge</p>

EVIDENCE GUIDE	
resources for assessment	<p>may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • documents, drawings, plans and specifications • copies of codes, standards, legislation and regulatory requirements • access to information and communications technology - hardware and software.
Method of assessment	<p>Assessment must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p>

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT

work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Fire systems</i> may include:	<ul style="list-style-type: none"> • water-based systems, including: <ul style="list-style-type: none"> • wet pipe sprinkler systems • deluge and drencher systems • dry pipe sprinkler systems • pre-action sprinkler systems • early suppression fast response (ESFR) • hydrants, hose reels and monitors • water supply tanks • fire pump sets • detection and warning systems, including: <ul style="list-style-type: none"> • emergency warning and intercommunications systems (EWIS) • fire detection and alarm systems • smoke control systems • emergency lighting systems • special hazard fire systems, including: <ul style="list-style-type: none"> • foam systems (low expansion, medium expansion and high expansion) • gaseous agent systems (carbon dioxide, inert gas and halocarbon gases) • water spray systems (deluge, medium/high velocity water spray and high speed deluge) • chemical systems, including: <ul style="list-style-type: none"> • powder • wet chemical.
<i>Compliance documentation</i> may include:	<ul style="list-style-type: none"> • fire safety schedules • inspection and testing logbooks • maintenance, repair and replacement documentation.
<i>Current and historical legislation, codes and standards</i> may include:	<ul style="list-style-type: none"> • current, or earlier versions of: <ul style="list-style-type: none"> • the Building Code of Australia • relevant Australian standards for fire systems

RANGE STATEMENT	
	<ul style="list-style-type: none"> • relevant international standards for fire systems • codes and standards stipulated by the regulatory authority or building insurer • obsolete legislation, regulations, codes and standards.

CPCSFS7001A Define scope of and initiate special hazard fire systems design projects

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit of competency specifies the outcomes required to define the scope of a project to design a complex special hazard fire system and put in place mechanisms to support the design work.</p> <p>The unit addresses the careful clarification of the special hazards project's scope, including an assessment of the level of risk attached to the equipment or facility for which the fire system is being designed, and the development of fire risk solutions. The unit covers the conduct of a thorough analysis of any relevant standards as well as of the project brief itself.</p> <p>Processes to guide and manage the special hazard fire systems design project are also covered. The development of a fire systems design project is subject to significant complexities due to the typical requirement to integrate multiple fire suppression and detection systems.</p> <p>Special hazard fire systems include gaseous, foam and water spray solutions which offer protection for life safety, and to facilities and equipment vital to business operation and success.</p> <p>Special hazard fire systems may fall outside the ambit of the Building Code of Australia. Client requirements may specify use of the U.S. National Fire Protection Association (NFPA) standards.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit of competency supports the attainment of skills and knowledge necessary for the effective and efficient scoping of special hazard fire suppression and detection systems in preparation for the technical development of the design.</p>
--------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish relevant project management details.	<p>1.1. Project management roles, responsibilities and lines of communication are established.</p> <p>1.2. Required project outcomes are consulted, clarified and finalised with the client.</p> <p>1.3. Relevant project scheduling and sequencing information is established.</p> <p>1.4. Tasks in the design process are assigned to relevant personnel, and mechanisms to coordinate their input are established and communicated.</p> <p>1.5. Project file-sharing and communication systems and tools are determined.</p> <p>1.6. Workplace quality assurance checks to ensure accuracy and validity of design are determined and procedures to ensure that these are conducted are established.</p> <p>1.7. Stages where regulatory or other approval is required for the design are determined and procedures to ensure that these are obtained are established.</p>
2. Interpret fire systems design concepts, briefs or specifications.	<p>2.1. The nature and purpose of the <i>fire systems design</i> are determined.</p> <p>2.2. <i>Project documentation</i> is gathered and assessed for completeness and use in the design of effective special hazard fire systems.</p> <p>2.3. <i>Structural characteristics</i> of the <i>equipment or facility</i> are identified and analysed.</p> <p>2.4. Functions and occupancies of buildings or facilities are determined from initial project documentation.</p> <p>2.5. Clarification of specific building details is sought from the client or relevant contractors and consultants.</p> <p>2.6. The appropriate hazard classification for the building or facility is researched and confirmed.</p>
3. Complete the risk assessment of the project.	<p>3.1. <i>Regulatory requirements and applicable standards</i> for the special hazard fire system are determined.</p> <p>3.2. Insurance requirements impacting on applicable codes and standards for the special hazard fire system project are determined.</p> <p>3.3. A risk assessment is documented to identify or confirm the type or types of special hazard detection</p>

ELEMENT	PERFORMANCE CRITERIA
	and suppression system that will be used.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
 - formal document control
 - formal amendments, including:
 - history
 - transmittal notices
- editing and creating drawings, including:
 - layout
 - section
 - detail
 - external references
 - freezing layers
- fluent detailed hand-drawing and sketching ability to convey information to on-site workers
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary hydraulic calculation software
 - proprietary estimating software
 - parametric modelling software
- using BASIC computer programming language to write logic for electronic system interfaces
- numeracy skills for:
 - calculating:
 - dimensions

REQUIRED SKILLS AND KNOWLEDGE

- pipe lengths
- piping friction loss
- pump capacity
- motor output
- performing calculations for electrical systems:
- voltage drops
- battery capacity
- battery back-up
- power supplies
- performing fluid mechanic calculations
- language and literacy skills for:
 - listening to and communicating clearly with colleagues, fitters, suppliers and contractors
 - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractor
 - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
 - letter writing, especially to formalise:
 - recognition of conflicts and errors on drawings supplied by other service contractors
 - agreements with other services, for example whichever service is fitted last must fit around existing services
 - reading and interpreting drawings, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
 - report writing
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, fitters and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
 - managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- fire engineering principles, including:
 - engineered solutions
 - innovative fire systems
 - fire modelling
- proprietary fire engineering and modelling programs
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary hydraulic calculation software
 - proprietary estimating software
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings, including the existence of special zones, the egress requirements of occupants, and the construction materials used
- passive fire safety elements:

REQUIRED SKILLS AND KNOWLEDGE

- identification of passive elements
- impact of fire systems design on passive elements
- specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
 - special hazard fire systems, including:
 - foam systems (low expansion, medium expansion and high expansion)
 - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
 - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
 - chemical systems, including:
 - powder
 - wet chemical
- purpose and operation of fire systems, including:
 - layout
 - special products and hazards
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material capability
- interconnection of fire systems, including:
 - cause and effect matrix

REQUIRED SKILLS AND KNOWLEDGE

- interface with other services
- instruments used in commissioning and measuring fire system performance
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
 - access requirements
 - health and safety requirements
- water supplies, including:
 - common water sources
 - conservation requirements
 - in-ground reticulation
 - booster configurations
- fluid mechanics and hydraulics relating to:
 - water supply
 - pressure
 - pump selection
 - tank selection
 - pressure vessels
 - pipe range
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
 - financial calculations, for example to assess cost-effectiveness of fire systems
 - trigonometry, for example to amend dimensions of pipe allowing for fittings
 - flow calculations, including:
 - area of operations
 - discharge rates and quantities

REQUIRED SKILLS AND KNOWLEDGE

- discharge times
- pressure gain and loss
- K-factors
- pressure, temperature and volume relationship
- Hazen-Williams equation
- Darcy-Weisbach equation
- computational fluid dynamics
- electrical calculations (alarm systems), including:
 - voltage drops
 - battery sizes
 - battery back-up
 - power supplies
 - cabling range
 - system calculations for gas or special hazard fire systems
- principles of organic and inorganic chemistry, including basic chemical reactions and substances
- principles of basic physics, including an understanding of:
 - Boyle's Law
 - Charles' Law
 - Dalton's Law
 - Henry's Law
- principles of thermodynamics, including:
 - effects of heat
 - stratification of gases
 - smoke and heat dynamics
- electrical and electronics theory, including:
 - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
 - effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
 - relationship between voltage drops around a circuit and applied voltage
 - definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
 - layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
 - basic operation of common electronic and electrical components used in fire detection and warning systems
 - basic operation of communication protocols on addressable systems,

REQUIRED SKILLS AND KNOWLEDGE

- peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- acoustics and speech intelligibility for occupant warning systems
 - human psychology, especially fire avoidance behaviour
 - organisational frameworks and functions, including:
 - industry associations
 - enterprises
 - government bodies
 - financial management, including:
 - budgeting
 - cost-effectiveness
 - contractual processes
 - risk management processes

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the determination of the scope of and initiation of a range of fire systems designs for special hazards projects. This entails establishing effective project management processes; correctly interpreting design concepts, briefs or specifications; and conducting risk management processes to ensure the selection of appropriate fire detection and suppression systems that reflect client requirements and are compliant with relevant codes, standards and legislation.

Critical aspects for assessment

A person who demonstrates competency in this

EVIDENCE GUIDE	
and evidence required to demonstrate competency in this unit	<p>unit must be able to provide evidence of the required skills and knowledge specified within this unit.</p> <p>In particular the person should demonstrate:</p> <ul style="list-style-type: none"> • project management skills to coordinate, schedule, resource and oversee the completion of special hazard projects • the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications • knowledge of fire sciences sufficient to ensure the design of compliant and effective systems that address the specific conditions of the projects being undertaken • an understanding of and ability to apply legislation, codes, standards, and regulatory and insurance requirements that may apply to special hazard fire systems design projects, including U.S. NFPA standards • the ability to conduct risk assessment processes.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • access to Australian and international codes and standards • access to legislation relevant to the jurisdiction • project documentation, including design brief, design drawings, specifications, construction schedules and other supporting documents • research resources, including product information and data • theoretical texts and other information to support the assessment of the unit's required skills and knowledge • relevant computer software packages and suitable hardware.
Method of assessment	Assessment methods must:

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	<p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fire systems design projects:

- are defined as those projects that are developed as a fire risk solution to offer protection against business interruption by providing fire protection to specific equipment or facility, whose performance-based principles are often outside the ambit of the Building Code of

RANGE STATEMENT	
	<p>Australia</p> <ul style="list-style-type: none"> • must respond to the requirements specified by the client or the client's insuring body and may include the application of international standards for fire systems.
<i>Project documentation</i> includes:	<ul style="list-style-type: none"> • fire engineer's design concepts and recommendations • construction drawings and plans • specific layout plans for other services, including plumbing, electrical and air conditioning.
<i>Structural characteristics</i> of the building or facility include:	<ul style="list-style-type: none"> • fabrication methods used • size and layout.
<i>Equipment or facility</i> that will require special hazard fire systems includes that which stores high value or high risk assets, including:	<ul style="list-style-type: none"> • data centres • computer rooms • electrical substations • documents (e.g. libraries and archives) and other collections (e.g. art galleries and museums) • fuel and gas storage and refineries • aeroplane hangars • chemical factories • warehouses containing highly volatile materials • any other storage facility for very high value individual items that would be destroyed by water-based fire suppression systems.
<i>Regulatory requirements and applicable standards:</i>	<ul style="list-style-type: none"> • will typically include references to U.S. NFPA standards, including: <ul style="list-style-type: none"> • NFPA 2001 Clean Agent Fire Extinguishing Systems • NFPA 11 Low, Medium and High Expansion Foam Systems • NFPA 13 The Installation of Sprinkler Systems • NFPA 15 Water Spray Fixed Systems for Fire Protection • NFPA 16 Deluge Foam-Water Sprinkler and Foam-Water Spray Systems • NFPA 750 Water Mist Fire Protection

RANGE STATEMENT

	<p>Systems</p> <ul style="list-style-type: none"> • relevant Australian standards, including: <ul style="list-style-type: none"> • AS4214 Gaseous fire extinguishing systems • AS2118 Automatic fire sprinkler systems Parts 1 to 6 • AS1670 Fire detection, warning control and intercom systems System design, installation and commissioning • AS1940 The storage and handling of flammable and combustible liquids • AS4360 Risk management • AS4587 Water mist fire protection systems • also note: <ul style="list-style-type: none"> • increasingly, international ISO standards are being identified for the industry • special hazard fire systems are not referenced in the Building Code of Australia.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select appropriate special hazard fire suppression solutions.	<p>1.1. Research is conducted to determine the appropriate <i>fire suppression solutions</i> to address the building or facility's <i>risk profile</i> and the <i>special hazard standards</i> that have been identified for use.</p> <p>1.2. A cost-benefit and efficiency analysis of the range of fire suppression systems is conducted.</p> <p>1.3. Recommendations for the selection of preferred solutions are made to the appropriate personnel.</p>
2. Select appropriate special hazard fire detection and occupant warning solutions.	<p>2.1. Research is conducted to determine the appropriate <i>fire detection and occupant warning solutions</i> to address the building or facility's risk profile, ambient conditions and the selected fire suppression solution.</p> <p>2.2. A cost-benefit and efficiency analysis of the range of fire detection and warning systems is conducted.</p> <p>2.3. Recommendations for the selection of preferred solutions are made to the appropriate personnel.</p>
3. Set up special hazard fire systems design drawing.	<p>3.1. Relevant <i>project drawings and documentation</i> are requested, received, named and filed according to workplace procedures.</p> <p>3.2. Drawings are cleaned to leave minimal essential information.</p> <p>3.3. Layers showing designs of other services are imported into clean architectural or structural drawings.</p> <p>3.4. Details from drawings of floor or building adjacent to the areas under design consideration are added if these affect the design.</p> <p>3.5. The detailed design drawing is named, filed and backed up according to workplace procedures.</p>
4. Lay out the special hazard system design.	<p>4.1. A site visit is conducted if possible to confirm dimensions and assess installation risks and constraints.</p> <p>4.2. The <i>interactions</i> between the various systems are identified and planned.</p> <p>4.3. The exact locations of sprinklers and other fittings are determined and notated on the drawing according to relevant codes and standards.</p> <p>4.4. The most <i>efficient and workable layout and location of system components</i> are determined and notated on the drawing.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.5. Dimensions are calculated, checked and notated on the drawing.
5. Calculate the requirements for the special hazard solutions.	<p>5.1. Calculations to identify and confirm the required capacity of the special hazards systems are undertaken.</p> <p>5.2. Infrastructure to support the special hazard solution is identified and quantified.</p> <p>5.3. Shortfalls in water pressure are determined and the sizes of pumps and tanks required for water spray systems are calculated.</p>
6. Evaluate and implement special hazard fire system solutions.	<p>6.1. The components of the special hazard fire system solution are gathered from relevant expert personnel as required.</p> <p>6.2. Special hazard system design drawings are evaluated for efficiency and effectiveness.</p> <p>6.3. Design drawings are submitted to relevant personnel within the scheduled timeframe.</p> <p>6.4. Required amendments to design drawings are made or negotiated as required.</p> <p>6.5. Final approved design drawings are processed and distributed according to project and workplace requirements.</p> <p>6.6. Fittings and components are selected and ordered.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
 - formal document control
 - formal amendments, including:
 - history
 - transmittal notices
- editing and creating drawings, including:

REQUIRED SKILLS AND KNOWLEDGE

- layout
- section
- detail
- external references
- freezing layers
- fluent detailed hand-drawing and sketching ability to convey information to on-site workers
- operating computer software packages and systems, including:
 - word processing
 - spreadsheet
 - email
 - internet
 - proprietary project management software
 - proprietary hydraulic calculation software
 - proprietary estimating software
 - parametric modelling software
- numeracy skills for:
 - calculating:
 - dimensions
 - pipe lengths
 - piping friction loss
 - pump capacity
 - motor output
 - performing calculations for electrical systems:
 - voltage drops
 - battery capacity
 - battery back-up
 - power supplies
 - performing fluid mechanic calculations
 - determining cost-benefit of solutions
- language and literacy skills for:
 - listening to and communicating clearly with colleagues, fitters, suppliers and contractors
 - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractor
 - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
 - letter writing, especially to formalise:
 - recognition of conflicts and errors on drawings supplied by other service

REQUIRED SKILLS AND KNOWLEDGE

- contractors
 - agreements with other services, for example whichever service is fitted last must fit around existing services
 - reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
 - report writing
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, fitters and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- workplace design tools and processes
- naming conventions for design drawings and drawing register
- fire science, including:
 - fire behaviour and dynamics
 - impact of fire on structures and materials
 - products of combustion
 - fire control strategies
 - fire retardants
 - fire detection technologies
 - fire suppression technologies
 - fire containment
- fire engineering principles, including:
 - engineered solutions
 - innovative fire systems
 - fire modelling
- proprietary fire engineering and modelling programs
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:

REQUIRED SKILLS AND KNOWLEDGE

- word processing
- spreadsheet
- email
- internet
- proprietary project management software
- proprietary hydraulic calculation software
- proprietary estimating software
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations
 - the Building Code of Australia
 - Australian standards for fire systems
 - international standards for fire systems
 - other fire system standards commonly required by building insurers
- protection requirements for different buildings, including the existence of special zones, the egress requirements of occupants, and the construction materials used
- passive fire safety elements, including:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
 - special hazard fire systems, including:

REQUIRED SKILLS AND KNOWLEDGE

- foam systems (low expansion, medium expansion and high expansion)
- gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
- water spray systems (deluge, medium/high velocity water spray and high speed deluge)
- chemical systems, including:
 - powder
 - wet chemical
- purpose and operation of fire systems, including:
 - layout
 - special products and hazards
 - system operation
 - performance requirements
 - maintenance standards
 - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material capability
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- instruments used in commissioning and measuring fire system performance
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
 - architect
 - lead contractor
 - mechanical engineer
 - hydraulic engineer
 - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
 - access requirements
 - health and safety requirements
- water supplies, including:
 - common water sources
 - conservation requirements
 - in-ground reticulation
 - booster configurations

REQUIRED SKILLS AND KNOWLEDGE

- fluid mechanics and hydraulics relating to:
 - water supply
 - pressure
 - pump selection
 - tank selection
 - pressure vessels
 - pipe range
- sustainability requirements and ratings, including:
 - energy conservation
 - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
 - financial calculations, for example to assess cost-effectiveness of fire systems
 - trigonometry, for example to amend dimensions of pipe allowing for fittings
 - flow calculations, including:
 - area of operations
 - discharge rates and quantities
 - discharge times
 - pressure gain and loss
 - K-factors
 - pressure, temperature and volume relationship
 - Hazen-Williams equation
 - Darcy Weisbach equation
 - computational fluid dynamics
 - electrical calculations (alarm systems), including:
 - voltage drops
 - battery sizes
 - battery back-up
 - power supplies
 - cabling range
 - system calculations for gas or special hazard fire systems
- principles of organic and inorganic chemistry, including basic chemical substances and reactions
- principles of basic physics, including an understanding of:
 - Boyle's Law
 - Charles' Law
 - Dalton's Law

REQUIRED SKILLS AND KNOWLEDGE

- Henry's Law
- principles of thermodynamics, including:
 - effects of heat
 - stratification of gases
 - smoke and heat dynamics
- electrical and electronics theory, including:
 - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
 - effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
 - relationship between voltage drops around a circuit and applied voltage
 - definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
 - layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
 - basic operation of common electronic and electrical components used in fire detection and warning systems
 - basic operation of communication protocols on addressable systems, peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- acoustics and speech intelligibility for occupant warning systems
- human psychology, especially fire avoidance behaviour
- organisational frameworks and functions, including:
 - industry associations
 - enterprises
 - government bodies
- financial management, including:
 - budgeting
 - cost-effectiveness
- contractual processes

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the

EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the analysis, design and evaluation of complex special hazard fire systems, including the application of appropriate codes and standards in accordance with the design requirements of the client.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- knowledge of fire sciences sufficient to ensure the design of compliant and effective systems that address the specific conditions of the projects being undertaken
- numeracy skills sufficient to ensure accurate calculations of system capacities and performance
- the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications
- an understanding of and ability to apply legislation, codes, standards, and regulatory and insurance requirements that may apply to special hazard fire systems design projects, including U.S. NFPA standards
- the ability to research appropriate special hazard fire detection and warning systems
- the ability to produce accurate technical drawings of the layout for the special hazard design
- the ability to design integrated solutions encompassing fire detection, warning and suppression components for special hazard fire

EVIDENCE GUIDE	
	systems as they apply to at least three different types of hazards requiring the application of different technical solutions.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • access to relevant Australian and international codes and standards • access to legislation relevant to the jurisdiction • project documentation, including design brief, design drawings, specifications, construction schedules and other supporting documents • research resources, including product information and data • theoretical texts and other information to support the assessment of the unit's required skills and knowledge • relevant computer software packages and suitable hardware.
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment

EVIDENCE GUIDE

	<p>support.</p> <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p>
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fire suppression solutions include:

- gaseous agent systems, including:
 - carbon dioxide
 - inert gases
 - halocarbon systems
 - FM-200
 - FE-25
 - Inergen
- foam systems, including:
 - low expansion foams
 - medium expansion foams
 - high expansion foams
- water spray systems, including:
 - deluge systems
 - medium and high velocity water spray systems
 - high speed deluge systems.

The ***risk profile*** of the building or facility will reflect the usage of the building, including:

- the need to protect people
- the value of the goods stored
- the susceptibility of the stored goods to water or other forms of damage.

The ***special hazard standards***

- U.S. NFPA standards, including:

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • NFPA 2001 Clean Agent Fire Extinguishing Systems • NFPA 11 Low, Medium and High Expansion Foam Systems • NFPA 11A Medium and High Expansion Foam Systems • NFPA 13 The Installation of Sprinkler Systems • NFPA 16 Deluge Foam-Water Sprinkler and Foam-Water Spray Systems • relevant Australian standards, including: <ul style="list-style-type: none"> • AS4214 Gaseous fire extinguishing systems • AS2008 Part 1 • AS2008 Part 3 • also note: <ul style="list-style-type: none"> • building insurers may specify the standards they require to issue cover on buildings and facilities • increasingly, international ISO standards are being identified for the industry • special hazards are not referenced in the Building Code of Australia.
<i>Fire detection and occupant warning solutions</i> include:	<ul style="list-style-type: none"> • smoke-sensing detectors • heat-sensing detectors • fire alarms • flame detectors • fire gas detectors.
<i>Project drawings and documentation</i> may include:	<ul style="list-style-type: none"> • architectural • structural • mechanical • electrical • hydraulic • fire engineer's or estimator's specifications.
<i>Interactions</i> between multiple systems on a complex site are analysed to:	<ul style="list-style-type: none"> • ensure the most effective selection of systems to protect different assets • maximise the effectiveness of the systems • maximise the efficiency of the installation process.

RANGE STATEMENT	
<i>Efficient and workable layout and location</i> relate to:	<ul style="list-style-type: none"> • penetrations • conflict with other services • occupational health and safety risks • access constraints • installation problems • aesthetic requirements • efficiencies to facilitate work on site • reduction of labour costing.
<i>System components</i> may include:	<ul style="list-style-type: none"> • discharge nozzles • pipework • brackets • system valves • zone valves • fire panels.
<i>Calculations</i> that relate to the various forms of special hazard systems include:	<ul style="list-style-type: none"> • water-spray system calculations <ul style="list-style-type: none"> • hydraulic calculations to assess pressure requirements and confirm pipe sizes • gaseous system calculations • foam system calculations.
<i>Infrastructure</i> for special hazard solutions include:	<ul style="list-style-type: none"> • pipework • storage containers • delivery systems for the suppression agent (e.g. foam, gas or water) • tanks.
Large and complex projects may use <i>expert personnel</i> to:	<ul style="list-style-type: none"> • design sub-components of a total solution, for example electrical components.
<i>Negotiated</i> changes may be made due to:	<ul style="list-style-type: none"> • non-compliance with applicable legislation, codes and standards • impact on installation risks and constraints • impact on cost-effectiveness.
<i>Fittings and components</i> may include:	<ul style="list-style-type: none"> • hangers • sprinkler heads • elbows • tees • pumps • tanks • control valves.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research fire system component capacities and costs.	<p>1.1. Industry networks and mechanisms are used to maintain current understanding of developments in fire system technology.</p> <p>1.2. Research is conducted into changes to the relevant legislation, codes and standards for the fire systems design sector to maintain currency of knowledge.</p> <p>1.3. Research is conducted to identify the capacity, performance characteristics and cost of alternative components of the range of appropriate fire suppression and detection solutions.</p> <p>1.4. A cost-benefit and efficiency analysis of the range of fire suppression and detection systems is conducted.</p> <p>1.5. The proposed project's documentation and drawings are fully scrutinised and assessed.</p>
2. Prepare estimate of labour costs.	<p>2.1. The skill profile and number of personnel required to design and install the proposed fire system are identified.</p> <p>2.2. Options for securing the required personnel are analysed.</p> <p>2.3. The types and numbers of appropriate on-site personnel are identified and the time required on site is estimated.</p> <p>2.4. Labour costs are calculated with allowance for the full range of on-costs and cost changes during the life of the project.</p>
3. Prepare estimate of material costs.	<p>3.1. The quantities of selected fittings and materials are calculated.</p> <p>3.2. Cost estimates for the purchase and fabrication of the project's fittings and materials from internal and external suppliers are negotiated, secured and analysed.</p> <p>3.3. Cost estimates for the use, purchase or hire of required plant or equipment to support the design and installation process are negotiated, secured and analysed.</p>
4. Prepare estimate of other project costs and margins.	<p>4.1. Cost estimates of overhead costs are identified and estimated for the project.</p> <p>4.2. The required profit margin is identified in line with the company's strategic requirements and policies.</p>
5. Prepare business	<p>5.1. Total project resource requirements and costs are</p>

ELEMENT	PERFORMANCE CRITERIA
proposal or tender.	<p>analysed and synthesised for inclusion in the business proposal or tender.</p> <p>5.2. The business proposal or tender requirements are analysed and applied in the development of the tender.</p> <p>5.3. Legal, financial or accounting expertise is sought as required in the preparation of the business proposal or tender and in line with company policies and procedures.</p> <p>5.4. The business proposal or tender is finalised in line with company policies and procedures and the requirements of the project brief.</p>
6. Finalise and support the bid process.	<p>6.1. The business proposal or tender is submitted within required timeframe.</p> <p>6.2. Responses are provided to the potential client in response to queries in a professional manner and in line with company policies and procedures.</p> <p>6.3. Negotiations regarding proposed services, timelines or price are conducted as required and in a professional manner and in line with company policies and procedures.</p> <p>6.4. The business proposal or tender bid process is finalised in a professional manner and in line with company policies and procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- numeracy skills for:
 - financial calculations:
 - labour costs
 - overhead costs
 - profit margins
 - water-based system calculations:

REQUIRED SKILLS AND KNOWLEDGE

- dimensions
- pipe lengths
- piping friction loss
- pump capacity
- motor output
- electrical system calculations:
 - dimensions
 - voltage drops
 - battery capacity
 - battery back-up
 - power supplies
- language and literacy skills for:
 - participating in meetings, such as negotiations with client, fire engineering consultant, architect, builder or other service contractor
 - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
 - preparing documentation, including to formalise tender responses and contracts
 - updating knowledge of products, software systems and technology
 - reading and interpreting drawings, plans and specifications, including:
 - architectural
 - structural
 - mechanical
 - hydraulic
 - electrical
- computer skills for:
 - word processing
 - spreadsheets
 - estimating and costing
- researching and evaluating competing technologies in new products and systems
- negotiation and conflict management
- lateral thinking and problem solving

Required knowledge

- computer software functions and operation, including relevant proprietary software
- relevant current legislation, codes and standards, including:
 - building Acts
 - building regulations
 - infrastructure supply regulations

REQUIRED SKILLS AND KNOWLEDGE

- the Building Code of Australia
- Australian standards for fire systems
- international standards for fire systems
- other fire system standards commonly required by building insurers
- passive fire safety elements:
 - identification of passive elements
 - impact of fire systems design on passive elements
 - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- fire systems' technology and components, including:
 - water-based systems, including:
 - wet pipe sprinkler systems
 - deluge and drencher systems
 - dry pipe sprinkler systems
 - pre-action sprinkler systems
 - early suppression fast response (ESFR)
 - hydrants, hose reels and monitors
 - water supply tanks
 - fire pump sets
 - detection and warning systems, including:
 - emergency warning and intercommunications systems (EWIS)
 - fire detection and alarm systems
 - smoke control systems
 - emergency lighting systems
 - special hazard fire systems, including:
 - foam systems (low expansion, medium expansion and high expansion)
 - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
 - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
 - chemical systems, including:
 - powder
 - wet chemical
- characteristics and limitations of products and materials used in fire systems and issues relating to material capability
- interconnection of fire systems, including:
 - cause and effect matrix
 - interface with other services
- tendering processes, including:

REQUIRED SKILLS AND KNOWLEDGE

- interpretation of bid requirements
- interpretation of contractual requirements

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the development and submission of tenders for fire systems design projects. This entails researching the capacities of a range of fire system components, preparing detailed schedules of costs for labour and materials, identifying and applying profit margins, and preparing the business proposal or tender response. Integral to the process is the capacity to work with the potential client, build relationships and conduct negotiations leading up to the finalisation of the tender or bid process.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- knowledge of tendering, bid and contractual processes
- numeracy skills sufficient to ensure accurate calculations of system capacities and performance and their costs
- the ability to read and interpret a range of design documents, including concept briefs,

EVIDENCE GUIDE	
	<p>design briefs, drawings, plans and specifications</p> <ul style="list-style-type: none"> • an understanding of and ability to apply legislation, codes, standards, regulatory and insurance requirements that may apply to fire systems design projects, including U.S. NFPA standards • the ability to research appropriate fire detection and warning systems • the ability to prepare tender or bid documentation that meets the bid specification requirements • the ability to build relationships with potential clients and conduct business negotiations.
Context of and specific resources for assessment	<p>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • access to relevant Australian and international codes and standards • access to legislation relevant to the jurisdiction • project documentation, including tender or bid specification, design brief, design drawings, construction schedules and other supporting documents • research resources, including product information and data • theoretical texts and other information to support the assessment of the unit's required skills and knowledge • relevant computer software packages and suitable hardware.
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to effectively analyse, implement and monitor environmentally sustainable work practices and their effectiveness on a work site, including contributing to consumer environmental efficiency.

Application of the Unit

Application of the unit This unit of competency supports the needs of those with responsibility for a specific area or site of work, or those who lead a work group or team by using processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools.

The context of this competency applies to all sectors of the construction industry. It may be applied to all sections of an organisation, including a work site, designated work area, in transit and/or an office.

Licensing/Regulatory Information

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate current practices in relation to resource usage.	<p>1.1.Environmental regulations applying to the organisation are identified.</p> <p>1.2.Procedures for ensuring <i>compliance</i> with environmental regulations are assessed.</p> <p>1.3.Information on <i>environmental and resource efficiency</i> systems and procedures are collected, and where appropriate, provided to <i>stakeholders, key personnel and specialists</i>.</p> <p>1.4.Current resource usage is measured and documented by members of the work group.</p> <p>1.5.Current <i>purchasing strategies</i> are analysed and documented.</p> <p>1.6.Current work processes and products are analysed to access information and data and to assist in identifying areas for improvement.</p>
2. Set targets for improvement.	<p>2.1.Input is sought from stakeholders, key personnel and specialists and shared with them as appropriate.</p> <p>2.2.External sources of information and data are accessed as required.</p> <p>2.3.Alternative solutions to work site environmental issues are evaluated.</p> <p>2.4.Efficiency targets are set.</p>
3. Implement performance improvement strategies.	<p>3.1.<i>Techniques and tools</i> are sourced to assist in achieving targets.</p> <p>3.2.Continuous improvement strategies are applied to work site, including ideas and possible solutions to communicate to stakeholders, key personnel and specialists.</p> <p>3.3.Environmental and resource efficiency improvement plans for work site and clients are integrated with other operational activities and implemented.</p> <p>3.4.<i>Suggestions</i> and ideas about environmental and resource efficiency management are sought from stakeholders, key personnel and specialists and shared with them to act on as appropriate.</p> <p>3.5.Costing strategies are implemented to fully value environmental assets and are shared with stakeholders, key personnel and specialists as necessary.</p>
4. Monitor performance.	<p>4.1.Outcomes are documented and reports on targets are</p>

ELEMENT**PERFORMANCE CRITERIA**

communicated to key personnel and stakeholders.

4.2.Strategies are evaluated.

4.3.New targets are set and new tools and strategies investigated and applied.

4.4.Successful strategies are promoted and, where possible, participants rewarded.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to source/identify the latest industry environmental sustainability concepts and technologies
- applying learning to future opportunities
- change management skills
- communication skills to:
 - answer questions
 - clarify and acknowledge suggestions relating to work requirements and environmental efficiency with stakeholders
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation
 - environmental and resource efficiency requirements
 - support information flow between various internal and external stakeholders to resolve and report on environmental and resource efficiency issues
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- creating tools to measure and monitor improvements and report on outcomes to stakeholders
- innovation skills to identify improvements, apply knowledge about resource use to organisational activities and customer service, and develop resource efficiency tools
- numeracy skills to analyse data on company and stakeholder resource consumption and waste product volumes

REQUIRED SKILLS AND KNOWLEDGE

- problem solving skills to recognise and analyse problems, including:
 - devising approaches
 - implementing and reflecting on environmental and water, energy or resource efficiency management policies and procedures relevant to work site to improve environmental sustainability
 - share alternative approaches as required
- skills to relate to different genders and people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- technology skills, including the ability to:
 - operate and shut down equipment
 - where relevant, use software systems for recording and filing documentation for measurement and improvement of resource usage and consumption.

Required knowledge

Required knowledge for this unit is:

- how tradespersons can contribute to environmental sustainability
- knowledge of compliance requirements for all relevant environmental and sustainability legislation, regulations and codes of practice including resource hazards and risks associated with work site:
 - supervision
 - job specifications
 - strategies and procedures to maximise opportunities and minimise impacts relevant to stakeholders and personal area of responsibility
- relevant knowledge of environmental, resource and energy/water efficiency issues, systems and procedures specific to industry practice
- knowledge of best practice approaches and quality assurance systems relevant to area of responsibility and industry
- ability to identify and advise on water/energy efficiency opportunities for stakeholders and key personnel
- supply chain procedures
- OHS issues and requirements
- organisational structure and reporting channels and procedures
- terms and conditions of employment, including policies and procedures, such as:
 - daily tasks
 - equal opportunity
 - work area responsibilities
 - worker, supervisor and employer rights.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by analysing and monitoring effective sustainable work practices on a construction project work site.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement and monitor integrated environmental and resource efficiency management policies and procedures within a work site, including:
 - access, collect, analyse and organise information from a number of sources to provide information, advice and tools or resources for improvement opportunities to stakeholders and key personnel
 - identify possible areas for improved practices and resource efficiency for stakeholders
 - communicate benefits of changing practices to work team and customers
 - implement new approaches and improvement plans, including planning and organising activities for staff and stakeholders in relation to:
 - measurement of current use
 - devising strategies to improve environmental and resource efficiency issues
 - reporting as required ensuring appropriate action is taken within work site in relation to environmental and sustainability compliance and potential

EVIDENCE GUIDE

hazards

- monitor and evaluate improvement plans and efficiency targets, using evaluation and monitoring tools and technology to potentially revise and adjust approaches and strategies to ensure continuous improvement.

Evidence that could be used, reflecting the requirements of the unit of competency and work being performed as evidence, include:

- reports of activities of work group in relation to:
 - measurement of resources and efficiency
 - development of improvement strategies
- work plans outlining approaches to improved practices, with documented benchmarks
- invoices from stakeholders specifying materials recommended for improved efficiency and those actually used
- quotes and tenders
- lists of environmental hazards, risks and inefficiencies, and opportunities for improvements identified in the work site
- work samples, tools, techniques or simulated activities and the outcomes.

Processes may include:

- relevant authenticated correspondence
- way in which advice is sought and suggestions made about improvements from stakeholders and key personnel
- evidence of implementation of programs, such as:
 - green building program
 - supply chain program for purchasing sustainable products
 - environmental site management framework or product recommendations
- notes on understanding external benchmarks and support for particular benchmarks to be used, with expected outcomes and including approaches to recommend products and practices to stakeholders for improving their resource use.

EVIDENCE GUIDE

	<p>Resource implications for assessment must include:</p> <ul style="list-style-type: none">• observation by the assessor over a period of time and in a range of situations and/or evidence provided to the assessor in written or verbal form, including:• implementing tools and techniques• review of work site and stakeholders/key personnel to assess and measure resource use, hazards and compliance• application of learning to future activities• recommended products and practices to stakeholders• access to a range of information and resources for assessment as listed in the range statement, such as:<ul style="list-style-type: none">• environmental and sustainability legislation• compliance documentation• organisational and procedural requirements or organisation plans• work supervision and work site documentation, including personnel and responsibilities• quotes, tenders, invoices.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none">• an induction procedure and requirement• realistic tasks or simulated tasks covering the mandatory task requirements• relevant specifications and work instructions• support materials appropriate to activity• workplace instructions relating to safe work practices and addressing hazards and emergencies• material safety data sheets

EVIDENCE GUIDE

- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be

EVIDENCE GUIDE

obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Compliance includes:

- meeting relevant Acts, laws, by-laws and regulations, codes of practice or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection, Biodiversity Conservation Act and Building Code of Australia)
- levels include:
 - federal
 - industry
 - international
 - local government
 - organisation
 - reporting breaches
 - state and territory.

Environmental and resource efficiency includes:

- approaches of industry associations, such as:
 - Australian Building Greenhouse Rating
 - green plumbers
 - green purchasing
 - Housing Industry Association (HIA) GreenSmart
 - ISO 14001 Environmental Management Systems
 - lifecycle thinking
 - Master Builders Association of Victoria

RANGE STATEMENT

-
- Green Living, Leadership in Energy and Environmental Design (LEED), or Green Building Council of Australia (GBCA) Green Star environmental rating system
 - National Australian Building Environmental Rating Scheme (NABERS)
 - product stewardship
 - supply chain management
 - Victoria Stormwater Management Guidelines of the Environment Protection Authority (EPA)
 - implementing and using alternative practices, procedures or materials to reduce or eliminate resource consumption on work site
 - recommendations to stakeholders, including:
 - addressing environmental and resource sustainability initiatives, such as an environmental framework, action plan, recommendations, surveys and audits with stakeholders and key personnel
 - efficient water use (e.g. rainwater tanks, grey water sprinkler systems or timers)
 - energy use (e.g. equipment/appliances installed; equipment, appliance and tool maintenance; transporting materials; heating and cooling; and building efficiency)
 - environmental site management
 - evaluating and implementing most appropriate waste treatment, including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment through site management
 - improving resource, energy and water efficiency
 - including environmental performance in tender and quote specifications
 - initiating and maintaining appropriate work site procedures for operational energy consumption, including stationary and non-stationary (transport) energy
 - preventing and minimising risks and maximising opportunities on work site and

RANGE STATEMENT

	<ul style="list-style-type: none"> for stakeholders reducing emissions of greenhouse gases reducing material usage reducing stormwater pollution reducing use of non-renewable resources types of products and materials used reference to standards, guidelines, industry association standards, codes of practice and best practice approaches such as: <ul style="list-style-type: none"> federal government standards, including five-star rating for all new homes.
<p><i>Stakeholders, key personnel and specialists</i> (individuals and groups) both within and external to the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, include:</p>	<ul style="list-style-type: none"> clients employees at all levels of the organisation government investors key personnel within the organisation local community specialists outside the organisation who may have particular technical expertise suppliers other organisations.
<p><i>Purchasing strategies</i> include:</p>	<ul style="list-style-type: none"> influencing stakeholders to take up environmental sustainability approaches and products researching and participating in programs, such as a supply chain program to purchase sustainable products (such as radial timber, sustainable timber, and low flow fittings and appliances).
<p><i>Techniques and tools</i> include:</p>	<ul style="list-style-type: none"> accessing the skills of others as appropriate to the specific industry context environmental site management plans examination of invoices from suppliers examination of relevant information and data integration of environmental and sustainability specifications in quotes and tenders measurements made under different conditions recommendation of sustainable products and practices to stakeholders.
<p><i>Suggestions</i> include:</p>	<ul style="list-style-type: none"> eliminating the use of hazardous and toxic materials

RANGE STATEMENT

- expressing green purchasing power through using and recommending a selection of suppliers with improved environmental performance (e.g. green power, lifecycle thinking, product stewardship, energy or water efficiency)
- ideas that help to improve energy and water efficiency
- making more efficient use of resources, materials, energy and water
- maximising opportunities to use renewable, recyclable, reusable and recoverable resources (energy, water, materials, products and waste)
- preventing and minimising risks and maximising opportunities, such as use of renewable energy such as solar or grey water, and other alternative forms of water, energy and resources
- recommending and using alternative sustainable products, materials, procedures, practices and installation techniques
- reducing emissions of greenhouse gases by reducing waste and transport
- reducing the consumption of non-renewable resources, such as water, fuel, and materials
- seeking alternative sources of water and energy or encouraging conservation.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop workplace sustainability policy.	<p>1.1.Scope of sustainability policy is defined.</p> <p>1.2.Stakeholders are identified and consulted as a key component of policy development process.</p> <p>1.3.Strategies for minimising resource use, reductions in toxic material and hazardous chemical use, and employment of lifecycle management approaches at all stages of work are included in policy.</p> <p>1.4.Recommendations are made for policy options based on likely effectiveness, timeframes and cost.</p> <p>1.5.Policy is developed that reflects organisation's commitment to sustainability as an integral part of the business planning and as a business opportunity.</p> <p>1.6.Appropriate methods of implementation are agreed.</p>
2. Communicate the policy.	<p>2.1.Policy, including its expected outcome, is promoted to key stakeholders.</p> <p>2.2.Those involved in implementing the policy are informed of outcomes expected, activities to be undertaken and responsibilities assigned.</p>
3. Implement the policy.	<p>3.1.Procedures to help implement the policy are developed and communicated.</p> <p>3.2.Strategies for continuous improvement in resource efficiency are implemented.</p> <p>3.3.Record systems for tracking continuous improvements in sustainability approaches are established and responsibilities assigned.</p>
4. Review policy implementation.	<p>4.1.Outcomes are documented and feedback is provided to key personnel and stakeholders.</p> <p>4.2.Success or otherwise of policy is investigated.</p> <p>4.3.Records are monitored to identify trends that may require remedial action, and used to promote continuous improvement of performance.</p> <p>4.4.Policies and procedures are modified as required to ensure improvements are made.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- effective management of different points of view and dissenting stakeholders
- flexible communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret complex and formal documents, such as policy and legislation
 - suit different audiences and support information flow between various internal and external stakeholders, using language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to prepare written reports requiring:
 - precision of expression
 - language and structures suited to the intended audience
- innovation and problem solving skills to:
 - analyse problems
 - apply knowledge about policy to devise policies and procedures around environmental and water, energy and resource efficiency and new technologies
 - identify improvements and customer service
- research, analyse and present information and techniques
- respond to diversity, including the ability to relate to different genders and people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- team work for consultation and validation of policies and procedures
- technology skills for use of software systems, communication, and creating documents and reports.

Required knowledge

Required knowledge for this unit is:

- benchmarking against best practice approaches and support for new approaches
- knowledge of best practice approaches relevant to industry and work area
- knowledge of environmental or sustainability legislation, regulations, compliance and codes of practice applicable to industry and organisation
- knowledge of policy development processes and practices and other relevant organisational policies, procedures and protocols
- principles, practices and available products, tools, technology and techniques of sustainability management relevant to the particular industry context

REQUIRED SKILLS AND KNOWLEDGE

- quality assurance systems relevant to own organisation
- relevant products, technology, systems and procedures to aid in the achievement of sustainability in the workplace, including environmental and energy efficiency products, technology, issues, systems and procedures specific to industry practice
- sustainability principles and concepts
- terms and conditions of employment, including:
 - equity and diversity principles
 - OHS implications of policy being developed
 - policies and procedures
 - work area responsibilities
 - worker, supervisor and employer rights
- understanding of how the business can contribute to environmental sustainability.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by developing policies and relevant procedures for implementing sustainable work practices on a construction project work site.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop enterprise policy for integrated sustainability, ensuring that developed policies comply with legislative requirements, and contain an implementation strategy that has been devised, implemented and reviewed showing a measurable improvement using chosen benchmark indicators
- review the policy after implementation
- communicate with relevant stakeholders
- develop and monitor policies
- communicate with relevant internal and external stakeholders to discuss possible approaches to policy development and implementation, and contribute to the resolution of disputes amongst them
- gather information from a number of sources (including regulatory sources, relevant personnel and organisational specifications) to plan and develop policies
- plan the policy development process, including meetings with stakeholders and key personnel
- develop and monitor policies for analysing data on organisation resource consumption
- use software systems for recording and filing documentation for measurement of current usage, and using word processing and other basic software

EVIDENCE GUIDE

Context of and specific resources for assessment

to:

- interpret charts, flowcharts, graphs and other visual data and information
- report.

Items that could be used as evidence include:

- inefficiencies or opportunities for improvements identified in the workplace
- case studies
- work documents from meetings or simulated activities
- portfolios of evidence on policy processes, including continuous improvement outcomes
- new approaches improved continuously over time.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- specifications of particular workplace roles and work area, equipment, systems, organisational structures and documentation
- documentation on resources used, and hazards and compliance requirements for benchmarking and continuous improvement.

Access to a range of information and resources for assessment as listed in the range statement (such as compliance obligations, organisational plans and work responsibilities).

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package

EVIDENCE GUIDE

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of sustainability policy includes:

- addressing sustainability initiatives through reference to standards, guidelines and approaches, such as
 - federal government standards, including five-star rating for all new homes
 - ecological foot printing
 - Energy Efficiency Opportunities Bill
 - Victoria Stormwater Management Guidelines of Environment Protection Agency
 - global reporting initiative
 - green purchasing programs to purchase sustainable products
 - greenhouse challenge
 - approaches of industry associations, such as:
 - Housing Industry Association (HIA) GreenSmart
 - Australian Building Greenhouse Rating
 - green plumbers
 - Master Builders Association of Victoria Green Living, Leadership in Energy and Environmental Design (LEED), or Green Building Council of Australia (GBCA) Green Star environmental rating system
 - ISO 14001 Environmental Management Systems
 - lifecycle thinking
 - National Australian Building Environmental Rating Scheme (NABERS)
 - product stewardship
 - supply chain management to influence suppliers to take up sustainability approaches
 - sustainability action plans or frameworks
 - sustainability covenants and compacts
 - triple bottom line reporting

RANGE STATEMENT

- integrated approach to sustainability that includes environmental, economic and social aspects, or a narrower one to focus on each aspect individually
 - investigation of the particular business and market context of the industry or organisation
 - meeting relevant Acts, laws, by-laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection, Biodiversity Conservation Act, Building Code of Australia) and reporting breaches
 - levels include:
 - federal
 - industry
 - international
 - organisation
 - state and territory
 - parts of the organisation to which it is to apply, including whether it is for the whole organisation, one site, one work area or combinations of these
 - site management.
- Stakeholders* include:
- individuals and groups both within and external to the organisation that have direct or indirect interest in the organisation's conduct, actions, products and services, including:
 - clients
 - employees at all levels of the organisation
 - government
 - investors
 - key personnel within the organisation, and specialists outside it who may have particular technical expertise
 - local community
 - suppliers
 - other organisations.
- Strategies* include:
- efficient use of resources, energy and water
 - environmental site management to minimise stormwater pollution
 - installation of efficient appliances, techniques

RANGE STATEMENT

and recommendations for consumer use and opportunities

- maximising the use of recycled, renewable, reusable and reclaimed resource opportunities
- preventing and minimising risks and maximising opportunities for business and stakeholders, such as:
 - promotional activities
 - purchasing of carbon credits or green power
 - raising awareness among stakeholders through product advice and user recommendations
 - reduce the consumption of non-renewable resources
 - reducing emissions of greenhouse gases
 - reducing or eliminating the use of hazardous and toxic materials
 - resource, water and energy audits included in quote or tender
 - training of staff in principles and techniques of sustainability
 - use of solar or renewable energies and water
 - waste treatment initiatives (materials and resources, water).

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish documentation standards	<p>1.1. Identify organisational requirements for information entry, storage, output, and quality of <i>document</i> design and production</p> <p>1.2. Evaluate organisation's present and future information technology capability in terms of its effect on document design and production</p> <p>1.3. Identify types of documents used and required by the organisation</p> <p>1.4. Establish documentation <i>standards and design tasks</i> for organisational documents in accordance with information, budget and technology requirements</p>
2. Manage template design and development	<p>2.1. Ensure standard formats and templates suit the purpose, audience and information requirements of each document</p> <p>2.2. Ensure document templates enhance readability and appearance, and meet organisational requirements for style and layout</p> <p>2.3. Test templates, obtain organisational and user feedback, and make amendments as necessary to ensure maximum efficiency and quality of presentation</p>
3. Develop standard text for documents	<p>3.1. Evaluate <i>complex technical functions</i> of software for their usefulness in automating aspects of standard document production</p> <p>3.2. Match requirements of each document with software functions to allow efficient production of documents</p> <p>3.3. Test macros to ensure they meet the requirements of each document in accordance with documentation standards</p>
4. Develop and implement strategies to ensure the use of standard documentation	<p>4.1. Prepare explanatory notes for the use of standard templates and macros using content, format and language style to suit existing and future users</p> <p>4.2. Develop and implement training on the use of standard templates and macros and adjust the content and level of detail to suit user needs</p> <p>4.3. Produce, circulate, name and store master files and print copies of templates and macros in accordance with organisational requirements</p>
5. Develop and implement strategies	<p>5.1. Monitor use of standard documentation templates and macros, and evaluate the quality of documents</p>

ELEMENT	PERFORMANCE CRITERIA
for maintenance and continuous improvement of standard documentation	<p>produced against documentation standards</p> <p>5.2. Review documentation standards against the changing needs of the organisation, and plan and implement improvements in accordance with organisational procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to present complex instructions orally, to communicate ideas logically, and to explain technical concepts and designs to others
- literacy skills to:
 - read and interpret policies and procedures
 - review and select technological designs
 - consider aspects of context, purpose and audience when designing and formatting texts
- research and analysis skills to evaluate content, structure and purpose of technical texts, and to adapt task instructions to suit changes in technology
- technological skills to manage design requirements and layouts.

Required knowledge

- cost constraints
- document production processes
- functions of range of software applications, including desktop publishing, word processing and spreadsheets
- key provisions of relevant legislation and regulations from all forms of government, codes and standards that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
- organisational policies and procedures relating to document design and formatting
- sources of expertise external to the organisation or workgroup.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- designing templates or style sheets for use in document design
- documenting processes and strategies to ensure implementation.

Context of and specific resources for assessment

Assessment must ensure:

- access to office equipment and resources, including:
 - computer hardware and other document production equipment
 - range of software applications appropriate to the task
 - media for production of documents
- access to samples of high quality standardised documents.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of authenticated documents from the workplace or training environment
- oral or written questioning to assess knowledge of accounting procedures and techniques.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- information and communications technology units
- other general administration units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

BSBAUD504B Report on a quality audit

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to report on the outcomes of a quality audit and to take appropriate follow up action. It covers compiling audit results; preparing a report for the auditee/client; negotiating follow up action with the auditee/client; and monitoring and reviewing auditing system and activities.</p> <p>The types of quality audit that may be covered by this unit include an external or internal systems audit or process or product/service audit.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to individuals with well established, sound theoretical knowledge base in quality auditing who are proficient in using a wide range of specialised quality auditing and managerial techniques to carry out their own work and to supervise the quality audit team. The unit addresses the function performed by either an auditor having sole responsibility for the audit or a lead auditor of a quality audit team.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Compile audit results	1.1. Compare results of audit evaluation against audit objectives and criteria 1.2. Analyse audit results
2. Prepare report	2.1. Provide objective evidence relating to the need for reduction, elimination and prevention of non-conformance as the basis for the audit report 2.2. Produce audit report according to specified audit requirements 2.3. Present audit report to auditee and other stakeholders
3. Negotiate follow up process with auditee	3.1. Determine and initiate any corrective action required to deal with non-conformance, in consultation with auditee 3.2. Provide suggestions for improvements where applicable 3.3. Ensure time lines are agreed upon for completion of corrective action activities 3.4. Ensure corrective action follow-up procedures are agreed with auditee
4. Monitor and review audit system and activities	4.1. Evaluate effectiveness and suitability in achieving audit objectives 4.2. Investigate possible improvements in audit methods , economy and efficiency

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to listen to and question, clients and other audit team members
- culturally appropriate communication skills to relate to people from diverse backgrounds and abilities
- interpersonal skills to establish rapport with clients and to liaise with other audit team members
- literacy skills to read, write, edit and proofread documents to ensure clarity of meaning, accuracy and consistency of information
- organisational, planning and time management skills to sequence tasks, meet time lines, conduct inspections and arrange meetings
- problem-solving skills to overcome any issues which may potentially affect the auditing process or outcome
- teamwork skills
- technology skills to use a range of equipment required to conduct quality auditing activities.

Required knowledge

- auditing codes of practice or ethics
- auditing methods and techniques
- auditing regulations and standards, including:
 - AS/NZS ISO: 9000:2006: Quality management systems - Fundamentals and vocabulary
 - AS/NZS ISO 19011:2003: Guidelines for quality and/or environmental management systems auditing
- current audit practices
- industry, product and/or service knowledge
- quality auditing principles, techniques and systems
- requirements of house or other style manual protocols for written communications
- relevant legislation affecting business operations including appropriate occupational health and safety, environmental, and privacy legislation
- software applications relevant to conducting quality auditing activities
- terminology relating to quality auditing.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- completion and presentation of audit reports to auditees/clients and stakeholders
- negotiations for follow-up actions with auditees/clients
- knowledge of auditing regulations and standards.

Context of and specific resources for assessment

Assessment must ensure:

- access to workplace documentation including quality audit reports, checklists, risk management plans and audit plans.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of objective evidence provided in relation to the need for reduction, elimination and prevention of non-conformance
- review of audit reports
- direct questioning combined with review of portfolios of evidence by third party workplace reports of on-the-job performance by the candidate
- analysis of documentation outlining possible improvements in audit methods
- observations of interactions with team members, colleagues and auditees
- observations of presentations of audit reports to auditees and their organisation
- oral or written questioning to assess knowledge of audit report contents
- review of corrective action follow-up procedures agreed with auditee.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read and understand a variety of texts; to prepare general information and papers according to target audience; and to edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
- technology skills to select and use technology appropriate to a task
- communication skills to monitor and advise on customer service strategies
- problem-solving skills to deal with customer enquiries or complaints
- analytical skills to identify trends and positions of products and services.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - financial legislation
 - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- identifying needs and priorities of customers
- distinguishing between different levels of customer satisfaction
- treating customers with courtesy and respect
- responding to and reporting on, customer feedback
- knowledge of organisational policy and procedures for customer service.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of customer complaints
- examples of documents relating to customer service standards and policies.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of reports on customer service delivery
- analysis of responses to case studies and scenarios
- demonstration of techniques
- oral or written questioning to assess knowledge of customer service strategies.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- sales units
- other customer service units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Appropriate interpersonal skills</i> may include:	<ul style="list-style-type: none"> • listening actively to what the customer is communicating • providing an opportunity for the customer to confirm their request • questioning to clarify and confirm customer needs • seeking feedback from the customer to confirm understanding of needs • summarising and paraphrasing to check understanding of customer message • using appropriate body language
<i>Customers</i> may include:	<ul style="list-style-type: none"> • corporate customers • individual members of the organisation • individual members of the public • internal or external • other agencies
<i>Customer needs and expectations</i> may include:	<ul style="list-style-type: none"> • accuracy of information • advice or general information • complaints • fairness/politeness • further information • making an appointment • prices/value • purchasing organisation's products and services • returning organisation's products and services • specific information
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • access and equity principles and practice • anti-discrimination and related policy • defined resource parameters • goals, objectives, plans, systems and processes • legal and organisational policies, guidelines and requirements • OHS policies, procedures and programs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • payment and delivery options • pricing and discount policies • quality and continuous improvement processes and standards • quality assurance and/or procedures manuals • replacement and refund policy and procedures • who is responsible for products or services

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist customer to articulate needs	1.1.Ensure <i>customer</i> needs are fully explored, understood and agreed 1.2.Explain and match available services and products to customer needs 1.3.Identify and communicate <i>rights and responsibilities of customers</i> to the customer as appropriate
2. Satisfy complex customer needs	2.1.Explain possibilities for meeting customer needs 2.2.Assist customers to evaluate service and/or product options to satisfy their needs 2.3.Determine and prioritise preferred actions 2.4.Identify potential areas of difficulty in customer service delivery and take appropriate actions in a positive manner
3. Manage networks to ensure customer needs are addressed	3.1.Establish <i>effective regular communication</i> with customers 3.2.Establish, maintain and expand relevant networks to ensure appropriate referral of customers to products and services from within and outside the organisation 3.3.Ensure procedures are in place to ensure that decisions about targeting of customer services are based on up-to-date information about the customer, and the products and services available 3.4.Ensure procedures are put in place to ensure that referrals are based on the matching of the assessment of customer needs and availability of products and services 3.5.Maintain records of customer interaction in accordance with <i>organisational procedures</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read a variety of texts, to prepare general information and papers, and to write formal and informal letters according to target audience
- numeracy skills to analyse data, and to compare time lines and promotional costs against budgets
- problem-solving skills to develop solutions unique to a customer
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety
- organisational procedures and standards for customer service relationships
- detailed product knowledge which may be of significant breadth (so as to propose alternative products and services), or of significant depth (so as to propose variations within a limited product and service range).

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- assisting customers to articulate their needs
- documenting processes used and customer satisfaction with the products/services offered
- assisting customers to address their needs.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of products/services and promotional strategies.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of documentation prioritising preferred actions
- analysis of responses to case studies and scenarios
- demonstration of techniques
- observation of presentations
- assessment of written reports
- evaluation of communication established with customers
- review of customer interaction records.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- general administration units.

Manage records, reports and recommendations within the organisation's systems and processes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, coaching and mentoring skills to provide support to colleagues
- problem-solving skills to deal with complex and non-routine difficulties.

Required knowledge

- techniques for solving complaints including the principles and techniques involved in the management and organisation of:
 - customer behaviour
 - customer needs research
 - customer relations
 - ongoing product and/or service quality
 - problem identification and resolution
 - quality customer service delivery
 - record keeping and management methods
 - strategies for monitoring, managing and introducing ways to improve customer service relationships
 - strategies to obtain customer feedback.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- plans, policies or procedures for delivering quality customer service
- demonstrated techniques in solving complex customer complaints and system problems that lead to poor customer service
- knowledge of techniques for solving complaints.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- assessment of written reports
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- evaluation of leadership, supervision, coaching and mentoring used to assist colleagues to overcome difficulty in meeting customer service standards
- review of strategies developed and used to monitor progress in achieving product and/or service targets and standards
- review of records, reports and recommendations about managing customer service.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Management.

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan financial management approaches	1.1. Access <i>budget/financial plans</i> for the work team 1.2. Clarify budget/financial plans with <i>relevant personnel</i> within the organisation to ensure that documented outcomes are achievable, accurate and comprehensible 1.3. Negotiate any changes required to be made to budget/financial plans with relevant personnel within the organisation 1.4. Prepare <i>contingency plans</i> in the event that initial plans need to be varied
2. Implement financial management approaches	2.1. Disseminate relevant details of the agreed budget/financial plans to team members 2.2. Provide <i>support</i> to ensure that team members can competently perform <i>required roles</i> associated with the management of finances 2.3. Determine and access <i>resources and systems</i> to manage financial management processes within the work team
3. Monitor and control finances	3.1. Implement <i>processes</i> to monitor actual expenditure and to control costs across the work team 3.2. Monitor expenditure and costs on an agreed cyclical basis to identify cost variations and expenditure overruns 3.3. Implement, monitor and modify contingency plans as required to maintain financial objectives 3.4. <i>Report</i> on budget and expenditure in accordance with organisational protocols
4. Review and evaluate financial management processes	4.1. Collect and collate for analysis, <i>data and information on the effectiveness of financial management processes</i> within the work team 4.2. Analyse data and information on the effectiveness of financial management processes within the work team and identify, document and recommend any improvements to existing processes 4.3. Implement and monitor agreed improvements in line with financial objectives of the work team and the organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- numeracy skills to read and understand a budget and to update a budget
- technology skills to use software associated with financial record keeping.

Required knowledge

- basic accounting principles
- organisational requirements related to financial management
- relevant legislation and current requirements of the Australian Taxation Office, including GST
- requirements for organisational record keeping and auditing
- principles and techniques involved in:
 - budgeting
 - cash flows
 - electronic spreadsheets
 - GST
 - ledgers and financial statements
 - profit and loss statements.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> financial skills required to work with and interpret budgets, ageing summaries, cash flow, petty cash, GST, and profit and loss statements knowledge of the record keeping requirements for the ATO and for auditing purposes.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> assessment of written reports indicating broad knowledge of managing budgets and managing financial resources in the organisation demonstration of techniques using financial record keeping software direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate oral or written questioning to assess knowledge of requirements for organisational record keeping and auditing review of contingency plans review of identification of cost variations and expenditure overruns evaluation of documentation reporting on budget and expenditure review of documentation identifying and recommending improvements to financial management processes.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job descriptions	1.1. Clarify time lines and requirement for appointment 1.2. Assist with preparation of <i>job descriptions</i> which accurately reflect the role requirements in accordance with organisational procedures and <i>legislation, codes and national standards</i> and <i>occupational health and safety (OHS) considerations</i> 1.3. Consult with relevant personnel about job descriptions 1.4. Ensure that job descriptions do not contravene legislative requirements 1.5. Obtain approvals to advertise position
2. Plan for selection	2.1. <i>Advertise</i> vacancies for <i>staffing requirements</i> in accordance with organisational policies and procedures 2.2. Consult with relevant personnel to convene selection panel and to develop interview questions 2.3. Short list applicants 2.4. Ensure that interview questions do not breach legislative requirements 2.5. Schedule interviews and advise relevant personnel of times, dates and venues
3. Assess and select applicants	3.1. Participate in interview process and assess candidates against agreed selection criteria 3.2. Discuss assessment with other selection panel members 3.3. Correct any biases or deviations from agreed procedures and negotiate for preferred candidate 3.4. Contact referees for referee reports 3.5. Prepare selection report and make recommendations to senior personnel for appointment 3.6. Advise unsuccessful candidates of outcomes and respond to any queries 3.7. Complete all necessary documentation in accordance with organisational procedures 3.8. Secure agreement of preferred candidate
4. Appoint and induct successful candidate	4.1. Provide successful candidate with employment contract and other documentation 4.2. Advise managers and staff of starting date and make

ELEMENT	PERFORMANCE CRITERIA
	<p>necessary administrative arrangements for pay and employee record keeping</p> <p>4.3. Advise manager and work team of new appointment</p> <p>4.4. Arrange induction in accordance with organisational policy</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to use networks to source suitable applicants, to listen to and understand what is being said in interviews, and to advise on the outcomes of the selection process
- literacy skills to work with job descriptions to devise suitable questions for interviews, to prepare letters for unsuccessful applicants and to make job offers
- organising and scheduling skills to arrange interviews and venues.

Required knowledge

- documentation required for recruitment and selection
- human resource functions, human resource life cycle and the place of recruitment and selection in that life cycle
- principles of equity, diversity and relevant legislation.
- range of interviewing techniques and other selection processes and their application.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- demonstrated ability to work with job descriptions to source and select suitable staff
- interviewing and other selection techniques that demonstrate awareness of equal opportunity and anti-discrimination requirements
- knowledge of the human resource life cycle.

Context of and specific resources for assessment

Assessment must ensure:

- access to an appropriate range of documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports on recruitment and selection
- demonstration of selection techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of interviewing techniques
- review of advertisements for staffing vacancies
- review of documentation provided to successful candidate
- oral or written questioning to assess knowledge of selection processes.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Certificate IV in Human Resources.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Job descriptions</i> may include:	<ul style="list-style-type: none"> • attributes • competencies required by staff • job or person specifications • job title and purpose of position • necessary skills and knowledge • qualifications • selection criteria • tasks or duties associated with the position
<i>Legislation, codes and national standards</i> may include:	<ul style="list-style-type: none"> • award and enterprise agreements, and relevant industrial instruments • relevant industry codes of practice • relevant legislation from all levels of government that affects business operation, especially in regard to OHS and environmental issues, equal opportunity, industrial relations and anti-discrimination
<i>Occupational health and safety (OHS) considerations</i> may include:	<ul style="list-style-type: none"> • establishment and maintenance of OHS training, records, induction processes • performance against OHS legislation and organisation's OHS system, especially policies, procedures and work instructions
<i>Advertising</i> may include:	<ul style="list-style-type: none"> • electronic or print • internal or external • outsourcing
<i>Staffing requirements</i> may include:	<ul style="list-style-type: none"> • permanent, temporary, full-time, part-time or casual

Co-requisite units

Co-requisite units		

BSBHRM509A Manage rehabilitation or return to work programs

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to process and analyse both workers compensation and sick leave claims. It also covers the establishment of rehabilitation needs and return to work programs, and their monitoring, ongoing review and evaluation.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to human resources managers or specialists who manage claims and ensure that the organisation provides appropriate support for the worker.</p> <p>Note that the unit does not in any way address the process of curing the worker of their injury or illness as this is the task of the health professional. Instead the unit focuses on the process of dealing with claims and ensuring that the organisation supports the worker through return to work programs.</p> <p>In large organisations this work may be a full time role for some people, in smaller organisations it would typically be a part of a broader role with a human resources focus.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse claims	<p>1.1.Ensure that the organisation has and maintains a current Workers' Compensation insurance policy (or equivalent) as required by the applicable legislation</p> <p>1.2.Process claims in accordance with organisational policies, and legal and insurance requirements</p> <p>1.3.Dispute claims where insurer or organisational requirements are not met</p> <p>1.4.Notify rehabilitation provider in accordance with organisational procedures</p> <p>1.5.Advise claimants as to whether their claim has been accepted</p> <p>1.6.Analyse claims to identify the nature of the illness/injury and prepare report/s</p> <p>1.7.Identify projected period of absence and where rehabilitation assistance is required, and ensure arrangements are made in the work team to deal with absence</p>
2. Establish rehabilitation/return to work program	<p>2.1.Ensure consultation occurs between rehabilitation provider and treating doctor</p> <p>2.2.Ensure consultation occurs between rehabilitation provider, relevant managers and employee</p> <p>2.3.Consider job redesign, reduced hours and alternative duties in the light of medical advice</p> <p>2.4.Design a rehabilitation/return-to-work program to achieve a successful return-to-work</p> <p>2.5.Obtain approval for return-to-work program by relevant managers</p> <p>2.6.Establish rehabilitation program with employee</p> <p>2.7.Undertake risk analysis in relation to proposed program and mitigate risk where appropriate</p> <p>2.8.Commence program as close to the time of the accident/illness as possible</p>
3. Monitor/evaluate rehabilitation/ return to work program	<p>3.1.Encourage regular feedback/communication between provider, supervising manager and employee</p> <p>3.2.Organise regular contact and support between provider and employee</p> <p>3.3.Identify breaches of the return-to-work program and take remedial action promptly</p> <p>3.4.Refer return-to-work program to workers</p>

ELEMENT	PERFORMANCE CRITERIA
	<p><i>compensation authorities</i> where breaches occur</p> <p>3.5. Modify return-to-work program where appropriate if it is not delivering the required outcomes</p> <p>3.6. <i>Evaluate</i> each rehabilitation/return-to-work program at its conclusion and implement recommendations for system improvement where appropriate</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communications skills to discuss health matters sensitively with a range of people and to represent the employer for disputed claims
- negotiation skills to negotiate disputed claims
- organisational and administrative skills to see that all claims are properly processed and that claimant is clear about what is happening and what to expect.

Required knowledge

- rehabilitation concepts and return-to-work procedures
- relevant legislation from all levels of government that affects business operation, especially in regard to workers compensation, occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- workers compensation tribunal procedures.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- critical analysis of the organisation's rehabilitation return-to-work programs
- assessment of the strengths and weaknesses of the organisation's approach to rehabilitation return-to-work programs
- knowledge of relevant legislation.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- oral or written questioning to assess knowledge of workers compensation tribunal procedures
- review of risk analysis undertaken of a proposed return-to-work program
- evaluation of contact and support organised between provider and employee.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Human Resource Management.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Claims</i> may include:	<ul style="list-style-type: none"> • sick leave claim/application • workers compensation claims
<i>Rehabilitation provider</i> may be any authorised health professional including:	<ul style="list-style-type: none"> • case managers • counsellors or psychotherapists • pain or injury management specialists • physiotherapists
<i>Alternative duties</i> may include:	<ul style="list-style-type: none"> • limited range of duties in their normal job • new position • specific tasks which will not aggravate the injury or condition
<i>Risk analysis</i> means:	<ul style="list-style-type: none"> • determination of the likelihood of a negative event preventing the organisation meeting its objectives and the likely consequences of such an event on organisational performance
<i>Mitigation</i> means:	<ul style="list-style-type: none"> • action taken to reduce or eliminate risk identified
<i>Workers compensation authorities</i> means:	<ul style="list-style-type: none"> • relevant body, court, tribunal or commission having jurisdiction in respect to workers compensation matters
<i>Evaluation</i> means:	<ul style="list-style-type: none"> • determining the extent to which the program meets its objective in respect to timeframes, success rates, cost and impact on the organisation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Create opportunities to maximise innovation within the team	1.1. Evaluate and reflect on <i>what the team needs and wants to achieve</i> 1.2. Check out <i>information about current or potential team members' work</i> in the context of developing a more innovative team 1.3. Bring people into the team or make suggestions for team members based on what needs to be achieved and the potential for cross-fertilising ideas 1.4. Acknowledge, respect and discuss the <i>different ways that different people may contribute</i> to building or enhancing the team
2. Organise and agree effective ways of working	2.1. Jointly establish <i>ground rules</i> for how the team will operate 2.2. Agree and communicate responsibilities in ways that encourage and reinforce <i>team-based innovation</i> 2.3. Agree and share tasks and activities to ensure the best use of skills and abilities within the team 2.4. Plan and schedule activities to allow time for thinking, challenging and collaboration 2.5. Establish personal reward and stimulation as an integral part of the team's way of working
3. Support and guide colleagues	3.1. Model <i>behaviour that supports innovation</i> 3.2. Seek <i>external stimuli and ideas</i> to feed into team activities 3.3. Pro-actively share information, knowledge and experiences with other team members 3.4. Challenge and test ideas within the team in a positive and collaborative way 3.5. Pro-actively discuss and explore ideas with other team members on an ongoing basis
4. Reflect on how the team is working	4.1. De-brief and reflect on activities and on opportunities for improvement and innovation 4.2. Gather and use feedback from within and outside the team to generate discussion and debate 4.3. Discuss the <i>challenges of being innovative</i> in a constructive and open way 4.4. Take ideas for improvement, build them into future activities and communicate key issues to relevant colleagues 4.5. Identify, promote and celebrate successes and

ELEMENT	PERFORMANCE CRITERIA
	examples of successful innovation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to work collaboratively as part of a team, to provide guidance and support to others, and to participate in open and constructive discussions
- creative thinking skills to generate, explore, test and challenge ideas
- learning skills to stretch boundaries of own knowledge and skills
- literacy skills to analyse a wide range of information from varied sources
- planning and organisational skills to participate in the effective allocation of work in a team context
- problem-solving skills to work constructively to overcome issues and challenges of both a practical and conceptual nature and to make ideas become realities
- self-management skills to take a pro-active team role and to reflect on own performance in modelling and encouraging behaviour that supports innovation.

Required knowledge

- barriers to innovation that can occur within a team and broader barriers that sometimes hinder innovation
- broad concepts of innovation including what innovation is, different types of innovation and the benefits of innovation
- characteristics of teams that are more likely to be innovative and characteristics of broader environments that support and encourage innovation
- different roles that people may play within a team, how this impacts on the way a team works and what it might achieve
- group dynamics in a team.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- active participation in a team where the team takes a pro-active and considered approach to innovation and innovative practice
- collaborative and open communication within the team
- knowledge and understanding of the internal and external factors that contribute to a team becoming and remaining innovative.

Context of and specific resources for assessment

Assessment must ensure:

- demonstration of skills as part of a team.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- direct observation of team interactions
- evaluation of reports by the candidate or the team (could be oral or written) discussing the ideas, challenges and opportunities associated with teams, and how they can be more innovative
- evaluation of feedback from other people in the team about the candidate's communication approaches and abilities
- oral or written questioning to assess knowledge of the characteristics of innovative teams, innovation concepts more broadly and they ways in which innovation can be encouraged
- review of jointly established 'groundrules' for how the team will operate.

Guidance information for assessment

Innovation does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

What the team needs and wants to achieve may relate to:

- addressing particular customer feedback
- conceiving and implementing a particular project
- developing new services or products
- generating ongoing ideas within the work unit
- improving budgetary performance
- improving or changing work conditions
- new ideas that impact beyond the workplace (e.g. that have a broader social or community impact)

Information about current or potential team members' work may relate to:

- interests
- lifestyle preferences
- past jobs
- technical strengths
- work preferences
- working styles

Different ways that different people may contribute may relate to individual strengths around:

- creating positive energy within the team
- fundamental literacy strengths (e.g. particularly strong in visual literacy, written or spoken communication)
- generating ideas
- networks or spheres of influence
- particular ways of thinking
- powers of persuasion
- problem-solving capacities
- specific technical skills or knowledge

Ground rules may relate to:

- boundaries or lack of boundaries for team activities and ideas
- confidentiality
- copyright, moral rights or intellectual property
- regularity of communication
- key roles and responsibilities
- time lines

RANGE STATEMENT	
	<ul style="list-style-type: none"> ways of communicating
<i>Team-based innovation</i> may be encouraged through:	<ul style="list-style-type: none"> accessing training and learning opportunities enough but not too much guidance and structure equitable sharing of workload follow-through with ideas supportive communication
<i>Behaviour that supports innovation</i> may include being:	<ul style="list-style-type: none"> collaborative equitable fair fun hardworking reflective responsible sympathetic
<i>External stimuli and ideas</i> might be from:	<ul style="list-style-type: none"> Australia or overseas colleagues outside of the team family and friends internet journals networks or technical experts other organisations
<i>Challenges of being innovative</i> may relate to:	<ul style="list-style-type: none"> budgetary or other resource constraints competing priorities organisational culture problems with breaking old patterns of behaviour or thinking time pressures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lead innovation by example	1.1. Make innovation an integral part of <i>leadership and management activities</i> 1.2. Demonstrate positive reception of ideas from others and provide constructive advice 1.3. Establish and maintain relationships based on mutual respect and trust 1.4. Take considered <i>risks</i> to open up opportunities for innovation 1.5. Regularly evaluate own approaches for consistency with the wider organisational or project context
2. Establish work practices that support innovation	2.1. Consult on and establish <i>working conditions</i> that reflect and encourage innovative practice 2.2. Introduce and maintain <i>workplace procedures</i> that foster innovation and allow for rigorous <i>evaluation of innovative ideas</i> 2.3. Facilitate and participate in <i>collaborative work arrangements</i> to foster innovation 2.4. Build and lead teams to work in <i>ways that maximise opportunities for innovation</i>
3. Promote innovation	3.1. Acknowledge suggestions, improvements and innovations from all colleagues 3.2. Find appropriate <i>ways of celebrating and promoting innovation</i> 3.3. Promote and reinforce the value of innovation according to the vision and objectives of the organisation or project 3.4. Promote and support the evaluation of innovative ideas within the wider organisational or project context
4. Create a physical environment which supports innovation	4.1. Evaluate the <i>impact of the physical environment</i> in relation to innovation 4.2. Collaborate with colleagues about ideas for enhancing the physical work environment before taking action 4.3. Consider potential for supporting innovation when selecting physical resources and equipment 4.4. Design, fit-out and decorate workspaces to encourage creative mindsets, collaborative working and the development of positive workplace relationships

ELEMENT	PERFORMANCE CRITERIA
5. Provide learning opportunities	<p>5.1.Pro-actively share relevant information, knowledge and skills with colleagues</p> <p>5.2.Provide or encourage <i>formal and informal learning opportunities</i> to help develop the skills needed for innovation</p> <p>5.3.Create opportunities in which individuals can learn from the experience of others</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, consultation and negotiation skills to model and lead, open and collaborative relationships
- comprehension skills to interpret and develop information that may deal with complex ideas and relate to issues both within and outside a given workplace context
- planning and organisational skills to implement wide-ranging practical processes and procedures that support innovation
- problem-solving skills to assess and respond to challenges and risks around innovation at an operational management level
- self-management and learning skills to evaluate and enhance personal effectiveness, and to promote a culture of ongoing learning and development.

Required knowledge

- benefits of providing coaching and learning opportunities in relation to innovation
- concept of innovation, what it is and what it means for different people either working independently or within an organisation
- context for innovation in the relevant workplace context including core business values, overall objectives, broader environmental context and the need to ensure the value and benefit of innovative ideas and projects
- different ways of rewarding performance
- factors and tools that can motivate individuals to use creative thinking and apply innovative work practices
- legislative framework that impacts on operations in the relevant workplace context
- management principles and leadership styles, including the impact of different approaches on innovation
- typical challenges and barriers to innovation within teams and organisations, and ways of overcoming these
- ways in which workplace climate can affect individual attitudes and performance.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- establishment of procedures and practices (for a project or a workplace) which support and foster innovative work practice and include sound evaluation processes
- modelling of behaviour that supports innovative work practice
- knowledge and understanding of the role of leaders and managers in encouraging innovation, and the issues and challenges associated with building and sustaining an innovative work environment.

Context of and specific resources for assessment

Assessment must ensure:

- involvement of a team for which the candidate provides leadership and guidance.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- evaluation of outcomes and processes from activities managed by the candidate, particularly in relation to how innovation and innovative practice was encouraged and supported
- oral or written questioning to assess knowledge of ways that innovation can be fostered and the typical challenges and barriers to innovation.

Guidance information for assessment

Innovation does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Leadership and management activities</i> may include:	<ul style="list-style-type: none"> • people management practices • planning processes • regular management meetings • review processes
<i>Risks</i> may include:	<ul style="list-style-type: none"> • budgetary issues • challenging changes in relationships, work practices and general workplace climate • unforeseen impacts of innovative ideas
<i>Working conditions</i> may include:	<ul style="list-style-type: none"> • family-friendly leave entitlements • flexible working hours • social leave • study leave • time provided for coming up with ideas
<i>Workplace procedures</i> may relate to:	<ul style="list-style-type: none"> • briefing processes • client relations • performance management • project management • staff meetings • training
<i>Evaluation of innovative ideas</i> may relate to:	<ul style="list-style-type: none"> • analysing consistency with overall goals, values or vision • assessing resource requirements and practicalities • assessing the potential to find 'champions' or supporters • evaluating the external factors that may impact on the idea • exploring the implications of ideas that may stretch or change existing ways of doing things
<i>Collaborative work arrangements</i> might be:	<ul style="list-style-type: none"> • cross section • vertical teams • within a section • working with supplier organisations or partner

RANGE STATEMENT	
	organisations
<i>Ways that maximise opportunities for innovation</i> may relate to:	<ul style="list-style-type: none"> • collaborating • collecting data • creative thinking • future scanning • getting feedback • making suggestions • networking
<i>Ways of celebrating and promoting innovation</i> may include:	<ul style="list-style-type: none"> • congratulating the project team • ensuring management acknowledgment • providing a newsletter story about the idea • using the idea to help foster other ideas • well-planned group incentive schemes
<i>Impact of the physical environment</i> may relate to:	<ul style="list-style-type: none"> • eating areas • extent to which design or style links with declared philosophies or objectives • external areas • general ambience of the work environment • location of different people • presence and ambience of relaxation areas • style of décor • use of creative messages or images in the workplace • workspace design and décor • workstation arrangements and opportunities for interaction
<i>Formal and informal learning opportunities</i> may include:	<ul style="list-style-type: none"> • coaching • conferences • formal training courses/programs • information seminars • job rotation • mentoring • online learning

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Design database	<p>1.1. Review <i>organisational and task requirements</i> to confirm <i>scope and functionality of database</i> design, including data redundancy</p> <p>1.2. Develop a logical data model to identify and classify data into types</p> <p>1.3. Select appropriate <i>software</i> according to organisational and task requirements and required scope and functionality of database</p> <p>1.4. Confirm database design with <i>appropriate person</i></p>
2. Develop database	<p>2.1. Set field attributes according to data type and link databases by a common field in accordance with software procedures</p> <p>2.2. Identify primary key to uniquely identify data</p> <p>2.3. Identify foreign keys to establish associations between data</p> <p>2.4. Use <i>software functions</i> and <i>formulae</i> to meet organisational and task requirements</p> <p>2.5. Create password and access system according to organisational and task requirements</p>
3. Develop queries, forms and reports	<p>3.1. Develop queries as required by organisational and task requirements</p> <p>3.2. Develop input screens or forms in order to access required data</p> <p>3.3. Develop reports according to organisational and task requirements</p>
4. Test and finalise database	<p>4.1. Populate database with sample dataset for testing</p> <p>4.2. Assess and document effectiveness of data relationships, queries forms and reports</p> <p>4.3. Address any errors in database design</p> <p>4.4. <i>Name and store</i> database in accordance with organisational requirements and exit the application without data loss or damage</p> <p>4.5. Confirm database readiness with appropriate person</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to interpret and evaluate the purposes and features of databases
- numeracy skills to utilise software functions and formulae, and to establish data relationships and queries
- planning and organising skills to establish database design
- problem-solving skills to address inconsistencies in database design and data relationships.

Required knowledge

- advanced functions of database software applications
- impact of formatting and design on the presentation and readability of data
- key provisions of relevant legislation from all forms of government, standards and codes that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • producing a database containing a minimum of three tables and incorporating queries, reports and forms • knowledge of advanced functions of database software app.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to office equipment and resources • access to sample data.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of databasedesign • review of database testing • demonstration of techniques.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • IT use units • other IT analysis and design units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Organisational and task requirements</i> may include:	<ul style="list-style-type: none"> • business requirements • consistent corporate image, including colour schemes and company logo • established guidelines and procedures for data usage • existing database templates • final output requirements for data • house styles • observing copyright legislation • organisation name, time, date, document title, filename or other fields in headers and footers • technical operating environment and platform
<i>Scope and functionality of database</i> may include:	<ul style="list-style-type: none"> • concurrency of access requirements • data relationships • data structures • forms • queries • reports • screens • security features • table relationships
<i>Software</i> may include:	<ul style="list-style-type: none"> • commercial software applications • organisational specific software
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • clients • colleagues • supervisors
<i>Software functions</i> may include:	<ul style="list-style-type: none"> • adding, deleting, moving, re-labelling fields • altering field widths • calculations, formula • data protection • field definitions and attributes • formatting fields

RANGE STATEMENT	
	<ul style="list-style-type: none"> • formatting text • headers and footers • inserting and deleting blank lines and spaces • macros <ul style="list-style-type: none"> • append • delete • edit • exit • list • print • query • report • repeating (if available) • table, form and report wizards
<i>Formulae</i> may include:	<ul style="list-style-type: none"> • formulae • addition • average • combinations of formulae • count • division • maximum • minimum • multiplication • subtraction • sum
<i>Naming and storage</i> may include:	<ul style="list-style-type: none"> • authorised access • filing locations • organisational policy for backing up files • organisational policy for filing hard copies of spreadsheets • security • storage in folders and sub-folders • storage on disc drives, CD-ROM, USBs, tape or server back-up

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain performance of hardware and software	<p>1.1. Monitor and evaluate system effectiveness to ensure it meets organisational and system requirements</p> <p>1.2. Use operating system, drive and disk structure, reports and files to identify performance problems</p> <p>1.3. Maintain disk drives and peripherals according to manufacturers' and organisational requirements</p> <p>1.4. Replace consumables in accordance with manufacturers' and organisational requirements</p>
2. Provide basic system administration	<p>2.1. Carry out system back-up procedure at regular intervals according to organisational and system requirements</p> <p>2.2. Install and operate software applications in accordance with developers' and organisational requirements</p> <p>2.3. Maintain and update security access procedures in line with organisational requirements</p> <p>2.4. Ensure that licence for use of software is used, checked and recorded in accordance with organisational requirements</p> <p>2.5. Regularly maintain and update virus programs in accordance with organisational requirements</p>
3. Identify future technology requirements	<p>3.1. Maintain knowledge of current and new technology by regularly accessing sources of information</p> <p>3.2. Identify and develop improved technology systems using feedback from clients and colleagues</p> <p>3.3. Assess existing technology against newly available technology to determine future needs and priorities</p> <p>3.4. Identify and select new technologies to achieve and maintain continuous organisational development</p> <p>3.5. Obtain management and budget approval for new selected technologies</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain the operation and troubleshooting of technology in the work environment
- literacy skills to interpret and evaluate the purposes and objectives of various uses of technology; to display logical organisation of written information
- problem-solving skills to address routine and non-routine faults with hardware and software
- research and analytical skills to analyse and identify organisation's future technology requirements.

Required knowledge

- costs and benefits of technology maintenance strategies
- general features and capabilities of current industry accepted hardware and software products
- importance of back-up and security procedures; maintenance and diagnostic procedures; licensing, installation and purchasing procedures
- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety (OHS).

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- installing software and hardware
- organising and accessing software, materials and consumables
- maintaining technology security and maintenance systems
- knowledge of costs and benefits of technology maintenance strategies.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- access to examples of technology maintenance and security procedures.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- analysis of responses to case studies and scenarios
- demonstration of techniques
- oral or written questioning to assess knowledge of general features and capabilities of current industry accepted hardware and software products.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other information and communications technology or general administration units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Organisational and system requirements</i> may include:	<ul style="list-style-type: none"> • back-up procedures • Code of Conduct • ethical standards • legal and organisational policy/guidelines and requirements • maintenance of customised software • OHS policies, procedures and programs • quality assurance and/or procedures manuals • register of licenses • restore procedures • security and confidentiality procedures • software licence documentation • storage of information technology documentation • storage retrieval and type of product licenses • updating of virus protection systems
<i>Disk drive and peripherals maintenance</i> may include:	<ul style="list-style-type: none"> • backing up files before major maintenance • checking hard drive for errors • cleaning dust from internal and external surfaces • creating more free space on the hard disk • defragmenting the hard disk • deleting unwanted files • reviewing programs • using up-to-date anti-virus programs
<i>Consumables</i> may include:	<ul style="list-style-type: none"> • disks • magnetic tape and cassettes • print heads • print media • printer ribbons and cartridges
<i>Software</i> may include:	<ul style="list-style-type: none"> • accounting applications • commercial software applications • database applications

RANGE STATEMENT	
	<ul style="list-style-type: none"> • internet/intranet/extranet related programs • organisation-specific software • presentation applications • spreadsheet applications • word processing applications
Technology may include:	<ul style="list-style-type: none"> • client services • computers • data transfer devices • modems • peripherals, including: <ul style="list-style-type: none"> • printers, scanners, tape cartridges • speakers, multimedia kits • personal computer, modems • input equipment such as mouse, touch pad, keyboard, pens • mobile phones, palmtops and personal digital assistants (PDAs), laptops and desktop computers • Bluetooth devices, universal serial bus (USB), Firewire (IEEE 1394) • photocopiers • printers • scanners • software
Sources of information may include:	<ul style="list-style-type: none"> • computer hardware manufacturers • computer magazines and journals • computer software designers • industry associations • internal/external clients • internet • retail outlets • seminars, workshops and training sessions • trade fairs
Improved technology systems may include:	<ul style="list-style-type: none"> • access protocols • cable data transmissions • delivery and installation systems • hardware upgrades • implementing a new system • maintenance options • multimedia

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to produce documents	<p>1.1. Use safe work practices to ensure <i>ergonomic, work organisation, energy and resource conservation requirements</i> are addressed</p> <p>1.2. Identify <i>document</i> purpose, audience and presentation requirements, and clarify with relevant personnel as required</p> <p>1.3. Identify <i>organisational</i> and task <i>requirements</i> for document layout and design</p>
2. Produce documents	<p>2.1. <i>Format</i> document using appropriate <i>software functions</i> to adjust page layout to meet information requirements, in accordance with organisational style and presentation requirements</p> <p>2.2. Use system features to identify and manipulate <i>screen display options and controls</i></p> <p>2.3. Use manuals, user documentation and online help to overcome problems with document presentation and production</p>
3. Finalise documents	<p>3.1. Ensure final document is previewed, <i>checked</i>, adjusted and <i>printed</i> in accordance with organisational and task requirements</p> <p>3.2. Ensure document is prepared within <i>designated time lines</i> and organisational requirements</p> <p>3.3. <i>Name and store document</i> in accordance with organisational requirements and exit application without information loss/damage</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to clarify document requirements
- editing and proofreading skills to check own work for accuracy
- keyboarding skills to enter text and numerical data
- literacy skills to read and understand organisation's procedures, and to use basic models to produce a range of correspondence
- problem-solving skills to solve routine problems.

Required knowledge

- formatting styles and their effect on formatting, readability and appearance of documents
- purpose, use and function of word processing software
- organisational requirements for ergonomics, work periods and breaks, and conservation techniques
- organisational style guide.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- knowledge of simple word processing functions, standard document layout and design principles
- production of a minimum of three simple, word processed documents.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- access to examples of word processed documents and style guides.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of formatted document
- review of final document
- demonstration of techniques
- oral or written questioning to assess knowledge of word processing software functions.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- general administration units
- other IT use units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Ergonomic requirements</i> may include:	<ul style="list-style-type: none"> • avoiding radiation from computer screens • chair height, seat and back adjustment • document holder • footrest • keyboard and mouse position • lighting • noise minimisation • posture • screen position • workstation height and layout
<i>Work organisation requirements</i> may include:	<ul style="list-style-type: none"> • exercise breaks • mix of repetitive and other activities • rest periods
<i>Conservation requirements</i> may include:	<ul style="list-style-type: none"> • disposing of non-confidential waste paper in recycling bins • double-sided paper use • re-using paper for rough drafts (observing confidentiality requirements) • utilising power-save options for equipment
<i>Documents</i> may include:	<ul style="list-style-type: none"> • agendas • briefing papers • envelopes • faxes • labels • letters • mail merges • memos • minutes • short reports • simple one-page flyers • standard form letters
<i>Organisational requirements</i> may	<ul style="list-style-type: none"> • company colour scheme

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • company logo • consistent corporate image • content restrictions • established guidelines and procedures for document production • house styles • observing copyright legislation • organisation name, time, date, document title, filename etc. in header/footer • templates
<i>Formatting</i> may include:	<ul style="list-style-type: none"> • alignment on page • columns • company logo/letterhead • enhancements to format - borders, patterns and colours • enhancements to text - colour, size, orientation • headers/footers • margins • page orientation
<i>Software functions</i> may include:	<ul style="list-style-type: none"> • default settings • document protection • grammar check • headers/footers • indent • line spacing • page numbers • page set up • paragraph formatting • spell check • tabs • text formatting
<i>Screen display options and controls</i> may include:	<ul style="list-style-type: none"> • layout view • maximise/minimise • normal view • page view • print preview • ruler • toolbars • zoom percentage

RANGE STATEMENT	
<i>Checking</i> may include:	<ul style="list-style-type: none"> • accuracy of information • consistency of layout • ensuring instructions with regard to content and format have been followed • grammar • proofreading • spelling, electronically and manually
<i>Printing</i> may include:	<ul style="list-style-type: none"> • basic print settings • multiple copies • odd or even pages • print preview • printer setup • specified pages • whole document
<i>Designated time lines</i> may include:	<ul style="list-style-type: none"> • organisational time line e.g. deadline requirements • time line agreed with internal/external client • time line agreed with supervisor/person requiring document/s
<i>Naming and storing documents</i> may include:	<ul style="list-style-type: none"> • appropriate file type • authorised access • file names according to organisational procedure e.g. numbers rather than names • file names which are easily identifiable in relation to the content • file/directory names which identify the operator, author, section, date etc. • filing locations • organisational policy for backing up files • organisational policy for filing hard copies of documents • security • storage in folders/sub-folders • storage on hard/floppy disk drives, CD-ROM, tape back-up

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and prepare resources	<p>1.1. Adjust workspace, furniture and equipment to suit user <i>ergonomic, work organisation</i> and occupational health and safety (OHS) <i>requirements</i></p> <p>1.2. Use energy and resource <i>conservation techniques</i> to minimise wastage in accordance with organisational and statutory requirements</p> <p>1.3. Identify <i>spreadsheet task requirements</i> and clarify with relevant personnel as required</p>
2. Create simple spreadsheets	<p>2.1. Ensure <i>data</i> is entered, <i>checked</i> and amended in accordance with organisational and task requirements, to maintain consistency of design and layout</p> <p>2.2. <i>Format</i> spreadsheet using <i>software functions</i>, to adjust page and cell layout to meet information requirements, in accordance with organisational style and presentation requirements</p> <p>2.3. Ensure <i>formulae</i> are used and tested to confirm output meets task requirements, in consultation with appropriate personnel as required</p> <p>2.4. Use manuals, user documentation and online help to overcome problems with spreadsheet design and production</p>
3. Produce simple charts	<p>3.1. Select <i>chart type</i> and design that enables valid representation of numerical data and meets organisational and task requirements</p> <p>3.2. Create chart using appropriate data range in the spreadsheet</p> <p>3.3. Modify chart type and layout using formatting <i>features</i></p>
4. Finalise spreadsheets	<p>4.1. Ensure spreadsheet and any accompanying charts are previewed, adjusted and <i>printed</i> in accordance with organisational and task requirements</p> <p>4.2. Ensure data input meets <i>designated time lines</i> and organisational requirements for speed and accuracy</p> <p>4.3. Name and <i>store</i> spreadsheet in accordance with organisational requirements and exit the application without data loss/damage</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to clarify requirements of spreadsheet
- editing and proofreading skills to check own work for accuracy
- keyboarding skills to enter text and numerical data
- literacy skills to read and understand organisation's procedures, and to use basic models to produce a range of spreadsheets
- numeracy skills to create and use spreadsheet formulae.

Required knowledge

- formatting of workplace documents
- organisational requirements for ergonomic standards, work periods and breaks, and conservation techniques
- organisational guidelines on spreadsheet manipulation and processing
- purpose and range of use of spreadsheet functions.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- designing a minimum of two spreadsheets
- using cell-based formulae
- creating charts using relevant data
- knowledge of purpose and range of use of spreadsheet functions.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- access to examples of spreadsheets and simple formulae.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of final spreadsheets
- analysis of responses to case studies and scenarios
- demonstration of techniques
- oral or written questioning to assess knowledge of spreadsheet software functions.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- general administration units
- other IT use units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Ergonomic requirements</i> may include:	<ul style="list-style-type: none"> • avoiding radiation from computer screens • chair height, seat and back adjustment • document holder • footrest • keyboard and mouse position • lighting • noise minimisation • posture • screen position • workstation height and layout
<i>Work organisation requirements</i> may include:	<ul style="list-style-type: none"> • exercise breaks • mix of repetitive and other activities • rest periods
<i>Conservation techniques</i> may include:	<ul style="list-style-type: none"> • double-sided paper use • recycling used and shredded paper • re-using paper for rough drafts (observing confidentiality requirements) • utilising power-save options for equipment
<i>Spreadsheet task requirements</i> may include:	<ul style="list-style-type: none"> • data entry • output • presentation • storage
<i>Data</i> may include:	<ul style="list-style-type: none"> • numbers • text
<i>Checking</i> may include:	<ul style="list-style-type: none"> • accuracy of data • accuracy of formulae with calculator • ensuring instructions with regard to content and format have been followed • proofreading • spelling, electronically and manually
<i>Formatting</i> may include:	<ul style="list-style-type: none"> • alignment on page • efficiency of formulae

RANGE STATEMENT	
	<ul style="list-style-type: none"> • enhancements to format - borders, patterns and colours • enhancements to text • headers/footers • use of absolute and relative cell addresses • use of cell addresses in formulae
<i>Software functions</i> may include:	<ul style="list-style-type: none"> • adding/deleting columns/rows • formatting cells • formatting text • headers/footers • sizing columns/rows
<i>Formulae</i> may include:	<ul style="list-style-type: none"> • absolute cell referencing and/or mixed references • average • division • maximum • minimum • multiplication • subtraction • sum • combinations of above
<i>Chart types</i> may include:	<ul style="list-style-type: none"> • area • bar • column • exploded pie • line • pie and 3-D pie • scatter/bubble • stacked/multiple bar • stacked, 3-D column
<i>Features</i> may include:	<ul style="list-style-type: none"> • axes • axis title • borders • chart title • colours • data labels • data tables • fills • gridlines • legend

RANGE STATEMENT	
	<ul style="list-style-type: none"> • lines • patterns
Printing may include:	<ul style="list-style-type: none"> • fit on one page • fit specific number of pages • with formulae • with values
Designated time lines may include:	<ul style="list-style-type: none"> • organisational time line e.g. financial requirements • time line agreed with internal/external client • time line agreed with supervisor/person requiring spreadsheet
Storing data may include:	<ul style="list-style-type: none"> • authorised access • filing locations • organisational policy for backing up files • organisational policy for filing hard copies of spreadsheets • security • storage in electronic folders/sub-folders • storage on CD-ROM, zip drives, USB memory

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Create a simple database	<p>1.1.Design a simple database, with at least two tables, using a database application, basic design principles, software functions and simple formulae</p> <p>1.2.Develop a table with fields and attributes according to database usage, as well as data considerations and user requirements</p> <p>1.3.Create a primary key for each table</p> <p>1.4.Modify table layout and field attributes as required</p> <p>1.5.Create a relationship between the two tables</p> <p>1.6.Check and amend data entered, in accordance with organisational and task requirements</p>
2. Create reports and queries	<p>2.1.Determine information output, database tables to be used and report layout to meet task requirements</p> <p>2.2.Determine data groupings, search and sort criteria to meet task requirements</p> <p>2.3.Run reports and queries to check that results and formulae provide the required data</p> <p>2.4.Modify reports to include or exclude additional requirements</p>
3. Use database	<p>3.1.Ensure data input meets designated time lines and organisational requirements for speed and accuracy</p> <p>3.2.Use manuals, user documentation and online help to overcome problems with database design and production</p> <p>3.3.Preview, adjust and print database reports or forms in accordance with organisational and task requirements</p> <p>3.4.Name and store databases, in accordance with organisational requirements, and exit application without data loss or damage</p> <p>3.5.Prepare and distribute reports to appropriate person in a suitable format</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- numeracy skills to create simple queries and to use simple formulae
- planning and organising skills to develop effective databases
- problem-solving skills to address inconsistencies in data and issues in database, and to query structures.

Required knowledge

- key provisions of relevant legislation from all forms of government, standards and codes that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety
- organisational requirements relating to data entry, storage and presentation.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- creating simple databases and queries
- manipulating data using queries
- formatting data into a final version.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- access to sample data.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of authenticated documents from the workplace or training environment
- demonstration of techniques.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- administration units
- other information and communications technology units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Database applications</i> may include:	<ul style="list-style-type: none"> • commercial database applications • organisational specific database applications
<i>Basic design principles</i> may include:	<ul style="list-style-type: none"> • naming conventions • data layout • formatting • database use • required output • reporting and presentation requirements
<i>Software functions</i> may include:	<ul style="list-style-type: none"> • adding, deleting, moving, re-labelling fields • altering field widths • calculating, using formula • data protection • field definitions and attributes • formatting fields • formatting text • headers and footers • inserting and deleting blank lines and spaces • repeating (if available) • table, form and report wizards
<i>Simple formulae</i> may include:	<ul style="list-style-type: none"> • average • count • division • maximum • minimum • multiplication • subtraction • sum • combinations of above
<i>Data</i> may include:	<ul style="list-style-type: none"> • numbers • text
<i>Checking and amending data</i>	<ul style="list-style-type: none"> • accuracy of data

RANGE STATEMENT	
may include:	<ul style="list-style-type: none"> • accuracy of formulae with calculator • ensuring instructions with regard to content and format have been followed • outcome of sorting or filtering • proofreading • spelling, electronically and manually
Report layout may include:	<ul style="list-style-type: none"> • alignment on page • columns • enhancements to format - borders, patterns and colours • enhancements to text • formatting provided through use of a wizard or other automated process • headers/footers • logical ordering of data • tables
Designated time lines may include:	<ul style="list-style-type: none"> • time line agreed with internal or external client • time line agreed with supervisor or person requiring database
Printing may include:	<ul style="list-style-type: none"> • forms • queries • records • reports • tables
Storing databases may include:	<ul style="list-style-type: none"> • authorised access • filing locations • naming conventions • organisational policy for backing up files • organisational policy for filing hard copies of databases • security • storage in electronic folders and sub-folders • storage on disk drives, CD-ROM, back-up tapes

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to develop spreadsheet	<p>1.1. Organise personal work environment in accordance with <i>ergonomic requirements</i></p> <p>1.2. Analyse task and determine specifications for spreadsheets</p> <p>1.3. Identify organisational and task requirements in relation to data entry, storage, output, reporting and presentation requirements</p> <p>1.4. Apply <i>work organisation strategies</i> and <i>energy and resource conservation techniques</i> to plan work activities</p>
2. Develop a linked spreadsheet solution	<p>2.1. Utilise <i>spreadsheet design</i> software <i>functions</i> and <i>formulae</i> to meet identified requirements</p> <p>2.2. Link spreadsheets in accordance with software procedures</p> <p>2.3. Format cells and use data attributes assigned with relative and/or absolute cell references, in accordance with the task specifications</p> <p>2.4. Test formulae to confirm output meets task requirements</p>
3. Automate and standardise spreadsheet operation	<p>3.1. Evaluate tasks to identify those where automation would increase efficiency</p> <p>3.2. Create, use and edit <i>macros</i> to fulfil the requirements of the task and automate spreadsheet operation</p> <p>3.3. Develop, edit and use <i>templates</i> to ensure consistency of design and layout for forms and reports, in accordance with organisational requirements</p>
4. Use spreadsheets	<p>4.1. Enter, check and amend data in accordance with organisational and task requirements</p> <p>4.2. <i>Import and export</i> data between compatible spreadsheets and adjust host documents, in accordance with software and system procedures</p> <p>4.3. Use manuals, user documentation and online help to overcome problems with spreadsheet design and production</p> <p>4.4. Preview, adjust and <i>print</i> spreadsheet in accordance with organisational and task requirements</p> <p>4.5. <i>Name and store spreadsheet</i> in accordance with organisational requirements and exit the application</p>

ELEMENT	PERFORMANCE CRITERIA
	without data loss or damage
5. Represent numerical data in graphic form	<p>5.1. Determine style of graph to meet specified requirements and manipulate spreadsheet data if necessary to suit graph requirements</p> <p>5.2. Create graphs with labels and titles from numerical data contained in a spreadsheet file</p> <p>5.3. Save, view and print graph within designated time lines</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to interpret and evaluate the purposes and uses of various features of spreadsheets and to use a variety of strategies for planning and reviewing own work
- proofreading and editing skills to check for accuracy and consistency of information by consulting additional resources
- numeracy skills to collate and present data, graphs and related references.

Required knowledge

- advanced functions of spreadsheet software applications
- impact of formatting and design on the presentation and readability of data
- key provisions of relevant legislation from all forms of government, standards and codes that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety
- organisational policies and procedures.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • developing complex spreadsheets • developing graphical representations of data contained in spreadsheets.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to office equipment and software • access to samples of data for inclusion in spreadsheets.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of authenticated documents from the workplace or training environment • demonstration of techniques.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • administration units • other information and communications technology units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Ergonomic requirements</i> may include:	<ul style="list-style-type: none"> • avoiding radiation from computer screens • chair height, seat and back adjustment • document holder • footrest • keyboard and mouse position • lighting • noise minimisation • posture • screen position • workstation height and layout
<i>Work organisation strategies</i> may include:	<ul style="list-style-type: none"> • exercise breaks • mix of repetitive and other activities • rest periods
<i>Energy and resource conservation techniques</i> may include:	<ul style="list-style-type: none"> • double-sided paper use • recycling used and shredded paper • re-using paper for rough drafts (observing confidentiality requirements) • using power-save options for equipment
<i>Spreadsheet design</i> may include:	<ul style="list-style-type: none"> • analysis • appropriateness • avoidance of blank rows and columns • embedding cell references in formulae • formulae • formatting and reformatting • functions • headers and footers • headings • headings and labels • identification and parameters • import and export of data • labels • linked formulae

RANGE STATEMENT	
	<ul style="list-style-type: none"> • multi-page documents • pivot tables • relative and absolute cell references • split screen operation
Functions may include:	<ul style="list-style-type: none"> • basic financial functions (if available) • date functions • logical functions (lookup, if, choose, true, false, conditions) • mathematical functions (square root, integer, absolute value, round) • simple nested functions • statistical functions (standard deviation, count, maximum, minimum)
Formulae may include:	<ul style="list-style-type: none"> • addition • average • comparison • division • exponentiation • multiplication • percentage • subtraction • combinations of above
Macros may include:	<ul style="list-style-type: none"> • printing sections of a spreadsheet
Templates may include:	<ul style="list-style-type: none"> • font types and sizes • forms • headers and footers • headings • page formats • reports
Importing and exporting data may include:	<ul style="list-style-type: none"> • proofreading • reformatting • split screen (if available)
Printing may include:	<ul style="list-style-type: none"> • charts • entire workbooks • selected data within a worksheet • worksheets
Naming and storing spreadsheets may include:	<ul style="list-style-type: none"> • authorised access • file naming conventions • filing locations

RANGE STATEMENT	
	<ul style="list-style-type: none"> • organisational policy for backing up files • organisational policy for filing hard copies of spreadsheets • security • storage in folders and sub-folders • storage on disk drives, CD-ROM, USB, tape back-up, server
Graphs may include:	<ul style="list-style-type: none"> • bar • line • pie • scatter • stack • 3D
Creating graphs may include:	<ul style="list-style-type: none"> • data range • keys and legends • labels and titles • naming • sizing (if possible) • using graph menu • X and Y axis

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to produce desktop published documents	<p>1.1. Use safe work practices including addressing <i>ergonomic requirements</i> and using <i>work organisation strategies</i></p> <p>1.2. Use <i>energy and resource conservation techniques</i></p> <p>1.3. Identify <i>document purpose</i>, audience, presentation and <i>final output</i> requirements, and clarify with relevant personnel as required</p> <p>1.4. Identify <i>organisational and task requirements</i> for desktop published documents to ensure consistency of style and image</p>
2. Design desktop published documents	<p>2.1. <i>Design</i> document to enhance readability and appearance, according to organisational and task requirements</p> <p>2.2. Determine document type and assess production and design requirements</p> <p>2.3. Set up and use master pages, templates and styles to ensure <i>consistency of design and layout</i></p> <p>2.4. Set up colour palettes according to organisational and task requirements</p>
3. Create desktop published documents	<p>3.1. Prepare, format and enter required text</p> <p>3.2. Import text from other applications and resolve any formatting issues</p> <p>3.3. Scan or import graphics from other applications and resolve any formatting issues</p> <p>3.4. Use <i>complex software functions</i> to arrange text and graphics on page, according to organisational and task requirements</p>
4. Finalise desktop published documents	<p>4.1. Ensure pages, and combined graphics and text are composed correctly, to suit organisational and task requirements</p> <p>4.2. Check that numerical sequencing and laydown of document is correct, to meet binding and finishing requirements</p> <p>4.3. Incorporate bleed allowance in margins and borders</p>
5. Produce desktop published documents	<p>5.1. Review text for possible errors and omissions, and resolve any issues</p> <p>5.2. Produce completed document in line with required final output</p> <p>5.3. <i>Name and store text documents</i>, in accordance with organisational requirements and exit the application</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>without information loss/damage</p> <p>5.4. Prepare text documents within <i>designated time lines</i> and organisational requirements for speed and accuracy</p> <p>5.5. Use manuals, user documentation and online help to overcome problems with document design and production</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to clarify requirements of documents
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- editing and proofreading skills to check own work for accuracy against original
- keyboarding skills to enter text and numerical data
- literacy skills to read and understand organisation's procedures and to use models or exemplars to produce a range of documents
- problem-solving skills to edit documents and to resolve issues of consistency of design.

Required knowledge

- formatting styles and their effect on formatting, readability and appearance of documents
- organisational requirements for ergonomics, work periods and breaks, and energy and resource conservation techniques
- purposes, uses and functions of desktop publishing software
- organisational style guide.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine development needs	<p>1.1. Systematically identify and implement <i>learning and development needs</i> in line with <i>organisational requirements</i></p> <p>1.2. Ensure that a learning plan to meet individual and group training and development needs is collaboratively developed, agreed to and implemented</p> <p>1.3. Encourage individuals to self-evaluate performance and identify areas for improvement</p> <p>1.4. Collect <i>feedback on performance</i> of team members from relevant sources and compare with established team learning needs</p>
2. Develop individuals and teams	<p>2.1. Identify learning and development program goals and objectives, ensuring a match to the specific knowledge and skill requirements of competency standards relevant to the industry</p> <p>2.2. Ensure that <i>learning delivery methods</i> are appropriate to the learning goals, the learning style of participants, and availability of <i>equipment and resources</i></p> <p>2.3. Provide workplace learning opportunities, and <i>coaching and mentoring assistance</i> to facilitate individual and team achievement of competencies</p> <p>2.4. Create development opportunities that incorporates a range of activities and support materials appropriate to the achievement of identified competencies</p> <p>2.5. Identify and approve resources and time lines required for learning activities in accordance with organisational requirements</p>
3. Monitor and evaluate workplace learning	<p>3.1. Use feedback from individuals or teams to identify and implement improvements in future learning arrangements</p> <p>3.2. Assess and record outcomes and performance of individuals/teams to determine the effectiveness of development programs and the extent of additional development support</p> <p>3.3. Negotiate modifications to learning plans to improve the efficiency and effectiveness of learning</p> <p>3.4. Document and maintain records and reports of competency according to organisational requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to receive and report on feedback, to maintain effective relationships and to manage conflict
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- leadership skills to gain trust and confidence of clients and colleagues
- literacy skills to read, write and understand a variety of texts; and to edit and proofread documents to ensure clarity of meaning, accuracy and consistency of information
- negotiation skills to achieve mutually acceptable outcomes
- technology skills to support effective communication and presentation.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- facilitation techniques to encourage team development and improvement
- organisational policies, plans and procedures
- career paths and competency standards relevant to the industry.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- identifying and implementing learning opportunities for others
- giving and receiving feedback from team members to encourage participation in and effectiveness of team
- creating learning plans to match skill needs
- knowledge of relevant legislation.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of learning and development plans, policies and procedures
- examples of documents relating to diversity policies and procedures.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- analysis of responses to case studies and scenarios
- oral or written questioning to assess knowledge of career paths and competency standards relevant to the industry
- review of records and reports of competency.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- management units
- other learning and development units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Learning and development needs</i> may include:</p>	<ul style="list-style-type: none"> • career planning/development • coaching, mentoring and/or supervision • formal/informal learning programs • internal/external training provision • performance appraisals • personal study • recognition of current competence/skills recognition • work experience/exchange/opportunities • workplace skills assessment
<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> • access and equity principles and practices • anti-discrimination and related policy • business and performance plans • confidentiality and security requirements • defined resource parameters • ethical standards • goals, objectives, plans, systems and processes • legal and organisational policies, guidelines and requirements • OHS policies, procedures and programs • quality and continuous improvement processes and standards • quality assurance and/or procedures manuals
<p><i>Feedback on performance</i> may include:</p>	<ul style="list-style-type: none"> • formal/informal performance appraisals • obtaining feedback from clients • obtaining feedback from supervisors and colleagues • personal, reflective behaviour strategies • routine organisational methods for monitoring service delivery
<p><i>Learning delivery methods</i> may include:</p>	<ul style="list-style-type: none"> • conference and seminar attendance • formal course participation • induction

RANGE STATEMENT	
	<ul style="list-style-type: none"> • involvement in professional networks • on-the-job coaching or mentoring • presentations/demonstrations • problem-solving • work experience
<i>Equipment and resources</i> may include:	<ul style="list-style-type: none"> • facilities • funding • guest speakers • technological tools and equipment • time • training equipment such as whiteboards and audio-visual equipment
<i>Coaching and mentoring assistance</i> may include:	<ul style="list-style-type: none"> • fair and ethical practice • non-discriminatory processes and activities • presenting and promoting a positive image of the collective group • problem-solving • providing encouragement • providing feedback to another team member • respecting the contribution of all participants and giving credit for achievements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research and analyse employee health issues	1.1. Identify and collect information on employee health issues from appropriate internal and external sources 1.2. Review findings and their implications for the organisation and business objectives 1.3. Develop options for addressing identified health issues 1.4. Obtain support from senior managers for preferred option/s
2. Plan health and wellbeing program/s	2.1. Develop program/s scope and objectives in consultation with appropriate industry consultants, colleagues and managers 2.2. Plan and create administrative structure and resources for the program/s 2.3. Establish program responsibilities and clearly communicate to all stakeholders 2.4. Plan communications and marketing strategies in conjunction with stakeholders 2.5. Establish suitable evaluation methods, develop an overall program management plan and communicate this plan to stakeholders
3. Implement, administer and monitor program/s	3.1. Prepare policy documents, and implement and monitor strategies in conjunction with program team members 3.2. Provide appropriate support, assistance and mentors to relevant personnel 3.3. Implement and monitor tracking systems according to program guidelines 3.4. Reach program milestones within agreed time lines and provide regular progress reports to stakeholders
4. Evaluate program/s	4.1. Use agreed evaluation methods to assess the effectiveness of the program at specific stages 4.2. Communicate information from program evaluation process to stakeholders 4.3. Incorporate evaluation process and outcomes into continuous improvement strategies, enterprise agreements and future corporate plans

Required Skills and Knowledge

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- research on employee health issues and a plan to improve employee health in one or more areas
- techniques for monitoring an employee health program and evaluating its effectiveness
- knowledge of a range of employee health issues and options for improving health outcomes.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- assessment of written reports on employee health issues and options to address health issues of concern
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations on employee health programs
- review of documentation aligning strategies with corporate goals, mission statements and directions
- review of program management plan and how it was communicated to stakeholders
- evaluation of progress reports to stakeholders
- oral or written questioning to assess knowledge of employee health program design and evaluation techniques.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Human Resources Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Employee health issues</i> may include:	<ul style="list-style-type: none"> • alcohol or other drug use • diet and obesity • lifestyle related diseases, such as diabetes • mental health, including depression and anxiety • obesity • physical fitness • smoking • stress
<i>Business objectives</i> may include:	<ul style="list-style-type: none"> • becoming an employer of choice • improving productivity • reducing illness and absenteeism • triple bottom line
<i>Options</i> may include:	<ul style="list-style-type: none"> • changing canteen offerings • conducting information or awareness-raising programs • developing policies on health food, stress management or other health issues • EAPs • offering more flexibility in working hours or leave arrangements • offering training or skills development programs • subsidising exercise programs, gym membership or smoking cessation
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • colleagues, team members or other staff members • owners/management/financial backers
<i>Program management plan</i> will normally include:	<ul style="list-style-type: none"> • additional resource requirements (including technology) • cost benefit analysis and contingency plans • key program milestones • strategies to assess, review and communicate progress against program goals

RANGE STATEMENT	
	<ul style="list-style-type: none"> strategies to obtain management approval for program plan
<i>Evaluation methods</i> may include:	<ul style="list-style-type: none"> collection of qualitative data collection of quantitative data cost benefit analysis feedback from consultants or staff delivering program/s interviews mapping against agreed goals and priorities

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement continuous improvement systems and processes	<p>1.1. Implement <i>systems</i> to ensure that individuals and teams are actively encouraged and supported to <i>participate in decision making processes</i>, assume responsibility and exercise initiative</p> <p>1.2. Communicate the organisation's <i>continuous improvement processes</i> to individuals and teams, and obtain feedback</p> <p>1.3. Ensure effective <i>mentoring and coaching</i> allows individuals and teams to implement the organisation's continuous improvement processes</p>
2. Monitor and review performance	<p>2.1. Use the organisation's systems and <i>technology</i> to monitor and review progress and to identify ways in which planning and operations could be improved</p> <p>2.2. Improve <i>customer service</i> through continuous improvement techniques and processes</p> <p>2.3. Formulate and communicate recommendations for adjustments to those who have a role in their development and implementation</p>
3. Provide opportunities for further improvement	<p>3.1. Implement <i>processes to ensure that team members are informed of savings and productivity/service improvements</i> in achieving the business plan</p> <p>3.2. Document work performance to aid the identification of further opportunities for improvement</p> <p>3.3. Manage records, reports and recommendations for improvement within the organisation's systems and processes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - coach and mentor team members
 - gain the commitment of individuals and teams to continuously improve
- innovation skills to design better ways of performing work.

Required knowledge

- principles and techniques associated with:
 - benchmarking
 - best practice
 - change management
 - continuous improvement systems and processes
 - quality systems.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Allocate work	1.1. Consult relevant groups and individuals on work to be allocated and resources available 1.2. Develop work plans in accordance with operational plans 1.3. Allocate work in a way that is efficient, cost effective and outcome focussed 1.4. Confirm <i>performance standards</i> , <i>Code of Conduct</i> and work outputs with relevant teams and individuals 1.5. Develop and agree <i>performance indicators</i> with relevant staff prior to commencement of work 1.6. Conduct <i>risk analysis</i> in accordance with the organisational risk management plan and legal requirements
2. Assess performance	2.1. Design <i>performance management</i> and review processes to ensure consistency with organisational objectives and policies 2.2. Train participants in the performance management and review process 2.3. Conduct performance management in accordance with organisational protocols and time lines 2.4. Monitor and evaluate performance on a continuous basis
3. Provide feedback	3.1. Provide informal feedback to staff on a regular basis 3.2. Advise relevant people where there is poor performance and take necessary actions 3.3. Provide on-the-job coaching when necessary to improve performance and to confirm <i>excellence in performance</i> 3.4. Document performance in accordance with the organisational performance management system 3.5. Conduct formal structured feedback sessions as necessary and in accordance with organisational policy
4. Manage follow up	4.1. Write and agree performance improvement and development plans in accordance with organisational policies 4.2. Seek assistance from human resources specialists where appropriate 4.3. Reinforce excellence in performance through recognition and continuous feedback

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Monitor and coach individuals with poor performance</p> <p>4.5. Provide support services where necessary</p> <p>4.6. Counsel individuals who continue to perform below expectations and implement the disciplinary process if necessary</p> <p>4.7. Terminate staff in accordance with legal and organisational requirements where serious misconduct occurs or ongoing poor-performance continues</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to articulate expected standards of performance, to provide effective feedback and to coach staff who need development
- risk management skills to analyse, identify and develop mitigation strategies for identified risks
- planning and organisation skills to ensure a planned and objective approach to the performance management system.

Required knowledge

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant awards and certified agreements
- performance measurement systems utilised within the organisation
- unlawful dismissal rules and due process
- staff development options and information.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- documented performance indicators and a critical description and analysis of performance management system from the workplace
- techniques in providing feedback and coaching for improvement in performance
- knowledge of relevant awards and certified agreements.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports
- demonstration of techniques in providing feedback and coaching
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of work plans, performance indicators, risk analysis, performance management and review processes, performance improvement and development plans.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other management units.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Performance standards</i> mean:	<ul style="list-style-type: none"> level of performance sought from an individual or group which may be expressed either quantitatively or qualitatively
<i>Code of Conduct</i> means:	<ul style="list-style-type: none"> agreed (or decreed) set of rules relating to employee behaviour/conduct with other employees or an agreed (or decreed) set of rules relating to employee behaviour/conduct with other employees or customers
<i>Performance indicators</i> mean:	<ul style="list-style-type: none"> measures against which performance outcomes are gauged
<i>Risk analysis</i> means:	<ul style="list-style-type: none"> determination of the likelihood of a negative event preventing the organisation meeting its objectives and the likely consequences of such an event on organisational performance
<i>Performance management</i> means:	<ul style="list-style-type: none"> in accordance with relevant industrial agreements process or set of processes for establishing a shared understanding of what an individual or group is to achieve, and managing and developing individuals in a way which increases the probability it will be achieved in both the short- and long-term
<i>Excellence in performance</i> means:	<ul style="list-style-type: none"> regularly and consistently exceeding the performance targets established while meeting the organisation's performance standards
<i>Termination</i> means:	<ul style="list-style-type: none"> cessation of the contract of employment between an employer and an employee, at the initiative of the employer within relevant industrial agreements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop operational plan	<p>1.1. Research, analyse and document resource requirements and develop an operational plan in consultation with relevant personnel, colleagues and specialist resource managers</p> <p>1.2. Develop and/or implement consultation processes as an integral part of the operational planning process</p> <p>1.3. Ensure details of the operational plan include the development of key performance indicators to measure organisational performance</p> <p>1.4. Develop and implement contingency plans at appropriate stages of operational planning</p> <p>1.5. Ensure the development and presentation of proposals for resource requirements is supported by a variety of information sources and seek specialist advice as required</p> <p>1.6. Obtain approval for plan from relevant parties and ensure understanding among work teams involved</p>
2. Plan and manage resource acquisition	<p>2.1. Develop and implement strategies to ensure that employees are recruited and/or inducted within the organisation's human resources management policies and practices</p> <p>2.2. Develop and implement strategies to ensure that physical resources and services are acquired in accordance with the organisation's policies, practices and procedures</p>
3. Monitor and review operational performance	<p>3.1. Develop, monitor and review performance systems and processes to assess progress in achieving profit and productivity plans and targets</p> <p>3.2. Analyse and interpret budget and actual financial information to monitor and review profit and productivity performance</p> <p>3.3. Identify areas of under performance, recommend solutions, and take prompt action to rectify the situation</p> <p>3.4. Plan and implement systems to ensure that mentoring and coaching are provided to support individuals and teams to effectively, economically and safely use resources</p> <p>3.5. Negotiate recommendations for variations to operational plans and gain approval from designated persons/groups</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6. Develop and implement systems to ensure that procedures and records associated with documenting performance are managed in accordance with organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to access and use workplace information and to write a succinct and practical plan
- technology skills to use software to produce and monitor the plan against performance indicators
- planning and organisational skills
- coaching skills to work with people with poor performance
- numeracy skills to allocate and manage financial resources.

Required knowledge

- models and methods for operational plans
- budgeting processes
- alternative approaches to improving resource usage and eliminating resource inefficiencies and waste.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- development of an operational plan with details of how it will be implemented and monitored
- knowledge of models and methods for operational plans.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of budgeting processes
- review of operational plan, key performance indicators and contingency plans
- evaluation of employee recruitment and induction strategies
- evaluation of processes implemented to acquire physical resources and services.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Management.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Resource requirements</i> may include:	<ul style="list-style-type: none"> • goods and services to be purchased and ordered • human, physical and financial resources - both current and projected • stock requirements and requisitions
<i>Relevant personnel, colleagues and specialist resource managers</i> may include:	<ul style="list-style-type: none"> • employees at the same level or more senior managers • managers • occupational health and safety committee/s and other people with specialist responsibilities • supervisors • union or employee representatives
<i>Consultation processes</i> may refer to:	<ul style="list-style-type: none"> • email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual operational plans • mechanisms used to provide feedback to the work team in relation to outcomes of consultation • meetings, interviews, brainstorming sessions
<i>Operational plans</i> may also be termed:	<ul style="list-style-type: none"> • action plans • annual plans • management plans • tactical plans
<i>Key performance indicators</i> may refer to:	<ul style="list-style-type: none"> • measures for monitoring or evaluating the efficiency or effectiveness of a system which may be used to demonstrate accountability and to identify areas for improvements
<i>Contingency plans</i> may include:	<ul style="list-style-type: none"> • contracting out or outsourcing human resources and other functions or tasks • diversification of outcomes • finding cheaper or lower quality raw materials

RANGE STATEMENT	
	<ul style="list-style-type: none"> and consumables • increasing sales or production • recycling and re-using • rental, hire purchase or alternative means of procurement of required materials, equipment and stock • restructuring of organisation to reduce labour costs • risk identification, assessment and management processes • seeking further funding • strategies for reducing costs, wastage, stock or consumables • succession planning
<i>Organisation's policies, practices and procedures</i> may include:	<ul style="list-style-type: none"> • organisational culture • organisational guidelines which govern and prescribe operational functions, such as the acquisition and management of human and physical resources • Standard Operating Procedures • undocumented practices in line with organisational operations
<i>Designated persons/groups</i> may include:	<ul style="list-style-type: none"> • groups designated in workplace policies and procedures • managers or supervisors whose roles and responsibilities include decision making on operations • other stakeholders such as Board members • other work groups or teams whose work will be affected by recommendations for variations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop business plan	1.1. Review and evaluate pre-existing <i>strategic, business and operational plan</i> , if available 1.2. Analyse and interpret business vision, mission, values and objectives 1.3. Consult with <i>key stakeholders</i> 1.4. Review market requirements for the product or service, profile customer needs and research pricing options 1.5. Develop <i>performance objectives and measures</i> through consultation with key stakeholders 1.6. Identify financial, human and physical resource requirements for the business 1.7. Consider any permits or licences that may be required for new activity 1.8. Write <i>business plan</i>
2. Monitor performance	2.1. Communicate business plan to all relevant parties and ensure understanding of performance requirements and timeframes 2.2. Ensure skilled labour is available to implement plan 2.3. Test performance measurement systems and refine, if necessary 2.4. Ensure timely reports on all key aspects of the business are available, user-friendly and balanced in terms of financial and non-financial performance 2.5. Report system failures, product failures and variances to the business plan as they occur
3. Respond to performance data	3.1. Analyse performance reports against planned objectives 3.2. Review performance indicators and refine if necessary 3.3. Ensure groups and individuals contributing to under-performance are <i>coached</i> , and provide training where appropriate 3.4. Review system processes and work methods regularly as part of continuous improvement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical and research skills to review the market, to research competitors and to review pricing structures
- coaching and communication skills to remediate any under-performance in the work group or individuals
- planning and organising skills to sequence activities and to develop a logical structure.

Required knowledge

- performance measurement approaches and benchmarking
- options for developing business plans.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- analysis of the strengths and weaknesses of a range of business plans
- implementation of a business plan including evaluation of performance against documented indicators in key results areas
- knowledge of performance measurement approaches and benchmarking.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- assessment of written reports/examples of business plans and their outcomes
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of options for developing business plans
- review of development of performance objectives and measures
- review of how business plan was communicated to all relevant parties.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Advanced Diploma of Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Strategic, business and operational plan</i> may include:	<ul style="list-style-type: none"> • previously formulated: <ul style="list-style-type: none"> • action plan • business goals • competitor analysis • financing arrangements or financial targets • management arrangements and/or personnel requirements • marketing approaches • product or service research or analysis
<i>Key stakeholders</i> may include:	<ul style="list-style-type: none"> • business partners or financiers • customers • shareholders • staff • technical experts or advisers
<i>Performance objectives and measures</i> may relate to:	<ul style="list-style-type: none"> • efficiency measures • input measures such as staff time or dollars allocated • outcomes measures • qualitative indicators such as feedback from customers, effect on the wider market or competitors, staff reports • quantitative indicators, such as numbers produced and sold, turnover, customer satisfaction ranking, lower staff turnover
<i>Business plan</i> includes:	<ul style="list-style-type: none"> • description of the business • business products and services • marketing activity • financial indicators • productivity and performance targets for key result areas such as: <ul style="list-style-type: none"> • community awareness or branding • environmental impact

RANGE STATEMENT	
	<ul style="list-style-type: none"> • governance or management • quality • sales • triple bottom line • workforce
<i>Coaching</i> refers to:	<ul style="list-style-type: none"> • informal on-the-job and off-the-job advice and training to improve performance

 - 3.1 Measure and document outcomes of marketing activities
 - 3.2 Review marketing activities against expected outcomes and document identified improvements
 - 3.3 Prepare reports of marketing activities and communicate to relevant enterprise personnel

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

literacy skills to read a variety of texts, to prepare general information and papers, and to write formal and informal letters according to target audience

planning skills to develop implementation schedules

problem-solving skills to address issues which may affect plans and their implementation.

Required knowledge

key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:

anti-discrimination legislation

ethical principles

codes of practice

privacy laws

environmental issues

occupational health and safety

organisational policies and procedures

specific product knowledge related to goods and services being marketed.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

planning and implementing marketing activities

reviewing the effectiveness of the marketing plan

documenting the activities and processes worked with

knowledge of relevant legislation.

Context of and specific resources for assessment

Assessment must ensure:

access to an actual workplace or simulated environment

access to office equipment and resources

examples of goods/services to be marketed

examples of marketing plans.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate

review of work activity plans for marketing activities

analysis of responses to case studies and scenarios

demonstration of techniques

observation of presentations

oral or written questioning to assess knowledge of marketing techniques and strategies

analysis of documentation outlining the outcomes of marketing activities

review of marketing activities reports.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

other marketing, advertising or public relations units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Need may be determined by:

- analysis of sales figures and other performance data
- analysis of client information
- direction from relevant enterprise personnel
- development of new products and services

Marketing activities may include:

- attendance at trade shows, conferences and other events
- basic advertising
- development and distribution of general promotional and informational materials
- development and distribution of samples, case studies, testimonials and other evidence of enterprise activity
- development of displays and signs
- development of media releases, articles and media background information
- information sessions for clients, suppliers and stakeholders
- online information
- telephone promotions

Outcomes may include:

- projections for potential client inquiries
- projections for detailed potential client follow-up
- projections for sales and service levels

Analysis may include:

- market definition, statistics and basic research
- basic market segmentation
- target audience profiles

Work activity plans may include:

- human resource plans
- plans for other required resources

	financial plans
	time plans
	detailed implementation plans (covering the how/what/when of activities)
	activity monitoring and evaluation plans
Relevant enterprise personnel might include:	coordinators
	owners
	managers
	section leaders
	supervisors
	team leaders
Resources may include:	human resources
	finance
	resource contributions from suppliers and/or partners
Relevant personnel performing specific marketing functions may include:	administrators
	copywriters
	desktop publishers
	external consultants
	graphic artists and designers
	marketing specialists
	printers, sign writers and other tradespeople

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Devise marketing strategies	<p>1.1. Evaluate marketing opportunity options that address organisational objectives, and evaluate their risks and returns in the selection process</p> <p>1.2. Develop marketing strategies that address strengths and opportunities within the organisation's projected capabilities and resources</p> <p>1.3. Develop strategies which increase resources or organisational expertise where gaps exist between current capability and marketing objectives</p> <p>1.4. Develop feasible marketing strategies and communicate reasons that justifies their selection</p> <p>1.5. Ensure strategies align with organisation's strategic direction</p> <p>1.6. Develop a marketing performance review strategy, incorporating appropriate marketing metrics to review of organisational performance against marketing objectives</p>
2. Plan marketing tactics	<p>2.1. Detail tactics to implement each marketing strategy in terms of scheduling, costing, accountabilities and persons responsible</p> <p>2.2. Identify coordination and monitoring mechanisms for scheduled activities</p> <p>2.3. Ensure tactics are achievable within organisation's projected capabilities and budget</p> <p>2.4. Ensure tactics meet legal and ethical requirements</p> <p>2.5. Ensure tactics provide for ongoing review of performance against objectives and budgets, and allow marketing targets to be adjusted if necessary</p>
3. Prepare and present a marketing plan	<p>3.1. Ensure marketing plan meets organisational, as well as marketing, objectives and incorporates marketing approaches and a strategic marketing mix</p> <p>3.2. Ensure marketing plan contains a rationale for objectives and information that supports the choice of strategies and tactics</p> <p>3.3. Present marketing plan for approval in the required format and timeframe</p> <p>3.4. Adjust marketing plan in response to feedback from key stakeholders and disseminate for implementation within the required timeframe</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- leadership skills to gain trust and confidence of colleagues and clients
- literacy skills to identify company and product or service information, to interpret strategic reports, to write in a range of styles for different audiences and to interpret legal requirements, company policies and procedures
- numeracy skills to analyse, create and manage budgets for marketing activities
- organisational and time management skills to sequence tasks and meet time lines
- presentation and facilitation skills to present a marketing plan.

Required knowledge

- organisational structure, products and services, overall strategic and marketing objectives
- key provisions of relevant legislation from all forms of government, codes of practice and national standards that may affect aspects of business operations such as:
 - anti-discrimination legislation and principles of equal opportunity, equity, and diversity
 - Australian Direct Marketing Association (ADMA) Direct Marketing Code of Practice
 - Australian E-commerce Best Practice Model
 - Australian Government Policy Framework for Consumer Protection in Electronic Commerce
 - confidentiality requirements
 - copyright laws
 - defamation laws
 - Free TV Australia Commercial Television Industry Code of Practice
 - privacy laws
 - sweepstakes regulations
 - Trade Practices Act
- industry products and services knowledge.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to interpret safety signs, symbols and notices
- problem-solving skills to analyse options in an emergency situation.

Required knowledge

- responsibilities of employers and employees under relevant health and safety legislation
- emergency procedures including procedures for fires and accidents
- commonly used hazard signs and safety symbols.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- accurately following all relevant safety procedures
- identifying and reporting hazards to designated personnel
- knowledge of relevant health and safety legislation
- knowledge of relevant materials, equipment and work processes.

Context of and specific resources for assessment

Assessment must ensure:

- safety processes, hazards and risk are relevant to the area of work

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of documentation identifying and reporting emergency incidents

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units related to the work environment

Range Statement

RANGE STATEMENT

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate incidents for prevention	1.1. Select and use <i>appropriate techniques</i> to investigate <i>incidents</i> 1.2. Establish <i>actions and events</i> leading up to an incident, during an incident and through the post incident management phase 1.3. Analyse incident to identify the <i>hazard/s</i> 1.4. Analyse incident to identify intervention points to prevent re-occurrence
2. Access existing sources of information and data to identify hazards	2.1. Review <i>workplace sources of information and data</i> to access information and data, and to assist in identifying hazards 2.2. Access <i>external sources of information and data</i> as required 2.3. Seek input from <i>stakeholders, key personnel</i> and <i>OHS specialists</i>
3. Conduct hazard identification	3.1. Seek formal and informal <i>techniques and tools</i> to identify hazards 3.2. Select and modify a suitable technique/tool as appropriate to identify hazards 3.3. Review hazard identification techniques and tools in consultation with workers in the area, and OHS specialists if required, to ensure they are suitably comprehensive 3.4. Utilise techniques and tools and other appropriate <i>hazard identification procedures</i> to identify hazards 3.5. Provide employees and their representatives with an opportunity to participate in workplace hazard identification
4. Assess risk	4.1. Select and use a <i>risk assessment tool</i> to identify key factors contributing to risk 4.2. Apply workplace sources of information and data to evaluate the effectiveness of risk controls 4.3. Prioritise risks considering the severity and likelihood of the consequences 4.4. Involve stakeholders and key personnel in risk assessment 4.5. Document the method of risk assessment
5. Participate in implementation	5.1. Maintain a <i>hazard register</i> relevant to the workplace 5.2. Identify the level of authority within the

ELEMENT	PERFORMANCE CRITERIA
process	<p>organisation to address the risk/s</p> <p>5.3.Document and communicate outcomes of hazard identification and risk assessments to key personnel and stakeholders</p> <p>5.4.Monitor and evaluate the effectiveness of own performance in identifying hazards and conducting risk assessments</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities across all levels of an organisation
- information management skills to evaluate OHS data
- interpersonal skills to establish rapport and to build networks with a range of internal and external stakeholders
- organisational and time management skills to sequence tasks and meet timelines
- research and data analysis skills to evaluate interactions between employees, their activities, equipment, environment and work systems
- technology skills to access internal and external OHS data.

Required knowledge

- basic principles of incident causation and injury processes
- legislative requirements for:
 - consultation and communication
 - information and data collection
 - notification of incidents
 - record keeping
 - reporting of incidents
 - specific hazards
- organisational culture as it impacts on the workgroup
- organisational policies and procedures for managing OHS
- organisational work processes for managing OHS
- appropriate data collection methods for OHS issues
- concepts of risks, factors that affect risk and difference between a hazard and a risk
- internal and external sources for OHS information and data
- principles and practices of systematic approaches to managing OHS
- principles, tools and techniques to identify and control workplace hazards and to manage risks in the OHS context
- relevant state/territory and commonwealth OHS legislation, codes of practice and standards
- roles and responsibilities of personnel as specified in relevant OHS legislation
- sources of OHS data.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- identification, analysis and evaluation of multiple workplace hazards using appropriate techniques and tools in a workplace
- knowledge of relevant state/territory and commonwealth OHS legislation, codes of practice and standards.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual or simulated workplace
- access to office equipment and resources
- access to relevant legislation, standards and guidelines
- access to relevant OHS documentation and records.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- demonstration of techniques used to identify, analyse and evaluate OHS hazards and risks
- demonstration of the application of OHS legislation in conducting hazard identification and risk management activities
- direct questioning combined with review of portfolios of evidence and third party reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of concepts of risks, factors that affect risk and difference between a hazard and a risk
- review of techniques/tools used to identify hazards
- evaluation of a risk assessment tools selected and used to identify key factors contributing to risk
- review of risk prioritisation
- review of hazard register.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBOHS404B Contribute to the implementation of strategies to control OHS risk.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Appropriate techniques</i> may include:	<ul style="list-style-type: none"> • examination of relevant information and data • inspections • interviews • simulations • timeline of actions and events • use of accident models
<i>Incidents</i> may include:	<ul style="list-style-type: none"> • an event resulting in or having a potential for: <ul style="list-style-type: none"> • injury • ill health • damage • or loss
<i>Actions and events</i> may include:	<ul style="list-style-type: none"> • all actions and events that may have contributed to the occurrence or severity of the incident, including: <ul style="list-style-type: none"> • design decisions • systems • people • tools • equipment • materials • fixtures • time and nature of the injury
<i>Hazard/s</i> may include:	<ul style="list-style-type: none"> • sources or situations with a potential for harm in terms of: <ul style="list-style-type: none"> • injury • ill health • damage to property • damage to the environment • or a combination of the above
<i>Workplace sources of information and data</i> may	<ul style="list-style-type: none"> • audits • hazard, incident and investigation reports

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • incident investigations • legislation, standards, manufacturers' manuals and specifications available at the workplace • material safety data sheets (MSDSs) and registers • minutes of meetings • reports • workplace inspections
External sources of information and data may include:	<ul style="list-style-type: none"> • employer groups • industry bodies • OHS professional bodies • OHS specialists • Australian Standards • manufacturers' manuals and specifications • regulatory authorities (for other relevant legislation such as acts, regulations, codes of practice) • unions • websites, journals and newsletters
Stakeholders may include:	<ul style="list-style-type: none"> • community • employees • health and safety, and other employee representatives • managers • OHS committees • supervisors
Key personnel may include:	<ul style="list-style-type: none"> • managers from other areas • people involved in OHS decision making or who are impacted by decisions
OHS specialists may include:	<ul style="list-style-type: none"> • ergonomists • health professionals • injury management advisors • occupational hygienists
Techniques and tools may include:	<ul style="list-style-type: none"> • body mapping • hazard identification procedures based on checklists • interviews • MSDSs • workplace processes such as 'walk throughs', surveys and inspections

RANGE STATEMENT	
<i>Hazard identification procedures</i> may include:	<ul style="list-style-type: none"> • identifying employee concerns, such as through a hazard reporting system • input of managers, OHS representatives, OHS committee and others through consultative processes • job and work system analysis (JSA) • reviews of: <ul style="list-style-type: none"> • hazard and incident reports • investigations • OHS records • plant and equipment maintenance records • registers of hazardous substances and dangerous goods
<i>Risk assessment tools</i> may include:	<ul style="list-style-type: none"> • checklists • matrix nomograms • codes of practice • standards • guidelines
<i>Hazard register</i> may include:	<ul style="list-style-type: none"> • a list of hazards • location of hazards • range of possible scenarios or circumstances under which hazards may cause injury or damage • results of a risk analysis related to the hazards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop option/s for risk control	<p>1.1. Review <i>hazard register</i>, outcomes of incident investigations and risk assessments to identify <i>hazards</i> requiring control action</p> <p>1.2. Apply knowledge of OHS legislation and standards to develop a range of options to control specific <i>risks</i> in the workplace</p> <p>1.3. Apply the <i>principles of the hierarchy of control</i> when developing risk control options</p> <p>1.4. Seek input from <i>stakeholders</i> and <i>key personnel</i></p> <p>1.5. Seek advice from <i>OHS specialists</i> and <i>technical advisors</i> where required</p>
2. Select appropriate option/s to control risks	<p>2.1. Review outcomes of risk assessments to inform the process of selecting option/s to control risks</p> <p>2.2. Prioritise appropriate interventions when selecting risk controls</p> <p>2.3. Identify potential <i>factors that may limit effectiveness of controls</i></p> <p>2.4. Consult with and involve workplace stakeholders in selecting appropriate control options</p> <p>2.5. Communicate recommendations for risk control to stakeholders</p>
3. Contribute to implementation of controls	<p>3.1. Seek appropriate authority and relevant resources to implement controls</p> <p>3.2. Identify and document <i>actions required to achieve change</i></p> <p>3.3. Consult with and involve workplace stakeholders in implementation of change</p> <p>3.4. Provide advice on the fitting, use, maintenance and storage of <i>personal protective equipment (PPE)</i></p>
4. Contribute to monitoring and evaluation of effectiveness of controls	<p>4.1. Monitor and evaluate the extent of change as a consequence of new controls, in consultation with stakeholders</p> <p>4.2. Monitor and document compliance with new procedures</p> <p>4.3. Access <i>workplace sources of information and data</i> to evaluate effectiveness of risk controls and to check for new hazards introduced as a result of controls</p> <p>4.4. Identify areas for further improvement in consultation with stakeholders and action as</p>

ELEMENT	PERFORMANCE CRITERIA
	appropriate 4.5.Develop and document an improvement plan

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- consultation and negotiation skills to develop risk management plans and implement risk controls effectively
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities across all levels of an organisation
- evaluation skills to analyse the effectiveness of own performance in implementing strategies chosen to control OHS risks
- information management skills to evaluate OHS data
- interpersonal skills to establish rapport and build networks with a range of internal and external stakeholders
- literacy skills to prepare reports for a range of target groups
- organisational and time management skills to sequence tasks and meet timelines
- research and data analysis skills to assess resources required to systematically manage OHS and to analyse relevant workplace information and data
- research and data analysis skills to evaluate interactions between employees, their activities, equipment, environment and work systems
- technology skills to access internal and external OHS data.

Required knowledge

- appropriate data collection methods for OHS purposes
- characteristics, mode of action and measurement of major hazard types
- concepts of risks, factors that affect risk and difference between a hazard and a risk
- internal and external sources for OHS information and data
- legislative requirements for:
 - consultation and communication
 - information and data collection
 - notification of incidents
 - record keeping
 - reporting of incidents
 - specific hazards
- organisational culture as it impacts on the workgroup
- organisational policies and procedures for managing OHS
- organisational work processes and structure
- principles and practices of systematic approaches to managing OHS
- principles of incident causation and injury processes
- principles of the hierarchy of control
- principles, tools and techniques to identify and control workplace hazards and

REQUIRED SKILLS AND KNOWLEDGE
<p>manage risks in the OHS context</p> <ul style="list-style-type: none">• relevant state/territory and commonwealth OHS legislation, codes of practice and standards• requirements for individual fitting, use, maintenance and storage of a range of PPE items• roles and responsibilities of personnel as specified in relevant OHS legislation• sources of OHS data• standard industry controls for a range of hazards.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- contribution to the development and implementation of risk control options to control risks associated with hazards in the workplace or simulated environment
- contribution to the monitoring and evaluation of the effectiveness of risk controls implemented and the making of appropriate adjustments where necessary
- knowledge of the principles of the hierarchy of control.

Context of and specific resources for assessment

Assessment must ensure:

- access to office equipment and resources
- access to relevant legislation, standards and guidelines
- access to workplace documentation.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- demonstration of techniques used to select, implement, monitor and evaluate risk controls
- direct questioning combined with review of portfolios of evidence and third party reports of on-the-job performance by the candidate
- observation of the application of risk control techniques
- oral or written questioning to assess knowledge of the principles, tools and techniques to identify and control workplace hazards and manage risks in the OHS context
- review of communication to stakeholders of recommendations for risk control
- review of documented compliance with new procedures
- evaluation of improvement plan.

EVIDENCE GUIDE

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBOHS403B Identify hazards and assess OHS risks.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Hazard register</i> may include:	<ul style="list-style-type: none"> • a list of hazards • location of hazards • range of possible scenarios or circumstances under which hazards may cause injury or damage • results of the risk analysis related to the hazards
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • sources of potential harm in terms of human injury, ill health, damage to property, damage to the environment, or a combination of these, including: <ul style="list-style-type: none"> • biological • chemical • environment • mechanical and/or electrical • physical • psychosocial • radiological • nuclear
<i>Risks</i> may include:	<ul style="list-style-type: none"> • the chance of something occurring that will result in injury or damage measured in terms of consequences (injury or damage) and likelihood of the consequence
<i>Principles of the hierarchy of control</i> may include:	<ul style="list-style-type: none"> • eliminating hazards • and where this is not practicable, minimising risk by: <ul style="list-style-type: none"> • substitution • isolating hazard from personnel • using engineering controls • using administrative controls (such as procedures, training) • using PPE

RANGE STATEMENT	
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • community • employees • health and safety, and other employee representatives • managers • OHS committees • supervisors
<i>Key personnel</i> may include:	<ul style="list-style-type: none"> • managers from other areas • people involved in OHS decision making or who are impacted by decisions
<i>OHS specialists</i> may include:	<ul style="list-style-type: none"> • ergonomists • health professionals • injury management advisors • occupational hygienists
<i>Technical advisors</i> may include:	<ul style="list-style-type: none"> • engineers (design, acoustic, safety, mechanical, civil) • legal practitioners • maintenance and tradespeople • workplace trainers and assessors
<i>Factors that may limit effectiveness of controls</i> may include:	<ul style="list-style-type: none"> • cultural diversity • language • literacy and numeracy • shift work and rostering arrangements • training required • workplace culture related to OHS, including commitment by managers and supervisors, and compliance with procedures and training • workplace organisational structures (for example geographic, hierarchical)
<i>Actions required to achieve change</i> may include:	<ul style="list-style-type: none"> • development of new procedures or revision of existing procedures • purchase of equipment or modification of equipment • training
<i>Personal protective equipment</i> may include:	<ul style="list-style-type: none"> • equipment designed to be worn by a person to provide protection from hazards such as: <ul style="list-style-type: none"> • clothing and footwear • face and eye protection • hand protection • head protection

RANGE STATEMENT	
	<ul style="list-style-type: none"> • hearing protection • respiratory protection
<i>Workplace sources of information and data</i> may include:	<ul style="list-style-type: none"> • audits • Australian Standards • hazard and incident reports • incident investigations • manufacturers' manuals and specifications • material safety data sheets (MSDSs) and registers • minutes of meetings • OHS legislation • reports • workplace inspections

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access sources of information and data to identify hazards	1.1. Access <i>external sources of information and data</i> to assist in identifying <i>hazards</i> 1.2. Review <i>workplace sources of information and data</i> to access and assist in identification of hazards 1.3. Seek input from <i>stakeholders, key personnel</i> and <i>OHS specialists</i> 1.4. Conduct formal and informal research to ensure currency of information with <i>workplace issues</i>
2. Analyse the work environment to identify hazards	2.1. Define, document and communicate <i>occasions when action for hazard identification is required</i> 2.2. Source <i>tools</i> to assist in analysing potential hazards 2.3. Examine <i>task demands</i> and <i>task environment</i> for impact on the person to identify situations with a potential for injury or ill health 2.4. Examine workforce structure, organisation of work and work relationships to identify situations with a potential for injury or ill health 2.5. Examine work environment for <i>agents</i> with a potential for injury or ill health 2.6. Seek input from stakeholders to clarify and confirm issues
3. Assess risk associated with hazards	3.1. Identify <i>factors contributing to risk</i> 3.2. Identify current risk controls for each hazard 3.3. Evaluate adequacy of current controls (if any), taking account of <i>relevant standards</i> and knowledge 3.4. Identify discrepancies between current controls and required quality of control 3.5. <i>Prioritise</i> hazards requiring further control action 3.6. Document method and outcomes of <i>risk assessment</i>
4. Control risk associated with hazards	4.1. Develop a range of control options in consultation with stakeholders, taking account of the outcomes of the risk assessment and the <i>hierarchy of control</i> 4.2. Identify potential <i>factors impacting on the effectiveness of controls</i> 4.3. Seek advice from OHS specialists and key personnel if required 4.4. Identify and seek appropriate authority and relevant resources to initiate and maintain controls 4.5. Identify and document actions required to achieve

ELEMENT	PERFORMANCE CRITERIA
	<p>change</p> <p>4.6. Analyse extent of change and reduction in risk, as a result of controls</p>
<p>5. Maintain hazard identification and risk control processes</p>	<p>5.1. Establish and maintain a <i>risk register</i> relevant to the workplace</p> <p>5.2. Document and communicate risk management procedures to stakeholders and key personnel, as appropriate</p> <p>5.3. Document and communicate outcomes of risk management processes to stakeholders and key personnel, as appropriate</p> <p>5.4. Involve stakeholders and operational staff in risk management processes</p> <p>5.5. Identify situations where OHS specialists may be required</p>
<p>6. Monitor and review risk management processes</p>	<p>6.1. Determine frequency, method and scope of review in consultation with workplace stakeholders and key personnel</p> <p>6.2. Ensure stakeholders and key personnel have input to the review</p> <p>6.3. Identify areas for improvement in the risk management processes and make recommendations</p> <p>6.4. Prepare action plans, including allocated responsibilities and timeframes for implementation</p> <p>6.5. Regularly review effectiveness of risk management processes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - identify areas for OHS risk improvement
 - analyse relevant workplace information and data
 - contribute to the assessment of the resources needed to systematically manage OHS and, where appropriate, access resources
- attention to detail when making observations and recording outcomes
- research skills to access relevant OHS information and data
- numeracy skills to carry out simple arithmetical calculations (e.g. % change), and to produce graphs of workplace information and data to identify trends and recognise limitations
- communication skills to:
 - conduct effective formal and informal meetings and to communicate effectively with personnel at all levels of the organisation, OHS specialists and, as required, emergency services personnel
 - prepare reports for a range of target groups including OHS committee, OHS representatives, managers and supervisors
 - use language and literacy skills appropriate to the workgroup and the task
- consultation and negotiation skills to develop plans and to implement and monitor designated actions
- project management skills to achieve change in OHS matters
- organisational skills to manage own tasks within a timeframe
- information technology skills to access and enter internal and external information and data on OHS and to use a range of communication media

Required knowledge

- organisational behaviour and culture as it impacts on OHS and on change
- basic physiology relevant to understanding mode of action of physical, biological and chemical agents on the body and how they produce harm
- basic principles of incident causation and injury processes
- characteristics, mode of action and units of measurement of major hazard types
- concept of common law duty of care
- difference between hazard and risk
- ethics related to professional practice
- how the characteristics and composition of the workforce impact on risk and the systematic approach to managing OHS, for example:
 - communication skills

REQUIRED SKILLS AND KNOWLEDGE

- cultural background/workplace diversity
- gender
- labour market changes
- language, literacy and numeracy
- structure and organisation of workforce e.g. part-time, casual and contract workers, shift rosters, geographical location
- workers with specific needs
- internal and external sources of OHS information and data
- language, literacy and cultural profile of the workgroup
- legislative requirements for OHS information and data, and consultation
- limitations of generic hazard and risk checklists, and risk ranking processes
- methods of providing evidence of compliance with OHS legislation
- nature of workplace processes (including work flow, planning and control) and hazards relevant to the particular workplace
- organisational culture as it impacts on the workgroup
- organisational OHS policies and procedures
- other function areas that impact on the management of OHS
- principles and practices of systematic approaches to managing OHS
- professional liability in relation to providing advice
- requirements under hazard specific OHS legislation and codes of practice
- risk as a measure of uncertainty and the factors that affect risk
- roles and responsibilities under OHS legislation of employees, including supervisors and contractors
- standard industry controls for a range of hazards
- state/territory and commonwealth OHS legislation (acts, regulations, codes of practice, associated standards and guidance material) including prescriptive and performance approaches and links to other relevant legislation such as industrial relations, equal employment opportunity, workers compensation, rehabilitation
- structure and forms of legislation including regulations, codes of practice, associated standards and guidance material
- types of hazard identification tools, including job safety analysis (JSA)

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- products used in:
 - the application of a risk management approach to identifying hazards
 - assessing OHS risk
 - controlling OHS risk
- how these products were developed and implemented
- knowledge of relevant OHS legislation (acts, regulations, codes of practice, associated standards and guidance material).

Context of and specific resources for assessment

Assessment must ensure:

- access to workplace or simulated workplace
- access to workplace documentation
- access to office equipment and resources
- access to relevant legislation, standards and guidelines relating to risks found in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports on the effectiveness of the hazard identification, risk assessment, control and management actions taken
- demonstration of techniques used to identify hazards, assess associated risks, control monitor and evaluate risks
- direct questioning combined with review of portfolios of evidence and third party reports of on-the-job performance by the candidate
- observation of performance in role plays
- observation of presentations
- oral or written questioning to assess knowledge of

EVIDENCE GUIDE	
	<p>the OHS information system</p> <ul style="list-style-type: none"> • review of action plans • written reports on hazard identification and risk management activities, matrices and measurements undertaken.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBOHS403B Identify hazards and assess OHS risks • BSBOHS404B Contribute to the implementation of strategies to control OHS risk • BSBOHS603B Analyse and evaluate OHS risk.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>External sources of information and data</i> may include:	<ul style="list-style-type: none"> • databases with national and state injury data such as National Industrial Chemicals Notification and Assessment Scheme (NICNAS) • employer groups • industry bodies • journals and websites • legislation, codes of practice and standards • manufacturers' manual and specifications • OHS regulatory authorities • OHS specialists • unions.
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • source or a situation with a potential for harm in terms of human injury or ill health • damage to property • damage to the environment • or a combination of these.
<i>Workplace sources of information and data</i> may include:	<ul style="list-style-type: none"> • audits • employees • hazard, incident and investigation reports • manufacturers' manuals and specifications • material safety data sheets (MSDSs) • minutes of meetings • OHS representatives • reports • workplace inspections.
<i>Stakeholders</i> include:	<ul style="list-style-type: none"> • employees • health and safety, and other employee representatives • managers • OHS committees • supervisors.

RANGE STATEMENT	
<i>Key personnel</i> may include:	<ul style="list-style-type: none"> • managers from other areas • people involved in OHS decision making or who are affected by OHS decisions
<i>OHS specialists</i> may include:	<ul style="list-style-type: none"> • engineers • ergonomists • occupational hygienists • organisational psychologists • toxicologists • workplace injury and return to work advisors.
<i>Workplace issues</i> may include:	<ul style="list-style-type: none"> • changes in equipment, including technology • changes in social, political or community environment • changes in work organisation, including: <ul style="list-style-type: none"> • contracting • hire arrangements • casualisation • supervisory arrangements • outworkers • rosters • shift work • work hours • work relations • changes in work practice • changes to legislation and standards • new knowledge on hazards • outcomes of court rulings.
<i>Occasions when action for hazard identification is required</i> may include:	<ul style="list-style-type: none"> • at design or pre-purchase of buildings, equipment and materials • at regular intervals during normal operations • before changes are made to workplace, equipment, work processes or work arrangements • commissioning or pre-implementation of new processes or practices • following an incident report • new forms of work and organisation of work • planning major tasks or activities, such as equipment shut-downs • prior to disposal of equipment, buildings or materials

RANGE STATEMENT	
	<ul style="list-style-type: none"> • when new knowledge becomes available.
Tools may include:	<ul style="list-style-type: none"> • audits • cause and effect diagrams • JSA • surveys.
Task demands may include:	<ul style="list-style-type: none"> • arousal and alertness • machine pacing or time pressure to complete a task • physical or physiological demands • repetitive nature of task • required precision or accuracy.
Task environment may include:	<ul style="list-style-type: none"> • air quality • lighting • noise • thermal
Agents may be:	<ul style="list-style-type: none"> • biological • chemical • ergonomic • nuclear • physical • psychosocial • radiological.
Factors contributing to risk may include those associated with:	<ul style="list-style-type: none"> • equipment • frequency and duration of exposure • individual/operator • number of people exposed/involved • task • work environment • work organisation.
Relevant standards may include:	<ul style="list-style-type: none"> • Australian and industry standards • codes of practice • current knowledge related to the specific hazard and controls • current practice in the industry • legislation.
Prioritising hazards requiring further control action may include:	<ul style="list-style-type: none"> • other recognised processes • specially designed tools • standard ranking tools.
Risk assessment includes	<ul style="list-style-type: none"> • factors contributing to risk

RANGE STATEMENT	
identification of:	<ul style="list-style-type: none"> • current controls and their adequacy • discrepancy between current control and required standard • prioritisation or ranking of a number of risks, where appropriate.
<i>Hierarchy of control</i> may include:	<ul style="list-style-type: none"> • eliminating hazards • and where this is not practicable, minimising risk by: • substitution • isolating the hazard from personnel • using engineering controls • using administrative controls (e.g. procedures, training) • using personal protective equipment (PPE).
<i>Factors impacting on the effectiveness of controls</i> may include:	<ul style="list-style-type: none"> • cultural diversity • language • literacy and numeracy levels • shift work and rostering arrangements • training required • workplace culture related to OHS including commitment by managers and supervisors and compliance with procedures and training • workplace organisational structures (size of organisation, geographic, hierarchical).
<i>Risk register</i> may include:	<ul style="list-style-type: none"> • list of hazards, their location and people exposed • possible control measures and dates for implementation • range of possible scenarios or circumstances under which the hazards may cause injury or damage • results of the risk analysis related to the hazards.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to conduct a formal risk assessment comprising analysis and evaluation of occupational health and safety (OHS) risk. It has been designed to be consistent with the Australian Standard, AS/NZS 4360: 2004 Risk management.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit addresses the knowledge, processes and techniques necessary to analyse and evaluate OHS risk as part of the risk management process.</p> <p>OHS risk analysis involves defining the range of consequences, assessing the effectiveness of existing controls and deciding the likelihood of each consequence, and combining these in some way to obtain a level of risk. Risk evaluation is the comparison of pre established criteria for tolerance and the subsequent ranking of risks requiring control.</p> <p>The situation to be analysed and evaluated may involve a single task or a process comprising a series of tasks.</p> <p>Application of this unit must be consistent with the pertinent sections of the Australian Standard, AS/NZS 4360: 2004 Risk management.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define parameters of the OHS risk study	1.1. Access information and data on the <i>hazard</i> identification process and the <i>context</i> of the OHS risk 1.2. Establish the <i>scope of the OHS risk study</i> 1.3. Divide the activity to be analysed into logical and manageable elements 1.4. Define and document the method of OHS risk analysis
2. Analyse the OHS risk of a task or process	2.1. Clarify the nature of the hazard including the process of injury or damage 2.2. Identify the need for further information using <i>monitoring activities</i> 2.3. Communicate <i>information and data about the OHS risk</i> to <i>stakeholders</i> 2.4. Consult and involve a range of stakeholders in the analysis 2.5. Identify and evaluate existing <i>controls</i> and their effectiveness, taking account of <i>relevant standards</i> 2.6. Determine specific scenarios to be considered 2.7. Determine the range of possible consequence/s from the various scenarios 2.8. Determine the likelihood of the occurrence of the consequence/s 2.9. Undertake steps to ensure <i>comprehensive analysis of information, data and techniques</i> 2.10. Rank OHS risks in order of level of risk 2.11. Consult <i>OHS specialist advisors</i> if required
3. Evaluate OHS risk of a task or process	3.1. Access and reference relevant legislation, codes of practice and standards 3.2. Consult stakeholders in determining criteria for OHS risk evaluation 3.3. Compare outcomes of OHS risk analysis with criteria to identify risks requiring further risk control and risks deemed as low as reasonably achievable 3.4. <i>Document</i> process and outcomes of <i>analysis</i> and <i>evaluation</i> in a manner that is accessible and facilitates understanding by stakeholders 3.5. Document outcomes to include explanation of the legal ramifications of decision making based on risk prioritisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - identify areas for improvement with OHS incidents
 - analyse relevant workplace information and data, and to make observations of workplace tasks and interactions between people, their activities, equipment, environment and systems
 - contribute to the assessment of resources needed to systematically manage OHS and, where appropriate, access resources
 - contribute to the strategic OHS performance of the organisation
- attention to detail when making observations and recording outcomes
- numeracy skills to carry out simple arithmetical calculations (e.g. % change) and to produce graphs of workplace information and data, to identify trends and recognise limitations of information and data
- research skills to access relevant OHS information and data to interpret information and data, to identify areas for improvement
- communication skills to:
 - conduct effective formal and informal meetings and to communicate effectively with personnel at all levels of the organisation, OHS specialists and, as required, emergency services personnel
 - write policies, procedures and plans
 - use language and literacy skills appropriate to the workgroup and the task
- data gathering skills such as brainstorming, polling, interviewing
- consultation and negotiation skills to develop plans, and to implement and monitor designated actions
- project management skills to achieve continuous improvement and action processes in OHS matters
- organisational skills to manage own tasks within a timeframe
- information technology skills to access and enter internal and external information and data on OHS and to use a range of media.

Required knowledge

- benefits, limitations and use of a range of communication strategies and tools appropriate to the workplace
- difference between hazard and risk
- ethics related to professional practice
- formal and informal communication and consultation processes, and key personnel related to communication
- how the characteristics and composition of the workforce impact on risk and the

REQUIRED SKILLS AND KNOWLEDGE

systematic approach to managing OHS, for example:

- communication skills
- cultural background/workplace diversity
- gender
- labour market changes
- language, literacy and numeracy
- structure and organisation of workforce e.g. part-time, casual and contract workers, shift rosters, geographical location
- workers with specific needs
- internal and external sources of OHS information and data
- language, literacy and cultural profile of the work group
- legislative requirements for OHS information and data, and consultation
- limitations of generic hazard and risk checklists and risk ranking processes
- nature of workplace processes (including work flow, planning and control) and hazards relevant to the particular workplace
- organisational behaviour and culture as it impacts on OHS and on change
- organisational culture as it impacts on the workgroup
- organisational OHS policies and procedures
- other functional areas that impact on the management of OHS
- pertinent sections of relevant Australian and other standards such as AS/NZS 4360: 2004 Risk management, National Standard for the Storage and Handling Workplace Dangerous Goods [NOHSC: 1015(2001)] and National Standard for Manual Handling [NOHSC: 1001 (1990)]
- principles and practices of a systematic approach to managing OHS
- principles of duty of care including concepts of causation, foreseeability, preventability
- principles of human behaviour and response to interactions with human, physical and task environment to identify psychosocial hazards
- principles of incident causation and injury processes
- range of risk analysis/assessment techniques and tools and their application and limitations
- requirements for control of work permits/written authorities in workplace monitoring activities
- requirements of OHS and standards related to systematically managing OHS
- risk as a measure of uncertainty and the factors that affect risk
- roles and responsibilities under OHS legislation of employees including supervisors, contractors, OHS inspectors
- roles and responsibilities in relation to communication and consultation for OHS committees, OHS representatives, line management, employees and inspectors
- sources of occupational disease and their prevention
- standard industry controls for a range of hazards

REQUIRED SKILLS AND KNOWLEDGE
<ul style="list-style-type: none">• state/territory and commonwealth OHS legislation (acts, regulations, codes of practice, associated standards and guidance material) including prescriptive and performance approaches and links to other relevant legislation such as industrial relations, equal employment opportunity, workers compensation, rehabilitation• structure and forms of legislation including regulations, codes of practice, associated standards and guidance material• toxicology of hazardous materials and potential health effects in the workplace• types of hazard identification tools including job system analysis (JSA).

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- OHS risk analysis and evaluation of a number of tasks as part of an OHS risk management process, either in an actual workplace, simulation exercise or scenario
- products developed for management of these OHS processes
- how these products were developed
- use of the products
- knowledge of pertinent sections of relevant Australian and other standards.

Context of and specific resources for assessment

Assessment must ensure:

- access to actual workplace/s and stakeholder groups
- access to office equipment and resources
- access to relevant legislation, standards and guidelines
- access to workplace documentation
- access to reports from other parties consulted in conducting risk analysis and evaluation.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- demonstration of techniques used to identify, analyse, evaluate, control and monitor risks
- direct questioning combined with review of portfolios of evidence and third party reports of on-the-job performance by the candidate
- observation of performance in role plays
- observation of presentations
- oral or written questioning
- review information and data communicated to stakeholders about the OHS risk

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• evaluation of ranking of OHS risks• assessment of comparison of outcomes of OHS risk analysis with criteria• review of documentation of process and outcomes of analysis and evaluation of OHS risk of a task or process.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• other OHS units

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • source or situation with a potential for harm in terms of human injury or ill health, damage to property or the environment, or a combination of these
<i>Context</i> may include:	<ul style="list-style-type: none"> • activities • controls currently in place • internal and external factors that impact on OHS risk • level of documentation required • stakeholders • workplace
<i>Scope of OHS risk study</i> may include:	<ul style="list-style-type: none"> • activities, job role, area, location to be analysed • who will use the output and for what purpose • why it is being done
<i>Monitoring activities</i> may include:	<ul style="list-style-type: none"> • air monitoring • medical monitoring • noise monitoring
<i>Information and data about the OHS risk</i> may include:	<ul style="list-style-type: none"> • mode/s of action of the hazard causing injury or damage • outcomes of OHS risk analysis
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • customers/users of the product or process • employees and their representatives • managers, including boards of management • the community
<i>Controls</i> may include:	<ul style="list-style-type: none"> • actions implementing risk management decisions • monitoring • programs or policies • re-evaluation and compliance with decisions
<i>Relevant standards</i> may include:	<ul style="list-style-type: none"> • Australian and industry standards • codes of practice and guidance material

RANGE STATEMENT	
	<ul style="list-style-type: none"> • common law duty of care • current knowledge • current practice • legislation
<i>Comprehensive analysis of information and data</i> may include:	<ul style="list-style-type: none"> • engineering modelling • experience with enterprise, own/other industries • past records • published literature • research within exposed groups • specialist and expert groups
<i>Comprehensive analysis of techniques</i> may include:	<ul style="list-style-type: none"> • broad consultation • multidisciplinary focus groups • processes and techniques used by specialists, such as modelling, fault tree and Hazard and Operability Studies (HazOps) • questionnaires • structured interviews
<i>OHS specialist advisors</i> may include:	<ul style="list-style-type: none"> • engineers • ergonomists • occupational hygienists • safety professionals • occupational health practitioners • psychologists • people skilled in applying advanced risk analysis processes, such as modelling, fault tree, HazOps and Management Oversight and Risk Tree (MORT) • toxicologists
<i>Documentation of risk analysis</i> may include:	<ul style="list-style-type: none"> • description of methods used • groups involved/consulted • description of consequences and their likelihood • information and data used in estimates • assumptions • effectiveness of existing controls • uncertainty in analysis • factors affecting level of risk • further information/data and/or investigation required

RANGE STATEMENT	
<i>Documentation of risk evaluation</i> may include:	<ul style="list-style-type: none"> • criteria determined • descriptions of method used to determine the criteria • groups consulted/involved • list of risks and schedule for action • statement of the legal ramifications of decision making based on risk prioritisation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to quality planning	<p>1.1. Contribute to determining quality requirements of project stakeholders</p> <p>1.2. Contribute to establishing quantifiable quality criteria for project outcomes and objectives</p> <p>1.3. Source information to locate and interpret quality policy and procedures</p> <p>1.4. Contribute to the development of quality requirements in the project plan and processes</p>
2. Apply quality policies and procedures	<p>2.1. Undertake work under delegated authority to implement quality assurance within the project in accordance with agreed quality standards and guidelines</p> <p>2.2. Maintain records and documentation in accordance with set procedures to facilitate quality control and to provide an audit trail</p> <p>2.3. Document and evaluate results of project activities and product performance to determine compliance with agreed quality standards</p> <p>2.4. Report shortfalls in quality outcomes to others to enable appropriate action to be initiated</p>
3. Contribute to continuous improvement process	<p>3.1. Participate in the ongoing review of project outcomes to determine the effectiveness of quality management activities</p> <p>3.2. Report quality management issues and responses to others for application in future projects</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to work with quality documents and project records, and to produce records for quality control and auditing purposes
- organisational skills and attention to detail to monitor compliance with agreed standards
- teamwork and communication skills to communicate quality issues.

Required knowledge

- quality auditing processes and requirements
- quality standards and their place in the project life cycle.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- application of quality management and continuous improvement techniques in relation to multiple complex projects
- knowledge of quality auditing processes and requirements.

Context of and specific resources for assessment

Assessment must ensure:

- access to examples of project management documentation used for quality control purposes
- access to project team records.

Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following assessment methods are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project quality and their application to different situations
- analysis of responses to case studies and scenarios which present issues and problems in project quality management
- review of records documented and maintained
- evaluation of documented results of project activities and product performance
- evaluation of reports developed about shortfalls in quality outcomes.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Certificate IV in Project Management.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist with risk analysis and planning	<p>1.1. Contribute to identifying and prioritising potential risks throughout the project life cycle</p> <p>1.2. Provide input, within <i>delegated authority</i>, to develop risk management strategies and risk management plans within established guidelines</p> <p>1.3. Establish <i>risk analysis methods, techniques and tools</i> to assist in the analysis of risks</p> <p>1.4. Ensure reporting mechanisms for risks are planned for and agreed to</p>
2. Conduct risk control activities	<p>2.1. Undertake control activities in accordance with agreed project and risk management plans to achieve project objectives</p> <p>2.2. Measure progress and act on perceived, potential or actual risks within authority or report to <i>others</i> for response</p> <p>2.3. Contribute to the implementation of agreed risk approaches and the amendment of plans to reflect the changing environment</p> <p>2.4. Identify and report <i>opportunities</i> for action in the same way as risks</p>
3. Contribute to assessing risk management outcomes	<p>3.1. Contribute to the ongoing <i>review</i> of project outcomes to determine the effectiveness of risk management activities by accessing project <i>records</i> and other available information</p> <p>3.2. Report risk management issues and responses to others for lessons learned or application in future projects</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- planning, organising and analytical skills to assist with risk analysis, risk management planning and review of risk management outcomes
- communication and teamwork skills to contribute to collective processes for risk management
- initiative and enterprise to think laterally about risks and how they might occur.

Required knowledge

- risk management framework and risk management processes.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- application of risk management techniques in relation to multiple complex projects
- knowledge of risk management methods, techniques and tools.

Context of and specific resources for assessment

Assessment must ensure:

- access to examples of project management documentation for risk management.

Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following assessment methods are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- analysis of responses addressing case studies and scenarios which present issues and problems in project risk management
- oral or written questioning to assess knowledge of strategies for managing project risk and their application to different situations
- review of risk analysis methods, techniques and tools
- review of risk management plans
- evaluation of reporting of risk management issues and responses.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Certificate IV in Project Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Delegated authority</i> means:	<ul style="list-style-type: none"> • subject to frequent change in a multi-disciplinary environment • under limited guidance and supervision • within agreed authorisation and limits • within established organisational framework, procedures and routines
<i>Risk analysis methods, techniques and tools</i> may include:	<ul style="list-style-type: none"> • using personal experience and/or subject matter experts • assisting in qualitative and/or quantitative risk analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development • using specialist risk analysis tool/s to assist in the decision making process
<i>Others</i> may include:	<ul style="list-style-type: none"> • higher project authorities • project manager • project specialists or personnel • team members
<i>Opportunities</i> may include:	<ul style="list-style-type: none"> • better means of achieving a result • changes in the project or broader environment that offer scope for rescheduling activities to better effect • efficiencies or methods to work more effectively, such as ways of shortening an activity • initial project activities that reveal entirely different sets of priorities for example, product development, research and policy development • responses to changing commercial/competitive conditions
<i>Reviews</i> may include evaluations of:	<ul style="list-style-type: none"> • agreed major milestones, for example phases and sub-contracts • change of key personnel • delivery of major deliverables

RANGE STATEMENT	
	<ul style="list-style-type: none"> • finalisation of project and other agreed milestones
Records may include:	<ul style="list-style-type: none"> • lists of potential risk events (risk register/log) • project and/or organisation files and records • risk analysis and reappraisal • risk diaries, incident logs, occurrence reports and other such documentation • risk management lessons learned • risk management plan

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine project costs	<p>1.1. Determine resource requirements for individual tasks, with input from stakeholders and guidance of <i>others</i></p> <p>1.2. Estimate <i>project costs</i> to enable budgets to be developed and implement agreed cost management processes</p> <p>1.3. Develop and implement a cost management plan, within <i>delegated authority</i>, to ensure clarity of understanding and ongoing management of project finances</p>
2. Monitor and control project costs	<p>2.1. Implement agreed <i>financial management processes and procedures</i> to monitor actual expenditure and to control costs</p> <p>2.2. Select and use cost analysis methods and tools to identify cost variations, evaluate options and recommend actions to a higher project authority</p> <p>2.3. Implement, monitor and modify agreed actions to maintain financial and overall project objectives throughout the project lifecycle</p>
3. Conduct financial completion activities	<p>3.1. Conduct appropriate activities to signify financial completion</p> <p>3.2. <i>Review</i> project outcomes using available <i>records</i> and information to determine the effectiveness of cost management processes and procedures</p> <p>3.3. Review cost management issues and identify improvements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- numeracy and budgeting skills to monitor expenditure and manage costs
- technology skills to use software for recording expenditure and reporting on finances
- analytical skills to evaluate processes and recommend improvements.

Required knowledge

- budgeting processes, tools and techniques
- methods and tools for costing and cost analysis.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- demonstrated evidence of monitoring project costs across the project life cycle for multiple complex projects
- knowledge of budgeting processes, tools and techniques.

Context of and specific resources for assessment

Assessment must ensure:

- access to workplace documentation including budgets, financial documents
- consideration of feedback from project stakeholders on how costs were managed.

Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project costs and their application to different situations.
- analysis of responses addressing case studies and scenarios which present project cost management issues and problems
- review of developed and implemented cost management plan
- review of documentation about project outcomes, cost management issues and identified improvements.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Project Management.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Others may include:	<ul style="list-style-type: none"> • relevant project authority • program manager • project specialists or other personnel • team members
Project costs are estimated to a level of accuracy available considering:	<ul style="list-style-type: none"> • availability of information at the time • contingencies to allow for identified risks and uncertainty • organisational requirements, for example overhead and profit margin • stage of the project life cycle
Delegated authority means that activities will:	<ul style="list-style-type: none"> • be conducted routinely or as changing circumstances dictate • be done independently within broad guidance or by taking the lead of a team • involve consultation with other project members, teams and internal stakeholders • involve the selection, use and supervision of appropriate time management methods, tools and techniques • take into account internal organisational change and external environmental change
Financial management processes and procedures may include:	<ul style="list-style-type: none"> • approval processes • communication and reporting processes • financial authorisations/delegations • invoice procedures
Reviewing may include evaluations of:	<ul style="list-style-type: none"> • agreed major milestones, for example phases and sub-contracts • change of key personnel • delivery of major deliverables • finalisation of project and other agreed milestones
Records may include:	<ul style="list-style-type: none"> • budgets, commitment and expenditure • cost management lessons learned

RANGE STATEMENT

	<ul style="list-style-type: none"> • cost management plans • invoice and payment summaries • lists of potential costs • project and/or organisation files and records • recommended and approved courses of action • reports to relevant stakeholders

BSBPMG505A Manage project quality

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to manage quality within projects. It covers determining quality requirements, implementing quality assurance processes, and using review and evaluation to make quality improvements in current and future projects.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant.</p> <p>In the context of this unit a complex project is defined as a project which involves:</p> <ul style="list-style-type: none">• the need for a comprehensive and multi faceted project plan• the need for a formal internal or external communications strategy• a dedicated and diverse project budget• multiple administrative components• multiple operational components• a wide range of stakeholders• a project operations team. <p>The functions performed by a program manager to manage quality within multiple projects are addressed in BSBPMG605A Direct quality management of a project program.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine quality requirements	<p>1.1. Determine quality objectives, standards and levels, with input from stakeholders and guidance of a higher project authority, to establish the basis for quality outcomes and a quality management plan</p> <p>1.2. Select and use established quality management methods, techniques and tools to determine preferred mix of quality, capability, cost and time</p> <p>1.3. Identify quality criteria, obtain agreement from a higher project authority and communicate to stakeholders, to ensure clarity of understanding and achievement of quality and overall project objectives</p> <p>1.4. Include agreed quality requirements in the project plan and implement as basis for performance measurement</p>
2. Implement quality assurance processes	<p>2.1. Measure and document results of project activities and product performance throughout the project life cycle to determine compliance with agreed quality standards</p> <p>2.2. Identify causes of unsatisfactory results, in consultation with client, and recommend appropriate actions to a higher project authority to enable continuous improvement in quality outcomes</p> <p>2.3. Conduct inspections of quality processes and quality control results to determine compliance of quality standards to overall quality objectives</p> <p>2.4. Maintain a quality management system to enable effective recording and communication of quality issues and outcomes to a higher project authority and stakeholders</p>
3. Implement project quality improvements	<p>3.1. Review processes and implement agreed changes continually throughout the project life cycle to ensure continuous quality improvement</p> <p>3.2. Review project outcomes against performance criteria to determine the effectiveness of quality management processes and procedures</p> <p>3.3. Identify and document lessons learned and recommended improvements, and pass on to higher project authority for application in future projects</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to develop quality objectives and criteria
- communication and leadership skills to motivate staff, convey expectations and ensure outcomes are met
- analytical skills to monitor achievement of project outcomes against quality criteria
- coaching and mentoring skills to boost performance.

Required knowledge

- quality management theory, techniques, tools and methodologies
- roles and responsibilities in project management
- methods for managing and improving performance
- relevant legislation codes and national standards:
 - award and enterprise agreements and industrial instruments
 - industry codes of practice
 - legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- demonstrated evidence of successfully managing project staff so that quality outcomes were achieved on multiple complex projects
- knowledge of a range of quality management tools, techniques and methodologies.

Context of and specific resources for assessment

Assessment must ensure:

- access to project documentation which includes quality criteria and evidence of quality monitoring and improvement practices
- consideration of feedback from project stakeholders regarding project quality management.

Method of assessment

This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant.

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project quality and their application to different situations
- analysis of candidate responses in addressing case studies and scenarios which present project quality management issues and problems
- review of project plan quality requirements
- review of implementation of agreed changes
- evaluation of review of project outcomes against performance criteria.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Project Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Quality objectives</i> may include:	<ul style="list-style-type: none"> • negotiated trade-offs between cost, schedule and performance • requirements from a higher project authority • requirements from the client and other stakeholders • those quality aspects which may impact on customer satisfaction
<i>Quality management plan</i> may include:	<ul style="list-style-type: none"> • authorisations and responsibilities for quality control • continuous improvement • established processes • quality assurance
<i>Quality management methods, techniques and tools</i> may include:	<ul style="list-style-type: none"> • benchmarking • brainstorming • charting processes • control charts • defining control • flowcharts • group work activities • histograms • pareto charts • processes that limit and/or indicate variation • ranking candidates • run charts • scattergrams • undertaking benefit/cost analysis
<i>Quality control</i> may include:	<ul style="list-style-type: none"> • monitoring conformance with specifications • monitoring of regular inspections by internal or external agents • recommending ways to eliminate causes of unsatisfactory performance of products or processes

RANGE STATEMENT**Improvements** may include:

- formal practices, such as total quality management or continuous improvement
- improvement by less formal processes that enhance both the product quality and processes of the project, for example client surveys to determine client satisfaction with project team performance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan communications processes	<p>1.1. Identify, document and analyse information requirements, with input from stakeholders and guidance from a higher project authority, as the basis for communications planning</p> <p>1.2. Develop, within delegated authority, an agreed communications management plan to ensure clarity of understanding and achievement of project objectives throughout the project life cycle</p> <p>1.3. Establish and maintain designated project management information system (PMIS) to ensure the quality, validity, timeliness and integrity of information and communication</p>
2. Manage project information	<p>2.1. Manage the generation, gathering, storage, retrieval, analysis and dissemination of information by project staff and stakeholders within established systems and procedures to aid decision making processes throughout the project life cycle</p> <p>2.2. Implement, modify, monitor and control designated information validation processes to optimise quality and accuracy of data</p> <p>2.3. Implement and maintain agreed communication networks between project staff, client and other stakeholders to ensure effective communications at appropriate levels throughout the project life cycle</p> <p>2.4. Identify communication and information management system problems and report them to a higher project authority</p>
3. Assess communications management outcomes	<p>3.1. Conduct finalisation activities to ensure agreed ownership of, and responsibility for, information collected</p> <p>3.2. Review project outcomes to determine the effectiveness of management information and communications processes and procedures</p> <p>3.3. Identify and document lessons learned and recommended improvements, and pass on to higher project authority for application in future projects</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to write reports and communicate key issues
- technology skills to facilitate effective communication
- organisational skills to manage information
- analytical skills to review project outcomes.

Required knowledge

- project life cycle and the place of communications within it
- project management information systems and their various applications.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- development and implementation of a range of project communications that facilitate effective outcomes for multiple complex projects
- knowledge of the place of communications within the project life cycle.

Context of and specific resources for assessment

Assessment must ensure:

- access to project communication documentation
- consideration of feedback from project team members and other stakeholders as to how effectively communication was managed.

Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project communications and their application to different situations
- analysis of responses in addressing case studies and scenarios which present project communication management issues and problems
- observation of performance in role plays which demonstrate communication skills
- evaluation of communications management plan
- review of identification and reporting of communication and information management system problems.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Project Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Delegated authority</i> means that activities may:	<ul style="list-style-type: none"> • be conducted routinely or as changing circumstances dictate • be done independently within broad guidance or by taking the lead of a team • involve consultation with other project members, teams and internal stakeholders • involve the selection, use and supervision of appropriate communications management methods and tools • take into account internal organisational change and external environmental change
<i>Project management information system</i> is a means for communicating knowledge about the project and provides a systematic approach to the storing, searching and retrieval of information relevant to the project and may include:	<ul style="list-style-type: none"> • complex computer-based systems • modified systems to cater for unique project requirements • simple manual systems
<i>Communication networks</i> may include:	<ul style="list-style-type: none"> • client organisation and end users • formal networks • informal networks • organisation's communication networks • specific networks

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine project risks	<ul style="list-style-type: none">1.1. Identify, document and analyse risks, in consultation with stakeholders and higher project authority, as the basis for risk planning1.2. Use established risk management techniques and tools, within delegated authority, to analyse risks, assess options and recommend preferred risk approaches1.3. Develop risk management plans, secure agreement of stakeholders and communicate plans to ensure clarity of understanding and ongoing management of risk factors1.4. Establish designated risk management processes and procedures to enable effective management and communication of risk events, responses and results
2. Monitor and control project risks	<ul style="list-style-type: none">2.1. Manage project in accordance with established project and risk management plans to ensure a common approach to the achievement of objectives2.2. Monitor progress against project plans to identify variances and recommend responses to a higher project authority for remedial action2.3. Implement agreed risk responses and modify plans to reflect changing project objectives in an environment of uncertainty
3. Assess risk management outcomes	<ul style="list-style-type: none">3.1. Review project outcomes to determine effectiveness of risk management processes and procedures3.2. Identify and document risk issues and recommended improvements, and pass on to higher project authority for application in future projects

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to write risk management plans
- problem-solving skills to control risks
- lateral thinking skills to identify risks
- planning and organisational skills to monitor project progress
- analytical skills to review project outcomes in terms of risk management.

Required knowledge

- risk management framework
- risk management techniques, tools and approaches.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- demonstrated evidence of effective risk management for multiple complex projects
- knowledge of risk management techniques, strategies and tools.

Context of and specific resources for assessment

Assessment must ensure:

- access to workplace risk management documentation
- consideration of feedback from project stakeholders as to how risks were managed.

Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of the risk management framework
- analysis of responses in addressing case studies and scenarios which present project scope management issues and problems
- review of risk management plans
- evaluation of monitoring of progress against project plans
- assessment of identified and documented risk issues and recommended improvements.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units in the Diploma of Project Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Risks</i> may be:	<ul style="list-style-type: none"> • actual • likely/probable • perceived • potential
<i>Risk management techniques and tools</i> may include:	<ul style="list-style-type: none"> • calling upon personal experience and/or subject matter experts • conducting or supervising qualitative and/or quantitative risk analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development • using specialist risk analysis tools to assist in the decision making process
<i>Delegated authority</i> refers to planning and activities that may:	<ul style="list-style-type: none"> • be conducted routinely or as changing circumstances dictate • be done independently within broad guidance or by taking the lead of a team • involve consultation with other project members, teams and internal stakeholders • involve the selection, use and supervision of appropriate risk management methods, tools and techniques
<i>Risk management processes and procedures</i> may include:	<ul style="list-style-type: none"> • communication with stakeholders, dispute resolution and modification procedures • implementation of risk control trigger mechanisms • measurement of actual progress against planned milestones • recording and reporting of major variance • setting key milestones at significant points during the project and at completion
<i>Recommended responses</i> to variations may be made:	<ul style="list-style-type: none"> • in consultation with project team members, section heads, project manager and stakeholders • independently or with higher project authority

RANGE STATEMENT

	<p>endorsement if necessary</p> <ul style="list-style-type: none">• regularly throughout the project life cycle• taking into account internal organisational change and external environmental change

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define project	<p>1.1. Access <i>project scope and other relevant documentation</i></p> <p>1.2. Define project <i>stakeholders</i></p> <p>1.3. Seek clarification from <i>delegating authority</i> of any issues related to project and <i>project parameters</i></p> <p>1.4. Identify limits of own responsibility and reporting requirements</p> <p>1.5. Clarify relationship of project to other projects and to the organisation's objectives</p> <p>1.6. Determine and access available resources to undertake project</p>
2. Develop project plan	<p>2.1. Develop <i>project plan</i> including timelines, work breakdown structure, role and responsibilities and other details of how the project will be managed in relation to the project parameters</p> <p>2.2. Identify and access appropriate <i>project management tools</i></p> <p>2.3. Formulate risk management plan for project, including occupational health and safety (OHS)</p> <p>2.4. Develop and approve project budget</p> <p>2.5. Consult team members and take their views into account in planning the project</p> <p>2.6. Finalise project plan and gain any necessary approvals to commence project according to documented plan</p>
3. Administer and monitor project	<p>3.1. Take action to ensure project team members are clear about their responsibilities and the project requirements</p> <p>3.2. Provide <i>support for project team members</i>, especially with regard to specific needs, to ensure that the quality of the expected outcomes of the project and documented time lines are met</p> <p>3.3. Establish and maintain <i>required record keeping systems</i> throughout the project</p> <p>3.4. Implement and monitor plans for managing project finances, resources (human, physical and technical) and quality</p> <p>3.5. Complete and forward project reports as required to stakeholders</p> <p>3.6. Undertake <i>risk management</i> as required to ensure</p>

ELEMENT	PERFORMANCE CRITERIA
	project outcomes are met 3.7.Achieve project deliverables
4. Finalise project	4.1.Complete financial record keeping associated with project and check for accuracy 4.2.Assign staff involved in project to new roles or reassign to previous roles 4.3.Complete project documentation and obtain any <i>necessary sign offs</i> for concluding project
5. Review project	5.1.Review project outcomes and processes against the project scope and plan 5.2.Involve team members in the project review 5.3.Document lessons learnt from the project and report within the organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and negotiation skills to work with team members and other stakeholders to maintain project schedules
- literacy skills to read, write and review a range of documentation
- planning and organising skills to develop, monitor and maintain implementation schedules
- numeracy skills to analyse data, and to compare time lines and promotional costs against budgets
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities.

Required knowledge

- relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - OHS
- organisational structure, and lines of authority and communication within the organisation
- how the project relates to organisation's overall mission, goals, objectives and operations.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- development of a project plan
- details of monitoring arrangement/s and evaluation of the project plan's efficacy to address time lines and budgets of project
- knowledge of relevant legislation.

Context of and specific resources for assessment

Assessment must ensure:

- access to workplace project documentation.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations
- oral or written questioning to assess knowledge of how the project relates to the organisation's overall mission, goals, objectives and operations
- review of project risk management plan and project plan
- evaluation of project reports forwarded to stakeholders
- analysis of documentation reviewing project outcomes and processes against the project scope and plan
- evaluation of documentation outlining lessons learnt from the project.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other project management units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Project scope and other relevant documentation</i> may include:	<ul style="list-style-type: none"> • contract or other agreement • project brief • project plan or summary • other documents outlining expected outcomes of the project, inclusions and exclusions from project, timeframes for project, quality standards for project, project resources
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • clients or customers (internal and external) • funding bodies • management, employees and relevant key personnel (internal and external) with special responsibilities • project sponsor
<i>Delegating authority</i> may include:	<ul style="list-style-type: none"> • customer or client • funding body • manager or management representative • project sponsor
<i>Project parameters</i> may include:	<ul style="list-style-type: none"> • finances for project • integration of project within organisation • legislative and quality standards • physical, human and technical resources available or required for project • procurement requirements associated with project • reporting requirements • risks associated with project, including OHS • scope of project • time lines
<i>Project management tools</i> may include:	<ul style="list-style-type: none"> • cost schedule control system • Critical Path Method • Gantt and bar charts • life cycle cost analysis • logistics support analysis

RANGE STATEMENT	
	<ul style="list-style-type: none"> • PERT charts • project management software • spreadsheets • technical resources required for the project, for example OHS management system tools
<i>Support for project team members</i> may include:	<ul style="list-style-type: none"> • additional physical, human and technical resources (within allocated budget) if and as required • encouragement • feedback • learning and development • regular project team meetings • supervision, mentoring and coaching
<i>Required record keeping systems</i> may include systems for:	<ul style="list-style-type: none"> • correspondence • financial data including costs, expenditure, income generated, purchases • project outcomes • quality data including any test results • recording of time spent on project and progress in completing project • samples, prototypes, models
<i>Risk management</i> may include:	<ul style="list-style-type: none"> • changing roles and responsibilities within project team • negotiating an extension of deadline, or redefining completion or quantities or quality of outcomes • outsourcing some aspects of the project • reducing costs • researching and applying more efficient methods for completing project tasks • seeking further resources to meet deadline • sharing of ideas to gain improvements to work undertaken within the project
<i>Necessary sign offs</i> may be required by:	<ul style="list-style-type: none"> • clients, customers • funding body • management • project sponsor

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather and organise information	<p>1.1. Gather and organise information in a format suitable for analysis, interpretation and dissemination in accordance with organisational requirements</p> <p>1.2. Access information held by the organisation ensuring accuracy and relevance in line with established organisational requirements</p> <p>1.3. Ensure that methods of collecting information are reliable and make efficient use of resources in accordance with organisational requirements</p> <p>1.4. Identify research requirements for combining online research with non-electronic sources of information</p> <p>1.5. Use business technology to access, organise and monitor information in accordance with organisational requirements</p> <p>1.6. Update, modify, maintain and store information, in accordance with organisational requirements</p>
2. Research and analyse information	<p>2.1. Clearly define objectives of research ensuring consistency with organisational requirements</p> <p>2.2. Ensure that data and research strategies used are valid and relevant to the requirements of the research and make efficient use of available resources</p> <p>2.3. Identify key words and phrases for use as part of any online search strategy, including the use of Boolean operators and other search tools</p> <p>2.4. Use reliable methods of data analysis that are suitable to research purposes</p> <p>2.5. Ensure that assumptions and conclusions used in analyses are clear, justified, supported by evidence and consistent with research and business objectives</p>
3. Present information	<p>3.1. Present recommendations and issues in an appropriate format, style and structure using suitable business technology</p> <p>3.2. Structure and format reports in a clear manner that conforms to organisational requirements</p> <p>3.3. Report and distribute research findings in accordance with organisational requirements</p> <p>3.4. Obtain feedback and comments on suitability and sufficiency of findings in accordance with organisational requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read, write and understand a variety of texts; and to edit and proofread documents to ensure clarity of meaning, accuracy and consistency of information
- problem-solving skills to deal with information which is contradictory, ambiguous, inconsistent or inadequate
- technology skills to select and use technology appropriate to a task
- research skills to identify and access information.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- organisational record keeping/filing systems, security procedures and safe recording practices
- organisational policies and procedures relating to distribution of workplace information, and legal and ethical obligations
- research processes and strategies to identify new sources (online and print) of information and to use them most efficiently and effectively.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- presenting information and data
- maintaining and handling data and documents systematically
- analysing and interpreting data to support organisational activities
- knowledge of research processes and strategies to identify new sources of information.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of research tasks and resources.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- analysis of responses to case studies and scenarios
- demonstration of techniques
- observation of presentations
- review of documentation outlining recommendations and issues
- review of reports outlining research findings.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- general administration units
- IT use units
- Governance units

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Information</i> may include:	<ul style="list-style-type: none"> • demographic data • service delivery records • computer databases (library catalogue, customer records, subscription database, internet) • computer files (letters, memos and other documents) • correspondence (faxes, memos, letters, email) • financial figures • forms (insurance forms, membership forms) • information on training needs • invoices (from suppliers, to debtors) • marketing reports/plans/budgets • personnel records (personal details, salary rates) • production targets • sales records (monthly forecasts, targets achieved)
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • anti-discrimination and related policy • business and performance plans • Code of Conduct/Code of Ethics • defined resource parameters • ethical standards • goals, objectives, plans, systems and processes • information protocols • legal and organisational policies, guidelines and requirements • management and accountability channels • OHS policies, procedures and programs • procedures for updating records • quality assurance and/or procedures manuals • security and confidentiality requirements
<i>Methods of collecting</i>	<ul style="list-style-type: none"> • checking research provided by others

RANGE STATEMENT	
<i>information</i> may include:	<ul style="list-style-type: none"> • checking written material including referrals and client files • individual research • information from other organisations • interviews with community members, colleagues/customers • observation and listening • previous file records • questioning (in person or indirect) • recruitment applications and other forms
<i>Business technology</i> may include:	<ul style="list-style-type: none"> • answering machine • computer • fax machine • photocopier • telephone
<i>Objectives of research</i> may include:	<ul style="list-style-type: none"> • comparative analysis • hypothesis testing • identification of trends • industry pricing policies • process mapping • situational diagnosis
<i>Research strategies</i> may include:	<ul style="list-style-type: none"> • data analysis • documentation reviews • focus groups • interviewing colleagues and clients • online searching • product sampling • subscription databases
<i>Key words and phrases</i> may include:	<ul style="list-style-type: none"> • American spellings when searching online • cultural or geographic terms • using different thesauri in different databases
<i>Boolean operators</i> may include:	<ul style="list-style-type: none"> • exclude - / NOT • include +/ AND • or • phrase searching " "() • variations, depending on the resource being used
<i>Methods of data analysis</i> may include:	<ul style="list-style-type: none"> • data sampling • feedback on results • peer review

RANGE STATEMENT	
	<ul style="list-style-type: none"> • review of previous research • statistical analysis
<i>Business objectives</i> may include:	<ul style="list-style-type: none"> • community capacity building • community development • service provision • business planning • financial performance • flexibility, responsiveness • interpersonal communication • marketing and customer service • organisational values and behaviours • people management • work procedures and quality assurance manuals
<i>Feedback</i> may include:	<ul style="list-style-type: none"> • audit documentation and reports • comments from community, board members, clients and colleagues • customer satisfaction questionnaires • quality assurance data • returned goods

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish risk context	1.1. Review organisational processes, procedures and requirements for undertaking risk management 1.2. Determine scope for risk management process 1.3. Identify internal and external stakeholders and their issues 1.4. Review political, economic, social, legal, technological and policy context 1.5. Review strengths and weaknesses of existing arrangements 1.6. Document critical success factors, goals or objectives for area included in scope 1.7. Obtain support for risk management activities 1.8. Communicate with relevant parties about the risk management process and invite participation
2. Identify risks	2.1. Invite relevant parties to assist in the identification of risks 2.2. Research risks that may apply to scope 2.3. Use tools and techniques to generate a list of risks that apply to the scope, in consultation with relevant parties
3. Analyse risks	3.1. Assess likelihood of risks occurring 3.2. Assess impact or consequence if risks occur 3.3. Evaluate and prioritise risks for treatment
4. Select and implement treatments	4.1. Determine and select most appropriate options for treating risks 4.2. Develop an action plan for implementing risk treatment 4.3. Communicate risk management processes to relevant parties 4.4. Ensure all documentation is in order and appropriately stored 4.5. Implement and monitor action plan 4.6. Evaluate risk management process

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and literacy skills to consult and negotiate, to prepare communications about risk management, and to encourage stakeholder involvement
- organisational and management skills to plan and implement risk management processes
- problem-solving and innovation skills to find practical ways to manage identified risks.

Required knowledge

- AS/NZS 4360:2004 Risk management.
- legislation, codes of practice and national standards, for example:
 - duty of care
 - company law
 - contract law
 - environmental law
 - freedom of information
 - industrial relations law
 - privacy and confidentiality
 - legislation relevant to organisation's operations
 - legislation relevant to operation as a business entity
- organisational policies and procedures, including:
 - risk management strategy
 - policies and procedures for risk management
- overall operations of organisation
- reasonable adjustment in the workplace for people with a disability
- types of available insurance and insurance providers.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- risk management plan which includes a detailed stakeholder analysis, explanation of the risk context, critical success factors, identified and analysed risks, and treatments for prioritised risks
- details of monitoring arrangements for risk management plan and an evaluation of the risk management plan's efficacy in treating risks
- knowledge of relevant legislation, codes of practice and national standards.

Context of and specific resources for assessment

Assessment must ensure:

- access to workplace documentation.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations
- oral or written questioning to assess knowledge of risk management policies and procedures
- review of documented critical success factors, and goals or objectives for area
- review of risks prioritised for treatment
- evaluation of action plan for implementing risk treatment
- evaluation of documentation communicating risk management processes to relevant parties.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- financial management units, governance units, human resource management units, or technology

EVIDENCE GUIDE

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Prepare for presentation	<ul style="list-style-type: none">1.1 Obtain and organise products for use within a sales presentation1.2 Review product information to ensure familiarity with products1.3 Identify sales tactic options, and assess and choose them in terms of their ability to meet the needs and preferences of the prospect1.4 Consider a variety of sales solutions and prepare to meet buyer needs1.5 Identify and select sales aids1.6 Identify alternatives for prospects and assess them in relation to anticipated buyer needs
2 Present a sales solution	<ul style="list-style-type: none">2.1 Use gestures, posture, body language, facial expressions and voice to create a supportive selling environment2.2 Apply listening skills to determine buyer needs2.3 Use open-ended questions to identify buyer needs, preferences, motives and objections2.4 Adjust presentation to match the needs and preferences of the buyer

- 2.5 Use persuasive communication techniques to secure buyer interest
 - 2.6 Demonstrate and explain products to enhance buyer retention
 - 2.7 Ensure the presentation communicates the key features of the product and emphasises benefits in relation to identified buyer needs
 - 2.8 Obtain and present **proof of benefits** through product purchase
 - 2.9 Utilise sales aids to build buyer understanding of how the product is aligned with needs
- 3 Manage buyer resistance
 - 3.1 Utilise probing to identify the source of **buyer resistance**
 - 3.2 Identify the strengths and limitations of **buyer resistance strategies**
 - 3.3 Elect and implement a strategy for managing buyer resistance
 - 3.4 Ensure strategy selected addresses the source of buyer resistance

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

communication skills to question clients to determine client needs and preferences and to use persuasive and assertive language in promoting product features and benefits

conflict resolution skills to manage customer dissatisfaction

negotiation skills to manage buyer resistance

presentation skills to demonstrate how product benefits and key features fulfil buyers' needs

research skills to use sales statistics to support a verbal argument

technological skills to use equipment to aid presentation of sales information.

Required knowledge

detailed product knowledge, including product:

advantages and disadvantages

features

service benefits

materials and aids which can be used to support presentations

principles of achieving an effective sales presentation mix

identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:

anti-discrimination

ethical principles

consumer protection

contract law

privacy laws

Trade Practices Act

statistical methods to demonstrate sales performance.

Evidence Guide

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Products may include:

- goods
- ideas
- services

Sales aids may include:

- drawings
- electronic media
- graphs
- models
- photographs
- printed materials
- product itself
- product samples
- transparencies
- whiteboards

Proof of benefits may include:

- anecdotes and examples
- comparisons
- statistics
- testimony

Source of **buyer resistance** may include:

- company resistance
- no perceived need
- price resistance
- salesperson resistance
- service dissatisfaction
- timing issues
- uncertainty about the product

Buyer resistance strategies may include:

- assertive messages
- boomerang
- checking perceptions

direct denial
incentives offer
indirect denial
requesting additional information from
buyers
open and closed questions
superior benefit
trial offer

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan sales operations	1.1. Set sales teams objectives 1.2. Prepare sales plan and budget to support attainment of objectives 1.3. Develop objectives related to the nature of the sales operation which are consistent with marketing and sales strategies 1.4. Determine the size and structure of the sales team 1.5. Recruit, select and induct sales team members on an ongoing basis in accordance with job analysis and sales team objectives 1.6. Provide sales team members with initial training using appropriate <i>training methods</i> 1.7. Establish sales team compensation methods and levels 1.8. Establish sales territories, sales targets and performance standards
2. Direct sales team	2.1. Implement strategies to encourage, motivate and support sales team members 2.2. Coach or mentor sales team members to facilitate attainment of sales targets 2.3. Model client-focused tactics for sales team members 2.4. Allocate resources in accordance with organisational policies and procedures to support attainment of sales targets 2.5. Analyse sales volume, conversion rate data and cross-selling ratios to monitor sales performance 2.6. Monitor the ethical and social conduct of the sales team in accordance with legal requirements, professional expectations and organisational policy
3. Evaluate sales team performance	3.1. Establish systems to evaluate sales effectiveness against performance standards 3.2. Offer sales team members constructive feedback on their performance 3.3. Recognise and reward superior sales team member performance 3.4. Take <i>corrective action</i> where sub-standard sales team member performance is identified 3.5. Adjust sales team planning in light of evaluation processes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to effectively work with a team
- financial management skills to manage a sales budget
- interpersonal skills to mentor, coach and apply training and development strategies
- leadership skills to gain trust and confidence of colleagues and clients
- literacy skills to interpret and explain complex, formal documents.

Required knowledge

- budgeting processes
- human resource management strategies
- principles of equal opportunity, equity, diversity and anti-discrimination
- identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:
 - anti-discrimination
- ethical principles
 - consumer protection
 - contract law
 - privacy laws
 - Trade Practices Act
- sales target and territory planning and management.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- management and development of a personal sales team to attain sales targets
- knowledge of the principles of equal opportunity, equity, diversity and anti-discrimination.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- direct questioning combined with portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of techniques used to manage sales team performance
- review of sales teams objectives
- review of resources allocated to support attainment of sales targets
- assessment of established sales territories, sales targets and performance standards
- evaluation of recognition and rewarding of superior sales team member performance.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Describe business ideas	<p>1.1. Gather information for <i>business ideas</i> from <i>appropriate sources</i></p> <p>1.2. List details of business ideas and opportunities</p> <p>1.3. Research alternative business ideas in light of the resources available</p> <p>1.4. Specify and list products and services to match business ideas</p> <p>1.5. Identify and research potential <i>customer information</i> for business ideas</p> <p>1.6. Identify and take into account financial, business and technical skills available when researching business opportunities</p>
2. Identify market needs	<p>2.1. Collect information regarding market size and potential from appropriate sources</p> <p>2.2. Investigate market trends and developments to identify market needs relative to business ideas</p> <p>2.3. Gather market information from <i>primary and secondary sources</i> to identify possible market needs in relation to business ideas</p> <p>2.4. Identify <i>ethical and cultural requirements</i> of the market and their impact on business ideas</p> <p>2.5. Identify <i>new and emerging markets</i> and document their features</p> <p>2.6. Identify and organise information on expected market growth or decline and associated risk factors</p>
3. Investigate factors affecting the market	<p>3.1. Identify projected changes in population, economic activity and the labour force that may affect business ideas</p> <p>3.2. Identify movements in prices and projected changes in availability of resources</p> <p>3.3. Review <i>trends and developments</i> and identify their potential impact on business ideas</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify market trends and developments, and to assess their impact on products and services
- communication skills to request information from diverse sources
- lateral thinking skills to generate ideas for potential businesses
- literacy skills to interpret business and market information
- numeracy skills to analyse data to aid business/market research
- research skills to investigate market needs.

Required knowledge

- ethical and cultural requirements
- research methods and data collection tools
- sources of business and market information.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- thorough investigation of business opportunities and ideas
- clearly identified products/services and customer information for each business idea
- thorough collection and analysis of market information and associated factors relating to business ideas
- knowledge of ethical and cultural requirements.

Context of and specific resources for assessment

Assessment must ensure:

- access to relevant documentation
- candidate's individual circumstances and work in the context of establishing or running a micro business, are the basis for assessment.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- portfolio of evidence relating to the development of the candidate's own business idea
- review of report on an existing micro or small business known to the candidate
- oral or written questioning to assess knowledge of research methods and data collection tools
- review of market information gathered to identify possible market needs in relation to business ideas
- assessment of review of trends and developments and their potential impact on business ideas.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBSMB302A Develop a micro business proposal.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Business ideas</i> may be influenced by:	<ul style="list-style-type: none"> • amount and type of finance available • cultural, family and/or community expectations • expected financial viability • finance required • lifestyle sought • number and type of competitors • returns expected or required by owner • skills of owner/operator
<i>Appropriate sources</i> may include:	<ul style="list-style-type: none"> • Aboriginal and cultural councils and incorporated bodies • accountants • Australian Bureau of Statistics • business advisory services • business brokers • business consultants • business incubators • business mentors and peers • current affairs • databases • financial institutions • government agencies set up to provide and assist business development for example Indigenous Business Australia (IBA), Business Entry Point (www.business.gov.au) • industry/trade associations • internet • lawyers and providers of legal advice <ul style="list-style-type: none"> • local councils • friends, family and community • market research publications • national and international publications • online gateways • role models and other successful businesses

RANGE STATEMENT	
	<ul style="list-style-type: none"> • training providers
<i>Customer information</i> may include:	<ul style="list-style-type: none"> • customer characteristics • marketing issues to meet needs • specialised needs of customers
<i>Primary sources</i> may include:	<ul style="list-style-type: none"> • group interviews • market testing a segment of the market • interviews (face-to-face and telephone) • observation • questionnaires • samples • surveys
<i>Secondary sources</i> may include:	<ul style="list-style-type: none"> • chambers of commerce data • data held by research and industry specific organisations • polls published by advertising and media companies • published government statistics • university databases
<i>Ethical and cultural requirements</i> may include:	<ul style="list-style-type: none"> • codes of practice • cultural expectations and influences • ethical principles <ul style="list-style-type: none"> • government policies and guidelines • societal expectations • social responsibilities, for example protection of children, environmental issues
<i>New and emerging markets</i> may include:	<ul style="list-style-type: none"> • e-commerce • export market • niche or segment of the market not currently penetrated
<i>Trends and developments</i> may include:	<ul style="list-style-type: none"> • changes in technology • demographic trends • ecological/environmental trends • economic trends (local, regional, national, international) • government activities, for example interest rates, deregulation • industrial trends • social and cultural factors

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and implement business legal requirements	<p>1.1. Identify and research possible <i>options for the business legal structure</i> using <i>appropriate sources</i></p> <p>1.2. Determine <i>legislation and regulatory requirements</i> affecting the operations of the business under its chosen structure</p> <p>1.3. Develop and implement procedures to ensure full compliance with relevant legislation and regulatory requirements</p>
2. Comply with legislation, codes and regulatory requirements	<p>2.1. Establish systems to ensure the <i>legal rights and responsibilities</i> of the business are identified and the business is adequately protected, specifically in relation to <i>occupational health and safety (OHS)</i>, business registration and environmental requirements</p> <p>2.2. Identify <i>taxation principles and requirements</i> relative to the business and follow procedures to ensure compliance</p> <p>2.3. Identify and carefully maintain <i>legal documents</i> and maintain and update relevant <i>records</i> to ensure their ongoing security and accessibility</p> <p>2.4. Monitor the provision of products and services of the business to protect legal rights and to comply with legal responsibilities</p> <p>2.5. Conduct investigations to identify areas of non-compliance with legal and regulatory requirements and take corrective action where necessary</p>
3. Negotiate and arrange contracts	<p>3.1. Seek legal advice on contractual rights and obligations, if required, to clarify business liabilities</p> <p>3.2. Investigate and assess potential products/services to determine <i>procurement rights</i> and to ensure protection of business interests where applicable</p> <p>3.3. Negotiate and secure contractual procurement rights for goods and services including <i>contracts with relevant people</i>, as required, in accordance with the business plan</p> <p>3.4. Identify <i>insurance requirements</i> and acquire adequate cover</p> <p>3.5. Identify options for leasing/ownership of business premises and complete contractual arrangements in accordance with the business plan</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, reporting, record keeping and consultation skills to operate the business
- literacy skills to interpret legal requirements, to develop policies and procedures and to analyse compliance information
- research skills to investigate legal structures, and taxation and insurance requirements
- time management skills to prioritise tasks and to meet key dates.

Required knowledge

- business registration and licensing requirements
- commonwealth, state/territory and local government legislative requirements relating to business operation, especially in regard to OHS and environmental issues, equal employment opportunity, industrial relations, anti-discrimination, taxation
- creation and termination of relevant legal contracts
- cultural differences and legal implications
- duty of care imposed by Law of Torts
- legal rights and obligations of alternative ownership structures
- record keeping to meet minimum legal and taxation requirements
- relevant consumer legislation
- relevant industry codes of practice
- relevant insurance requirements and products.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- implementation of a systematic approach to identifying, managing and meeting legal and business requirements within culturally appropriate contexts
- interpreting compliance data and formulating appropriate action
- knowledge of relevant legislation.

Context of and specific resources for assessment

Assessment must ensure:

- access to relevant documentation
- candidate's individual circumstances and work in the context of establishing or running a small business, are the basis for assessment.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- portfolio of evidence including contracts negotiated and arranged
- oral or written questioning to assess knowledge of relevant consumer legislation
- review of procedures developed and implemented to ensure full compliance with relevant legislation and regulatory requirements
- review of insurance cover acquired.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBSMB402A Plan small business finances
- BSBSMB404A Undertake small business planning.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Options for the business legal structure may include:

- company
- cooperative
- corporation
- government owned enterprise
- partnership
- profit or not-for-profit legal structure
- sole trader
- trust

Options for the business legal structure may be influenced by:

- confidentiality
- contractual requirements
- family/community/cultural expectations
- ownership transfer
- partnership considerations
- preferences of owners/stakeholders
- protection of stakeholders and assets
- requirements of financial backers
- superannuation
- taxation

Appropriate sources may include:

- business advisers
- financial planners
- government agencies
- industry/trade associations
- mentors
- professional advisers (e.g. solicitors, accountants)

Legislation and regulatory requirements may include:

- local, state/territory, commonwealth and international legislation, regulations and codes of practice affecting business operations such as:
 - relevant Acts and regulations
 - industry and OHS codes of practice
 - business registrations and licences

RANGE STATEMENT	
	<ul style="list-style-type: none"> • planning and other permissions • environmental legislation • industrial law, agency law, property law, consumer legislation and standards, Torts Law and duty of care • equal employment opportunity (EEO) and anti-discrimination legislation, anti-competition regulations
<i>Legal rights and responsibilities</i> may include:	<ul style="list-style-type: none"> • culturally appropriate processes and protocols • marketing the business in accordance with consumer legislation • obligations imposed by choice of business structure • operating the business with a duty of care (Law of Torts)
<i>Occupational health and safety and requirements</i> must include:	<ul style="list-style-type: none"> • complying with relevant OHS codes of practice • establishing and maintaining a system for managing OHS • establishing hazard management arrangements to assess and control the risks associated with workplace hazards including development of written safe operating procedures • establishing OHS record keeping arrangements in accordance with regulatory requirements • OHS duty of care responsibilities • registering with state/territory workers compensation authority if applicable
<i>Taxation principles and requirements</i> may include:	<ul style="list-style-type: none"> • relevant taxation requirements/obligations for business • tax file number, Australian Business number, goods and services tax registration, PAYG and withholding arrangements
<i>Legal documents</i> may include:	<ul style="list-style-type: none"> • appropriate software for financial records • certificate of incorporation • constitution documents • franchise agreements and financial documentation • partnership agreements • statutory books for companies (register of members, register of directors and minute books)

RANGE STATEMENT	
<i>Records</i> may include:	<ul style="list-style-type: none"> • environmental • financial • OHS • personnel • taxation
<i>OHS records</i> may include:	<ul style="list-style-type: none"> • accident reports and investigations • first aid and medical • hazardous substances register • instruction and training • manufacturers' and suppliers' information • material safety data sheets • OHS audits and inspections • plant maintenance and testing • workers compensation and rehabilitation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify costs, calculate prices and prepare profit statement	<p>1.1. Identify and document costs associated with the production and delivery of the business' products/services</p> <p>1.2. Calculate prices based on costs and profit margin, as an hourly charge out rate for labour or unit price for products</p> <p>1.3. Calculate break-even sales point to establish business viability and profit margins</p> <p>1.4. Identify appropriate pricing strategies in relation to market conditions to meet business profit targets</p> <p>1.5. Prepare projected profit statement to supplement the business plan</p>
2. Develop a FINANCIAL PLAN	<p>2.1. Set profit targets/goals to reflect owner's desired returns</p> <p>2.2. Identify working capital requirements necessary to attain profit projections</p> <p>2.3. Identify non-current asset requirements and consider alternative asset management strategies</p> <p>2.4. Prepare cash flow projections to enable business operation in accordance with business plan and legal requirements</p> <p>2.5. Identify capital investment requirements accurately for each operational period</p> <p>2.6. Select budget targets to enable ongoing monitoring of financial performance</p>
3. Acquire finance	<p>3.1. Identify start-up and ongoing financial requirements according to financial plan/budget</p> <p>3.2. Identify sources of finance, including potential financial backers, to provide required liquidity for the business to complement business goals and objectives</p> <p>3.3. Investigate cost of securing finance on optimal terms</p> <p>3.4. Identify strategies to obtain finance as required to ensure financial viability of the business</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret financial data
- communication skills to secure finance
- literacy skills to develop a financial plan and to interpret legal requirements and financial reports
- numeracy skills to calculate costs, prices, profit and other financial information
- research skills to identify costs and sources of finance.

Required knowledge

- break-even analysis
- costing for the business, including margin/mark-up, hourly charge out rates and unit costs
- financial decision making relevant to the business
- methods and relative costs of obtaining finance
- principles for preparation of balance sheets
- principles for preparation of cash flow forecasts
- principles for preparation of profit and loss statements
- purpose of financial reports
- relevant accounting terminology
- working capital cycles.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- development of a financial plan which identifies the financial requirements of the business, including profit targets, cash flow projections and strategies for the acquisition of finance
- knowledge of financial decision making relevant to the business.

Context of and specific resources for assessment

Assessment must ensure:

- access to relevant documentation
- candidate's individual circumstances and work in the context of establishing or running a small business, are the basis for assessment.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- portfolio of evidence including financial plan and records
- review of projected profit statement prepared to supplement the business plan
- review of cash flow projections
- oral or written questioning to assess knowledge of principles for preparation of cash flow forecasts.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBSMB401A Establish legal and risk management requirements of small business
- BSBSMB404A Undertake small business planning
- BSBSMB405A Monitor and manage small business operations
- BSBSMB406A Manage small business finances.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Costs may include:

- direct/indirect costs
- fixed, variable, semi-variable costs
- overheads and employee costs

Pricing strategies may include:

- competitor analysis
- cost/volume/profit analysis
- cost factors
- cost plus pricing
- demand-based pricing
- discounting
- market conditions
- penetration pricing
- perceived value
- product mix
- skimming

Financial plan may include:

- analysis of sales by product/service, identifying where they were sold and to whom
- cash flow estimates for each forward period
- current financial state of the enterprise (or owner/operator)
- estimates of profit and loss projections for each forward period
- financial performance to date (if applicable)
- likely return on investment
- monthly, quarterly or annual returns
- non-recurrent assets calculations
- profit, turnover, capital and equity targets
- projected profit targets, pricing strategies, margins
- projections of likely financial results (budgeting)
- projections, which may vary depending on the importance of such information and the stage in the life of the business
- resources required to implement the proposed marketing and production strategies (staff,

RANGE STATEMENT	
	materials, plant and equipment) <ul style="list-style-type: none"> • review of financial inputs required (sources and forms of finance) • risks and measures to manage or minimise risks • working, fixed, debt and equity capital • working in conjunction with external consultants e.g. investment analysts, accountants, financiers

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify elements of the business plan	1.1. Identify purpose of the business plan 1.2. Identify and review the essential components of the business plan 1.3. Identify and document business goals and objectives as a basis for measuring business performance
2. Develop a business plan	2.1. Research resources, legal and compliance requirements, specifically in relation to occupational health and safety (OHS) , in accordance with business goals and objectives 2.2. Research market needs, and market size and potential 2.3. Identify sources and costs of finance, from the financial plan , to provide required liquidity and profitability for the business 2.4. Identify methods, from the marketing strategies , to promote the market exposure of the business 2.5. Identify methods/means of production/operation from the production/operations plan to conform with business goals and objectives 2.6. Identify staffing requirements to effectively produce/deliver products/services 2.7. Identify specialist services and sources of advice, where required, and cost in accordance with resources available
3. Develop strategies for minimising risks	3.1. Identify specific interests and objectives of relevant people and seek and confirm their support of the planned business direction 3.2. Identify and develop risk management strategies according to business goals and objectives, and relevant legal requirements 3.3. Develop contingency plan to address possible areas of non-conformance with the plan

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to assess business performance
- literacy skills to enable interpretation of business information
- numeracy skills to analyse data.

Required knowledge

- commonwealth, state/territory and local government legislative requirements relating to business operation, especially in regard to OHS and environmental issues, equal employment opportunity, industrial relations and anti-discrimination
- methods of evaluation
- OHS responsibilities and procedures for identifying hazards relevant to the business
- planning processes
- preparation of a business plan
- principles of risk management relevant to business planning
- reasons for and benefits of, business planning
- relevant industry codes of practice
- setting goals and objectives
- types of business planning - feasibility studies; strategic, operational, financial and marketing planning.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- development of a business plan which provides for finance, marketing and provision of products/services to facilitate the business goals and objectives
- identification of and planning for, OHS and duty of care responsibilities
- development of risk management strategies
- knowledge of relevant legislation.

Context of and specific resources for assessment

Assessment must ensure:

- access to relevant documentation
- candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- portfolio of evidence including a business plan and risk management strategies
- oral or written questioning to assess knowledge of OHS responsibilities and procedures for identifying hazards relevant to the business
- demonstration of practical skills
- review of documented business goals and objectives
- review of contingency plans developed to address possible areas of non-conformance with the business plan.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBSMB401A Establish legal and risk management requirements of small business
- BSBSMB402A Plan small business finances
- BSBSMB403A Market the small business.

Range Statement

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop OPERATIONAL STRATEGIES AND PROCEDURES	<p>1.1. Develop an action plan to provide a clear and coherent direction, in accordance with the <i>business goals and objectives</i></p> <p>1.2. Identify <i>occupational health and safety (OHS) and environmental issues</i> and implement strategies to minimise risk factors</p> <p>1.3. Develop a <i>quality system</i> for the business in line with industry standards, compliance requirements and cultural criteria</p> <p>1.4. Develop performance measures and <i>operational targets</i> to conform with the business plan</p> <p>1.5. Develop strategies for innovation, including the utilisation of existing, new or emerging technologies, where practicable, to optimise business performance</p>
2. Implement operational strategies and procedures	<p>2.1. Implement systems and key performance indicators/targets to monitor business performance and customer satisfaction</p> <p>2.2. Implement systems to control stock, expenditure/cost, wastage/shrinkage and risks to health and safety in accordance with the business plan</p> <p>2.3. Maintain staffing requirements, where applicable, within budget to maximise productivity</p> <p>2.4. Carry out the provision of goods/services in accordance with established legal, ethical cultural and <i>technical standards</i></p> <p>2.5. Provide goods/services in accordance with time, cost and quality specifications, and customer requirements</p> <p>2.6. Apply quality procedures to address product/service and customer requirements</p>
3. Monitor business performance	<p>3.1. Regularly monitor/review the achievement of operational targets to ensure optimum business performance, in accordance with the business plan goals and objectives</p> <p>3.2. Review systems and structures, with a view to more effectively supporting business performance</p> <p>3.3. Investigate and analyse operating problems to establish causes and implement changes as required as part of the business quality system</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Amend operational policies and procedures to incorporate corrective action
4. Review business operations	4.1. Review and adjust business plan, as required, to maintain business viability, in accordance with business goals and objectives 4.2. Clearly record proposed changes to aid future planning and evaluation 4.3. Undertake ongoing research into new business opportunities and adjust business goals and objectives as new business opportunities arise

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to develop criteria and targets for the business plan
- communication skills to question, clarify and report
- literacy skills to interpret legal requirements, company policies and procedures
- numeracy skills to manage performance information and to control the finances
- technology skills to use relevant business equipment.

Required knowledge

- methods for developing and maintaining networks
- methods for implementing operation and revenue control systems
- methods for monitoring performance and implementing improvements
- OHS responsibilities and procedures for managing hazards
- principles of risk management relevant to the business, including risk assessment
- quality system principles and methods
- relevant industry codes of practice
- relevant marketing, sales and financial concepts
- relevant performance measures
- role of innovation
- systems to manage staff, stock, expenditure, services and customer service
- technical or specialist skills relevant to the business operation.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- developing strategies and procedures to successfully manage the operation of the business
- making appropriate adjustments to the business operations as required
- knowledge of quality system principles and methods.

Context of and specific resources for assessment

Assessment must ensure:

- access to relevant documentation
- candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- portfolio of evidence including operational strategies and procedures
- oral or written questioning to assess knowledge of principles of risk management relevant to the business, including risk assessment
- review of analysis of operating problems (establishing causes and implementing changes as required as part of the business quality system)
- review of records proposing changes to the business operations.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBSMB406A Manage small business finances
- BSBSMB407A Manage a small team.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Operational strategies and procedures</i> may be determined by:</p>	<ul style="list-style-type: none"> • business premises (size, location, layout) • financial control systems and procedures • management and administrative systems and procedures • methods/techniques/technology • physical and natural resources • plant and equipment , including OHS requirements • premises, plant and equipment, which may be new or previously owned • purchase (sole or shared ownership) or leasing • raw materials • requirements, which may be one-off requirements or recurrent requirements (such as equipment maintenance) specific to the nature of the business • technology • use of existing, new and emerging technologies including e-commerce
<p><i>Business goals and objectives</i> may include:</p>	<ul style="list-style-type: none"> • customer needs/marketing projections • family or community benefits • financial projections • goals, objectives, plans, systems and processes • lifestyle issues • proposed size and scale of the business, market focus of the business • short-, medium- or long-term goals • social responsibility
<p><i>Occupational health and safety and environmental issues</i> must include:</p>	<ul style="list-style-type: none"> • controls, which may include instructions to workplace personnel concerning site hazards and controls, material safety data sheets, use of personal protective equipment, vehicle access, signs and barricades, traffic control, outside contractors

RANGE STATEMENT	
	<ul style="list-style-type: none"> establishment and maintenance of procedures for assessing and controlling risks establishment and maintenance of procedures for identifying risks to health and safety waste and by-products
<i>Quality system</i> may include:	<ul style="list-style-type: none"> manual or computer quality control systems quality assurance/management approaches random inspections and assessments of goods and services against predetermined standards random inspections and assessments of processes against predetermined standards random sampling and follow-up of customers
<i>Operational targets</i> may include:	<ul style="list-style-type: none"> external targets, which may relate to market share and positioning and may involve exploring new markets, building national or international trade links internal targets, which may relate to size, quality, quantity and diversity, wages to sales, sales to area/stock levels/stock turnover/average debtor payment periods and levels staffing level and skills mix targets, which may be short-, medium- or long-term
<i>Technical standards</i> may include:	<ul style="list-style-type: none"> current and generally agreed descriptions of what the product/service is, how it should be produced/delivered and the quality, safety, efficiency or other measures to determine the activity is done effectively

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement financial plan	<p>1.1. Identify financial information requirements and obtain specialist services, as required, to profitably operate and extend the business in accordance with the business plan</p> <p>1.2. Produce financial budgets/projections, including cash flow estimates, as required for each forward period, and distribute to relevant people in accordance with legal requirements</p> <p>1.3. Negotiate, secure and manage business capital to best enable implementation of the business plan and to meet the requirements of financial backers</p> <p>1.4. Develop and maintain strategies to enable adequate financial provision for taxation in accordance with legal requirements</p> <p>1.5. Develop, monitor and maintain client credit policies, including contingencies for debtors in default, to maximise cash flow</p> <p>1.6. Select key performance indicators to enable ongoing monitoring of financial performance</p> <p>1.7. Record and communicate financial procedures to relevant people to facilitate implementation of the business plan</p>
2. Monitor financial performance	<p>2.1. Regularly monitor and report on financial performance targets and analyse data to establish the extent to which the financial plan has been met</p> <p>2.2. Monitor marketing and operational strategies for their effects on the financial plan</p> <p>2.3. Calculate and evaluate financial ratios according to own/industry benchmarks</p> <p>2.4. Assess financial plan to determine whether variations or alternative plans are needed, and change as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret financial data
- communication skills to negotiate capital and to report on performance
- literacy skills to interpret legal requirements and financial reports
- numeracy skills to calculate costs, prices, profit and other financial information.

Required knowledge

The following knowledge must be assessed as part of this unit:

- benchmarking
- financial decision making relevant to the business
- financial indicators
- purpose of financial reports
- preparation and interpretation of budget/actual reports
- principles for preparation of balance sheets and their interpretation
- principles for preparation of profit and loss statements and their interpretation
- stock records/stock control relevant to the business.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- development, implementation and review of strategies for the ongoing management of finance
- maintenance of day-to-day financial management of the business as well as implementation of broad financial strategies
- knowledge of purpose of financial reports.

Context of and specific resources for assessment

Assessment must ensure:

- access to relevant documentation
- candidate's individual circumstances and work in the context of establishing or running a small business, are the basis for assessment.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- portfolio of evidence including financial reports
- preparation and review of financial ratios
- review of cash flow projections
- analysis of development, monitoring and maintenance of client credit policies
- oral or written questioning to assess knowledge of principles for preparation of balance sheets and their interpretation.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBSMB402A Plan small business finances
- BSBSMB405A Monitor and manage small business operations.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Financial plan may include:

- analysis of sales by product/service, identifying where they were sold and to whom
- cash flow estimates for each forward period
- current financial state of the enterprise (or owner/operator)
- estimates of profit and loss projections for each forward period
- financial performance to date (if applicable)
- likely return on investment
- monthly, quarterly or annual returns
- non-recurrent assets calculations
- profit, turnover, capital and equity targets
- projected profit targets, pricing strategies, margins
- projections of likely financial results (budgeting)
- projections, which may vary depending on the importance of such information and the stage in the life of the business
- resources required to implement the proposed marketing and production strategies (staff, materials, plant and equipment)
- review of financial inputs required (sources and forms of finance)
- risks and measures to manage or minimise risks
- working, fixed, debt and equity capital
- working in conjunction with external consultants e.g. investment analysts, accountants, financiers

Financial information may include:

- accrual of staff leave/entitlements
- asset management strategies which may include:
 - owning, leasing, sharing, syndicating
 - maintaining and deploying assets
- asset registers
- balance sheets
- bookkeeping/accounting/stock/job costing records

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect, analyse and communicate information and ideas	<p>1.1. Collect relevant information from appropriate sources and analyse and share with the work team to improve work performance</p> <p>1.2. Communicate ideas and information in a manner which is appropriate and sensitive to the cultural and social diversity of the audience and any specific needs</p> <p>1.3. Implement consultation processes to encourage employees to contribute to issues related to their work, and promptly relay feedback to the work team in regard to outcomes</p> <p>1.4. Seek and value contributions from internal and external sources in developing and refining new ideas and approaches</p> <p>1.5. Implement processes to ensure that issues raised are resolved promptly or referred to relevant personnel as required</p>
2. Develop trust and confidence	<p>2.1. Treat all internal and external contacts with integrity, respect and empathy</p> <p>2.2. Use the organisation's social, ethical and business standards to develop and maintain effective relationships</p> <p>2.3. Gain and maintain the trust and confidence of colleagues, customers and suppliers through competent performance</p> <p>2.4. Adjust interpersonal styles and methods to meet organisation's social and cultural environment</p> <p>2.5. Encourage other members of the work team to follow examples set, according to organisation's policies and procedures</p>
3. Develop and maintain networks and relationships	<p>3.1. Use networks to identify and build relationships</p> <p>3.2. Use networks and other work relationships to provide identifiable benefits for the team and organisation</p>
4. Manage difficulties into positive outcomes	<p>4.1. Identify and analyse difficulties, and take action to rectify the situation within the requirements of the organisation and relevant legislation</p> <p>4.2. Guide and support colleagues to resolve work difficulties</p> <p>4.3. Regularly review and improve workplace outcomes</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>in consultation with relevant personnel</p> <p>4.4. Manage <i>poor work performance</i> within the organisation's processes</p> <p>4.5. Manage conflict constructively within the organisation's processes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- coaching and mentoring skills to provide support to colleagues
- literacy skills to research, analyse, interpret and report information
- relationship management and communication skills to:
 - deal with people openly and fairly
 - forge effective relationships with internal and/or external people, and to develop and maintain these networks
 - gain the trust and confidence of colleagues
 - respond to unexpected demands from a range of people
 - use supportive and consultative processes effectively.

Required knowledge

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety (OHS), and environmental issues, equal opportunity, industrial relations and anti-discrimination
- theory associated with managing work relationships to achieve planned outcomes:
 - developing trust and confidence
 - maintaining consistent behaviour in work relationships
 - understanding the cultural and social environment
 - identifying and assessing interpersonal styles
 - establishing, building and maintaining networks
 - identifying and resolving problems
 - resolving conflict
 - managing poor work performance
 - monitoring, analysing and introducing ways to improve work relationships.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- range of methods and techniques for communicating information and ideas to a range of stakeholders
- range of methods and techniques for developing positive work relationships that build trust and confidence in the team
- accessing and analysing information to achieve planned outcomes
- techniques for resolving problems and conflicts and dealing with poor performance
- knowledge of the theory associated with managing work relationships to achieve planned outcomes.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- demonstration of techniques in managing poor performance and communicating effectively
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- observation of presentations
- oral or written questioning to assess knowledge of relevant legislation
- review of consultation processes implemented to encourage employees to contribute to issues related to their work
- review of documentation outlining reviewing of workplace outcomes.

Guidance information for

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to achieve team outcomes	<p>1.1. Identify, establish and document team purpose, roles, responsibilities, goals, plans and objectives in consultation with team members</p> <p>1.2. Support team members in meeting expected outcomes</p>
2. Develop team cohesion	<p>2.1. Provide opportunities for input of team members into planning, decision making and operational aspects of work team</p> <p>2.2. Encourage and support team members to take responsibility for own work and to assist each other in undertaking required roles and responsibilities</p> <p>2.3. Provide feedback to team members to encourage, value and reward individual and team efforts and contributions</p> <p>2.4. Recognise and address issues, concerns and problems identified by team members or refer to relevant persons as required</p>
3. Participate in and facilitate work team	<p>3.1. Actively encourage team members to participate in and take responsibility for team activities and communication processes</p> <p>3.2. Give the team support to identify and resolve problems which impede its performance</p> <p>3.3. Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with clients/customers</p>
4. Liaise with management	<p>4.1. Maintain open communication with line manager/management at all times</p> <p>4.2. Communicate information from line manager/management to the team</p> <p>4.3. Communicate unresolved issues, concerns and problems raised by the team/team members to line manager/management and ensure follow-up action is taken</p> <p>4.4. Communicate unresolved issues, concerns and problems related to the team/team members raised by line managers/management to the team and ensure follow-up to action is taken</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - boost team morale
 - deal with team conflict
 - deliver messages from management
 - facilitate discussion
 - mentor and coach
- leadership skills
- planning and organising skills.

Required knowledge

- organisational goals, objectives and plans
- organisational policy and procedures framework
- organisational structure, including organisational chart
- principles and techniques associated with:
 - delegation and work allocation
 - goal setting
 - group dynamics and processes
 - individual behaviour and difference
 - leadership
 - motivation
 - negotiation
 - planning.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- teamwork plan with details of how it was generated and how it will be monitored so that team goals can be met
- techniques in communicating information, dealing with team conflict and resolving issues
- knowledge of organisational goals, objectives and plans.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of demonstrated techniques in working with team dynamics
- observation of performance in role plays
- oral or written questioning to assess knowledge of principles and techniques associated with group dynamics and processes
- evaluation of opportunities provided for input of team members into planning, decision making and operational aspects of work team
- review of feedback provided to team members
- review of teamwork plan.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish personal work goals	<p>1.1. Serve as a positive role model in the workplace through personal work planning and organisation</p> <p>1.2. Ensure personal work goals, plans and activities reflect the organisation's plans, and <i>own responsibilities and accountabilities</i></p> <p>1.3. Measure and maintain personal performance in varying work conditions, work contexts and contingencies</p>
2. Set and meet own work priorities	<p>2.1. Take initiative to prioritise and facilitate competing demands to achieve personal, team and organisational goals and objectives</p> <p>2.2. Use <i>technology</i> efficiently and effectively to manage work priorities and commitments</p> <p>2.3. Maintain appropriate work-life balance, and ensure stress is effectively managed and health is attended to</p>
3. Develop and maintain professional competence	<p>3.1. Assess personal knowledge and skills against <i>competency standards</i> to determine development needs, priorities and plans</p> <p>3.2. Seek feedback from employees, <i>clients and colleagues</i> and use this feedback to identify and develop ways to improve competence</p> <p>3.3. Identify, evaluate, select and use <i>development opportunities</i> suitable to personal learning style/s to develop competence</p> <p>3.4. Undertake participation in networks to enhance personal knowledge, skills and work relationships</p> <p>3.5. Identify and develop new skills to achieve and maintain a competitive edge</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to receive, analyse and report on feedback
- literacy skills to interpret written and verbal information about workplace requirements
- organisational skills to set and achieve priorities.

Required knowledge

- principles and techniques involved in the management and organisation of:
 - performance measurement
 - personal behaviour, self-awareness and personality traits identification
 - personal development plan
 - personal goal setting
 - time management
- management development opportunities and options for self
- organisation's policies, plans and procedures
- types of learning style/s and how they relate to the individual
- types of work methods and practices that can improve personal performance.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- systems and processes (electronic or paper-based) used to organise and prioritise tasks, which show how work is managed
- personal development plan, with career objectives and an action plan

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations
- oral or written questioning to assess knowledge of work methods and practices that can improve personal performance
- review of personal work goals, plans and activities
- evaluation of work-life balance
- review of documentation assessing personal knowledge and skills against competency standards.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Management.

Range Statement

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish team performance plan	<p>1.1. Consult team members to establish a common understanding of team purpose, roles, responsibilities and accountabilities in accordance with organisational goals, plans and objectives</p> <p>1.2. Develop performance plans to establish expected outcomes, outputs, key performance indicators and goals for work team</p> <p>1.3. Support team members in meeting expected performance outcomes</p>
2. Develop and facilitate team cohesion	<p>2.1. Develop strategies to ensure team members have input into planning, decision making and operational aspects of work team</p> <p>2.2. Develop policies and procedures to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities</p> <p>2.3. Provide feedback to team members to encourage, value and reward individual and team efforts and contributions</p> <p>2.4. Develop processes to ensure that issues, concerns and problems identified by team members are recognised and addressed</p>
3. Facilitate teamwork	<p>3.1. Encourage team members and individuals to participate in and to take responsibility for team activities, including communication processes</p> <p>3.2. Support the team in identifying and resolving work performance problems</p> <p>3.3. Ensure own contribution to work team serves as a role model for others and enhances the organisation's image for all stakeholders</p>
4. Liaise with stakeholders	<p>4.1. Establish and maintain open communication processes with all stakeholders</p> <p>4.2. Communicate information from line manager/management to the team</p> <p>4.3. Communicate unresolved issues, concerns and problems raised by team members and follow-up with line manager/management and other relevant stakeholders</p> <p>4.4. Evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain team goals, to address team conflict and to build an environment of trust
- planning and organisational skills to keep team on track and focussed on work outcomes.

Required knowledge

- group behaviour
- strategies for mentoring and coaching to informally guide and instruct team members
- issue resolution
- strategies for gaining consensus.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- range of techniques that can be used to build work teams, strengthen communications in the team and resolve issues
- methods for engaging with stakeholders and obtaining advice from outside the work team, to ensure team is focussed and on track
- knowledge of group behaviour.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports
- demonstration of team building techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- review of performance plans developed for work team
- review of policies and procedures developed to ensure team members take responsibility for own work.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Management.

Range Statement

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan documents	1.1. Determine the <i>purposes</i> of documents 1.2. Choose <i>appropriate formats</i> for documents 1.3. Establish <i>means of communication</i> 1.4. Determine <i>requirements of documents</i> 1.5. Determine <i>categories and logical sequences of data, information and knowledge</i> to achieve document objectives 1.6. Develop overview of structure and content of documents
2. Draft text	2.1. Review and organise available data, information and knowledge according to proposed structure and content 2.2. Ensure data, information and knowledge is aggregated, interpreted and summarised to prepare text that satisfies document purposes and objectives 2.3. Include graphics as appropriate 2.4. Identify gaps in required data and information, and collect additional material from <i>relevant enterprise personnel</i> 2.5. Draft text according to document requirements and genre 2.6. Use language appropriate to the audience
3. Prepare final text	3.1. Review draft text to ensure document objectives are achieved and requirements are met 3.2. Check grammar, spelling and style for accuracy and punctuation 3.3. Ensure draft text is approved by <i>relevant</i> enterprise personnel 3.4. Process text amendments as required
4. Produce document	4.1. Choose basic <i>design elements</i> for documents appropriate to audience and purpose 4.2. Use word processing software to apply basic design elements to text 4.3. Check documents to ensure all requirements are met

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to clarify requirements of documents
- literacy skills to edit and proofread documents; to create documents with a complex, organised structure of linked paragraphs which use simple and complex syntactic structure
- numeracy skills to collate and present data, graphs and annotated references
- problem-solving skills to use processes flexibly and interchangeably.

Required knowledge

- enterprise style guide/house style
- formatting styles and their impact on formatting, readability and appearance of documents
- organisational requirements for ergonomics, work periods and breaks, and resource conservation techniques
- rules and conventions for written English, as defined by general and specialist dictionaries and books about grammar.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- production of documents
- editing draft text to ensure accuracy and clarity of information
- knowledge of enterprise style guide/house style.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of documents and style guides.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of structure and content of documents
- review of draft documents
- review of final documents
- demonstration of techniques
- oral or written questioning to assess knowledge of word processing software functions.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBITU401A Design and develop complex text documents.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Purposes of documents</i> may include:	<ul style="list-style-type: none"> • conveying research findings • documenting policies, procedures and processes • influencing attitudes, opinions, beliefs • meeting legal requirements • meeting other data, information or knowledge needs of an audience • proposing recommendations, options and actions
<i>Appropriate formats</i> for documents may include:	<ul style="list-style-type: none"> • detailed business letters • emails • instructions and procedures • manuals • publications, leaflets, brochures • reports • speeches and presentations • submissions tender documentation and public notices • website text
<i>Means of communication</i> may include:	<ul style="list-style-type: none"> • software packages such as MS Word, MS Excel, MS PageMaker, MS PowerPoint and templates
<i>Requirements of documents</i> may include:	<ul style="list-style-type: none"> • compliance with genre • compliance with proformas, standardised reporting requirements or undertakings made by the organisation about reporting • file types and sizes for online documents • languages other than English requirements • legal or traditional requirements for the particular document format • organisational policy, procedures and guidelines applying to writing documents, including house style • point numbering systems • requirements for illustrations, photographs, graphs, charts, maps and other illustrative material

RANGE STATEMENT	
	<p>to explain texts</p> <ul style="list-style-type: none"> • standards for references, footnotes, citations, acknowledgements • time lines, including deadlines • word length • writing styles, including simplicity of English and use of technical language

Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency.

The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1. <i>Communicate effectively</i> with clients and staff | <p>1.1 Identify and use appropriate communication strategies to:</p> <ul style="list-style-type: none">• establish rapport• exchange information• facilitate resolution of issues• defuse potentially difficult situations <p>1.2 Conduct <i>interviews</i> according to <i>established procedures</i></p> <p>1.3 Give feedback and advice in a way which reflects current identified good practice</p> <p>1.4 Demonstrate respect for individual, cultural and social differences, needs and rights in communicating with clients and colleagues</p> <p>1.5 If communication break down occurs, respond appropriately and refer to other staff or specialist services if required to ensure duty of care responsibilities are met</p> <p>1.6 Respond to enquiries in a manner that promotes achievement of mutual outcomes</p> <p>1.7 Respect and consider differences in views in a way that values and encourages the contributions of others</p> <p>1.8 Ensure communication represents the organisation effectively where appropriate</p> |
|--|---|

ELEMENT**PERFORMANCE CRITERIA**

2. Contribute to the implementation of effective communication strategies

- 2.1 Implement strategies to check on the effectiveness of communication with clients and colleagues
- 2.2 Facilitate access to interpretive and translation services as required
- 2.3 Regularly review established channels of communication to ensure clients and co workers are informed of relevant information in a timely way
- 2.4 Provide coaching in effective communication to colleagues and clients as required
- 2.5 Maintain relevant work-related networks and relationships as required to ensure client needs and organisation objectives are met

3. Use specific communication techniques to maintain constructive interaction

- 3.1 Put in place strategies to develop a trusting relationship that will enable negotiation of communication barriers
- 3.2 Use communication skills and processes to identify and address barriers to communication and facilitate identification of individual issues
- 3.3 Use effective skills in listening and providing feedback to ensure stories are heard and to support exploration and validation of issues raised
- 3.4 Seek agreement on processes to be followed to address issues within scope of own abilities, skills and work role
- 3.5 Make referral for conflict resolution and mediation as appropriate

ELEMENT**PERFORMANCE CRITERIA****4. Facilitate discussions**

4.1 Provide *opportunities* to fully explore all relevant issues

4.2 Routinely use strategies that encourage all group members to participate equally, including seeking and acknowledging contributions from all members

4.3 Routinely contribute to and follow objectives and agendas for meetings and discussions

4.4 Provide relevant information to groups as appropriate to facilitate outcomes

4.5 Evaluate group communication strategies to promote ongoing participation of all parties

4.6 Implement strategies to ensure the specific communication needs of individuals within the group are identified and addressed

5. Identify communication strategies to build relationships with clients who are involuntary or present communication challenges

5.1 Identify and address specific communication barriers such as:

- closed or unreceptive attitudes
- mistrust or misunderstanding of people, organisations, systems and/or processes
- emotional states, such as fear, anger and frustration

5.2 Identify areas of mistrust or conflict that may require resolution

5.3 Identify the need to include *additional parties*

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Essential knowledge:

It is critical that the candidate demonstrate knowledge of:

- Effective communication strategies and techniques to address barriers and build and maintain relationships
- Recognition of communication styles of individuals
- Basic group dynamics and facilitation of group discussion

The candidate must also be able to demonstrate relevant knowledge required to effectively perform task skills; task management skills; contingency management skills and job/role environment skills as outlined in elements and performance criteria, such as knowledge of:

- Cross cultural communication protocols
- Non-verbal communication strategies
- Communication techniques to maintain constructive interactions
- Barriers to communication

Essential skills:

It is critical that the candidate demonstrate the ability to:

- Provide evidence that all communication with clients and colleagues is appropriate to individual needs and the situation and promotes achievement of organisation objectives
- Use strategies to meet particular communication needs/difficulties
- Address individual issues in a timely way and in a manner which maintains the integrity of the individual
- Know when to provide referrals to conflict resolution and mediation

In addition, the candidate must be able to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role

These include the ability to:

REQUIRED SKILLS AND KNOWLEDGE

- Apply a full range of communication techniques including:
 - reflective and active listening, respectful responding, empathy, feedback and rapport
 - addressing communication barriers through application of a range of strategies
 - recognition of non-verbal triggers
 - clarification of boundaries of work role
- Apply oral communication skills required to fulfil job roles as specified by the organisation/service:
 - skills in asking questions, providing clear information, listening to and understanding workplace instructions, and clarifying workplace instructions when necessary
 - service/organisation may require competence in English or community language, depending on client group

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate this unit of competency:

- The individual being assessed must provide evidence of specified essential knowledge as well as skills
- This unit will be most appropriately assessed in a work context or in simulated work environment and under the normal range of work conditions
- Assessment is recommended to be on more than one occasion and must include the range of clients who access the service

EVIDENCE GUIDE

- Access and equity considerations:*
- All workers in community services should be aware of access, equity and human rights issues in relation to their own area of work
 - All workers should develop their ability to work in a culturally diverse environment
 - In recognition of particular issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on Aboriginal and Torres Strait Islander people
 - Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander clients and communities
- Context of and specific resources for assessment:*
- This unit can be assessed independently, however holistic assessment practice with other community services units of competency is encouraged
 - Resources required for assessment include access to relevant workplace or simulated realistic workplace setting where assessment may take place
- Method of assessment:*
- Assessment may include observation, questioning and evidence gathered from the workplace and/or simulated work environment, including written work

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

RANGE STATEMENT

Communicate effectively includes:

- Effective use of questioning, speaking, and listening and non-verbal communication techniques
- Identifying and evaluating what is occurring within an interaction in a non-judgemental way
- Making decisions about appropriate words, behaviour, posture
- Using clarifying, summarising questions
- Putting together a response that is culturally appropriate
- Expressing an individual perspective
- Expressing own philosophy, ideology and background and exploring the impact of this on the communication
- Exploring and unpacking problems
- Using active and reflective listening appropriately
- Providing sufficient time to enable stories to be told
- Providing summarising and reflective responses in conflict situations
- Confirming that required information is accessed or message communicated

Non-verbal communication includes:

- Gestures
- Posture
- Facial expression

Interviews may include:

- Discussion of staffing issues
- Routine information collection
- Maintaining confidentiality
- Evidential-based
- Non disclosure
- Disclosure

RANGE STATEMENT

- Established procedures may refer to:*
- Commonwealth and State legislation
 - International conventions relating to the rights of individuals
 - Organisation policy and procedures
 - Relevant program standards
 - Duty of care and ethical practice
- Presentation of information includes:*
- Clarity
 - Appropriate sequencing
 - Delivery within an appropriate time
 - Utilising media to enhance presentation, if appropriate
 - Addressing audience needs
- Opportunities will include:*
- Allowing sufficient time to hear individual stories
 - Encouraging a full exploration of issues
 - Encouraging validation of individual issues
- Additional parties may include:*
- Trusted friends
 - Case workers
 - Family members
 - Nominated adults

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Contribute to the development of effective communication strategies	<p>1.1 Strategies for internal and external dissemination of information are developed, promoted, implemented and reviewed as required to ensure individual and organisational effectiveness is maximised</p> <p>1.2 In developing and implementing strategies special communication needs are addressed to avoid discrimination in the workplace</p> <p>1.3 Channels of communication are established and reviewed regularly to ensure staff are informed of relevant information in a timely way</p> <p>1.4 Coaching in effective communication is provided to staff as required</p> <p>1.5 Negotiation and conflict resolution strategies are used where required to promote effective operation of the organisation</p> <p>1.6 Issues are negotiated with key stakeholders, clients and staff in a way which leads to a mutually acceptable outcome</p> <p>1.7 Relevant work related networks and relationships are maintained as required to ensure client needs and organisational objectives are met</p> <p>1.8 All communication with clients and colleagues is appropriate to individual needs and the situation and promotes achievement of organisational objectives</p>
2 Represent the organisation to a range of groups	<p>2.1 When participating in internal and external forums, presentations are relevant, appropriately researched and presented in a manner to promote the organisation, and adjusted to meet audience needs</p> <p>2.2 Presentations are clear and sequential and delivered within a predetermined time and utilise appropriate media to enhance the presentation and address audience needs</p>

- 2.3 Questions from the audience are responded to in a manner consistent with organisation standards
 - 2.4 Differences in views are respected and considered in a way that values and encourages other's contributions
- 3 Facilitate group discussions
 - 3.1 Mechanisms which enhance effective group interactions are defined and implemented
 - 3.2 Strategies which encourage all group members to participate are used routinely including seeking and acknowledging contributions from all members
 - 3.3 Objectives and agendas for meetings and discussions are routinely set and followed
 - 3.4 Relevant information is provided to groups as appropriate to facilitate outcomes
 - 3.5 Evaluation of group communication strategies is undertaken to promote ongoing participation of all parties
 - 3.6 The specific communication needs of individuals are identified and addressed
- 4 Produce quality written materials
 - 4.1 Writing is succinct and clear and is presented in a logical and sequential way which matches the audience and the purpose of the document
 - 4.2 Organisation guidelines and current accepted standards of writing which match the purpose are observed in producing all written documentation
 - 4.3 Appropriate and timely advice to management and clients is prepared and provided as required
 - 4.4 Where individual skill levels do not match workplace requirements, appropriate remedial action is taken, including seeking assistance and additional training
- 5 Conduct interviews
 - 5.1 In conducting interviews and formal discussions effort is applied to ensure that appropriate structures, timeframes and protocols are mutually agreed and adhered to
 - 5.2 Effective questioning, speaking, listening and

nonverbal communication techniques are used during discussions and interviews, to ensure the required information is accessed or message communicated

- 5.3 Feedback and advice is given in a way which reflects current identified good practice
- 5.4 The conduct of interviews and formal discussions shows due regard to individual differences, needs and rights
- 5.5 Appropriate grievance and counselling procedures are used to deal with problems of a serious nature

Range Statement

Oral, written and non-verbal communication in the organisation can occur with:

Clients and stakeholders
Representatives of client groups or organisations
Members of the public
Managers and staff in own and other organisations
Private organisations and consultants
Academic institutions, public sector and community organisations
Colleagues in different locations, e.g. regional/central offices

Written communication can involve both handwriting and operation of word processing equipment. It may take the form of:

Case notes and reports
Minutes of meetings
Routine as well as complex reports
Proposals, project plans and spreadsheets
General internal and external correspondence
Speeches, journal articles and marketing materials
Instructions, procedures and policies

Oral communication can take the form of:

Seeking and conveying information
Consulting and advising
Formal and informal presentations to different audiences
Structured interviewing for selection or counselling purposes
Leading discussions and briefings
Negotiating
Chairing and participating in meetings
Conflict resolution
Coaching
Advocacy
On the job training

Clients are defined by the work of the organisation and can include:

Individual members of the public
Other organisations, community groups and individuals
Other work areas of the organization

Non verbal communication incorporates using:

Techniques of listening

Oral, written and non-verbal communication in the organisation can occur with:

Clients and stakeholders

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where <i>bold italicised</i> text is used, further information is detailed in the required skills and knowledge section and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for assignment.

- 1.1 Applicable provisions of *legislative* and *organisational requirements* relevant to *assignment instructions* are identified and complied with.
- 1.1 Traffic control schedules and other relevant assignment instructions are obtained and verified with *relevant persons*.
- 1.2 Personal dress and presentation including suitable *personal protection equipment* is selected in line with OHS and organisational requirements.
- 1.3 *Traffic control and communication equipment* are checked for effective operation and serviceability in accordance with manufacturer's specifications
- 1.4 Traffic routes and parking details are examined to ensure familiarity.

2. Direct traffic.

- 2.1 Traffic is directed in a courteous and professional manner in accordance with assignment instructions
- 2.2 Traffic control equipment is positioned to ensure maximum visibility in accordance with state and territory traffic requirements.
- 2.3 *Work area conditions* are constantly monitored to ensure safe and secure operations
- 2.4 Vehicle incidents or accidents are reported to relevant persons and recorded in accordance with organisational procedures.

3. Complete assignment.

- 3.1 Traffic control and security equipment is cleaned, maintained and stored in accordance with organisational procedures.
- 3.2 Faulty or damaged equipment is identified and rectified, or replaced according to organisational procedures.
- 3.3 Incident observations are provided accurately and constructively when reviewing and debriefing assignment procedures.
- 3.4 Relevant documentation is completed and securely maintained in accordance with organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- communicate effectively with people from different social, cultural and ethnic backgrounds and of varying physical and mental abilities
- communicate using clear and concise language
- determine response appropriate to security risk situation
- direct vehicular traffic
- maintain goodwill and professionalism when dealing with incidents
- present a professional image to members of the public and colleagues
- recognise suspicious behaviour
- record and report information
- select and use appropriate traffic control and personal protection equipment appropriate to the security operation
- use and understand hand signals
- verify identification and authority of vehicles and persons entering premises.

Required knowledge

- approved communication terminology and codes and signals
- communication channels
- emergency procedures
- limits of own responsibility and authority
- operational principles of security and communications equipment
- premises layout and access points
- premises security procedures
- principles of effective communication including interpersonal techniques
- relevant commonwealth, state and territory laws and local by-laws regarding directing traffic
- reporting and documentation procedures
- traffic control procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for A person who demonstrates competency in this unit must be able to

assessment and evidence required to demonstrate competency in this unit

provide evidence of:

- accurately verifying and controlling authorised access and exit of persons, vehicles and dispatched goods to and from premises
- an ability to communicate with persons of different social and cultural backgrounds, and of varying mental and physical abilities
- effectively controlling traffic in accordance with legislative requirements and using hand signals
- effectively operating and maintaining various traffic control systems.

Context of and specific resources for assessment

Context of assessment includes:

- a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement.

Resource implications for assessment include:

- access to plain English version of relevant statutes and procedures
- access to a registered provider of assessment services
- access to a suitable venue and equipment
- assessment instruments including personal planner and assessment record book
- work schedules, organisational policies and duty statements.

Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

This unit of competency could be assessed using the following methods of assessment:

- observation of processes and procedures
- questioning of underpinning knowledge and skills.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge.

Oral questioning or written assessment may be used to assess underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical.

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team

leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative requirements may relate to:

- apprehension and powers of arrest
- Australian standards and quality assurance requirements
- counter-terrorism
- crowd control and control of persons under the influence of intoxicating substances
- force continuum, use of force guidelines
- general 'duty of care' responsibilities
- inspection of people and property, and search and seizure of goods
- licensing or certification requirements
- privacy and confidentiality
- relevant commonwealth, state and territory legislation, codes and national standards for:
 - anti-discrimination
 - cultural and ethnic diversity
 - environmental issues
 - equal employment opportunity
 - industrial relations
 - Occupational Health and Safety (OHS)
- relevant industry Codes of Practice
- trespass and the removal of persons.

Organisational requirements may relate to:

- access and equity policies, principles and practices
- business and performance plans
- client service standards
- code of conduct, code of ethics
- communication and reporting procedures
- complaint and dispute resolution procedures
- emergency and evacuation procedures

- employer and employee rights and responsibilities
 - OHS policies, procedures and programs
 - own role, responsibility and authority
 - personal and professional development
 - privacy and confidentiality of information
 - quality assurance and continuous improvement processes and standards
 - resource parameters and procedures
 - roles, functions and responsibilities of security personnel
 - storage and disposal of information.
- Assignment instructions** may include:
- assignment objectives and timeframes
 - instructions from supervisor
 - personal presentation requirements
 - reporting and documentation requirements
 - resource and equipment requirements
 - site layout including access points, exit locations and passage ways
 - specific client requirements
 - work tasks and procedures.
- Relevant persons** may include:
- clients
 - colleagues
 - emergency services personnel
 - Roads and Traffic Authority personnel
 - supervisor.
- Personal protection equipment** may include:
- ear protectors
 - eye protectors
 - gloves
 - luminous traffic control coats
 - portable shade
 - safety boots
 - safety overalls
 - sunscreen
 - traffic wands.
- Traffic control equipment** may include:
- hand held traffic bats and wands
 - portable traffic lights
 - temporary barriers
 - temporary signage
 - witches hats.
- Communication equipment** may include:
- pager
 - portable and mounted two-way radio
 - telephones and mobile phones.

- Work area conditions** may include:
- degree of visibility
 - hazardous materials which may include asphalt concrete, flammable substances, cement, lime, sandstone and chemical substances
 - obstacles
 - other traffic
 - site and nature of loads
 - surface conditions of the work area
 - weather conditions.

Employability Skills Information

Employability skills The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop marketing plan for property.	<p>1.1 Potential <i>buyer profile</i> and benefits of effectively marketing property for sale are discussed with seller.</p> <p>1.2 Strategies and timeframe for marketing property, including possible <i>marketing activities</i>, are discussed with seller.</p> <p>1.3 Costs of different marketing strategies and activities are discussed with seller.</p> <p>1.4 <i>Marketing plan</i> for property is prepared and presented to seller in line with agency practice.</p> <p>1.5 Marketing plan, including marketing activities and budget, is agreed with seller.</p>
2 Check marketing materials.	<p>2.1 Marketing materials that reflect agreed property and agency marketing plan are developed within agreed budget and timeframes.</p> <p>2.2 Marketing materials are checked for accuracy and compliance with agency and legislative requirements.</p>
3 Implement marketing activities.	<p>3.1 <i>Persons</i> involved in marketing property for sale are briefed on their roles and responsibilities to ensure success of marketing activities.</p> <p>3.2 Marketing activities are implemented in line with agreed marketing plan and budget.</p> <p>3.3 Responsibility is assigned for ongoing <i>monitoring of marketing activities</i>.</p> <p>3.4 Marketing activities are implemented that comply with agency practice, ethical standards and legislative requirements.</p> <p>3.5 Seller is kept <i>informed of progress</i> of marketing activities according to agency practice and legislative requirements.</p>
4 Review and report on marketing activities and plan.	<p>4.1 Marketing activities and plan are reviewed against aims and objectives of marketing plan.</p> <p>4.2 Feedback on outcomes of marketing activities is sought using reliable methods and verifiable data according to agency practice.</p> <p>4.3 Need for alternative marketing activities and adjustments to marketing plan are assessed in consultation with relevant people <i>if property proves difficult to sell</i>.</p> <p>4.4 Effectiveness of planning and marketing processes is assessed to identify possible improvements in future activities.</p>

ELEMENT**PERFORMANCE CRITERIA**

- 4.5 Costs and time lines are analysed to evaluate and improve future marketing initiatives.
- 4.6 Conclusions are prepared from *verifiable evidence* and advice is provided on future marketing initiatives.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- ability to communicate with and relate to a range of people from diverse social, economic and cultural backgrounds and with varying physical and mental abilities
- analytical skills to interpret documents such as legislation, regulations and property documentation
- application of risk management strategies associated with advising clients on approaches to marketing properties for sale
- computing skills to access agency databases, send and receive emails and complete standard forms online
- decision making and problem solving skills to analyse situations and make ethical marketing decisions consistent with legislative and ethical requirements
- literacy skills to access and interpret a variety of texts, including legislation, regulations and rules of ethics; prepare general information and papers; prepare marketing materials and marketing plans; and complete standard forms
- negotiation skills to assist sellers to decide on marketing activities, budgets and timeframes
- numeracy skills to calculate and interpret data, such as costs of marketing activities and to ensure compliance with agreed marketing budgets
- planning, organising and scheduling skills to implement marketing plans
- research skills to identify and locate documents and information relating to preparing marketing plans for specified properties.

Required knowledge and understanding:

- ethical standards associated with marketing properties for sale
- factors considered in review of effectiveness of marketing strategy, plan, activities and materials
- factors influencing choice of marketing strategy
- marketing activities, including:
 - advertising, including print and electronic media

REQUIRED SKILLS AND KNOWLEDGE

- agency property guides
- brochures
- direct marketing
- business-to-business marketing
- inspections
- mail-outs
- networking
- open house
- signboards
- seminars
- targeting markets by service type
- internet and online advertising, including web pages, virtual tours and online directories
- marketing budget
- marketing materials
- marketing plan
- marketing strategies for:
 - businesses
 - commercial properties
 - development properties, including subdivision and multi-unit sites
 - industrial properties
 - residential properties
 - retail properties
 - rural properties
- principles underpinning effective marketing materials
- relevant federal, and state or territory legislation and local government regulations relating to:
 - anti-discrimination and equal employment opportunity
 - consumer protection, fair trading and trade practices
 - employment and industrial relations
 - financial services
 - OHS
 - privacy
 - property sales
- risks and risk management strategies
- strategies if properties prove difficult to sell.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of marketing properties and businesses for sale. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- implementing marketing activities for the sale of all types of property in line with agency practice, ethical standards and legislative requirements
- knowledge of agency practice, ethical standards and legislative requirements associated with marketing all types of property for sale
- planning and developing marketing plans for the sale of all types of property in line with agency practice, ethical standards and legislative requirements
- preparing marketing materials for the sale of all types of property in line with agency practice, ethical standards and legislative requirements
- reviewing and reporting on marketing activities associated with the sale of all types of businesses and property.

Context of and specific resources for assessment

Resource implications for assessment include:

- access to suitable simulated or real opportunities and resources to demonstrate competence
- assessment instruments that may include personal planner and assessment record book
- access to a registered provider of assessment services.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or

assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

- Buyer profile*** may include:
- buyer's property requirements
 - buying intentions
 - financial capacity
 - timeframe for purchase.
- Marketing activities*** may include:
- advertising, including print and electronic media
 - agency property guide
 - brochures
 - business-to-business marketing
 - direct marketing
 - inspections
 - mail-outs
 - networking
 - open house
 - seminars
 - signboards
 - targeting markets by service type
 - internet and online advertising, including web pages, virtual tours and online directories.
- Marketing plan*** may include:
- advertising and promotional materials prepared and scheduled
 - advertising budget
 - aims and objectives
 - inspection of property by agency sales consultants
 - inspections scheduled
 - property listed in agency property guide
 - prospective buyers contacted
 - sale board prepared and ordered as per schedule
 - seller advised of advertising and marketing procedures and costs
 - target group identified for marketing plan
 - timeframe for marketing activities
 - seller advised on optimal property presentation
 - web-based advertising arranged.
- Persons*** may include:
- agency principal
 - business broker
 - licensed real estate agent
 - real estate representative
 - stock and station agent
 - support staff.
- Monitoring of marketing activities*** may include:
- enquiry records
 - expenditure
 - feedback from prospective buyers

Information on progress
may include:

- feedback from sales consultants
- feedback from seller.
- agency input into marketing of property
- approaches and enquiries of interest regarding the property
- costings
- perception of levels of interest and worth of current marketing strategies
- possible changes in marketing activities and plan
- strategies used in marketing and promoting the property.

Strategies ***if property proves difficult to sell*** may include:

- revising advertising budget
- modifying advertising copy and promotional materials
- involving other agencies.

Verifiable evidence may include:

- checklists
- notes
- qualitative and quantitative data
- records
- testimonies.

CPPDSM4022A Sell and finalise the sale of property by private treaty

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to sell and finalise the sale of all types of property by private treaty. It includes qualifying buyers, arranging for potential buyers to inspect listed properties, delivering effective sales presentations, submitting offers and negotiating property sale with sellers and buyers and maintaining communications with sellers and prospective buyers. It also includes monitoring the process between exchange of contracts and settlement for all types of property and businesses and preparing documentation for agency disbursements.

The unit does not include the sale of property by auction.

The unit may form part of the licensing requirements for persons engaged in real estate activities in those States and Territories where these are regulated activities.

Application of the Unit

Application of the unit

This unit of competency supports the work of licensed real estate agents and real estate representatives involved in selling and finalising the sale of all types of property by private treaty.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Qualify buyer.

- 1.1 *Enquiries from potential buyers* regarding purchase of property are handled promptly to enable high quality service delivery according to agency requirements.
- 1.2 *Appropriate rapport* is established with potential buyer.
- 1.3 *Buyer requirements* are clarified and accurately assessed using *appropriate interpersonal communication techniques*.
- 1.4 *Factors likely to influence the purchase of properties* are identified and used to confirm buyer intentions.
- 1.5 *Customer due diligence* is undertaken according to agency practice and legislative requirements.
- 1.6 Potential buyers are provided with suitable information about available and prospective listings and assisted to find listing that best matches their requirements.
- 1.7 Potential buyers are assisted in making a decision to view properties using information obtained from sellers and buyers.
- 1.8 Qualified prospects are recorded to provide an opportunity to maximise future marketing activities.

2 Arrange property inspection for potential buyer.

- 2.1 Appointments are made for property inspections in line with agency practice, ethical standards and *legislative requirements*.
- 2.2 Preparations are made for property inspection in line with agency practice.
- 2.3 *Promotional material* on the property is used to describe main sales features of the property.
- 2.4 *Effective questioning techniques* are used to clarify buyer interest in the property.
- 2.5 *Records of inspections* are accurately completed in line with agency practice.

3 Deliver effective sales presentation.

- 3.1 *Factors affecting the successful conclusion of the sale* are identified and addressed in the sales presentation.
- 3.2 *Key decision makers* are identified to ensure that their needs and concerns are met in the sales presentation.
- 3.3 Main features of property are matched to buyers' stated needs and motivation.
- 3.4 Relevant legal and financial information is used to

ELEMENT**PERFORMANCE CRITERIA**

support the sales presentation.

3.5 Effective communication and *presentation skills* are used to create buyer interest and focus buyer attention on the property.

3.6 Buyer is given time and space to evaluate property while time is used to maximum advantage to promote property.

3.7 Buyer is encouraged to clarify key aspects of property before a decision is made to purchase property.

3.8 Buyer questions are answered fully and honestly.

3.9 Details of offer to purchase property submitted by buyer are confirmed and documented.

4 Submit offer and negotiate property sale.

4.1 Offer from buyer is submitted to seller in line with agency practice, ethical standards and legislative requirements.

4.2 Professional agency advice is provided to seller that incorporates declared knowledge of buyer's motivation.

4.3 Negotiations are conducted with buyer according to seller response to offer.

4.4 Negotiations are conducted in a professional manner, including showing respect for seller and buyer in line with agency practice, ethical standards and legislative requirements.

4.5 *Effective negotiation techniques* are used to persuade and reach agreement between seller and buyer.

4.6 Alternative offers are discussed and their viability assessed.

4.7 *Effective techniques are used for dealing with conflict and breaking deadlocks* where required.

4.8 *Effective techniques are used for closing sale.*

4.9 Mutually agreed price and conditions of sale are established and confirmed with seller and buyer.

4.10 Relevant *sale of property documentation* is explained to seller and buyer in line with agency and statutory requirements for finalisation of the property transaction.

4.11 Documented, agreed price and conditions of sale are made accessible that provide an accurate record of agreement and meet agency and statutory requirements for finalisation of the property transaction.

5 Maintain

5.1 Seller confidence in agency marketing activities is

ELEMENT	PERFORMANCE CRITERIA
communication with seller.	maintained through ongoing contact and correspondence.
5.2	Communication is diarised to provide an accurate and objective record of progress reports to seller.
6 Manage contract to settlement.	6.1 <i>Settlement requirements</i> are identified and checked with relevant parties to minimise misunderstanding or breaches of contract in line with agency practice and legislative requirements.
	6.2 Requests from buyer to inspect property prior to settlement are facilitated in line with agency practice and legislative requirements.
	6.3 Information on buyer and seller responsibilities with regard to building and content insurance prior to settlement is provided in line with agency practice and legislative requirements.
	6.4 Procedures for holding and release of <i>deposit moneys</i> during the settlement period are implemented in line with agency policy and legislative requirements.
	6.5 Settlement within the contract's legal framework is ensured by liaison with <i>settlement agents and other assisting professionals</i> representing the seller and buyer.
	6.6 Progress of settlement agents and other assisting professionals is monitored in line with agency practice.
	6.7 Contingency plans are prepared in consultation with relevant legal agents to avoid the possibility of one or more parties to the transaction being unable to fulfil contractual obligations.
	6.8 Appropriate procedures are implemented if any party to the transaction is unable to fulfil contractual obligations.
	6.9 Effective communication techniques are used in liaising with seller, buyer and other parties representing the seller and buyer through the settlement process.
7 Prepare documentation for agency disbursements.	7.1 Settlement financial transactions are checked for accuracy against contractual documentation, and agency fees are calculated and safeguarded during disbursement activities.
	7.2 Authorised agency disbursements are obtained within contractual, agency and statutory requirements.
	7.3 Financial systems are updated to reflect authorised

ELEMENT**PERFORMANCE CRITERIA**

transactions.

7.4 Agency fees are calculated and safeguarded during disbursement activities.

7.5 Due and proper attention is paid to obtaining required authorisations, signatures and identifications prior to disbursement.

8 Decide on future contacts with prospects.

8.1 Nature of future contacts with prospects is assessed in the light of likely agency-client interaction to a given point in time.

8.2 Business correspondence records are held on file to provide justification for the continuation or termination of contract, and are communicated without prejudice to the parties involved.

9 Maintain client relationships.

9.1 Future business relations are established by mutual evaluation of seller and buyer satisfaction with services provided.

9.2 Business records and databases are updated to facilitate networking and informed marketing strategy planning.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- ability to communicate with and relate to a range of people from diverse social, economic and cultural backgrounds and with varying physical and mental abilities on matters associated with the sale of property
- analytical skills to interpret documents such as contracts, legislation and regulations
- application of risk management strategies associated with the sale of property
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- decision making and problem solving skills to analyse situations and make decisions consistent with legislative and ethical requirements associated with the sale of property
- literacy skills to access and interpret a variety of texts, including legislation, regulations and contracts; prepare general information and papers; prepare formal

REQUIRED SKILLS AND KNOWLEDGE

and informal letters, reports and applications; and complete standard and statutory forms

- negotiation skills to assist sellers and buyers to reach agreement on price and conditions of sale of property
- numeracy skills to perform calculations associated with property sales
- planning, organising and scheduling skills to make appointments with sellers and buyers in the process of selling property
- research skills to identify and locate documents and information relating to sale of property.

Required knowledge and understanding:

- agency disbursements, including:
 - authorisations, signatures and identifications that must be obtained prior to disbursement
 - calculation and protection of agency fees during disbursement activities
 - documentation for agency disbursements
 - financial transactions that take place at settlement
- circumstances in which contracts are void, voidable or unenforceable, including:
 - illegality
 - lack of capacity
 - misrepresentation
 - mistake
- consumer protection principles that impact on the sale of property, including:
 - cooling off provisions
 - false representations and misleading conduct in relation to the sale of land
 - impact of consumer protection legislation on contracts
 - insurance provisions
 - penalties and remedies for breaches
 - protection offered for consumers
 - rights and obligations of estate agents
 - secret commissions
- contract construction principles, including:
 - acceptance
 - consideration
 - implied matters in contracts for sale of property
 - negligence
 - offer
- contracts for sale of property, including:
 - chattels and fixtures
 - contract requirements for special circumstances, such as providing finance and

REQUIRED SKILLS AND KNOWLEDGE

- sale of units and flats
- defects in property
- defects in title
- effect of acceptance of title
- prescribed or permitted forms
- requisitions on title
- special conditions
- deposit funds, including:
 - capacity in which an estate agent holds deposit moneys
 - circumstances in which deposit moneys may be released by the estate agent to the seller
 - procedures an estate agent must follow when he or she receives deposit moneys from a buyer
- ethical and conduct standards
- general legal principles that affect property law relating to the sale of property, including:
 - adverse possession
 - contracts
 - easements
 - fee simple and life estates
 - general law system and the Torrens system of title
 - mortgages
 - real and personal property
 - restrictive covenants
 - types of interest in land
- insurance
- marketing aids
- methods of sale, including:
 - auction
 - off the plan
 - private treaty
 - reverse auction
 - set sale
 - specialised properties
 - tender
- negotiation techniques
- property inspections
- property sales, including:
 - after-sales procedures

REQUIRED SKILLS AND KNOWLEDGE

- agency and statutory documentation
- sales presentation techniques
- qualifying buyers
- relevant federal, and state or territory legislation and local government regulations relating to:
 - anti-discrimination and equal employment opportunity
 - anti-money laundering
 - consumer protection, fair trading and trade practices
 - employment and industrial relations
 - financial services
 - OHS
 - privacy
 - property sales
- risks and risk management strategies
- settlement, including:
 - buyer's rights to inspect property prior to settlement
 - contingencies that may emerge prior to settlement and the actions that can be taken to avoid one or more parties being unable to fulfil contractual obligations
 - forms prepared at settlement
 - procedure for settling the sale of property
 - responsibilities of sellers and buyers
 - responsibility of seller and buyer with regard to building and content insurance prior to settlement
 - rights of sellers and buyers if either party is unable to settle on the due date
- techniques for identifying needs and motivation of buyers
- trust accounting in real estate.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of selling different types of property using general real estate sales procedures and techniques in line with agency practice, ethical standards and legislative requirements affecting the sale of property. Targeted written (including alternative formats where necessary) or verbal

questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- arranging and conducting property inspections for potential buyers
- completing standard and statutory documentation associated with the sale of property
- knowledge and application of approaches for qualifying buyers
- knowledge of agency practice, ethical standards and legislative requirements affecting the sale of property and requirements associated with the transfer of ownership required for the legal sale of all types of property and businesses
- knowledge of consumer protection principles that impact on the sale of property
- maintaining business records associated with the sale of property
- maintaining communications with sellers and buyers throughout the sale process
- negotiating the sale of property with sellers and buyers
- planning and delivering effective sales presentations to facilitate the sale of property
- knowledge of agency practice and legislative requirements associated with agency disbursements
- managing contracts for sale of property to settlement
- monitoring the lodgement of documents for the correct transfer of ownership required for a legal sale of all types of property and businesses
- preparing documentation for agency disbursements.

Context of and specific resources for assessment

Resource implications for assessment include:

- access to suitable simulated or real opportunities and resources to demonstrate competence
- assessment instruments that may include personal planner and assessment record book
- access to a registered provider of assessment services.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Enquiries from potential buyers may be received through:

- email
- inspections
- office
- open houses
- referral
- telephone
- website.

Appropriate rapport relates to use of techniques that:

- establish and build confidence and trust in the agency and its representatives
- make the buyer feel valued
- promote and maintain an effective relationship with the buyer.

Buyer requirements may include:

- access to transport and facilities
- finance
- location
- price
- purpose of purchase, such as for:
 - business
 - holiday
 - investment
 - private residence
- settlement period
- size of property
- style of property.

Appropriate interpersonal communication techniques may include:

- active listening
- providing an opportunity for the seller or buyer to clarify their understanding of the sales process
- soft questioning and seeking feedback from sellers or buyers to confirm own understanding of their needs and expectations
- summarising and paraphrasing to check understanding of seller or buyer message

- Factors likely to influence the purchase of properties*** may include:
- using appropriate body language.
 - buying intentions
 - capacity to purchase
 - financial limits
 - motives
 - needs
 - preferences.
- Customer due diligence*** may include:
- availability of finance
 - identity verification
 - record keeping requirements
 - reporting requirements.
- Legislative requirements*** may include:
- relevant federal, and state or territory legislation and local government regulations relating to:
 - anti-discrimination and equal employment opportunity
 - anti-money laundering
 - consumer protection, fair trading and trade practices
 - employment and industrial relations
 - financial services
 - OHS
 - privacy
 - property sales.
- Promotional materials*** may include:
- agent and agency profile
 - brochures and pamphlets
 - posters
 - property descriptions
 - web page entry.
- Effective questioning techniques*** may include:
- active listening
 - clear questions
 - different question types
 - reflection
 - using silences.
- Records of inspection*** may include:
- buyer's reaction to property
 - buyer requirements
 - name and contact details of potential buyers.
- Factors affecting the successful conclusion of a sale*** may include:
- area and environment in which the property is located
 - availability of comparable properties
 - marketing preferences of seller
 - circumstances of seller and buyer
 - professional skills and resources of agent

Key decision makers may include:

- state of the market for type of property
- type and condition of property.
- business associates
- buyer's agent
- family members and friends of buyer
- providers of professional advice, including:
 - accountants
 - building advisers
 - financial advisers
 - legal representatives
 - property advisers
- spouse or partner.

Presentation skills may include:

- active listening
- appearance
- body language
- use of information technology, such as website, virtual tours and online databases
- use of support and promotional materials
- voice.

Effective negotiation techniques may include:

- analytical skills
- listening techniques
- non-verbal communication skills
- personal attributes
- presentation techniques
- questioning techniques
- speaking skills.

Effective techniques for dealing with conflict and breaking deadlocks may include:

- calling in a third party
- clarifying the positions of both parties
- deferring the decision
- preparing a compromise
- restating the position
- summarising the progress to date.

Effective techniques for closing sale may include:

- alternate option close
- assumption close
- competition close
- customer close
- deal or concession close
- direct close
- indirect close
- summary-of-benefits close
- time-driven close.

Sale of property

documentation may include:

- contract of sale or real estate, contract note and contract for the sale of businesses
- declaration of selling agent
- financial statement to buyer
- receipt for deposit
- vendor's statement and trading statement.

Settlement requirements

may include:

- buyer settlement responsibilities, including:
 - anything the new lender requires, such as a notice of acquisition or a disbursement order
 - bank cheques for the balance of purchase money, plus or minus adjustments
- seller settlement responsibilities, including:
 - any other documents necessary to provide a clear title to the buyer, such as discharge of mortgage, withdrawal of caveats change of name declaration
 - disconnection of services, such as water, gas, electricity and telephone
 - keys
 - notify rating and taxing authorities of sale
 - other services
 - title
 - transfer of land
 - value of land and chattels.

Deposit moneys may refer to:

- capacity of agent to hold
- capacity of agent to release to seller
- procedures for receipt and banking.

Settlement agents and other assisting professionals may include:

- accountants
- conveyancers
- financiers and financial institutions
- landlords and managing agents
- legal advisers
- licensed settlement agents.

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish performance needs of assets.	<p>1.1 <i>Asset</i> performance needs are established in consultation with relevant people according to organisational requirements.</p> <p>1.2 Risk assessment is conducted on asset management outcomes according to organisational and legislative requirements.</p> <p>1.3 Industry benchmarks are analysed to determine expected asset performance in varying conditions according to organisational requirements.</p> <p>1.4 Applicable legislation is interpreted in order to establish user, contractual and legislative requirements for asset performance.</p> <p>1.5 Specifications, conditions and manufacturer requirements for asset maintenance and operation are identified for incorporation into plan.</p>
2 Prepare asset management plan.	<p>2.1 Asset management plan is prepared that facilitates achievement of identified aims and objectives.</p> <p>2.2 Operational and maintenance schedule detailing a range of activities and time lines is incorporated into asset management plan.</p> <p>2.3 Asset management plan is presented to client for review according to organisational requirements.</p> <p>2.4 Quality assurance goals and strategies related to implementation of the plan are communicated using established communication channels.</p> <p>2.5 Monitoring and reporting arrangements for asset management plan are established and documented in line with client requirements.</p> <p>2.6 Financial, physical and human resource requirements are identified and arranged according to asset management plan and organisational requirements.</p> <p>2.7 Roles and responsibilities for establishing and maintaining asset register are identified and documented according to client and legislative requirements.</p>
3 Review and evaluate asset management plan.	<p>3.1 Maintenance strategies and plans are reviewed and evaluated in consultation with client and relevant people using appropriate communication techniques.</p> <p>3.2 Systematic review processes and established evaluation methods are identified and used to assess planning processes and outcomes.</p> <p>3.3 Evaluation results are prepared in required format, style</p>

ELEMENT**PERFORMANCE CRITERIA**

and structure and presented to relevant people within agreed timeframes.

3.4 Recommendations for improvement of plan are presented to relevant people according to organisational procedures.

3.5 *Business equipment and technology* are used to securely maintain documentation according to legislative and organisational procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- analytical skills to interpret documentation, analyse risk, estimate costings and budget needs, and review and evaluate plan
- communication skills to negotiate and consult with relevant people
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- literacy skills to interpret written and oral information
- organisational skills to schedule and meet time lines and client requirements, organise resource and support processes, and plan and document strategies to manage assets
- technical skills to develop schedules and document plans.

Required knowledge and understanding:

- building codes and relevant Australian standards
- building control legislation
- building practices in relevant property types
- building services and operation methods and practices
- customer needs and preferences for different property types
- industry performance benchmarks
- limitations of work role, responsibility and professional abilities
- maintenance procedures, including vendor specifications
- monitoring and evaluation systems
- OHS issues and requirements

REQUIRED SKILLS AND KNOWLEDGE

- organisational and professional procedures, ethical practices and business standards
- relevant federal and state or territory legislation and local government regulations related to:
 - anti-discrimination
 - consumer protection
 - environmental issues
 - equal employment opportunity (EEO)
 - financial probity
 - franchise and business structures
 - industrial relations
 - OHS
 - privacy
 - property sales, leasing and management
- standards for building equipment operation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of planning for the management of assets. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- determining asset performance needs using industry benchmarks and consideration of risk
- documenting resource and support arrangements, incorporating expected costs, and processes for

development and maintenance of an asset register and operational and maintenance schedules

- evaluating the asset management plan through consultation with interested parties
- knowledge of organisation's practices, ethical standards and legislative requirements associated with planning for the management of assets
- preparing a detailed asset management plan which incorporates strategies for risk management, resource needs, monitoring and reporting arrangements and quality assurance.

Context of and specific resources for assessment

Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time

- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Assets may be static or dynamic and include:

- buildings
- business and marketing contracts
- equipment
- furniture
- goodwill
- land
- property
- vehicles.

Relevant people may include:

- agents
- clients
- designated OHS representatives
- emergency personnel
- engineers and technicians
- government personnel
- installers
- legal representatives
- management and colleagues
- members of industry associations
- property owners
- site personnel
- subcontractors
- technical experts
- tenants.

Organisational requirements may be outlined and reflected in:

- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- quality and continuous improvement processes and

- Risk** may relate to:
- standards
 - quality assurance and procedure manuals.
 - industry special risks
 - loss of profits
 - machinery malfunction
 - OHS
 - public liability
 - trade practices issues.
- Legislative requirements** may be outlined and reflected in:
- Australian standards, and quality assurance and certification requirements
 - award and enterprise agreements
 - codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
 - environmental and zoning laws affecting access security, access and property use
 - general duty of care to clients
 - home building requirements
 - local regulations and by-laws
 - privacy laws applying to owners, contractors and tenants
 - relevant federal, and state or territory legislation that affects organisational operation, including:
 - anti-discrimination and diversity
 - environmental issues
 - EEO
 - industrial relations
 - OHS
 - strata, community and company titles
 - tenancy agreements
 - trade practices laws and guidelines.
- Industry benchmarks** may include:
- discounted cash flow
 - employment rates
 - industry association performance index
 - inflation rate
 - internal rate of return
 - life cycle costing
 - published vacancy factors
 - tenancy mix.
- Asset performance** criteria may include:
- age
 - condition assessment

- cost
- depreciation
- down time
- emergency operation and backup
- functionality
- life span
- maintenance requirements and cost
- replacement
- security
- service levels.

Schedules may be:

- charts
- computerised
- paper-based
- prepared for daily, weekly, monthly or annual timeframes
- to-do lists
- wall-mounted planning boards
- work diary.

Clients may include:

- building supervisors
- company management
- fund managers
- fund providers
- government and legal instruments or agencies
- institutions
- insurers
- internal and external property groups
- legal advisers
- private investors
- property agents
- property owners
- risk assessors.

Communication channels
may include:

- direct line supervision paths
- lateral supervision paths
- organisational communication protocols and procedures
- organisational networks.

Asset register may include:

- air conditioning
- cleaning
- heating
- security systems
- telecommunications systems
- utilities
- ventilation

Maintenance strategies
may relate to:

- vertical services
- waste management.
- cleaning
- electrical
- emergency lighting
- evacuation
- fire lighting
- garden
- housekeeping
- painting
- pests
- plumbing
- sanitary disposal
- security
- vertical movement
- waste disposal
- weather proofing.

Communication techniques may include:

- active listening
- clear presentation of options
- consultation methods
- culturally inclusive and sensitive engagement techniques
- questioning to clarify and confirm understanding
- seeking feedback
- two-way interaction
- using language and concepts appropriate to cultural differences
- verbal or non-verbal language.

Evaluation methods could be qualitative or quantitative and may include:

- checklists
- cost data analysis
- expert and peer review
- interviews
- observation
- questionnaires
- review of quality assurance data.

Business equipment and technology may include:

- data storage devices
- email
- facsimile machines
- internet, extranet and intranet
- photocopiers
- printers
- scanners

- software applications, such as databases and word applications
- work computers.

CPPDSM6002A Conduct a property investment feasibility study

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to conduct an assessment of investment feasibility. It requires the ability to identify objectives and techniques to undertake the study, use valid and reliable research techniques to analyse information, and report study findings and conclusions.

The unit may form part of the licensing requirements for persons engaged in property operations and development in those States and Territories where these activities are regulated.

Application of the Unit

Application of the unit

This unit of competency supports the work of those involved in conducting assessments of investment feasibility.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish study requirements.	<p>1.1 Aims and objectives of <i>investment</i> feasibility study are clearly established according to <i>client</i> and <i>organisational requirements</i>.</p> <p>1.2 Study objectives and time lines are negotiated and agreed in consultation with <i>relevant people</i>.</p> <p>1.3 <i>Relevant documentation</i> and <i>legislative requirements</i> are gathered and reviewed to identify critical requirements of the study.</p> <p>1.4 Initial comparisons with similar properties are made to allow effective comparison with <i>client expectations</i> according to organisational requirements.</p> <p>1.5 Situations requiring <i>specialist advice</i> are identified and support is sought as required according to organisational requirements.</p>
2 Access relevant information.	<p>2.1 Relevant <i>information</i> is gathered and organised in a format suitable for <i>analysis</i> and interpretation.</p> <p>2.2 Market information is accessed and evaluated in terms of validity, reliability and relevance according to identified analysis requirements.</p> <p>2.3 Relevant people are consulted to gather additional information using appropriate <i>communication techniques</i>.</p> <p>2.4 Environment is scanned to identify and assess factors that may impact on study according to organisational requirements.</p> <p>2.5 Reliable methods for gathering information are used according to organisational requirements, making efficient use of time and resources.</p>
3 Analyse information.	<p>3.1 Quantitative and qualitative analysis is undertaken of <i>comparative market data</i> using standard financial analysis techniques.</p> <p>3.2 Economic trends and market developments are identified and evaluated in terms of potential implications and impact on study objectives.</p> <p>3.3 <i>Factors</i> increasing or diminishing investment <i>risk</i> are identified, analysed and discussed with client.</p> <p>3.4 Sound reasoning is applied to ensure consistency of interpretations based on available information.</p>
4 Formulate investment scenarios.	<p>4.1 Alternative investment scenarios are developed to meet study requirements according to organisational requirements.</p>

ELEMENT**PERFORMANCE CRITERIA**

- 4.2 *Consultative processes* are used to obtain views of industry experts as required.
- 4.3 Scenarios are verified against prescribed criteria and analysed to minimise subjective assessment.
- 4.4 Sensitivity analysis is performed on data to identify degree of convergence within identified industry and market *benchmarks*.
- 4.5 Property trends and *market conditions* are identified and evaluated against study requirements.
- 5 Document feasibility study.**
- 5.1 Feasibility study is presented in appropriate format, style and structure using suitable *business equipment and technology*.
- 5.2 Report is prepared and distributed to relevant people within agreed timeframes according to organisational requirements.
- 5.3 Conclusions are documented that are verifiable, current and sufficiently detailed to meet identified client and organisational requirements.
- 5.4 Information is securely maintained with due regard to client confidentiality, and legislative and organisational requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- communication skills to negotiate client requirements and consult with industry experts and other relevant people
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- literacy skills to interpret written and oral information
- organisational skills to plan and schedule time lines and objectives and to manage project processes
- problem solving skills to determine factors that may affect property markets and evaluate risk

REQUIRED SKILLS AND KNOWLEDGE

- research skills to source, analyse and interpret property and market information
- technical skills to use software for planning and scheduling tasks, use financial and assessment software and spreadsheets, and access market information.

Required knowledge and understanding:

- alternative property uses
- building control legislation, codes and relevant Australian standards
- business and industry property networks
- current property and investment market
- investment risk factors and relationship to return expectations
- limitations of work role, responsibility and professional abilities
- OHS issues and requirements
- organisational and professional procedures, ethical practices and business standards
- project assessment methods
- relevant federal and state or territory legislation and local government regulations related to:
 - anti-discrimination
 - consumer protection
 - environmental issues
 - equal employment opportunity (EEO)
 - financial probity
 - franchise and business structures
 - industrial relations
 - OHS
 - privacy
 - property sales, leasing and management
- sources of industry and market information
- types of property markets
- value management.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of conducting an assessment of

investment feasibility. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- analysing market information to identify economic trends, market developments and risk factors
- documenting and presenting investment feasibility study using appropriate business equipment and technology
- formulating investment scenarios against industry benchmarks
- knowledge of organisation's practices, ethical standards and legislative requirements associated with conducting an assessment of investment feasibility
- sourcing documentation and information through consultation to establish study aims and objectives, and make initial comparisons of similar properties
- sourcing market and environmental information to identify factors affecting study.

Context of and specific resources for assessment

Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment
- workplace documentation.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Investment may relate to:

- concepts and plans
- strategies and placement of capital in property for investment
- productive use of property and assets
- customer service outcomes.

Clients may include:

- financial institutions
- fund managers
- individuals
- internal and external property groups
- investment organisations.

Organisational requirements may be outlined and reflected in:

- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- quality and continuous improvement processes and standards
- quality assurance and procedure manuals.

Relevant people may include:

- accountants
- agents
- clients
- government personnel
- interested parties
- legal representatives
- management and colleagues
- members of industry associations
- taxation specialists.

Relevant documentation may relate to:

- building codes
- current and planned property or site developments

- deposited, survey and other plans and maps
- depreciation schedules
- land title and zoning
- leasing rates
- legal status
- management policy and procedures
- marketing services
- performance of comparable properties
- permits
- rates notices
- sales information
- taxation papers
- tenancy and other contracts or leases.

Legislative requirements may be outlined and reflected in:

- Australian standards
- general duty of care to clients
- home building requirements
- privacy requirements
- relevant federal, and state or territory legislation that affects organisational operation, including:
 - anti-discrimination and diversity
 - environmental issues
 - EEO
 - industrial relations
 - OHS
- relevant industry codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- strata, community and company titles
- tenancy agreements
- trade practices laws and guidelines.

Client expectations may relate to:

- immediate capital gains
- long-term capital gains.

Specialist advice may be sought from:

- architects
- bankers and financiers
- developers
- investment consultants
- land economists
- members of industry associations
- planners
- real estate agents

- Information** sources may include:
- solicitors
 - taxation and accounting practitioners
 - valuers.
 - consultants
 - industry and organisational databases
 - information services
 - press clippings
 - published industry data, including industry indices
 - third parties
 - trade journals.
- Analysis** may include:
- computer modeling
 - examination of cash flows and other financial projections
 - examination of collected data
 - quantitative and qualitative analysis
 - probability analysis
 - time series recognition.
- Communication techniques** may include:
- active listening
 - clear presentation of options
 - consultation methods
 - culturally inclusive and sensitive engagement techniques
 - questioning to clarify and confirm understanding
 - seeking feedback
 - two-way interaction
 - using language and concepts appropriate to cultural differences
 - verbal or non-verbal language.
- Comparative market data** may include:
- best practice information
 - national and international benchmarking
 - inter-organisation comparison data.
- Factors** that may influence complexity of feasibility study may include:
- constraints on use
 - existing land use and ownership
 - government zoning and restrictions
 - project financing
 - staging of investment or development
 - structure of leases
 - type and number of tenants.
- Risk** may relate to:
- asset allocation and investment spread
 - borrowing risk
 - gearing
 - economics

- lifestyle choices
- market and property sector risks, including:
 - fluctuations in economic cycle
 - interest rates
 - stock market
- organisational risk
- risk factors and client return expectations
- volatility of income and capital.
- face-to-face meetings
- telephone, facsimile and written communication.

Consultative processes may include:

Benchmarks may include:

- building operational costs
- business strategy parameters
- economic parameters
- financial constraints
- historical operational costs
- industry published building occupation data
- market expectations
- research data
- statutory costs.

Market conditions may relate to:

- availability of alternatives
- business confidence
- economic conditions
- level of competition.

Business equipment and technology may include:

- computers
- data storage devices
- email
- facsimile machines
- internet, extranet and intranet
- photocopiers
- printers
- scanners
- software applications.

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish facilities management requirements.	<p>1.1 <i>Facilities</i> management performance needs are determined and confirmed as required in consultation with <i>relevant people</i>.</p> <p>1.2 Risk assessment of facilities management outcomes is conducted and assessed according to industry and organisational policies and procedures.</p> <p>1.3 Relevant <i>industry benchmarks</i> are analysed to assess expected performance of <i>assets</i> in varying market conditions.</p> <p>1.4 Applicable industry, <i>organisational and legislative requirements</i> are interpreted to establish user, contractual and legal compliance for facilities performance.</p>
2 Prepare plan.	<p>2.1 <i>Facilities management plan</i> including aims and objectives is prepared in appropriate format for dissemination to relevant people.</p> <p>2.2 <i>Quality assurance goals and strategies</i> are established according to facilities management plan.</p> <p>2.3 Monitoring and reporting arrangements for facilities management plan are determined in line with client requirements.</p> <p>2.4 <i>Life cycle analysis</i> is undertaken and capital investment strategies are planned.</p>
3 Organise resources and support processes.	<p>3.1 Financial, physical and human resource requirements are organised according to facilities management plan.</p> <p>3.2 <i>Information relating to implementation of facilities management plan</i> is distributed using established <i>communication channels</i>.</p> <p>3.3 Reliable management methods are used, making efficient use of time and resources.</p> <p>3.4 <i>Roles and responsibilities</i> associated with implementation of facilities management plan are clearly defined and documented.</p>
4 Review, evaluate and modify facilities management plan.	<p>4.1 Facilities management plan is reviewed and evaluated in consultation with relevant people using appropriate <i>feedback strategies</i>.</p> <p>4.2 Systematic review processes are established and suitable <i>evaluation methods</i> used to evaluate facilities management plan outcomes.</p> <p>4.3 Evaluation results are reviewed and recommendations for modification of plan and corrective actions are</p>

ELEMENT**PERFORMANCE CRITERIA**

incorporated as required into facilities management plan.

4.4 Information is securely maintained with due regard to client confidentiality, and legislative and organisational requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- analytical skills to interpret documentation, evaluate plan, analyse risk and estimate costings and budget needs
- communication skills to include relevant people in the planning process, discuss issues that may impact on others and receive feedback
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to obtain feedback that enables a review and evaluation of plan and to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- leadership skills to take a leading role in a variety of situations and pursue new challenges and opportunities
- literacy skills to access and interpret relevant information and prepare required documentation and information for those involved in implementation activities
- problem solving skills to identify potential barriers to implementation of the plan and establish contingencies
- research skills to collect reliable and valid information and match forecasting models and techniques with specific asset or facility requirements
- technical skills to design facilities or asset management plan, schedule tasks and report outcomes.

Required knowledge and understanding:

- building services and operation methods and practices
- financial analysis and forecasting principles
- impact analysis and investment scenario planning
- industry benchmarks for maintenance procedures
- industry performance benchmarks, including use and application of value analysis and benchmarking techniques
- long-range and annual facility planning techniques and practices

REQUIRED SKILLS AND KNOWLEDGE

- organisational and professional procedures, ethical practices and business standards
- organisational quality systems, such as recording systems and strategic planning processes
- principles and practices of performance measurement, including review and evaluation procedures, processes and techniques
- principles and processes of objective setting
- relevant federal and state or territory legislation and local government regulations related to:
 - anti-discrimination
 - consumer protection
 - environmental issues
 - equal employment opportunity (EEO)
 - financial probity
 - franchise and business structures
 - industrial relations
 - OHS
 - privacy
 - property sales, leasing and management.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment This unit of competency could be assessed through practical demonstration of developing and implementing a facilities management plan. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate A person who demonstrates competency in this unit must be able to provide evidence of:

- competency in this unit**
- conducting a life cycle assessment and planning appropriate investment and disposal strategies for incorporation into facilities management plan
 - determining facilities and asset management requirements using industry benchmarks and risk assessment strategies
 - evaluating the facilities management plan and making recommendations for immediate action or modification of the plan
 - identifying resource requirements, communicating roles and responsibilities and designing an implementation strategy for the plan
 - knowledge of organisation's practices, ethical standards and legislative requirements associated with developing and implementing facilities management plans
 - preparing a facilities management plan incorporating quality systems and reporting procedures.

Context of and specific resources for assessment Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment
- workplace documentation.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect

and supplementary evidence

- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Facilities may include:

- car parking
- child care centres
- community facilities
- educational facilities
- meeting places
- offices
- security facilities
- sport and recreation venues.

Relevant people may include:

- agents
- clients
- colleagues
- designated OHS representatives
- emergency personnel
- engineers and technicians
- government personnel
- installers
- legal representatives
- members of industry associations
- property owners
- site personnel
- subcontractors
- supervisors
- technical experts
- tenants
- tradespeople.

Industry benchmarks may relate to:

- discounted cash flows
- employment rates
- industry association performance index
- inflation rate
- internal rates of return
- life cycle costings
- published vacancy factors

Assets may be static or dynamic and include:

- tenancy mix.
- buildings
- business and marketing contracts
- equipment
- furniture
- goodwill
- land
- property
- vehicles.

Organisational requirements may be outlined and reflected in:

- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- emergency and evacuation procedures
- employer and employee rights and responsibilities
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- policies and procedures relating to own role and responsibility
- quality and continuous improvement processes and standards
- quality assurance and procedure manuals
- records and information systems and processes.

Legislative requirements may be outlined and reflected in:

- Australian standards
- codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- consumer protection
- environmental and zoning laws affecting access security, access and property use
- freedom of information relevant federal, and state or territory legislation that affects organisational operation, including:
 - OHS
 - environmental issues
 - EEO
 - industrial relations
 - anti-discrimination and diversity
- home building requirements

Facilities management plan may include:

- local regulations and by-laws
- privacy laws applying to owners, contractors and tenants
- public health
- quality assurance and certification requirements
- strata, community and company titles
- tenancy agreements
- trade practices laws and guidelines.
- asset management process and practice recommendations
- building and engineering maintenance plans
- environment plans and guidelines
- funding strategies
- life cycle management plans
- long-term capital and maintenance financial forecasts
- performance benchmarking recommendations and measurement processes
- planning guidelines
- quality standards
- risk management processes and practices
- utilities plans and infrastructure such as energy, water and sewerage.

Quality assurance goals and strategies may relate to:

- a formal structure against which progress can be evaluated
- budgets and timetables that enable the commitment of resources at appropriate points in the project
- compliance with Australian standards
- contingency plans to cater for a change of corporate focus or significant project difficulties
- continuous improvement strategies
- mechanisms for involving a wide variety of interested parties or stakeholders in the project
- procedures for monitoring and evaluating project outcomes and client satisfaction
- reducing risk by anticipating, evaluating and developing strategies for the management of possible problems
- reporting procedures and protocols.

Life cycle analysis may include:

- computer modelling
- examination of cash flows and other financial projections
- quantitative and qualitative analysis
- probability analysis
- time series recognition.

Information relating to implementation of facilities management plan may include:

- a formal structure against which progress can be evaluated
- acquisition and disposal strategies
- budgets and timetables that enable the commitment of resources at appropriate points
- consultation strategies to involve stakeholders
- contingency plans to cater for changes or significant difficulties
- objectives, scope and expected benefits
- quality assurance procedures
- specifications
- transition plans.

Communication channels may include:

- direct line supervision paths
- lateral supervision paths
- organisational communication protocols and procedures
- organisational networks.

Roles and responsibilities may be influenced by:

- codes of conduct
- job description and employment arrangements
- organisational policies relevant to work role
- skills, training and competencies
- supervision and accountability requirements, including OHS
- team structures.

Feedback strategies may include:

- clients and their legal representatives
- management and colleagues
- documentation and reports
- formal and informal communication
- regular meetings.

Evaluation methods could be qualitative or quantitative and may relate to:

- checklists
- cost data analysis
- expert and peer review
- interviews
- observation
- questionnaires
- review of quality assurance data.

HLTHIR403B Work effectively with culturally diverse clients and co-workers

Modification History

Unit Descriptor

This unit deals with the cultural awareness required for effective communication and cooperation with persons of diverse cultures

Application of the Unit

Work will be within a prescribed range of functions involving known routines and procedures with some accountability for the quality of outcomes

The workplace context may be:

Specific community

Community or regional service

Department of a large institution or organisation

Specialised service or organisation

Application of this unit should be contextualised to reflect any requirements, issues and practices specific to each workplace

Licensing/Regulatory Information

The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements

Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency.

The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in *italics* are elaborated in the Range Statement.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Reflect cultural awareness in work practice	<ul style="list-style-type: none">1.1 Demonstrate awareness of culture as a factor in all human behaviour by using culturally appropriate work practices1.2 Use work practices that create a culturally and psychologically safe environment for all persons1.3 Review and modify work practices in consultation with persons from diverse cultural backgrounds
2 Accept cultural diversity as a basis for effective work place and professional relationships	<ul style="list-style-type: none">2.1 Show respect for cultural diversity in all communication and interactions with co-workers, colleagues and clients2.2 Use specific strategies to eliminate bias and discrimination in the workplace2.3 Contribute to the development of work place and professional relationships based on acceptance of cultural diversity
3 Communicate effectively with culturally diverse persons	<ul style="list-style-type: none">3.1 Show respect for cultural diversity in all communication with clients, families, staff and others3.2 Use communication constructively to develop and maintain effective relationships, mutual trust and confidence3.3 Where language barriers exist, make efforts to communicate in the most effective way possible3.4 Seek assistance from interpreters or other persons as required
4 Resolve cross-cultural misunderstandings	<ul style="list-style-type: none">4.1 Identify issues that may cause conflict4.2 If difficulties or misunderstandings occur, consider the impact of cultural differences4.3 Make an effort to sensitively resolve differences, taking account of cultural considerations4.4 Address any difficulties with appropriate people

and seek assistance when required

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Essential knowledge:

Recognition of cultural diversity in Australian society with many individuals living in many cultures

Recognition of cultural influences and changing cultural practices in Australia and its impact on diverse communities that make up Australian society

Knowledge of own cultural conceptions and pre-conceptions and perspective of diverse cultures

Recognition of impact of cultural practices and experiences on personal behaviour, interpersonal relationships, perception and social expectations of others

Recognition of culture as a dynamic social phenomenon

Recognition of culture as a range of social practices and beliefs evolving over time

Recognition that the word 'normal' is a value-laden, excluding concept that often precludes acknowledgment of the diversity of people, their life experiences and situations

Recognition of the unique way individuals may experience a culture and respond to past experiences

Knowledge of the principles of equal employment opportunity, sex, race, disability, anti-discrimination and similar legislation and the implications for work and social practices

Knowledge of availability of resources and assistance within and external to the organisation in relation to cultural diversity issues

Knowledge of the role and use of language and cultural interpreters

Essential skills:

Ability to:

Apply culturally respectful practices in the workplace and to demonstrate respect and inclusiveness of culturally diverse people in all work practices

Sensitively and respectfully communicate with persons of diverse backgrounds and cultures

Respond respectfully and sensitively to cultural beliefs and practices that may cause harm

Form effective workplace relationships with co-workers and colleagues of diverse backgrounds and culture

Participate in identifying and implementing culturally safe work practices

Use effective strategies to address and eliminate discrimination and bias in the workplace

Use basic conflict resolution and negotiation skills

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate this competency unit:

This unit is most appropriately assessed in the workplace or a simulated workplace environment under the normal range of work conditions

Assessment should be conducted on more than one occasion to cover a variety of circumstances to establish consistency

Holistic assessment of this competency unit is encouraged, to ensure application of these skills in conjunction with specific work functions. However, the unit may be delivered and assessed independently

Access and equity considerations:

All workers in the health industry should be aware of access and equity issues in relation to their own area of work

All workers should develop their ability to work in a culturally diverse environment

In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people

Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Work practices may relate to:

Dealing with persons of diverse gender, sexuality and age
Compliance with duty of care policies of the organisation
Collection and provision of information
Communication
Provision of assistance
Contact with families and carers
Physical contact
Care of deceased persons
Handling personal belongings
Provision of food services

Work practices that are culturally appropriate would be non-discriminatory and free of bias, stereotyping, racism and prejudice.

Cultural diversity may include:

Ethnicity
Race
Language
Cultural norms and values
Religion
Beliefs and customs
Kinship and family structure and relationships
Personal history and experience, which may have been traumatic
Gender and gender relationships
Age
Disability
Sexuality
Special needs

Communication may be:

Verbal

Appropriate gestures and facial and physical expressions

Posture

Written

Signage

Through an interpreter or other person

Strategies to eliminate bias and discrimination may include:

Cross cultural work teams

Cross cultural employee representation on committees

Workplace free of culturally insensitive literature, posters, signage

Inclusion in decision-making

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Start the computer	1.1. Check peripheral device connections for correct position 1.2. Switch on power at both the power point and computer
2. Access basic system information	2.1. Insert user name and password as prompted and note access, privacy, security and related conditions of use displayed on introductory screens 2.2. Navigate through the operating system to access system information to identify system configuration and application versions in operation 2.3. Use on-line help functions as required
3. Navigate and manipulate desktop environment	3.1. Create and customise desktop icons 3.2. Select, open and close desktop icons to access application programs 3.3. Manipulate application windows and return desktop to original condition
4. Organise basic directory/folder structure and files	4.1. Create and name directories and subdirectories 4.2. Identify attributes of directories 4.3. Move subdirectories between directories 4.4. Rename directories as required 4.5. Access directories and subdirectories via different paths
5. Organise files for user and/or organisation requirements	5.1. Use system browser to search drives for specific files 5.2. Access the most commonly used types of files in the directories 5.3. Select, open and rename groups of files as required 5.4. Move files between directories 5.5. Copy files to disk 5.6. Restore deleted files as necessary 5.7. Erase and format disks as necessary
6. Print information	6.1. Add a printer if required and ensure correct printer settings 6.2. Change the default printer if appropriate 6.3. Print information from an installed printer 6.4. View and delete progress of print jobs as required
7. Shut down computer	7.1. Save any work to be retained and close all open

ELEMENT	PERFORMANCE CRITERIA
	application programs correctly 7.2.Shut down computer correctly

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Saving and retrieving files to various locations
- Mouse management (button usage) for different applications
- Reading and writing at a level where basic workplace documents are understood
- Ability to communicate with peers and supervisors
- Seeking assistance and expert advice
- Interpretation of user manuals and help functions
- The ability to input user access details for accessing a personal computer (PC) (possibly a networked environment)

Required knowledge

- Basic keyboarding skills
- Computer functions
- Basic parts of a computer and various hardware components
- Storage devices and basic categories
- Basic software operation

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- Assessment must confirm the ability to use software, navigate around the desktop, use system features to perform tasks, and save results of work.

To demonstrate competency in this unit the person will require access to:

- Personal computer
- Printer
- Mouse and keyboard
- Monitor
- Basic software

Context of and specific resources for assessment

Using a personal computer is an essential business function and basic core skill in most workplaces.

Demonstration of this competency will require:

- Knowledge of PC operations in a narrow range of areas
- Basic PC practical skills
- Performing a sequence of routine tasks after having received clear direction
- Receiving and passing on messages and information.

The breadth, depth and complexity of knowledge and skills in this competency would prepare a person to perform a defined range of activities many of which may be routine and predictable.

Assessment must ensure:

- Demonstration of knowledge by recall in a narrow range of areas; demonstrating basic practical skills, such as the use of relevant tools and applications; performing a sequence of routine tasks given clear

EVIDENCE GUIDE	
	<p>direction; and receiving and passing on messages or information.</p> <ul style="list-style-type: none"> Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.
Method of assessment	<p>The purpose of this unit is to define the standard of performance to be achieved in the workplace. In undertaking training and assessment activities related to this unit, consideration should be given to the implementation of appropriate diversity and accessibility practices in order to accommodate people who may have special needs. Additional guidance on these and related matters is provided in ICA05 Section 1</p> <ul style="list-style-type: none"> Competency in this unit should be assessed using summative assessment to ensure consistency of performance in a range of contexts. This unit can be assessed either in the workplace or in a simulated environment. However, simulated activities must closely reflect the workplace to enable full demonstration of competency. Assessment will usually include observation of real or simulated work processes and procedures and/or performance in a project context as well as questioning on underpinning knowledge and skills. The questioning of team members, supervisors, subordinates, peers and clients where appropriate may provide valuable input to the assessment process. The interdependence of units for assessment purposes may vary with the particular project or scenario.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICAU1129B Operate a word processing application <p>An individual demonstrating this competency would be</p>

EVIDENCE GUIDE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Create documents	1.1. Open word processing application and create/open document and add data according to <i>information requirements</i> 1.2. Use document templates as required 1.3. Use simple <i>formatting tools</i> when creating the document 1.4. Save document to correct directory
2. Customise basic settings to meet page layout conventions	2.1. Adjust page layout to meet information requirements 2.2. Open and view different <i>toolbars</i> 2.3. Change <i>font format</i> to suit the purpose of the document 2.4. Change <i>alignment</i> and line spacing according to document <i>information requirements</i> 2.5. Modify margins to suit the purpose of the document 2.6. Open and switch between several documents
3. Format document	3.1. Use <i>formatting features</i> and styles as required 3.2. Highlight and copy text from another area in the document or from another active document 3.3. Insert headers and footers to incorporate all necessary data 3.4. Save document in another <i>file format</i> 3.5. Save and close document to <i>disk</i>
4. Create tables	4.1. Insert a standard table into a document 4.2. Change cells to meet information requirements 4.3. Insert and delete columns and rows as necessary 4.4. Use <i>formatting tools</i> according to style requirements
5. Add images	5.1. Insert appropriate <i>images</i> in a document and customise as necessary 5.2. Position and resize images to meet the document formatting needs
6. Use mail merge	6.1. Create simple mailing list in layout suitable for merging 6.2. Create or select another document for merging 6.3. Mail merge list with other document
7. Print documents	7.1. Preview document in print preview mode

ELEMENT	PERFORMANCE CRITERIA
	7.2.Select basic print settings 7.3.Print document or part of the document from printer

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Low-level decision making in relation to a limited range of routine areas
- Problem solving skills in known areas during normal routine
- Reading and writing at a level where basic workplace documents are understood
- Clear and precise communication
- Interpretation of user manuals and help functions

Required knowledge

- Organisational benchmarks for minimum typing skills, including speed and accuracy
- Creating and opening documents
- Formatting documents
- Inserting tables and images
- Saving, printing and closing documents
- Mail merge function

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- Assessment must ensure the ability to create open and retrieve documents, customise basic settings, format documents, create tables, add objects and images, and save and print documents.

To demonstrate competency in this unit the person will require access to:

- Personal computer
- Printer
- Mouse and keyboard
- Monitor
- Basic software
- Documents detailing organisational style guide/policy
- Documents or information containing data suitable for use with word processing packages

Context of and specific resources for assessment

Operating a word processing application is a core function for almost all businesses and is an essential skill.

The breadth, depth and complexity of knowledge and skills in this competency would prepare a person to perform a defined range of activities many of which may be routine and predictable.

Assessment must ensure

- Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

EVIDENCE GUIDE**Method of assessment**

The purpose of this unit is to define the standard of performance to be achieved in the workplace. In undertaking training and assessment activities related to this unit, consideration should be given to the implementation of appropriate diversity and accessibility practices in order to accommodate people who may have special needs. Additional guidance on these and related matters is provided in ICA05 Section 1.

- Competency in this unit should be assessed using summative assessment to ensure consistency of performance in a range of contexts. This unit can be assessed either in the workplace or in a simulated environment. However, simulated activities must closely reflect the workplace to enable full demonstration of competency.
- Assessment will usually include observation of real or simulated work processes and procedures and/or performance in a project context as well as questioning on underpinning knowledge and skills. The questioning of team members, supervisors, subordinates, peers and clients where appropriate may provide valuable input to the assessment process. The interdependence of units for assessment purposes may vary with the particular project or scenario.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICAU1128B Operate a personal computer
- ICAU1130B Operate a spreadsheet application
- ICAU1131B Operate a database application
- ICAU1132B Operate a presentation package

An individual demonstrating this competency would be able to:

- Demonstrate knowledge by recall in a narrow range of areas
- Demonstrate basic practical skills, such as the use of relevant tools

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • Perform a sequence of routine tasks given clear direction • Receive and pass on messages and information <p>Demonstration of these competencies would involve:</p> <ul style="list-style-type: none"> • Demonstrating basic word processing skills in a moderate range of areas • Applying a defined range of skills to basic processing operations • Applying known processing solutions to a limited range of predictable problems • Performing a range of basic processing tasks where operating options are varied • Assessing and recording information from varied sources • Maintain knowledge of industry products and services
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Information requirements</i> may include:	<ul style="list-style-type: none"> • memos • letters • minutes • agendas • other business documents required by the organisation
<i>Formatting tools</i>	<ul style="list-style-type: none"> • Menu commands within the application, such as: help, search and replace, spell check, undo, cut, copy, paste, borders, shading.
<i>Toolbars</i> can contain:	<ul style="list-style-type: none"> • buttons • menus

RANGE STATEMENT	
	<ul style="list-style-type: none"> • a combination of both
Font format	<ul style="list-style-type: none"> • Font format is the combination of typeface and other attributes, such as size, pitch and spacing of the font

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Create spreadsheets	1.1. Open spreadsheet application and create/open spreadsheet file and enter numbers, text and symbols into cells according to information requirements 1.2. Enter simple formulas using cell referencing where required 1.3. Correct formulas when error messages occur 1.4. Use a range of common tools during spreadsheet development 1.5. Edit columns and rows within the spreadsheet 1.6. Use the auto-fill function to increment data where required 1.7. Save spreadsheet to correct directory or folder
2. Customise basic settings	2.1. Adjust page layout to meet user requirements or special needs 2.2. Open and view different toolbars 2.3. Change font settings so they are appropriate for the purpose of the document 2.4. Change alignment options and line spacing according to spreadsheet formatting features 2.5. Format cell to display different styles as required 2.6. Modify margin sizes to suit the purpose of the spreadsheets 2.7. View multiple spreadsheets concurrently
3. Format spreadsheet	3.1. Use formatting features as required 3.2. Copy selected formatting features from another cell in the spreadsheet or from another active spreadsheet 3.3. Use formatting tools as required within the spreadsheet 3.4. Align information in a selected cell as required 3.5. Insert headers and footers using formatting features 3.6. Save spreadsheet in another format 3.7. Save and close spreadsheet to disk
4. Incorporate object and chart in spreadsheet	4.1. Import an object into an active spreadsheet 4.2. Manipulate imported object by using formatting features 4.3. Create a chart using selected data in the spreadsheet 4.4. Display selected data in a different chart 4.5. Modify chart using formatting features

ELEMENT	PERFORMANCE CRITERIA
5. Print spreadsheet	5.1. Preview spreadsheet in print preview mode 5.2. Select basic printer options 5.3. Print spreadsheet or selected part of spreadsheet 5.4. Submit the spreadsheet to the <i>appropriate person</i> for approval or feedback

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Low-level decision making in relation to creating and manipulating spreadsheet data
- Reading and writing at a level where basic workplace documents are understood
- Clear and precise communication
- Interpretation of user manuals

Required knowledge

- Logging in procedures relating to accessing a PC
- Basic mathematics
- Basic technical terminology in relation to reading help files and prompts

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- Assessment must confirm ability to complete basic operations associated with creating, formatting, saving and printing a spreadsheet, including creating basic formulas and working with objects and charts.

To demonstrate competency in this unit the person will require access to:

- Personal computer
- Printer
- Mouse and keyboard
- Monitor
- Basic software
- Documents or information containing data suitable for creating spreadsheets

Context of and specific resources for assessment

An individual demonstrating this competency may use pre-existing data (e.g. documents, spreadsheet data, data from database tables) or create new data when creating and manipulating spreadsheets.

The use of spreadsheets for business and mathematical applications is widespread. In some cases, spreadsheets can operate as sophisticated computerised ledgers and enable the collation, manipulation and presentation of complex data.

The breadth, depth and complexity of knowledge and skills in this competency would prepare a person to perform a defined range of activities many of which may be routine and predictable.

Assessment must ensure

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Create database	<ul style="list-style-type: none">1.1. Open a database application and design a two-table simple relational database incorporating basic <i>design principles</i>1.2. Develop a table with fields and <i>attributes</i> according to database usage, as well as user requirements1.3. Create a primary key and establish an index for each table1.4. Modify table layout and field <i>attributes</i> as required1.5. Create a <i>relationship</i> between the two tables1.6. Add and modify data in a table according to information requirements1.7. Add and delete records as required1.8. Save and close down database to <i>disk</i>
2. Customise basic settings	<ul style="list-style-type: none">2.1. Adjust page layout to meet user requirements2.2. Open and view different <i>toolbars</i>2.3. Format <i>font</i> as appropriate for the purpose of the database entries
3. Create reports	<ul style="list-style-type: none">3.1. Design reports to present data in a logical sequence3.2. Modify reports to include/exclude additional requirements3.3. Distribute reports to <i>appropriate person</i> in a suitable format
4. Create forms	<ul style="list-style-type: none">4.1. Use a wizard to create a simple form4.2. Open existing database and modify records through a simple form4.3. Rearrange <i>objects</i> within the form to accommodate information requirements
5. Retrieve information	<ul style="list-style-type: none">5.1. Access existing database and locate required records5.2. Create simple query and retrieve required information5.3. Develop query with multiple criteria and retrieve required information5.4. Select data and display appropriately

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Reading and writing at a level where basic workplace documents are understood
- Clear and precise communication
- Interpretation of user manuals
- Ability to create a simple database

Required knowledge

- Basic database design
- Knowledge of relationships between tables (cardinality)
- Knowledge of forms, reports and queries for retrieving and displaying information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- Assessment must ensure a person has the ability to design and develop a simple database using a standard database package. The person must add data, use queries, and create forms and reports.

To demonstrate competency in this unit the person will require access to:

- Personal computer
- Basic software
- Documents or information containing data suitable for creating a database

Context of and specific resources for assessment

An individual demonstrating these competencies, may use pre-existing data (e.g. documents, spreadsheet data, data from database tables) or create new data when creating and manipulating databases and tables.

The breadth, depth and complexity of knowledge and skills in this competency would prepare a person to perform a defined range of activities many of which may be routine and predictable.

- Assessment must ensure

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Method of assessment

The purpose of this unit is to define the standard of performance to be achieved in the workplace. In undertaking training and assessment activities related to this unit, consideration should be given to the implementation of appropriate diversity and accessibility

EVIDENCE GUIDE

	<p>practices in order to accommodate people who may have special needs. Additional guidance on these and related matters is provided in ICA05 Section 1.</p> <ul style="list-style-type: none"> Competency in this unit should be assessed using summative assessment to ensure consistency of performance in a range of contexts. This unit can be assessed either in the workplace or in a simulated environment. However, simulated activities must closely reflect the workplace to enable full demonstration of competency. Assessment will usually include observation of real or simulated work processes and procedures and/or performance in a project context as well as questioning on underpinning knowledge and skills. The questioning of team members, supervisors, subordinates, peers and clients where appropriate may provide valuable input to the assessment process. The interdependence of units for assessment purposes may vary with the particular project or scenario.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICAU1128B Operate a personal computer ICAU1129B Operate a word processing application ICAU1130B Operate a spreadsheet application ICAU1132B Operate a presentation package <p>An individual demonstrating this competency would be able to:</p> <ul style="list-style-type: none"> Demonstrate knowledge by recall in a narrow range of areas Demonstrate basic practical skills, such as the use of relevant tools Perform a sequence of routine tasks given clear direction Receive and pass on messages and information Maintain knowledge of industry products and services

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Design principles</i> may include:	<ul style="list-style-type: none"> • naming conventions • data layout • formatting
<i>Attributes</i> may include:	<ul style="list-style-type: none"> • name • data type • size
<i>Relationship</i> may be but is not limited to:	<ul style="list-style-type: none"> • one-to-one • one-to-many • many-to-many relationships
<i>Disk</i> may include but are not limited to:	<ul style="list-style-type: none"> • diskettes (floppy disks) • CDs • CD-RW (Compact Discs-Read Write) • DVD RW • zip disks • solid state hard drives
<i>Page layout</i> may include:	<ul style="list-style-type: none"> • landscape • portrait
<i>Toolbars</i> may contain:	<ul style="list-style-type: none"> • buttons • menus • a combination of both
<i>Font</i>	<ul style="list-style-type: none"> • The combination of typeface and other attributes, such as size, pitch, and spacing character or symbol
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • supervisor • teacher • authorised business representative • client
<i>Objects</i> may include:	<ul style="list-style-type: none"> • buttons • checkboxes

RANGE STATEMENT	
	<ul style="list-style-type: none">• option buttons• text boxes• drop down lists

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access the internet	1.1. Open an <i>internet browser</i> and set a home page of personal choice by setting <i>internet options</i> 1.2. Adjust the display of the <i>internet browser</i> to suit personal requirements 1.3. Modify <i>toolbar</i> to meet user and <i>internet browser</i> needs 1.4. Access a particular website, note privacy and other conditions of use and retrieve data 1.5. Enter a uniform resource locator (URL), in the address line of the <i>internet browser</i>
2. Search the internet	2.1. Locate and select appropriate <i>search engine</i> and define search expressions based on the data required 2.2. Save search expression results and present them in a report according to the information requirements 2.3. Create a bookmark within the <i>internet browser</i> or a link for the required web page and save it in a bookmark folder 2.4. Modify the <i>internet browser</i> options for printing and print a web page 2.5. Close the internet browser
3. Research and apply 'netiquette' principles	3.1. Select <i>search engine</i> and using key word search research the concept of <i>netiquette</i> (or web etiquette) 3.2. Review rules of good online manners from at least two <i>netiquette</i> sites 3.3. Develop a personal list of <i>netiquette</i> principles to be applied to email and newsgroup discussions 3.4. Check that these are consistent with organisational policies
4. Send and organise messages	4.1. Open an email application package and create a new email message 4.2. Add addressee to the email message 4.3. Compose the text of an email message according to organisational guidelines 4.4. Create and add an automatic signature for the user, so that it appears automatically in every new email message that the user creates 4.5. Attach <i>files</i> to the email message, using the attachment feature 4.6. Determine and set a priority for an email message

ELEMENT	PERFORMANCE CRITERIA
	<p>and spell check and edit text as required</p> <p>4.7. Send the email message</p> <p>4.8. Reply to received messages and forward as appropriate, using the carbon copy and forward features</p> <p>4.9. Open and save an attachment to the relevant folder</p> <p>4.10. Search for an email message and set a priority setting or delete as necessary</p> <p>4.11. Sort inbox according to sender's name and date received</p> <p>4.12. Save email messages in a folder</p> <p>4.13. Compact folder to save space</p> <p>4.14. Print an email message</p>
5. Create an address book	<p>5.1. Manually add an email address to the email package address book</p> <p>5.2. Update the address book by transferring the email address from a received message</p> <p>5.3. Create a distribution list and send out email message</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- Ability to implement workstation adjustment according to OH&S guidelines
- Basic analysis in relation to a limited range of routine tasks
- Low-level decision making in relation to a limited range of routine tasks
- Problem solving skills in known areas during normal routine activities
- Reading and writing at a level where basic workplace documents are understood
- Clear and precise communication
- Ability to interpret user manuals
- Using a PC and peripherals
- Cultural understanding

Required knowledge

- Makeup and structure of an internet addresses

REQUIRED SKILLS AND KNOWLEDGE

- Basic technical terminology in relation to reading help files and prompts
- Log-on procedures for accessing a PC
- Modem speed, traffic loads in relation to times of accessing the internet
- Evaluating and assessing the authority, reliability and authenticity of information
- Organisational guidelines on internet and email usage ('web etiquette' or netiquette)
- Different types of search engines (eg. Google, Alta Vista, Infoseek)
- Different types of messages that occur (e.g. error messages, updates, need for installing plug-ins)

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> Assessment must confirm the ability to browse the internet, search for information, send and receive emails and organise the email client application on the computer. <p>To demonstrate competency in this unit the person will require access to:</p> <ul style="list-style-type: none"> Organisational style guide/policy Organisational policies on internet and email usage Personal computer with internet capability
Context of and specific resources for assessment	<p>This competency provides one of the fundamental foundation skills for interacting online. In this context, individuals must recognise their own responsibility in having access to the vast services, sites, systems and people provided by the internet.</p> <p>The breadth, depth and complexity of knowledge and skills in this competency would prepare a person to perform a defined range of activities many of which may be routine and predictable.</p> <p>Assessment must ensure</p> <ul style="list-style-type: none"> Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.
Method of assessment	The purpose of this unit is to define the standard of performance to be achieved in the workplace. In undertaking training and assessment activities related to this unit, consideration should be given to the implementation of appropriate diversity and accessibility

	<p>practices in order to accommodate people who may have special needs. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work	1.1. Work instructions are used to determine job requirements, including: location, type of installation, tolerances, process, finish and quality 1.2. Installation location and sequence are planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Hardware, fittings and attachments are collected 1.6. Tools and equipment suitable for installation are identified and checked for safe and effective operation 1.7. Fixing and joining devices are selected in line with work instructions and types of materials 1.8. Required installation aids are selected and checked for suitability for purpose
2. Complete installation	2.1. Site is prepared for installation 2.2. Furnishing products are prepared to site requirements 2.3. Hand and/or power tools and equipment are used in accordance with workplace requirements, including use of personal protective equipment 2.4. Fixing methods are undertaken according to site conditions 2.5. Installed furniture product is checked for compliance with specification 2.6. Tops and/or appliances are installed in accordance with plans and specifications 2.7. Hardware and decorative accessories are installed 2.8. Work is checked against required quality standards
3. Finalise operation clean work site	3.1. Work site is cleaned, hand and/or power tools are checked for serviceable condition, returned and stored in accordance with workplace procedures 3.2. Unused materials are returned and/or stored 3.3. Waste and scrap materials are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, installation plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the installation, including tools, equipment and measuring devices

Required knowledge

- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs
- workflow in relation to furniture production
- identification of hand and/or power tools, materials, equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, tools, equipment or products
 - maintain required production output and product quality
- Install four different and significant furnishing products, including at least:
 - one floor mounted, and
 - one wall mounted
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, equipment, materials, woodworking machinery, furnishing products and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Furnishing products for installation may include but are not limited to:

- kitchen cabinets
- bathroom cabinets
- wall units
- desks
- counters
- wardrobes
- dressing tables
- entertainment units
- laundry cabinets

Appliances to be installed may include but are not limited to:

- ovens
- range hoods
- sinks
- basins
- cooktops
- refrigerators

Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the installation of furnishing products
- Competency may be demonstrated on work sites of enterprises involved in the installation of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets

Tools and equipment may

- measuring tapes or rulers

RANGE STATEMENT	
include but not be limited to:	<ul style="list-style-type: none"> • hammers • mallets • squares • bevels • chisels • levels • plumb lobs • planes • hand saws • power saws • power planers • cordless drills • screwdrivers • power drills • explosive fixing gun • clamps • supporting devices • screwdrivers
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • timber • manufactured board • laminates • granite • marble • stainless steel • adhesives • screws • nails • masonry anchors • dowels • cavity wall fixing
Product checking is to cover:	<ul style="list-style-type: none"> • level • plumb • twirl • and alignment of doors and/or drawers
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets,

RANGE STATEMENT	
	cutting lists, plans, drawings and designs <ul style="list-style-type: none"> • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain measurements	<p>1.1. The purpose of obtaining measurements is clarified and confirmed</p> <p>1.2. The most appropriate method of obtaining the measurement is selected and applied</p> <p>1.3. Accurate measurements are obtained, confirmed and recorded</p> <p>1.4. Calculations required for the measurement or validation are selected and correctly applied</p> <p>1.5. Quality assurance requirements, standards and tolerances associated with enterprise operations are recognised and adhered to</p>
2. Draw site layout	<p>2.1. The intended use of the site is clarified and confirmed</p> <p>2.2. A site plan is prepared showing all features and measurements</p> <p>2.3. A site elevation is completed showing all features and measurements</p> <p>2.4. The details of the proposed furniture products, including all relevant dimensions are incorporated into the plan and elevation</p> <p>2.5. Unique and non-complying features which may impact on manufacture and/or installation are highlighted and referred to the appropriate party</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- plan and organise activities to avoid any back tracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow
- use mathematical ideas and techniques to correctly complete measurements, calculate area, perimeter, volume, mass, scales and ratios and estimate material requirements
- use pre-checking techniques to anticipate measurement and drawing problems and avoid reworking
- use workplace technology related to measurement and drawing, including tools, equipment, calculators and measuring devices

Required knowledge

- furniture design and planning criteria
- drawing techniques, technologies and processes
- furniture installation methods, criteria and techniques
- structural geometry
- measurement techniques and equipment/tools
- the theory and practice of calculations (addition, subtraction, multiplication, division)
- conventional signs and markings for plans and drawings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Identify the factors relevant to the measurements and drawings
- Communicate effectively to enable accurate calculations, measurements and drawings
- Accurately measure and record particulars for required sector sites and materials
- Draw accurate, scaled plans and elevations relevant to the site using manual or computer-aided methods
- Superimpose the furniture product accurately to scale onto the plan and elevation
- Identify and communicate on measurements and dimensions which may impact on manufacture and/or installation

Resource Implications

Information on the site and products for measurement and calculation, suitable work area appropriate to the activity, suitable site plans/drawings and/or specifications, and measuring, calculating and recording devices.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	This unit applies to the measurement and drawing of site layout related to the manufacture and installation of furniture, cabinets, glass, soft furnishings, upholstery, picture framing, and floor covering products
Drawing	Drawing may be manual or computer aided
Measurements	Measurements are to be in metric scale, cover all dimensions of the site and furnishings and involve the use of rulers, tape measures, squares and service detectors. They may involve laser or equivalent technology
Critical dimensions that may impact on manufacture and installation include:	<ul style="list-style-type: none"> • the square of the structure • angles floor to walls • walls to ceiling • vertical walls • horizontal floor and ceiling • service locations and critical structural criteria
Calculations to include:	<ul style="list-style-type: none"> • area • perimeter • volume • mass • scales and ratios (ingredients/elements and triangulation) and require the application of addition • subtraction • multiplication and division processes • Calculations are to be performed both manually and with the aid of a calculator
Unit context	<ul style="list-style-type: none"> • Workplace health and safety requirements may include OH&S legislation, building codes, material safety management systems, hazardous substances and dangerous goods

RANGE STATEMENT	
	codes and local safe operating procedures <ul style="list-style-type: none"> • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Personal protection equipment	Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the measuring and drawing of site layouts • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity 1.2. Fabrication sequence are planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Preparatory drawings and set-outs for tasks are completed 1.7. Cutting list for components is developed 1.8. Materials are selected following work instructions 1.9. Tools and equipment suitable for fabrication are identified and checked for safe and effective operation
2. Complete fabrication	2.1. Materials are set out and prepared according to work instructions and components are marked according to industry practices 2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 2.3. Components are fabricated and checked against set-outs for accuracy tolerances, fit and distortion 2.4. Doors, drawers, shelves or decorative treatments are fitted as required 2.5. Product is prepared for final finish, including the removal of bruises, scratches, dents and marks 2.6. Product is checked against plans at identified checkpoints
3. Finalise operation	3.1. Faulty and/or defective equipment is tagged and reported in accordance with workplace practices 3.2. Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures 3.3. Off-cuts and unused materials are collected and stored for reuse or disposed following workplace procedures 3.4. Waste and scrap materials are dealt with following

ELEMENT	PERFORMANCE CRITERIA
	workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to synthetic solid surface materials, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate fabrication problems, avoid reworking and avoid wastage
- use the limited workplace technology related to fabrication, including tools, equipment and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of synthetic solid surface materials
- the interpretation of plan representation of furniture design
- the preparation of drawings and set-outs
- identification of hand and/or power tools, materials, machines, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Fabricate a minimum of three synthetic solid surface material products, including at least one full benchtop
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, machines, equipment, materials, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Synthetic solid surface products	<ul style="list-style-type: none"> • Synthetic solid surface products are generally acrylic or polyester sheet based materials • There are a range of commercially licensed products, including Corian, Aztec, Trezzini and others
Synthetic solid surface products are to include benchtops and may include:	<ul style="list-style-type: none"> • edges • sinks • bowls • other containers and waterproof wall treatments
Unit context	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work involves reading and interpreting plans, developing set-outs, using hand and/or power tools, equipment and operating machinery
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • measuring tapes or rulers • hammers • mallets • squares • bevels • chisels • planes • hand saws • power saws • power drills/screwdrivers • air compressor and hoses • clamps

RANGE STATEMENT	
	<ul style="list-style-type: none"> • screwdrivers • pincers
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • panel saws • routers • edge moulders • point to point • heat applicators • sanding and buffing machines
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • synthetic solid surface materials • timber • manufactured board • glues • screws • nails • dowels • knockdown fittings
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including: design, quality, materials, equipment and quantities 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Material for machining is selected and inspected for appropriate quality 1.4. Procedures are determined for minimising waste material 1.5. Procedures are identified for maximising energy efficiency while completing the job
2. Set up machines	2.1. CNC program is set to job requirements 2.2. Safety equipment, including emergency stops, gauges, guards and controls are checked 2.3. Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturers' instructions 2.4. Machines, cutting tools and jigs are checked for safe and effective operation 2.5. Trial runs are conducted to check machine operation and quality of finished work 2.6. Final adjustments are made to CNC programs and equipment according to workplace procedures
3. Operate machines	3.1. Machines are operated and monitored to ensure product quality and output 3.2. Waste quantities are checked and minimised 3.3. Problems with the required work are identified and reported to appropriate persons 3.4. Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures 3.5. Any authorised changes in working procedures are followed
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace procedures</p> <p>4.4. Operator maintenance is completed in accordance with manufacturers' specifications and site procedures</p> <p>4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace</p> <p>4.6. Equipment and tooling is maintained in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to CNC sizing operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, compute input data and estimate material requirements
- use pre-checking and inspection techniques to anticipate CNC sizing problems, avoid reworking and avoid wastage
- use the workplace technology related to CNC sizing, including machinery, tools, equipment and measuring devices

Required knowledge

- types, characteristics, uses and limitations of CNC sizing machines
- CNC theory, practices and techniques
- characteristics of materials used and uses of products produced
- workflow processes
- procedures for reporting materials, product or equipment faults

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Identify, set up and operate CNC sizing equipment, including the use of safety cut-outs and guards, to produce a range of complex cutting patterns to its full potential
- Conduct operator maintenance on the machine and related equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

CNC controlled equipment, standard operating procedures, unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
CNC sizing machines	CNC sizing machines are to include CNC beam saws and may include double end profiling machines
Unit scope	Work involves computer programming skills, reading and interpreting drawings, stock control, setting cutting speeds, computer-aided machining operations, saw and tool maintenance
Material to be sized is to include:	<ul style="list-style-type: none"> • solid timber • manufactured board • laminate • solid synthetic materials and plastics
Unit context	<ul style="list-style-type: none"> • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines • Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Tools	Tools are to include machine-specific tools and may include screwdrivers, hammers and spanners
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and

RANGE STATEMENT	
	enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the use of tools and equipment • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturers' specifications and operational procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to CNC machining and processing centre operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, compute input data and estimate material requirements
- use pre-checking and inspection techniques to anticipate CNC machining and processing centre problems, avoid reworking and avoid wastage
- use the workplace technology related to CNC machining and processing centre, including machining and processing, tools, equipment and measuring devices

Required knowledge

- types, characteristics, uses and limitations of CNC machining and processing centres
- CNC theory, practices and techniques
- characteristics of materials used and uses of products produced
- workflow processes
- procedures for reporting materials, product or equipment faults

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment or products
 - maintain required production output and product quality
- Identify, set up and operate CNC machining and processing centre equipment to complete detailed profiling, including:
 - development and application of sub-program
 - development and application of parametric program, and
 - application of CAD/CAM functions
- Conduct operator maintenance on the machining and processing centre equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

CNC controlled equipment, standard operating procedures, unprocessed materials.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment,

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information	1.1.Details of the particular product and competition products are obtained 1.2.Details of the proposed production operation are obtained and analysed 1.3.Labour unit cost projections are obtained and agreed 1.4.Logistic support contracts, supply agreements or equivalent are obtained and analysed 1.5.Details of proposed warehousing and physical distribution systems and related cost factors are obtained 1.6.Information is converted to usable form and stored ready for retrieval and application
2. Estimate materials and labour	2.1.Types and quantities of materials required for production are estimated and recorded 2.2.Time requirements for production activities and other lead times are estimated 2.3.Labour requirements for direct production and handling operations are estimated and recorded
3. Determine/calculate overheads	3.1.Components contributing to overhead costs are identified 3.2.Overhead costs to be attributed to work in accordance with commercial and enterprise procedures are identified
4. Calculate costs	4.1.Total materials costs and labour costs are calculated in accordance with enterprise procedures 4.2.Total production cost is calculated, including overheads and mark-up percentages 4.3.Final cost to customer is calculated in conjunction with marketing/sales personnel
5. Document details and verify where necessary	5.1.Details of costs and charges are documented in accordance with enterprise practice 5.2.Costs, calculations or other details are verified by other enterprise personnel, as required 5.3.Details are documented for future reference in accordance with enterprise practice

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, collect, organise and understand information related to production costing including the relevant technical, commercial, industrial and accounting requirements
- communicate ideas and information to enable clarification of the production and related requirements and to present the outcomes in an appropriate manner
- plan and organise activities to avoid backtracking and re-working of solutions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly estimate and validate labour, materials and on-costs and calculate production costs
- create and apply systematic problem solving techniques to anticipate costing problems, avoid re-working and avoid wastage
- use the workplace technology related to costing, including calculators and measuring devices and computing/computer-aided systems

Required knowledge

- production systems documentation processes
- enterprise costing procedures
- mathematical formulae and processes relevant to costing
- components of labour costs
- enterprise/commercial approach to overhead costs
- enterprise/commercial approaches to warehousing and physical distribution costs
- enterprise information management processes, including storage requirements

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- For a significant mass production operation, determine the production and product costs using the following or equivalent steps:
 - obtain all information relevant to the determination of costs
 - interpret plans, specifications and instructions for production and materials to be used
 - estimate quantities of materials required
 - determine the types and amount of labour required to complete the work
 - estimate time required to complete the work
 - determine/calculate overheads
 - document the process and outcomes
- Work effectively with others

Resource implications

Access is required to real or appropriately simulated situations involving estimation and costing of production operations and products.

Access is required to specifications and costs of relevant equipment and materials and information on labour costs and availability, on costs, safety costs, regulations, quality standards, and enterprise procedures.

Access is required to all necessary facilities and associated equipment, including calculators, computers and relevant software.

Method of assessment

Assessment methods must confirm consistency or the potential for consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of performance and samples of work outcomes and questioning on underpinning knowledge.

Assessment may be conducted over time and may be in conjunction with assessment of other units of

EVIDENCE GUIDE	
	competency.
Context of assessment	Assessment may occur on the job or in a simulated workplace facility with a relevant scenario, simulated work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope	<ul style="list-style-type: none"> • Work involves the estimating and costing of production and products in a significant mass production environment • Work may involve referral of matters to other enterprise personnel
Unit context	<ul style="list-style-type: none"> • OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements • Work requires individuals to demonstrate organisational and administrative ability, discretion, judgement and problem solving skills
Workplace environment	<ul style="list-style-type: none"> • Work undertaken in accordance with established procedures involving a range of products, equipment and installation sites • Interaction with customers and other personnel from the operator's workplace • Use of relevant tools, equipment and resources, including: <ul style="list-style-type: none"> • measuring equipment • product sales literature • product samples
Overhead costs	Overheads may be calculated for a specific product or be a constant component based on historical records and may include such costs as rental/lease costs, utilities, non-production resources, depreciation of plant and equipment, warehousing margins, physical distribution unit costs, insurance and other costs incurred by doing

RANGE STATEMENT	
	business
Information and procedures	<ul style="list-style-type: none"> • Enterprise production plan and schedule • Enterprise financial management policy and procedures • Enterprise policy and procedures for cost and apportioning overheads • Labour employment costs (awards, EBA, contracts) • Material/supply costs (contracts, standing agreements, market rates, warehousing margins) • Physical distribution contracts or arrangements • Australian, international and enterprise quality standards and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements including design variations, tolerances, process, materials, finish and quantity 1.2. Work sequence is planned 1.3. Procedures are determined for checking quality at each stage of the process 1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.5. Suitable work area is selected for the task 1.6. Preparatory drawings/set outs for tasks are confirmed 1.7. Materials are selected following work instructions 1.8. Tools and equipment suitable for the work are identified and checked for safe and effective operation
2. Fabricate and assemble components	2.1. Material is set out according to work instructions, prepared, and components are marked according to workplace procedures 2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers' specifications 2.3. Components are fabricated including any specified shapes, angles or curves and checked against set out and job requirements 2.4. Components are fitted to job requirements 2.5. Assembly process is undertaken according to workplace procedures 2.6. Item is checked for compliance with specifications 2.7. Item is finished in accordance with work instructions
3. Finalise operation and maintain equipment	3.1. Work area is cleaned, hand and/or power tools and equipment is cleaned, maintained and stored in accordance with workplace procedures 3.2. Off-cuts and unused materials are collected and stored for re-use or disposed following workplace procedures 3.3. Waste and scrap materials are dealt with following workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination with work supervisor, other workers and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate working problems, avoid re-working and wastage
- use the limited workplace technology related to this glass and glazing project including tools, equipment, materials and measuring devices

Required knowledge

- the interpretation of plan representation of product design
- the preparation of drawings/set outs
- workflow in relation to glass and glazing projects
- identification of glass and glazing hand and basic processing tools, materials, equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work instructions and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - achieve required production output and product quality
- Adapt or vary glass and glazing designs
- Prepare, fabricate and assemble at least one basic glass and glazing project which:
 - is of thin glass (annealed glass of less than or 6 mm thick or laminated glass of less than or 6.38 mm thick)
 - requires the use of glass and glazing hand tools and basic glass and glazing processing machines
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Access to plans/designs, glass and glazing hand tools and/or basic processing machines, equipment, materials, a work area and a specified project.

Method of assessment

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be conducted in conjunction with assessment of other relevant units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Workplace health and safety requirements include OHS legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work involves reading and interpreting plans, developing set-outs, using hand and power tools, operating basic machinery, applying quality requirements and applying product finishing techniques and materials
- Work is conducted under supervision and guidance

Basic glass and glazing unit may include but is not limited to:

- fish tank
- display case
- flower vase/box
- ornamental box/case

Project is to be determined in consultation with supervisor/teacher

Tools and equipment may include, but are not limited to:

- flat felt covered cutting tables
- tungsten wheel glass cutters
- speed cutters
- circle cutters
- L-squares and straight edges
- tape measures
- glass handling gloves
- safety glasses
- gauntlets
- aprons
- marking pens

RANGE STATEMENT	
	<ul style="list-style-type: none"> • chinagraph pencils • templates and lubricants
Tables appropriate for cutting large glass sheets include:	<ul style="list-style-type: none"> • air flotation tables • roller castor tables or tilt tables with air flotation • breaker bars or roller castors
Edging equipment includes but is not limited to:	<ul style="list-style-type: none"> • finishing or belt machines • diamond or pencil edgers • pumice or cork polishers • horizontal wheels • finger slotters and hand tools
Drilling equipment may include, but is not limited to:	<ul style="list-style-type: none"> • portable • wall-mounted and free-standing diamond drill presses and saws
Materials to be used may include but are not limited to:	<ul style="list-style-type: none"> • annealed glass (less than or 6mm thick) and laminated glass (less than or 6.38mm thick) as deemed appropriate for the project
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices. It may include:</p> <ul style="list-style-type: none"> • gloves • safety glasses • gauntlets • footwear • earmuffs • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the handling of glass • Workplace procedures relating to the setting and operation of glass cutting, drilling and edging machines • Workplace procedures relating to the use of other tools and equipment • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • Manufacturer specifications and operational procedures • Safety standards include personal protective equipment, OHS regulations and enterprise

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements	<p>1.1. Work requirements in the form of type of glass and the method of fixing are identified from work instructions</p> <p>1.2. Workplace health and safety requirements for glazing/reglazing of windows and doors, including personal protection needs, are observed throughout the work</p> <p>1.3. The process for fitting glass to window and door frames is identified</p>
2. Prepare for work	<p>2.1. Work sequence is planned in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials (less glass and frames) are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Type of glass to be fitted and frames are selected to match:</p> <p>2.3.1. customer order</p> <p>2.3.2. existing glass type</p> <p>2.3.3. requirements for security, noise or light control</p> <p>2.3.4. Australian Standards</p> <p>2.4. Glass is checked for type, size and imperfections</p> <p>2.5. Glass fixing method is selected according to:</p> <p>2.5.1. specification</p> <p>2.5.2. type of glass and frame</p> <p>2.5.3. security requirements</p> <p>2.5.4. sealing methods</p> <p>2.5.5. Australian Standards</p> <p>2.6. Frame condition is assessed to ensure suitability for glazing in accordance with customer order and Australian Standards. Defective frames are reported for repair or replacement in accordance with workplace procedures</p> <p>2.7. Fixing and sealing materials are prepared by mixing or cutting to length as appropriate</p>
3. Identify site conditions and restraints	<p>3.1. On-site difficulties are recognised and action taken to resolve in accordance with regulations and workplace requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Covering material is applied where necessary to protect existing fixtures and fittings</p> <p>3.3. Special characteristics of the window or door which may affect the finished job are identified and corrective action taken</p>
4. Perform glazing	<p>4.1. Frame is prepared to receive glass by:</p> <ul style="list-style-type: none">4.1.1. checking size against specification4.1.2. removing remains of glass and any sealants4.1.3. cleaning4.1.4. surface preparation (if required) <p>4.2. Glass is fixed to the frame using the selected method and in accordance with recognised industry procedures and Australian Standards</p> <p>4.3. Solvents and sealants are used in accordance with manufacturer recommendations and Australian Standards</p> <p>4.4. Excess sealing material is removed</p> <p>4.5. Glass and frame are cleaned after fixing</p>
5. Complete work	<p>5.1. Completed installation is checked to ensure compliance with customer requirements and specifications</p> <p>5.2. Tools, equipment and materials are cleaned and stored following workplace procedures</p> <p>5.3. Work area is cleaned and left in a safe condition and rubbish disposed of as appropriate</p> <p>5.4. Waste and scrap materials are removed for disposal or recycling as required</p> <p>5.5. Workplace documentation is completed in accordance with workplace requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the glazing of simple window and door frames

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- the techniques, methods, materials and process of glazing simple/complex window and door frames
- workplace safety system requirements related to the glazing simple/complex window and door frames
- relevant Australian Standards
- workflow in relation to fitting glass
- characteristics, purpose and operation of tools and equipment used in glazing simple/complex window and door frames
- identification of equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order/job instruction and locate and apply relevant information to glaze/reglaze simple/complex windows and doors
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Glaze the following:
 - timber putty faced and beaded window sashes, including fixed, sliding, double hung, casement and awning sashes
 - metal channel and beaded window sashes, including fixed, sliding, double hung, casement and awning sashes
 - timber putty faced and beaded doors, including fixed, sliding, hinged, pivot and bi-fold doors
 - metal channel and beaded doors, including fixed, sliding, hinged, pivot and bi-fold doors
- Include the following for each:
 - select glass thickness and type in accordance with AS1288
 - calculate glazing clearance and cutting size
 - cut glass to AS4667 Quality requirements for cut to size and processed glass
 - select glazing tools, equipment, glazing sealants, vinyls and tapes
 - prepare working area
 - prepare glazing rebates and channels prior to installation
 - clean glass, tools, equipment and work area
 - calculate the cost of glass, glazing materials and

EVIDENCE GUIDE	
	<p>labour</p> <ul style="list-style-type: none"> • Re-glaze timber and metal windows and doors, including: <ul style="list-style-type: none"> • prepare work area and drop sheets • select reglazing tools and equipment • hack out/remove beads and glass safely from timber windows and doors • remove and disassemble metal window sashes and doors and remove glass safely • select glass thickness and type in accordance with AS1288 • calculate glazing clearance and cutting size • cut glass to industry standards AS4667 • select glazing tools, equipment, glazing sealants, vinyls and tapes • glaze timber and metal windows and doors • install sash cords, unique and spring balances on timber and metal double hung windows • clean glass, tools, equipment and work area • Work effectively with others • Modify activities to cater for variations in workplace contexts and environment
Resource implications	Frames, glass, fixing material, sealants, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant glazing equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements
- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures
- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the handling and installation of glass products
- Work may be performed in workplaces which are involved in on-site and off-site fabrication, installation and/or replacement of glass to commercial or residential windows, doors and other openings or to other frames

Glaze/re-glaze

- Involves the installation of glass to metal and/or timber doors, windows and other frames and reglazing of existing windows and doors
- Residential glazing/re-glazing is confined to simple doors and windows and may include:
 - residential windows, such as fixed, sliding, casement, awning and double hung and louvres
 - residential doors, such as sliding, hinged, pivot and bi-fold
- Glazing or reglazing for non-residential situations is addressed in commercial and architectural/engineering AQF III units

Types of glass may include but are not limited to:

- annealed glass
- toughened glass
- laminated glass
- wired glass

RANGE STATEMENT	
	<ul style="list-style-type: none"> • tinted and heat reflective glass • coated glass and insulated glass units.
Tools and equipment are to include:	<ul style="list-style-type: none"> • tungsten wheel glass cutters • speed cutters • cutting lubricants • running pliers • straight edges and squares • tape measures • glass handling and lifting equipment • hack-out knives • chisels • putty knives • sprig/diamond guns • vinyl cutters and rollers • pry bars • sealant guns • blade and phillips head screwdrivers • pop rivet guns • electric and pneumatic drills • rubber mallets • claw hammers • nail punches and PPE equipment
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • all forms of flat glass and acrylic glazing products • plastic • aluminium • steel • solid timber • gaskets • sealants • adhesives • glazing tapes and setting blocks
Methods of glazing may include:	<ul style="list-style-type: none"> • channel glazing • beaded glazing and double glazing
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulation and Australian Standard policies and practices. It may include:</p> <ul style="list-style-type: none"> • gloves

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for work	<p>1.1. Work requirements in the form of type of shower screen/wardrobe door to be fabricated and installed are identified from work instructions. This includes the identification of its pattern or plan</p> <p>1.2. Workplace health and safety requirements for fabrication and installation of shower screens and wardrobe doors, including personal protection needs, are observed throughout the work</p> <p>1.3. The process for fabricating and installing shower screens and wardrobe doors is identified</p> <p>1.4. Glass fixing method and joining devices or materials are identified in line with specifications or type of materials to be used and Australian Standards</p> <p>1.5. Quantities of materials required are calculated from plans or work instructions or by measuring the fixture opening</p> <p>1.6. Tools and equipment appropriate to the fixing method are identified</p>
2. Prepare for work	<p>2.1. Work sequence is determined in a logical order to suit the job</p> <p>2.2. Tools, equipment and materials are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</p> <p>2.3. Components of the shower screen/wardrobe door are checked against specifications or job order for: size, quantity, finish and profile</p>
3. Fabricate and install shower screen/wardrobe door	<p>3.1. If required, aluminium frame is fabricated in accordance with workplace procedures or industry practice</p> <p>3.2. Fittings are attached to screen in accordance with workplace procedures or industry practice</p> <p>3.3. Shower screen/wardrobe door is installed in shower opening/wardrobe in accordance with workplace procedures or industry practice</p> <p>3.4. Shower screen is waterproof sealed in accordance with workplace procedures or industry practice</p>
4. Complete work	<p>4.1. Shower screen/wardrobe door is inspected for quality of work and repaired, refabricated or reinstalled as required in accordance with workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>procedures</p> <p>4.2. Material which can be reused is collected and stored</p> <p>4.3. Waste and scrap material is removed for disposal or recycling as required</p> <p>4.4. Work area is cleaned and rubbish disposed of as appropriate</p> <p>4.5. Tools, equipment and unused materials are cleaned and removed and stored appropriately</p> <p>4.6. Workplace documentation is completed in accordance with workplace requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding reworking and wastage
- use the limited workplace technology related to the fabrication and installation of shower screens and wardrobe doors

Required knowledge

- workflow in relation to the fabrication and installation of shower screens and wardrobe doors
- characteristics of materials used and uses of products produced
- workplace safety system requirements related to the fabrication and installation of shower screens and wardrobe doors
- identification of equipment, processes and procedures
- relevant Australian Standards

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Plan the fabrication and installation of shower screens and wardrobe doors
- Interpret work order/job instruction and locate and apply relevant information to fabricate and install shower screens and wardrobe doors
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum, demonstrate the ability to:
 - measure for installation each of sliding, pivot, bi-fold, semi-frameless and frameless shower screens and sliding wardrobe doors
 - work from product specification data sheets
 - identify and select product materials
 - select glass in accordance with AS1288
 - fabricate frame and sash components, including cutting, tooling and drilling
 - identify, select and install component hardware including weather seals, wheels, hinges, guides and handles
 - assemble frames, including glass and gaskets
 - install shower screens and wardrobe doors
 - calculate the cost of shower screens and wardrobe doors
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Shower screen/wardrobe door glass, aluminium framing material, fixtures, waterproof sealant, workplace operating procedures, personal protective equipment and

EVIDENCE GUIDE	
	an appropriate work area.
Method of assessment	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment may be in conjunction with assessment of other relevant units of competency.</p>
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context	<ul style="list-style-type: none"> • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the fabrication and installation process • OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures • Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements • Work is generally performed individually, with general supervision and may be part of a production process
Shower screens are glass panels and may include:	<ul style="list-style-type: none"> • framed • semi-frameless and frameless screens • sliding screens • pivot screens and returns
Wardrobe doors	Wardrobe doors may be fitted with safety vinyl backed mirror and textured vinyl coated board
Tools and equipment may include:	<ul style="list-style-type: none"> • power saws • pneumatic • hydraulic and manual presses • tooling • drills • screwdrivers and rubber mallets and general glazing tools • spirit and laser levels
Materials are to include but are not limited to:	<ul style="list-style-type: none"> • aluminium shower screen and wardrobe extrusions • laminated • toughened and organic coated glass

RANGE STATEMENT	
	<ul style="list-style-type: none"> • vinyl backed mirror • textured vinyl board • glazing and bump rubbers • shower screen • wardrobe hardware and sealants
Fittings may include:	<ul style="list-style-type: none"> • wheels • hinges • handles • pivot blocks • corner blocks and fasteners
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • gauntlets • gloves • safety glasses • hard hats • safety footwear • aprons and overalls
Information and procedures	<ul style="list-style-type: none"> • Workplace procedures relating to the fabrication and installation of shower screens and wardrobe doors • Equipment or tool manufacturers' specifications and operational procedures • Work instructions including job sheets, plans, drawings and designs • Safety standards include personal protective equipment, OHS regulations and enterprise requirements • AS1288

Co-requisite units

Co-requisite units		

MEM05010C Apply fabrication, forming and shaping techniques

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit of competency covers applying fabrication, forming and shaping of a wide variety of shapes and products undertaken by an Engineering Tradesperson - Fabrication using a variety of forming and shaping techniques. The fabrication, forming and shaping is done to specifications interpreted from technical drawings and job specifications using a variety of tools and equipment.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency applies to fabrication, forming and shaping of plate, sheet and tubular ferrous and non-ferrous metal to specified measurements, tolerances and shapes. Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boilermaking or sheet metal work.</p> <p>This unit has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in fabrication, forming and shaping.</p> <p>Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures.</p> <p>This unit includes the ability to produce a wide range of shapes and products such as pipework, chamfers, cylinders, cones, angles, hoppers, ductwork, 'square to round', 'transitions', 'lobster backs' and all forms of tubular shapes, including hand rails, reticulation pipework and mufflers.</p> <p>Materials may include ferrous and non-ferrous and non-metallic materials. A variety of tools and equipment may be used including presses, shapers, benders, rollers and drop hammers.</p> <p>If heating or thermal cutting is required, MEM05007C Perform manual heating and thermal cutting should be accessed.</p> <p>Where marking off/out skills are required, then MEM12007D Mark off/out structural fabrications and shapes should be selected. Where welding is required, relevant welding units should be selected.</p>
--------------------------------	--

	<p>This unit does not cover repetitive fabrication, bending and shaping of metal and non-metallic materials by production workers, trades assistants etc. such as where the bending or shaping equipment has been pre-set and the material to be fabricated, formed or shaped has been pre-marked up or pre-cut to size. This unit is also not intended to apply in situations where products or shapes are merely bent using hand tools or equipment.</p> <p>Band: A</p> <p>Unit Weight: 8</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and set up forming/shaping equipment for a specific operation	1.1. Most appropriate tools and equipment are selected 1.2. Equipment is correctly set up and adjusted for operation to standard operating procedures 1.3. Allowances for shrinkage, thickness and inside/outside measurements are correctly made
2. Operate forming/shaping equipment	2.1. Machine is safely started up and shut down to standard operating procedures 2.2. Material and safety guards are correctly positioned. 2.3. Equipment is correctly operated and adjusted
3. Form and shape material	3.1. Material is levelled, straightened, rolled, pressed or bent to specifications/drawings using fabrication techniques 3.2. Correct hot or cold forming procedures are followed 3.3. Final form/shape is checked for compliance to specification and adjusted as necessary to standard operating procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- selecting tools and equipment
- setting up and adjusting equipment
- calculating allowances
- taking measurements
- starting up and shutting down the machine
- positioning material
- positioning safety guards
- obtaining drawings and/or specifications
- selecting the most appropriate forming/shaping process to achieve the required size and specification
- forming/shaping material to size and specification

REQUIRED SKILLS AND KNOWLEDGE

- checking the final form/shape of the object for conformance with specifications
- reworking the object to ensure conformance with specifications
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information

Required knowledge

Required knowledge includes:

- variety of hot and cold forming/shaping processes
- machines, tools and/or equipment required to perform forming/shaping processes
- reasons for selecting chosen tools, equipment and processes
- adjustments that can be made to the equipment and the effect of adjustments on the object being formed/shaped
- allowances when forming/shaping materials
- sources of data relating to allowances
- startup and shutdown procedures
- the material positioning/feeding requirements
- the location and function of all safety guards
- procedures for the forming/shaping process
- defects in formed/shaped materials
- defects that can be rectified by further work/adjustment
- hazards and control measures associated with undertaking fabrication, forming and shaping, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply fabrication, forming and shaping techniques to meet specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:

- examining drawings and specifications to determine correct equipment to be used and sequence of fabrication, forming and shaping processes
- correctly identifying any specified tolerances
- correctly calculating allowances for shrinkage, thickness and inside/outside measurements
- setting up and safely operating equipment to ensure forming and shaping outcome is to specifications
- ensuring equipment is shut down and made safe
- carrying out hot and cold forming processes safely and to specifications including levelling, straightening, rolling, pressing or bending.

Context of and specific resources for assessment

This unit has been developed to support training in and recognition of trade level competency in fabrication, forming and shaping as applied to a sheet metal or metal fabrication environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.

The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Method of assessment

Typically, persons engaged in Engineering Tradesperson - Fabrication work are required to exercise fabrication, forming and shaping skills and techniques across a range of jobs and specifications.

EVIDENCE GUIDE

	<p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying fabrication, forming and shaping techniques or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT	
regional contexts) may also be included.	
Tools and equipment	<p>Tools and equipment may include:</p> <ul style="list-style-type: none"> • presses • shapers • benders • rollers • drop hammers
Material	Material may include ferrous and non-ferrous and non-metallic substances
Fabrication techniques	Fabrication techniques may include measurements and calculations associated with allowances for shrinkage, thickness and inside/outside measurements
Final form/shape	<p>Final form/shape may include:</p> <ul style="list-style-type: none"> • pipework • chamfers • cylinders • cones • angles • hoppers • ductwork • 'square to round' • 'transitions' • 'lobster backs' • all forms of tubular shapes, including hand rails, reticulation pipework and mufflers

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. The locations of welds are identified in accordance with standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Settings and consumables are selected to suit application.
4. Perform routine welding using GTAW	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- setting up welding equipment
- welding with GTAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- using measurement skills for joint preparation and routine GTAW

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- properties and characteristics of materials and consumables
- equipment and equipment settings
- fuel gas properties and applications
- post welding treatments

REQUIRED SKILLS AND KNOWLEDGE

- weld characteristics
- safe welding practices
- use and application of personal protective equipment for routine GTAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform routine gas tungsten arc welding (GTAW).

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with carrying out routine gas tungsten arc welding or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Guidance information for

EVIDENCE GUIDE**assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials	Mild and low carbon steel
Prepared	Preheating, setting up jigs, fixtures, clamps, joint preparation
Equipment	Hoses, welding leads and gas shrouds, electrodes, gas regulator, liners, contact tips
Consumables	Tungsten electrodes, filler wire, shielding gas
Cleaned	Slag, spatter

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- setting up welding equipment
- welding with GMAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instruction
- using measurement skills relating to joint preparation and routine GMAW

Required knowledge

Look for evidence that confirms knowledge of:

- different current and voltage settings, gas flow rates wire diameters, wire feed speed and other variables to suit typical situations.
- material and equipment preparation
- properties and characteristics of materials and consumables
- equipment and equipment settings

REQUIRED SKILLS AND KNOWLEDGE

- fuel gas properties and applications
- post-welding treatments
- weld characteristics
- safe welding practices
- use and application of personal protective equipment for routine GMAW

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and prepare installation site	<ul style="list-style-type: none">1.1. Site is checked for correct location, dimension and levels, etc. using appropriate measuring equipment and standard refrigeration/air conditioning practices.1.2. Non-compliance with specification is reported to appropriate authority.1.3. Alteration/correction is undertaken with approval of appropriate authority.1.4. All surfaces, materials and components are prepared for use.
2. Install refrigeration/air conditioning plant and equipment	<ul style="list-style-type: none">2.1. All work is carried out safely and in accordance with site procedures and to relevant standards.2.2. Refrigeration/air conditioning plant and equipment/components are organised for correct sequential installation.2.3. Refrigeration/air conditioning plant and equipment/components are installed in conformance with manufacturers' and site specifications.2.4. Routine modifications/alterations of the refrigeration/air conditioning plant and equipment are undertaken to standard operating procedures where required.2.5. Refrigeration/air conditioning plant and equipment are levelled, aligned, coupled and connected in accordance with specifications.2.6. The refrigeration system is charged with refrigerant and lubricant in accordance with standard operating procedures.2.7. The site is cleaned and cleared of all debris and left in a safe state.
3. Start up refrigeration/air conditioning plant and equipment and check operation	<ul style="list-style-type: none">3.1. Start-up procedure is developed for the refrigeration/air conditioning plant and equipment.3.2. The refrigeration/air conditioning plant and equipment is operated and assessed for conformance to specification.3.3. Non-conformances and system faults are identified, and appropriate action/adjustments are taken to specification.3.4. All reports and documentation are completed correctly to required specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information
- checking the site for correct location, dimensions and levels
- detecting and reporting non-conformance to specifications
- preparing surfaces for installation
- checking for conformance to specifications
- preparing plant for start-up
- adjusting refrigeration plant and equipment
- using appropriate tools, techniques and equipment

Required knowledge

Look for evidence that confirms knowledge of:

- procedures for non-compliances
- procedures for checking the refrigeration/air conditioning plant and associated equipment
- procedures for making alterations, corrections or adjustments to the refrigeration/air conditioning plant and associated equipment
- correct sequential installation of all components
- methods of fixing/fastening and locating/holding the components
- procedures for checking refrigeration systems for leaks
- procedures for checking refrigeration/air conditioning plant and associated equipment prior to start-up
- procedures for adjusting the refrigeration/air conditioning plant and associated equipment to specification
- codes and regulations relevant to the refrigeration/air conditioning industry including environmental and ozone and greenhouse substance legislation
- hazards and control measures associated with installing refrigeration and/or air conditioning plant and associated equipment, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to install refrigeration and air conditioning plant and equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with installing refrigeration and air conditioning plant and equipment or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

EVIDENCE GUIDE**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Measuring equipment

Lasers, dumpy levels etc.

Relevant standards

- Australian standards
- Building codes
- Air conditioning/refrigeration standards
- Local authority standards
- Environmental standards
- Greenhouse emission regulations

Refrigeration/air conditioning plant and equipment/components

Compressors, evaporators, condensers, valves, controllers, fans, solenoids, sensors, thermostats, switches, recorders, etc.

Appropriate action

In accordance with urgency requirements to address equipment failure and/or personnel danger

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the installation of pipework and pipework assemblies	<p>1.1. Quantity and type of pipework and pipework assemblies are selected according to specifications.</p> <p>1.2. The appropriate sequence for the installation of pipework and pipework assemblies is determined according to the installation type and specifications and other applicable factors.</p> <p>1.3. The work area is prepared for installation of pipework and pipework assemblies.</p>
2. Prepare pipework and pipework assemblies for assembly	<p>2.1. Pipework is cleaned to standard operating procedures.</p> <p>2.2. Pipework and assemblies are purged to standard operating procedures.</p> <p>2.3. Pipework and assemblies are capped/sealed.</p>
3. Install pipework and assemblies	<p>3.1. Enclosures/hangers/support systems are installed without damage or distortion to the surrounding environment or other services.</p> <p>3.2. Pipework and assemblies are installed without damage or distortion to pipework, assemblies or surrounding environment or other services.</p> <p>3.3. Pipework is leak tested to standard operating procedures.</p> <p>3.4. All ancillary devices and materials are installed to specification according to standard operating procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following information on specifications, standard operating procedures and other applicable reference documents
- planning and sequencing installation
- preparing the site
- preparing joining surfaces

REQUIRED SKILLS AND KNOWLEDGE

- purging pipework and assembly
- capping and sealing pipework and assembly
- installing enclosure/hanging /supporting assemblies
- assembling and installing pipework and ancillaries
- testing installed pipework and rectifying leaks

Required knowledge

Look for evidence that confirms knowledge of:

- installation techniques
- site and safety requirements
- cleaning procedures and the applications and precautions for using solvents/cleaning material
- purging techniques, applications and precautions
- capping/sealing pipework and assembly methods
- identification of location/layout of pipework and assemblies and application and characteristics of enclosure/hanging/supporting systems
- pipework, ancillary installation and joining procedures
- leak testing applications and uses
- regulations and legislative requirements
- hazards and control measures
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to install pipework and pipework assemblies in accordance with standard operating procedures. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with installing pipework and pipework assemblies or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

EVIDENCE GUIDE**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Pipework and pipework assemblies

- Ferrous, non-ferrous, plastic, etc.
- Variety of sizes and or wall thickness
- Variety of joining systems such as collars, unions, flanges, etc.

Enclosures

Metal and PVC

Hangers and support systems

Pipe/tube bundle support, ties, unistrut, trays, ladder racks, ducts etc.

Leak test

Soapy water, water immersion, compressed air

Ancillary devices and materials

Insulation materials, valve control systems, etc.

Legislation and regulations

Building regulations, gas/fluid pipeline regulations

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess refrigeration system operation	<p>1.1.Refrigeration system operating principles and terminology are applied to assessment activities.</p> <p>1.2.All <i>relevant information</i> is obtained and correctly interpreted prior to the commencement of work on the refrigeration system.</p> <p>1.3.Refrigeration system checks are undertaken safely in accordance with standard operating procedures, relevant codes and regulations.</p> <p>1.4.Appropriate operating procedures are developed as required.</p> <p>1.5.Pressures and temperatures are correctly determined and recorded.</p> <p>1.6.Faults are correctly isolated to component level and <i>appropriate corrective action</i> is determined.</p> <p>1.7.The refrigeration system is checked for leaks.</p> <p>1.8.The refrigeration system is checked for <i>contamination</i>.</p>
2. Recover refrigerant and evacuate system	<p>2.1.The <i>refrigerant</i> in the system is recovered in accordance with standard operating procedures, codes and regulations.</p> <p>2.2.The refrigerant recovered from the refrigeration system is contained in accordance with the <i>relevant codes and regulations</i>.</p> <p>2.3.The refrigeration system is evacuated in accordance with standard operating procedures, codes and regulations.</p>
3. Charge the refrigeration system	<p>3.1.The refrigeration system is charged with the correct refrigerant in accordance with standard operating procedures.</p> <p>3.2.The appropriate lubricating oil is added to the refrigeration system in accordance with standard operating procedures.</p> <p>3.3.The refrigeration system is checked for leaks.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- developing operating procedures for equipment as required
- selecting correct refrigerant for a given system
- obtaining and interpreting drawings, instructions, specifications, procedures, codes and regulations
- testing and checking refrigeration components and systems including electrical safety checks and tests
- checking for conformance to specifications
- undertaking numerical operations within the scope of this unit
- determining pressures and temperatures
- documenting test results and procedures undertaken
- using equipment and test techniques
- identifying faulty components and system contamination
- applying safety procedures, standard operating procedures and legislative requirements to all work undertaken
- selecting appropriate materials, equipment and solutions for specific refrigeration systems

Required knowledge

Look for evidence that confirms knowledge of:

- operating principles of refrigeration systems
- characteristics, properties and operating specifications of each type of refrigerant
- safety precautions and work practices to be undertaken when handling or working with refrigerants
- methods of identifying stored refrigerants
- methods of identifying the type of refrigerant used in refrigeration systems
- relevant codes and regulations applying to refrigeration systems
- procedures and safety precautions for testing/checking refrigeration systems
- corrective actions for system and component faults including appropriate basic electrical safety checks
- types of leak detection equipment/techniques and their applications
- causes of contamination in refrigeration systems and their effect on refrigeration system performance
- procedures, tools and equipment to be used to clean up contaminated systems
- care and use of vacuum pumps
- tools, techniques and equipment required to carry out recovery procedures

REQUIRED SKILLS AND KNOWLEDGE

- procedures for storing/disposing of recovered refrigerant
- consequences of releasing quantities of refrigerant into the atmosphere
- procedures for charging refrigeration systems
- correct refrigerant for a range of given applications
- tools, techniques and equipment required to charge a refrigeration system with refrigerant
- precautions to be taken when charging by various methods, refrigeration systems with refrigerant
- procedures for checking level and adding lubricating oil
- properties and uses of refrigeration oil
- hazards and control measures associated with handling refrigerants, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to test, recover, evacuate and charge refrigeration systems. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the assessment, evacuation and charging of refrigeration systems, or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant information	Manufacturers' technical data, pressure temperature charts, operating manuals
Appropriate operating procedures	In the case where specific equipment does not have standard operating procedures
Appropriate corrective action	Isolation and tagging of faulty components, repair and/or replacement
Contamination	Moisture, non-condensables, solids, acids etc.
Refrigerant	All refrigerants including CFCs, HCFCs, HFCs, natural refrigerants, ammonia, etc.
Relevant codes and regulations	Australian Standards Refrigeration and Air Conditioning codes of practice, relevant ozone and greenhouse substance legislation

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required for a service technician to complete mechanical inspection, testing and maintenance tasks on installed gaseous fire suppression systems. All work in this area must be completed in accordance with relevant legislative, industry, customer and organisational requirements, including policies and procedures relating to ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) emissions and occupational health and safety (OHS).

Note: The service technician is not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state and territory regulations). This unit of competency does **not** cover **all** requirements of AS 1851.

Application of the Unit

Application of the unit

This unit of competency supports one or more extinguishing agent handling licences prescribed under the *Ozone Protection and Synthetic Greenhouse Gas Management Act 1989*.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| <p>1 Interpret and comply with legal and industry requirements relating to service operations.</p> | <p>1.1 Apply knowledge and understanding of legislative requirements, including relevant state and territory building codes, manufacturer documentation and Australian standards to work procedures and clarify where necessary with relevant persons.</p> <p>1.2 Apply knowledge and understanding of ODS and SGG legislative and industry requirements to inspect and test gaseous fire suppression systems.</p> <p>1.3 Apply knowledge and understanding of the operation of fire protection systems to determine system key functional requirements and operation within design limitations.</p> <p>1.4 Identify potential and actual breaches of legislative and industry requirements and take action according to organisational requirements, and ODS, SGG and OHS policies and procedures.</p> |
| <p>2 Identify requirements and components of the gaseous fire suppression system.</p> | <p>2.1 Identify gaseous fire suppression system application and method of operation.</p> <p>2.2 Identify and locate system components of the gaseous fire suppression system according to function, manufacturer manuals, Australian standards and installer documentation.</p> <p>2.3 Verify system layout is in accordance with installation drawings.</p> <p>2.4 Identify isolation devices for gaseous fire suppression systems and interface controls to other systems.</p> <p>2.5 Identify potential and actual breaches of the gaseous fire suppression equipment and system performance according to Australian standards, relevant state and territory building codes, and manufacturer documentation.</p> |
| <p>3 Prepare to inspect, test and maintain gaseous fire suppression systems.</p> | <p>3.1 Organise all necessary work permits prior to entering customer premises.</p> <p>3.2 Advise relevant persons and occupants of protected areas and areas surrounding test site, of intended test and procedures required by Australian standards and manufacturer</p> |

ELEMENT**PERFORMANCE CRITERIA**

- recommendations.
- 3.3 Assess system and surrounding work area for *hazards*.
- 3.4 Identify and assemble *tools, equipment and testing devices* for inspect, test and maintain procedures according to *work procedures* and *organisational requirements*.
- 3.5 Switch alarm signalling equipment (ASE) to test mode where *back-to-base facilities* transmit a signal to monitoring centre during test tasks.
- 3.6 Physically isolate equipment and gaseous fire suppression function to ensure testing or maintenance procedures do not cause discharge of extinguishing agent.
- 3.7 Electrically isolate equipment and interface controls to other systems so no alarms are unduly generated.
- 3.8 Install and calibrate test equipment to verify operation of components and system.
- 4 Inspect installed gaseous fire suppression system.
- 4.1 Identify and locate *system components* of gaseous fire suppression system according to function and manufacturer manuals.
- 4.2 Complete *mechanical inspection tasks* specified for *maintenance schedule periods* described in the current Australian standards, manufacturer specifications and procedures, service manual instructions and service bulletins.
- 4.3 Follow all safety procedures during inspection.
- 4.4 Complete *documentation*, record inspection results and report faulty equipment according to Australian standards, *work procedures*, technical specifications and *customer requirements*.
- 5 Test installed gaseous fire suppression system.
- 5.1 Complete *mechanical test tasks* specified for maintenance schedule periods described in the current Australian standards, manufacturer specifications and procedures, service manual instructions and service bulletins.
- 5.2 Follow all safety procedures during testing.

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|--|--|
| | 5.3 Complete documentation , record test results and report faulty equipment according to Australian standards, work procedures , technical specifications and customer requirements. |
| 6 Conduct preventive maintenance on installed gaseous fire suppression system. | <p>6.1 Complete the mechanical preventive maintenance tasks specified for maintenance schedule period described in the current Australian standard, according to legislative requirements, manufacturer specifications and procedures, service manual instructions and service bulletins.</p> <p>6.2 Repair or replace faulty equipment according to Australian standards, work procedures, technical specifications and customer requirements.</p> <p>6.3 Organise transportation and refilling of gaseous agent containers by authorised refilling station.</p> <p>6.4 Follow all safety procedures during preventive maintenance.</p> <p>6.5 Complete documentation and record preventive maintenance results, repairs and replacements of faulty equipment according to Australian standards, work procedures, technical specifications and customer requirements.</p> |
| 7 Reinstate installed gaseous fire suppression system. | <p>7.1 Reinstate installed gaseous fire suppression system to fully operational state.</p> <p>7.2 Leave customer premises in a clean and tidy condition on completion of work.</p> |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- use hand and power tools safely and with dexterity
- conduct visual mechanical inspection, test and maintenance tasks as specified in AS 1851
- handle and transport gaseous containers according to legislation (including ODS and SGG requirements) and manufacturer and work procedures
- identify if gaseous agent is still suitable for existing occupancy risk

- operate standardised control functions on a fire alarm panel that interfaces with the gaseous system to conduct functional tests as specified in AS 1851
- operate actuation control devices to determine that operation is within design parameters for installed equipment
- conduct function system tests with other system interfaces as specified in AS 1851
- conduct routine mechanical maintenance on equipment as specified in AS 1851
- interpret information on engineering drawings, such as installation drawings
- verify visually that system complies with original installation requirements
- operate manual controls of gaseous fire suppression system
- remove and replace container actuation control devices (note: the technician may require manufacturer endorsement for specific actuation control devices)
- remove and replace containers from container bank manifold
- report and record information neatly and legibly when completing documentation
- plan and organise work in order to estimate time to complete activities and prioritise tasks
- apply language, literacy and numeracy skills to:
 - communicate with others in a clear and concise manner in verbal, non-verbal and written modes
 - read, understand and comply with work instructions and specifications
 - read, understand and record measurements
- use appropriate workplace housekeeping procedures
- use effective customer service skills and relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge:

- key features of legislation, regulations and standards, including ODS and SGG, applicable to inspecting, testing and maintaining gaseous fire suppression systems
- implications of **not** applying legislative requirements to job functions
- action to take when a breach of OHS, ODS and SGG or other policies occurs
- reasons for preventing ODS and SGG emissions in the workplace
- industry best practice methods used to isolate actuation control devices to prevent ODS and SGG emissions in the workplace
- extent to which pressures and liquid levels in extinguishing agent containers vary according to temperature change
- container handling, moving and transporting requirements
- pressures generated during release of gaseous agents, pressure rating requirements of pipework and fittings, and the need for adequate support bracing
- principles of operation of gaseous agent discharge nozzles
- difference between various types of extinguishing gaseous agents used
- operation of different types of equipment used to store and release gaseous extinguishant agent
- fire suppressant action of gaseous agents in terms of smothering, cooling and reacting chemically with the fire radical
- concentration and holding time requirements of various gaseous agents to extinguish a fire in relation to flooding factor and agent storage requirements
- how building structures, services and service penetration within and through protected area enclosures influence the holding time of a gaseous agent
- occupational hazards of gaseous agent in terms of:
 - no observable adverse effect level (NOAEL)

- lowest observable adverse effect level (LOAEL)
- by-products of combustion associated with gaseous agent in a fire condition
- various gaseous fire suppression agents and their operation, including total flooding and local application
- operating principles of lock-off, directional and pressure release valves
- operating principles of pneumatic and mechanical actuation systems interfaced with gaseous systems
- operating principles of fire alarm components interfaced with gaseous fire suppression system
- working principles and relevant Australian standards in respect of gaseous fire suppression systems
- relevant international codes of practice
- safety requirements relevant to inspect, test and maintain procedures
- Environment Protection Authority, ODS and SGG emission requirements
- relevant federal, state or territory legislation that affects organisational operations, including:
 - anti-discrimination and diversity
 - equal employment opportunity
 - industrial relations.

KEY COMPETENCIES

The seven key competencies represent generic skills considered necessary for effective participation by an individual in the workplace.

Performance level 1 - at this level the candidate is required to undertake tasks effectively.

Performance level 2 - at this level the candidate is required to manage tasks.

Performance level 3 - at this level the candidate is required to use concepts for evaluating and reshaping tasks.

Key competency	Example of application	Performance level
How are ideas and information communicated?	Gather information from a number of sources, including regulatory, manufacturer, organisational and customer sources, to enable accurate inspecting, testing and maintenance activities to occur.	2
How can information be collected, analysed and organised?	Discuss and confirm customer requirements and complete administrative documentation.	2
How are activities planned and organised?	Plan mechanical inspection and maintenance activities to assemble appropriate tools and hardware for on-site services and organise work schedules to suit customer and organisational requirements.	2

Key competency	Example of application	Performance level
How is teamwork used?	Apply consultative and collaborative approaches through support and assistance provided to customers and work groups.	1
How are mathematical ideas and techniques used?	Apply mathematical techniques to on-site mechanical inspection, test and maintenance tasks.	2
How are problem-solving skills applied?	Identify potential problems throughout mechanical inspect and test activities especially with regard to ambiguous information received from information sources, and identify processes to be followed when unusual faults are detected.	3
How is the use of technology applied?	Demonstrate sound technical knowledge of equipment functions to allow accurate inspection, testing and maintenance to occur.	2

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

- Competency in this unit underpins competency in other aspects of the candidate's role in managing work tasks.
- This unit could be assessed on its own or in combination with other units of competency relevant to the job function.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Competency is to be demonstrated through at least one practical demonstration covering the full range of performance criteria.
- Type of gaseous fire suppression system tested should correlate to the workplace setting of the candidate.
- Ability to transfer skills to other situations

described in the range statement may be inferred from this assessment. (Oral questioning may be used to provide evidence of this ability.)

- A person who demonstrates competency in this unit must be able to provide evidence of:
 - locating, interpreting and applying relevant information, standards and specifications
 - complying with OHS and ODS and SGG regulations (where required) and state and territory legislation applicable to workplace operations
 - complying with organisational policies and procedures, including quality requirements
 - communicating and working effectively and safely with others.
- In a minimum of two different settings:
 - identifying potential risks and hazards
 - identifying risk reduction measures
 - adhering to safety procedures during inspect, test and maintain procedures
 - identifying installed gaseous fire suppression system
 - identifying and locating system components
 - identifying, selecting and using tools, equipment and materials effectively to perform inspect, test and maintain procedures on an installed gaseous fire suppression system
 - matching installed system to installation drawings
 - identifying isolation devices and interface controls to other systems
 - switching alarm signalling equipment to test mode
 - physically isolating equipment and gaseous fire suppression system
 - electrically isolating equipment and interface controls to other systems
 - installing and calibrating test equipment
 - completing specified mechanical inspection tasks, documenting results and reporting faulty equipment
 - completing specified mechanical test tasks,

Specific resources for assessment

documenting results and reporting faulty equipment

- completing specified mechanical preventive maintenance tasks, repairing or replacing faulty equipment and documenting results
- reinstating system to operational state
- completing workplace housekeeping requirements.

Context of assessment

- The following resources should be available:
 - access to customer premises or a simulated workplace environment
 - assessment documentation
 - all necessary tools, specialist equipment, manuals and relevant documentation, including ODS and SGG policies and work procedures
 - training and assessment record books.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.
- Assessment processes and techniques must be culturally appropriate, and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
- For valid and reliable assessment of this unit, competency should be demonstrated over a period of time and be observed by the assessor (or assessment team working together to conduct the assessment).
- Competency is to be demonstrated in a range of situations, reflecting the practical requirements of the workplace which may include customer and workplace interruptions and involvement in related activities normally experienced in the workplace.
- Assessment of competency over the full range of performance criteria should be made through practical demonstrations at a customer's premises. However, at times this may not be practicable, and in these situations, the conditions normally available to the candidate may be simulated in an environment suitable

for assessment.

- Candidates should also be given the opportunity to practise and undertake self-assessment of performance before requesting formal assessment.
- Oral questioning or a written assessment may be used to assess underpinning knowledge. (In assessment situations where the candidate is offered a preference between oral questioning and written assessment, questions are to be identical.)
- Assessment of evidence should establish the candidate's ability to perform the job to the standard required in the workplace.
- Supplementary evidence may be obtained from relevant authenticated correspondence or reports from supervisors or team leaders. Other forms of evidence may include audit reports, customer survey reports and appraisal reports.
- Candidate should be encouraged to compile a portfolio of examples of completed documentation relevant to candidate's organisation. One accurate example of each completed document is suggested as sufficient to infer competency and the ability to transfer appropriate skills to each document type when required in the workplace. (Oral questioning may contribute as evidence of this ability.)
- Information derived from enterprise policies and practices must be treated as commercial-in-confidence.
- In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.
- Questioning will be undertaken in such a manner as is appropriate to the oracy, language and literacy levels of the candidate and any cultural issues that may affect responses to the questions. It will reflect requirements of the unit of competency and the work being performed.
- Where assessment is for the purpose of recognition (RCC or RPL), the evidence provided will need to be authenticated and show that it represents current competency demonstrated over a period of time.

- Performance and assessment of this unit must be carried out within the relevant requirements of the following legislative and industry framework:
 - building Acts, regulations and codes
 - Australian and international standards identified as relevant to the required inspect, test and maintain procedure
 - environmental regulations
 - manufacturer specifications
 - organisational requirements, including policies and procedures relating to ODS, SGG and OHS
 - ODS and SGG legislation, codes and regulations
 - OHS legislation, codes and regulations.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Note: Australian standards are frequently revised and users must always check for currency.

Legislative requirements may include:

- relevant federal, state and territory building Acts, regulations and codes
- OHS legislation, codes and regulations
- relevant current Australian standards, such as AS 1851, AS 1603, AS 1670, AS 4214, AS 4428 and AS 2030
- ODS and SGG legislation, codes and regulations, such as *Ozone Protection and Synthetic Greenhouse Gas Management Amendment Regulations, 2005*
- fire protection industry codes of practice
- manufacturer system manuals
- dangerous goods regulations
- licensing arrangements
- environmental regulations
- building surveyor requirements

Work procedures may include:

- other relevant legislation relating to fire protection equipment, including international, shipping and marine codes
- Australian petroleum industry requirements.
- instructions from colleagues, supervisors and managers
- specific customer requirements
- work instructions to prevent the emission of ODS and SGG in the workplace
- assignment instructions
- equipment manufacturer requirements
- reporting and documentation requirements
- personal protective equipment (PPE) requirements.

Relevant persons may include:

- team leaders
- supervisors
- managers
- colleagues
- building owners or nominated representatives
- customers.

ODS and SGG materials are listed using the format: **Product name** (other names); use. Check the latest amendments to the *Ozone Protection and Synthetic Greenhouse Gas Management Act* for the current list of ODS and SGG extinguishing agents which may include:

- **Blitz III** (HCFC Blend D); used in flooding systems
- **CFC 11** (trichlorofluoromethane, CCl₃F); may be found as a propellant in some powder fire extinguishers (this product is banned in Australia)
- **FC-2-1-8** (CEA-308, CF₃CF₂CF₃); used in flooding systems
- **FC-3-1-10** (CEA-410, C₄F₁₀); used in flooding systems
- **FC-5-1-14** (CEA-614, C₆F₁₄); used as a streaming agent
- **FE-227** (heptafluoropropane, HFC-227ea); used as a total flooding extinguishing agent - is a replacement for Halon 1301
- **FE-25** (pentafluoroethane, HFC-125); used in inerting and explosion suppression applications and retro-fit to existing Halon 1301 systems
- **FE-36** (hexafluoropropane, HFC-236fa); used in portable fire extinguishers - is a replacement for Halon 1211 and Halon 1301
- **FE-13** (trifluoromethane, HFC-23); used as a total flooding agent
- **FE-241** (chlorotetrafluoroethane, HCFC-124); used as a total flooding agent for non-occupied spaces and as a streaming agent
- **FM100**® (HBFC-22B1); used in portable fire extinguishers
- **FM200**® (heptafluoropropane, HFC-227ea); used in chemical storage areas, clean rooms, communications facilities, laboratories, museums, robotics and emergency power facilities

- **Halotron** (HCFC Blend B); used as a total flooding agent and streaming agent
- **Halon 1211** (BCF); used as a streaming agent - requires a special permit in Australia
- **Halon 1301** (BTM); used as a total flooding agent - requires a special permit in Australia
- **Halon 2402** (dibromotetrafluoroethane, $C_2Br_2F_4$); limited use in military systems - requires a special permit in Australia
- **HCFC 22** (chlorodifluoromethane, $CHClF_2$); used as a propellant in some powder fire extinguishers (this product is banned in Australia)
- **HFC 134a** (unsymmetric tetrafluoroethane, CH_2FCF_3); used as a propellant in some powder fire extinguishers
- **NAF-S-III** (HCFC Blend A); used as a total flooding agent - is a replacement for Halon 1301
- **NAF-P-III** (HCFC Blend C); used as a streaming agent - is a replacement for Halon 1211
- **NAF-P-IV** (HCFC Blend E); used as a streaming agent
- **SF6** (sulfurhexafluoride, SF_6); used as an inerting agent for sealed high voltage switchgear.

Key functional requirements
relate to interpreting the system functions within design limitations, such as:

- system is total flooding or local
- gaseous system suppression of fire mechanism in relation to the fire triangle
- gaseous flooding discharge time and holding time, and factors that can effect these key design requirements, including:
 - pipe blockages
 - nozzle location
 - orifices
 - openings in protected enclosure
- understanding of environmental and occupational hazards caused by gaseous agents.

Potential and actual breaches
could be identified by:

- direct observation
- workplace quality assurance teams.

Organisational requirements
may be located in quality assurance and/or procedures manuals and relate to:

- legal and organisational policies and guidelines
- personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to service operations
- OHS policies, procedures and programs
- ODS and SGG policies, procedures and programs

OHS policies and procedures may relate to:

- documentation and information systems and processes
- use of electronic job scheduling and communication devices.
- employer and employee rights and responsibilities
- the OHS hierarchy of control
- assessing the work site for hazards and risks prior to preparing it for the work procedure
- displaying signs and using barriers in work area
- hazard and risk identification and reporting
- risk assessment and control measures
- incident and accident investigation
- OHS audits and safety inspections
- safe operating procedures and instructions, including:
 - working safely around electrical wiring, cables and overhead powerlines
 - working safely around tools and equipment
 - working safely on ladders and raised platforms
 - risk and hazard recognition
 - emergency procedures
 - awareness of electrical hazards
 - following confined spaces procedures
 - using PPE, including:
 - safety glasses or goggles
 - safety boots or shoes
 - hard hats
 - earmuffs or plugs
 - appropriate gloves and overalls
 - sunhats
 - dust masks
- equipment maintenance and use
- use and storage of hazardous substances
- first aid.

Gaseous fire suppression systems:

- may include:
 - liquefied gas extinguishing agents
 - non-liquefied gas extinguishing agents
- amount of extinguishant in each container may be determined by weighing methods or using liquid level detectors
- gaseous extinguishants may vary according to the specific installation.

System components may include:

- fire alarm system interface components, such as:
 - anti-tamper switches
 - gaseous system controls and indicators on control and indicating equipment (CIE), such as fire indicating panels (FIP) approved to AS 1603 or AS 4428
 - positional monitoring switches
 - pressure switches
 - pyrotechnic actuators (detonators)
 - remote gas control points
 - solenoid valve actuators
- warning system equipment, such as:
 - alarm bells
 - warning lights and strobes
 - warning speakers
- fixed gaseous agent fire protection equipment, such as:
 - actuation control devices mounted (installed) on the container valve assembly to actuate the container valve, such as:
 - electrical operation: signal generated from CIE panel as part of a fire alarm detection system
 - pneumatic operation: from fire detector (typically heat)
 - mechanical operation: via signal from Local Control Station or fire detector
 - manual operation: by direct push lever or pull cable system
 - agent discharge nozzles
 - container discharge valves
 - discharge piping and fittings, and supports
 - flexible discharge hose and fittings
 - gaseous agent containers
 - pilot and slave tubes
 - fittings
 - pressure relief and directional valves
 - system lock-off valves
 - system operational indication devices.

Installation drawings may include:

- installation drawings that meet the requirements of AS 4214 and AS 1670, including:
 - 'for construction' drawings

- 'as installed' or 'as built' drawings.
- Isolation devices** may include:
- CIE including:
 - gas control panels
 - fire indicating panels
 - pneumatic isolation devices
 - mechanical isolation devices.
- Work permits** may include permits to:
- enter a work site
 - enter a restricted area within a work site
 - enter a work site at specific times
 - ensure that specific OHS requirements are met before entering a work site.
- Hazards** may include:
- ergonomic, such as incorrect manual handling methods
 - environmental, such as improper use of ODS and SGG, hazardous materials and other chemicals
 - environmental risks from ODS and SGG emissions that could be caused by:
 - transporting, storing and manual handling ODS and SGG containers
 - servicing and maintaining container valve assemblies
 - installing and removing container valve assembly, manifold connection components and actuation control devices
 - conducting interface tests between container actuation control devices, CIE and fire alarm system during inspect, test and maintain procedures
 - obstructive, such as blocked access to emergency entry or exit points
 - hazards associated with electrical or mechanical faults
 - any source of potential harm
 - any situation with a potential to cause loss
 - equipment in a work site
 - people in a work site
 - work methods, plans and procedures.
- Tools, equipment and testing devices** may include:
- hand tools, including:
 - hammers
 - pliers
 - screwdrivers
 - spanners

- spirit levels
- power tools, including:
 - battery-powered drills
 - hammer drills
- manual handling aids, including:
 - hand trucks
 - lifting straps
 - trolleys
- servicing tools and testing devices, including:
 - actuator simulators
 - barcode readers
 - container contents test equipment
 - electrical multi-meter
 - re-charging and pressurising equipment
 - safety equipment
 - scales
 - service tag punch
- fire equipment spare parts, including:
 - aerosol test smoke
 - anti-tamper seals
 - clamps
 - service tags.

Back-to-base facilities:

- monitoring equipment that is connected by alarm signalling equipment (ASE) from the CIE to a communication path (telephone line or a radio link) and then to a monitoring centre
- monitoring centres can be operated by or on behalf of a fire authority for the purposes of mobilising and directing firefighting resources to site where CIE is installed.

Mechanical inspection tasks
may include:

- actions to complete mechanical inspection tasks according to AS 1851, such as:
 - check that gas discharge pipe lock-off valve (if fitted) is correctly labelled and accessible
 - visually check that all gas containers are secure, accessible and free from damage
 - inspect each container pressure indicator to check that the pressure is within the prescribed limits
 - where there is no container pressure indicator, check that system discharged indicator has not operated

- check that all release mechanisms, including drop weights, are undamaged, accessible and unimpeded
- check gas container enclosure is accessible, adequately illuminated, ventilated and secured against unauthorised entry
- check integrity of all pneumatic piping and fittings
- check that entire protected area enclosure complies with original design
- check that all discharge nozzles are clear and unobstructed, correctly aimed and secured
- check all actuating devices for any condition that is likely to adversely affect their operation, such as excessive deposits of dust or paint coating
- inspect all areas adjacent to protected area to ensure that migration of gas does not create a hazard to personnel
- inspect protected area to check that the risk has not changed from original design, such as computer room to combustible storage and equipment
- check that all pipework, flexible connectors and manifolds are free from damage and adequately secured
- check that discharge from all pressure-relief devices and vent valves does not create a hazard to personnel
- check that all directional valves and check valves are correctly orientated
- check to determine if cylinder valve overhaul is due
- check to determine if cylinder hydrostatic pressure test is due in accordance with AS 2030.1 or AS 1851
- check age of pyrotechnic actuator to determine if due for replacement.

Maintenance schedule periods may be:

- monthly
- six-monthly
- yearly
- five-yearly
- ten-yearly.

- Documentation** may include:
- service test record logbooks
 - job cards
 - customer recommendation forms
 - service agreements
 - expense claims
 - application for credit forms
 - equipment recommendation forms
 - motor vehicle fleet cards
 - corrective action reports
 - petty cash vouchers
 - certificates of inspection
 - product documentation
 - maintenance record systems.
- Customer requirements** may include:
- providing routine services
 - providing non-routine or urgent services
 - confirming or varying service instructions
 - sighting work permits
 - sign-in and sign-out procedures for entry to or exit from premises
 - written or verbal confirmation of services provided and future maintenance schedule.
- Mechanical test tasks** may include:
- actions to complete mechanical test tasks according to AS 1851, such as:
 - simulate a system operation and confirm that discharge actuators and directional valves operate correctly
 - test operation of all mechanical manual discharge release systems
 - test operation of mechanical automatic discharge release systems not operated through CIE, such as fusible links
 - operate system lock-off valve and confirm that the system inoperative visual warning device (VWD) operates
 - confirm by weighing or other acceptable means that each gas container is charged with correct quantity of extinguishing agent
 - test to ensure correct operation of all automatic pneumatic controls
 - simulate operation of agent release detection device and confirm indication of agent release at system control panel.
- Mechanical preventive**
- actions to complete routine mechanical

maintenance tasks may include:

maintenance tasks according to AS 1851, such as:

- check operation of mechanical container actuator and lubricate as necessary
- check operation of remote mechanical release system and lubricate as necessary
- check operation of automatic mechanical release system and lubricate as necessary
- replace pyrotechnic container actuator that will exceed its listed lifetime prior to next scheduled maintenance
- clean dampers and nozzles that are subject to deposit of contaminants, such as cooking oil, hot wax, etc.

Reinstate process may involve:

- actions to conduct non-routine maintenance, such as general isolation to CIE so that building works can be done, then resetting systems after works are completed.
- confirming all interface actuation control devices are isolated and appropriate signage, documentation and lock-off are in place
- removing transport caps on actuation outlets, plugs and locking devices according to manufacturer and organisational requirements
- re-installing pneumatic actuators and pilot and slave tubes and fittings according to finalised design documentation and installation drawings
- checking pneumatic actuator and pilot and slave tubes connection are free from kinks and physically checking for tightness
- re-installing electrical and mechanical actuators according to finalised design documentation and installation drawings
- physically checking tightness of electrical and mechanical actuators and that they are correctly set to operate
- re-installing manual actuators according to finalised design documentation and installation drawings
- physically checking tightness of manual actuators and that they are correctly set to operate with safety device engaged
- activating all interface actuation control devices and removing signage, documentation and lock-off for functional testing
- advising relevant persons that system is fully

- operational and providing appropriate technical, maintenance or handover instructions on operation of system
- leaving work site clean and tidy with materials disposed of or recycled according to state or territory legislative and industry requirements.

Unit Descriptor

Unit descriptor

This unit of competency specifies fire protection industry work outcomes required to interpret and explain agreements, protocols, legislation, regulations, codes of practice and handling licences developed to control ozone layer depletion and global warming. The unit also covers assessing the impact of ozone layer depletion and global warming on fire protection industry work practices and proposing changes to work practices in the fire protection industry to tackle the threat of ozone layer depletion and global warming.

Application of the Unit

Application of the unit

This unit of competency supports the six extinguishing agent handling licences prescribed under the *Ozone Protection and Synthetic Greenhouse Gas Management Act 1989*. In particular, as a prerequisite unit, it provides introductory information to all other required units in each licence category.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1 Interpret and comply with legal and industry requirements relating to ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) extinguishing agents used in fire protection. | 1.1 Apply knowledge and understanding of agreements, protocols, legislative and regulatory requirements , fire protection industry codes of practice, and Australian standards to contribute to prevention of ODS and SGG emissions in the fire protection industry. |
| | 1.2 Identify potential and actual breaches of legal and industry requirements and take action according to organisational requirements , ODS and SGG policies and procedures, and best practice requirements. |
| 2 Identify ODS and SGG extinguishing agent handling licence, trading authorisation and usage permit requirements. | 2.1 Identify types of ODS and SGG extinguishing agent handling licences and describe entitlement of licensees . |
| | 2.2 Identify and describe the licence requirements of each licence category. |
| | 2.3 Describe trading authorisations and ODS and SGG usage permits . |
| 3 Apply an understanding of ozone layer depletion and global warming. | 3.1 Identify and explain role and function of the ozone layer . |
| | 3.2 Identify and describe factors involved with and effect of global warming . |
| | 3.3 Describe and classify ODS and SGG extinguishing agents used in the fire protection industry. |
| | 3.4 Describe effect of ozone depletion and global warming on human health, the environment and fire protection industry work practices. |
| | 3.5 Identify and assess relevant fire protection industry work practices. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- apply an understanding of ozone layer depletion and global warming to change fire protection industry work practices
- use technology to access information
- identify and act upon learning opportunities
- seek appropriate advice and constructive feedback
- apply language, literacy and numeracy skills to:
 - communicate with others in a clear and concise manner in verbal, non-verbal and written modes
 - read, understand and comply with work instructions and specifications
 - read, understand and record information.

Required knowledge:

- role of ozone layer
- effect of ODS and SGG emissions on ozone depletion and global warming
- factors involved in global warming
- ODS and SGG substances used in the fire protection industry
- effect of ozone depletion and global warming on environment and human health
- key features of legislation, regulations and standards applicable to ozone protection in the fire protection industry
- key features of the fire protection industry codes of practice
- ODS and SGG extinguishing agent handling licence features and requirements, authorisations and permit requirements
- implications of **not** applying ODS and SGG legislative requirements to the workplace
- action to take where a breach of ODS and SGG policies and procedures occurs
- relevant federal, state or territory legislation that affects organisational operations, including:
 - anti-discrimination and diversity
 - equal employment opportunity
 - industrial relations.

KEY COMPETENCIES

The seven key competencies represent generic skills considered necessary for effective participation by an individual in the workplace.

Performance level 1 - at this level the candidate is required to undertake tasks effectively.

Performance level 2 - at this level the candidate is required to manage tasks.

Performance level 3 - at this level the candidate is required to use concepts for evaluating and reshaping tasks.

Key competency	Example of application	Performance level
How are ideas and information communicated?	Gather information from a number of sources, including regulatory and organisational sources.	1
How can information be collected, analysed and organised?	Discuss and confirm ODS and SGG extinguishing agent handling requirements in the workplace.	2

Key competency	Example of application	Performance level
How are activities planned and organised?	Discuss ODS and SGG extinguishing agent handling activities to meet organisational requirements.	1
How is teamwork used?	Apply consultative and collaborative approaches through support and assistance provided to work groups.	1
How are mathematical ideas and techniques used?	Use mathematical techniques to establish ODS and SGG extinguishing agent handling requirements.	1
How are problem-solving skills applied?	Identify ambiguous information received from information sources and potential problems related to ODS and SGG extinguishing agent handling activities.	2
How is the use of technology applied?	Use technology to access relevant information about ODS and SGG extinguishing agents.	1

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

- This unit could be assessed on its own or in combination with other units of competency relevant to the job function.
- Competency in this unit underpins competency in other aspects of the candidate's role in managing their work tasks.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- A person who demonstrates competency in this unit must be able to provide evidence of:
 - locating, interpreting and explaining:
 - ODS and SGG legal requirements for handling extinguishing agents in the fire protection industry
 - extinguishing agent handling licence types, associated responsibilities, usage permits

and trading authorisations

- agreements, protocols, regulatory requirements, fire protection industry code of practice, and Australian standards relevant to extinguishing agent handling licences
- applying an understanding of ozone layer depletion and global warming to:
- discussing the effect of ODS and SGG emissions on the ozone layer and global warming
- describing the impact of ozone depletion and global warming on human health and the environment
- assessing impact on fire protection industry work practices
- proposing changes to fire protection industry work practices to meet ODS and SGG legal requirements
- taking action to respond to potential and actual breaches of ODS and SGG regulations.

Specific resources for assessment

- The following resources should be available:
 - assessment documentation
 - all necessary legislation and regulatory documents, manuals, textbooks and other relevant documentation
 - training and assessment record books.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.
- Assessment processes and techniques must be culturally appropriate, and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Context of assessment

- For valid and reliable assessment of this unit, competency should be demonstrated over a period of time and be observed by the assessor (or assessment team working together to conduct the assessment).
- Competency is to be demonstrated in a range of situations, reflecting the practical requirements

of the workplace which may include customer and workplace interruptions and involvement in related activities normally experienced in the workplace.

- Assessment of competency over the full range of performance criteria should be made.
- Candidates should be given the opportunity to practise and undertake self-assessment of performance before requesting formal assessment.
- Oral questioning or a written assessment may be used to assess underpinning knowledge. (In assessment situations where the candidate is offered a preference between oral questioning and written assessment, questions are to be identical.)
- Assessment of evidence should establish the candidate's ability to perform the job to the standard required in the workplace.
- Supplementary evidence may be obtained from relevant authenticated correspondence or reports from supervisors or team leaders. Other forms of evidence may include audit reports, customer survey reports and appraisal reports.
- Candidate should be encouraged to compile a portfolio of examples of completed documentation relevant to candidate's organisation. One accurate example of each completed document is suggested as sufficient to infer competency and ability to transfer appropriate skills to each document type when required in the workplace. (Oral questioning may contribute as evidence of this ability.)
- Information derived from enterprise policies and practices must be treated as commercial-in confidence.
- In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.
- Questioning will be undertaken in such a manner as is appropriate to the oracy, language and literacy levels of the candidate and any cultural issues that may affect responses to the questions. It will reflect requirements of the unit of competency and the work being performed.
- Where assessment is for the purpose of

recognition (RCC or RPL), the evidence provided will need to be authenticated and show that it represents current competency demonstrated over a period of time.

- Performance and assessment of this unit must be carried out within the relevant requirements of the following legislative and industry framework:
 - Acts, regulations and codes
 - Australian and international standards identified as relevant
 - environmental regulations
 - organisational requirements, including policies and procedures relating to ODS, SGG and OHS.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative and regulatory requirements may include:

- relevant agreements and protocols
- relevant federal, state and territory Acts, regulations and codes
- ODS and SGG legislation, codes and regulations, including penalties and policing
- relevant current Australian standards, such as AS 1851
- fire protection industry codes of practice
- manufacturer system manuals
- dangerous goods regulations
- licensing arrangements, such as extinguishing agent handling licence
- environmental regulations
- other relevant legislation relating to fire protection equipment, including international, shipping and marine codes
- Australian petroleum industry requirements.

Potential and actual breaches

- direct observation

could be identified by:

- workplace quality assurance teams.

Organisational requirements may be located in quality assurance and/or procedures manuals and relate to:

- legal and organisational policies and guidelines
- personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to ODS and SGG extinguishing agent handling licences
- ODS and SGG policies, procedures and programs
- documentation and information systems and processes
- use of electronic job scheduling and communication devices.

Extinguishing agent handling licence types include:

- portable fire extinguisher maintenance
- fixed system installation and decommissioning
- fixed system maintenance
- recovery, reclamation and recycling
- warehouse maintenance
- control systems installation.

Entitlement of licensees include:

- **portable fire extinguisher maintenance:**
 - to maintain a portable fire extinguisher, including to repair, pressure test and recharge an extinguisher
- **fixed system installation and decommissioning:**
 - to install a fixed firefighting system, including to:
 - install pipes and discharge nozzles and actuation mechanisms
 - charge a system after installation
 - install a system that has been charged and sealed by another person
 - to decommission a system, including to:
 - remove charge of extinguishing agent
 - dismantle the system
- **fixed system maintenance:**
 - to maintain a fixed firefighting system, including to:
 - pressure test pipework and test actuation systems
 - certify that system contains an adequate charge
- **recovery, reclamation and recycling:**
 - in the field or in a workshop, to recover an extinguishing agent from a portable fire extinguisher or firefighting system

- **warehouse maintenance:**
 - to monitor stocks of extinguishing agents in a warehouse and, as needed, to transfer an agent from a leaking storage vessel
 - **control systems installation:**
 - to install a fire control system, including any remote operation panel and actuation system.
- Trading authorisations** may include:
- holders of existing state or territory authorisations may apply for an extinguishing agent handling licence:
 - Australian Capital Territory - authorisations granted under the *Environment Protection Act 1997*
 - New South Wales - authorisations issued under clause 17 of the *Ozone Protection Regulation 1997*
 - Northern Territory - registration in the register of Qualified Persons under sub-regulation 22 (3) of the *Ozone Protection Regulations*
 - South Australia - environmental authorisation issued under section 40 of the *Environment Protection Act 1993*
 - Tasmania - individual authorisation issued under subsection 83 (1) of the *Environment Management and Pollution Control Act 1994*
 - Victoria - ozone accreditation issued under clause 16 (1) of the *Industrial Waste Management Policy (Protection of the Ozone Layer)*
 - Western Australia - accreditation issued under approval given under clause 42 (1) of the *Environment Protection (Ozone Protection) Policy Approval Order 2000*.
- Usage permits** may include:
- halon special permits:
 - granted as a written permit
 - which entitle a person to possess halon for use in personal protective equipment.
- Ozone layer:**
- ozone (O₃): a form of oxygen in which the oxygen molecule contains three atoms of oxygen instead of the usual two
 - the atmosphere contains less than 0.4 parts per million of ozone
 - about 90% of the ozone is in the upper part of the atmosphere (the stratosphere)

Global warming involves:

- most ozone is in the layer from 20 to 25 km above the earth's surface.
- carbon dioxide found in small quantities (about 350 parts per million) in the atmosphere
- carbon dioxide trapping infra-red (heat) radiation and warming the atmosphere - the greenhouse effect.

ODS and SGG materials are listed using the format: Product name (other names); use. Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents which may include:

- **Blitz III** (HCFC Blend D); used in flooding systems
- **CFC 11** (trichlorofluoromethane, CCl₃F); may be found as a propellant in some powder fire extinguishers (this product is banned in Australia)
- **FC-2-1-8** (CEA-308, CF₃CF₂CF₃); used in flooding systems
- **FC-3-1-10** (CEA-410, C₄F₁₀); used in flooding systems
- **FC-5-1-14** (CEA-614, C₆F₁₄); used as a streaming agent
- **FE-227** (heptafluoropropane, HFC-227ea); used as a total flooding extinguishing agent - is a replacement for Halon 1301
- **FE-25** (pentafluoroethane, HFC-125); used in inerting and explosion suppression applications and retro-fit to existing Halon 1301 systems
- **FE-36** (hexafluoropropane, HFC-236fa); used in portable fire extinguishers - is a replacement for Halon 1211 and Halon 1301
- **FE-13** (trifluoromethane, HFC-23); used as a total flooding agent
- **FE-241** (chlorotetrafluoroethane, HCFC-124); used as a total flooding agent for non-occupied spaces and as a streaming agent
- **FM100®** (HBFC-22B1); used in portable fire extinguishers
- **FM200®** (heptafluoropropane, HFC-227ea); used in chemical storage areas, clean rooms, communications facilities, laboratories, museums, robotics and emergency power facilities
- **Halotron** (HCFC Blend B); used as a total flooding agent and streaming agent
- **Halon 1211** (BCF); used as a streaming agent - requires a special permit in Australia
- **Halon 1301** (BTM); used as a total flooding agent - requires a special permit in Australia
- **Halon 2402** (dibromotetrafluoroethane, C₂Br₂F₄); limited use in military systems - requires a special permit in Australia
- **HCFC 22** (chlorodifluoromethane, CHClF₂); used as a propellant in some powder fire extinguishers (this product is banned in Australia)
- **HFC 134a** (unsymmetric tetrafluoroethane,

CH₂FCF₃); used as a propellant in some powder fire extinguishers

- **NAF-S-III** (HCFC Blend A); used as a total flooding agent - is a replacement for Halon 1301
- **NAF-P-III** (HCFC Blend C); used as a streaming agent - is a replacement for Halon 1211
- **NAF-P-IV** (HCFC Blend E); used as a streaming agent
- **SF₆** (sulfurhexafluoride, SF₆); used as an inerting agent for sealed high voltage switchgear.

Effect of ozone depletion and global warming on human health and the environment may include:

- constraints on aquatic ecosystems
- constraints on human immune system
- increased risk of cataracts
- increased risk of skin cancer
- inhibited growth of plants
- reduced production of agriculture
- changes to work practices, including those in the fire protection industry
- increased incidence of photochemical smog.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to complete routine monthly and six-monthly inspect and test procedures to verify that control and indicating equipment (CIE) for a fire alarm system functions as intended. The unit encompasses working safely, conducting compliance tests, conducting visual inspections, identifying non-compliance defects and mandatory reporting requirements as well as general isolations and resetting CIE.

Licence to practise: The skills and knowledge described in this unit do not require an electrical licence or an Australian Communications and Media Authority cabling licence to practise.

Note: Service technicians are **not** permitted to undertake any installation, replacement, maintenance and repair functions that are **restricted** to licensed trades or occupations (subject to relevant state and territory regulations).

Application of the Unit

Application of the unit

This unit of competency supports one or more extinguishing agent handling licences prescribed under the *Ozone Protection and Synthetic Greenhouse Gas Management Act 1989*.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- 1 Plan to conduct routine monthly or six-monthly inspect and test operations on CIE.
 - 1.1 Obtain and understand *occupational health and safety (OHS) policies and procedures* for a given work area.
 - 1.2 Follow established OHS, ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) emission risk control measures and *organisational requirements* in preparation for *maintenance activity*.
 - 1.3 Note safety *hazards* and implement established risk control measures.
 - 1.4 Organise all necessary *work permits* prior to entering customer premises.
 - 1.5 Consult *relevant persons* to coordinate work effectively with other work site staff.
 - 1.6 Determine location of *system components and materials* from specifications and *installation drawings*.
 - 1.7 Arrange inspection and test procedures to suit *CIE* in accordance with *legislative and industry requirements*, Australian standards, job schedule and manufacturer instructions.
 - 1.8 Confirm *documentation* needed to conduct tests according to *work procedures* and job requirements.
 - 1.9 Check *tools, equipment and test devices* for correct operation and safety according to *work procedures* and job requirements.
- 2 Inspect CIE.
 - 2.1 Follow ODS, SGG and *OHS policies and procedures* and apply risk control measures when inspecting *CIE*.
 - 2.2 Identify *CIE* functions in manufacturer instructions to be used to conduct routine tests in accordance with AS 1851.
 - 2.3 Identify alarm zone circuits, plant and other *system interfaces* to be isolated to allow the conduct of *maintenance activity* according to OHS, *ODS and SGG extinguishing agent* emission requirements and *work procedures*.
 - 2.4 Identify circuits and *actuation control devices* to be isolated.
 - 2.5 Conduct visual inspections as described in AS 1851 for monthly and six-monthly routine

ELEMENT**PERFORMANCE CRITERIA**

- testing.
- 2.6 Validate **CIE** inspection results against requirements described in AS 1851.
- 3 Test CIE.
- 3.1 Follow ODS, SGG and **OHS policies and procedures** and apply risk control measures when testing **CIE**.
- 3.2 Isolate circuits, **actuation control devices, back-to-base facilities** and other **system interfaces** according to **work procedures**.
- 3.3 Confirm alarm zone circuits, plant and other **system interfaces** are isolated to make sure the system cannot be activated during testing.
- 3.4 Perform monthly and six-monthly tests in accordance with AS 1851 and confirm **CIE** and components function according to manufacturer instructions, system **finalised design documentation** and **organisational requirements**.
- 3.5 Discuss and document methods to deal with unexpected situations with **relevant persons**.
- 3.6 Obtain approval of authorised **relevant persons** to deal with unexpected situations safely.
- 4 Report inspect and test findings.
- 4.1 Follow ODS, SGG and **OHS policies and procedures**, risk control measures and **work procedures** when reporting inspect and test findings.
- 4.2 Clean and make safe work site and equipment according to **work procedures**.
- 4.3 Identify and report non-compliance defects according to **work procedures**.
- 4.4 Make recommendations for rectifying defects according to **work procedures**.
- 4.5 Reset **CIE** to operational state.
- 4.6 Complete **documentation** according to **work procedures** and notify **relevant persons**.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- check routine service details of fire alarm system components and materials
- read and interpret final design documentation and manufacturer instructions
- identify work area hazards in preparation for inspection and test procedures
- select and safely use tools, equipment and materials appropriate to specific tasks
- identify and isolate zone circuits, plant, back-to-base facilities, actuation control devices and other system interfaces
- physically isolate actuation control devices to inhibit operation
- perform routine monthly and six-monthly inspect and test procedures in accordance with AS 1851
- test actuation control devices for operation and reset to operational state
- verify compliance and functionality of CIE against monthly and six-monthly schedules in AS 1851
- document test results and non-compliance defects
- reset CIE to operational state
- use appropriate workplace housekeeping procedures and remove any debris caused by inspect and test operations in the work area
- plan and organise work in order to estimate time to complete activities and prioritise tasks
- report and record information neatly and legibly
- use effective customer service skills and relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- apply language, literacy and numeracy skills to:
 - communicate with others in a clear and concise manner in verbal, non-verbal and written modes
 - read, understand and comply with work instructions and specifications
 - read, understand and record measurements.

Required knowledge:

- implications of **not** applying legislative requirements to job functions
- environmental conditions that cause actuation control devices to create false alarms
- action to take when a breach of OHS, ODS and SGG or other policies occurs
- intent of Australian standard AS 1851 in relation to CIE inspect and test operations
- methodology used to conduct AS 1851 monthly and six-monthly maintenance schedules relevant to conventional and addressable CIE
- detection and warning components connected to CIE
- local controls (LC), Local Control Stations (LCS), aural alarms, visual warning devices (VWD) and actuation control devices on fire suppression systems interfaced to CIE
- key operational principles of CIE specifically interfaced to fire suppression systems
- operation of actuation control devices
- key functional differences between a conventional and addressable CIE
- awareness of on-site work permit requirements
- selection of appropriate tools, equipment and materials for conducting monthly and six-monthly inspect and test procedures on CIE in accordance with AS 1851 procedures
- common controls and indicators on CIE
- types of electrical safeguards used to protect persons and property
- safety requirements for using tools, equipment and materials
- relevant federal, state or territory legislation that affects organisational operations, including:

- anti-discrimination and diversity
- equal employment opportunity
- industrial relations.

KEY COMPETENCIES

The seven key competencies represent generic skills considered necessary for effective participation by an individual in the workplace.

Performance level 1 - at this level the candidate is required to undertake tasks effectively.

Performance level 2 - at this level the candidate is required to manage tasks.

Performance level 3 - at this level the candidate is required to use concepts for evaluating and reshaping tasks.

Key competency	Example of application	Performance level
How are ideas and information communicated?	Discuss and confirm customer requirements and complete inspect and test documentation.	1
How can information be collected, analysed and organised?	Gather information from a number of sources, including regulatory, manufacturer, organisational and customer sources, so that accurate inspect and test activities occur.	2
How are activities planned and organised?	Plan inspect and test activities to assemble appropriate tools, equipment and test devices on-site and organise work schedules to suit customer and organisational requirements.	2
How is teamwork used?	Apply consultative and collaborative approaches through support and assistance provided to customers and work groups.	1
How are mathematical ideas and techniques used?	Apply mathematical techniques through inspect and test activities.	1
How are problem-solving skills applied?	Identify potential problems throughout inspect and test activities, especially with regard to ambiguous information received from information sources and identify processes to be followed when faults are detected.	2
How is the use of technology applied?	Demonstrate sound technical knowledge of equipment to allow accurate inspect and test activities to occur.	2

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

- Competency in this unit will underpin competency in other aspects of the candidate's role in managing their work tasks.
- This unit could be assessed on its own or in combination with other units of competency relevant to the job function.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Competency is to be demonstrated through at least two practical demonstrations covering the full range of performance criteria. The type of CIE interfaced to fire suppression systems tested should correlate to the workplace setting of the candidate.
- Ability to transfer skills to other situations described in the range statement may be inferred from this assessment. (Oral questioning may be used to provide evidence of this ability.)
- A person who demonstrates competency in this unit must be able to provide evidence of:
 - locating, interpreting and applying relevant information, standards and specifications
 - complying with site safety plan, OHS regulations, ODS and SGG regulations (where required) and state and territory legislation applicable to workplace operations
 - complying with organisational policies and procedures, including quality requirements
 - communicating and working effectively and safely with others
 - organising appropriate work permits
 - adhering to safety procedures during inspect and test procedures
 - identifying risk reduction measures
 - identifying and locating system components and materials

- identifying, selecting and using tools, equipment and test equipment
- identifying and isolating alarm zone circuits, back-to-base facilities, actuation control devices, plant and other system interfaces
- confirming circuits, plant and other system interfaces are isolated
- completing mandatory and optional test and verification requirements applicable to installed fire suppression systems
- performing test procedures on CIE interfaced to fire suppression systems
- visually inspecting fire suppression systems
- identifying and reporting non-compliance defects
- developing recommendations to rectify defects
- resetting CIE and fire suppression system to operational state without unwanted CIE outputs or alarms
- completing workplace housekeeping requirements
- creating appropriate records and documentation.
- Competency in this unit shall be demonstrated using at least two different situations involving CIE specifically interfaced to different fire suppression systems:
 - conventional fire indicating panels and microprocessor analogue fire indicating panel fire detection systems
 - fire alarm systems that comply with AS 1670.1
 - emergency warning and inter-communication systems that comply with AS 1670.4
 - fire alarm systems interfaced with activating mechanisms of a fire suppression system.
- The following resources should be available:
 - access to customer premises or a simulated workplace environment
 - assessment documentation
 - all necessary tools, specialist equipment,

Specific resources for assessment

manuals and relevant documentation

- training and assessment record books.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.
- Assessment processes and techniques must be culturally appropriate, and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.
- For valid and reliable assessment of this unit, competency should be demonstrated over a period of time and be observed by the assessor (or assessment team working together to conduct the assessment).
- Competency is to be demonstrated in a range of situations, reflecting the practical requirements of the workplace, which may include customer and workplace interruptions and involvement in related activities normally experienced in the workplace.
- Assessment of competency over the full range of performance criteria should be made through practical demonstrations at a customer's premises. However, at times this may not be practicable and, in these situations, the conditions normally available to the candidate may be simulated in an environment suitable for assessment.
- Candidates should also be given the opportunity to practise and undertake self-assessment of performance before requesting formal assessment.
- Oral questioning or a written assessment may be used to assess underpinning knowledge. (In assessment situations where the candidate is offered a preference between oral questioning and written assessment, questions are to be identical.)
- Assessment of evidence should establish the candidate's ability to perform the job to the standard required in the workplace.
- Supplementary evidence may be obtained from relevant authenticated correspondence or

Context of assessment

reports from supervisors or team leaders. Other forms of evidence may include audit reports, customer survey reports and appraisal reports.

- Candidate should be encouraged to compile a portfolio of examples of completed documentation relevant to the candidate's organisation. One accurate example of each completed document is suggested as sufficient to infer competency and ability to transfer appropriate skills to each document type when required in the workplace. (Oral questioning may contribute as evidence of this ability.)
- Information derived from enterprise policies and practices must be treated as commercial-in-confidence.
- In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.
- Questioning will be undertaken in such a manner as is appropriate to the oracy, language and literacy levels of the candidate and any cultural issues that may affect responses to the questions. It will reflect requirements of the unit of competency and the work being performed.
- Where assessment is for the purpose of recognition (RCC or RPL), the evidence provided will need to be authenticated and show that it represents current competency demonstrated over a period of time.
- Performance and assessment of this unit must be carried out within the relevant requirements of the following legislative and industry framework:
 - building Acts, regulations and codes
 - Australian and international standards identified as relevant to the required inspect and test procedures
 - environmental regulations
 - manufacturer specifications
 - organisational requirements, including policies and procedures relating to ODS, SGG and OHS
 - OHS legislation, codes and regulations
 - ODS and SGG legislation, codes and

regulations.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Note: Australian standards are frequently revised and users must always check for currency.

Occupational health and safety policies and procedures may relate to:

- employer and employee rights and responsibilities
- the OHS hierarchy of control
- assessing the work site for hazards and risks prior to preparing it for the work procedure
- displaying signs and using barriers in work area
- hazard and risk identification and reporting
- risk assessment and control measures
- incident and accident investigation
- OHS audits and safety inspections
- safe operating procedures and instructions, including:
 - working safely around electrical wiring, cables and overhead powerlines
 - working safely around tools and equipment
 - working safely on ladders and raised platforms
 - risk and hazard recognition
 - emergency procedures
 - awareness of electrical hazards
 - following confined spaces procedures
 - using personal protective equipment (PPE), including:
 - safety glasses or goggles
 - safety boots or shoes
 - hard hats
 - earmuffs or plugs
 - appropriate gloves and overalls
 - sunhats
 - dust masks
- equipment maintenance and use

Organisational requirements may include:

- use and storage of hazardous substances
- first aid.
- legal and organisational policies and guidelines
- personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to inspect and test operations for control and indicating equipment
- OHS policies, procedures and programs
- procedures and work instructions to prevent the emission of ODS and SGG in the workplace
- documentation and information systems and processes
- use of electronic job scheduling and communication devices.

Maintenance activity may include:

- actions to conduct routine maintenance according to AS 1851
- actions to conduct non-routine maintenance, such as general isolation of a system to allow building works to be completed and subsequent resetting of the system after works completed.

Hazards may include:

- ergonomic, such as incorrect manual handling methods
- environmental, such as improper use of ODS and SGG, hazardous materials and other chemicals
- environmental, including from ODS and SGG emissions that could be caused by:
 - transporting, storing and manual handling containers containing ODS and SGG agents
 - servicing and maintaining container valve assemblies
 - installing and removing container valve assembly, manifold connection components and activating mechanisms
 - conducting interface tests during commissioning, servicing and decommissioning procedures between container activating mechanisms, CIE and fire alarm system
- obstructive, such as blocked access to emergency entry or exit points
- hazards associated with electrical or mechanical faults
- any source of potential harm
- any situation with a potential to cause loss

Work permits may include permits to:

- equipment in a work site
- people in a work site
- work methods, plans and procedures.
- enter a work site
- enter a restricted area within a work site
- enter a work site at specific times
- ensure that specific OHS requirements are met before entering a work site.

Relevant persons may include:

- team leaders
- supervisors
- managers
- colleagues
- building owners or nominated representatives
- customers.

System components and materials may include:

- fire indicator panel components
- standby batteries
- remote indicating equipment, such as:
 - mimic panels
 - sub-fire indicator panels.
 - colour graphic visual display units (VDUs)
- fire detection equipment, such as:
 - data gathering control units
 - analogue and analogue addressable smoke, heat and gas detectors
- warning system equipment, such as:
 - alarm bells
 - mimic and location panels
 - warning and strobe lights
 - warning speakers
- fire suppression systems equipment, such as:
 - actuation control devices (pneumatic, electrical, mechanical and manual operation)
 - container discharge valves
 - flexible discharge hose and fittings
 - pilot and slave tubes
 - fittings
- interface equipment to other fire protection and building services systems, such as:
 - door system release controls
 - electrical interface relays and contacts
 - flow switches and pressure switches

- optical couplers
- utility shutdown devices
- solenoid valves and other activating mechanisms
- interface communication devices, such as:
 - remote public address system (PA) outputs
 - two-way radios
 - warden inter-communication phones.
- installation drawings that meet the requirements of AS 4214 and AS 1670 including:
 - 'for construction' drawings
 - 'as installed' and 'as built' drawings.

Installation drawings may include:

Control and indicating equipment (CIE) may include:

- fire indicating panels (FIP) approved to AS 1603 or AS 4428
- equipment specifically interfaced to fire suppression systems:
 - alarm operation requirements
 - dual zone operations
 - shutdown operations
 - inhibit discharge switches
 - system warning indications
 - discharge time delays
 - system operation indicators
 - inoperative status indicators
 - actuation circuit supervision indicators.

Legislative and industry requirements may include:

- relevant federal, state and territory building Acts, regulations and codes, such as *Ozone Protection and Synthetic Greenhouse Gas Management Act 1989*
- OHS legislation, codes and regulations
- relevant current Australian standards e.g. AS 1603, AS 1670, AS 1851, AS 4214 and AS 4428
- fire protection industry codes of good practice
- manufacturer system manuals
- Building Code of Australia (BCA)
- dangerous goods regulations
- licensing arrangements, such as extinguishing agent handling licence
- environmental regulations, including ODS and SGG legislation, codes and regulations
- building surveyor requirements, such as occupancy permits

Documentation may include:

- other relevant legislation relating to fire protection equipment, including international, shipping and marine codes
- Australian petroleum industry requirements.
- service test record logbooks
- manufacturer system documentation
- job cards
- customer recommendation forms
- service agreements
- expense claims
- equipment recommendation forms
- corrective action reports
- test results and test reports
- product documentation
- maintenance record system.

Work procedures may include:

- instructions from colleagues, supervisors and managers
- specific customer requirements
- assignment instructions
- equipment manufacturer requirements
- reporting and documentation requirements
- ODS, SGG and OHS requirements
- PPE requirements.

Tools, equipment and test devices may include:

- hand tools, including:
 - hammers
 - spirit levels
 - pliers
 - screwdrivers
 - spanners
- power tools, including:
 - battery drills
 - hammer drills
- manual handling aids, including:
 - hand trucks
 - lifting straps
 - trolleys
- servicing tools and test devices, including:
 - barcode readers
 - electrical multi-meter
 - hydrostatic test equipment
 - re-charging and pressurising equipment

- safety equipment
- scales
- service tag punch
- simulator actuators
- sound meters
- fire equipment spare parts, including:
 - anti-tamper seals
 - batteries
 - bulbs and globes
 - service tags.
- operating signals between CIE and building services systems, such as:
 - controls for pressurisation systems, air conditioning system shutdowns and smoke spills
 - utilities shutdown devices
 - building warning systems
 - building management systems.

System interfaces may include:

ODS and SGG materials are listed using the format: Product name (other names); use. Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents which may include:

- **Blitz III** (HCFC Blend D); used in flooding systems
- **CFC 11** (trichlorofluoromethane, CCl₃F); may be found as a propellant in some powder fire extinguishers (this product is banned in Australia)
- **FC-2-1-8** (CEA-308, CF₃CF₂CF₃); used in flooding systems
- **FC-3-1-10** (CEA-410, C₄F₁₀); used in flooding systems
- **FC-5-1-14** (CEA-614, C₆F₁₄); used as a streaming agent
- **FE-227** (heptafluoropropane, HFC-227ea); used as a total flooding extinguishing agent - is a replacement for Halon 1301
- **FE-25** (pentafluoroethane, HFC-125); used in inerting and explosion suppression applications and retro-fit to existing Halon 1301 systems
- **FE-36** (hexafluoropropane, HFC-236fa); used in portable fire extinguishers - is a replacement for Halon 1211 and Halon 1301
- **FE-13** (trifluoromethane, HFC-23); used as a total flooding agent
- **FE-241** (chlorotetrafluoroethane, HCFC-124); used as a total flooding agent for non-occupied spaces and as a streaming agent
- **FM100®** (HBFC-22B1); used in portable fire extinguishers
- **FM200®** (heptafluoropropane, HFC-227ea); used in chemical storage areas, clean rooms, communications facilities, laboratories, museums, robotics and emergency power facilities

- **Halotron** (HCFC Blend B); used as a total flooding agent and streaming agent
- **Halon 1211** (BCF); used as a streaming agent - requires a special permit in Australia
- **Halon 1301** (BTM); used as a total flooding agent - requires a special permit in Australia
- **Halon 2402** (dibromotetrafluoroethane, $C_2Br_2F_4$); limited use in military systems - requires a special permit in Australia
- **HCFC 22** (chlorodifluoromethane, $CHClF_2$); used as a propellant in some powder fire extinguishers (this product is banned in Australia)
- **HFC 134a** (unsymmetric tetrafluoroethane, CH_2FCF_3); used as a propellant in some powder fire extinguishers
- **NAF-S-III** (HCFC Blend A); used as a total flooding agent - is a replacement for Halon 1301
- **NAF-P-III** (HCFC Blend C); used as a streaming agent - is a replacement for Halon 1211
- **NAF-P-IV** (HCFC Blend E); used as a streaming agent
- **SF6** (sulfurhexafluoride, SF_6); used as an inerting agent for sealed high voltage switchgear.

Actuation control devices
(also known as actuators) may include:

- **electrical** operation: signal generated from the CIE panel as part of a fire alarm detection system
- **pneumatic** operation: from fire detector (typically heat)
- **mechanical** operation: via signal from Local Control Station or fire detector
- **manual** operation: by direct push lever or pull cable system.

Back-to-base facilities:

- monitoring equipment which is connected by alarm signalling equipment (ASE) from CIE to a communication path (telephone line or radio link) to a monitoring centre
- monitoring centres can be operated by or on behalf of a fire authority for the purposes of mobilising and directing firefighting resources to site where the CIE is installed.

Finalised design documentation may include:

- documentation that meets the requirements of AS 4214 and AS 1670, including:
 - system concentration and calculations
 - technical bulletins
 - material safety data sheets on agents and equipment

- manufacturer information.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1 Organise for moving | 1.1 Review <i>job sheet and schedule</i> to identify all job requirements |
| | 1.2 Identify and manage <i>potential risks and hazards</i> to job requirements, in accordance with <i>company requirements</i> , OHS and other relevant legislation |
| | 1.3 Select appropriate type of <i>load shifting</i> equipment and associated attachments according to job requirements to maximise efficiency and effectiveness of transportation |
| | 1.4 Ensure operator holds the appropriate licence in accordance with company requirements and relevant legislation |
| | 1.5 Select, check and fit <i>emergency and personal protective equipment</i> in accordance with job requirements, <i>manufacturers' specifications</i> , company requirements and <i>relevant legislation</i> |
| 2 Perform routine checks on load shifting equipment | 2.1 Conduct a visual check on equipment to pinpoint damage, leaks, obstructions, component wear or potential hazards |
| | 2.2 Test equipment systems in accordance with manufacturers' specifications and company requirements |
| | 2.3 Conduct service checks to ensure water, oil, fuel, air pressure and greasing are maintained at appropriate levels in accordance with manufacturers' specifications |
| | 2.4 Check emergency and personal protective equipment to ensure it is functioning adequately and provides correct operation |
| | 2.5 Check and test associated equipment (e.g. attachments) to ensure it is operational and in accordance with manufacturers' specifications |
| 3 Start and operate load shifting equipment | 3.1 Start and operate equipment in accordance with manufacturers' specifications and company requirements |
| | 3.2 Operate and drive equipment in a safe and efficient manner, in accordance with company requirements, road and traffic regulations and other relevant legislation |
| | 3.3 Maintain continuous observation of surrounding environment to identify and avoid |

ELEMENT	PERFORMANCE CRITERIA
	or minimise potential hazards
	3.4 Maintain clear communications with other relevant personnel
4 Organise for loading	<p>4.1 Identify waste to be loaded and check to ensure <i>integrity of containment</i></p> <p>4.2 Determine appropriate <i>loading method</i> in accordance with waste containment type and company requirements</p> <p>4.3 Identify potential hazards to loading and incorporate into loading method</p> <p>4.4 Park or set up equipment in a loading position which ensures efficiency and safety of loading</p> <p>4.5 Erect barriers and warning signs at loading/unloading sites to ensure safety of surrounding personnel, in accordance with company requirements and relevant legislation</p>
5 Load and unload waste	<p>5.1 Load/unload waste safely and efficiently in designated area using appropriate loading/unloading method</p> <p>5.2 Maintain integrity of load during loading/unloading</p> <p>5.3 Regulate liquid flow where waste is vacuumed to ensure maintenance of constant hose pressure</p> <p>5.4 Maintain visual checks to identify and remedy potential hazards during loading/unloading</p> <hr/> <p>5.5 Ensure load conforms to equipment capacity requirements, manufacturers' specifications and relevant legislation</p> <p>5.6 Stack or house load at destination in accordance with company requirements, manufacturers' specifications and relevant legislation</p>
6 Move waste	6.1 Move waste safely and securely in accordance with company requirements, manufacturers' specifications and relevant legislation
7 Shut down and secure load shifting equipment	<p>7.1 Park and/or store equipment in a safe location to avoid damage to equipment or obstruction of surrounding site activity</p> <p>7.2 Complete shut-down procedures in accordance with manufacturers' specifications and company requirements</p>

ELEMENT**PERFORMANCE CRITERIA**

- 7.3 Secure and store equipment to avoid unauthorised access or use
- 8 Carry out basic housekeeping and maintenance
- 8.1 *Clean equipment* to remove debris and contamination and ensure *safe and efficient operation*
- 8.2 Conduct service checks to ensure water, oil, fuel, air pressure and greasing are maintained at appropriate levels in accordance with manufacturers' specifications
- 8.3 Report any equipment faults or defects to relevant personnel
- 8.4 *Document* moving activities accurately and promptly and in accordance with company requirements

Required Skills and Knowledge

Refer to Evidence Guide

Evidence Guide

EVIDENCE GUIDE

Critical aspects of competency

- Effective organisation of equipment operation.
- Safely and efficiently loads and unloads.
- Safely and efficiently operates equipment and moves waste.

Knowledge needed to achieve the performance criteria

Knowledge and understanding are essential to apply this unit in the workplace, to transfer the skills to other contexts, and to deal with unplanned events. The knowledge requirements for this unit are listed below.

- Requirements for handling and transportation of waste.
- Waste loading/unloading and moving hazards.
- Road rules.
- Licences required for various equipment.
- Equipment load weight requirements.
- Loading and unloading methods and techniques.
- Emergency response procedures.
- Confined space procedure.
- Company requirements.
- Occupational health and safety requirements.
- Relevant industry standards.
- Relevant legislation.
- Relevant environmental regulations.
- OHS hierarchy of control.

Specific skills needed to achieve the performance criteria

To achieve the performance criteria, some complementary skills are required. These are:

- writing, following instructions and signalling
- reading and interpreting maps, plans and specifications
- equipment operation and driving
- materials handling skills
- using communications equipment (two-way radio and mobile phone)
- reading graduated device
- hazard identification
- safe and efficient work practices
- following MSDS.

Other units of competency that could be assessed with this unit

This unit could be assessed on its own or in combination with other competencies relevant to the job function, for example:

- PRMWM44B Identify wastes and hazards
- BSBCMN215B Participate in environmental work practices
- Transport and distribution units of competency.

Resources required to assess this unit

The following resources should be available:

- OHS requirements
- personal protective equipment
- site safety plan
- waste for loading/unloading
- load shifting equipment
- job sheet to determine load/unload requirements.

Gaining evidence to assess this unit

For valid and reliable assessment of this unit, the competency should be demonstrated over a period of time and be observed by the assessor (or assessment team working together to conduct the assessment). The competency is to be demonstrated in a range of situations, which may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.

Evidence of competency is best obtained by observing activities in this field and reviewing the operation of mobile plant to move waste under normal industry operating conditions. If this is not practicable, observations in realistic simulated environments may be substituted.

Consistency in performance

Assessment requires that the plan meets the objectives of the client and that it complies with industry expectations in the particular client environment. If the environment is narrowly defined or is not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of waste requirements to assess competency in moving waste using load shifting equipment.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge. (In assessment situations where the candidate is offered a preference between oral questioning and written audit, questions are to be identical.)

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

Note: All practical demonstrations must adhere to the safety and environmental regulations relevant to each state or territory.

Key competency levels

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the key competencies, although others may be added. Information below highlights how these processes are applied in this competency standard.

- | | | |
|------------------------------|---|---|
| 1 Perform the process | 2 Perform and administer the process | 3 Perform, administer and design the process |
|------------------------------|---|---|

How can communication of ideas and information be applied?	1	Communicate effectively with personnel throughout loading and unloading processes.
How can information be collected, analysed and organised ?	1	Gather information from a number of sources (including job requirements, manufacturers' specifications and company requirements) about the moving of waste using load-shifting equipment.
How are activities planned and organised ?	1	Plan detailed activities to be carried out throughout the moving of waste process.
How can teamwork be applied?	1	Work cooperatively with relevant personnel throughout the waste moving process.
How can the use of mathematical ideas and techniques be applied?	1	Perform mathematical calculations correctly on documentation.
How can problem-solving skills be applied?	1	Discuss possible problems and solutions that may arise throughout the implementation of waste moving process.
How can the use of technology be applied?	1	Demonstrate understanding of technological principles and physical skills to use appropriate equipment.

Range Statement

RANGE STATEMENT

The range statement links the required knowledge and organisational and technical requirements to the workplace context. It describes any contextual variables that will be used or encountered when applying the competency in work situations. It allows for different work practices and work and knowledge requirements as well as for differences between organisations and workplaces. The following variables may be present for this particular unit.

Appropriate person includes client, supervisor and team member.

Checking integrity of containment should include checks for contamination, drum expansion, gases, leaks, seals and spillage.

Cleaning of equipment may include high pressure water or air-hosing, shovelling, sweeping out, use of decontamination products and vacuuming.

Client/company includes all forms of business enterprises in this context including government agencies, local governments/councils, private and public companies, and residents/ratepayers.

Client requirements are found in briefing papers, letters, quality assurance documentation, tender/contract documents and verbal or written instructions.

Documentation includes but is not limited to:

- accident report
- checklists
- emergency report
- equipment used
- incident report
- maintenance requirements
- non-conformances
- run sheet
- vehicle logbook
- weighbridge docket.

Emergency and personal protective equipment must include:

- communications equipment
- eye protection
- eyewash kit
- fire extinguishers
- First Aid kit
- gloves
- overalls and protective clothing
- safety boots.

Emergency and personal protective equipment could also include:

- breathing apparatus
- emergency procedure guides
- face shield/mask
- hard hat
- hearing protection
- material safety data sheets (MSDS)
- spill kit.

Emergency response action/procedures include but are not limited to:

- clean up
- contain emergency
- equipment/plant isolation and shut-down
- evacuation
- First Aid
- make safe
- notification of authorities
- use of appropriate personal protective equipment.

Job sheet and schedule typically includes:

- emergency and personal protective equipment requirements
- job route and sequence
- site contact
- site requirements
- vehicle and associated equipment requirements
- waste type, classification, characteristics and transport requirements
- work schedule.

Load shifting equipment may include:

- dozer
- earthmoving equipment
- forklift
- loaders (tailgate, front-end and rear)
- open-bodied truck
- tankers (vacuum, pump and hook lift)
- trucks (rigid and articulated)
- windrow turners.

Loading methods may include use of Bobcat, front-end loader, high pressure vacuum loading, load by hand, shovelling and use of forklift.

Manufacturers' specifications are found in equipment specifications and operator manuals.

Performance of this unit is carried out in accordance with relevant requirements of the following:

- Australian Standards
- environmental regulations
- legislative requirements
- manufacturers' specifications
- OHS procedures
- organisational procedures
- relevant state/territory regulations.

Personal protective equipment required will be stored, cleaned, worn/fitted in accordance with company requirements, and occupational health and safety and other legislation.

Potential risks and hazards are those risks and hazards identified by the organisation that could lead to injury or illness of employees, contractors, visitors or the public; damage to plant, vehicles or property; or that could cause harm to the environment.

This relates to on-site and off-site activities (whether company owned or occupied premises, customer/client premises or public property) over which it could be expected the organisation had control. Risks and hazards may include:

- broken glass/metal
- compaction equipment
- contamination
- dust
- fire
- gases and fumes
- hazardous waste (e.g. sharps)
- injuries resulting from manual handling and repetitive work
- narrow driveways
- other vehicles and equipment
- overhanging signs
- projectiles
- spark-producing equipment
- unguarded conveyor belt
- weather.

Relevant legislation and codes cover state and federal:

- Australian Code for the Transport of Dangerous Goods by Road or Rail
- duty of care
- industrial
- industry codes of conduct
- occupational health and safety
- Australian Standards
- environmental protection legislation.

Safe operating procedures include any activity or operation conducted on site to ensure health and safety of personnel/equipment in the area.

Unit Sector(s)

RIICBS201A Conduct tack coat spraying operations

Modification History

Not applicable.

Unit Descriptor

This unit covers the conduct of tack coat spraying operations in the civil construction industry. It includes planning and preparing, preparing for spraying operations, spraying tack coat, operating hand lance, and performing operator maintenance and clean up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit

This unit is appropriate for those working in an assistant role at worksites within:

- Civil construction

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Access, interpret and apply <i>compliance documentation</i> relevant to the work activity</p> <p>1.2. Obtain and confirm <i>safety requirements</i> from the <i>site</i> safety plan and organisational policies and procedures, and apply to the allotted task</p> <p>1.3. Identify, obtain and implement signage requirements from the project <i>traffic</i> management plan</p> <p>1.4. Select <i>tools and equipment</i> to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults</p> <p>1.5. Identify <i>environmental protection requirements</i> from the project environmental management plan, and confirm and apply to the allotted task</p>
2. Prepare for spraying operations	<p>2.1. Carry out pre-operational checks in accordance with organisation, manufacturer or site authorised procedures</p> <p>2.2. Check tank for cleanliness and contaminants prior to filling, and ensure transfer connections are completed and fully functional</p> <p>2.3. Conduct all loading and unloading operations safely in accordance with manufacturer's or company instructions</p> <p>2.4. Fill spray tank and ensure adequate <i>materials</i> are made available to perform spray operations</p> <p>2.5. Identify <i>application rate</i> and translate into the relevant travel speed and pump characteristics where necessary</p> <p>2.6. Select jets and fit to spray bar to enable spraying operations</p>
3. Spray tack coat	<p>3.1. Select and modify spraying techniques <i>for tack coating</i> to meet changing work conditions and <i>types of surfaces</i></p> <p>3.2. Conduct, control and monitor spraying operations <i>of tack coat sprayer</i> to ensure that materials are sprayed to specification</p>

	<p>3.3. Carry out operations adjacent to traffic in accordance with authorised traffic management controls in a safe manner at all times</p> <p>3.4. Complete work in accordance with the agreed plan and outcomes within the operating capacities of the allocated equipment</p>
4. Operate hand lance	<p>4.1. Determine situations where hand spraying is required</p> <p>4.2. Inspect hand lance to ensure the equipment is safe and operating correctly</p> <p>4.3. Inspect and set spray jets for job</p> <p>4.4. Conduct, control and monitor hand spraying operations to ensure that materials are sprayed to specification</p> <p>4.5. Carry out hand spraying operations adjacent to traffic in accordance with authorised traffic management controls in a safe manner at all times</p> <p>4.6. Clean and store hand spraying equipment after use</p>
5. Operator maintenance and clean up	<p>5.1. Conduct inspection and fault finding in accordance with manufacturer's or organisational requirements</p> <p>5.2. Clean spray bars and lances and ensure jets are free of contaminants</p> <p>5.3. Empty and clean tank of bituminous products, in accordance with EPA and company procedures</p> <p>5.4. Carry out routine operational servicing and lubrication tasks</p> <p>5.5. Carry out minor maintenance</p> <p>5.6. Maintain records in accordance with site requirements including identification of potential and current equipment problems</p> <p>5.7. Perform work to the requirements of the organisation's environmental instructions and EPA standards</p> <p>5.8. Clear work area and dispose of or recycle materials in accordance with project environmental management plan</p> <p>5.9. Clean, check, maintain and store tools and equipment</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct tack coat spraying operations:

- apply legislative, organisation and site requirements and procedures for conducting tack coat spraying operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct tack coat spraying operations:

- site and equipment safety requirements
- equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures
- bituminous surfacing operations
- site isolation and traffic control responsibilities and authorities
- bituminous products
- tack coat spraying techniques
- processes for the calculation of material requirements, application rates and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for conducting tack coat spraying operations • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of tack coat spraying operations • working with others to undertake and complete tack coat spraying operations that meets all of the required outcomes • consistent timely completion of tack coat spraying operations that safely, effectively and efficiently meets the required outcomes • a minimum of 500m² of an existing pavement to be tack coated prior to asphaltting using the spray bar, completed in a minimum of two separate runs • a minimum of two areas of at least 20m² to be tack coated using a hand lance
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites

	<p>may differ due to the site circumstances.</p> <ul style="list-style-type: none"> • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non English speaking background may have second language issues. • Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.
Method of assessment	<p>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</p> <ul style="list-style-type: none"> • written and/or oral assessment of the candidate's required knowledge • observed, documented and/or first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes • consistent achievement of required outcomes • first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • working with others to undertake and complete tack coat spraying operations
Guidance information for assessment	<p>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:	<ul style="list-style-type: none"> • legislative, organisational and site requirements and procedures • manufacturer's guidelines and specifications • Australian standards • Employment and workplace relations legislation • Equal Employment Opportunity and Disability Discrimination legislation
Safety requirements may include:	<ul style="list-style-type: none"> • OHS requirements in accordance with State or Territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances • safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public • safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement • recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials • emergency procedures related to equipment

	operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation
Site locations may include:	<ul style="list-style-type: none"> • car parks • airport runways • container yards • hard stands • footpaths • bikeways • roadways
Traffic conditions may include:	<ul style="list-style-type: none"> • congested urban environments • low traffic rural areas • off-road un-trafficked areas • buildings • parking sites • pedestrian areas
Tools and equipment may include:	<ul style="list-style-type: none"> • trucks • tanks • spraying equipment • hand lances • transfer hoses • brooms • jets • shovels • compressors • storage tanks
Environmental protection requirements may include:	<ul style="list-style-type: none"> • organisational/project environmental management plan • waste management • water quality protection • noise • vibration • dust and clean-up management
Materials may include:	<ul style="list-style-type: none"> • bitumen emulsions (cationic and anionic) • cutback bitumen • cutters • distillates • water
Application rate are:	<ul style="list-style-type: none"> • to be followed within specified tolerances

Tack coating refers to:	<ul style="list-style-type: none">• an application in preparation for further surface coatings which are to include but not be limited to asphalt, geo-textile and slurry
Types of surface may include:	<ul style="list-style-type: none">• spray seal• asphalt• concrete• granular pavement• pavement which is limited to a clean dry surface which may be coated day or night
Tack coat sprayer may be:	<ul style="list-style-type: none">• a mechanical bitumen sprayer or a truck/trailer mounted bitumen emulsion sprayer used to apply tack coat at a specified rate on a pavement surface• they also provide facilities for hand spraying

Unit Sector(s)

Bituminous Surfacing

Competency field

Refer to Unit Sector(s).

Co-requisite units

Not applicable.

RIICBS202A Hand spread asphalt

Modification History

Not applicable.

Unit Descriptor

This unit covers the hand spreading of asphalt in the civil construction industry. It includes planning and preparing, spreading asphalt, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit

This unit is appropriate for those working in an assistant role at worksites within:

- Civil construction

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<ul style="list-style-type: none">1.1. Access, interpret and apply <i>compliance documentation</i> relevant to the work activity1.2. Obtain and confirm <i>safety requirements</i> from the <i>site</i> safety plan and organisational policies and procedures, and apply to the allotted task1.3. Identify, obtain and implement signage requirements from the project <i>traffic</i> management plan1.4. Select <i>tools and equipment</i> to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults1.5. Identify, confirm and apply <i>environmental protection requirements</i> from the project environmental management plan
2. Spread asphalt	<ul style="list-style-type: none">2.1. Conduct hand <i>asphalt spreading</i> in safe proximity to the paver2.2. Hand place <i>asphalt</i> to required level and line2.3. Achieve even finish when raking and construct <i>joints</i> to correct level2.4. Identify and repair low spots, high spots and <i>defects</i> in the mat2.5. Identify and report faults in the mat detected prior to or during operations
3. Clean up	<ul style="list-style-type: none">3.1. Clear work area and dispose of or recycle <i>materials</i> in accordance with project environmental management plan3.2. Clean, check, maintain and store tools and equipment

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to hand spread asphalt:

- apply legislative, organisation and site requirements and procedures for hand spreading asphalt
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to hand spread asphalt:

- site and equipment safety requirements
- equipment types, characteristics and limitations
- operational and maintenance procedures
- hand spreading asphalt
- site isolation and traffic control responsibilities and authorities
- the properties of asphalt
- the AAPA code of practice for working with SBS modified binders
- processes for the calculation of material requirements
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for hand spreading asphalt • implementation of requirements, procedures and techniques for the safe, effective and efficient hand spreading of asphalt • working with others to undertake and complete the hand spreading of asphalt that meets all of the required outcomes • consistent timely completion of hand spreading of asphalt that safely, effectively and efficiently meets the required outcomes • a minimum of 5m² of asphalt (per patch) to line and level is to be hand spread without segregation: <ul style="list-style-type: none"> • two patches over 50mm thick, each with a different type of asphalt • two patches under 50mm thick, each with a different type of asphalt • work with a paver to lay a minimum of 100 lineal metres of longitudinal joint and two transverse joints
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • Assessment of this competency requires typical

	<p>resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</p> <ul style="list-style-type: none"> • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non English speaking background may have second language issues. • Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.
Method of assessment	<p>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</p> <ul style="list-style-type: none"> • written and/or oral assessment of the candidate's required knowledge • observed, documented and/or first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes • consistent achievement of required outcomes • first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • working with others to undertake and complete the hand spreading of asphalt
Guidance information for assessment	<p>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Safety requirements may include:

- state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe spreading including procedures minimising strain and fatigue, adherence to site traffic plans, precautions taken when working close to traffic, awareness of rollers and other vehicles working in the area
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment operation including extinguishing equipment fires, organisational First Aid requirements and evacuation

Site may include:	<ul style="list-style-type: none"> • car parks • airport runways • container yards • hard stands • footpaths • bikeways • roadway
Traffic conditions may include:	<ul style="list-style-type: none"> • congested urban environments • low traffic rural areas • off-road un-trafficked areas • buildings • parking sites • pedestrian areas
Tools and equipment may include:	<ul style="list-style-type: none"> • rakes • brooms • shovels • depth gauges and may include • straight edges • shovel baths • smart levels • string lines
Environmental protection requirements may include:	<ul style="list-style-type: none"> • organisational/project environmental management plan • waste management • water quality protection • noise • vibration • dust and clean-up management
Asphalt spreading may include:	<ul style="list-style-type: none"> • constructing new work • repairing surfaces • repair of defects • paver runs • joints
Asphalt may include:	<ul style="list-style-type: none"> • dense graded • open graded • stone mastic
Joints may include:	<ul style="list-style-type: none"> • longitudinal • transverse • hot to hot • cold to hot

Defects may include:	<ul style="list-style-type: none">• bumps• segregation• blemishes• bony materials• voids
Materials may include:	<ul style="list-style-type: none">• asphalt and release agents including emulsion, slurry and Styrene Butadiene Styrene modified binders (SBS) handled and used in accordance with the Australian Asphalt Paving Association (AAPA) code of practice for SBS modified binders

Unit Sector(s)

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to safely handle bituminous materials:

- apply legislative, organisation and site requirements and procedures for safe handling of bituminous materials
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to safely handle bituminous materials:

- site and equipment safety requirements
- bituminous materials
- SBS modified binders
- materials safety data sheet requirements
- equipment types, characteristics, capabilities and limitations
- operational and maintenance procedures
- site isolation responsibilities and authorities
- processes for the calculation of material requirements
- materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for safe handling of bituminous materials • implementation of requirements, procedures and techniques for the safe, effective and efficient safe handling of bituminous materials • working with others to undertake and complete the safe handling of bituminous materials that meets all of the required outcomes • consistent timely completion of safe handling of bituminous materials that safely, effectively and efficiently meets the required outcomes • a minimum of five major hazards associated with handling bituminous materials are reported • a minimum of four bituminous materials are stored and used together • burn First Aid is applied to a minimum of one simulated burn and tagged accordingly • a minimum of one simulated fire involving a bituminous substance is extinguished
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • Assessment of this competency requires typical

	<p>resources normally used in a resources and infrastructure sector environment. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Access, interpret and apply <i>compliance documentation</i> relevant to the work activity</p> <p>1.2. Obtain and confirm <i>safety requirements</i> from the site safety plan and organisational policies and procedures, and apply to the allotted task</p> <p>1.3. Identify, obtain and implement signage requirements from the project traffic management plan</p> <p>1.4. Select plant and <i>tools and equipment</i> to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults</p> <p>1.5. Identify <i>environmental protection requirements</i> from the project environmental management plan, and confirm and apply to the allotted task</p>
2. Conduct compaction machine operational checks	<p>2.1. Carry out pre-start, start-up and shutdown procedures in accordance with manufacturer's and/or site specific requirements</p> <p>2.2. Check machine controls and functions for serviceability, and rectify or report any faults</p>
3. Spread and compact materials	<p>3.1. Conduct <i>basic field identification test</i> and identify material type</p> <p>3.2. Direct trucks to required location for loading/dumping</p> <p>3.3. Direct delivered/relocated <i>materials</i> to correct location</p> <p>3.4. Check manufactured material for segregation</p> <p>3.5. Conduct field test to ensure material moisture is suitable</p> <p>3.6. Direct machine operator to spread materials to specified levels</p> <p>3.7. Finish materials by hand to specified levels</p> <p>3.8. Consolidate materials into layers by hand held mechanical compaction equipment</p> <p>3.9. Conduct field test to ensure compaction has</p>

	been achieved in restricted locations
4. Clean up	<p>4.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan</p> <p>4.2. Clean, check, <i>maintain</i> and store tools and equipment t</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to spread and compact materials manually:

- apply legislative, organisation and site requirements and procedures for manually spreading and compacting materials
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to spread and compact materials manually:

- basic principles of soil technology for civil works
- basic soil compaction theory including the effects of moisture and mechanical interlock
- hand operated mechanical compaction machine types, characteristics, technical capabilities and limitations
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- project quality requirements
- civil construction terminology
- practical field tests for moisture content, shrinkage and compaction
- JSAs/safe work method statement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for manually spreading and compacting materials • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the manual spreading and compacting of materials • working with others to undertake and complete the manual spreading and compacting of materials that meets all of the required outcomes • consistent timely completion of manual spreading and compacting of materials that safely, effectively and efficiently meets the required outcomes • a minimum of three separate operations requiring the hand spreading and the mechanical (hand operated) compaction of two different material types to site specification
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites

	<p>may differ due to the site circumstances.</p> <ul style="list-style-type: none"> • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non English speaking background may have second language issues. • Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.
Method of assessment	<p>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</p> <ul style="list-style-type: none"> • written and/or oral assessment of the candidate's required knowledge • observed, documented and/or first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes • consistent achievement of required outcomes • first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • working with others to undertake and complete spreading and compacting materials manually
Guidance information for assessment	<p>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment

	operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation
Tools and equipment may include:	<ul style="list-style-type: none"> • rakes • shovels • mechanical compaction equipment
Environmental protection requirements may include:	<ul style="list-style-type: none"> • organisational/project environmental management plan • waste management • water quality protection • noise • vibration • dust and clean-up management
Basic field identification test for materials may include:	<ul style="list-style-type: none"> • the visual and feel identification test for material type identification • the visual identification test for material segregation • the visual and feel identification test for material moisture content • project specification testing requirements for material compaction • speedie moisture content test
Materials may include:	<ul style="list-style-type: none"> • soils • aggregates • clay • sand • gravel • stabilised material • pre mix • cold mix • hot mix
Maintain may include:	<ul style="list-style-type: none"> • cleaning • authorised servicing • monitoring, recording and reporting of faults • conduct of authorised minor replacements

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare	<p>1.1. Access, interpret and apply <i>compliance documentation</i> relevant to the work activity</p> <p>1.2. Obtain and confirm <i>safety requirements</i> from the site safety plan and organisational policies and procedures, and apply to the allotted task</p> <p>1.3. Identify, obtain and implement <i>traffic control signage</i> requirements from the project traffic management plan</p> <p>1.4. Select plant, <i>tools and equipment</i> to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults</p> <p>1.5. Identify <i>environmental protection requirements</i> from the project environmental management plan, and confirm and apply to the allotted task</p>
2. Install trench shoring	<p>2.1. Communicate with plant operator to ensure the <i>excavation of trenches</i> complies with site plan, line and depth</p> <p>2.2. Determine and prepare <i>shoring method</i></p> <p>2.3. Set out positioning of shoring</p> <p>2.4. Position or <i>erect shoring</i> within the trench</p> <p>2.5. Secure shoring in position and check to ensure structural conformity with regulations</p> <p>2.6. Clean out excavation out by hand to job requirements</p> <p>2.7. Provide ladders for access and egress to site safety plan requirements</p>
3. Remove trench shoring	<p>3.1. Release jacking mechanisms and remove ladders</p> <p>3.2. Check shoring and prepare it for lifting from the trench</p> <p>3.3. Remove shoring from trench and store it on site</p>
4. Clean up	<p>4.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan</p> <p>4.2. Clean, check, maintain and store tools and</p>

	equipment
--	-----------

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install trench shoring:

- apply legislative, organisation and site requirements and procedures for installing trench shoring
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install trench support:

- site and equipment safety requirements
- excavation techniques
- shoring methods and systems
- working in confined spaces
- construction techniques
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for installing trench support • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of trench support installation • working with others to undertake and complete the installation of trench support in a way that meets all of the required outcomes • consistent timely completion of trench support installation that safely, effectively and efficiently meets the required outcomes • installation of trench support on two projects in trenches deeper than 1.5 metres requiring the trench support to be installed, moved along or within the trench and removed from the trench
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. • The assessment environment should not disadvantage the participant. For example,

	<p>language, literacy and numeracy demands of assessment should not be greater than those required on the job.</p> <ul style="list-style-type: none"> • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non English speaking background may have second language issues. • Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.
Method of assessment	<p>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</p> <ul style="list-style-type: none"> • written and/or oral assessment of the candidate's required knowledge • observed, documented and/or first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes • consistent achievement of required outcomes • first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • working with others to undertake and complete the trench support installation
Guidance information for assessment	<p>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment

	operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation
Traffic control signage may include:	<ul style="list-style-type: none"> • site safety signage • temporary signage for the benefit of motorists and pedestrians • barricades • traffic conditions signage
Tools and equipment may include:	<ul style="list-style-type: none"> • shoring systems • levelling equipment • hand and power tools • measuring equipment • shovels • picks • scaffolding • elevated work platforms • slings • chains
Environmental protection requirements may include:	<ul style="list-style-type: none"> • organisational/project environmental management plan • waste management • water quality protection • noise • vibration • dust • clean-up management
Excavations may include:	<ul style="list-style-type: none"> • trenches • wells • pits
Trench may include:	<ul style="list-style-type: none"> • trenches of at least 1.5 metres in depth • trenches less than 1.5 metres deep
Shoring method may include:	<ul style="list-style-type: none"> • fixed and/or adjustable trench boxes • drag boxes • hydraulic vertical shoring • close timber shoring • aluminium shoring shields • powerbrace • lite box aluminium panels • slide rails
Erect shoring may include:	<ul style="list-style-type: none"> • using trench shoring mechanisms including:

	<ul style="list-style-type: none">• closed timber sheeting• soldier sets• segmental sections• trench shields• using shoring securing mechanisms including:<ul style="list-style-type: none">• footings• needles• anchors• sole plates• struts• brackets

Unit Sector(s)

Civil Works (Common Units)

Competency field

Refer to Unit Sector(s).

Co-requisite units

Not applicable.

RIICFW301A Construct underpinning

Modification History

Not applicable.

Unit Descriptor

This unit covers the construction of underpinnings in the civil construction industry. It includes planning and preparing, setting out and preparing sections, excavating sections, constructing underpinnings, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit

This unit is appropriate for those working in an operational role at worksites within:

- Civil construction

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Access, interpret and apply <i>compliance documentation</i> relevant to the work activity</p> <p>1.2. Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details to the allotted task</p> <p>1.3. Obtain and confirm <i>safety requirements</i> from the site safety plan and organisational policies and procedures, and apply to the allotted task</p> <p>1.4. Identify, obtain and implement <i>signage</i> requirements from the project <i>traffic</i> management plan</p> <p>1.5. Select <i>tools and equipment</i> to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults</p> <p>1.6. Identify <i>environmental protection requirements</i> from the project environmental management plan, and confirm and apply to the allotted task</p>
2. Set out and prepare sections	<p>2.1. Identify and record <i>underpinning requirements</i> for adjoining properties and roadways from site drawings and surveys of the surrounding construction</p> <p>2.2. Identify and implement sections and sequence of excavations from the planned schedule for underpinning</p> <p>2.3. Check existing <i>shoring system</i> for soundness and conformation to specifications and design requirements</p> <p>2.4. Set out sections for excavation to underpinning specifications and schedule</p> <p>2.5. Identify and protect areas for excavation and surrounding working space requirements to provide a safe working area</p> <p>2.6. Erect barricades and signage, where required, in accordance with the site safety plan</p> <p>2.7. Position plant and equipment for excavations</p>

3. Excavate sections	<p>3.1. Excavate designated sections to the designed depth of footings</p> <p>3.2. Install trench and excavation support in accordance with <i>soil</i> characteristics, safety considerations and the job safety analysis</p>
4. Construct underpinning	<p>4.1. Construct underpinning in accordance with job specifications</p> <p>4.2. Backfill excavated sections</p> <p>4.3. Underpin alternate sections in sequence according to underpinning schedule</p>
5. Clean up	<p>5.1. Clear work area and disposed of or recycled <i>materials</i> in accordance with project environmental management plan</p> <p>5.2. Clean, check, maintain and store plant, tools and equipment</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct underpinnings:

- apply legislative, organisation and site requirements and procedures for the construction of underpinnings
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct underpinnings:

- site and equipment safety requirements
- foundation work
- civil construction terminology
- underpinning techniques
- construction principles
- processes for interpreting engineering drawings
- soil, sand, rock, clay, shale, gravel and silt types and characteristics
- water erosion
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- JSAs/safe work method statement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for constructing underpinnings • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of underpinning construction • working with others to undertake and complete the construction of underpinnings that meets all of the required outcomes • consistent timely completion of underpinning construction that safely, effectively and efficiently meets the required outcomes • construction of underpinning for a minimum of two projects, one using drilling techniques and one using excavation techniques to the required job specifications
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. RIIMPO320A Conduct civil construction excavator operations

Modification History

Not applicable.

Unit Descriptor

This unit covers the conduct excavator operations in the civil construction industry. It includes: planning and preparing; conducting machine pre-operational checks; operating the machine; lifting, carrying and placing materials; selecting, removing and fitting attachments; relocating the machine; carrying out machine operator maintenance; and cleaning up.

Application of the Unit

This unit is appropriate for those working in mobile plant operator roles, at worksites within:

- Civil construction

Operator license issued by OHS authority may be required in some states or territories and some excavators must be registered to drive and operate on public roads.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	1.1. Access, interpret and apply <i>compliance documentation</i> relevant to <i>excavator operations tasks</i> 1.2. Obtain, confirm and apply <i>work instructions</i> to the allotted task 1.3. Obtain, confirm and apply <i>safety requirements</i> to the allotted task 1.4. Obtain, identify and implement signage requirements from the project traffic management plan 1.5. Select plant, <i>tools and equipment</i> to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults 1.6. Identity, confirm and apply <i>environmental</i> protection requirements from the project environmental management plan, to the allotted task
2. Conduct machine preoperational checks	2.1. Carry out pre-start, start-up, park and shutdown procedures 2.2. Check excavator controls and functions, including implements or other attachments, brakes and manoeuvrability for serviceability and report or rectify any faults
3. Operate excavator	3.1. Identity site hazards associated with excavator operations and use safe operating techniques to minimise risk 3.2. Identify and apply operating techniques for excavator to achieve optimum output in accordance with design specifications while achieving specified tolerances 3.3. Operate excavator to work instructions
4. Lift, carry and place materials	4.1. Conduct <i>communication</i> practices associated with transportation and lifting of <i>materials</i> 4.2. Establish weight of load 4.3. Select, attach and use slings and lifting gear in accordance with safe working load requirements

	<p>4.4.Position machinery ensuring stability and locate to effectively shift materials according to job specifications</p> <p>4.5.Shift load safely and effectively</p> <p>4.6.Move load in accordance with conventional hand and audible signals</p>
5. Select, remove and fit attachments	<p>5.1.Select attachment for the task</p> <p>5.2.Remove and fit attachment according</p> <p>5.3.Test attachment to ensure correct fitting and operation</p> <p>5.4.Use attachment in accordance with recommendations and design limits</p> <p>5.5.Remove, clean and store attachments in designated location</p>
6. Relocate the excavator	<p>6.1.Move excavator safely between worksites, observing relevant codes and traffic management requirements</p> <p>6.2.Prepare excavator for relocation</p>
7. Carry out machine operator maintenance	<p>7.1.Safely park-up, shutdown and prepare the machine for maintenance</p> <p>7.2.Conduct inspection and fault finding</p> <p>7.3.Remove and replace defective parts safely and effectively</p> <p>7.4.Carry out regular programmed maintenance tasks</p>
8. Clean up	<p>8.1.Clear work area and dispose of or recycle materials in accordance with project environmental management plan</p> <p>8.2.Clean, check, maintain and store plant, tools and equipment</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct excavator operations:

- apply legislative, organisation and site requirements and procedures
- apply basic principles of soil technology for civil works
- apply site and equipment safety requirements
- apply techniques for calculating safe working loads
- apply excavator and attachment operating techniques related to essential tasks
- interpret drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply levelling techniques
- apply JSA's/Safe work method statement

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct excavator operations:

- excavator types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- techniques for calculating safe working loads
- excavator and attachment operating techniques related to essential tasks
- processes for interpreting drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments

- safe operating techniques in all terrain
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage
- levelling techniques
- JSA's/Safe work method statement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for conducting excavator operations • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of excavator operations, including: <ul style="list-style-type: none"> • in a minimum of two different soil types; and • to include the mandatory tasks of loading, bulk excavation, backfilling, trench excavation, stockpiling, battering and benching • working with others to undertake and complete excavator operations that meet all of the required outcomes • consistent timely completion of excavator operations that safely, effectively and efficiently meet the required outcomes • laser guidance or ATS are not to be used to assist in control of the machine during assessment
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

	<ul style="list-style-type: none"> • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non English speaking background may have second language issues. • Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. • Where applicable, physical resources should include equipment modified for people with disabilities. • Access must be provided to appropriate learning and/or assessment support when required.

	<p>candidate's:</p> <ul style="list-style-type: none">• working with others to undertake and complete excavator operations
Guidance information for assessment	Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:	<ul style="list-style-type: none"> legislative, organisation and site requirements and procedures manufacturer's guidelines and specifications Australian standards codes of practice Employment and workplace relations legislation Equal Employment Opportunity and Disability Discrimination legislation
An excavator is:	<ul style="list-style-type: none"> a self-propelled crawler or wheeled machine with an upper structure capable of a minimum of 360 degree rotation which excavates, elevates, swings and discharges material by the action of a bucket fitted to the boom and arm or telescoping boom, without moving the chassis or undercarriage during any part of the working cycle of the machine are to include tracked and may include wheeled excavators
Excavator operations tasks are to include:	<ul style="list-style-type: none"> loading, bulk excavation, backfilling, trench excavation, stockpiling, battering and benching
Excavator operations tasks may include:	<ul style="list-style-type: none"> compacting materials, demolition, rock breaking, removal of trees and ripping, lifting materials, cutting/boxing, laying pipes, cut and fill, mixing materials, stripping/spreading topsoil and materials
Work instructions may include:	<ul style="list-style-type: none"> plans, specifications, quality requirements and operational details quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction
Safety requirements are to be:	<ul style="list-style-type: none"> in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan

<p>Safety requirements may include:</p>	<ul style="list-style-type: none"> • protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances • personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices • safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public • safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/ machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement • hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials • emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation
<p>Tools and equipment are to include:</p>	<ul style="list-style-type: none"> • hand tools and maintenance equipment relevant to the particular loader
<p>Environmental requirements are to include:</p>	<ul style="list-style-type: none"> • organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management
<p>Communications practices are to include:</p>	<ul style="list-style-type: none"> • verbal instructions and fault reporting and may include 2-way radio, hand signals, mobile phone, site specific instructions, written instructions or instructions related to job/task • on site meeting processes may include notification/ scheduling (time, place, purpose),

	task discussions and local coordination of procedural and operational issues
Materials may include:	<ul style="list-style-type: none">• clays, silts, stone, gravel, mud, rock, sand, topsoil, blended materials, organic materials, typical construction site materials/waste and bituminous mixes• rock types may include metamorphic, igneous and sedimentary
Attachments may include:	<ul style="list-style-type: none">• ripper/tyne, auger, tilt bucket, rock breaker, buckets, lifting device, vibrating compaction plate and compaction wheel
Operator maintenance is to include:	<ul style="list-style-type: none">• cleaning, authorised servicing and the monitoring, recording and reporting of faults. It may also include the conduct of authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities

Co-requisite units

Not applicable.

RIIOHS202A Enter and work in confined spaces

Modification History

Not applicable.

Unit Descriptor

This unit covers the entering and working in confined spaces in resources and infrastructure industries. It includes planning and preparing for entry of confined spaces, entry and working in confined spaces, exiting confined spaces and cleaning up.

Application of the Unit

This unit is appropriate for those working in confined spaces (enclosed or partially enclosed) for the purpose of carrying out work or inspections and also is appropriate for those performing sentry or stand-by person roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining
- General construction

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for entering and working in confined spaces	1.1. Access, interpret and apply <i>compliance documentation</i> relevant to entering and working in confined spaces 1.2. Obtain, confirm and apply <i>work instructions</i> relevant to the allotted task 1.3. Obtain, confirm and apply <i>safety requirements</i> relevant to the allotted task 1.4. Obtained authorisation (<i>entry permit</i>) to enter the <i>confined space</i> is in accordance with regulatory requirements 1.5. Confirm the emergency response procedure is with the stand-by person 1.6. Identify, obtain and implement <i>signage</i> and barrier requirements as required by the project plan 1.7. Select tools and equipment to carry out tasks that are consistent with the requirements of the job and check them for serviceability and rectify or report any faults 1.8. Identify, confirm and apply to the allotted task the <i>environmental protection requirements</i> from the project environmental management plan 1.9. Position rescue equipment as required by the entry permit close to the point of entry
2. Enter and work in the confined space	2.1. <i>Gain access</i> to the confined space 2.2. Ensure that the atmosphere is tested and monitored for harmful elements in accordance with procedures 2.3. Apply tagging and lock-out procedures as required 2.4. Enter the confined space according to agreed procedure 2.5. Maintain <i>communication</i> with the stand-by person 2.6. Comply with entry permit requirements while carrying out designated work in confined space 2.7. Monitor and adhere to allocated entry time

3. Exit confined space	<ul style="list-style-type: none">3.1.Exit confined space according to agreed procedure3.2.Recover tools, equipment and materials from the confined space3.3.Conduct inspection of the confined space3.4.<i>Secure access</i> according to site procedures3.5.Remove tagging and lock-out according to site procedures3.6.Complete confined space entry permit
4. Clean up	<ul style="list-style-type: none">4.1.Clear work area and dispose of or recycle materials in accordance with project environmental management plan4.2.Clean, check, maintain and store <i>tools and equipment</i> in accordance recommendations and standard work practices4.3.Remove, clean and store barriers and signs

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to enter and work in confined spaces:

- apply legislative, organisation and site requirements and procedures
- apply operational, maintenance and basic diagnostic procedures
- apply materials handling methods
- use atmospheric monitoring devices
- interpret JSAs/Safe work method statements

Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to enter and work in confined spaces:

- site and equipment safety requirements
- confined space entry and exit procedures, risks and regulations
- air contaminants and toxic gases
- breathing apparatus limitations
- equipment types, characteristics, technical capabilities and limitations
- site isolation and site control responsibilities and authorities
- materials safety data sheets (MSDS)
- project quality requirements
- industry terminology
- state and territory interpretations of a confined space

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for entering and working in confined spaces • implementation of requirements, procedures and techniques for the safe, effective and efficient completion for entering and working in confined spaces • working with others to undertake and complete the entering and working in confined spaces that meet all of the required outcomes • consistent timely completion of entering and working in confined spaces that safely, effectively and efficiently meets the required outcomes
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non

	<p>English speaking background may have second language issues.</p> <ul style="list-style-type: none"> • Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular work sites may differ due to site circumstances. • Where applicable, physical resources should include equipment modified for people with disabilities. • Access must be provided to appropriate learning and/or assessment support when required.
Method of assessment	<p>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</p> <ul style="list-style-type: none"> • written and/or oral assessment of the candidate's required knowledge • observed, documented and/or first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes • consistently achieving the required outcomes • first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • working with others to undertake and complete the entering and working in confined spaces
Guidance information for assessment	<ul style="list-style-type: none"> • Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:	<ul style="list-style-type: none"> • legislative, organisation and site requirements and procedures • manufacturer's guidelines and specifications • Australian standards • code of practice • Employment and Workplace Relations legislation • Equal Employment Opportunity and Disability Discrimination legislation
Work instructions may include:	<ul style="list-style-type: none"> • plans • specifications • quality requirements • operational details
Safety requirements may be included in:	<ul style="list-style-type: none"> • site safety plans • organisational policies and procedures • statutory/regulatory authorities which may include: <ul style="list-style-type: none"> • federal • state and • local authorities • verbal or written and graphical instructions • signage • work schedules/plans/specifications • work bulletins • charts and hand drawings • memos • maps • materials safety data sheets (MSDS) • diagrams or sketches • safe work procedures or equivalent related to working in confined spaces • regulatory/legislative requirements pertaining to working in confined spaces • manufacturer's specifications and instructions • organisation's work specifications and

	<ul style="list-style-type: none"> requirements instructions issued by authorised organisational or external personnel relevant Australian standards
Safety requirements may include:	<ul style="list-style-type: none"> OHS requirements personal protective clothing and equipment as prescribed under legislation, regulation and workplace policies and practices use of tools and equipment workplace environment and safety handling of materials use of fire fighting equipment use of First Aid equipment hazard control and hazardous materials and substances safe operating procedures including recognising and preventing hazards associated with working in confined spaces, working in proximity to others, worksite visitors and the public hazards and risks may include but not be limited to fires, underground services, excavations, traffic, hazardous materials, contaminated atmosphere and toxic gases risks associated with confined spaces may include but not be limited to restricted means of entry and exit, atmosphere which contains potentially harmful levels of contaminant, unsafe oxygen levels or engulfment respiratory protection devices are to include but not be limited to air purifying respirators and may include self contained compressed air breathing apparatus, supplied airline breathing apparatus and escape breathing apparatus and atmospheric monitoring devices
Confined space entry permit , or work permits, may include:	<ul style="list-style-type: none"> location of work duration of work size of work crew atmospheric testing requirements personal protective equipment hot work stand-by personnel rescue arrangements other precautions (signs, barriers)

	<ul style="list-style-type: none"> • authorisation
Confined spaces may include:	<ul style="list-style-type: none"> • storage tanks, tank cars, process vessels, boilers, pressure vessels, silos and other tank-like compartments • open-topped spaces such as pits or degreasers • pipes, sewers, shafts, ducts and similar structures • shipboard spaces entered through a small hatchway or access point, cargo tanks, cellular double bottom tanks, duct keels, ballast and oil tanks and void spaces (but not including dry cargo holds)
Signage may include:	<ul style="list-style-type: none"> • site safety signage • temporary signage for the benefit of motorists • pedestrians and barricades
Environmental protection requirements may include:	<ul style="list-style-type: none"> • organisational/project environmental management plan • waste management • water quality protection • noise • vibration • dust • clean-up management
Gain access may include:	<ul style="list-style-type: none"> • removing access cover • installing and securing ladder
Communications may include:	<ul style="list-style-type: none"> • verbal instructions • fault reporting • 2-way radio • hand signals • mobile phone • site specific instructions • written instructions • instructions related to job/task
Secure access may include:	<ul style="list-style-type: none"> • replacing or closing off access cover
Tools and equipment may include:	<ul style="list-style-type: none"> • harness and lifeline • respirator apparatus • atmospheric testing equipment • signs • barricades • communication devices • tools and equipment relevant to the work to be

	performed

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Access, interpret and apply compliance documentation relevant to controlling of traffic with a stop-slow bat</p> <p>1.2. Obtain, confirm and apply work instructions relevant to the allotted task</p> <p>1.3. Obtain, confirm and apply safety requirements from the site safety plan and organisational policies and procedures for the allotted task</p> <p>1.4. Identify, obtain and implement signage and devices requirements from the project traffic management plan</p> <p>1.5. Select tools and equipment to carry out tasks that are consistent with the requirements of the job; check them for serviceability and rectify or report any faults</p> <p>1.6. Identify, confirm and apply environmental protection requirements from the project environmental management plan</p>
2. Coordinate traffic	<p>2.1. Position or confirm temporary traffic signs and barriers in accordance with regulations</p> <p>2.2. Direct traffic in accordance with site traffic plan and away from services or areas of potential damage or danger</p> <p>2.3. Control vehicles and pedestrian traffic within the worksite to ensure safety of workers</p> <p>2.4. Monitor traffic, and make adjustments for changing conditions, and position waiting vehicles to allow for smooth traffic flow</p> <p>2.5. Use hand held stop/slow bats in accordance with regulatory authority approved procedures</p> <p>2.6. Use hand signals in accordance with regulatory authority approved procedures</p> <p>2.7. Report traffic offenders in accordance with regulatory authority approved procedures</p>
3. Operate radio	<p>3.1. Adjust radio controls for optimum reception/transmission results</p> <p>3.2. Transmit messages concisely and in</p>

	<p>accordance with operating procedures or best practice</p> <p>3.3.Maintain radio power supply</p> <p>3.4.Check radio contact after nominated period of non contact</p>
4. Clean up	<p>4.1.Remove or cover signs and devices sequentially to provide warning to motorists during shutdown</p> <p>4.2.Clean, check, maintain and store tools and equipment in accordance with recommendations and standard work practices</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to control traffic with a stop-slow bat:

- apply legislative, organisation and site requirements and procedures

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to control traffic with a stop-slow bat:

- site and equipment safety requirements
- traffic controlling
- traffic management plans
- traffic control signage and barricades
- radio operations
- equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures for equipment
- site isolation and traffic control responsibilities and authorities
- affects of travel speed and vehicle mass on stopping distances
- quality requirements
- JSAs/Safe work method statement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for controlling traffic with a stop-slow bat • implementation of requirements, procedures and techniques for the safe, effective and efficient control of traffic with a stop-slow bat • working with others to control traffic with a stop-slow bat that meets all of the required outcomes • consistent timely control of traffic with a stop-slow bat that safely, effectively and efficiently meets the required outcomes
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • Evidence for assessment is best gathered using the outcomes of products and processes of the workplace context. • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. • Customisation of assessment and delivery environment to sensitively accommodate

	<p>cultural diversity.</p> <ul style="list-style-type: none"> • Aboriginal people and other people from a non English speaking background may have second language issues. • Assessment of this competency requires typical resources normally used in the work environment. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Access, interpret and apply compliance documentation relevant to implement a traffic management plans</p> <p>1.2. Obtain, confirm and apply work instructions relevant to the allotted task</p> <p>1.3. Obtain, confirm and apply safety requirements from the site safety plan and organisational policies and procedures to the allotted task</p> <p>1.4. Identify, obtain and implement signage and devices requirements from the project traffic management plan</p> <p>1.5. Select tools and equipment to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults</p> <p>1.6. Identify, confirm and apply environmental protection requirements from the project environmental management plan to the allotted task</p> <p>1.7. Check the designated traffic controllers' training and qualifications for currency as per legislation</p> <p>1.8. Advise traffic controllers of the traffic flow requirements for the site</p>
2. Set out the traffic guidance scheme	<p>2.1. Select traffic guidance scheme to suit site conditions, traffic volumes and work activities</p> <p>2.2. Determine and ensure adherence to work schedule, maximum traffic delays, signals and site communications</p> <p>2.3. Ensure signs and devices are correctly positioned on the approaches to the work area in accordance with the traffic management plan</p> <p>2.4. Ensure that signs and devices are positioned and displayed on each approach according to Road Authority requirements and the traffic management plan</p> <p>2.5. Ensure signs and devices are positioned</p>

	<p>laterally and displayed in accordance with Road Authority requirements</p> <p>2.6.Ensure traffic is controlled effectively to protect the work crew placing traffic control devices around the work area</p>
3. Monitor traffic guidance scheme	<p>3.1.Ensure traffic flow is monitored and effectiveness of guidance scheme determined</p> <p>3.2.Monitor work activities and provide guidance to adjust scheme</p> <p>3.3.Apply process for dealing with traffic controllers when they fail to adhere to the approved procedures</p> <p>3.4.Apply procedures to deal with offending motorists</p>
4. Close down traffic guidance scheme	<p>4.1.Ensure traffic is controlled to protect work crew removing traffic control devices from the work area</p> <p>4.2.Ensure signs are removed in sequence to provide maximum warning during removal of traffic control devices</p> <p>4.3.Ensure guidance scheme details are recorded to organisational and or Road Authority requirements</p> <p>4.4.Ensure incidents are reported as required by the organisation and/or Road Authority</p>
5. Clean up	<p>5.1.Ensure work area is cleared in accordance with the project environmental management plan</p> <p>5.2.Ensure tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturers' recommendations and standard work practices</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement a traffic management plan:

- apply legislative, organisation and site requirements and procedures

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement a traffic management plan:

- site and equipment safety requirements
- state and territory traffic management legislation
- requirements set down by the Manual for Uniform Traffic Control Devices
- potential hazards
- traffic controlling
- traffic management plans
- basic signalling
- signs and devices
- radio operations
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of travel speed
- quality requirements
- civil construction terminology
- JSAs/Safe work method statement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for implementing of traffic management plans
- implementation of requirements, procedures and techniques for the safe, effective and efficient implementing of traffic management plans, which are to include:
 - complying with State/Territory regulations on three separate live traffic projects, and
 - one project controlling site construction vehicles
- working with others to undertake and complete the traffic management plans that meet all of the required outcomes
- consistent timely implementation of traffic management plans that safely, effectively and efficiently meets the required outcomes

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

	<ul style="list-style-type: none"> • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non English speaking background may have second language issues. • Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. • Where applicable, physical resources should include equipment modified for people with disabilities. • Access must be provided to appropriate learning and/or assessment support when required.
Method of assessment	<p>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</p> <ul style="list-style-type: none"> • written and/or oral assessment of the candidate's required knowledge • observed, documented and/or first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes • consistently achieving the required outcomes • first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • working with others to implement traffic management plans
Guidance information for assessment	<p>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant compliance documentation may include:</p>	<ul style="list-style-type: none"> • legislative, organisation and site requirements and procedures • manufacturer's guidelines and specifications • Australian standards • code of practice • Employment and workplace relations legislation • Equal Employment Opportunity and Disability Discrimination legislation
<p>Work instructions may be received via verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, maps, materials safety data sheets (MSDS) and diagrams or sketches and may include:</p>	<ul style="list-style-type: none"> • specifications • quality requirements • operational details • safe work procedures or equivalent • regulatory/legislative requirements • manufacturers' specifications and instructions • organisation work specifications and requirements • instructions issued by authorised organisational or external personnel • relevant Australian standards
<p>Safety requirements may include:</p>	<ul style="list-style-type: none"> • those included in compliance documentation • personal protective equipment • safe operating procedures, including recognising and preventing hazards associated with: <ul style="list-style-type: none"> • uneven/unstable terrain • trees • pits • poles • trip hazards • dirt mounds • overhead services • underground services

	<ul style="list-style-type: none"> • bridges • surrounding buildings • obstructions • structures • facilities • fires • excavations • traffic • embankments • cuttings • hazardous materials • recently filled trenches • other machines • personnel • restricted access barriers • traffic control • working in proximity to others • worksite visitors and the public • safe parking practices, including: <ul style="list-style-type: none"> • ensuring access ways are clear • equipment/machinery is away from overhangs and refuelling sites • safe distance from excavations • secured from unauthorised access or movement • emergency procedures
Signage and devices are to include	<ul style="list-style-type: none"> • temporary warning signs • regulatory and traffic cones
Signage and devices may include:	<ul style="list-style-type: none"> • vehicle mounted signs and flashing lights • guide signs • warning signs • barriers • hazard markers • portable traffic signals • bollards • arrow boards
Tools and equipment are to include:	<ul style="list-style-type: none"> • high visibility vests • cones • signage • notebooks

	<ul style="list-style-type: none"> • pens • radios • stop-slow bats • delineators • barricades • barriers • bollards • warning lights and beacons • arrow boards • signalling devices
Environmental include the requirements of the organisational/project environmental management plan, and may include:	<ul style="list-style-type: none"> • waste management • water quality protection • noise, vibration, dust management • clean-up management
Conditions may include:	<ul style="list-style-type: none"> • varying terrain • all weather conditions • varying road surfaces • all vehicle types • rural, urban or residential localities • all times of day • varying traffic volumes • varying road types • congested urban environments • low traffic rural areas • off-road un-trafficked areas • buildings • parking sites • pedestrian areas • civil construction site • road where civil construction work is conducted
Communications is to include:	<ul style="list-style-type: none"> • verbal instructions • fault reporting
Communications may include:	<ul style="list-style-type: none"> • 2-way radio • hand signals • mobile phone • site specific instructions • written instructions • instructions related to job/task

Unit Descriptor

This unit covers the operating of a range of small plant and equipment in resources and infrastructure industries. It includes the planning and preparation for work, the conducting of pre-operational checks, the use of the plant and/or equipment, and carrying out operator maintenance and cleaning up.

Application of the Unit

This unit is appropriate for those working in operational, service and maintenance roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Access, interpret and apply <i>compliance documentation</i> relevant to operate small plant and equipment</p> <p>1.2. Obtain, confirm and apply <i>work instructions</i> for the allotted task</p> <p>1.3. Obtain, confirm and apply to the allotted task <i>safety requirements</i> from the site safety plan and organisational policies and procedures</p> <p>1.4. Select plant, tools and equipment to carry out tasks are consistent with the requirements of the job</p> <p>1.5. Identify, confirm and apply to the allotted task <i>environmental protection requirements</i> from the project environmental management plan</p>
2. Conduct pre-operational checks	<p>2.1. Select fuel and lubricants according to manufacturer's specifications</p> <p>2.2. Check and adjust fuel, oil, hydraulic fluid and water levels according to manufacturer's manual</p> <p>2.3. Secure/tighten and maintain bolts, nuts, guards and attachment couplings in accordance with manufacturer's instructions</p> <p>2.4. Check and adjust function of controls and gauges where necessary to comply with manufacturer's manual</p> <p>2.5. Conduct standard start-up and shutdown procedures according to requirements of operator's manual</p>
3. Use small plant and equipment	<p>3.1. Identify site hazards associated with <i>small plant and equipment</i> operations and establish appropriate controls in accordance with the requirements of the site safety plan</p> <p>3.2. Identify and apply operating techniques for small plant and equipment to achieve optimum output in accordance with manufacture's design specifications while maintaining specified tolerances</p> <p>3.3. Operate machine to produce results within design specifications to meet specified</p>

	tolerances 3.4.Safely locate plant and equipment when not in immediate use
4. Carry out operator maintenance	4.1.Shutdown plant/equipment and prepare it for <i>maintenance</i> as per manufacturer's manual and organisational requirements 4.2.Conduct inspection and fault finding in accordance with the manufacture's specifications and/or organisational requirements 4.3.Remove and replace defective parts safely and effectively according to manufacturer's manual and organisational requirements 4.4.Carry out regular programmed maintenance tasks in accordance with the manufacturer's and/or organisational requirements
5. Clean up	5.1.Clear work area and dispose of or recycle <i>materials</i> in accordance with project environmental management plan 5.2.Clean, check, maintain and store plant, equipment and tools in accordance with manufacturer's recommendations and standard work practices

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate small plant and equipment:

- apply legislative, organisation and site requirements and procedures
- apply clear and direct speaking and active listening skills
- apply teamwork to a range of situations, particularly in a safety context
- apply problem solving techniques, particularly in teams and in dealing with safety issues
- interpret and apply information
- show initiative in adapting to changing work conditions or contexts particularly when working across a variety of work placements
- manage time, particularly in organising priorities and planning work
- take responsibility for self organisation of work priorities
- use a range of mediums to learn

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate small plant and equipment :

- small plant and equipment types, characteristics, technical capabilities and limitations
- basic soil types and characteristics
- site and equipment safety requirements
- small plant and equipment operating techniques related to essential tasks
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets (MSDS) and materials handling methods
- project quality requirements
- industry and site specific terminology
- JSA's/Safe work method statement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions to operate small plant and equipment • implementation of requirements, procedures and techniques for the safe, effective and efficient operating of small plants and equipment • working with others to operate small plants and equipment that meets all of the required outcomes • consistent timely operating of small plants and equipment that safely, effectively and efficiently meets the required outcomes
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non English speaking background may have second

	<p>language issues.</p> <ul style="list-style-type: none"> • Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. • Where applicable, physical resources should include equipment modified for people with disabilities. • Access must be provided to appropriate learning and/or assessment support when required.
Method of assessment	<p>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</p> <ul style="list-style-type: none"> • written and/or oral assessment of the candidate's required knowledge • observed, documented and/or first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes • consistently achieving the required outcomes • first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • working with others to operate small plants and equipment
Guidance information for assessment	<p>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant compliance documentation may include:</p>	<ul style="list-style-type: none"> • legislative, organisation and site requirements and procedures • manufacturer's guidelines and specifications • Australian standards • code of practice • Employment and workplace relations legislation • Equal Employment Opportunity and Disability Discrimination legislation
<p>Work instructions may include:</p>	<ul style="list-style-type: none"> • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, materials safety data sheets (MSDS) and diagrams or sketches • plans and specifications • quality requirements, including dimensions, tolerances, standards of work and material standards • safe work procedures related to the operation of small plant and equipment on construction sites
<p>Safety requirements may include:</p>	<ul style="list-style-type: none"> • protective clothing and equipment • use of tools and equipment • workplace environment and safety • handling of materials • use of fire fighting equipment • use of First Aid equipment • hazards and risks control, including: <ul style="list-style-type: none"> • uneven/unstable terrain • trees • fires • overhead and underground services • bridges • buildings • traffic • embankments

	<ul style="list-style-type: none"> • excavations and cuttings • structures and • hazardous materials and substances • safe operating procedures <ul style="list-style-type: none"> • underground and overhead services • other machines • personnel restricted access barriers • traffic control • working at heights • working in proximity to others • worksite visitors and • the public • emergency procedures, including: <ul style="list-style-type: none"> • emergency shutdown and stopping • extinguishing equipment fires • organisational First Aid requirements and • evacuation
Environmental protection requirements may include:	<ul style="list-style-type: none"> • organisational/project environmental management plan • waste management • water quality protection • noise, vibration and dust management and • clean-up management
Small plant and equipment may include the use of:	<ul style="list-style-type: none"> • compressors, concrete mixers, pedestrian rollers, water pumps, brick/masonry saws, jack hammers, kanga hammers, generator sets, lighting sets, vibrating plates, plate compactors, quick cut saws, concrete vibrators, pedestrian rollers, concrete saws and generators, industrial wet and dry vacuum cleaners, pallet trolleys, terrazzo grinders, hoists, brush-cutters and mowers
Operator maintenance is to include:	<ul style="list-style-type: none"> • cleaning • authorised servicing • the monitoring, recording and reporting of faults
Operator maintenance may also include:	<ul style="list-style-type: none"> • the conduct of authorised minor replacements
Materials may include:	<ul style="list-style-type: none"> • water • clays, silts, stone, gravel, mud, rock sand, topsoil

	<ul style="list-style-type: none">• bituminous mixes• timber• fuels and oils• power leads• replacement parts and consumables

RIIWMG203A Drain and dewater civil construction site

Modification History

Not applicable.

Unit Descriptor

This unit covers draining and/or dewatering of civil construction project sites. It includes: planning and preparing; positioning sedimentation control; remove surface water; constructing sump and wells; removing water from sumps or wells, trenches and pits; and cleaning up.

Application of the Unit

This unit specifies the competency required to drain and/or dewater civil construction project sites for environmental protection purposes and the control of water, which may affect construction. It is appropriate for those working in a operational roles, at worksites within:

- Civil construction

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare	<p>1.1. Access, interpret and apply <i>compliance documentation</i> relevant to <i>draining and/or dewatering project sites</i></p> <p>1.2. Obtain, confirm and apply <i>work instructions</i> relevant to the tasks to the allotted task</p> <p>1.3. Obtain, confirm and apply safety requirements from the site safety plan and organisational policies and procedures, to the allotted task</p> <p>1.4. Identify, obtain and implement <i>signage requirements</i> from the project traffic management plan</p> <p>1.5. Select plant, tools and equipment to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults</p> <p>1.6. Identify, confirm and apply <i>environmental</i> protection requirements from the project environmental management plan to the allotted task</p>
2. Position sedimentation control	<p>2.1. Position sedimentation controls according to project environmental management plan</p> <p>2.2. Construct sedimentation control barriers in accordance with the environmental management plan</p> <p>2.3. Position geo-fabrics and/or woven wire according to specification and to the environmental management plan</p>
3. Remove surface water	<p>3.1. Establish temporary drainage systems to drain or divert surface and sub-surface water to the storm water drainage system</p> <p>3.2. Remove slab and site surface water and/or directed to the temporary drainage system</p> <p>3.3. Fill surface holes and depressions</p> <p>3.4. Drain surface water to drainage system using adequate fall</p>
4. Construct sump/wells	<p>4.1. Locate sump and/or well at the lowest point to be drained to maximise pump efficiency</p> <p>4.2. Construct sumps and/or wells to work</p>

	instructions
5. Remove water from sumps/wells, trenches and pits	<p>5.1. Install surface or submersible pumps</p> <p>5.2. Locate surface pump as close as practicable to the sump or well</p> <p>5.3. Pump water to temporary drainage system according to the project environmental management plan</p> <p>5.4. Disperse discharged water using approved procedures</p>
6. Clean up	<p>6.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan</p> <p>6.2. Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer's recommendations and standard work practices</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to drain and dewater civil construction site:

- apply legislative, organisation and site requirements and procedures
- apply operational, maintenance and basic diagnostic procedures
- apply pump operating requirements and procedures

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to drain and dewater civil construction site:

- site and equipment safety requirements
- drainage and dewatering
- sedimentation controls
- grading and levelling
- free water
- pumps
- environmental considerations
- construction principles
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSA's/Safe work method statement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</p> <ul style="list-style-type: none"> • knowledge of the requirements, procedures and instructions for draining and dewatering of civil construction site • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the draining and dewatering of civil construction site, which is to include: <ul style="list-style-type: none"> • draining surface water from a site using surface drains • dewater a trench or pit using at least one type of pump on two separate projects • establishing sedimentation controls for at least one project, and • constructing a sump • working with others to undertake and complete the draining and dewatering of civil construction sites that meets all of the required outcomes • consistent timely completion of the draining and dewatering of civil construction sites that safely, effectively and efficiently meets the required outcomes
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment

	<p>skills.</p> <ul style="list-style-type: none"> • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. • Aboriginal people and other people from a non English speaking background may have second language issues. • Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. • Where applicable, physical resources should include equipment modified for people with disabilities. • Access must be provided to appropriate learning and/or assessment support when required.
Method of assessment	<p>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</p> <ul style="list-style-type: none"> • written and/or oral assessment of the candidate's required knowledge • observed, documented and/or first hand testimonial evidence of the candidate's: <ul style="list-style-type: none"> • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes, including: <ul style="list-style-type: none"> • draining surface water from a site using surface drains • dewater a trench or pit, using at least one type of pump on two separate projects • establishing sedimentation controls for at least one project • constructing a sump • consistently achieving the required

	<p>outcomes</p> <ul style="list-style-type: none">• first hand testimonial evidence of the candidate's:<ul style="list-style-type: none">• working with others to undertake and complete the draining and dewatering of civil construction site
Guidance information for assessment	Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:	<ul style="list-style-type: none"> legislative, organisation and site requirements and procedures manufacturer's guidelines and specifications Australian standards code of practice Employment and workplace relations legislation Equal Employment Opportunity and Disability Discrimination legislation
Areas to be drained and/or dewatered are to include:	<ul style="list-style-type: none"> control of surface water, bores, coffer dam, springs, creeks, wetland water, seepage water in trenches and pits and low lying natural ground where water may not escape
Drainage is to include:	<ul style="list-style-type: none"> graded surface level gutters and ditches excavated manually or by machine and various types of plastic piping
Dewatering techniques are to include:	<ul style="list-style-type: none"> sumps, wells, submersible pumps, vacuum pumps, surface pumps and sludge pumps
Project sites include:	<ul style="list-style-type: none"> road construction sites, excavation projects and construction sites in close proximity of wetlands or active water
Work instructions may include:	<ul style="list-style-type: none"> plans, specifications, quality requirements and operational details quality requirements may include: dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction
Safety requirements may be from the site safety plan and organisational policies and procedures and may include:	<ul style="list-style-type: none"> protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of first aid equipment, hazard control and hazardous materials and substances safe operating procedures, which are to include: recognising and preventing hazards

	<p>associated with underground services, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public</p> <ul style="list-style-type: none"> hazards and risks, which may include: uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials emergency procedures, which are to include: emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation
Traffic signage and devices are to include:	<ul style="list-style-type: none"> temporary warning signs, regulatory and traffic cones
Traffic signage and devices may include:	<ul style="list-style-type: none"> highway traffic signs, site safety signage, guide signs, warning signs, barriers, hazard markers, portable traffic signals, bollards, arrow boards, vehicle mounted signs, flashing lights, barricades, and traffic conditions signage
Environmental Requirements are to include:	<ul style="list-style-type: none"> organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management
Materials are to include:	<ul style="list-style-type: none"> various types of plastic piping, silt fences, rocks or straw bales
Tools and equipment are to include:	<ul style="list-style-type: none"> hoses, shovels and pumps

Water Management

Competency field

Refer to Unit Sector(s).

Co-requisite units

Not applicable.

RTE3605A Troubleshoot irrigation systems

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the process of troubleshooting faults and blockages in irrigation systems. It requires the ability to read and apply system specifications, technical manuals and supply/spare parts inventories, operate, maintain and repair irrigation systems, and record and report maintenance activities. Troubleshooting faults and blockages in irrigation systems requires knowledge of characteristics and operation of replaceable components of irrigation systems, system malfunctions and their likely causes, isolation procedures and OHS and environmental guidelines.

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Not applicable.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Locate and identify faulty components and blockages	<p>1.1 Irrigation system and component function is determined by reference to system specifications and technical manuals.</p> <p>1.2 Monitoring and maintenance records are checked and reviewed.</p> <p>1.3 Operational tests are carried out in accordance with system specifications, technical manuals and OHS requirements.</p> <p>1.4 Faulty components and blockages are identified and documented according to enterprise policy and procedures.</p>
2 Shut down/isolate component	<p>2.1 Shut down sequence and isolation procedures are applied as required according to system specifications and technical manuals.</p> <p>2.2 Safe shut down or isolation is verified.</p> <p>2.3 Safety/security lock off devices and signage is installed according to enterprise policy and procedures.</p>
3 Replace faulty components and clear blockages	<p>3.1 Access to faulty components and blockages is arranged.</p> <p>3.2 Faulty components are removed from the system, according to system specifications and technical manuals, and repaired or disposed of in an environmentally responsible way.</p> <p>3.3 Replaceable components are selected from manufacturers catalogues and procured using enterprise procedures.</p> <p>3.4 Replacement components are installed to meet system specifications according to technical manuals.</p> <p>3.5 Replace faulty components and clear blockages are carried out without unnecessary damage to</p>

surrounding site and structures.

3.6 Blockages are cleared or blocked sections are replaced according to enterprise, environmental and OHS procedures.

4 Return system to normal operating status

4.1 Isolated or shut down components are returned to service.

4.2 Operational tests are carried out according to system specifications, technical manuals and OHS requirements.

4.3 System is returned to normal operational set up.

4.4 Repair activities are reported and recorded according to enterprise policy and procedures

Required Skills and Knowledge

Not applicable.

Evidence Guide

What evidence is required to demonstrate competence for this standard as a whole?

Competence in troubleshooting faulty components and blockages in irrigation systems requires evidence that a person can locate, isolate and replace faulty components and blockages and return the system to normal operating status.

The skills and knowledge required to troubleshooting faulty components and blockages in irrigation systems must be **transferable** to a different work environment. For example, this could include different systems, components, enterprise procedures and access difficulties.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts, and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

identification, characteristics and operation of replaceable components of irrigation systems

system malfunctions and their likely causes

environmental impacts of irrigation, using water from any ground or underground source

purchasing procedures

isolation procedures

enterprise policies and procedures

irrigation OHS and environmental guidelines.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, appropriate literacy and numeracy levels as well as some complementary skills are required. These include the ability to:

read and apply system specifications, technical manuals and supply/spare parts inventories

record and report maintenance activities

identify adverse environmental impacts of irrigation activities and appropriate remedial action

operate, maintain and repair irrigation systems

implement and follow relevant enterprise OHS and environmental policies and procedures.

What processes should be applied to this competency standard?

There are a number of processes that are learnt throughout work and life, which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this competency standard. Following each question a number in brackets indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process and 3 = perform, administer and design the process.

- | | |
|--|--|
| 1. How can communication of ideas and information (2) be applied? | Order replaceable components from suppliers. |
| 2. How can information be collected, analysed and organised (2)? | Collecting and assessing system performance data. |
| 3. How are activities planned and organised (2)? | Organising shut down and repair activities. |
| 4. How can team work (2) be applied? | Checking and reviewing monitoring and maintenance records completed by others. |
| 5. How can the use of mathematical ideas and techniques (2) be applied? | Interpreting system performance data and purchasing parts within budget. |
| 6. How can problem-solving skills (2) be applied? | Identifying and replacing faulty components. |
| 7. How can the use of technology (2) be applied? | Using computerised irrigation systems. |

Are there other competency standards that could be assessed with this one?

This competency standard **could** be assessed on its own or in combination with other competencies relevant to the job function.

There is essential information about **assessing this competency standard for consistent performance and where and how it may be assessed**, in the Assessment Guidelines for this Training Package. All users of these competency standards must have **access** to the **Assessment Guidelines**. Further advice may also be sought from the relevant **sector booklet**.

Range Statement

Range of Variables

The Range of Variables explains the contexts within which the performance and knowledge requirements of this standard may be assessed. The scope of variables chosen in training and assessment requirements may depend on the work situations available

What **irrigation systems** might be relevant to this standard?

These may be pressurised irrigation systems such as micro-irrigation, spray irrigation or gravity fed irrigation systems.

Micro-irrigation systems include mains pressure, low pressure, below or above ground, sprays systems, drip emitter trickle, t-tape, mini-sprinklers, capillary, ebb and flow, and flood systems.

Spray irrigation systems include travelling irrigators (soft hose, hard hose boom type) centre pivot, linear move, powered side roll hand shift permanent (installed), and bike shift/easy shift.

Gravity fed irrigation systems include border check, contour irrigation, furrow irrigation, hillside flooding and basin irrigation.

Border check systems may be either permanent or temporary earth, plastic or concrete devices for insertion in a drain for reticulating water, contour banks used to collect and distribute water along the perimeter of an irrigation plot, contour banks within a plot to collect/distribute water or larger scale systems to stop water exiting one area to another.

Irrigation systems may range from manual operation and monitoring to fully automated with computer control and monitoring.

What faulty **components** or system parts might need to be replaced?

These may vary according to brand and supplier and may include, but not be limited to, injectors, pumps, tensiometers, probe tubes, flow meter, pressure gauge, controllers, solenoid valves, wiring, quick coupling valves (QCV), computer and/or other scheduling devices, pipes, jets, micro jets, laterals, sprinklers, emitters, integrated dripline "thin wall", seals, outlets and gears.

What **operational tests** of the system may be conducted?

These may include pressures, flow rates, sprinkler performance, calculation of co-efficient of uniformity and distribution uniformity.

What might be the **OHS requirements** for maintenance activities?

Requirements may include systems and procedures for safe manual handling, outdoor work (including protection from solar radiation, dust and noise), selection, use and maintenance of relevant personal protective clothing and equipment, selection, care and safe use of hand tools and safe systems for the prevention of electrical injury.

What may be involved in gaining **access** to faulty components or blockages?

Gaining access may require specific approvals from property owners/managers and may involve excavation work.

How might faulty components be **disposed** of?

Disposal of faulty components must occur in an environmentally responsible way. For example, metal and plastic components may be recycled, returned to the manufacturer, or disposed of in accordance with enterprise procedures.

For more information on contexts, environment and variables for training and assessment, refer to the Sector Booklet.

RTF3203A Construct brick and/or block structures and features

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the process of constructing brick and/or block structures and features as a component of landscape project works. These structures and features may include steps, edgings, walls, fences, BBQ and entertaining areas, and ornamental garden elements.

The construction of brick and/or block structures and features is likely to be under limited supervision from others, with checking only related to overall progress. Work is usually done within established guidelines, although some discretion and judgement may be required depending on the type of structure or feature to be constructed.

Application of the Unit

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Plan and prepare work	<p>1.1 Plans and specifications are interpreted and clarified with the supervisor.</p> <p>1.2 The quantity and quality of materials are checked to ensure they conform to design drawings and specifications.</p> <p>1.3 Tools and equipment are selected and checked for serviceability according to enterprise guidelines.</p> <p>1.4 OHS hazards are identified, risks assessed and controls implemented.</p> <p>1.5 Environmental implications of erecting brick and/or block structures are identified and reported to the supervisor.</p>
2 Set out and prepare the site	<p>2.1 Services are determined and located from site plans.</p> <p>2.2 The position of the structure or feature is marked out according to design drawings and specifications.</p> <p>2.3 Profiles are established to conform to the tolerances nominated within the design drawings and specifications.</p> <p>2.4 Subsoil is prepared by removing all debris, vegetable matter and topsoil to provide a solid foundation for construction.</p> <p>2.5 Drainage systems are installed according to design drawings and specifications.</p> <p>2.6 Sub-base material is placed and compacted to the required finished levels.</p>
3 Construct structure or feature	<p>3.1 Mortar is mixed to determined ratio and appropriate admixes including bonding and colouring agents are added, as required, and in accordance with specifications.</p> <p>3.2 Damp proofing and base course of brick and/or</p>

block work is laid according to design drawings and specifications.

- 3.3 Courses of brick and/or block work are laid using designated bond(s) in a manner that will ensure the viability and stability of the structure, and according to design drawings and specifications.
- 3.4 **Finishes** are applied to brick or block work in accordance with specifications.
- 4 Check quality of work and clean up site
 - 4.1 Quality of finished works is inspected to ensure the standard of the finished structure or feature is in accordance with design drawings and specifications
 - 4.2 Brick and/or block work surfaces are cleaned down in an environmentally safe and sensitive manner.
 - 4.3 Tools and equipment are cleaned and stored according to enterprise guidelines.

Not applicable.

Evidence Guide

What evidence is required to demonstrate competence for this standard as a whole?

Competence in constructing brick and/or block structures and features requires evidence that work can be planned and prepared, that the construction site can be set out and prepared according to design drawings and specifications, and that the structure or feature can be constructed according to the required standards.

The skills and knowledge required to construct brick and/or block structures and features must be **transferable** to a different work environment. For example, a person should be able to apply the same principles of brick and/or block work construction whether they are building a wall, a barbecue, or some other garden element.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts, and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

comparative environmental implications associated with soil disturbance and the establishment of drainage systems

components of mortar, including admixes such as bonding and colouring agents, used in the construction of brick and/or block structures and features.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, appropriate literacy and numeracy levels as well as some complementary skills are required. These include the ability to:

interpret design drawings and specifications, and transpose the information to site

measure and construct profiles using mathematical techniques

use of levelling equipment.

What processes should be applied to this competency standard?

There are a number of processes that are learnt throughout work and life, which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this competency standard. Following each question a number in brackets indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process and 3 = perform, administer and design the process.

- | | |
|--|---|
| 1. How can communication of ideas and information (2) be applied? | Information regarding the type of bonding agent to be used may need to be communicated to other members of the work team. |
| 2. How can information be collected, analysed and organised (2) ? | Information from design drawings and specifications may need to be collected, analysed and then organised to transpose it on to site. |
| 3. How are activities planned and organised (2) ? | Activities may need to be planned and organised to meet timelines and to finish the project according to budget. |
| 4. How can team work (2) be applied? | Team work may need to be applied when setting out and preparing a site for construction. |
| 5. How can the use of mathematical ideas and techniques (2) be applied? | Mathematical ideas and techniques may be applied when calculating quantities of materials required. |
| 6. How can problem-solving skills (2) be applied? | Problem-solving skills may be applied if the mortar is mixed to the incorrect consistency. |
| 7. How can the use of technology (2) be applied? | The use of technology may be applied when marking out the site for construction. |

Are there other competency standards that could be assessed with this one?

This competency standard **could** be assessed on its own or in combination with other competencies relevant to the job function.

There is essential information about **assessing this competency standard for consistent performance and where and how it may be assessed**, in the Assessment Guidelines for this Training Package. All users of these competency standards must have **access** to the **Assessment Guidelines**. Further advice may also be sought from the relevant **sector booklet**.

Range Statement

Range of Variables

The Range of Variables explains the contexts within which the performance and knowledge requirements of this standard may be assessed. The scope of variables chosen in training and assessment requirements may depend on the work situations available

What **tools and equipment** are likely to be used when constructing concrete structures and features?

Tools and equipment may include levelling equipment, string lines, tape measures, spades, shovels, trowels, wheelbarrow and concrete mixer.

What **OHS hazards** apply to this standard?

OHS hazards may include manual lifting, use of power tools, use of sharp hand tools, dust, and sun exposure.

What **OHS controls** may be relevant to this standard?

OHS controls may include safe lifting and transporting techniques, the drinking of fluids, basic first aid, and the appropriate use of personal protective clothing and equipment such as overalls, boots, hat, gloves, the erection of safety signs and barriers, the identification of site access points, and the safe storage of materials on site.

What **environmental implications** are likely to be considered?

Consideration may be given to the impact of soil disturbance and the alteration to water flow during construction and after the structure or feature has been constructed.

What **services** are likely to be located on site?

Services may include power, gas, water, stormwater, sewerage or septic connections, phone and optical cables.

What **drainage systems** are likely to be installed?

Drainage systems may include sumps, agricultural drains, storm water pipes, slotted pipes, open drains and channels.

What **finishes** may be relevant to this competency standard?

Finishes may include acrylic render, sand/cement render, oxides and other colours, mouldings and cappings.

For more information on contexts, environment and variables for training and assessment refer to the Sector Booklet.

Unit Sector(s)

RTF3221A Implement a retaining wall project

Modification History

Not applicable.

Unit Descriptor

This competency standard covers the process of implementing a retaining wall project. The work is likely to be under limited supervision, with checking only related to overall progress. It requires the application of knowledge of landscape materials and retaining wall construction techniques. The work is usually done within routines, methods and procedures where some discretion and judgement is required in the selection of equipment, work organisation, services, actions, and achieving outcomes within time constraints.

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Not applicable.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Prepare for retaining wall project	<ul style="list-style-type: none">1.1 Requirements of the retaining wall project are clarified with client/supervisor and enterprise guidelines.1.2 Equipment and material resource requirements are identified according to the scope of the construction work and supervisors instructions.1.3 The environmental implications of the proposed work are identified.1.4 OHS hazards are identified, risks assessed and reported to the supervisor.1.5 Personal protective equipment (PPE) is selected, used, maintained and stored.1.6 Delivery of materials to site is organised according to workplace priorities.
2 Mark out site for retaining wall	<ul style="list-style-type: none">2.1 Site bunting is erected and safety signage is placed where appropriate.2.2 Services are determined and located from site plans.2.3 The position of the retaining wall is marked out according to site and construction plans.2.4 The location and depth of excavations are determined from site and construction plans.2.5 Profiles are established to conform to the tolerances designated by the construction plans.2.6 Survey benchmarks are established.
3 Co-ordinate retaining wall construction	<ul style="list-style-type: none">3.1 Retaining wall components are assembled/installed according to plan.3.2 Appropriate drainage is installed according to plan.3.3 Tools, equipment and machinery are used safely in

accordance with enterprise safe operating procedures and OHS requirements.

- | | |
|---|---|
| 4 Check quality of work and clean up site | 4.1 Quality of finished works is inspected to ensure the standard of the finished project is in accordance with design drawings and specifications. |
| | 4.2 The work site is cleaned down in an environmentally safe and sensitive manner. |
| | 4.3 Tools and equipment are cleaned and stored according to enterprise guidelines. |

Required Skills and Knowledge

Not applicable.

Evidence Guide

What evidence is required to demonstrate competence for this standard as a whole?

Competence in implementing a retaining wall project requires evidence that a person can prepare a project site, set out a retaining wall project, build a retaining wall, and complete a project according to design parameters.

The skills and knowledge required to implement a retaining wall project must be **transferable** to a different work environment. For example, this could include different retaining situations, different retaining wall materials, and different job complexities.

What specific knowledge is needed to achieve the performance criteria?

Knowledge and understanding are essential to apply this standard in the workplace, to transfer the skills to other contexts, and to deal with unplanned events. The knowledge requirements for this competency standard are listed below:

landscape retaining wall materials

landscape retaining wall construction techniques

set out techniques

work schedule programming

possible causes of disruption to work activities and their effect on quality and time schedules

methods and practices for maintaining and repairing retaining walls

the range, use and availability of materials, equipment and machinery that may be required for the project

OHS issues, legislative requirements and codes of practice.

What specific skills are needed to achieve the performance criteria?

To achieve the performance criteria, appropriate literacy and numeracy levels as well as some complementary skills are required. These include the ability to:

read and interpret documentation associated with retaining wall projects

calculate material and resource requirements

co-ordinate a team to achieve optimum performance

communicate with personnel at all levels

document results clearly and concisely

perform an OHS risk assessment.

What processes should be applied to this competency standard?

There are a number of processes that are learnt throughout work and life, which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this competency standard. Following each question a number in brackets indicates the level to which the

key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process and 3 = perform, administer and design the process.

- | | |
|--|--|
| 1. How can communication of ideas and information (2) be applied? | Ideas and information may need to be communicated with the client/supervisor, such as regular reporting. |
| 2. How can information be collected, analysed and organised (2) ? | Information on retaining wall project may need to be collected, analysed and organised according to the scope of work required. |
| 3. How are activities planned and organised (2) ? | Activities may need to be planned and organised to ensure that the project meets timelines. |
| 4. How can team work (2) be applied? | Team work may be applied to ensure that retaining wall project is undertaken according to schedule. |
| 5. How can the use of mathematical ideas and techniques (2) be applied? | Mathematical ideas and techniques may be applied when organising, calculating materials, determining falls and setting out site. |
| 6. How can problem-solving skills (2) be applied? | Site contingencies, personnel difficulties, timeline failures, assessing hazards and identifying controls, may require problem-solving skills. |
| 7. How can the use of technology (2) be applied? | Technology may be used to set out and level site. |

Are there other competency standards that could be assessed with this one?

This competency standard **could** be assessed on its own or in combination with other competencies relevant to the job function.

There is essential information about **assessing this competency standard for consistent performance and where and how it may be assessed**, in the Assessment Guidelines for this Training Package. All users of these competency standards must have **access** to the **Assessment Guidelines**. Further advice may also be sought from the relevant **sector booklet**.

Range Statement

Range of Variables

The Range of Variables explains the range of contexts within which the performance and knowledge requirements of this standard may be assessed. The scope of variables chosen in training and assessment may depend on the work contexts

What retaining wall projects are covered by this unit?	Retaining wall projects include all modular concrete, timber, brick, dry stone and mortared block.
What resource requirements are likely to be identified?	Resource requirements may include base materials, sub-surface drainage materials, retaining wall components, levelling equipment and powered tools, and other equipment associated with construction.
What might be the environmental implications of proposed work site activities?	Environmental implications may include risk of contamination of soils, water, or adjoining property through fuels flowing into drains and water sources, or changes to drainage patterns. Compliance with local, State/Territory, and Commonwealth environmental legislation is required.
What OHS hazards may apply to work site activities?	Hazards may include disturbance of services, solar radiation, dust, noise, through traffic, uneven surfaces and holes, moving machinery and machinery parts, powered equipment and hand tools, hazards from use of hired equipment (untrained staff), and overhead hazards including powerlines.
What PPE is likely to be selected?	PPE will be determined by the type of activity being undertaken and may include work boots, gloves, overalls, sun hat, sunscreen lotion, and hearing or eye protection.
What services are likely to be located on site?	Services may include power, gas, water, stormwater, sewerage or septic connections, phone and optical cables.
What drainage systems are likely to be installed?	Drainage systems may include sumps, agricultural drains, storm water pipes and slotted pipes.

For more information on contexts, environment and variables for training and assessment

refer to the Sector Booklet.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish effective work environment for learning	1.1. Establish and agree upon objectives and scope of the work-based learning 1.2. Analyse work practices and routines to determine their effectiveness in meeting established learning objectives 1.3. Identify and address <i>OHS implications</i> of using work as the basis for learning
2. Develop a work-based learning pathway	2.1. Address <i>contractual requirements</i> and responsibilities for learning at work 2.2. Arrange for integration and monitoring of external learning activities with the <i>work-based learning pathway</i> 2.3. Obtain agreement from relevant personnel to implement the work-based learning pathway
3. Establish the learning-facilitation relationship	3.1. Identify context for learning and individual's learning style 3.2. Select appropriate technique or process to facilitate learning and explain the basis of the technique to learner 3.3. Develop, document and discuss <i>individualised learning plan</i> with learner 3.4. Access, read and interpret documentation outlining the OHS responsibilities of the various parties in the learning environment 3.5. Monitor supervisory arrangements appropriate to learner's levels of knowledge, skill and experience to provide support and encouragement and ensure learner's health and safety
4. Implement work-based learning pathway	4.1. Sequence introduction of workplace tasks, activities and processes to reflect the agreed work-based learning pathway 4.2. Explain objectives of work-based learning and the processes involved to learner 4.3. Encourage learner to take responsibility for learning and to self-reflect 4.4. Develop techniques that facilitate learner's transfer of skills and knowledge
5. Maintain and develop the learning/facilitation	5.1. Prepare for each session 5.2. Structure learning activities to support and reinforce new learning, build on strengths, and identify areas

ELEMENT	PERFORMANCE CRITERIA
relationship	<p>for further development</p> <p>5.3. Observe learner cues and change approaches where necessary to maintain momentum</p> <p>5.4. Practise <i>ethical behaviour</i> at all times</p> <p>5.5. Monitor effectiveness of the learning/facilitation relationship through regular meetings between the parties</p>
6. Close and evaluate the learning/facilitation relationship	<p>6.1. Carry out the closure smoothly, using appropriate interpersonal and communication skills</p> <p>6.2. Seek feedback from learner on the outcomes achieved and value of the relationship</p> <p>6.3. Evaluate and document process, including <i>impact, self evaluation and reflection</i>, and file according to legal and organisational requirements</p>
7. Monitor and review the effectiveness of the work-based learning pathway	<p>7.1. Document work performance and learning achievement and keep records according to organisational requirements</p> <p>7.2. Evaluate effectiveness of the work-based pathway against the objectives, processes and techniques used</p> <p>7.3. Recommend improvements to work-based practice in light of the review process</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- oral communication and language skills to:
 - motivate the learner
 - transfer skills and knowledge
- interpersonal skills to maintain appropriate relationships
- observation skills to monitor individual progress
- literacy skills to:
 - read and interpret organisational documents, legal documents and contracts
 - complete and maintain documentation
- organisational skills to provide guidance and feedback to individuals
- communication skills, including:
 - using effective verbal and non-verbal language
 - using critical listening and questioning techniques
 - giving constructive and supportive feedback
 - assisting learners to paraphrase advice or instructions back to the trainer/facilitator
 - providing clear and concrete options and advice
 - using appropriate industry/profession terminology and language
 - ensuring language, literacy and numeracy used is appropriate to learners

Required knowledge

- systems, processes and practices within the organisation where work-based learning is taking place
- operational demands of the work and impact of changes on work roles
- organisational work culture, including industrial relations environment
- systems for identifying skill needs
- introductory knowledge of different learning styles and how to encourage learning in each, for example:
 - visual learners
 - audio learners
 - kinaesthetic learners
 - theoretical learners
- relevant policy, legislation, codes of practice and national standards that may affect training and assessment in the vocational education and training sector
- OHS relating to the work role, including:
 - hazards relating to the industry and specific workplace

REQUIRED SKILLS AND KNOWLEDGE
<ul style="list-style-type: none">• reporting requirements for hazards and incidents• specific procedures for work tasks• safe use and maintenance of relevant equipment• emergency procedures• sources of OHS information

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. Arrange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare and facilitate work-based learning • provide evidence of a minimum of two examples of developing work-based learning pathways, that include: <ul style="list-style-type: none"> • identifying needs for learning • analysing work practices, work environment and work activities • organising and allocating work in a way that reflects learning needs and provides effective learning opportunities through work processes • provide a minimum of two examples of a learning facilitation relationship being conducted: <ul style="list-style-type: none"> • with different individuals • demonstrating communication skills and flexibility • demonstrating one or more of the processes or techniques identified.
Context of and specific resources for assessment	<p>Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.</p> <p>Assessment must ensure access to information about work activities.</p>
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>OHS implications</i> may include:	<ul style="list-style-type: none"> • OHS obligations • workplace OHS policies and procedures • ensuring work practices, routines and proposed changes do not pose a risk to learners and others.
<i>Contractual requirements</i> may include:	<ul style="list-style-type: none"> • training plans under apprenticeships/traineeships • requirements of government-funded training programs, such as Workplace English Language and Literacy (WELL).
<i>Work-based learning pathway</i> may include:	<ul style="list-style-type: none"> • identifying specific goals for work-based learning • identifying job tasks or activities to be included in learning process • appropriate sequencing of job tasks/activities to reflect learner incremental development • direct guidance and modelling from experienced co-workers and experts • opportunities for practice.
<i>Individualised learning plan</i> may include:	<ul style="list-style-type: none"> • information about individual's learning style, learner characteristics, and the context for learning • clear boundaries and expectations of the learning/facilitation relationship • documented equity or additional support needs for the learner • performance benchmarks to be achieved • activities and processes which together will achieve the benchmarks.
<i>Ethical behaviour</i> includes:	<ul style="list-style-type: none"> • trust • integrity • privacy and confidentiality of the session • following organisational policies • knowing own limitations • having a range of other intervention referrals ready when needed • honesty

RANGE STATEMENT	
	<ul style="list-style-type: none"> • fairness to others.
Impact may be:	<ul style="list-style-type: none"> • successful achievement, rate of achievement, or lack of achievement of identified goals • achievement of other outcomes as a result of the relationship • development of new goals • new or increased motivation to learn • greater capacity to learn • increase in learner's self-confidence.
Self-evaluation and reflection may include:	<ul style="list-style-type: none"> • asking critical questions about: <ul style="list-style-type: none"> • own ability • what worked or didn't work • how the relationship building process could be improved • reviewing records and journals on sessions and critically evaluating own performance • reviewing feedback from learner and identifying critical aspects and areas for improvement.

Co-requisite units

Co-requisite units		

TLILIC1008A Licence to operate a slewing mobile crane (up to 100 tonnes)

Modification History

Not applicable.

Unit Descriptor

This unit specifies the outcomes required to operate a slewing mobile crane (up to 100 tonnes) for licensing purposes. It encompasses the requirement for the up to 60 tonnes licence.

Application of the Unit

This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads and shut down and secure the crane.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Refer to Application of the Unit

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Plan work	<p>1.1 Potential workplace hazards are identified</p> <p>1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment</p> <p>1.3 The weight of the load is identified and estimated in consultation with associated personnel</p> <p>1.4 Crane is appropriate to the load/s and workplace conditions</p> <p>1.5 Appropriate paths for the movement of loads in the work area are inspected and determined</p> <p>1.6 Appropriate communication methods are identified with associated personnel</p>
2 Conduct routine checks	<p>2.1 Crane is visually checked for any damage or defects</p> <p>2.2 Crane is accessed in a safe manner</p> <p>2.3 All signage and labels are visible and legible according to the appropriate standard</p> <p>2.4 Routine pre-operational crane checks are carried out according to procedures</p> <p>2.5 All controls are located and identified</p> <p>2.6 Crane service logbook is checked for compliance</p> <p>2.7 Crane is started according to procedures and checked for any abnormal noises</p> <p>2.8 All crane safety devices are tested according to procedures</p> <p>2.9 Post-start operational checks are carried out according to procedures</p> <p>2.1 All communication equipment is checked for serviceability</p>
0	

- 2.1 **All damage and defects are reported and recorded according to procedures, and appropriate action is taken**
 - 1
- 3 Set up crane
 - 3.1 **Ground suitability** is checked
 - 3.2 **Crane** is driven to the work area according to **procedures**
 - 3.3 **Crane** is positioned for work application and **stability** according to **procedures**
 - 3.4 Appropriate **crane configuration** for work task is determined according to **procedures** (where applicable)
 - 3.5 Boom/jib and counterweight configuration data is input into the crane computer (as required)
 - 3.6 Appropriate **hazard prevention/control measures** are applied to the work area according to **procedures**
 - 3.7 All **communications equipment** is tested for functionality
- 4 Transfer load
 - 4.1 Lifts are determined within the capacity of the crane
 - 4.2 Boom/jib and hoist block is positioned over load following directions from **associated personnel**
 - 4.3 **Test lift** is carried out according to **procedures**
 - 4.4 Loads are transferred using all **relevant crane movements** according to **procedures** and the **appropriate standard**
 - 4.5 All required **communication signals** are correctly interpreted according to **procedures** and the **appropriate standard**
 - 4.6 **Crane** is operated according to **procedures**.
 - 4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability
 - 4.8 **Unplanned and/or unsafe** situations are responded to in line with **procedures**

- 5 Mobile load
 - 5.1 Suitability of **planned route** is checked for the crane according to **procedures**
 - 5.2 **Crane** is configured to mobile load according to **procedures**
 - 5.3 **Load is moved using best mobile practice according to the appropriate standard**
- 6 Shut down and secure crane
 - 6.1 **Crane** boom/jib and equipment are stowed and secured where appropriate according to **procedures** and the **appropriate standard**
 - 6.2 **Relevant motion locks and brakes are applied (where applicable)**
 - 6.3 **Outriggers/stabilisers are stowed and secured according to procedures**
 - 6.4 **Crane is shut down according to procedures**
 - 6.5 Plates or packing are stowed and secured
 - 6.6 **Routine post-operational crane checks are carried out according to procedures**
 - 6.7 **All damage and defects are reported and recorded according to procedures, and appropriate action is taken**

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

Accurately record and maintain information relating to crane operations

Use communication techniques in the workplace including whistles, hand signals and use of two-way radios

Use interpersonal communication skills at a level sufficient to communicate with other site personnel

Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration

Operate a slewing mobile crane (61t up to 100t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other

Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)

Use and interpret crane manufacturer's specifications and data, including load charts, to enable the crane to be configured for the load

Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

Appropriate mathematical procedures for estimation and measurement of loads

Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class

Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs

Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads

Mobile slewing crane operating techniques

Understanding of the hierarchy of hazard identification and control

Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class

Procedures for the recording, reporting and maintenance of workplace records and information

Rated capacity and working load limits (including use of crane load charts)

Typical routine problems encountered in the process and with equipment and adjustments

required for correction

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.

State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Compliance with OH&S licensing legislation.

Effectively communicate and work safely with others in the work area.

Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).

Effectively complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 100 tonne capacity in conjunction with associated personnel.

Appropriate mathematical procedures for estimation of loads.

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all

the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:

Personal Protective Equipment (PPE) for the purpose of the Performance Assessment

appropriate slewing mobile crane (61 tonne up to 100 tonne) and associated equipment in safe condition

suitable loads as specified by the endorsed assessment instrument

communication equipment (e.g. two-way radios, whistles, etc.)

other associated personnel to sling and direct the loads

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

Hazards

May include:

ground stability (e.g. ground condition, recently filled trenches, slopes)

overhead hazards (e.g. powerlines, service pipes)

traffic (e.g. pedestrians, vehicles, other plant)

insufficient lighting

environmental conditions (e.g. wind, lightning, storms, etc.)

other specific hazards (e.g. dangerous materials)

Hazard control measures

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

1 elimination

2 substitution

3 isolation

4 engineering control measures

5 using safe work practices

6 personal protective equipment.

Appropriate standard

Appropriate standards may include:

codes of practice (mobile crane)

legislation

Australian standards

manufacturer's specifications

industry standards (where applicable)

Associated personnel

May include but not limited to:

	<ul style="list-style-type: none">riggersdoggers
Appropriate	<p>May include but not limited to:</p> <ul style="list-style-type: none">crane capabilitiesenvironmental conditions (e.g. wind, lightning, storms, etc.)

Service logbook

slewing levers including brake
boom extension levers (where fitted)

May include but not limited to:

any logbook
service book
history record system where the service and
maintenance history is kept

Crane safety devices

May include but not limited to:

horns/sirens
audible and visual reversing devices
operator restraint devices
lights

Communication equipment

May include but not limited to:

two-way radios
whistles
bells
buzzers

NB: where radio communication equipment
is used the transmitting frequencies of the
equipment must be selected to prevent
interference to or from other radio equipment
being used in the vicinity of the crane

Ground suitability

May include but not limited to:

rough uneven ground
backfilled ground
soft soils
hard compacted soil
rock
bitumen
concrete

Stability

May include but not limited to:

deploying outriggers
establishing correct size plates or packing

Crane configuration

correctly positioning plates or packing

May include but not be limited to:

boom/jib

fly-jib

counterweights

Hazard prevention/control measures

May include but not limited to:

safety tags on electrical switches/isolators

insulated powerlines

safety observer used inside exclusion zone

disconnected power

traffic barricades and control

pedestrian barricades

trench covers

movement of obstructions

personal protective equipment

adequate illumination

Test lift

The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:

near capacity loads do not overload the crane

loads of unusual shape or weight distribution are correctly slung

load measuring equipment can be used to verify the calculated weight of the load

all crane equipment is functioning properly

adjustments to the slinging can be made in a safe manner

Relevant crane movements

May include but not limited to:

telescope in and out

boom/jib up and down

slew boom/jib

operation of outriggers/stabilisers

raise and lower hoist

boom/jib in line with the crane
boom/jib as low as possible
load faces uphill
use of handheld taglines

Shut down

May include but not limited to:
retracting boom/jib
retracting hoist rope and hook block
positioning/securing boom/jib for transport
retracting outriggers/stabilisers
idling engine to stabilise temperature
turning off engine (where applicable)
removing key from ignition (where applicable)
locking and securing cabin (where applicable)
securing crane for travel

Unit Sector(s)

Not applicable.

TLILIC108A Licence to operate a forklift truck

Modification History

Not applicable.

Unit Descriptor

This unit specifies the outcomes required for the operation of a powered industrial truck equipped with a mast and an elevating load carriage to which is attached a pair of fork arms or other attachment, for licensing purposes. This definition also includes a truck on which the operator is raised with the attachment for order-picking.

Application of the Unit

This unit requires the operator to be able plan the work, conduct routine checks on the forklift, shift loads in a safe manner, and shut down and secure the equipment after the completion of operations.

This unit is based on the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Refer to Application of the Unit

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Plan work	<p>1.1 Potential workplace hazards are identified</p> <p>1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment</p> <p>1.3 Appropriate forklift truck is selected according to the load and workplace conditions</p> <p>1.4 Working area is inspected to determine appropriate path of movement for loads and forklift truck</p> <p>1.5 Communication methods are identified according to procedures</p>
2 Conduct routine checks	<p>2.1 Forklift is visually checked for any damage or defects</p> <p>2.2 All signage and labels are visible and legible according to the appropriate standard</p> <p>2.3 All controls are located and identified</p> <p>2.4 Pre-start operational checks are carried out according to procedures</p> <p>2.5 Forklift is started according to procedures and checked for any abnormal noise</p> <p>2.6 Post-start operational checks are carried out according to procedures</p> <p>2.7 All forklift functions and safety devices are tested to their maximum according to procedures</p> <p>2.8 Defects and damage are reported and recorded according to procedures, and appropriate action is taken</p>

- 3 Shift load
 - 3.1 The weight of load is assessed to ensure compliance with **forklift** truck data plate specifications
 - 3.2 Appropriate **hazard prevention/control measures** are implemented and communicated with personnel in the work area
 - 3.3 **Forklift** is operated at a safe speed and according to **procedures**
 - 3.4 **Loads are moved and placed to ensure stability of material and avoidance of hazards**
 - 3.5 **Load movement is monitored constantly ensuring safety to personnel and load, and structural stability**
 - 3.6 **Unplanned and/or unsafe situations** are responded to in line with **procedures**
- 4 Shut down and secure forklift truck
 - 4.1 **Forklift** truck is parked to avoid hazards
 - 4.2 Forklift is **shut down** according to **procedures**
 - 4.3 **Routine post-operational forklift checks are carried out according to procedures**
 - 4.4 **Forklift is secured to prevent unauthorised access/use**
 - 4.5 **All defects and damage are reported and recorded according to procedures, and appropriate action is taken**

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

Accurately interpret information relating to conducting forklift truck operations (e.g. procedures)

Safely conduct forklift truck operations including all functions to the maximum height and load capacity

Identify hazards associated with the operation of the forklift truck, assess risks and put into place effective hazard prevention/control measures for those hazards identified

Use communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)

Drive forklift with load in forward and reverse, maintaining visibility

Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

Methodology of determining the weight of a load

Commonwealth, state or territory OH&S legislation, standards relevant to the safe operation for the forklift trucks

Understanding of forklift characteristics and capabilities (including use of load data plates)

Understanding of the hierarchy of hazard identification and control

Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class

Procedures for the recording, reporting and maintenance of workplace records and information

Forklift truck operations and safe operating techniques

Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.

State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Compliance with OH&S licensing legislation.

Communicate and work safely with others in the work area.

Identify hazards associated with the operation of the forklift truck and put in place effective hazard controls for those hazards identified.

Conduct pre-start-up, operational, moving loads and shut down and secure checks of the forklift truck according to procedures.

Operate the forklift truck and move loads safely, including driving and manoeuvring, picking up and placing of loads at various stack heights.

Drive forklift truck with load in forward and reverse, maintaining visibility.

Context of and specific resources for assessment

Assessment of the safe application of knowledge and skills to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Applicants must have access to:

Personal Protective Equipment (PPE) for the

purpose of the Performance Assessment
associated equipment appropriate to forklift
truck operations
suitable loads as described by the endorsed
Assessment Instrument
manufacturers specifications
appropriate forklift truck in a safe condition.

Method of assessment

Assessment must be conducted using the
endorsed Assessment Instrument. These
Instruments provide instruction on their
application.

The use of '**simulators**' in the assessment of
this unit of competency is **not acceptable**.

Assessment may be in conjunction with the
assessment of other units of competency.

Assessment methods must confirm
consistency and accuracy of performance
together with application of underpinning
knowledge.

Assessment must confirm a reasonable
inference that competency is not only able to
be satisfied under the particular
circumstance, but is able to be transferred to
other circumstances.

Guidance information for assessment

Further information about endorsed
Assessment Instruments may be obtained
from state/territory OH&S regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised wording, if used in the performance criteria, is detailed below.**

Hazards

May include but not limited to:

ground conditions (e.g. condition of pavement, slopes)
overhead hazards (e.g. powerlines, service pipes)
insufficient lighting
traffic (e.g. pedestrians, vehicles, other plant)
weather (e.g. wind, lightning, rain)
forklift instability (e.g. overloading, poor load placement, irregular loads)
other hazards (e.g. dangerous materials)

Hazard control measures

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- 1 elimination
- 2 substitution
- 3 isolation
- 4 engineering control measures
- 5 using safe work practices
- 6 personal protective equipment

Appropriate standards

May include but not limited to:

legislation
Australian standards
manufacturer's specifications
industry standards (where applicable)

Forklift truck

May include but not be limited to:
counterbalanced

reach trucks
rough terrain
internal combustion petrol, diesel, gas
electric

Communications methods

May include but not limited to:
verbal and non-verbal language
written instructions
signage
hand signals
listening
questioning to confirm understanding
appropriate worksite protocol

Procedures

May include but not limited to:
manufacturer's guidelines (instructions, specifications or checklists)
industry operating procedures
workplace procedures (work instructions, operating procedures, checklists)

Pre-start operational checks

May include but not limited to:
safety devices fitted where appropriate
forklift data plate fitted and interpreted
logbook, handbook or operating manuals available
external visual check including, evidence of damage, leaks, visual evidence of structural weaknesses (including paint separation or stressed welds) is carried out
forklift attachment is checked for security
approved modifications and/or attachments fitted to manufacturer's specifications (e.g. as per forklift or attachment data plate) are identified
checks for adaptations or modifications outside manufacturer's specifications (e.g. not listed on the forklift or attachment data plate) are carried out

	maintenance logbook/records checked
Post-start operational checks	<p>May include checks of the forklift truck and equipment after start-up to ensure:</p> <p>hazard warning systems (for example lights and horns), are functional</p> <p>attachment movements and control functions are smooth and comply with operating requirements</p> <p>steering, transmission and brake functions comply with operating requirements</p>
Hazard prevention/control measures	<p>May include but not limited to:</p> <p>barricades and traffic control</p> <p>safety tags on electrical switches/isolators</p> <p>insulated powerlines</p> <p>safety observer used inside exclusion zone</p> <p>disconnected power</p> <p>pedestrian control (barricades, signs, etc.)</p> <p>excavation safeguards</p> <p>movement of obstructions</p> <p>personal protective equipment</p> <p>adequate illumination</p>
Unplanned and/or unsafe situations	<p>May include but not limited:</p> <p>failure/loss of control (e.g. brakes and steering)</p> <p>failure of equipment (e.g. hydraulic system)</p> <p>environmental condition</p>
Shut down	<p>May include, but is not limited to:</p> <p>parking in a suitable location away from dangerous areas</p> <p>fork arms are correctly positioned (tips down, tilted forward, lowered to ground)</p> <p>appropriate transmission/gear is selected for parking (relevant to transmission type)</p> <p>hand/parking brake is applied</p> <p>engine power is turned off</p>

ignition key is removed (if applicable)
LPG gas cylinder valve is shut off (where fitted)
securing equipment against unauthorised operation
securing the site
ensuring access ways are clear
identifying and segregating defective equipment and reporting to authorised personnel
batteries are connected to the charger (if applicable)

Unit Sector(s)

Not applicable.

TLILIC608A Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Not applicable.

Unit Descriptor

This unit specifies the outcomes required to operate a mobile crane of greater than 3 tonnes capacity that incorporates a boom or jib which includes articulated type mobile cranes and locomotive cranes, but does not include vehicle tow trucks, for licensing purposes.

Application of the Unit

This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads, and shut down and secure the crane.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Refer to Application of the Unit

Pre-Requisites

- 3 Set up crane
 - 3.1 **Ground suitability** is checked
 - 3.2 **Crane** is driven to the work area according to **procedures**
 - 3.3 **Crane** is positioned for work application and **stability** according to **procedures**
 - 3.4 Appropriate **crane configuration** for work task is determined according to **procedures** (where applicable)
 - 3.5 Boom/jib and counterweight configuration data is input into the crane computer (where applicable)
 - 3.6 Appropriate **hazard prevention/control measures** are applied to the work area according to **procedures**
 - 3.7 All **communications equipment** is tested for functionality
- 4 Transfer load
 - 4.1 Lifts are determined within the capacity of the crane
 - 4.2 Boom/jib and hoist block is positioned over load following directions from **associated personnel**
 - 4.3 **Test lift** is carried out according to **procedures**
 - 4.4 Loads are transferred using all **relevant crane movements** according to **procedures** and the **appropriate standard**
 - 4.5 All required **communication signals** are correctly interpreted according to **procedures** and the **appropriate standard**
 - 4.6 **Crane** is operated according to **procedures**
 - 4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability
 - 4.8 **Unplanned and/or unsafe** situations are responded to in line with **procedures**

- 5 Mobile load
 - 5.1 Suitability of **planned route** is checked for the crane according to **procedures**
 - 5.2 **Crane** is configured to mobile load according to procedures
 - 5.3 Load is moved using **best mobile practice** according to the appropriate standard
- 6 Shut down and secure crane
 - 6.1 **Crane** boom/jib and equipment is stowed and secured, where appropriate, according to **procedures** and the **appropriate standard**
 - 6.2 Relevant motion locks and brakes are applied (where applicable)
 - 6.3 Outriggers/stabilisers are stowed and secured according to **procedures** (where applicable)
 - 6.4 Crane is **shut down** according to procedures
 - 6.5 Routine post-operational crane checks are carried out according to **procedures**
 - 6.6 Plates or packing are stowed and secured (where applicable)
 - 6.7 All damage and defects are recorded and reported according to **procedures**, and appropriate action is taken

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

Accurately record and maintain information relating to crane operations

Use communication techniques in the workplace including whistles, hand signals and use of two-way radios

Use communication skills at a level sufficient to communicate with other site personnel

Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate crane

Operate crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel

Mobile loads using best mobile practice

Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites)

Use and interpret crane manufacturer's specifications and data, including load charts to enable the crane to be configured for the load

Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

Appropriate mathematical procedures for estimation and measurement of loads

Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class

Ability to read and comprehend manufacturer's instructions, procedures and safety signs

Understanding of crane characteristics and capabilities (including use of load charts) to allow the configuration of the crane to suit the range of loads

Understanding of the hierarchy of hazard identification and control

Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class

Procedures for the recording, reporting and maintenance of workplace records and information

Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.

State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Compliance with OH&S licensing legislation.

Communicate and work safely with others in the work area.

Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping, other vehicles and personnel).

Operation of a non-slewing mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of non-slewing mobile cranes (over 3t capacity) in conjunction with other associated personnel.

Appropriate mathematical procedures for estimation of loads.

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to

suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:

Personal Protective Equipment (PPE) for the purpose of the Performance Assessment

appropriate non-slewing crane (greater than 3 tonnes) and associated equipment in safe condition

suitable loads as specified by endorsed assessment instrument

communication equipment (e.g. two-way radios, whistles, etc.)

other associated personnel to sling and direct the loads.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

Hazards

May include but not limited to:

ground stability (e.g. ground condition, recently filled trenches, slopes)

overhead hazards (e.g. powerlines, service pipes)

insufficient lighting

traffic (e.g. pedestrians, vehicles, other plant)

environmental conditions (e.g. wind, lightning, storms, etc.)

other specific hazards (e.g. dangerous materials)

Hazard control measures

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

1 elimination

2 substitution

3 isolation

 - 3.2 **Crane** is driven to the work area according to **procedures**
 - 3.3 **Crane** is positioned for work application and **stability** according to **procedures**
 - 3.4 Appropriate **crane configuration** for work task is determined according to **procedures** (where applicable)
 - 3.5 Boom/jib and counterweight configuration data is input into the crane computer (as required)
 - 3.6 Appropriate **hazard prevention/control measures** are applied to the work area according to **procedures**
 - 3.7 All **communications equipment** is tested for functionality
- 4 Transfer load
 - 4.1 Lifts are determined within the capacity of the crane
 - 4.2 Boom/jib and hoist block is positioned over load following directions from **associated personnel**
 - 4.3 **Test lift** is carried out according to **procedures**
 - 4.4 Loads are transferred using all **relevant crane movements** according to **procedures** and the **appropriate standard**
 - 4.5 All required **communication signals** are correctly interpreted according to **procedures** and the **appropriate standard**
 - 4.6 **Crane** is operated according to **procedures**
 - 4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability
 - 4.8 **Unplanned and/or unsafe** situations are

- responded to in line with **procedures**
- 5 Mobile load
- 5.1 Suitability of **planned route** is checked for the crane according to **procedures**
- 5.2 **Crane** is configured to mobile load according to **procedures**
- 5.3 **Load is moved using best mobile practice according to the appropriate standard**
- 6 Shut down and secure crane
- 6.1 **Crane** boom/jib and equipment are stowed and secured where appropriate according to **procedures** and the **appropriate standard**
- 6.2 **Relevant motion locks and brakes are applied (where applicable)**
- 6.3 **Outriggers/stabilisers are stowed and secured according to procedures**
- 6.4 **Crane is shut down according to procedures**
- 6.5 **Plates or packing are stowed and secured**
- 6.6 **Routine post-operational crane checks are carried out according to procedures**
- 6.7 **All damage and defects are reported and recorded according to procedures, and appropriate action is taken**

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

Accurately record and maintain information relating to crane operations

Use communication techniques in the workplace including whistles, hand signals and use of two-way radios

Use interpersonal communication skills at a level sufficient to communicate with other site personnel

Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration

Operate a slewing mobile crane (up to 20t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel

Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)

Use and interpret crane manufacturer's specifications and data, including load charts, to enable the crane to be configured for the load

Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

Appropriate mathematical procedures for estimation and measurement of loads

Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class

Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs

Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads

Mobile slewing crane operating techniques

Understanding of the hierarchy of hazard identification and control

Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class

Procedures for the recording, reporting and maintenance of workplace records and information

Rated capacity and working load limits (including use of crane load charts)

Typical routine problems encountered in the process and with equipment and adjustments

required for correction

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.

State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Compliance with OH&S licensing legislation.

Communicate and work safely with others in the work area.

Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).

Complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 20 tonne capacity in conjunction with other associated personnel.

Appropriate mathematical procedures for estimation of loads.

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a

suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:

Personal Protective Equipment (PPE) for the purpose of the Performance Assessment

appropriate slewing mobile crane (up to 20 tonne) and associated equipment in safe condition

suitable loads as specified by the endorsed Assessment Instrument

communication equipment (e.g. two-way radios, whistles, etc.)

other associated personnel to sling and direct the loads

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

Assessment may be in conjunction with the assessment of other units of competency.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised wording, if used in the performance criteria, is detailed below.**

Hazards

May include but not limited to:

ground stability (e.g. ground condition, recently filled trenches, slopes)

overhead hazards (e.g. powerlines, service pipes)

traffic (e.g. pedestrians, vehicles, other plant)

insufficient lighting

environmental conditions (e.g. wind, lightning, storms, etc.)

other specific hazards (e.g. dangerous materials)

Hazard control measures

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

1 elimination

2 substitution

3 isolation

4 engineering control measures

5 using safe work practices

6 personal protective equipment

Appropriate standard

May include but not limited to:

codes of practice (mobile crane)

legislation

Australian standard

manufacturer's specifications

industry standards (where applicable)

Associated personnel

May include but not limited to:

	<p>riggers</p> <p>doggers</p>
Appropriate	<p>May include but not limited to:</p> <p>crane capabilities</p> <p>environmental conditions (e.g. wind, lightning, storms, etc.)</p>
Crane	<p>May include a boom or jib, which is capable of being slewed (up to 20 tonnes capacity)</p> <p>The slewing mobile crane up to 20 tonnes classification encompasses the requirements for the non-slewing mobile crane classification and the vehicle loading crane classification</p> <p>NB: This excludes front-end loader, backhoe, excavator or like equipment when configured for crane operation</p>
Communication method	<p>May include but not limited to:</p> <p>verbal and non-verbal language</p> <p>written instructions</p> <p>signage</p> <p>hand signals</p> <p>listening</p> <p>questioning to confirm understanding</p> <p>appropriate worksite protocol</p>
Signage and labels	<p>May include but not limited to:</p> <p>crane data plates/labels</p> <p>load charts</p> <p>crane decals</p> <p>control labels</p>
Procedures	<p>May include but not limited to:</p> <p>manufacturer's guidelines (instructions, specifications or checklists)</p> <p>industry operating procedures</p> <p>workplace procedures (work instructions, operating procedures, checklists)</p>

Controls

May include but not limited to:

- luffing levers
- hoisting and lowering levers
- slewing levers including brake
- boom extension levers (where fitted)

Service logbook

May include but not limited to:

- any logbook
- service book
- history record system where the service and maintenance history is kept

Crane safety devices

May include but not limited to:

- horns/sirens
- audible and visual reversing devices
- operator restraint devices
- lights

Communication equipment

May include but not limited to:

- two-way radios
- whistles
- bells
- buzzers

NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane

Ground suitability

May include but not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete

Stability	May include but not limited to: deploying outriggers establishing correct size plates or packing correctly positioning plates or packing
Crane configuration	May include but not be limited to: boom/jib fly-jib counterweights
Hazard prevention/control measures	May include but not limited to: safety tags on electrical switches/isolators insulated powerlines safety observer used inside exclusion zone disconnected power traffic barricades and control pedestrian barricades trench covers movement of obstructions personal protective equipment adequate illumination
Test lift	The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that: near capacity loads do not overload the crane loads of unusual shape or weight distribution are correctly slung load measuring equipment can be used to verify the calculated weight of the load all crane equipment is functioning properly adjustments to the slinging can be made in a safe manner
Relevant crane movements	May include but not limited to: telescope in and out boom/jib up and down

	slew boom/jib operation of outriggers/stabilisers raise and lower hoist travel
Communication signals	May include but not limited to: stop - hand stop - whistle hoist up - hand hoist up - whistle hoist down - hand hoist down - whistle luff boom down - hand luff boom down - whistle luff boom up - hand luff boom up - whistle telescope out - hand telescope out - whistle telescope in - hand telescope in - whistle slew left - hand slew left - whistle slew right - hand slew right - whistle travel - hand
Unplanned and/or unsafe situations	May include but not limited to: failure/loss of control (e.g. brakes and steering) failure of equipment (e.g. hydraulic system) environmental conditions (e.g. wind, lightning, storms, etc.)
Planned route	May include but not limited to: unusual or difficult terrains obstacles or obstruction

Best mobile practice

May include but not limited to:

- minimum speed
- gentle acceleration and braking (to minimise load swing)
- minimum boom/jib length
- carrying the load near to the ground surface
- boom/jib in line with the crane
- boom/jib as low as possible
- load faces uphill
- use of handheld taglines

Shut Down

May include but not limited to:

- retracting boom/jib
- retracting hoist rope and hook block
- positioning/securing boom/jib
- retracting outriggers/stabilisers
- idling engine to stabilise temperature
- turning off engine (where applicable)
- removing key from ignition (where applicable)
- locking and securing cabin (where applicable)

Unit Sector(s)

Not applicable.

TLILIC908A Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History

Not applicable.

Unit Descriptor

This unit specifies the outcomes required to operate a slewing mobile crane (up to 60 tonnes) for licensing purposes. It encompasses the requirement for the up to 20 tonnes licence.

Application of the Unit

This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads and shut down and secure the crane.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Refer to Application of the Unit

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Plan work	<p>1.1 Potential workplace hazards are identified</p> <p>1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment</p> <p>1.3 The weight of the load is identified and estimated in consultation with associated personnel</p> <p>1.4 The crane is appropriate to the load/s and workplace conditions</p> <p>1.5 Appropriate paths for the movement of loads in the work area are inspected and determined</p> <p>1.6 Appropriate communication methods are identified with associated personnel</p>
2 Conduct routine checks	<p>2.1 Crane is visually checked for any damage or defects</p> <p>2.2 Crane is accessed in a safe manner</p> <p>2.3 All signage and labels are visible and legible according to the appropriate standard</p> <p>2.4 Routine pre-operational crane checks are carried out according to procedures</p> <p>2.5 All controls are located and identified</p> <p>2.6 Crane service logbook is checked for compliance</p> <p>2.7 Crane is started according to procedures and checked for any abnormal noises</p> <p>2.8 All crane safety devices are tested according to procedures</p> <p>2.9 Post-start operational checks are carried out according to procedures</p> <p>2.1 All communication equipment is checked for serviceability</p>
0	

- 2.1 All damage and defects are reported and recorded according to **procedures**, and appropriate action is taken
- 3 Set up crane
 - 3.1 **Ground suitability** is checked
 - 3.2 **Crane** is driven to the work area according to **procedures**
 - 3.3 **Crane** is positioned for work application and **stability** according to **procedures**
 - 3.4 Appropriate **crane configuration** for work task is determined according to **procedures** (where applicable)
 - 3.5 Boom/jib and counterweight configuration data is input into the crane computer (as required)
 - 3.6 Appropriate **hazard prevention/control measures** are applied to the work area according to **procedures**
 - 3.7 All **communications equipment** is tested for functionality
- 4 Transfer load
 - 4.1 Lifts are determined within the capacity of the crane
 - 4.2 Boom/jib and hoist block is positioned over load following directions from **associated personnel**
 - 4.3 **Test lift** is carried out according to **procedures**
 - 4.4 Loads are transferred using all **relevant crane movements** according to **procedures** and the **appropriate standard**
 - 4.5 All required **communication signals** are correctly interpreted according to **procedures** and the **appropriate standard**
 - 4.6 **Crane** is operated according to **procedures**
 - 4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability
 - 4.8 **Unplanned and/or unsafe** situations are responded to in line with **procedures**

- 5 Mobile load
 - 5.1 Suitability of **planned route** is checked for the crane according to **procedures**
 - 5.2 **Crane** is configured to mobile load according to **procedures**
 - 5.3 Load is moved using **best mobile practice** according to the **appropriate standard**
- 6 Shut down and secure crane
 - 6.1 **Crane** boom/jib and equipment are stowed and secured where appropriate according to **procedures** and the **appropriate standard**
 - 6.2 Relevant motion locks and brakes are applied (where applicable)
 - 6.3 Outriggers/stabilisers are stowed and secured according to **procedures**
 - 6.4 Crane is **shut down** according to **procedures**
 - 6.5 Plates or packing are stowed and secured
 - 6.6 Routine post-operational crane checks are carried out according to **procedures**
 - 6.7 All damage and defects are reported and recorded according to **procedures**, and appropriate action is taken

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

Accurately record and maintain information relating to crane operations

Use communication techniques in the workplace including whistles, hand signals and use of two-way radios

Use interpersonal communication skills at a level sufficient to communicate with other site personnel

Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration

Operate a slewing mobile crane (21t up to 60t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel

Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)

Use and interpret crane manufacturer's specifications and data, including load charts, to enable the crane to be configured for the load

Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

Appropriate mathematical procedures for estimation and measurement of loads

Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class

Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs

Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads

Mobile slewing crane operating techniques

Understanding of the hierarchy of hazard identification and control

Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class

Procedures for the recording, reporting and maintenance of workplace records and information

Rated capacity and working load limits (including use of crane load charts)

Typical routine problems encountered in the process and with equipment and adjustments

required for correction

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.

State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Compliance with OH&S licensing legislation.

Effectively communicate and work safely with others in the work area.

Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).

Effectively complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 60 tonne capacity in conjunction with other associated personnel.

Appropriate mathematical procedures for estimation of loads.

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all

the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:

Personal Protective Equipment (PPE) for the purpose of the Performance Assessment.

appropriate slewing mobile crane (21tonne up to 60 tonne) and associated equipment in safe condition

suitable loads as specified by the endorsed Assessment Instrument

communication equipment (e.g. two-way radios, whistles, etc.)

other associated personnel to sling and direct the loads.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from State/territory OH&S regulators.
