Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to develop, plan and implement an appropriate building or construction planning process. It applies to the strategic development and implementation of an organisation's project and organisational planning.

The unit applies to the management and review systems of an organisation involved in residential and/or commercial projects of significant size and complexity. It supports the establishment of a soundly based contract planning service necessary to produce accurate and successful project outcomes in accordance with organisational guidelines and legislation, codes and standards governing project completion.

Application of the Unit

Application of the unit

This unit of competency supports the needs of builders and senior managers within building, construction and services firms, typically working in larger organisations and managing more complex projects and processes, responsible for developing, planning and implementing an appropriate building or construction planning process.

The unit requires facilitating implementation of new and modified systems and monitoring and overseeing the performance of systems and personnel.

Knowledge of industry contracts, human resources and industrial relations practices; socioeconomic factors which influence the industry; and organisational strategic and operational activities is essential.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Quantify and qualify factors to be included in the organisational on-site planning system.	<p>1.1. Strategic factors impacting on the planning process are identified and quantified in accordance with legislative, code, standard and organisational requirements.</p> <p>1.2. Range and scope of activities to be undertaken by the organisation are quantified.</p> <p>1.3. Strategic and operational planning structures within the organisation are reviewed and qualified regarding their information needs.</p>
2. Establish and implement organisational on-site planning system.	<p>2.1. Design and development of the organisational project planning system is facilitated.</p> <p>2.2. Criteria for personnel and processes concerned with construction planning are established.</p> <p>2.3. Endorsement of senior management is facilitated and obtained for implementation of the system.</p> <p>2.4. Senior project staff are selected and appointed to meet organisational needs.</p>
3. Establish and implement a planning quality control system.	<p>3.1. Construction methodologies applicable to the type of construction project are identified and applied to the planning quality control process.</p> <p>3.2. Implementation of a review and feedback system using company project records and performance criteria is facilitated and directed.</p>
4. Develop and implement an organisational feedback system.	<p>4.1. Means of effectively communicating planning information within the strategic and operational sectors of the organisation is established and implemented.</p> <p>4.2. Organisational feedback system based on performance, progress and project outcomes and other strategic factors is developed and strategically implemented.</p>
5. Establish a recording and evaluation system.	<p>5.1. Documentation and recording system that meets organisational needs for ongoing recording and evaluation of the planning process is instituted and managed.</p> <p>5.2. Strategic balances and checks, which enable the ongoing maintenance of the quality of the planning system, are developed and applied.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- communication skills to:
 - appoint staff
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - facilitate and obtain senior management endorsement
 - read and interpret:
 - codes and standards
 - legislation
 - other relevant documentation
 - seek feedback
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to complete relevant documentation
- conceptualising and envisaging unique solutions to complex problems and situations
- delegating tasks within specific functional guidelines
- directing the activities of personnel involved in the construction planning process
- facilitating the implementation of new and modified systems
- interpreting strategic and often ambiguous information and reaching logical and practical decisions
- monitoring and overseeing the performance of systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- financial and business principles as they apply to the building and construction industry
- human resource and industrial relations practices within the building and construction industry
- organisational strategic and operational activities and mechanisms through which they are addressed

REQUIRED SKILLS AND KNOWLEDGE

- relevant state or territory building and construction codes, standards and regulations
- socioeconomic and political factors which impact on the building and construction industry
- type, breadth and scope of building and construction industry contracts.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by effective development, planning and implementation of an appropriate building or construction planning process.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop a strategic focus on the mechanisms implemented to enable the construction planning process
- interpret organisational information and reporting requirements, which results in the establishment of mechanisms that demonstrate those needs are being met
- implement and maintain mechanisms and systems which enable demonstrable improvements to occur within the organisational construction planning process
- delegate effectively and oversee tasks
- communicate effectively both verbally and in writing with owners, senior management and employees.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- documentation that should normally be available in a building or construction office to comply with legislation and the organisation policies
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs, record and print copies
- a technical reference library with current publications on measurement, design, building construction to support underpinning knowledge and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the planning process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over

EVIDENCE GUIDE

a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Strategic factors impacting on the planning process include:

- clients and client needs
- location of projects
- logistics and location of personnel
- market focus and structure of the organisation
- organisation information needs and timelines

RANGE STATEMENT

Legislative, code and standard
requirements include:

- relevant legislative requirements, codes and standards
- strategic organisational objectives
- type of work being undertaken.
- application of the Building Code of Australia (BCA) related to the size and complexity of the project and the class of building being constructed
- council and other relevant planning approval processes
- OHS and other workplace standards
- relevant state or territory licensing arrangements.

Criteria for personnel and processes include:

- appropriate experience and qualifications of participants
- correct and timely selection of key project supervisors and administrators
- effective lines and methods of communication
- suitability and timing of communication
- suitability of documentation and reporting methods
- suitability of work habits and timeliness of personnel.

Planning quality control process
includes:

- documentation and graphical representation of data
- establishment of performance benchmarks
- evaluation and review methods and practices
- feedback loops and information extraction
- personnel and system information gathering and insert points
- project review meetings and project progress reporting.

Recording and evaluation
include:

- key point data availability and crisis flagging
- maintenance and redevelopment of information recording systems
- manual and electronic data recording processes
- performance data entry and responsibility
- programmed and crisis evaluation strategies.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop energy conservation and management philosophies and strategies.	<p>1.1. Factors to be included in the organisational <i>energy conservation and management system</i> are quantified and qualified.</p> <p>1.2. <i>Strategic factors</i> that impact on the organisational ability to improve energy conservation and management practices and processes are evaluated.</p> <p>1.3. Range and scope of activities being undertaken by the organisation in regard to energy conservation and management are quantified.</p> <p>1.4. Previous policy and <i>operational factors</i> contributing to energy conservation and management are evaluated.</p> <p>1.5. Organisational energy conservation and management policy and strategy are developed, with assessment of savings and benefits to be derived.</p>
2. Scope the introduction and management of energy conservation and management principles and processes.	<p>2.1. Board and senior management are consulted concerning the introduction and implementation of the energy conservation and management policy and strategy.</p> <p>2.2. Organisational policy and management guidelines are developed covering energy conservation and management within and external to the organisation.</p> <p>2.3. Strategic plan for the introduction of the policy and strategy is developed and documented.</p> <p>2.4. Staff are briefed on criteria for implementing and maintaining systems concerned with energy conservation and management.</p> <p>2.5. Methods are developed to gather and monitor energy conservation and management information essential to the management process.</p> <p>2.6. Methods are developed to translate the policy into practice in the organisation and on site.</p>
3. Implement the energy conservation and management system.	<p>3.1. Energy conservation and management instructions are built into organisational operating procedures.</p> <p>3.2. Staff training program is introduced to ensure that energy conservation and management practices are applied to organisational activities on a daily basis.</p> <p>3.3. Methods for determining effectiveness of the energy conservation and management system are introduced.</p> <p>3.4. Routine monitoring of energy benchmarks is</p>

ELEMENT	PERFORMANCE CRITERIA
	established and maintained.
4. Manage the organisational energy conservation processes.	4.1. Energy conservation and management issues are added to the process agenda at all levels of the organisation. 4.2. Contractors and employees are advised of and monitored within the framework. 4.3. Policy guidelines and obligations are circulated within the organisation and sign-off by staff, employees and contractors is obtained. 4.4. Staff compliance with energy conservation and management policy is monitored.
5. Implement an energy management feedback system.	5.1. Processes to monitor and report on energy conservation and management achievements are developed and introduced. 5.2. Feedback systems are developed, circulated and maintained to ensure all stakeholders can support the energy conservation and management process.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to facilitate the implementation of new and modified energy conservation and management systems
- apply numeracy skills to workplace requirements
- communication skills to:
 - consult board members and senior management
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - obtain agreement on guidelines and obligations
 - provide information to staff and contractors
 - read and interpret documents from a variety of sources
 - seek feedback
 - use and interpret non-verbal communication

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- written skills to develop policies, strategies and plans
- conceptualisation of unique solutions to complex problems and situations
- interpretation of strategic and often ambiguous information to ensure logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in the energy conservation and management review process
- supervisory skills to monitor and oversee performance of the management and review systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- energy conservation and management issues that impact on organisation and its practices
- factors to be considered in assessing the energy conservation and management requirements inherent in different types of building and site utilisation projects
- financial and business administration principles commensurate with organisational needs
- key factors influencing decisions on energy conservation and management issues and decision making
- legislative, regulatory and administrative obligations incumbent on the building and construction industry for energy conservation and management practices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by developing, implementing and maintaining the energy conservation and management system for an organisation.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- contribute to an effective energy conservation and management strategy
- establish identifiable roles and responsibilities for organisation personnel involved in that strategy
- implement management practices which result in a high level of compliance with energy management guidelines and organisational policy
- strategically plan to meet energy management obligations effectively
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate environmental legislation and regulations
- strategic building and construction market information
- a technical reference library with current publications on design, building construction and manufactures product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Energy conservation and management system quality principles and practices include:

- ensuring availability of appropriately qualified personnel to deal with energy issues
- maintenance of agreed expenditures for energy management compliance
- obtaining timely and relevant expert advice as required by the organisation or project
- organisational compliance with appropriate legislation and regulations
- periodic review of energy conservation and management practices and processes
- preventative maintenance of energy conservation and management practices and processes.

Strategic factors impinging on the organisational energy conservation and management process obligations include:

- extent and types of equipment being operated
- location and nature of the construction activity
- organisational policy and management practices
- scope of operations and activities of organisation
- types, age and construction of buildings in which organisation operates.

Operational factors impinging on organisational energy conservation and management process include:

- management commitment to the energy conservation and management process
- organisational policy and operating guidelines
- public liabilities and exposure to risk
- risk management strategies and policies
- skills and experience of organisational personnel
- structure of the management team and apportionment of responsibilities
- timing of activities and project deadlines
- types of materials and consumables being employed in the process.

Feedback systems include:

- emergency or process breakdown advisory channels
- formal meetings between staff, employees and contractors on a regular basis
- programmed appraisals of compliance with energy policy involving staff, employees and contractors
- programmed reporting and energy management conformance statements and

RANGE STATEMENT

timetables

- verbal, electronic and hard copy information communications systems.

PERFORMANCE CRITERIA

evaluation system.

of costing process.

5.2. Strategic balances and checks are applied that enable the ongoing maintenance of quality of the costing system.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret documents from a variety of sources
 - seek approval from senior management
 - seek feedback
 - train staff
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to complete relevant documentation
- conceptualisation of unique solutions to complex problems and situations
- facilitation skills to implement new and modified systems
- interpretation of strategic and often ambiguous information to ensure logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional guidelines and direct activities of personnel involved in the estimating and tendering process
- numeracy skills to apply calculations to interpret costs
- supervisory skills to monitor and oversee the performance of systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- appropriate sector of the building and construction industry and the nature of contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and industry's industrial relations climate and practices
- socioeconomic and political factors which determine the climate in that sector of the building and construction industry.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the development and implementation of an organisational construction costing system. This should include relevant aspects of the monitoring process to ensure continued financial viability of the organisation.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement effective cost development and monitoring system
- apply management practices that result in a high level of staff productivity
- interact effectively with personnel both within and external to the organisation
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Strategic factors impacting on the construction costing process include:

- availability and accessibility of historical records
- availability of materials and suppliers costs
- awards, agreements and work practices
- construction methodologies and practices
- extent of information and anticipated degree of risk
- margins, allowances, rates and penalties
- organisational performance data

RANGE STATEMENT

Strategic and operational factors impinging on organisation costing processes include:

- plant, equipment and provision of services.
- ability to gather specific information concerning actual versus estimated costs
- establishment of internal and external performance management systems
- relationships with organisation's financial management and construction management systems.

Criteria for implementing and maintaining systems concerned with costing the construction process include:

- establishing and maintaining accurate estimating practices
- gathering and classifying appropriate strategic and performance information
- using the services of well trained and experienced personnel in the costing process.

Quality control procedures for maintaining costing involve obtaining adequate feedback from clients, subcontractors and suppliers and include:

- establishing performance benchmarks for system
- maintaining a quality dialogue with parties to construction process
- monitoring internal expenditure and funding allocations.

Evaluation of ***recording system*** and costing system includes:

- establishing and maintaining comprehensive records of bids
- maintaining appropriate manual or electronic databases to assist performance comparisons
- programmed and spontaneous reviews of success rates
- providing secure and safe accommodation for costing information.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Quantify and qualify factors to be included in organisational documentation processes.	<p>1.1.Organisational administrative and operational structures and processes are identified and quantified.</p> <p>1.2.Legal and financial obligations are identified that must be reflected in and conformed to in the development of documentation for building and construction <i>projects</i>.</p> <p>1.3.Range and scope of activities to be undertaken by the organisation and types of documentation and <i>documentation processes</i> required to support building or construction projects are quantified.</p> <p>1.4.Strategic operational and project structures within and external to the organisation are reviewed and qualified as to their documentation requirements.</p>
2. Implement and manage documentation system of construction organisation.	<p>2.1.Design and development of documentation system of construction organisation are facilitated and managed.</p> <p>2.2.Operational criteria for personnel and processes concerned with construction and project documentation are established.</p> <p>2.3.Endorsement from senior management for implementation of system is obtained.</p> <p>2.4.Staff members with necessary expertise and industry knowledge to excel at the work involved are appointed.</p>
3. Establish and implement a construction documentation quality control system.	<p>3.1.Appropriate corporate guidelines for a <i>construction documentation quality control system</i> which underpins the development and maintenance of construction or project documentation are identified or developed.</p> <p>3.2.House rules are established and managed for the accurate and timely completion of construction and project documentation.</p> <p>3.3.Documentation impinging on or requiring adherence to Acts, regulations or local authority requirements, that meets the necessary legal and/or financial obligations, is produced.</p> <p>3.4.Review and feedback system using internal and external advice about the useability of company documentation is implemented and facilitated.</p>
4. Establish a recording	<p>4.1.<i>Documentation recording system</i> which fosters</p>

ELEMENT

PERFORMANCE CRITERIA

and evaluation system.

ongoing evaluation of construction or project performance is instituted.

4.2. Strategic checks and balances which enable ongoing maintenance of the quality of construction and project documentation are applied.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- apply numeracy skills to workplace requirements
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret documents from a variety of sources
 - seek endorsement from senior management
 - seek feedback
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to complete relevant documentation
- conceptualisation of unique solutions to complex problems and situations
- facilitation skills to implement new and modified documentation administration systems
- interpretation of strategic and often ambiguous information to ensure logical and practical decisions
- management skills, including the ability to delegate tasks within specific functional guidelines and direct the activities of personnel involved in the documentation administration process
- supervisory skills to monitor and oversee performance of the documentation administration systems and individuals involved in the process
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- appropriate sector of the building and construction industry and nature of the contracts upon which its activities are based
- factors to be considered in assessing the risk inherent in different types of building and construction projects
- financial and business administration principles commensurate with organisational needs
- human resource practices and the industry's industrial relations climate and practices
- legislative, regulatory and administrative obligations incumbent on the building and
- construction industry for OHS, environmental, employment and financial practices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed through efficient and effective contract documentation management and administration, including the production of contracts, specifications and drawings which contribute to an organisation operating in an efficient and productive project environment.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- document administration procedures and frameworks supported and directed by strong and decisive leadership
- manage practices that result in a high level of staff productivity
- interact effectively with personnel both within and external to the organisation
- develop conceptual and strategic problem solving and systems
- communicate effectively both verbally and in writing with senior management, employees, clients, regulatory authorities and legal representatives.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers' product literature
- copies of appropriate awards and workplace agreements
- strategic building and construction market information
- a technical reference library with current publications on design, building construction and manufactures product literature
- suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able

EVIDENCE GUIDE

to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess the nature and performance of concrete for use in multi-storey buildings and other building types.	<p>1.1. Plastic and hardened concrete properties are identified and recorded for building types.</p> <p>1.2. Sources of aggregate are listed and properties of each described.</p> <p>1.3. Effects of impurities are described and recorded.</p> <p>1.4. Manufacture and testing of concrete is conducted in accordance with relevant Australian standards.</p>
2. Assess application of concrete used in multi-storey buildings.	<p>2.1. Selection and distribution methods of concrete are determined following analysis of site access.</p> <p>2.2. Correct distribution and placement methods of concrete are demonstrated and maintained.</p> <p>2.3. Reasons and effects of compaction on both plastic and hardened concrete are identified.</p> <p>2.4. Immersion, surface and form vibration are compared.</p> <p>2.5. Accurate records relating to the application of concrete are maintained.</p> <p>2.6. Types of curing methods and detrimental effects of poor or no curing are identified and recorded.</p>
3. Evaluate methods undertaken to repair concrete.	<p>3.1. Live and dormant cracks are identified.</p> <p>3.2. Repair methods and causes of cracked concrete and concrete cancer are described and recorded in accordance with organisational procedures.</p> <p>3.3. Faults in concrete are diagnosed and recorded in accordance with organisational procedures.</p>
4. Evaluate effects of fire and heat on concrete used in multi-storey buildings.	<p>4.1. Reinforced concrete is tested for effects of fire and heat.</p> <p>4.2. Methods of fire protection for concrete elements are identified and applied.</p>
5. Monitor environmental impacts of building materials used.	<p>5.1. Concrete used in buildings complies with organisation's sustainability policies.</p> <p>5.2. New technologies in concrete are monitored and applied in the construction of multi-storey buildings in accordance with organisational policies and guidelines.</p> <p>5.3. Performance requirements of concrete in fire resistance construction are identified and applied in accordance with acceptable standard construction practices.</p>

ELEMENT**PERFORMANCE CRITERIA**

5.4. Cost-effectiveness of using recycled materials is identified in accordance with acceptable standard construction practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of design concepts and principles
- application of measurements and calculations
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - specifications and drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to record information and maintain records
- numeracy skills to apply calculations
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- application of Building Code of Australia (BCA) and Australian standards
- applications of structural principles in buildings
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- grading process and grade markings used to categorise timber and timber products
- OHS requirements, legislative codes and practices
- types and nature of materials and effect of their performance, including properties and uses of cement and types of hydraulic cement
- work drawings and specifications.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by applying correct processes for selecting and sizing materials for all structural components that form a complex building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS and organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- apply design principles relating to performance
- identify typical faults and problems and the action required to rectify such faults.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including timber product information and samples
- access to relevant legislation, regulations and

EVIDENCE GUIDE

codes of practice, including BCA, National Timber Framing Code and AS1684, AS4055

- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Building types include:

- bridge and pier construction
- buildings with concrete skeleton and slabs
- concrete column or wall 10 metres high
- slab on ground floor.

Records maintained include details regarding:

- causes of surface defects during concrete placement
- compaction of concrete
- finishing processes and surface treatments to slab concrete.

Types of curing methods include:

- accelerated curing
- continuously wetting concrete
- impermeable membrane curing.

Reinforced concrete includes:

- methods of pre-stressed concrete
- principles of reinforced concrete using steel, wire, fibres, etc.

Performance requirements include:

- characteristics, uses, maintenance and selection of materials and systems in terms of their:
 - alternative uses
 - cost effectiveness

RANGE STATEMENT

- hazard potential and environmental safety
- installation requirements
- needs for use of cranes and hoists
- recycling capacity
- rubbish removal demands
- transport problems and restrictions
- cost
- detail relating to materials
- evaluation and assessment for new materials
- milestones
- nominated subcontractors
- provision of site access/facilities
- quality assurance
- quality of work
- standard procedures
- standards of work
- work schedules.
- BCA, including AS1684.

Standard construction practices

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply structural principles to the planning of the erection or demolition of a structure.	<p>1.1. Main <i>structural principles</i> that apply to the erection of large, high rise and complex structures are identified.</p> <p>1.2. Performance characteristics of the structural elements, including <i>materials</i> identified in the building plan, are identified, analysed and applied to the planning of the construction work.</p> <p>1.3. Demolition of existing structures is undertaken in accordance with legislative and planning requirements and safe work practices.</p>
2. Coordinate and manage the site assessment and job set-up.	<p>2.1. Processes are put in place to analyse stability of soils and capacity of the site to support the construction loads.</p> <p>2.2. Requirements for retaining walls are identified in conjunction with related industry professionals and applied to the planning process.</p> <p>2.3. Structural function and requirements for <i>temporary structural elements</i> are analysed and applied to the planning process.</p>
3. Coordinate and manage construction of footing systems.	<p>3.1. Coordination of the set-out of the building is undertaken in accordance with documented building plans, following the full assessment of the site.</p> <p>3.2. Structural performance of the footings specified in the building plan is assessed for compliance with relevant codes and accepted industry construction principles.</p> <p>3.3. Footings, as specified in the building plan, are laid and checked for compliance with standards and accepted industry construction principles.</p> <p>3.4. Damp coursing and the provision of termite barriers and other relevant techniques are planned, implemented and checked in accordance with codes, standards and industry practice.</p>
4. Coordinate and manage structural elements of the construction process.	<p>4.1. Technical construction principles and performance characteristics of construction materials are identified and analysed in the planning of project.</p> <p>4.2. Processes for construction of all structural elements are identified, implemented and checked for compliance with manufacturer specifications and relevant Australian standards and codes.</p> <p>4.3. Building plans and relevant standards and codes are</p>

ELEMENT

PERFORMANCE CRITERIA

	identified and implemented to ensure appropriate allowances have been made for plumbing, electrical conduits and other services to be installed.
5. Analyse and plan for structural integrity of buildings.	<p>5.1. Relevant industry professionals are consulted to provide advice regarding the structural integrity of proposed building.</p> <p>5.2. <i>Structural requirements and loads</i> of the building design are assessed.</p> <p>5.3. Analysis is conducted of the effects of force and movements on structural elements.</p> <p>5.4. Analysis of properties and behaviours of structural materials is conducted.</p> <p>5.5. Analysis of section properties of structural elements is conducted using standard industry formulas and performance comparisons.</p> <p>5.6. <i>Performance characteristics of columns</i> are evaluated using standard industry techniques.</p> <p>5.7. Methods used for stress distribution in connections between structural elements are assessed.</p> <p>5.8. Impact of <i>various loads</i> on the building structure is assessed.</p> <p>5.9. Design impact of high performance structural elements is considered.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of design concepts and principles
- application of measurements and calculations
- communication skills to:
 - consult with industry professionals
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- codes and standards
- legislative and planning requirements
- plans, specifications and drawings
- other relevant documentation
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- interpret documentation from a wide range of sources
- numeracy skills to apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- applications of structural principles in buildings
- Building Code of Australia (BCA) and Australian standards
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- interpretation and analysis of work drawings and specifications
- nature of materials and effect of performance.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of structural design principles and communication of the selection, positioning and sizing of all structural members that form fixed or temporary building structures.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- coordinate professional input to evaluate structural integrity of large and complex buildings
- clearly analyse structural impact of design decisions
- comply with OHS and organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- apply design principles relating to performance
- identify typical faults and problems and the action required to rectify such faults.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation, including design brief

EVIDENCE GUIDE

drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents

- research resources, including timber product information and samples
- access to relevant legislation, regulations and codes of practice, including the BCA
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Structural principles relate to factors, including:

- dead and live load calculations and characteristics
- impact of wind, snow, ground water, earthquake, liquid pressure, rainwater and earth pressure actions
- impact of time-dependent effects, including creep and shrinkage
- impact of thermal effects
- structural resistance of materials
- fire resistance of materials
- structural resistance of forms of construction.

Materials include:

- masonry
- concrete, including reinforced and pre-stressed concrete
- steel, including cold-formed steel

RANGE STATEMENT

Temporary structural elements
include:

- composite steel and concrete
- aluminium.
- bracing
- close sheeting
- formwork props
- pressure resistant formwork
- scaffolding sole plates
- shields
- shoring collar sets
- soldier sets
- ties.

Structural requirements and loads
relate to building:

- aesthetics
- economy
- equilibrium
- functionality
- stability
- strength.

Properties and behaviours of structural materials include
consideration of:

- effect of force on materials in tension, compression, stress, strain and elasticity
- structural properties of common materials.

Analysis of ***performance characteristics of columns***
requires consideration of:

- bending behaviour and performance of loaded support beams
- eccentric and axial load effect
- load spanning elements for bending moments, shear forces, deflection and torsion
- effect of connections
- effect of slab behaviour in relation to spans and stress distribution
- effect of slenderness ratio.

Various loads include:

- dead load
- earthquake load
- live load
- wind load.

High performance structural elements include:

- castellated beams
- connections
- fire resistance
- laminated beams
- pre-stressed beams
- slabs
- trusses

RANGE STATEMENT

- use of steel to reinforce concrete
- waffle slabs.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review documents submitted for building and land use approval for compliance with relevant legislation and codes.	<p>1.1. Plans, <i>specifications</i> and engineering drawings for medium rise buildings are accessed and interpreted.</p> <p>1.2. Legislative requirements are interpreted and applied to various building projects.</p> <p>1.3. Common faults with medium rise buildings are identified and recorded.</p>
2. Inspect building work.	<p>2.1. Progress of building work is monitored for compliance with <i>standard construction practice</i> in accordance with organisational quality assurance procedures.</p> <p>2.2. Work that does not comply with standards and <i>performance requirements</i> is recorded and required remedial action is documented and communicated to appropriate personnel.</p> <p>2.3. Ongoing communication with appropriate personnel is maintained to assist in monitoring progress of building work.</p>
3. Prepare reports on various building types.	<p>3.1. Advice with respect to work on medium rise buildings is prepared and reported.</p> <p>3.2. Report on suitability of existing buildings prior to purchase inspections is documented.</p> <p>3.3. Records of building safety inspections conducted on existing buildings are documented.</p> <p>3.4. Reports on construction work prior to occupancy inspection are documented.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- application of building survey procedures to the assessment of building systems
- application of design concepts and principles
- application of measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
 - communicate building work progress
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - legislation
 - plans, specifications and drawings
 - other relevant documentation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to record relevant information and prepare reports
- interpretation skills, including the ability to interpret documentation from a wide range of sources
- numeracy skills to apply measurements and calculations and to interpret mathematical information
- technological skills to facilitate use of the organisation's software and office equipment.

Required knowledge

Required knowledge for this unit is:

- applications of structural principles in buildings
- building survey practices
- design principles and behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- nature of materials and effect of performance
- relevant legislation, codes and practices, including Building Code of Australia (BCA), Australian standards and OHS requirements
- work drawings and specifications.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the application of building survey procedures to assessment of all structural components that form a building project.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS and organisational quality procedures and processes
- apply and interpret relevant documentation and codes
- apply design principles relating to performance of the building system
- identify typical faults and problems and the action required to rectify such faults.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documentation, including design brief drawings, specifications, codes, design concepts, construction schedules and other necessary supporting documents
- research resources, including timber product information and samples

EVIDENCE GUIDE

- access to relevant legislation, regulations and codes of practice, including the BCA
- relevant computer software package and suitable hardware.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Specifications include:

- detailed specifications addressing specific components, e.g. construction, mechanical, structural, services or other requirements
- developed specifications
- industry standard specifications
- preliminary or outline specifications.
- Building Code of Australia (BCA), including relevant Australian standards.

Standard construction practice includes:

Performance requirements include:

- cost
- detail relating to materials
- milestones
- nominated subcontractors
- provision of site access/facilities
- quality assurance
- quality of work
- standard procedures
- standards of work
- work schedules.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to identify construction faults in large, high rise and complex buildings (open' licensing classification with special reference to Type A buildings). It includes the identification and evaluation of construction problems and determination of alternative methods in accordance with legislative requirements.

Builders and other related construction industry professionals for whom this unit is relevant, exercise personal judgement based on their knowledge, skills and experience. They must also coordinate the input and expertise of a range of other professionals in order to assess construction faults and determine appropriate responses.

Application of the Unit

Application of the unit

This unit of competency supports builders, project managers and related construction industry professionals responsible for assessing construction faults in large building projects, assembling the input of related professionals and determining appropriate responses.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and analyse construction faults in large building projects.	<p>1.1. Information is collected relating to specific construction faults.</p> <p>1.2. Original specifications for the construction are analysed to identify potential causes of construction problem.</p> <p>1.3. Construction problem is documented and communicated to relevant personnel in accordance with standard work practices.</p> <p>1.4. Expert analysis and opinions are gathered as required from project team members and external professionals.</p> <p>1.5. Problem solving techniques are used and typical faults and problems are identified and the action to rectify is deemed to be in accordance with the Building Code of Australia (BCA) open classification.</p>
2. Analyse construction techniques, methods and materials.	<p>2.1. Building terminology is used accurately in the communication of issues.</p> <p>2.2. Working drawings and specifications are evaluated to identify any existing or designed in construction problems.</p> <p>2.3. Alternative methods and materials to meet construction aims and objectives are prepared to the specification nominated in relevant legislation in the BCA (open classification) and Australian standards.</p>
3. Evaluate alternative construction solutions.	<p>3.1. Commonly occurring on-site problems with building materials and their causes are considered and evaluated.</p> <p>3.2. Report identifying available alternative methods and materials available to meet the construction aims and objectives is prepared to specification.</p> <p>3.3. Detailed sketches of available alternative methods and materials available to meet the construction aims and objectives are prepared to specification.</p>
4. Resolve construction faults using alternative construction methods.	<p>4.1. Suitable methods from the available alternative solutions are evaluated and recommended to resolve the problem, in accordance with project aims and objectives and using standard organisational processes.</p> <p>4.2. Selected methods are integrated into the project in</p>

ELEMENT**PERFORMANCE CRITERIA**

	order to resolve construction problems in accordance with project aims.
	4.3. Evaluation of the available alternative forms of construction are carried out in accordance with project aims.
5. Communicate preferred solution to construction problem.	5.1. Technical resolution to the identified problem is documented in accordance with project and organisational requirements.
	5.2. Appropriate documentation is lodged with and communicated to appropriate project and other personnel.
	5.3. Strategies are determined and put in place to monitor the implementation of corrective procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- analysis and interpretation skills relating to documentation from a wide range of sources, including BCA and Australian standards
- applying access requirements for people with a disability and requirements of the Disability Discrimination Act (DDA) with regard to access to building projects
- applying design concepts and principles in accordance with Australian standards
- applying structural principles to the construction process
- applying building codes and standards
- communication skills to:
 - communicate construction problems to appropriate personnel
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - Australian standards
 - BCA
 - reports and legislation
 - working drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- seek expert analysis and opinions
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
 - record construction problem
 - prepare report identifying alternative methods and materials
- apply numeracy skills to workplace requirements.

Required knowledge

Required knowledge for this unit is:

- design and construction principles of buildings
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- terminology, definitions and hazard identification.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by identifying construction faults and their correction to achieve, certification of compliance on the final outcome or authorisation for commencement by a competent authority.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- assess construction faults in buildings, determine a rectification strategy and consider alternative construction methods; and the associated reporting of data, findings, recommendations and strategies for at least one residential building project and one commercial building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body or individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- relevant Acts, Australian standards, regulations and codes of practice for building design
- plans, working drawings, specifications and material requirements for relevant buildings.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured

EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Construction faults include those occurring in:

- initial constructions
- installations
- refurbishments
- renovations
- restorations.

Open classification within the BCA refers to:

- all classes of building and types of construction.

Australian standards may include:

- AS1288 Installation of glass in buildings
- AS1684 Residential timber framed construction
- AS2050 Fixing of roof tiles
- AS2180 Metal rainwater goods, selection and installation
- AS2208 Safety glazing materials for use in buildings
- AS3500 National plumbing

RANGE STATEMENT

- AS3600 Concrete structures
- AS3660 Protection of buildings from subterranean termites
- AS3700 Masonry
- AS3740: 2004 Waterproofing of wet areas in residential buildings
- AS4349 Inspection of buildings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate layouts of water supply for general and firefighting use.	<p>1.1. Relevant professional expertise is sought to analyse the technical robustness of the planned solution for provision of water supply for general and firefighting services use.</p> <p>1.2. Water supply, connection and layout specified in the building and construction plans are identified, evaluated and recorded as part of the building and construction planning process and in accordance with BCA, relevant legislation and Australian standards.</p> <p>1.3. Installation of water services supplying fire hydrants, fire hose reels and fire sprinkler systems is identified, evaluated and recorded in accordance with BCA, relevant legislation and Australian standards.</p> <p>1.4. Interconnection of water tanks for fire services is emulated in intent of non-return to original tanks and results are evaluated.</p>
2. Evaluate sewerage and drainage disposal methods and their layouts.	<p>2.1. Relevant professional expertise is sought to analyse the technical robustness of planned solution for the provision of sewerage and drainage disposal methods and their layouts.</p> <p>2.2. Sewerage connection and layout are identified, evaluated and recorded in accordance with the BCA, relevant legislation and Australian standards.</p> <p>2.3. Connection methods of main drains to local authority sewers across open ground and within buildings for the whole site, are identified, evaluated and recorded.</p> <p>2.4. Disposal of sewerage from fixtures situated below the level of local authority sewer for both domestic and commercial buildings are evaluated in accordance with BCA, relevant legislation and Australian standards.</p> <p>2.5. Methods for disposal of stormwater drainage systems are evaluated and documented in accordance with the BCA, relevant legislation and Australian standards.</p> <p>2.6. Design and installation of stormwater drainage systems are evaluated and documented in accordance with BCA, relevant legislation and Australian standards.</p>
3. Evaluate smoke	<p>3.1. Relevant professional expertise is sought to analyse</p>

ELEMENT	PERFORMANCE CRITERIA
hazard management, mechanical ventilation, air conditioning and methods of air filtration and layout.	<p>the technical robustness of the planned solution for provision of smoke hazard management, <i>mechanical ventilation and air conditioning</i>, and methods of air filtration and layout.</p> <p>3.2. Terms used in mechanical ventilation are clearly recorded, stating how ventilation, volume, velocity and content may be controlled.</p> <p>3.3. Methods of mechanical ventilation, air distribution and smoke hazard management are identified, evaluated and recorded in accordance with BCA, relevant legislation and Australian standards.</p> <p>3.4. Air conditioning and mechanical ventilation basic elements are identified, evaluated and documented, including the function of air conditioning and applications for various types of occupancy in buildings.</p>
4. Evaluate hot water systems and factors affecting selection.	<p>4.1. Relevant professional expertise is sought to analyse the technical robustness of the planned solution for provision of <i>hot water systems</i>.</p> <p>4.2. Hot water systems are identified and evaluated according to design factors, types of system, height of installation, area to be serviced, number of outlets and energy sources available.</p> <p>4.3. Operating principles of various types of hot water systems are evaluated and documented.</p>
5. Identify natural lighting for varying situations and evaluate suitable lighting fixtures for a range of operations.	<p>5.1. Relevant professional expertise is sought to analyse the technical robustness of the planned solution for provision of natural and artificial <i>lighting systems</i>.</p> <p>5.2. Natural lighting and general aims of design are identified in accordance with authorities and governing regulation requirements.</p> <p>5.3. Artificial lighting and types of light sources are compared to recommended service luminance for various service situations in accordance with BCA, relevant legislation and Australian standards.</p>
6. Evaluate firefighting and fire detection services.	<p>6.1. Relevant professional expertise is sought to analyse technical robustness of the planned solution for provision of firefighting and fire detection services.</p> <p>6.2. Authorities involved in the perusal of plans and site inspection for the various building classifications and their roles and functions are identified.</p> <p>6.3. Requirements for sprinkler systems, fire hydrants and fire hoses for the various building classifications</p>

ELEMENT

PERFORMANCE CRITERIA

	are identified and evaluated in accordance with BCA, relevant legislation and Australian standards.
	6.4. Fire detection and alarm systems are identified and evaluated in accordance with BCA, relevant legislation and Australian standards.
7. Determine requirements for general electrical and electronic service installation.	<p>7.1. Relevant professional expertise is sought to analyse the technical robustness of planned solution for <i>general electrical and electronic service</i> installation.</p> <p>7.2. Electrical supply authorities and the relevant legislation are identified and recorded.</p> <p>7.3. Procedures for electrical supply and connection to site, and electrical design and provision for services and electronic cabling for the project, are identified, evaluated and recorded.</p> <p>7.4. Design and installation of emergency warning systems, emergency lighting and exit signage systems are evaluated and recorded in accordance with the BCA and relevant Australian standards.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to evaluate impact of the requirement for service layout and connection methods on the construction process
- analysis and interpretation skills relating to documentation from a wide range of sources, including BCA and Australian standards
- application of design concepts and principles in accordance with Australian standards
- applying building codes and standards
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - Australian standards

REQUIRED SKILLS AND KNOWLEDGE

- BCA
- legislation
- specifications
- working drawings
- seek professional expertise
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to record relevant information
- numeracy skills ability to perform and apply measurements and calculations.

Required knowledge

Required knowledge for this unit is:

- design concepts and principles in relation to service installations
- general services installation terminology, definitions, installation methods and hazards
- nature of materials and effect of performance
- processes for the interpretation of working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- processes for the preparation of documentation
- terminology and methods of roof construction used for daylight transmission
- terminology and methods used in artificial lighting
- terminology with reference to items and services that may be used in plumbing, sewerage and drainage systems
- terminology with reference to vertical transportation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by research, design, analysis, evaluation and reporting to determine service layout and connection methods for large and complex residential and commercial buildings.

Competency must be demonstrated within the context of relevant legislation, the BCA and Australian standards.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- coordinate and assess input received from technical experts
- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- evaluate the services layout, connection methods and rectification actions for at least one residential and one commercial building project or equivalent, which includes advice on hot and cold water supply, sewerage layout, electrical and electronic installation lighting systems, vertical transportation requirements and smoke and fire detection and prevention systems
- provide reports to appropriate body or individual as determined by project brief
- apply strategic plans, workplace policies and

EVIDENCE GUIDE

procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- a situation, real or realistically simulated, requiring assessment of service layout and connection method requirements for residential and commercial buildings.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Water supply includes consideration of:

- town supply
- tank storage supply relative to public water supply and reservoir heights
- single and two-stage pumping for multi-function and single function connected services

Firefighting services use includes consideration of:

- sprinkler systems (BCA deemed-to-satisfy [DTS] provisions)
- fire hydrants
- fire hose reels and fire extinguishers

RANGE STATEMENT

	<ul style="list-style-type: none">• installation of fire stopping and fire collars• fire and smoke detection and alarm systems (BCA DTS provisions).
<i>Sewerage connection</i> includes consideration of:	<ul style="list-style-type: none">• local authority sewerage drainage system• septic or bio-chemical treatment unit• graded or vertical discharge pipes• inspection shafts and overflow relief gullies (ORGs).
<i>Stormwater</i> includes consideration of:	<ul style="list-style-type: none">• design, installation and disposal• connection to local government water drains• use of soakage pits and on-site water detection systems• size, location and construction requirements for eaves and box gutters• downpipes and unground or concealed piping.
<i>Mechanical ventilation and air conditioning</i> include:	<ul style="list-style-type: none">• air conditioning applications• air distribution, including mechanical ventilation requirements for enclosed car parks• air filtration, including air filters, ducting and main filter types• air intake systems• fire dampers• fume discharge systems• installation of fire stopping• smoke control and exhaust systems• warm water and cooling towers.
<i>Hot water systems</i> include consideration of:	<ul style="list-style-type: none">• area to be serviced• energy sources available• height of installation• number of outlets• type of occupancy• type of system.
<i>Lighting systems</i> include consideration of:	<ul style="list-style-type: none">• emergency and exit signage systems• natural and artificial lighting• terms, such as:<ul style="list-style-type: none">• brightness• control of glare• installation of fire stopping• intensity• lifespan

RANGE STATEMENT

General electrical and electronic service systems include consideration of:

- locations for installation
- reflections.
- categories of cabling:
 - data
 - lift controls
 - power supplies
 - telecommunications, including connection to site and distribution facilities
- electrical supply authorities connection to site and distribution facilities (switch room and substations)
- emergency lighting and exit signage systems
- emergency warning and intercommunication systems
- fire stopping
- layout of equipment for:
 - computers
 - lift controls
 - power supplies
 - telephones
- service system safeguards
- service system access for maintenance, repair and extension
- type of service (emergency power and alternative power sources).

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out bricklaying and blocklaying tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Manually handle bricklaying and blocklaying materials.	<p>2.1. Bricklaying and blocklaying materials and components are identified and checked for conformity to material schedule, plans and specifications.</p> <p>2.2. Handling characteristics of bricklaying and blocklaying materials and components are identified and safe and effective handling techniques, including mechanical handling, are applied.</p> <p>2.3. Bricklaying and blocklaying materials and components are sorted and stacked for support of the job in accordance with supervisor's instructions and/or specifications.</p> <p>2.4. Bricklaying and blocklaying materials and components are protected against physical damage and stored clear of traffic ways.</p>
3. Perform mechanical handling of materials.	<p>3.1. Bricklaying and blocklaying materials and components are prepared and positioned for mechanical handling in accordance with type of material and plant or equipment to be used.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.2. Materials and components are loaded, unloaded, moved, located and/or installed in accordance with workplace procedures.
	3.3. Bricklaying and blocklaying materials and components are safely handled with assistance of mechanical lifting devices in accordance with workplace requirements.
4. Mix bricklaying and blocklaying mortar.	4.1. Mortar ingredients are identified and positioned in the vicinity of the mixing area.
	4.2. Mixing equipment is prepared and operated in accordance with manufacturers' instructions and workplace procedures.
	4.3. Mortar is mixed to specifications in accordance with workplace procedures.
5. Handle and remove waste materials.	5.1. Waste bricklaying and blocklaying materials and components are handled in accordance with material safety data sheet (MSDS) and regulatory requirements.
	5.2. Hazardous material is identified for separate handling.
	5.3. Non-toxic materials are removed using appropriate procedures.
	5.4. Dust suppression procedures are used to minimise health risk to work personnel and others.
6. Clean up.	6.1. Work area is cleared and waste materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- bricklaying and blocklaying materials
- calculation of and techniques for preparing mixes
- construction terminology
- hazards associated with the use of bricklaying and blocklaying tools, plant and equipment
- job safety analysis (JSA) and safe work method statements
- manual handling techniques
- materials storage and environmentally friendly waste management
- MSDS
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques for bricklaying and blocklaying tasks
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- demonstrate safe and effective use of tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
 - on a ground level work site, manually relocate a pallet of bricks and associated mortar, aggregate and cement from a storage site in proximity to a specified work area and set out to reflect the laying sequence for a job requiring the blending of bricks (by colour and/or texture)
 - using manual and mechanical means, relocate a pallet of bricks to a raised platform
 - set up a cement mixer and mix a quantity of mortar to Australian standard AS3700 M3 standard, using the bucket gauging technique.

Context of and specific resources This competency is to be assessed using standard

EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational

RANGE STATEMENT

	or external personnel
	<ul style="list-style-type: none"> • manufacturer specifications and instructions where specified • memos • MSDS • organisation work specifications and requirements • plans and specifications • regulatory and legislative requirements pertaining to handling and preparing bricklaying and blocklaying materials • relevant Australian standards • safe work procedures related to handling and preparing bricklaying and blocklaying materials • signage • verbal or written and graphical instructions • work bulletins • work schedules.
<p>Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:</p>	<ul style="list-style-type: none"> • emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation • handling of materials • hazard control • hazardous materials and substances • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • lighting • power cables, including overhead service trays, cables and conduits • restricted access barriers • surrounding structures • traffic control • trip hazards • underground services, including water, gas, electricity and communications • work site visitors and the public • working at heights

RANGE STATEMENT

Tools and equipment:

- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- include:
 - bolsters
 - brick grabs
 - brooms
 - builders' lines
 - concrete mixers
 - hammers (brickies, club and scutch)
 - hoses
 - jointing tools
 - line blocks
 - line pins
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - profiles
 - rakes
 - shovels
 - spirit levels
 - straight edges
 - trowels
 - wheelbarrows
- may include:
 - brick buggies
 - elevators
 - forklifts
 - materials hoists
 - pallet trolleys
 - scaffolds.

RANGE STATEMENT

Bricklaying and blocklaying tasks:

- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

Materials include:

- aggregates
- cement, lime and waterproofing materials
- clay bricks
- masonry blocks
- reinforcing materials
- sealants
- timber and plyboard.

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Bricklaying and blocklaying materials and components may be sorted according to:

- ease of identification
- task sequence and job allocation
- type, size, colour and texture.

Mechanical handling includes:

- elevators
- forklifts
- materials hoists
- pallet trolleys.

Sorted and stacked materials may be protected by:

- covering
- tying and banding
- barricading
- signage
- securing (hazardous materials).

Dust suppression procedures include:

- covering
- spraying with water
- using vacuum cleaner.

Waste materials include:

- banding straps
- broken or damaged materials or components
- cardboard, plastic, paper and loose material
- packing pieces.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Identify hand and power tools.	<p>2.1. Types and functions of bricklaying and blocklaying hand and power tools, plant and equipment to be used in the bricklaying and blocklaying work are identified.</p> <p>2.2. Methods of operation of hand and power tools are identified from specifications, standards and manufacturers' instructions.</p> <p>2.3. Specific OHS requirements for specific hand and power tools are identified and applied.</p> <p>2.4. Personal protective equipment required for the operation of the tools is identified in accordance with regulatory and workplace requirements.</p>
3. Select tools for work.	<p>3.1. Tools and personal protective equipment are selected consistent with job requirements and bricklaying and blocklaying tasks.</p> <p>3.2. Tools, including leads and hoses, are checked for tags, serviceability and safety and any faults are reported to supervisor.</p> <p>3.3. Power tools guards, guides and controls are checked and maintained in accordance with manufacturer recommendations.</p> <p>3.4. Equipment to hold or support material during operation is selected and inspected for faults.</p> <p>3.5. Pre-operational checks, including lubricants, hydraulic fluid and water are completed, where required, according to manufacturer recommendations.</p>
4. Use tools.	<p>4.1. Power and compressed air supply to work area are connected in accordance with regulatory</p>

ELEMENT	PERFORMANCE CRITERIA
5. Identify and select plant and equipment.	<p>requirements and codes of practice.</p> <p>4.2.Start up and shut down procedures are observed.</p> <p>4.3.Tools are used safely and effectively according to manufacturer recommendations and regulatory requirements.</p> <p>4.4.Tools are safely located when not in use.</p> <p>5.1.Function and limitations of plant and equipment to be used in the bricklaying and blocklaying work are identified.</p> <p>5.2.Method of operation of plant and equipment is identified from specifications, standards and manufacturers' instructions.</p> <p>5.3.OHS requirements for specific plant and equipment, including requirements for guarding, guiding and controls, are identified and applied.</p> <p>5.4.Personal protective equipment required for the operation of plant and equipment is identified in accordance with regulatory and workplace requirements.</p> <p>5.5.Items of plant and equipment are selected consistent with hazard minimisation and needs of the job.</p> <p>5.6.Plant and equipment are checked for safety, and faults are reported to supervisor.</p> <p>5.7.OHS requirements for operating and using plant and equipment are recognised and adhered to.</p>
6. Use plant and equipment.	<p>6.1.Start up and shut down procedures are observed.</p> <p>6.2.Plant and equipment are used safely and effectively according to manufacturer recommendations and statutory and regulatory authority requirements.</p> <p>6.3.Plant and equipment are safely switched and located when not in use.</p>
7. Clean up.	<p>7.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>7.2.Machinery, <i>tools and equipment</i> are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - drawings and specifications
 - manufacturers' instructions
 - other relevant documentation
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- applications, limitations and method of operation and maintenance of hand and power tools, plant and equipment applicable to bricklaying and blocklaying tasks
- construction terminology
- hazards associated with the use of bricklaying and blocklaying tools, plant and equipment
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements

REQUIRED SKILLS AND KNOWLEDGE

- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- use prescribed brick and blocklaying tools and equipment
- set up a cement mixer and mix mortar for the next task
- construct a brick wall 600mm high and at least 1200mm long in stretcher bond with a round iron joint finish with all halves to be hand cut and scutched
- use a jig saw to develop an arch centre or curved wall template
- use a brick saw to cut:
 - a 110mm bat
 - a 170mm (3/4) bat
 - a queen closure
 - a split

EVIDENCE GUIDE

- a compound mitre
- use a block saw to cut 10 of each 200 and 100 series blocks to various sizes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to the use of bricklaying and blocklaying hand and power tools, plant and equipment
- relevant Australian standards
- safe work procedures related to the use of bricklaying and blocklaying hand and power tools, plant and equipment
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications

RANGE STATEMENT

	<ul style="list-style-type: none"> • work site visitors and the public • working at heights • working in proximity to others • working with dangerous materials • organisational first aid • personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices • use of firefighting equipment • use of tools and equipment • workplace environment and safety.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up protection • noise and dust • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Hand and power tools, plant and equipment:</i>	<ul style="list-style-type: none"> • include those required to facilitate the effective laying of bricks and blocks and include: <ul style="list-style-type: none"> • bolsters • brick grabs • brooms • builders' lines • concrete mixers • hammers (brickies, club and scutch) • hoses • jig saws • jointing tools • line blocks • line pins • masonry saws • measuring tapes and rules • mortar boards • profiles • rakes • shovels • spirit levels • straight edges

RANGE STATEMENT

- trowels
 - wheelbarrows
 - may include:
 - bricksaws
 - circular saws
 - elevators
 - materials hoists
 - scaffolds
 - small petrol or diesel engines, compressors or mixers.
- Bricklaying and blocklaying tasks:***
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
 - may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment are selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out work area.	<p>2.1. Location and area of paved area are identified from plans and specifications.</p> <p>2.2. Sub-soil and footing types are identified and classified according to standards.</p> <p>2.3. Underground services are located and avoided throughout work process.</p> <p>2.4. Location and shape of paving area are set out to dimensions from plans and specifications.</p>
3. Lay paving.	<p>3.1. Area is excavated to required depth, allowing for base and thickness of unit and specified finish level.</p> <p>3.2. Drainage pipes are positioned in sub soil in accordance with regulatory authorities' requirements, plans and specifications.</p> <p>3.3. Mortar for masonry paving is mixed to specifications and standards.</p> <p>3.4. Substrate base material is spread and compacted to specifications.</p> <p>3.5. Bedding material is spread and screeded to designed level and alignment.</p> <p>3.6. Edge boards are positioned to set out and</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications.
	3.7. Paving surface is graded to fall evenly, without ponding, to outlets or surface run-off system.
	3.8. Initial starting line is determined and pavers are laid to line conforming with specified pattern.
	3.9. Paving units and segments are cut and laid to designed pattern and specifications, with joints to specifications and surface finish aligned.
	3.10. Finished level is maintained across junctions between different finishes.
	3.11. Paving installation is completed with <i>joints finished</i> to specifications.
	3.12. Paving surface is cleaned on completion to specifications.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of materials for laying pavers
- construction terminology
- corner geometry
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- paving bonds and patterns, joints and finishing
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques for laying pavers
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, pave a level area of 3m x 5m with clay pavers, using sand as a bedding material on compacted crushed rock (closed finish with sand brushed in); and pave an area of 3m x 5m over a fall with clay bricks, incorporating control joints and using mortar as a bedding material on concrete (mortar joints finish), ensuring:
 - correct identification of requirement and finishing of the tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine bricklaying and blocklaying tasks.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to work application, including required fire resistance rating, are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out brickwork/blockwork.	<p>2.1. Bricks/ blocks are identified, selected and checked for conformity with specifications and compliance with standards.</p> <p>2.2. Work platform is erected in accordance with regulatory and workplace requirements.</p> <p>2.3. Location and structural details of brickwork/blockwork are identified from plans and job specifications.</p> <p>2.4. Base brickwork below floor construction is set out to location, dimensions and specifications in compliance with standards.</p> <p>2.5. Brickwork/blockwork is set out to location and dimensions from drawings and specifications.</p>
3. Construct base brickwork/blockwork.	<p>3.1. Mortar mix is prepared and checked for conformity and bricks/blocks laid to set out to specifications and standards.</p> <p>3.2. Brickwork/blockwork gauge is determined and set</p>

ELEMENT**PERFORMANCE CRITERIA**

	out rod is prepared.
	3.3. Base brickwork/blockwork is constructed for veneer construction to requirements of regulations and specifications.
	3.4. Sub-floor ventilation is installed in accordance with specifications.
4. Construct veneer walls.	4.1. Structural frame is checked to ensure it is ready for brick or block veneer construction maintaining minimum cavity.
	4.2. Damp proof courses are installed to specifications and in accordance with standards.
	4.3. Ventilation for veneer construction is built to specifications and requirements of standards.
	4.4. Wall ties are positioned and correctly fixed to framework to standards.
	4.5. Openings are constructed and flashings installed to job specifications.
	4.6. Cavities are kept clear of mortar droppings and bridging.
	4.7. Lintels are installed to job specifications.
	4.8. Top brickwork/blockwork is constructed to eaves/gable level in accordance with standards.
	4.9. Veneer gable is constructed as required by plans and specifications.
	4.10. Walls are built to gauge straight and true in plumb, line and level within standards tolerance.
	4.11. Control joints are formed in accordance with locations on job drawings, specifications and standards.
	4.12. Weepholes, brick/block reinforcing, vermin proofing and wall flashing are located and built in to job specifications.
	4.13. Sill bricks are cut where required and laid to line in accordance with job specifications.
5. Rake/rule joints and clean face.	5.1. Joints of laid brickwork/blockwork are raked or ruled to correct depth and profile in accordance with job specifications.
	5.2. Brickwork/blockwork is brushed down prior to drying to remove unwanted mortar and face is cleaned.
	5.3. Excess mortar is removed from brick/blockwork surfaces and cavities are cleaned free of mortar and

ELEMENT	PERFORMANCE CRITERIA
6. Clean up.	<p>debris in accordance with manufacturer recommendations, job specifications and standards.</p> <p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints

REQUIRED SKILLS AND KNOWLEDGE

- brick bond patterns
- characteristics and applications of materials for masonry veneer construction, including fire control and separation required by the Building Code of Australia (BCA) and other legislation
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of masonry veneer construction, including gable and eaves construction, damp proofing, flashings and ventilation, vermin control, anti-termite measures, floor, wall and roof members, tying components, timber shrinkage, sub-floor construction, lintels and load bearing components
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations

EVIDENCE GUIDE

- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications, construct a section of a brick veneer building, including set out and gauge brickwork to a base; damp proof course (DPC) if applicable, weepholes, air vents, control joints and veneer ties; lintels and flashings; brick gables; and brick sills and flashings; ensuring:
 - correct identification of requirement and finishing of the task
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification, ensuring correct selection and use of fire-rated materials and methods of construction.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related

EVIDENCE GUIDE

systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in

EVIDENCE GUIDE

relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to carrying out masonry veneer construction
- relevant Australian standards
- safe work procedures related to carrying out masonry veneer construction
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work

Bricklaying and blocklaying tasks:

RANGE STATEMENT

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- include:
 - bolsters
 - brick grabs
 - brooms

Tools and equipment:

RANGE STATEMENT

- buckets
- builders' lines
- concrete mixers
- dumpy levels
- elevators
- hammers (brickies, club and scutch)
- hoses
- jig saws
- jointing tools
- line blocks
- line pins
- mason's squares
- masonry saws
- measuring tapes and rules
- mortar boards
- plumb rules
- margin or raking tools
- profiles
- shovels
- spirit levels
- straight edges
- string lines
- trowels
- wheelbarrows
- may include:
 - brick buggies
 - elevators
 - forklifts
 - materials hoists
 - pallet trolleys
 - scaffolds
 - small petrol or diesel engines and compressors.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- aggregates

RANGE STATEMENT

	<ul style="list-style-type: none"> • cement • clay bricks • lime • masonry blocks • reinforcing materials • waterproofing materials.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up protection • noise and dust • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Location</i> brickwork laid may be on a:	<ul style="list-style-type: none"> • slab • suspended floor.
<i>Brick or block veneer construction</i> includes:	<ul style="list-style-type: none"> • straight, square and plumb brick/block, wall ties and reinforcement, dampcourse and flashings, installation of sills to door and window openings and lintels installed over openings and sill flashings • methods include ensuring compliance with incipient spread of fire requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant <i>information</i>, confirmed and applied to determine <i>bricklaying and blocklaying tasks</i>.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, <i>tools and equipment</i> selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and <i>quality requirements</i>.</p> <p>1.6. <i>Materials</i> appropriate to the work application, including required fire resistance rating, are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and regulatory authority</i> obligations, and are applied.</p>
2. Set out brickwork/blockwork.	<p>2.1. Bricks and/or blocks are identified, selected and checked for conformity with specifications and compliance with standards.</p> <p>2.2. Work platform is erected in accordance with regulatory and workplace requirements.</p> <p>2.3. <i>Location</i> and structural details of brickwork/blockwork are identified from job drawings and job specifications.</p> <p>2.4. Base brickwork below floor construction is set out to location, dimensions and specifications in compliance with standards.</p> <p>2.5. Load bearing brickwork, including engaged piers, dwarf walls, isolated piers and corbelling are set out to job drawings and specifications.</p> <p>2.6. Cavity brick wall is set out to requirements of job drawings.</p>
3. Construct base	<p>3.1. Mortar mix is prepared and checked for conformity</p>

ELEMENT	PERFORMANCE CRITERIA
brickwork/ blockwork.	<p>and bricks/blocks are laid to set out according to specifications and standards.</p> <p>3.2. Brickwork/blockwork gauge is determined and set out rod is prepared.</p> <p>3.3. Base brickwork/blockwork is constructed for cavity construction to requirements of regulations and specifications.</p>
4. Position door and window frames.	<p>4.1. Window frames are located and built in to cavity walls to specification, and are protected from mortar droppings during construction.</p> <p>4.2. Door jambs are located, built in and fixed to cavity walls and single leaf walls according to job drawings and specifications.</p>
5. Construct brick walls.	<p>5.1. Brick or block cavity construction walls are constructed to job specifications and standards.</p> <p>5.2. Damp proof courses and flashings are laid/built in to job specifications.</p> <p>5.3. Ventilation for solid brick construction is built to requirements of job specification and regulations.</p> <p>5.4. Walls are to be straight and true in plumb, line and level within standard tolerances.</p> <p>5.5. Wall ties are positioned to comply with standards.</p> <p>5.6. Openings are constructed and flashing is installed to job specifications.</p> <p>5.7. Lintels are installed to job specifications.</p> <p>5.8. Control joints are formed in accordance with locations on job drawings and standards.</p> <p>5.9. Weepholes, brick reinforcing, vermin proofing and wall flashings are located and built in to job specifications.</p> <p>5.10. Gables and parapets are constructed by plans and specifications.</p> <p>5.11. Sill bricks are cut and laid to line in accordance with job specifications.</p> <p>5.12. Tie down and lateral support systems for ceiling/roof structures are installed to walls in accordance with plans, specifications and standards.</p>
6. Rake or rule joints.	<p>6.1. Joints of laid brickwork/blockwork are raked or ruled to correct depth and profile in accordance with job specifications.</p> <p>6.2. Brickwork/blockwork is brushed down prior to</p>

ELEMENT	PERFORMANCE CRITERIA
	drying to remove unwanted mortar.
	6.3.Excess mortar is removed from brick/blockwork surfaces and cavities are cleaned free of mortar and debris in accordance with manufacturer recommendations, job specifications and standards.
7. Clean up.	7.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	7.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
- brick bond patterns
- characteristics and applications of materials for cavity brick construction, including fire control and separation required by the Building Code of Australia (BCA) and other legislation
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of cavity brick construction, including:
 - anti-termite measures
 - closing of cavities and capping systems
 - damp proofing
 - floor, wall and roof members
 - gable and eaves construction
 - lintels and load bearing components
 - stepped and level flashing for parapets and gables
 - sub-floor construction
 - tying components
 - ventilation
 - vermin control
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications, construct a section of a cavity brick building, including sub-floor walling; damp proof course (DPC) and ventilation; attached and isolated piers; openings (window and door) and lintels; brick cavity ties and roof tie-downs; and parapets (stepped flashing), ensuring:
 - correct identification of requirement and finishing of the task
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification ensuring correct selection and use of fire-rated materials and methods of construction.

Context of and specific

This competency is to be assessed using standard

EVIDENCE GUIDE

resources for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine bricklaying and blocklaying tasks.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out brickwork/blockwork.	<p>2.1. Work platform is erected in accordance with regulatory and workplace requirements and brick and block stair construction requirements.</p> <p>2.2. Location and relative level of prepared footing are checked from job drawings and specifications.</p> <p>2.3. Rise and going of flight and individual steps are calculated to codes and workplace requirements.</p> <p>2.4. Flight and individual steps are set out from calculations and job drawings.</p>
3. Lay bricks/blocks forming steps and wing walls.	<p>3.1. Mortar mix is prepared and checked for conformity and bricks/blocks are laid to set out according to specifications, standards and codes.</p> <p>3.2. Base brickwork is constructed to specifications and requirements of standards and codes.</p> <p>3.3. Steps are formed square, level, plumb and true and laid to specified bond.</p> <p>3.4. Profile of steps is constructed to bond and design, aligned and plumb to specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.5. Parallel wing walls are formed to step alignment in accordance with specifications.</p> <p>3.6. Jointing is carried out to job specifications.</p> <p>3.7. Brickwork/blockwork is laid to line and set out with gauge and completed to job drawings, specifications, standards and codes.</p> <p>3.8. Brick/block faces are cleaned free of mortar.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental

REQUIRED SKILLS AND KNOWLEDGE

abilities

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
- brick bond patterns
- characteristics and applications of materials for masonry steps and stairs construction
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of masonry steps and stairs construction
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct a flight of stairs with a minimum of three pre-cast treads, and construct a flight of three solid masonry treads with a parallel wing wall on one side, ensuring:
 - correct identification of requirement and finishing of the tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements

RANGE STATEMENT

	<p>pertaining to constructing masonry steps and stairs</p> <ul style="list-style-type: none"> • relevant Australian standards • safe work procedures related to constructing masonry steps and stairs • signage • verbal or written and graphical instructions • work bulletins • work schedules.
<i>Bricklaying and blocklaying tasks:</i>	<ul style="list-style-type: none"> • include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work • may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
<i>Safety (OHS)</i> is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation • handling of materials • hazard control • hazardous materials and substances • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • lighting • power cables, including overhead service trays, cables and conduits • restricted access barriers • surrounding structures • traffic control • trip hazards • underground services, including water, gas, electricity and communications • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • working with dangerous materials

RANGE STATEMENT

Tools and equipment:

- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- include:
 - bolsters
 - brick grabs
 - brooms
 - buckets
 - builders' lines
 - concrete mixers
 - dumpy levels
 - elevators
 - hammers (brickies, club and scutch)
 - hoses
 - jig saws
 - jointing tools
 - line blocks
 - line pins
 - mason's squares
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - plumb rules
 - margin or raking tools
 - profiles
 - shovels
 - spirit levels
 - straight edges
 - string lines
 - trowels
 - wheelbarrows
- may include:
 - brick buggies
 - elevators

RANGE STATEMENT

	<ul style="list-style-type: none"> • forklifts • materials hoists • pallet trolleys • scaffolds • small petrol or diesel engines or compressors.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications, where specified • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • aggregates • cement • clay bricks • lime • masonry blocks • pre-cast concrete steps • waterproofing materials.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up protection • noise and dust • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Brick and block stair construction</i> includes:	<ul style="list-style-type: none"> • internal and external construction of steps and stairs • stairs involving straight flights, which may incorporate landings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine bricklaying and blocklaying tasks.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Prepare materials and work site.	<p>2.1. Work platform is erected in accordance with regulatory and workplace requirements.</p> <p>2.2. Bricks/blocks are selected according to quality requirements and specifications.</p> <p>2.3. Materials for mortar are selected to requirements of specification, standards and codes.</p> <p>2.4. Location of blockwork/brickwork is set out on reinforced concrete footing slab in accordance with dimensions and details from job drawings.</p> <p>2.5. Mortar is mixed in accordance with job specifications, standards and codes.</p> <p>2.6. Brickwork/blockwork gauge is determined and set out rod is prepared.</p>
3. Lay bricks/blocks.	<p>3.1. Mortar mix is prepared and checked for conformity and applied evenly to job and set out location.</p> <p>3.2. Bricks/blocks are located to job set out according to specifications, standards and codes.</p> <p>3.3. Bricks/blocks walls are to be straight and true in</p>

ELEMENT	PERFORMANCE CRITERIA
	plumb, line and level within standard tolerances and codes.
	3.4.Bricks/blocks are laid maintaining stretcher bond throughout construction to specifications, standards and codes and using appropriate <i>joints in brick and block walls and corners</i> .
	3.5.Bricks are cut.
	3.6.Corners are formed maintaining bond and perpendicular intersection of both surfaces.
	3.7. <i>Horizontal reinforcement</i> is placed and laid to bed joints to specifications, where applicable.
	3.8.Brickwork/blockwork is laid and completed to job drawings, specifications, standards and codes.
4. Finish joints.	4.1.Excess mortar is removed from brick/blockwork surfaces and cavities are cleaned free of mortar and debris in accordance with manufacturer recommendations, job specifications, standards and codes.
	4.2.Joints of laid brickwork/blockwork are raked, struck or ruled to correct profile and depth to job specifications.
	4.3.Brickwork/blockwork is brushed down prior to drying to remove unwanted mortar.
5. Clean up.	5.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- determine requirements
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

- brick and block expansion and growth, control and articulation joints
- brick bond patterns, types of joints and finishing
- characteristics and applications of materials for brick/block wall and corner construction
- construction terminology
- corner geometry
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of brick/block wall and corner construction
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, in brick and in block, construct a wall between profiles to a line, including an internal corner, an external corner, and a stopped end to a minimum height of 1200mm (without toothing), ensuring:
 - correct identification of requirement and finishing of the tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements

RANGE STATEMENT

Bricklaying and blocklaying tasks:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- plans and specifications
- regulatory and legislative requirements pertaining to laying masonry walls and corners
- relevant Australian standards
- safe work procedures related to laying masonry walls and corners
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others

RANGE STATEMENT

Tools and equipment:

- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- include:
 - bolsters
 - brick grabs
 - buckets
 - builder's squares
 - builders' lines
 - concrete mixers
 - dumpy levels
 - elevators
 - hammers (brickies, club and scutch)
 - hoses
 - jointing tools
 - line blocks
 - line pins
 - mason's squares
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - plumb rules
 - margin or raking tools
 - profiles
 - shovels
 - spirit levels
 - straight edges
 - string lines
 - trowels
 - wheelbarrows
- may include:
 - brick buggies
 - forklifts

RANGE STATEMENT

	<ul style="list-style-type: none"> • materials hoists • pallet trolleys • scaffolds • small petrol or diesel engines, compressors or mixers.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out brickwork.	<p>2.1. Work platform is erected in accordance with regulatory and workplace requirements.</p> <p>2.2. Location and structural details of multi-thickness brickwork are determined from drawings and specifications.</p> <p>2.3. Set out area is located and footing is checked for conformity to dimensions and location as per job drawings, specifications and standards.</p> <p>2.4. Brickwork is set out to location according to dimensions from drawings and specifications.</p>
3. Construct walls and attached piers.	<p>3.1. Mortar is mixed and bricks are laid to set out for base and specified bond types in accordance with specifications and standards.</p> <p>3.2. Multi-thickness wall is constructed maintaining bond, and is completed to job specifications and standards.</p> <p>3.3. Attached piers are bonded to wall according to job specifications.</p> <p>3.4. Walls are to be straight and true in plumb line and</p>

ELEMENT	PERFORMANCE CRITERIA
	level within standard tolerances.
	3.5. Damp proof courses are built to specifications and standards.
	3.6. Openings are constructed and lintels are installed to job specifications and standards.
	3.7. Tie down and lateral support systems for ceiling and roof structures are installed to walls in accordance with plans, specifications, codes and standards.
4. Construct isolated piers.	4.1. Bricks are laid to set out and specified bond.
	4.2. Piers are constructed to application and requirements for line, level and plumb in construction projects, and bond is maintained to job specifications.
5. Finish joints.	5.1. Excess mortar is removed from brickwork surfaces and cavities are cleaned free of mortar and debris in accordance with manufacturer recommendations, job specifications, standards and codes.
	5.2. Joints of laid brickwork are raked or ruled to correct profile and depth in accordance with job specifications.
	5.3. Brickwork is brushed down prior to drying to remove unwanted mortar.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements

REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
- brick bond patterns (including corners, piers and junctions), types of joints and finishing
- characteristics and applications of materials for multi-thickness walls and piers construction
- construction terminology
- corner geometry
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of multi-thickness walls and piers construction
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct three brick walls including one English bond, one Flemish bond and one other type with each to be a minimum of 230mm thick and 600mm high and contain at least one return corner; plus construct an isolated pier in brick using an appropriate bond of a minimum 470mm x 470mm, ensuring:
 - correct identification of requirement and finishing of the tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine laying of glass blockwork.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Prepare for installation.	<p>2.1. Location and dimensions of glass blockwork are determined from plans and specifications.</p> <p>2.2. Work platform is erected in accordance with regulatory authorities' and workplace requirements.</p> <p>2.3. Area for set out is located and base and abutting surfaces are checked for level and plumb, and are finished to specifications.</p> <p>2.4. Surface area preparation for blockwork installation is checked to be clean, dry and in accordance with manufacturer recommendations, plans and specifications.</p> <p>2.5. Wall or section of blockwork is set out to base details according to plans and specifications.</p> <p>2.6. Mortar mix is prepared and checked for conformity to specifications and standards.</p>
3. Install glass blocks.	<p>3.1. If required by specifications, frame is installed onto the base and fixed into position in accordance with manufacturer requirements.</p> <p>3.2. Mortar mix is applied according to manufacturer</p>

ELEMENT	PERFORMANCE CRITERIA
	recommendations, standards, plans and specifications.
	3.3. Glass blocks are laid to set out line, plumb, level and to design pattern in accordance with manufacturer recommendations, plans and specifications.
	3.4. Glass blockwork installation is completed to standards, plans and specifications.
	3.5. Glass blockwork joints are tool finished to achieve specified finish in accordance with manufacturer recommendations, standards, plans and specifications.
	3.6. Excess mortar mix is removed from glass blockwork and surfaces are cleaned in accordance with manufacturer recommendations, standards, plans and specifications.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans and specifications

REQUIRED SKILLS AND KNOWLEDGE

- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics, applications and limitations of materials for the installation of glass blockwork
- construction terminology
- hazards associated with the installation of glass blockwork
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques for installing glass blockwork
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, calculate material requirements, prepare, set out and install a panel of glass blocks, at least 1.2m x 1.2m, into a masonry wall, ensuring:
 - correct identification of requirement and installation and finishing of the panel
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements

RANGE STATEMENT

Glass blockwork may be performed on:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- pertaining to installing glass blockwork
- relevant Australian standards
- safe work procedures related to installing glass blockwork
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- a new construction site
- an existing structure being renovated or extended
- an existing structure subject to service restoration or maintenance.
- emergency procedures related to this unit include emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications
 - work site visitors and the public
 - working at heights
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment

RANGE STATEMENT

Tools and equipment:

- use of tools and equipment
- workplace environment and safety.
- include:
 - bolsters
 - brooms
 - builders' lines
 - concrete mixers
 - hooked end tool (Frenchman)
 - hammers
 - jig saws
 - jointing tools
 - line blocks
 - line pins
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - profiles
 - rubber mallets
 - shovels
 - spirit levels
 - sponges
 - straight edges
 - trowels
 - wheelbarrows
- may include:
 - elevators
 - forklifts
 - materials hoists
 - pallet trolleys
 - scaffolds.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- glass blocks
- mortar
- reinforcing materials and spacers
- sealants

RANGE STATEMENT

Environmental requirements
include:

- waterproofing materials.
- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Glass blocks:

- are for ornamental rather than structural purpose
- are hollow glass blocks of standard size (190mm x 190mm)
- may be clear or coloured
- may be laid flat or curved direct to a base or fixed into a frame for installation.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine damp proofing applications.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements and type of construction, are checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Identify damp proofing requirement.	<p>2.1. Type of flashing and damp proofing material are identified in accordance with job specifications, state of structure and job safety (OHS) requirements.</p> <p>2.2. Area of structure requiring damp proofing is identified from job drawings and specifications or site inspection.</p> <p>2.3. Area of structure requiring damp proofing is inspected for defects and soundness, in accordance with job and manufacturer specifications.</p>
3. Prepare surface.	<p>3.1. Defects are identified, corrected and made good to requirements of manufacturer specifications.</p> <p>3.2. Surface preparation of structure requiring damp proofing is carried out to manufacturer specifications.</p>
4. Install DPC.	<p>4.1. Damp proof is installed in accordance with work drawings and manufacturer specification.</p> <p>4.2. Flashing or damp proof course is laid and lapped in accordance with manufacturer specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3.Damp proof material is applied with a consistent mortar bed on top and bottom.
	4.4.DPC is folded to follow shape of surrounding structures.
5. Install moisture proof barrier or flashings.	5.1.Flashings materials are <i>prepared for application</i> to surrounding structures in accordance with design drawings and manufacturer recommendations.
	5.2.Flashings material is laid, lapped and joined to follow shape of surrounding structure.
	5.3.Flashings or moisture barrier material is formed and sealed around openings.
	5.4.Flashings and DPC are installed to project outside of mortar joint on external surface, and outside of brickwork in accordance with manufacturer specifications.
6. Clean up.	6.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings

REQUIRED SKILLS AND KNOWLEDGE

- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of materials for the installation of flashings and DPC
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques for installing flashings and DPC
- waterproofing methods
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, install flashings of suitable materials for the following construction situations: step flashings and/or DPC to cavity brickwork including internal and external corners, window and door heads and vertical flashings; and stepped and tray flashings to gables and/or parapets, ensuring:
 - correct identification of requirement and finishing of the tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine the required brick and blocklaying tasks.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out first course.	<p>2.1. Location and line of brickwork/blockwork wall are set out on concrete footing/slab to job drawings.</p> <p>2.2. Span of masonry arch is determined from prepared allotted arch centre plus 4mm.</p> <p>2.3. Arch spans are set out to location for first course.</p>
3. Construct wall to arch level.	<p>3.1. Mortar mix is prepared and bricks/blocks are laid to form wall to set out.</p> <p>3.2. All work is carried out to specifications and standards.</p> <p>3.3. Gauge of abutting walls is maintained within standard tolerance at each course level.</p> <p>3.4. Plumb and alignment of vertical wall face are maintained.</p> <p>3.5. Bricks are cut.</p> <p>3.6. Bricks/blocks are laid level and to line over length of wall.</p> <p>3.7. Abutment jambs/piers are laid vertical up to</p>

ELEMENT	PERFORMANCE CRITERIA
	springing line.
	3.8.Bricks/blocks are laid in stretcher bond to springing line of arch with perpendicular joints maintained in vertical line.
4. Construct arch centre.	4.1.Arch centre is set out and curve is drawn up in accordance with specifications and plan.
	4.2.Plan is transferred to material and cut to shape.
5. Set up arch centre.	5.1.Height to springing line is determined and height to crown of arch is confirmed to be within standard tolerance.
	5.2.Height of toms and wedges or adjustable metal props are determined to set up and support timber arch centre.
	5.3.Supports are adjusted to ensure arch centre is level at right angles to wall face and level across springing line.
	5.4.Props, toms, packers and wedges are located for easy removal.
	5.5.Position of central key brick/block is established for gauged arch and tape used to mark gauge.
6. Cut and lay bricks/blocks to form arch.	6.1.Bricks and blocks are cut and laid on centre to form arch to specifications.
	6.2.Joints are maintained to equal size and parallel on the extrados of an arch.
	6.3.Same size wedge shape is maintained on face.
	6.4.Centreline of key brick/block wedge is maintained through vertical centre line of arch.
	6.5.Even joint thickness is maintained around extrados for cut brickwork and blockwork.
	6.6.All bricks are cut and laid to maintain even joints.
	6.7.All joints are struck evenly to depth and shape to specifications.
7. Clean up.	7.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	7.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
- brick bond patterns, types of joints and finishing
- characteristics and applications of materials for masonry arch construction
- construction and arch terminology
- geometric calculations and drawing
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements

REQUIRED SKILLS AND KNOWLEDGE

- types of masonry arches and techniques of construction
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct five arches to specification of which three are to be in brick and two in block, including bull's eye, segmental and Gothic with the construction of the arch centre for one of the arches.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing masonry arches
- relevant Australian standards

RANGE STATEMENT

Bricklaying and blocklaying tasks:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- safe work procedures related to constructing masonry arches
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and

RANGE STATEMENT

Tools and equipment:

- workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- include:
 - adjustable metal props
 - bolsters
 - buckets
 - builder's squares
 - builders' lines
 - concrete mixers
 - dumpy levels
 - hammers (brickies, club and scutch)
 - hoses
 - jig saws
 - jointing tools
 - line blocks
 - line pins
 - mason's squares
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - packers and wedges
 - plumb rules
 - margin or raking tools
 - profiles
 - shovels
 - spirit levels
 - straight edges
 - string lines
 - timber and centre
 - timber toms
 - trowels
 - wheelbarrows
- may include:
 - scaffolds
 - forklifts
 - pallet trolleys

RANGE STATEMENT

	<ul style="list-style-type: none"> • brick buggies • small petrol or diesel engines, compressors or mixers.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications, where specified • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • aggregates • cement and lime • clay bricks • masonry blocks • plywood • reinforcing materials • timber • waterproofing materials.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up protection • noise and dust • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Masonry arches</i> include:	<ul style="list-style-type: none"> • arch rings gauged and bonded • bull's eye and wheel • camber/square • elliptical • four centred • Gothic (equilateral, Lancet and modified) • multi-ring arches • segmental • Tudor.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine the required bricklaying and blocklaying tasks.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out curve.	<p>2.1. Key plan curve points are plotted from job drawings and all trammel centres are established on footing slab for construction of the curved masonry wall.</p> <p>2.2. Curve of wall is planned to specified location from trammel or plotted points and marked on footing slab.</p>
3. Lay first course.	<p>3.1. Mortar is mixed to specifications and spread evenly to the established wall location.</p> <p>3.2. Bricks/blocks are laid to planned set out for line and specified bond according to job specifications.</p> <p>3.3. Work is carried out to job specifications and standards.</p>
4. Lay wall.	<p>4.1. Gauge is maintained within standard tolerance at every course level.</p> <p>4.2. Vertical face alignment is maintained.</p> <p>4.3. Bricks are cut.</p> <p>4.4. Bricks/blocks are laid level over the length of the wall to the established plan profile.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.5.Bricks/blocks are laid to specified bond with perpendicular joints (perpends) maintained in vertical line.
	4.6.Construction is completed to requirements of job drawings and specifications.
5. Finish joints.	5.1.Excess mortar is removed from brick/blockwork surfaces in accordance with manufacturer recommendations, job specifications, standards and codes.
	5.2.Joints of laid brickwork/blockwork are raked or ruled to correct profile and depth to job specifications.
	5.3.Brickwork/blockwork is brushed down prior to drying.
6. Clean up.	6.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick and block expansion and growth, control and articulation joints
- brick bond patterns, applications to arcs and finishing
- characteristics and applications of materials for masonry curved wall construction
- circle geometric calculations - tangents, normal and arcs
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- techniques of masonry curved wall construction, including radius set out
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct a curved wall using an arc centre and trammel (up to 2.4m radius), construct a 4 metre serpentine curved wall using the plotted points and template technique, ensuring:
 - correct identification of requirement and finishing of the tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements

RANGE STATEMENT

Bricklaying and blocklaying tasks:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- plans and specifications
- regulatory and legislative requirements pertaining to constructing curved walls
- relevant Australian standards
- safe work procedures related to constructing curved walls
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others

RANGE STATEMENT

Tools and equipment:

- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- include:
 - bolsters
 - buckets
 - builder's squares
 - builders' lines
 - concrete mixers
 - curve templates
 - dumpy levels
 - hammers (brickies, club and scutch)
 - hoses
 - jointing tools
 - line blocks
 - line pins
 - mason's squares
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - plumb rules
 - margin or raking tools
 - profiles
 - shovels
 - spirit levels
 - straight edges
 - string lines
 - trammel heads
 - trowels
 - wheelbarrows
- may include:
 - brick buggies
 - elevators

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine the required bricklaying and blocklaying tasks.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out and prepare base.	<p>2.1. Set out area is correctly located and footing is checked for conformity to dimensions and location as per job drawings and specifications for fireplaces and chimneys.</p> <p>2.2. Fireplace base is set out to correct measurements and location to job drawings.</p>
3. Construct base.	<p>3.1. Mortar mix is prepared and checked for conformity to specifications and standards.</p> <p>3.2. Bricks, blocks and stone are laid to set out for base in accordance with specifications and standards.</p> <p>3.3. Bricks and stone laid to line and level and constructed in accordance with specifications and standards.</p>
4. Construct hearth and firebox.	<p>4.1. Damp proof courses are installed to specifications and in accordance with standards.</p> <p>4.2. Bricks, blocks and stone are laid to form hearth to designed shape, pattern, job drawings and specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Construct firebox and face brickwork.	<p>5.1. Specified materials for firebox and face brickwork are selected to specifications.</p> <p>5.2. Firebox is constructed to form shape for rear and side walls to specifications.</p> <p>5.3. Face brickwork is laid to form shape of openings to designed dimensions and finish of drawings and specifications.</p> <p>5.4. Lintel is installed to specifications.</p> <p>5.5. Facework is laid to bond, pattern and colour finish to wall and aligned to specification.</p> <p>5.6. Protrusions and mantelpiece are formed and finished to designed shape and specifications.</p> <p>5.7. Plumb and level are maintained for straight work.</p>
6. Form throat and chimney shaft.	<p>6.1. Work platform is erected in accordance with regulatory authorities' and workplace requirements.</p> <p>6.2. Throat is formed, parged and shaped for firebox and chimney design and specifications, and constructed in accordance with specifications and standards.</p> <p>6.3. Parging to flue is completed to specifications.</p> <p>6.4. Brick and stone are laid to build outer skin and form chimney shaft to specifications and are constructed in accordance with specifications and standards.</p> <p>6.5. Baffles are built in, where designed, to location and specifications.</p>
7. Complete chimney.	<p>7.1. Chimney tray is built in to chimney design and installed to specification in accordance with standards.</p> <p>7.2. Chimney is constructed in accordance with specifications and standards.</p> <p>7.3. Head of chimney is completed to designed finish in accordance with drawings and specifications.</p>
8. Finish joints.	<p>8.1. Joints to laid brickwork, blockwork and stonework are raked or ruled to designed depth in accordance with the job specifications.</p> <p>8.2. Joints to laid brickwork, blockwork and stonework are raked out for provision of apron and stepped flashing at roof line.</p> <p>8.3. Brickwork, blockwork and stonework are brushed down prior to drying, using appropriate brushing tool.</p>
9. Clean up.	<p>9.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation,</p>

ELEMENT**PERFORMANCE CRITERIA**

regulations, codes of practice and job specification.

9.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick expansion and growth, control and articulation joints
- characteristics and applications of materials for constructing fireplaces and

REQUIRED SKILLS AND KNOWLEDGE

chimneys

- construction terminology
- flashing
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- principles of heat, fire and drawing of smoke
- processes for the calculation of material requirements
- quality requirements
- techniques for constructing fireplaces and chimneys
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment

EVIDENCE GUIDE

Context of and specific resources for assessment

- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications, calculate the materials required and construct a brick fireplace and chimney, ensuring:
 - correct identification of requirement and finishing of the tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of

EVIDENCE GUIDE

the Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing fireplaces and chimneys
- relevant Australian standards
- safe work procedures related to constructing fireplaces and chimneys
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Bricklaying and blocklaying tasks:

- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances

RANGE STATEMENT

- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- include:
 - bolsters
 - brick grabs
 - brooms
 - buckets
 - builders' lines
 - cement mixers
 - elevators
 - hammers (brickies, club and scutch)
 - hoses
 - jig saws
 - line blocks
 - line pins
 - masonry saws

Tools and equipment:

RANGE STATEMENT

- measuring tapes and rules
- mortar boards
- margin or raking tools
- profiles
- shovels
- spirit levels
- straight edges
- trowels
- wheelbarrows
- may include:
 - elevators
 - scaffolds
 - materials hoists
 - forklifts
 - pallet trolleys
 - brick buggies
 - small petrol or diesel engines or compressors.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- where specified
- workplace operations and procedures.

Materials:

- are to include:
 - aggregates
 - cement
 - clay bricks (wire cut or pressed)
 - fire-rated masonry blocks
 - lime
 - refractory bricks
- may be stone.

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

RANGE STATEMENT

Fireplaces and chimneys include:

- brick and block veneer
- solid brick, block and stone wall structured buildings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine the required bricklaying and blocklaying tasks.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out masonry structures.	<p>2.1. Location and structural details of masonry structures are determined from plans and specifications.</p> <p>2.2. Work platform is erected in accordance with regulatory and workplace requirements.</p> <p>2.3. Set out area is correctly located and footing is checked for conformity to dimensions and location as per job specifications.</p> <p>2.4. Masonry structure is set out from drawings and specifications.</p> <p>2.5. Mortar materials are prepared and mixed in accordance with specifications.</p>
3. Construct load bearing walls.	<p>3.1. Masonry load bearing wall structure is laid to set out for base and specified bond in accordance with specifications.</p> <p>3.2. Structural masonry wall is constructed maintaining bond, and is completed to job specifications.</p> <p>3.3. Walls are to be straight, plumb and level within standard tolerances.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Construct load bearing walls with piers.	<p>3.4. Tie down and lateral support system structures are installed to walls in accordance with plans, specifications, codes and standards.</p> <p>4.1. Masonry blockwork is laid to set out on reinforced concrete footing slab and to specified bond.</p> <p>4.2. Masonry blockwork gauge is determined and set out rod is prepared to gauge dimensions in accordance with specifications.</p> <p>4.3. Masonry blocks are cut to work bond and control joints.</p> <p>4.4. Columns are formed using walls and attached/engaged <i>piers</i>, incorporating and maintaining bond and perpendicular intersections of both vertical surfaces.</p> <p>4.5. Reinforcement material is placed and secured to form tie down, bracing and vertical supports for roof structures.</p> <p>4.6. Cores and blocks are cleaned out in preparation for the installation of formwork for concrete core filling in accordance with manufacturer recommendations and specifications.</p> <p>4.7. Concrete grout is mixed, placed and compacted to hollow blocks in accordance with manufacturer recommendations and specifications.</p> <p>4.8. Completed wall is to be straight, plumb and level within standard tolerances.</p>
5. Carry out articulated masonry construction.	<p>5.1. Design principles and methods of construction using <i>articulation joints</i> are identified.</p> <p>5.2. Locations of articulation joints are identified from work drawings specifications.</p> <p>5.3. Type of articulation method is identified and applied in accordance with work drawings, manufacturer recommendations and specifications.</p>
6. Clean and finish mortar joints.	<p>6.1. Joints to laid face brickwork are raked or ruled to correct profile and depth in accordance with job specifications.</p> <p>6.2. Blockwork is brushed down prior to drying.</p>
7. Clean up.	<p>7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>7.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with</p>

ELEMENT**PERFORMANCE CRITERIA**

manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- articulated and pier construction
- bonding patterns and block bonding techniques
- brick expansion and growth
- characteristics and applications of materials for constructing masonry structural systems

REQUIRED SKILLS AND KNOWLEDGE

- construction terminology
- control joints
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements for masonry structural systems
- reinforcing of structures and core filling of blockwork
- techniques for constructing masonry structural systems
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications, construct a block wall, including:
 - confirming that starter bars are correctly positioned
 - reinforcing with horizontal and vertical steel
 - cleaning eyes and tie downs
 - cleaning cores (for installation of formwork and pouring of concrete)
 - mixing, placing and compacting concrete grout
 - finishing wall to specifications
 - a load bearing column (390mm x 390mm) of a minimum of 1m high, including a control joint and a service opening for a door jamb with a bond beam lintel
 - and ensuring:

EVIDENCE GUIDE

Context of and specific resources for assessment

- correct identification of requirement and finishing of the tasks
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

EVIDENCE GUIDE

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing masonry structural systems
- relevant Australian standards
- safe work procedures related to constructing masonry structural systems
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Bricklaying and blocklaying tasks:

- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers

RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- underground services, including water, gas, electricity and communications
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Tools and equipment include:

- include:
 - bolsters
 - bolt cutters
 - brick grabs
 - brooms
 - buckets
 - builders' lines
 - concrete mixers
 - dumpy levels
 - elevators
 - explosive power tools
 - hammers (brickies, club and scutch)
 - hoses
 - jig saws
 - line blocks
 - line pins
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - pincers
 - plumb rule
 - margin or raking tools

RANGE STATEMENT

	<ul style="list-style-type: none"> • profiles • shovels • spirit levels • steel tying tools • straight edges • string line • trowels • wheelbarrows • may include: <ul style="list-style-type: none"> • brick buggies • elevators • forklifts • materials hoists • pallet trolleys • scaffolds • small petrol or diesel engines, compressors or mixers.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications, where specified • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • aggregates • cement • clay bricks (wire cut or pressed) • lime • masonry blocks • non-shrink grout • sealants • steel reinforcing materials • steel ties • waterproofing materials.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up protection • noise and dust • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Masonry structure</i> includes:	<ul style="list-style-type: none"> • articulated masonry joints

RANGE STATEMENT

	<ul style="list-style-type: none"> retaining walls walls, columns and surrounds of service openings.
<i>Load bearing walls</i> include:	<ul style="list-style-type: none"> reinforced masonry retaining walls walls directly supporting roof walls/bracing walls for wind loads.
<i>Structural masonry</i> includes:	<ul style="list-style-type: none"> lateral support systems and reinforcement specified wall ties.
<i>Piers</i> include:	<ul style="list-style-type: none"> column at a control joint corner column end of wall column straight wall column.
<i>Articulation joints</i> include:	<ul style="list-style-type: none"> combined flexible panel and control joint compressed foam filler rods compressed foam joint filler compressed foam joint strips flexible panel full height control joint.

CPCCBL3014A Install fire-rated masonry construction

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to construct fire-rated masonry construction systems for fire-resistant construction. It includes planning, set out and installation requirements of the work.

Application of the Unit

Application of the unit This unit of competency supports achievement of skills for laying fire-resistant masonry to buildings, walls and service openings through the fire resistance level (FRL) range of 30/30/30 to 240/240/240, which includes working with others and as a member of a team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine the required bricklaying and blocklaying tasks.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Prepare for construction.	<p>2.1. FRL is established, and type of fire-resistant construction and material requirements are determined from job plans and design specifications.</p> <p>2.2. Location and composition of wall structure are identified from job plans and specifications.</p> <p>2.3. Mortar mix is prepared and checked for conformity to specifications and standards.</p> <p>2.4. Work platform is erected in accordance with regulatory authorities' requirements.</p>
3. Construct masonry wall systems.	<p>3.1. Fire-resistant wall types are identified as satisfying FRL for integrity and insulation.</p> <p>3.2. Masonry wall is constructed using specified bricks/blocks laid to specification to satisfy FRL for design specifications, codes and structural adequacy in accordance with standards.</p>
4. Finish joints and junctions.	<p>4.1. Fire seal is installed in accordance with manufacturer specifications to form a continuous fire block between separating wall structure and roof covering.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. Service penetrations are installed to specifications to maintain integrity of design.
	4.3. Excess mortar is removed from brick/blockwork surfaces and cavities are cleaned free of mortar and debris in accordance with job specifications and standards.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick expansion and growth, control and articulation joints
- characteristics and applications of materials for installing fire-rated masonry
- construction terminology
- fire rating of buildings
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- principles of heat and effects on materials
- processes for the calculation of material requirements
- quality requirements for fire-rated masonry construction
- techniques for installing fire-rated masonry
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct a fire-resistant masonry wall of sufficient dimension to incorporate a fire-rated steel door jamb and service penetration, including the installation of appropriate fire-rated insulation between the wall and roof covering and fire seal strip between the structure and the cladding, ensuring:
 - correct identification of requirement and finishing of the structure
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS

RANGE STATEMENT

Bricklaying and blocklaying tasks:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to installing fire-rated masonry construction
- relevant Australian standards
- safe work procedures related to installing fire-rated masonry construction
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications
 - work site visitors and the public

RANGE STATEMENT

- working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
 - organisational first aid
 - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
 - use of firefighting equipment
 - use of tools and equipment
 - workplace environment and safety.
- Tools and equipment* include:
- include:
 - bolsters
 - brooms
 - buckets
 - builders' lines
 - concrete mixers
 - hammers (brickies, club and scutch)
 - hoses
 - line blocks
 - line pins
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - profiles
 - shovels
 - spirit levels
 - straight edges
 - trowels
 - wheelbarrows
 - may include:
 - brick buggies
 - elevators
 - forklifts
 - materials hoists
 - pallet trolleys
 - scaffolds
 - small petrol or diesel engines or compressors.

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- fire-resistant masonry blocks
- fire seals and insulation (rockwools and sealing strips)
- mortar.

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Fire-resistant construction includes:

- ceilings
- concrete walls
- masonry walls
- timber and steel framing.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to determine the required bricklaying and blocklaying tasks.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out for decorative brickwork.	<p>2.1. Location and structural feature details of decorative brickwork are determined from drawings and specifications.</p> <p>2.2. Brickwork is set out according to location and dimensions from drawings and specifications.</p> <p>2.3. Mortar is mixed to specifications.</p>
3. Lay bricks to form corbels and protrusions.	<p>3.1. Corbelling design is checked from specifications to ensure overhang design is in accordance with job drawings and specifications.</p> <p>3.2. Bricks are laid to maintain bond and level alignment to form corbels to design and specifications.</p> <p>3.3. Bricks are laid to form featured protrusions in accordance with job drawings and specifications.</p>
4. Construct brickwork to acute and obtuse angled corners.	<p>4.1. Junction at corners is determined in accordance with specifications.</p> <p>4.2. Standard bricks are laid to line and level to form dogtooth and mitre junctions in accordance with specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Lay plinth bricks or squints to form plinth areas or sills.	<p>4.3.Squints and standard bricks are laid to line and level to form designed flush junctions in accordance with specifications.</p> <p>4.4.Bond and gauge are maintained to specification.</p> <p>5.1.Plinth bricks are laid to level and alignment to form protruding plinth in accordance with specifications.</p> <p>5.2.Plinth bricks or squints are laid to sill locations to form feature finish to level and alignment in accordance with specifications.</p>
6. Install decorative capping.	<p>6.1.Bricks are cut and laid on edge mitre coping to 90° corner.</p> <p>6.2.Bricks are cut and laid on edge mitre coping to 135° corner.</p>
7. Construct decorative panel.	<p>7.1.Area for set out is located, and is checked for plumb, level and to be clean and dry in accordance with manufacturer specifications.</p> <p>7.2.Panel is set out to plan and specifications.</p> <p>7.3.Whole bricks are laid to conform to the set out.</p> <p>7.4.Starting edges and feather edges are cut and laid to conform to set out.</p>
8. Finish joints.	<p>8.1.Brickwork joints in laid brickwork are raked or ruled to correct depth in accordance with job specification.</p> <p>8.2.Brickwork is brushed down prior to drying using appropriate brushing tool in accordance with job specifications.</p>
9. Clean up.	<p>9.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>9.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- decorative brickwork materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements for decorative brickwork
- techniques for constructing decorative brickwork
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct a wall of 3 course corbel to decorative features; construct a 90° and a 135° corner using squints, dog toothing and mitre to a minimum of 600mm high; cut and lay brick on edge coping to 90° and 135° corner; using standard bricks, squints and plinths, lay return corner sills to 90° and 135° corners and construct a herring bone panel of 900 x 1200mm, ensuring:
 - correct identification of requirement and finishing of the tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos

RANGE STATEMENT

Bricklaying and blocklaying tasks:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing decorative brickwork
- relevant Australian standards
- safe work procedures related to constructing decorative brickwork
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- include all clay brick (wire cut/pressed) and concrete block (hollow and solid) masonry work
- may be performed on a new construction site, an existing structure being renovated or extended or an existing structure subject to service restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications

RANGE STATEMENT

Tools and equipment:

- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- include:
 - bolsters
 - brick grabs
 - brooms
 - builders' lines
 - concrete mixers
 - elevators
 - hammers (brickies, club and scutch)
 - hoses
 - jig saws
 - jointing tools
 - line blocks
 - line pins
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - margin or raking tools
 - profiles
 - shovels
 - spirit levels
 - straight edges
 - trowels
 - wheelbarrows
- may include:
 - brick buggies
 - forklifts

RANGE STATEMENT

	<ul style="list-style-type: none">• materials hoists• pallet trolleys• scaffolds.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Prepare base.	<p>2.1. Angle of batter is identified from plans or specifications.</p> <p>2.2. Profile is set up as specified.</p> <p>2.3. First course of bricks or blocks is cut and laid to suit the angle of battered wall.</p>
3. Lay masonry.	<p>3.1. Mortar materials are proportioned and mixed to specifications.</p> <p>3.2. Layout of masonry or stone is determined and set out in accordance with plans and specifications.</p> <p>3.3. Wall ends are located and constructed using battered rod, board and battering level.</p> <p>3.4. Corners are constructed or profile template is used to establish the batter angle.</p> <p>3.5. Stone is laid into place to pattern, bond and surface alignment according to specifications.</p> <p>3.6. Mortar joints are struck or raked in accordance with specifications.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of,</p>

ELEMENT**PERFORMANCE CRITERIA**

reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of materials for constructing battered walls and

REQUIRED SKILLS AND KNOWLEDGE

piers

- construction terminology
- control and articulation joints
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements for battered masonry walls and piers
- techniques for constructing battered walls
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, construct a brick battered wall, 1m high and 1m long; and construct a battered pier of 1.2m length, 470mm width and 1.2m high, at 90 degrees to an existing or constructed plumb wall, ensuring:
 - correct identification of requirement and finishing of the tasks
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained using suitable <i>information</i> sources, confirmed and applied for <i>restoration of brickwork structures</i>.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, <i>tools and equipment</i> selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and <i>quality requirements</i>.</p> <p>1.6. <i>Materials</i> appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and regulatory authority</i> obligations, and are applied.</p>
2. Prepare work location.	<p>2.1. Materials and existing brickwork, including <i>type of bonds</i>, are checked for consideration of colour wash, and composition of mortar stopping mix and mixing putty for beading.</p> <p>2.2. Work platform is erected in accordance with regulatory authorities' requirements.</p> <p>2.3. Work area and surrounds are isolated by use of barricades and signage or fall protection in accordance with regulatory and job requirements.</p> <p>2.4. Loose or broken bricks are removed and reinstalled individually and mortar is removed from joints in brickwork by raking out mortar to specified depth.</p> <p>2.5. Surface of work area is cleaned and prepared for application.</p> <p>2.6. Surface of work area is colour washed consistent with brick colour.</p> <p>2.7. Position of bed and cross joints is determined, measured and struck with chalk line.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.8. Mortar is prepared to determined composition, colour and mix for stopping application to brickwork.
	2.9. Mortar stopping mix is applied to ensure joints are full and brickwork is re-pointed to meet job requirements.
	2.10. Jointer tool is used to form an indent key to receive putty point.
3. Apply putty point material to bed joints.	3.1. Materials are identified, selected and prepared to determined composition and consistency used for pointing or beading putty in accordance with job requirements.
	3.2. Pointing putty is applied with the use of jointer tool to fill indent and form joints.
	3.3. Surplus pointing putty present on horizontal and vertical joints is removed with the aid of a Frenchman tool to form finite shape and edges to tuck pointing.
	3.4. Tuck pointed work area is completed, allowed to dry and any imperfections gently removed and lightly brushed clean.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- brick expansion, growth and control joints
- characteristics and applications of materials for tuck pointing of brickwork
- construction terminology
- finishing of brick joints
- heritage brickwork materials and bonding techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- quality requirements for tuck pointing to brickwork
- techniques for tuck pointing of brickwork
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tuck point a new or existing area of brickwork of at least 1 square metre, ensuring:
 - correct identification of requirement and finishing of the task
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant <i>information</i> to determine the <i>installation of AAC products</i>.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, <i>tools and equipment</i> selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and <i>quality requirements</i>.</p> <p>1.6. <i>Materials</i> appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and regulatory authority</i> obligations, and are applied.</p> <p>1.8.</p>
2. Set out and prepare base.	<p>2.1. Location of blockwork is set out in mortar to position in accordance with job drawings, including any damp course.</p> <p>2.2. Base location is prepared so that surface is dry, horizontal, clean and flat to specifications.</p> <p>2.3. Work is platform erected in accordance with job and regulatory authorities' requirements.</p> <p>2.4.</p>
3. Lay AAC blockwork.	<p>3.1. Adhesive is prepared to conform to consistency and preparation in accordance with requirements and manufacturer recommendations.</p> <p>3.2. Adhesive is applied to <i>AAC blocks</i> to maintain full joints at specified thickness in accordance with manufacturer specifications.</p> <p>3.3. AAC block is laid in running bond and set out to application and requirements for line, level and plumb in construction projects in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
	job plans and specifications.
	3.4. Blocks are cut to correct length at end of course in accordance with manufacturer recommendations and specifications.
	3.5. Blockwork is completed to specification requirements, with surplus adhesive from joints removed.
	3.6. Service installations are chased into blockwork to depth and position according to manufacturer recommendations and specifications.
	3.7. Tension and control <i>fixings, ties and brackets</i> are installed across joints or between internal and external wall components in accordance with manufacturer recommendations and specifications, for wall stability.
	3.8.
4. Install lintels to AAC blockwork.	4.1. Blockwork is prepared to receive manufactured lintels in accordance with plans and manufacturer specifications.
	4.2. Mortar bed is prepared to facilitate lintel and maintain to level position in accordance with plans and manufacturer specifications.
	4.3. Lintels are lifted into position manually or with mechanical assistance in accordance with workplace requirements.
	4.4.
5. Install AAC floor panels.	5.1. Floor supports are prepared and finished to a level, even surface to receive manufactured floor panels in accordance with manufacturer specifications.
	5.2. AAC floor panels are checked for conformity of span, size, fix and load design in accordance with design specifications.
	5.3. AAC floor panels are installed to specified location, and reinforcement bars and grout are installed to form a ring anchor system in accordance with manufacturer specifications.
	5.4. Excess adhesive is removed from work surface and cleaned free of debris in accordance with manufacturer recommendations and job specifications.
	5.5.
6. Install AAC wall	6.1. Location and surrounds of installation are checked

ELEMENT	PERFORMANCE CRITERIA
panels.	for conformity to dimensions and design specifications.
	6.2. Wall panels are checked for conformity to dimension and in accordance with design specifications.
	6.3. AAC wall panels are installed vertically for load bearing applications in accordance with manufacturer recommendations and engineer's design specifications or horizontally for cladding purposes.
	6.4. Control joints are installed in accordance with manufacturer recommendations.
	6.5. Excess adhesive is removed from work surface and cleaned free of debris in accordance with manufacturer recommendations and job specifications.
	6.6.
7. Clean up.	7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	7.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
	7.3.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of AAC products and materials
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- mechanical lifting
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements of AAC products
- techniques for installing AAC products
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given plans and specifications, construct an AAC block and panel building section to include damp proof course; a base laid in mortar; walls of AAC blocks laid in running bond using adhesive, incorporating an opening and a lintel; and a floor and wall of AAC panels (including reinforcement), ensuring:
 - correct identification of requirement and finishing of the structure
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe

EVIDENCE GUIDE

work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and

EVIDENCE GUIDE

numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to installing AAC products
- relevant Australian standards
- safe work procedures related to installing AAC products
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Installation of AAC products may be performed on:

- a new construction site
- an existing structure being renovated or extended
- an existing structure subject to service

RANGE STATEMENT

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- restoration or maintenance.
- emergency procedures, including emergency shutdown and stopping, extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - underground services, including water, gas, electricity and communications
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- include:
 - AAC adhesive trowels
 - adhesive drills
 - band saws
 - bolsters
 - brooms
 - buckets

Tools and equipment:

RANGE STATEMENT

- builders' lines
- caulking guns
- concrete mixers
- dust masks and respirators
- hammers (brickies, club and scutch)
- hand saws
- hoses
- line blocks
- line pins
- masonry saws
- measuring tapes and rules
- mortar boards
- profiles
- shovels
- spirit levels
- straight edges
- wheelbarrows
- may include:
 - elevators
 - forklifts
 - materials hoists
 - mechanical lifting equipment
 - pallet trolleys
 - planks
 - scaffolds
 - small petrol or diesel engines or compressors.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- AAC products
- adhesives
- mortar.

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration
- waste management.

RANGE STATEMENT

<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none">• federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>AAC blocks</i> include:	<ul style="list-style-type: none">• reinforced AAC products (steel mesh, panels, lintels and treads in a range of strength and grades)• unreinforced AAC products (blocks).
<i>Fixing ties and brackets</i> include:	<ul style="list-style-type: none">• angle brackets• control joint ties• flat junction brackets• joist hanger support brackets• sliding joint ties• tension ties• wall ties.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained, confirmed and applied from relevant information to undertake planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant and equipment, is selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Identify and select hand, power and pneumatic tools.	<p>2.1. Hand, power and pneumatic tools, their functions, operations and limitations are identified and selected.</p> <p>2.2. OHS requirements for using hand, power and pneumatic tools are recognised and adhered to.</p> <p>2.3. Lubricants, hydraulic fluid and water are checked according to manufacturer recommendations.</p>
3. Use tools.	<p>3.1. Hand tools used are appropriate to the task and materials and are in accordance with OHS requirements.</p> <p>3.2. Power and pneumatic tools are safely and effectively used in accordance with manufacturer recommendations and state or territory OHS requirements.</p> <p>3.3. Tools are sharpened and maintained.</p>
4. Identify, select and use plant and equipment.	<p>4.1. Plant and equipment are selected and used consistent with OHS requirements and the needs of the job.</p> <p>4.2. Lubricants, hydraulic fluid and water are checked according to manufacturer recommendations.</p> <p>4.3. Plant and equipment are maintained in accordance with manufacturer recommendations and standard</p>

ELEMENT	PERFORMANCE CRITERIA
	work practices.
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- creative design, drawing and drafting skills, including use of drafting equipment
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- planning and organisational skills to ensure coordinated development of sketches and drawings
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones

REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- carpentry materials
- carpentry tool use techniques
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements of carpentry tools and equipment
- relevant Acts, regulations and codes of practice
- tools and equipment safety manuals and instructions
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- identify and select hand tools for given tasks
- safely use and maintain a minimum of rules, tapes, squares, hammers, hand saws, hand plane and chisels for given tasks
- identify power and pneumatic tools for a given task
- safely use and maintain a minimum of a power saw, electric plane, impact power drill, nail gun and compressor for given tasks, with maintenance including grinding and sharpening of a hand plane, chisel, a hand saw and one non-tungsten tip power saw blade.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to undertake planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Erect formwork.	<p>2.1. Design of footing and/or slab on ground is identified from job drawings and specifications, and is checked to be in accordance with legislation, regulations and codes of practice.</p> <p>2.2. Formwork is set out to requirements of drawings and specifications.</p> <p>2.3. Fixing and fasteners are selected consistent with construction requirements of the job.</p> <p>2.4. Formwork shutters and/or edge boxing are constructed and erected to site requirements and specifications.</p> <p>2.5. Formwork support is braced to job requirements and specifications.</p> <p>2.6. Block-outs and cast-in services are installed to specified locations.</p> <p>2.7. Release agents are applied to formwork face, where specified, to manufacturer specifications.</p>
3. Strip formwork.	<p>3.1. Edge boxing and bracing/strutting support are removed sequentially and safely.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.2. Timber components are de-nailed, cleaned and stored or stacked safely for reuse or removal from site.
	3.3. Steel components are cleaned, oiled and stored or stacked to manufacturer's maintenance recommendations.
	3.4. Damaged formwork components are safely discarded after stripping.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

abilities

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- formwork materials
- formwork techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out and measuring
- processes for calculating material requirements
- quality requirements for formwork
- requirements of application and requirements for line, level and plumb in construction projects
- termite barriers
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- form up a slab on ground a minimum of 9 square metres, incorporating an edge rebate and internal corner to specifications
- form up a step to a foundation excavation to specified masonry units.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to erecting and dismantling formwork for footings and slabs on ground

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- relevant Australian standards
- safe work procedures related to erecting and dismantling formwork for footings and slabs on ground
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment

RANGE STATEMENT

Tools and equipment include:

- workplace environment and safety.
- air compressors and hoses
- automatic levels
- bevels
- chisels
- hammers
- hand saws
- laser levels
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- pinch bars
- power drills and power saws
- power leads
- saw stools
- shovels
- spanners
- spirit levels
- squares (combination/tri)
- steel squares
- string lines.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- bolts and nuts
- boxing, either timber, metal, masonry, fibre cement sheeting or reconstituted timber products
- coach screws
- metal brackets
- nails and spikes
- patented metal fasteners
- steel tie rods.

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory

- federal, state and local authorities

RANGE STATEMENT

<i>authorities</i> include:	administering applicable Acts, regulations and codes of practice.
<i>Formwork</i> :	<ul style="list-style-type: none">includes prefabricated or in situ and is to be rigid to withstand the mass of wet concrete and actions imposed during placementformwork construction must comply with specifications to height and level and includes timber, metal or prefabricated for both footings and slabs on ground.
<i>Formwork shutters and edge boxing</i> include:	<ul style="list-style-type: none">an edge rebate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Manually handle, sort and stack carpentry materials and components.	<p>2.1. Carpentry materials for handling are moved to specified location, applying safe manual handling techniques.</p> <p>2.2. Carpentry materials and components are sorted to suit material type and size, stacked for ease of identification and retrieval and for task sequence and job location in accordance with job specifications.</p> <p>2.3. Carpentry materials and components are protected against physical and water damage and stored clear of access ways, and for ease of identification, retrieval and distribution.</p>
3. Prepare for mechanical handling of materials.	<p>3.1. Carpentry materials and components are stacked/banded for mechanical handling in accordance with the type of material and plant or equipment to be used.</p> <p>3.2. Carpentry materials and components are loaded, unloaded, moved or located at specified location.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. <i>Hazardous materials</i> are identified for separate handling.
	4.3. <i>Non-toxic materials</i> are removed using correct procedures.
	4.4. <i>Dust suppression</i> procedures are used to minimise health risk to work personnel and others.
	4.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- asbestos characteristics and reporting requirements
- carpentry material handling techniques
- construction terminology
- hazardous materials found in construction work sites
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- material sizes
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements and types of carpentry materials
- types, characteristics, uses and limitations of tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- safely handle, sort and stack varying lengths of timber, providing quick access and use
- safely move and stack a given quantity of sheet material
- safely handle carpentry components for one carpentry project.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to handling carpentry materials
- relevant Australian standards

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- safe work procedures related to handling carpentry materials
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - personnel
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- banders

Tools and equipment include:

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- hammers
- pallets
- pinch bars
- tin snips
- wheelbarrows.
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- bricks and concrete masonry units
- concrete components
- glass
- insulation
- joinery units
- metal sheeting
- paints and sealants
- plaster or fibre cement sheeting
- reconstituted timber products
- reinforcement materials
- scaffolding components
- structural steel sections and components
- timber.

Environmental requirements include:

- clean-up protection
- noise and dust
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Handling includes:

- handling activities may require assistance of others where size or weight is a factor
- manual handling, which includes using pallets, carrying materials using correct lifting techniques and control of waste
- preparing for mechanical handling, which includes forklifts, pallet jacks and trucks
- procedures such as MSDS, calculating quantities, and stacking and storing of materials.

Protected includes:

- correct handling and stacking techniques without damaging the material
- protecting with covers.

RANGE STATEMENT

- Hazardous materials* include:
- coatings
 - glues
 - inflammable materials
 - solvents.
- Non-toxic materials* include:
- general carpentry materials with appropriate labelling.
- Dust suppression* includes:
- keeping dust in the air to a minimum.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Demolish minor building structures.	<p>2.1. Designated demolition area of minor building structure is assessed to determine scope of work in accordance with legislation, regulations and codes of practice and type of construction system.</p> <p>2.2. Risks are identified and managed, including determining the status of existing services.</p> <p>2.3. Preparatory work is completed.</p> <p>2.4. Demolition procedures are carried out consistent with safe and effective processes of dismantling or demolishing and removing materials from location to designated storage area.</p> <p>2.5. Materials and building component parts are safely and effectively handled using appropriate material handling techniques consistent with the type of building materials and components.</p> <p>2.6. Materials and components identified for salvaging are safely and effectively handled, stored and stacked ready for transport in accordance with OHS material handling practices and techniques.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Identify and indicate site boundaries.	<p>2.1. Survey pegs at corners of site are located and identified in accordance with job drawings, specifications and site topography.</p> <p>2.2. String lines are set accurately into position to identify site boundary markings in accordance with site plan and survey pegs.</p>
3. Set out first line for building alignment.	<p>3.1. Measurements of building line from boundary or existing building are determined from site drawings for setting out.</p> <p>3.2. Approximate position and length of line, plus building clearance measurement at each end, are determined for hurdle location in accordance with site plan and survey pegs.</p> <p>3.3. Pegs and hurdles/profiles are installed approximately level across and between one another with adequate provision to mark footing width on hurdle/profile in accordance with job drawings and specifications.</p> <p>3.4. Location for line is accurately marked with nails on hurdles/profiles and line is set taut into position to</p>

ELEMENT	PERFORMANCE CRITERIA
4. Set out right angled corners.	<p>true alignment with boundary in accordance with job drawings and specifications without error.</p> <p>4.1. Corner of building is determined on set building line to true measurement from adjacent boundary and marked with peg in accordance with job drawings and specifications.</p> <p>4.2. Right angle is set up to line from corner peg using triangulation principles.</p> <p>4.3. Hurdles/profiles are installed to approximate level of other hurdles and line is set taut to right angled alignment.</p>
5. Install other building lines.	<p>5.1. Hurdles for remaining building lines are installed to appropriate locations, approximately level with established hurdles in accordance with job drawings and specifications.</p> <p>5.2. Measurements for remaining building lines are accurately marked and nailed on hurdles to dimensions from site drawings.</p> <p>5.3. String lines are set taut into position to nailed locations on hurdles in accordance with job drawings and specifications.</p>
6. Building lines are checked for square.	<p>6.1. Diagonal measurements are checked for square and lines are adjusted to provide square relationship within 5mm tolerance over minimum diagonal length of 15m.</p> <p>6.2. Measurements are checked for accuracy.</p>
7. Clean up.	<p>7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>7.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- basic construction processes
- basic mathematical techniques associated with setting out
- construction plan, symbols and construction terminology
- construction terminology
- job safety analysis (JSA) and safe work method statements
- processes for interpreting engineering drawings and sketches
- processes for setting out
- project quality requirements
- setting out techniques
- site and equipment safety (OHS) requirements
- site isolation and traffic control responsibilities and authorities
- types, characteristics, technical capabilities and limitations of setting out devices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- set out a full size L shape building on a relatively level site to specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to setting out
- relevant Australian standards
- safe work procedures related to setting out
- signage
- verbal or written and graphical instructions

RANGE STATEMENT

Planning and preparation include:

- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with state or territory legislation, regulations, organisational safety policies and procedures, and project safety plan and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

Materials include:

- nails
- pegs
- timber.

Environmental requirements include:

- clean-up protection
- noise and dust
- waste management.

Site topography includes:

- flat
- sloping

RANGE STATEMENT

- Site boundary markings* include:
- steep.
 - building built on line
 - fence built on line
 - survey pegs.
- Setting out* includes:
- footings, including:
 - pad
 - posts
 - slab
 - strip
 - stumps
 - residential buildings, commercial buildings and other structures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out flooring system tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental policies and procedures and statutory and regulatory authorities requirements.</p>
2. Set out sub-floor frame.	<p>2.1. Support structure, posts, stumps and piers are positioned and installed to set out lines for building as determined from site drawings in accordance with specifications for floor framing.</p> <p>2.2. Check support structure, posts, stumps and piers for level and square prior to installation of bearers and joists.</p>
3. Install timber bearers.	<p>3.1. Bearer material is marked and cut to lengths for joining over supports.</p> <p>3.2. Damp proof course and termite shield are installed where specified by regulation.</p> <p>3.3. Bearers are located and fixed in accordance with regulations, job drawings and specifications to square, line and level.</p>
4. Install timber floor joists.	<p>4.1. Location for floor joists are set out to spacings from job drawings, specifications and regulations.</p> <p>4.2. Material lengths for floor joists are selected.</p> <p>4.3. Floor joists are selected for straightness, located,</p>

ELEMENT	PERFORMANCE CRITERIA
	fitted and fixed to line and level.
	4.4. Block or herringbone strutting is installed to deep floor joists where specified in accordance with regulations.
	4.5. Blocks and trimmers are fitted and fixed around doorways and openings to provide support in accordance with specifications.
	4.6. Trimmers are cut, fitted and fixed to support sheet flooring joints where specified.
5. Install flooring.	5.1. Flooring materials selected are appropriate for the intended room use and specifications.
	5.2. Floor measurements are confirmed and flooring materials are cut and prepared for installation with a minimum of loss.
	5.3. Flooring is installed and secured in accordance with manufacturer recommendations.
	5.4. Installed flooring is completed in preparation for the next process.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- damp proof systems
- floor construction techniques
- flooring system installation techniques
- flooring system materials, including fire control and separation materials required by the Building Code of Australia (BCA) and other legislation
- flooring system types, characteristics, materials, uses and limitations
- imposed loads
- insulation products
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements
- regulations applicable to floor framing and flooring
- setting out and levelling techniques
- termite barriers
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete as a minimum one bearer and joist system constructed on a support system (stumps, posts or piers) applicable to local conditions, to carry external walls and internal walls parallel to joists for a full sized home or equivalent (including a bedroom, lounge, kitchen and bathroom not less than 30 square metres)
- install a tongue and groove fitted strip flooring surface and an approved wet area floor system to a bathroom area
- install a system of similar size as above with either a sheet or strip platform system.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified and applied for the project in accordance with environmental plans and statutory and regulatory authority obligations.</p>
2. Construct wall frames.	<p>2.1. Wall frame components are identified and selected in accordance with regulatory criteria and load bearing requirements.</p> <p>2.2. Location of walls is set out on a slab or sub floor frame in accordance with dimensions, drawings, plans and specifications.</p> <p>2.3. Wall plates are set out and cut to length.</p> <p>2.4. Wall plates are marked to accommodate studs and openings and/or cladding and lining types.</p> <p>2.5. Pattern stud is set out.</p> <p>2.6. Studs, trimmers and noggings are cut to length.</p> <p>2.7. Wall frames are fabricated, including lintels and bracing.</p> <p>2.8. Wall frames are erected, fixed into place and aligned to specification.</p> <p>2.9. Erected walls are temporarily braced.</p> <p>2.10. Walls are straightened, plumbed and aligned.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of,</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained for planning the work and confirmed and applied from relevant information.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity and quality requirements are calculated in accordance with plans and specifications.</p> <p>1.6. Materials appropriate to construction of ceiling frames, including fire resistance ratings are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p> <p>1.8. Passive and active fire control elements for ceiling frame construction and installation are identified and applied.</p>
2. Locate ceiling joists.	<p>2.1. Ceiling frame components are identified and selected in accordance with regulatory criteria.</p> <p>2.2. Location of ceiling joists are set out on the top plate to specifications for spacings of roof and ceiling members.</p> <p>2.3. Ceiling joists and trimmers are cut to length, placed and securely fixed to locations in accordance with specifications.</p>
3. Install hanging beams.	<p>3.1. Hanging beam sizes and spacings are checked in accordance with regulatory criteria.</p> <p>3.2. Hanging beams are installed.</p> <p>3.3. Hanging beams on external walls are placed alongside rafter locations where specified.</p> <p>3.4. Ceiling joists are connected using appropriate connecting methods to hanging beams.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- ceiling frame construction techniques
- ceiling framing materials, including steel and their rated fire resistance
- wall framing and roof construction, ceiling lining materials, including fire control and separation required by the Building Code of Australia (BCA) and other legislation
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for ceiling frames
- roofing set out
- timber types, structural properties and uses, including engineered timber products
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- set out, construct and erect a ceiling incorporating a hanging beam, ceiling trimmers and strutting beam to specifications for a full size one bedroom home or equivalent (includes a bedroom, lounge, kitchen and bathroom not less than 30 square metres)
- complete construction tasks involving both timber and metal materials and components
- ensure correct selection and use of fire-rated materials and methods of construction.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Planning includes:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions

RANGE STATEMENT

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing ceiling frames
- relevant Australian standards
- safe work procedures related to constructing ceiling frames
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices

RANGE STATEMENT

<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • use of firefighting equipment • use of tools and equipment • workplace environment and safety. • air compressors and hoses • chisels • hammers • hand saws • marking equipment • measuring tapes and rules • nail bags • nail guns • power drills • power leads • power saws • roofing square • saw stools • scaffolding • spirit levels • squares (combination/tri) • string lines.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications, where specified • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • bolts • metal • nails • patented fasteners • reconstituted timber products • screws • synthetic materials • timber.
<i>Construction of ceiling frames:</i>	<ul style="list-style-type: none"> • is to be completed in conjunction with the roof members • methods include ensuring compliance with incipient spread of fire requirements • selection of hangers and composite beams will be determined by the building geometry and roof pitch.
<i>Environmental requirements</i>	<ul style="list-style-type: none"> • clean-up protection

RANGE STATEMENT

include:	<ul style="list-style-type: none"> • noise and dust • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Ceiling frame components</i> include:	<ul style="list-style-type: none"> • synthetic materials • timber and metal components.
<i>Hanging beams</i> include:	<ul style="list-style-type: none"> • ceiling frame bracing, which may be included where high wind loadings are specified • hanging beams with end bearing, which are to be positioned so that full load distribution to the supporting wall frame is achieved • installation, which may be incorporated with strutting and/or composite beams.
<i>Connecting methods</i> include:	<ul style="list-style-type: none"> • metal straps • patented connectors • timber cleats.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Erect roof trusses.	<p>2.1. Location of roof trusses for hip and valley roofs are set out on wall top plates to plan layout and specifications.</p> <p>2.2. Steel frames are temporarily earthed during erection and are connected to permanent earthing system upon completion.</p> <p>2.3. Roof trusses are erected and fixed, including temporary bracing, to set out positions in correct sequence to line at apex and plumb.</p> <p>2.4. Top chord is installed above wall plate to be constant height above wall plate.</p> <p>2.5. Ceiling trimming and creeper rafter members are fixed to specifications.</p> <p>2.6. Bottom chord of truss is used to provide lateral support for internal walls.</p> <p>2.7. Roof bracing is provided through hip construction, valley construction, diagonal metal tension or timber bracing or a combination of these, and fixed to specification.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Clean up.	<p>2.8. Lateral restraints to truss chords are fixed in position to manufacturer specifications.</p> <p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for roof trusses
- roof bevels
- roof calculations for lengths, quantities and pitch
- roof load transfer
- roof shape and geometry
- roof truss erection and construction techniques
- roof truss materials and installation, including fire control and separation materials required by the Building Code of Australia (BCA) and other legislation
- roof types and truss components
- roofing regulations
- techniques for lifting and positioning of trusses
- temporary and permanent bracing
- timber types, structural properties and uses, including engineered timber products
- truss set out
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- set out and erect a roof comprising a minimum of one hip end, a valley and enough standard trusses to incorporate bracing for a full size roof in timber and metal.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out and prepare members for pitched roof erection.	<p>2.1. Set out for position of members is checked against top of plates in accordance with drawings and specifications.</p> <p>2.2. Pattern rafter is set out and cut to length allowing for overhang.</p> <p>2.3. Main ridge boards are marked and cut to length.</p> <p>2.4. Common rafters are cut to length and checked.</p> <p>2.5. Common rafters are erected in correct sequence.</p> <p>2.6. Bevels and lengths for hip and valley rafters are determined from pitch of roof.</p> <p>2.7. Hip and valley rafters are cut and fixed.</p> <p>2.8. Creeper rafters are cut and fixed from pattern rafter allowing for overhang.</p>
3. Install roof support.	<p>3.1. Bevels and lengths for under purlins are determined.</p> <p>3.2. Under purlins are cut and installed.</p> <p>3.3. Struts are measured, cut and installed to under purlins, hips, valley and ridges to regulation.</p> <p>3.4. Collar ties are installed to regulatory requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. Trimmers are fitted to gable ends to take gable end rafter and barge board.
	3.6. Valley boards are cut and fixed.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions

CPCCCA3008A Construct eaves

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to prepare, set out and construct eaves, including the cutting and fixing of fascias and barges to provide a finish between the wall and the roof. It includes boxed eaves and the finish to gable ends.

Application of the Unit

Application of the unit This unit of competency supports achievement of skills constructing eaves for roof finishing in a range of construction projects, which includes working with others and as a member of a team.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application including required fire resistance rating are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p> <p>1.8. Passive and active fire control elements for eaves construction are identified and applied.</p>
2. Install fascia and barge.	<p>2.1. Overhang of rafters is marked and cut to line, plumb and angle.</p> <p>2.2. Gable ends are trimmed for overhang where a verge rafter is not used.</p> <p>2.3. Fascia is fitted and fixed to roof structure overhang to line and level.</p>
3. Construct framework for eaves or soffits.	<p>3.1. Framework structure for eaves type are identified, and eaves design is established and set out to drawings and specifications.</p> <p>3.2. Timber framework members are set out, marked and cut to lengths in accordance with methods of joining and proposed framework structure.</p> <p>3.3. Boxed eaves constructed with soffit bearers are fixed to wall frame or supported by hangers from rafters, to line and level.</p> <p>3.4. Boxed eaves structure is installed, clear of top of</p>

ELEMENT	PERFORMANCE CRITERIA
	masonry walls in veneer construction to allow for frame shrinkage and settlement.
	3.5. Eaves structure members are securely fixed, including back blocking and trimmers.
4. Line and clad eaves and soffits.	4.1. Eaves cladding and sheeting material is marked and cut to shape to suit task application and jointing methods.
	4.2. Eaves lining, cladding and sheeting are fitted, <i>joined</i> and fixed in accordance with type of material, task application and specifications.
	4.3. Mouldings are fitted and fixed to specifications to finish eaves.
	4.4. Sloping eaves are fitted to underside of rafters or framing for fixing and joining of material.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- eaves construction techniques, including fire control and separation required by the Building Code of Australia (BCA) and other legislation
- eaves materials, including their rated fire resistance
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for eaves construction
- roof geometry and construction
- safe use of scaffolding
- timber types, structural properties and uses, including engineered timber products
- wall framing construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- completion of marking and cutting of roof members to line to accommodate plumb fascia and barge for three metres of overhand barge eaves, three metres of boxed eaves and three metres of raking eaves, ensuring correct selection and use of fire-rated materials and methods of construction, each to include:
 - an apex junction on the barge
 - a junction between the barge and the plumb fascia
 - a junction at the valley
 - an eaves junction at the hip to a brick wall.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing eaves
- relevant Australian standards
- safe work procedures related to constructing eaves
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid

RANGE STATEMENT

Tools and equipment include:

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- air compressors and hoses
- bevels
- chisels
- hammers
- hand saws
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- power drills
- power saws and power leads
- protractors
- saw stools
- scaffolding
- spirit levels
- squares (combination/tri)
- stair clips and tables
- steel squares and fence
- string lines.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- beads
- fibre cement sheeting
- joining mould
- metal
- plaster
- quads
- reconstituted timber products
- timber
- timber battens
- timber lining boards.

Environmental requirements

- clean-up protection

RANGE STATEMENT

include:	<ul style="list-style-type: none"> • noise and dust • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Gable ends:</i>	<ul style="list-style-type: none"> • can be boxed or raked and raked eaves • includes exposed rafters or soffit finish.
<i>Fascia</i> (and fascia gutter and barges) include:	<ul style="list-style-type: none"> • methods include ensuring compliance with incipient spread of fire requirements methods • timber or metal and overhang types, including conventional fascia gutter and concealed.
<i>Eaves design:</i>	<ul style="list-style-type: none"> • includes sloping soffits and boxed eaves • may incorporate verandas, concealed gutters and open eaves.
<i>Joined</i> includes:	<ul style="list-style-type: none"> • jointing methods involving plastic, timber or metal moulds.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application including required fire resistance rating are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p> <p>1.8. Passive and active fire control elements for roof construction are identified and applied.</p>
2. Set out and prepare members for roof erection.	<p>2.1. Set out for position of members is checked against top of plates in accordance with drawings and specifications for advanced roof construction.</p> <p>2.2. Pattern rafter is set out and cut to length allowing for overhang.</p> <p>2.3. Main ridge boards are marked and cut to length.</p> <p>2.4. Common rafters are cut to length and checked.</p> <p>2.5. Common rafters are erected in correct sequence.</p> <p>2.6. Bevels and lengths for hip and valley rafters are determined from pitch of roof.</p> <p>2.7. Hip and valley rafters are cut and fixed.</p> <p>2.8. Creeper rafters are cut and fixed from pattern rafter, allowing for overhang.</p>
3. Install roof support.	<p>3.1. Bevels and lengths for under purlins are determined.</p> <p>3.2. Under purlins are cut and installed.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. <i>Struts</i> are measured, cut and installed to under purlins, hips, valley and ridges to regulation.
	3.4. Collar ties are installed to regulatory requirements.
	3.5. Trimmers are fitted to gable ends to take gable end rafter and barge board.
	3.6. Valley boards are cut and fixed.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- ceiling framing
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- pitched roof construction techniques, including fire control and separation required by the Building Code of Australia (BCA) and other legislation
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for advanced roofs
- roof calculations for lengths, quantities and pitch
- roof geometry
- roof set out
- roof types and design
- roofing materials, including their rated fire resistance
- roofing regulations
- timber types, structural properties and uses, including engineered timber products
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete the roof to be constructed, which must include a hip end other than square on plan (hexagonal or octagonal), for a full size project ensuring correct selection and use of fire-rated materials and methods of construction.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,

EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing advanced roofs

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- relevant Australian standards
- safe work procedures related to constructing advanced roofs
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied using relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Install window units to frame.	<p>2.1. Window opening size is checked to be greater than overall window frame.</p> <p>2.2. Reveals are joined and fixed securely to frames where specified.</p> <p>2.3. Window unit is located to suit brickwork and eaves finish for veneer construction, whichever is applicable.</p> <p>2.4. Window unit is positioned in place so that head/sill are level and stiles are plumb and in wind, ensuring reveals or frame are finished flush with face of inside wall lining.</p> <p>2.5. Window is packed and fixed to wall frame through/to studs, in accordance with specified fixing and fastening methods.</p>
3. Replace window units/door frames.	<p>3.1. Architraves and nosing are removed.</p> <p>3.2. Sill bricks or cladding are removed where specified.</p> <p>3.3. Fasteners are cut, packing removed and flashing detached from frame.</p> <p>3.4. Window unit/ door frame is removed.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. Window unit/door frame and <i>window components</i> are installed to plumb, level and wind.
	3.6. Architraves and mouldings are replaced.
4. Prepare door opening, and construct and fix jamb.	4.1. Door frame opening size is checked to be greater than the overall door jamb width and height, allowing for plumbing of stiles, thickness of floor covering, levelling of door head and level of floor.
	4.2. Jamb stiles are marked and cut to length allowing for clearances according to specifications.
	4.3. Head is trenched to accommodate jamb stiles allowing for clearance according to specification.
	4.4. Jamb frame is assembled, squared and braced with rebates flush.
	4.5. Joints and rebates are cleaned and finished to quality requirements.
5. Install door and door unit.	5.1. <i>Door</i> unit is positioned in place so that the head/sill is level and stiles are plumb and in wind, ensuring reveals or frame finished flush with face of inside wall lining.
	5.2. Door is fitted to jamb allowing for clearances according to specifications with lock stile door backed off to facilitate correct operation.
	5.3. Hinges are marked out on door and jamb.
	5.4. Hinges are fitted to door and jamb.
	5.5. Final adjustments of door are made.
	5.6. <i>Door furniture components</i> are fitted and fixed to manufacturer specifications.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- flashing requirements and installation techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out
- processes for the calculation of material requirements
- quality requirements for windows and doors
- window and door installation and replacement techniques
- window and door materials
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- install one standard window or glazed sliding door unit to specifications
- replace one standard window or glazed sliding door unit to specifications
- construct and fit one standard external rebated door jamb/frame to specifications
- fit and hang one standard door, including the door furniture and a pair of doors with door jambs to specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- plans and specifications
- regulatory and legislative requirements pertaining to installing and replacing windows and doors
- relevant Australian standards
- safe work procedures related to installing and replacing windows and doors
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices

RANGE STATEMENT

Tools and equipment include:

- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- air compressors and hoses
- bevels
- chisels
- hammers
- hand saws
- marking equipment
- measuring tapes and rules
- nail bags
- nail guns
- power drills
- power leads
- power saws
- protractors
- saw stools
- scaffolding
- spirit levels
- squares (combination/tri)
- stair clips and tables
- steel squares and fences
- string lines.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- barrel bolts
- cabin hooks
- closers
- dead bolts
- flash bolts
- flashings
- handles
- hinges (butt and parliament)
- latches
- locks
- metal
- night latches
- passage sets

RANGE STATEMENT

<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • timber. • clean-up protection • noise and dust • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Windows</i> include:	<ul style="list-style-type: none"> • all size windows • casement, double hung, hopper, straight and sliding, including glazed sliding doors, curved and bay.
<i>Reveals:</i>	<ul style="list-style-type: none"> • may or may not be fitted with windows.
<i>Door frames:</i>	<ul style="list-style-type: none"> • may be fixed first and then the door installed or doors may be fixed to the frame prior to installation • doors may be hung to timber or metal frames.
<i>Window components</i> include:	<ul style="list-style-type: none"> • reveal • sill • trimmers.
<i>Doors</i> include:	<ul style="list-style-type: none"> • flush panel, framed and panelled, and glazed • door units are to cover hinged door units and include standard doors, sliding, flywire, combination window/door units, door sidelight units (glazed or unglazed) and internal doors • door jambs, door stiles and door sills.
<i>Door furniture components</i> include:	<ul style="list-style-type: none"> • grips, latches/deadlocks, push plates and closers • handles and locks.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out window refurbishment are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Refurbish casement windows.	<p>2.1. Sash fittings are removed.</p> <p>2.2. Sash is removed.</p> <p>2.3. New sash is fitted to correct margins and hung.</p> <p>2.4. Window components and furniture are fitted to manufacturer specifications.</p>
3. Refurbish double hung windows.	<p>3.1. Sashes are removed from the frame in correct sequence.</p> <p>3.2. New sashes are fitted, where specified, to correct margins ensuring waterproofing to bottom rail, and sash is maintained.</p> <p>3.3. Sash cords/spiral balances and frame components are replaced.</p> <p>3.4. Window furniture is replaced.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with</p>

ELEMENT**PERFORMANCE CRITERIA**

manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings

REQUIRED SKILLS AND KNOWLEDGE

- processes for the calculation of material requirements
- quality requirements for timber sashes and window frames
- timber sash refurbishment techniques
- tools and equipment types, characteristics, uses and limitation
- window frame and sash construction
- window materials
- window measurements and calculations
- window set outs
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- remove, refurbish and refit a sash to a top or side hung casement frame
- remove, refurbish and refit a pair of sashes to a double hung window.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out wet area framing and fitting out are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out wet area installation.	<p>2.1. Noggings and housings are set out for fitments and fixtures in accordance with drawings and specifications.</p>
3. Prepare for bath installation.	<p>3.1. Studs are checked to height and level for required depth to receive lip of bath.</p> <p>3.2. Support to front edge of bath is constructed to height and level.</p> <p>3.3. Noggings and short studs are fixed and fitted, where specified, flush to wall face for fixing surround sheeting.</p> <p>3.4. Sheeting and flashing are fixed to specifications.</p>
4. Prepare for shower base installation.	<p>4.1. Location of shower base is set out.</p> <p>4.2. Wall plates and studs are checked out to required depth to receive shower base.</p> <p>4.3. Noggings and short studs are fitted and fixed flush to wall face for fixing surround sheeting.</p> <p>4.4. Corner flashing is installed to regulations.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.5. Flashing and sheeting are fitted and fixed to specifications.
5. Prepare for sink installation.	5.1. Noggings are set out to accommodate vanity basin and laundry sink units. 5.2. Flashings are installed in accordance with regulations.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings

1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out lining and moulding installation tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Prepare surface for lining/panelling.	<p>2.1. Fixing procedures for specified lining materials are selected in accordance with specifications.</p> <p>2.2. Surface is set out to provide a balanced panel or board effect to width and height.</p>
3. Install lining/panelling.	<p>3.1. Lining material is marked, cut to length and/or shape, fitted and positioned to specifications.</p> <p>3.2. Panelling/lining is secured and fixed to job and manufacturer specifications.</p> <p>3.3. Panelling/lining is installed to plumb, level and uniform plane.</p>
4. Cut and fix standard architrave mouldings.	<p>4.1. Standard architraves for edging are marked, cut to length, positioned and fitted to specifications.</p> <p>4.2. Skirtings are marked, cut to length, positioned and fitted to specifications.</p> <p>4.3. Mitre joints are fitted flush to face and true without gaps.</p> <p>4.4. Scribed joints are marked, cut to length, positioned</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and fitted to specifications.</p> <p>4.5.Scotia return end is cut to profile shape and length as detailed for location in drawings and specifications.</p> <p>4.6.Standard pelmet moulding sections are marked to length, cut, fitted and assembled and fixed to specifications with mitres true without gaps.</p> <p>4.7.Raked moulding is set out to position and mould is shaped to pattern for each position.</p> <p>5. Clean up.</p> <p>5.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- commonly used timber profiles
- construction terminology
- geometry for raking mouldings, stairs and roofing
- job safety analysis (JSA) and safe work method statements
- lining, panelling and moulding materials
- lining, panelling and moulding techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements of lining, panelling and moulding
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment

A person who demonstrates competency in this

EVIDENCE GUIDE

and evidence required to demonstrate competency in this unit	<p>unit must be able to provide evidence of the ability to:</p> <ul style="list-style-type: none"> • locate, interpret and apply relevant information, standards and specifications • comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations • comply with organisational policies and procedures, including quality requirements • safely and effectively use tools, plant and equipment • communicate and work effectively and safely with others • complete lining one wall to a minimum of 3 metres by 2.4 metres, with lining boards including one opening to specifications • complete lining one wall to a minimum of 3 metres by 2.4 metres, with sheet panelling including one opening to specifications • complete fitting profiled architraves to a minimum of one door or one window or a combination of both, with specified margins and tight fitting mitre joints • complete cutting and fixing a profiled skirting with a minimum of one internal scribed joint and one external mitre joint with tight fitting joints • complete scribing and mitring a Scotia, quad and colonial architrave with a minimum of one internal joint and one external mitre joint with tight fitting joints • construct a pelmet with two return ends able to be fixed and removed upon completion • construct a raking mould using either an internal scribed or external mitre joint with tight fitting joints.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory</p>

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- plans and specifications
- regulatory and legislative requirements pertaining to installing lining, panelling and moulding
- relevant Australian standards
- safe work procedures related to installing lining, panelling and moulding
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices

RANGE STATEMENT

Tools and equipment include:

- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- air compressors and hoses
- bevels
- chisels
- coping saws
- corking guns
- cramps
- hammers
- hand planes
- hand saws
- marking equipment
- measuring tapes and rules
- moulding planes
- nail guns
- power drills
- power leads
- power planers
- power saws
- rebate planes
- routers
- saw stools
- spirit levels
- squares (combination/tri)
- straight edges
- string lines.

Lining of framed walling or battened surfaces provides a finished surface and includes:

- all moulding applications where joining occurs at surface intersections and involves change of levels and mouldings running at a slope or rake.
- junctions of surfaces, which may be at right angles or obtuse or acute angles
- lining boards, which may be vertical, horizontal or raked.

Moulding includes:

- beading (flat, quad, cover strips and nosings)
- bull nosed
- multi-curved
- ornate period profile
- Scotia
- splayed

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- square.
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- lining, panelling, mouldings, nails, screws, adhesives and gap fillers
- lining and panelling sheet materials, including lining boards, veneer panelling, plywood, hardboard, MDF board, particle board and fibre cement board.

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Surfaces include:

- floors, walls, ceilings, windows, door frames and jambs, built-in cupboards, built-in robes, fitments and stairs
- preparation of surfaces may involve:
 - fixing of battens to surface
 - trimming of frame members to line
 - fixing of additional noggings
 - packing of frame members
 - wedging of frame members.

Architraves include:

- may incorporate a plinth block.

Edging includes:

- architrave
- cornice
- raking moulds
- skirting.

Joints include:

- butt or moulds (of plastic, metal or timber) incorporated in the joint or surface fixed above the joints.

CPCCCA3014A Construct bulkheads

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to construct bulkheads to conceal services or for decorative purposes. It includes straight, curved and geometric shaped bulkheads, generally constructed in situ and includes prefabricated fitments.

Application of the Unit

Application of the unit This unit of competency supports achievement of skills to construct non-load bearing bulkheads in a range of construction projects, which includes working with others and as a member of a team.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant <i>information</i> for <i>planning and preparation</i> purposes.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, <i>tools and equipment</i> selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and <i>quality requirements</i>.</p> <p>1.6. <i>Materials</i> appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and regulatory authority</i> obligations, and are applied.</p>
2. Construct bulkheads.	<p>2.1. <i>Bulkhead</i> is set out to plans and specifications.</p> <p>2.2. Materials are selected in accordance with plans and specifications.</p> <p>2.3. Bulkhead trimmers and plates are cut in accordance with set out and job requirements.</p> <p>2.4. Fasteners are selected ensuring that the method employed is capable of carrying the load of the finished product.</p> <p>2.5. Bulkhead is assembled and fixed in position to application and requirements for line, level and plumb in construction projects in accordance with job specifications.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- bulkhead construction techniques
- bulkhead materials
- construction terminology
- curved geometry
- framing techniques
- job safety analysis (JSA) and safe work method statements
- load and anchor capacities for bulkheads
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management

REQUIRED SKILLS AND KNOWLEDGE

- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out and measuring
- processes for the calculation of material requirements
- quality requirements for bulkheads
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- construct a segmental curved bulkhead a minimum of 3 metres in radius with a depth of 600mm to plumb, line and level and job specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

RANGE STATEMENT

- crimping tools
- docking saws and drop saws
- explosive power tools
- hammers
- laser levelling equipment
- levels
- marking equipment
- masonry drills
- measuring tapes and rules
- nail guns
- pop riveters
- power drills
- power leads
- saw stools
- scaffolding
- screw guns
- spirit levels
- squares (combination/tri)
- steel squares
- straight edges
- string lines
- templates
- tin snips.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- bolts and nuts
- masonry anchors
- metal
- nails and spikes
- patented metal fasteners
- pop rivets
- prefabricated components
- rivets
- screws
- timber.

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration

RANGE STATEMENT

Statutory and regulatory authorities include:

- waste management.
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Bulkheads:

- include:
 - decoration, to contain fittings (bar hoods and cupboards) and help facilitate changes in height to ceilings
 - services
 - smoke containment
- may require sound or fire rating
- may be constructed of metal or timber
- may be sheeted with plasterboard, lining boards, reconstituted timber products, metal or plastic decorative panels
- may be hung from the structure above, incorporated into the structure above or fastened to the structure above.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out and cut components.	<p>2.1. Materials are obtained from the store or stack to quantity and specification requirements.</p> <p>2.2. Location is set out and marked for partitions in accordance with job plan and specifications.</p> <p>2.3. One or multiple components are accurately cut to size according to plans and specifications.</p> <p>2.4. Prefabricated or cut components are distributed and stacked to suit job location and sequence of construction.</p>
3. Assemble partitions.	<p>3.1. Locations for member connections are marked and prepared to designed measurement spacings.</p> <p>3.2. Fixing and fastenings are installed to secure each junction of members tight together, flush on partition face and within $\pm 2\text{mm}$ of set out.</p> <p>3.3. Partitions are assembled and secured square and plumb to specification.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p>

ELEMENT**PERFORMANCE CRITERIA**

4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources

- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

RANGE STATEMENT

Tools and equipment include:

- clamps
- compressors
- crimping tools
- docking saws
- drop saws
- explosive power tools
- hammers
- laser levelling equipment
- levels and power leads
- marking equipment
- masonry drills
- measuring tapes and rules
- nail guns
- pop riveters
- power drills
- saw stools
- scaffolding
- screw guns
- spirit levels
- squares (combination/tri)
- steel squares
- straight edges
- string lines
- templates
- tin snips.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- internal lining
- nails, screws, pop rivets and patented fasteners
- proprietary partition systems
- timber or metal.

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

RANGE STATEMENT

Set out includes:

- the use and fixing of tracks or plates.

Partitions:

- can be non-structural timber, metal or fire-rated, including:
 - cladding with plasterboard
 - fibre cement board
 - plastic
 - reconstituted timber products
- types of partitions include:
 - pre-glazed panels
 - lined or unlined door units
 - modular and custom window units
 - framed or solid.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out and prepare material.	<p>2.1. Exit and ground finish levels are determined from job drawings and site location.</p> <p>2.2. Rise and going of stairs are calculated from job drawings, site location and regulations.</p> <p>2.3. Newel posts and footings are set out and placed to layout of designed stairs, job drawings and specifications.</p> <p>2.4. Materials for stringers are selected and set out to the pitch of stairs with treads and risers according to regulations.</p> <p>2.5. Stringers are housed to accommodate treads, and risers or metal brackets are fixed to support treads.</p> <p>2.6. Stringers are cut and housed into newel posts and/or landings where specified.</p> <p>2.7. Material for treads are selected and risers are set out and cut to length to requirements of stair design.</p>
3. Assemble and erect stairs.	<p>3.1. Strings are located and fixed into position.</p> <p>3.2. Landing is constructed where specified.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Treads and <i>risers</i> are fixed to the stringers.
	3.4. Tie bolts are located and secured to maintain stair width where specified.
	3.5. Bracing and lateral ties are fixed to newels in accordance with specifications to maintain rigidity of stair structure where specified.
4. Fit handrails, balustrade and finish.	4.1. Material for handrails and balusters are marked and cut to length.
	4.2. <i>Handrails and balusters</i> are fitted and fixed in accordance with regulations.
	4.3. Non-slip strips are installed to treads, where specified.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out and measuring
- processes for calculating material requirements
- quality requirements of timber stairs
- stair building materials
- stair construction techniques
- stair types
- stair regulations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete the setting out and construction of full size stairs (free standing or against a wall), including a landing, handrail and balustrade to a minimum height of 1.2 metres, in accordance with regulations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing timber external stairs

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- relevant Australian standards
- safe work procedures related to constructing timber external stairs
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

RANGE STATEMENT

Tools and equipment include:

- clamps
- compressors
- crimping tools
- docking saws
- drop saws
- explosive power tools
- hammers
- laser levelling equipment
- levels and power leads
- marking equipment
- masonry drills
- measuring tapes and rules
- nail guns
- pop riveters
- power drills
- saw stools
- scaffolding
- screw guns
- spirit levels
- squares (combination/tri)
- steel squares
- straight edges
- string lines
- templates
- tin snips.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Materials include:

- anti-slip products
- coach screws
- masonry anchors
- metal brackets
- patented metal fasteners and connectors
- steel tie rods
- timber and nails, including bolts and nuts
- wall plugs.

Environmental requirements include:

- clean-up protection
- noise and dust
- vibration

RANGE STATEMENT

<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • waste management. • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Stairs</i> :	<ul style="list-style-type: none"> • may be constructed with housed stringers or metal brackets to accommodate treads • can be between ground level and landing, landing and landing, and free standing or against a wall.
<i>Newel posts</i> and handrails may be:	<ul style="list-style-type: none"> • metal • timber.
<i>Stringers</i> can be:	<ul style="list-style-type: none"> • open • housed.
<i>Risers</i> can be:	<ul style="list-style-type: none"> • open • closed.
<i>Handrails and balusters</i> include:	<ul style="list-style-type: none"> • handrail and balusters fixed to face of newels • handrails mortised into newels • parallel railing fixed to face of newels.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Straighten and prepare exterior walls.	<p>2.1. Timber frame is checked for straightness and studs are trimmed or packed to provide true surface across studs.</p> <p>2.2. Additional rows of nogging are fitted and fixed to line, flush with wall face and plumb, where specified to facilitate exterior cladding.</p>
3. Fix edge finishing, flashing and insulation.	<p>3.1. Weatherproofing, vapour barrier and flashing material are cut and fitted into position and secured to specifications.</p> <p>3.2. Location of edge finishing, joiners, corner moulds and flashing is prepared to length and position, and secured to specifications.</p> <p>3.3. Wall insulation is cut and fixed where specified.</p>
4. Set out, cut and fix horizontal weatherboards.	<p>4.1. Cover for weatherboards is determined from recommended lap, type and profile of board and height of wall.</p> <p>4.2. Gauge rod is produced.</p> <p>4.3. Stop locations of each board or starting board are marked on face to determined or specified position.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Boards are cut to fit length of wall faces.</p> <p>4.5. Butt joints of timber boards are joined at centre of studs with joint flush to face and line.</p> <p>4.6. Other boards are joined using manufacturer recommended joining profiles and fitted to specification.</p> <p>4.7. Material is pre-drilled subject to splitting, and fixed at end junction or butt joints to avoid splitting.</p> <p>4.8. Internal and external corners are finished to manufacturer recommendations and job specifications.</p> <p>4.9. Timber weatherboards, where specified, are prepared with nominated primer to cover overlaps and end joints.</p>
5. Fix panelling.	<p>5.1. Starting position of first panel is determined in accordance with specified design and finished effect against windows, doors and corners.</p> <p>5.2. Panelling is cut to fit height of wall.</p> <p>5.3. Abutting joints of panelling are fixed to manufacturer specification and requirements for covering flashing.</p> <p>5.4. Panelling is cut, fitted and fixed to manufacturer recommendations and job specification, maintaining plumb and level.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- exterior cladding materials and techniques
- flashing and sarking
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements of exterior cladding
- safe use of scaffolding
- wall frame construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- produce a storey/set out rod for a full height wall using a weatherboard of a given profile or end cover
- fix weatherboards to a height of at least six rows, incorporating an internal and external corner with stops, together with flashings and sarking for a window and a door
- install a minimum of two different types of panels, incorporating an internal and external corner with stops, vertical and horizontal joints, together with flashings and sarking for a window and a door.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to installing exterior cladding
- relevant Australian standards
- safe work procedures related to installing exterior cladding
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out formwork.	<p>2.1. Design of stairs and/or ramps and method of joining formwork are identified from job drawings and specifications, and are checked to be in accordance with legislation, regulations and codes of practice.</p> <p>2.2. Exit and ground finish levels are determined from plans, specifications and site inspection.</p> <p>2.3. Rise, going and pitch of stairs and ramp are determined from plans, specifications, site inspection, rise measurements and requirements of Building Code of Australia (BCA).</p> <p>2.4. Full size set out of stairs and ramp is calculated and made to determine rise, going and pitch of stairs to provide location of landings, stringers, treads and posts where specified.</p> <p>2.5. Location of stair, ramp and newels are determined from plans, specifications and pitch of stairs or full size set out.</p> <p>2.6. Location of footings are set out to layout of designed stairs and ramp from plans, specifications or full size</p>

ELEMENT	PERFORMANCE CRITERIA
3. Assemble and erect formwork.	<p>set out, where specified.</p> <p>2.7. Materials for formwork, including stringers, are selected and set out to pitch of stairs with rises not exceeding specified space between treads.</p> <p>3.1. Landing bearers and joists are placed, fixed and braced according to plans and specifications, where specified.</p> <p>3.2. Footings are checked for accuracy to requirements of plans and specifications.</p> <p>3.3. Stairs and/or ramp formwork soffit is erected and braced in accordance with plans and specifications.</p> <p>3.4. Formwork stringers are cut square to length and shape in accordance with set out and junction with newel posts, and are installed and braced.</p> <p>3.5. Metal angle brackets are screwed/bolted to formwork strings to set out locations of tread support.</p> <p>3.6. Formwork strings for stairs and ramps are located and fixed according to plans and specifications.</p> <p>3.7. Material for face of treads is set out, cut square to length and fixed to metal angle bracket according to plans and specifications.</p> <p>3.8. Risers are braced at mid-span to prevent deflection under the load of wet concrete.</p> <p>3.9. Newels are erected and temporarily braced to plumb position, where specified.</p> <p>3.10. Formwork tie bolts are located and secured to plans and specifications to maintain stair width where specified.</p>
4. Strip formwork.	<p>4.1. Formwork and bracing are removed sequentially and safely.</p> <p>4.2. Timber components are de-nailed, cleaned and stored or stacked safely for reuse or removal from site.</p> <p>4.3. Steel components are cleaned, oiled and stored or stacked to manufacturer's maintenance recommendations.</p> <p>4.4. Damaged formwork components are safely discarded after stripping.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p>

ELEMENT**PERFORMANCE CRITERIA**

5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- construction terminology
- formwork materials and techniques

REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out and measuring
- processes for calculating material requirements
- quality requirements for formwork for stairs and ramps
- regulations on stair construction for safe use, including disability access
- stair and ramp construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely

EVIDENCE GUIDE

	<p>with others</p> <ul style="list-style-type: none"> complete a site assessment to determine levels and stair dimensions apply the height and going of stairs to construct, erect and dismantle the formwork for a flight of stairs (free standing or against a wall), including a landing, with a minimum rise of flight of 1800mm complete the construction, erection and dismantling of a ramp with a rise of 400mm.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> an induction procedure and requirement realistic tasks or simulated tasks covering the mandatory task requirements relevant specifications and work instructions tools and equipment appropriate to applying safe work practices support materials appropriate to activity workplace instructions relating to safe work practices and addressing hazards and emergencies material safety data sheets research resources, including industry related systems information. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package

EVIDENCE GUIDE

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to constructing, erecting and dismantling formwork for stairs and ramps
- relevant Australian standards
- safe work procedures related to constructing, erecting and dismantling formwork for stairs and ramps
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices

RANGE STATEMENT

	<ul style="list-style-type: none">• traffic control• use of firefighting equipment• use of tools and equipment• work site visitors and the public• working at heights• working in proximity to others• workplace environment and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none">• air compressors and hoses• automatic levels• chisels• explosive power tools• grinders• hammers• hand saws• laser levels• marking equipment• measuring tapes and rules• nail bags• nail guns• optical levelling equipment• pinch bars• power drills• power leads• power saws• props• saw stools• scaffolding• shovels• spanners• spirit levels• squares (combination/tri)• steel squares and bevels• string lines.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<ul style="list-style-type: none">1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.1.3. Signage and barricade requirements are identified and implemented.1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.
2. Erect formwork.	<ul style="list-style-type: none">2.1. Work area is cleared and surface prepared for safe erection of formwork for suspended slabs, piers and shutters.2.2. Formwork is set out to requirements of plans and specifications.2.3. Formwork is assembled to plans, specifications and class of surface finish, with support system set to correct height level and line.2.4. Bracing of formwork is placed according to support plans and specifications to maintain rigidity and stability.2.5. Formwork support system is sequentially erected according to initial set out to job specifications.2.6. Formwork shutters and/or edge boxing is constructed to designed form requirements and specified dimensions.2.7. Block-outs and cast-in services are installed to specified locations.2.8. Debris, sawdust and other waste materials are

ELEMENT**PERFORMANCE CRITERIA**

	removed from completed formwork in accordance with waste management policy for the site.
	2.9. Release agent is applied to formwork face to manufacturer specifications where specified.
3. Strip formwork.	3.1. Formwork and bracing/strutting support are removed sequentially and safely.
	3.2. Timber components are de-nailed, cleaned and stored or stacked safely for reuse or removal from site.
	3.3. Steel components are cleaned, oiled and stored or stacked to manufacturers' maintenance recommendations.
	3.4. Damaged formwork components are safely discarded after stripping.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- concrete properties
- construction terminology
- formwork materials and techniques
- hydraulic pressures applied to formwork
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for setting out and measuring
- processes for calculating material requirements
- purpose, application and properties of commonly used release agents
- quality requirements of formwork to suspended slabs, columns, beams and walls
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- set out and erect suspended slab formwork (slab size a minimum of 30 square metres), incorporating a beam and two different types of columns with a specified formwork system at a minimum height of 2.4 metres.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out formwork.	<p>2.1. Set out points and lines are located according to engineer's drawings, survey datum points and site plan for formwork erection.</p> <p>2.2. Jump form formwork positioning is located to predetermined set out.</p>
3. Assemble core form system.	<p>3.1. Internal prefabricated system wall form shutters are erected and fixed into location according to engineer's drawings.</p> <p>3.2. System is fitted to concrete nib walls to heights consistent with engineer's requirements.</p> <p>3.3. Shear key feet are installed to manufacturer specifications.</p> <p>3.4. Platforms and assembly are fitted into core to manufacturer specifications.</p> <p>3.5. Structural steel system grid work and hydraulic hose lines are fitted according to manufacturer specifications.</p> <p>3.6. Wall form shutters are suspended and system cladding and platforms are fitted and completed</p>

ELEMENT	PERFORMANCE CRITERIA
	according to manufacturer specifications and engineer's requirements.
4. Locate and install penetrations.	<p>4.1. Locations and dimensions of penetrations are set out in accordance with designated tolerance from engineering drawings.</p> <p>4.2. <i>Penetrations, block-outs and cast-in services</i> are constructed where required to engineering drawings.</p> <p>4.3. Penetrations are installed to requirements of engineering drawings.</p>
5. Conduct jump system.	<p>5.1. External prefabricated system wall shutters are erected and fixed to engineer's and manufacturer specifications.</p> <p>5.2. Shutters are loosened and stripped according to manufacturers' and OHS requirements.</p> <p>5.3. Rigger is communicated with to activate electrical/hydraulic jacking of the system to the new position.</p> <p>5.4. Trailing platforms are installed to engineer's specifications.</p> <p>5.5. Formwork is dismantled in accordance with manufacturer and engineer's specifications.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements

REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- common formwork faults, problems and suitable rectifications
- concrete characteristics and properties in formwork
- construction terminology
- electrical/hydraulic jacking systems
- formwork materials and techniques
- hydraulic pressures applied to formwork
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for jump form formwork
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete, as part of a team, the erection and dismantling of jump form formwork for one operation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS

CPCCCA3021A Erect and dismantle slip form formwork

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to erect and dismantle slip form formwork to form wall structures where the formwork process is continuous. It includes curved or straight slip form formwork.

Application of the Unit

Application of the unit This unit of competency supports achievement of skills for erecting and taking down slip form formwork for placing of concrete in a range of construction projects. Slip form formwork requires work as a member of a mixed trades team, including carpenters, riggers, electricians, concreters and steel fixers.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out formwork.	<p>2.1. Set out points and lines are located according to engineer's drawings, survey datum points and site plan for formwork erection.</p> <p>2.2. Slip form formwork positioning is located to predetermined set out.</p>
3. Assemble core form system.	<p>3.1. Internal prefabricated system wall form shutters are erected and fixed into location according to engineer's drawings.</p> <p>3.2. System is fitted to concrete nib walls to heights consistent with engineer's requirements.</p> <p>3.3. Shear key feet are installed to manufacturer specifications.</p> <p>3.4. Platforms and assembly are fitted into core to manufacturer specifications.</p> <p>3.5. Structural steel system grid work and hydraulic hose lines are fitted to manufacturer specifications.</p> <p>3.6. Wall form shutters are suspended and system cladding and platforms are fitted and completed to manufacturer specifications and engineer's</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements.
4. Locate and install penetrations.	<p>4.1. Locations and dimensions of penetrations are set out in accordance with designated tolerance from engineering drawings.</p> <p>4.2. <i>Penetrations, block-outs and cast-in services</i> are constructed where required to engineering drawings.</p> <p>4.3. Penetrations are installed to requirements of engineering drawings.</p>
5. Conduct slip system.	<p>5.1. External prefabricated system wall shutters are erected and fixed to engineer's and manufacturer specifications.</p> <p>5.2. Shutters are loosened and stripped according to manufacturer's and OHS requirements.</p> <p>5.3. Rigger is communicated with to activate electrical/hydraulic jacking of the system to the new position.</p> <p>5.4. Trailing platforms are installed to engineer's specifications.</p> <p>5.5. Formwork is dismantled in accordance with manufacturer and engineer's specifications.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and

REQUIRED SKILLS AND KNOWLEDGE

- confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- common formwork faults, problems and suitable rectifications
- concrete properties
- construction terminology
- electrical/hydraulic jacking systems
- formwork materials and techniques
- hydraulic pressures applied to formwork
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plant, tools and equipment types, characteristics, uses and limitation
- processes for the calculation of material requirements
- quality requirements for slip form formwork
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete, as part of a team, the erection and dismantling of the slip form formwork for one operation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to erecting and dismantling slip form formwork
- relevant Australian standards
- safe work procedures related to erecting and

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to fit and fix curtain walling facades to multi-storey structures to provide external cladding of structural steel or reinforced concrete. It includes fabricated frameworks with metal cladding, fabricated framework with glass panels, pre-cast concrete panels, and manufactured and natural stone products in or on the structure.

Application of the Unit

Application of the unit This unit of competency supports achievement of skills fabricating and installing curtain walling framework to facilitate cladding a building surface with a variety of cladding materials, such as metal, glass, pre-cast concrete and stone. Work is to be carried out with others and as a member of a team situation working with other trades, including carpenters, riggers, crane operators, concreters and steel fixers.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Prepare site for installation.	<p>2.1. Location of curtain wall installation connections are set out to job drawings and specifications.</p> <p>2.2. Area below construction face is cleared and isolated with designed barricade to OHS regulations and job work plans allowing for support plant and equipment.</p> <p>2.3. Surface of structure to receive curtain walling is inspected for conformity and surface is prepared to receive fixings according to job drawings and specifications.</p>
3. Install curtain walling.	<p>3.1. Curtain wall fixing brackets are checked or installed to set out points in accordance with manufacturer specifications and site structural drawings.</p> <p>3.2. Curtain walling is located and fixed into correct position in accordance with job drawings, after being raised to location by crane operations.</p> <p>3.3. Curtain walling is installed plumb and level and aligned and finally fixed into position in accordance with specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Seal curtain walling.	<p>3.4. Junctions between placed sections of curtain walling are fitted and secured to fixing specifications.</p> <p>3.5. Curtain wall trims are installed in accordance with manufacturer specifications and detail drawings, where applicable.</p> <p>4.1. Surface areas are cleaned in preparation for application of caulking sealants.</p> <p>4.2. Sealants are applied to curtain walling and trims, where specified, in accordance with job specifications.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - plans, specifications and drawings
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- curtain walling materials, systems and techniques
- fall arrest system
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- purpose and safe use of swing scaffolding
- quality requirements for curtain walling
- slings, clutches and other applicable lifting equipment
- tools and equipment types, characteristics, uses and limitation
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- complete external surface preparation to receive fixings that are checked for conformity with tolerances for plumb and line
- install check, place, fix and seal sections of curtain walling for a multi-storey project.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Conduct levelling procedures using rise and fall method.	<p>2.1. Instrument is accurately set up and tested for operation before commencing levelling activities.</p> <p>2.2. Datum point is set up or located.</p> <p>2.3. Readings are taken to datum and at nominated or selected stations, to project specifications.</p> <p>2.4. Backsights, intermediate sights and foresights are identified and levels are booked.</p> <p>2.5. Instrument is transferred to another location and the process is repeated to project specifications.</p> <p>2.6. Accuracy of readings is established using rise and fall method of calculation.</p> <p>2.7. Reduced levels for all stations are identified from the level book calculations.</p>
3. Conduct levelling procedures using height of instrument method.	<p>3.1. Instrument is accurately set up and tested for operation before levelling, including levelling equipment/device tolerance checks.</p> <p>3.2. Datum point is set up or located.</p> <p>3.3. Level readings are taken to datum and the interim</p>

ELEMENT	PERFORMANCE CRITERIA
	reduced level is established.
	3.4. Readings are taken at nominated or selected stations to project specifications.
	3.5. Instrument is transferred to another location and the process is repeated to project specifications.
	3.6. Reduced levels are calculated using height of instrument method.
	3.7. Reduced levels for all stations are identified from the calculations and <i>heights and levels recorded</i> .
4. Calculate distances using stadia lines.	4.1. Cross hair readings are checked for accuracy using stadia lines.
	4.2. Distances are calculated from instrument to stations using staff, stadia lines and identified factor of the levelling instrument.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Tools and equipment are cleaned, checked, <i>levelling devices maintained</i> and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- basic levelling
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources

REQUIRED SKILLS AND KNOWLEDGE

- plans, specifications and drawings
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- basic construction and levelling processes
- construction plan, symbols and construction terminology
- construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling device types, characteristics, technical capabilities and limitations
- levelling techniques commonly used in construction work
- processes for interpreting engineering drawings and sketches
- processes for setting out
- project quality requirements
- site and equipment safety (OHS) requirements
- site isolation and traffic control responsibilities and authorities.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- set up and test levelling equipment
- transfer levels and record differences in height undertaking a closed traverse using both the rise and fall method and the height of instrument method on a minimum of three projects
- confirm accuracy of the readings taken, including set up and movement of device in two locations
- accurately record the results of each levelling procedure to organisational requirements
- calculate distances using an optical levelling instrument and levelling staff.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS

RANGE STATEMENT

Safety (OHS) is to be in accordance with state or territory legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to the conduct of basic demolition processes
- relevant Australian standards
- safe work procedures related to the conduct of basic demolition processes
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - personnel
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment

RANGE STATEMENT

Tools and equipment include:

- workplace environment and safety.
- automatic level and levelling staff
- bolt cutters
- chalk lines
- hammers
- laser levels
- laser targets
- marking equipment
- measuring tapes and rules
- plumb bobs
- saw stools
- saws
- signage for laser levelling
- spirit levels and straight edges
- string lines
- water levels
- wooden and steel pegs.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Levelling activities include:

- approximate distances and the transfer of the data points
- location of services
- positioning offsets and recovery pegs for construction projects or for use in determining quantity from calculations.
- recording ground levels at respective critical set out points
- recording heights or levels
- recording slab or pad levels for placement of steel columns or masonry piers
- recording or checking levels in drainage
- setting up devices
- shooting levels for concrete slabs

RANGE STATEMENT

	<ul style="list-style-type: none"> • shooting levels for excavation/footings • sloping blocks • transferring levels/heights for formwork • those undertaken in a team arrangement.
<i>Levelling</i> procedures include:	<ul style="list-style-type: none"> • closed traverse.
<i>Levelling equipment/device tolerance checks</i> include:	<ul style="list-style-type: none"> • a two peg test for automatic level • reverse readings for spirit level.
<i>Level readings</i> include:	<ul style="list-style-type: none"> • datum backsight, foresight and intermediate sight from stations with known or unknown reduced levels, using height of instrument and rise and fall calculations.
<i>Heights and levels recorded</i> may be by:	<ul style="list-style-type: none"> • chalk or nail mark • datum/survey peg • drawing or sketch • marks on vertical surface • verbal or written instructions.
<i>Levelling devices maintained:</i>	<ul style="list-style-type: none"> • include: <ul style="list-style-type: none"> • authorised servicing • cleaning • monitoring, recording and reporting faults • may include the conduct of authorised minor replacements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information.	<p>1.1.Details of project requirements are obtained from <i>information</i> supplied for <i>planning and preparation</i> of <i>estimating and costing</i>.</p> <p>1.2.Details of products and services to be provided are compiled.</p> <p>1.3.Delivery point and methods of transportation are determined where necessary.</p> <p>1.4.Details are recorded in accordance with enterprise practice.</p>
2. Estimate materials, time and labour.	<p>2.1.Types, quantities and <i>quality requirements</i> of <i>materials</i> required for the construction project are estimated, including meeting <i>environmental requirements</i>.</p> <p>2.2.Labour requirements to achieve construction outcomes and/or perform required services are estimated.</p> <p>2.3.Time requirements to construct and/or perform required services are estimated.</p>
3. Calculate costs.	<p>3.1.Total materials, labour and overhead cost allowances are calculated in accordance with enterprise procedures.</p> <p>3.2.Total job cost is calculated, including overheads and mark-up percentages.</p> <p>3.3.Final cost is calculated.</p>
4. Document details and verify where necessary.	<p>4.1.Details of costs and charges are documented in accordance with enterprise practice.</p> <p>4.2.Costs, calculations or other details are verified in accordance with enterprise practice.</p> <p>4.3.Details are documented for future reference in accordance with enterprise practice.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record details of project, including costs and charges
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- construction materials
- construction terminology
- costing techniques and procedures
- job safety analysis (JSA) and safe work method statements
- labour rates and overheads
- material sizes
- plans, specifications and drawings
- processes for calculating material requirements
- quality requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- document and communicate work-related information, including work orders, specifications, products, materials and labour requirements, costing calculations for products, materials and labour, and special conditions for a specified construction project
- estimate and cost a specified project, including:
 - estimate quantities of material required
 - determine types and amount of labour required to complete the work
 - estimate time required to complete the work
 - estimate overheads associated with the project.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify industry structure, occupations, job roles and work conditions.	<p>1.1. Scope and nature of the construction industry and its national economic importance are recognised.</p> <p>1.2. Construction job roles, occupations and trade callings of the construction industry are identified and related to direct and indirect employment opportunities.</p> <p>1.3. Trends in technology, work processes and environmental issues which are likely to impact on the construction industry are identified and evaluated in terms of employment options.</p> <p>1.4. Construction employment conditions, organisational requirements, responsibilities and duties are identified and related to jobs and career paths.</p> <p>1.5. Safe work methods and practices are identified to meet Australian government and state and territory OHS legislative requirements.</p>
2. Accept responsibility for own workload.	<p>2.1. Work activities are planned and priorities and deadlines are established with work group members such as supervisors and communicated to others whose own work plans and timelines may be affected.</p> <p>2.2. Work is completed against the plan and to the standard expected in the workplace and in accordance with any guidelines, directions and specifications provided by supervisors, including use of personal protective equipment.</p> <p>2.3. Variations and difficulties affecting performance or quality requirements of own work are identified and these issues reported to appropriate personnel using appropriate communication techniques and accessing relevant information.</p> <p>2.4. Additional support needed to achieve or improve work outcomes or quality is communicated clearly to the appropriate personnel.</p>
3. Work in a team.	<p>3.1. Site goals and the contributions to be made by teams in a construction activity are identified and understood.</p> <p>3.2. Individual contributions to team activities are identified and confirmed with others in the team.</p> <p>3.3. Assistance and encouragement are provided to other team members wishing to meet or enhance their role</p>

ELEMENT**PERFORMANCE CRITERIA**

	and the role of the team.
	3.4. Team improvements are initiated where possible and/or encouraged from other team members.
	3.5. Causes of disharmony and other barriers to achievement are referred to the appropriate party for resolution.
4. Identify own development needs.	4.1. Skills and knowledge necessary to work effectively in the construction industry are identified.
	4.2. Steps are taken, in consultation with appropriate personnel, to identify own <i>learning needs</i> for future work requirements.
	4.3. Appropriate opportunities to learn and develop required skills and knowledge for future construction industry work opportunities are identified and evaluated.
5. Identify current resource use and identify opportunities to improve resource efficiency.	5.1. Work site <i>environmental and resource efficiency issues</i> and resources used in own work role are identified and recorded using <i>appropriate techniques</i> .
	5.2. Work site <i>environmental hazards</i> relating to the use of resources are identified and reported to designated personnel.
	5.3. Enterprise plans to improve environmental practices, <i>environmental requirements</i> and resource efficiency are followed.
	5.4. <i>Suggestions</i> are made for improvements to work site practices in own work area.
6. Comply with environmental regulations.	6.1. Procedures are followed to ensure compliance with environmental requirements.
	6.2. Breaches or potential breaches are reported to <i>designated personnel</i> .

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - establish and communicate deadlines
 - follow supervisor's instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - report variations or difficulties in performance and additional support required
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record resource use
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic understanding of sustainability on a construction work site
- common construction industry terminology and interpersonal communication requirements
- construction industry quality requirements
- construction industry size, scope of work and national economic importance
- environmental and resource hazards/risks, including compliance with relevant legislation associated with the environment, job specifications and procedures
- federal, state, and territory environmental or sustainability legislation, regulations and codes of practice relevant to this sector and applicable to own work role, e.g. Building Code of Australia (BCA)
- job safety analysis (JSA) and safe work method statements
- relevant environmental and resource efficiency systems and practices
- relevant industrial awards and enterprise agreements

REQUIRED SKILLS AND KNOWLEDGE

- relevant legislation, regulations and workplace requirements relating to provisions covering discrimination and equal employment opportunity
- site meeting procedures
- typical site/team work structure, methods and communication processes.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant construction industry information, standards and specifications
- comply with site safety plans and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- explain to others scope, employment and economic importance of the construction industry
- locate and identify documentation on site employment conditions and source of these conditions
- set personal and team work goals and participate in site meetings
- respond to personal conflict situations
- identify personal development needs and apply learning to future work tasks
- follow workplace procedures according to instructions given and report information only at own level of responsibility, including:
 - complying with environmental/sustainability legislation, and organisational and procedural requirements relevant to specific daily responsibilities
 - use of tools, such as an inspection checklist

EVIDENCE GUIDE

Context of and specific resources for assessment

to collect and measure relevant information on resource and energy consumption

- participating in and supporting improved environmental use of resources
- recognising efficiency processes involving work practices and reporting as required.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning

EVIDENCE GUIDE

knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

Construction job roles include:

- bricklaying and blocklaying
- carpentry
- concreting
- demolition
- dogging
- formwork and falsework
- painting and decorating
- rigging
- roof tiling
- scaffolding
- solid plastering
- steelfixing
- wall and ceiling lining
- wall and floor tiling
- waterproofing.

Construction employment conditions include coverage of:

- AWAs
- bulletins and newsletters
- enterprise agreements
- industrial awards
- industry and workplace codes of practice
- workplace agreements.

Organisational requirements include:

- access and equity principles and practice
- anti-discrimination and related policy
- business and performance plans
- ethical standards
- goals and objectives
- legal and organisation policy, guidelines and requirements
- quality
- systems and processes.

Responsibilities and duties include:

- codes of conduct
- job description and employment arrangements
- organisation's policy relevant to work role
- skills training and competencies
- supervision and accountability requirements, including OHS
- team structures.

Safe work methods and practices

- access to site amenities, such as drinking

RANGE STATEMENT

include:

- water and toilets
- day to day observation of OHS policies and procedures
- emergency procedures and use of basic firefighting equipment
- general requirements for safe use of plant and equipment
- general requirements for use of personal protective equipment and clothing
- housekeeping to ensure a clean, tidy and safer work area
- no drugs and alcohol at work
- preventing bullying and harassment
- risk assessment
- smoking in designated areas
- storage and disposal of waste and debris according to established procedures and environmental protection requirements.

Australian government and state and territory OHS legislative requirements include:

- Australian standards
- construction industry OHS standards and guidelines
- duty of care
- health and safety representatives, committees and supervisors
- licences, tickets or certificates of competency
- National Code of Practice for Induction Training for Construction Work
- national safety standards
- OHS and welfare Acts and regulations
- safety codes of practice, and JSA and safe work method statements.

Work group members include:

- coach or mentor
- employee representative
- peers, work colleagues, team, enterprise and other members of the organisation
- supervisor or manager.

Personal protective equipment includes:

- caps
- dust masks and respirators
- ear muffs and plugs
- gloves
- hard hats

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- high visibility vests
- jackets
- overalls
- safety glasses/goggles
- steel capped boots.
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements
- relevant Australian standards
- safe work procedures or equivalent
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Teams:

- is a generic term that refers to the site work organisation
- may be known/titled locally as crews, gangs, shifts or other industrially and historically acceptable term.

Learning needs and development processes include competency achievement/maintenance processes, which include:

- assessment processes
- formal vocational education and training
- on-the-job training and job rotation
- recognition of prior learning
- refresher training.

Environmental and resource efficiency issues include:

- minimisation of environmental risks and maximisation of opportunities to improve environmental performance and to promote more efficient production and consumption of natural resources on the work site, for

RANGE STATEMENT

example by minimising waste, through participation in or use of a waste minimisation system

- using resources efficiently, including reducing material usage and supporting efficient energy and water use, such as:
 - air testing pipes
 - efficient fittings
 - insulation
 - site management to minimise stormwater pollution
 - strategic use of materials to reduce off-cuts and wastage
 - tool maintenance
 - transportation
 - using alternative practices, procedures and materials/products that reduce or eliminate resource consumption.

Appropriate techniques for recording resource use include:

- examination and documentation of resources on work site
- examination and measurement of resources, materials and products from suppliers
- examination of relevant information and data on efficiency and resource reduction
- instructions and reports from other parties involved in the process of identifying and implementing improvements.

Environmental hazards include:

- substances (e.g. resource, waste, by-product) that are dangerous to living things in the environment, such as humans, animals, plants and water, including storage, handling and disposal of the following substances:
 - toxic
 - corrosive
 - flammable
 - explosive
- may be infectious or have other dangerous characteristics.

Environmental requirements are to cover workplace quality management and include:

- clean-up protection
- stormwater protection
- waste management.

RANGE STATEMENT

Suggestions for sustainable use of resources includes ideas that help to:

- ensure appropriate use of materials and make recommendations to others to use sustainable products and practices
- identify alternative sources of energy or energy conservation
- improve energy and water efficiency
- prevent and minimise risks and maximise opportunities, such as use of solar or grey water, and other alternative forms of energy/resources where appropriate
- reduce emissions of greenhouse gases by reducing waste, transportation and use of non-renewable resources, such as energy, water, fuel, and materials
- use alternative products/materials, procedures and installation techniques to support efficiency and sustainability
- use renewable, recyclable, reusable and recoverable resources (energy, water, materials/products and waste).

Compliance with environmental requirements includes:

- meeting relevant acts, laws, by-laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection, Biodiversity Conservation Act, BCA), including:
 - federal
 - industry
 - international
 - local government
 - organisation
 - reporting breaches
 - state and territory.

Designated personnel to be contacted are determined by the enterprise and include:

- managers
- supervisors
- other senior personnel assigned to particular work site roles, such as safety officer.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify task requirements.	1.1.Task requirements are determined or confirmed and clarified to ensure correct interpretation of specifications or requirements.
2. Plan steps to complete tasks.	2.1.Task is interpreted and relevant steps are identified to ensure efficient conduct of work, and in accordance with <i>safety (OHS)</i> , <i>environmental requirements</i> and <i>quality requirements</i> . 2.2.Steps are planned in conjunction with others.
3. Organise work.	3.1.Work activity is organised with other involved personnel to ensure safe and appropriate sequencing of tasks. 3.2.All necessary documentation related to job planning progress is completed and recorded in accordance with workplace requirements.
4. Review planning and organising process.	4.1.Planning and organising of work activities is reviewed to establish the effectiveness of the process. 4.2.Ideas for improvement are suggested and implemented in future planning and organising of work activities.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine or confirm and clarify task requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - plan steps and organise work activities with others
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to complete workplace documentation
- evaluating own actions and make judgements about performance and necessary

REQUIRED SKILLS AND KNOWLEDGE

improvements

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- interpret information relevant to the work activity including plans, specifications and drawings and documentation from a variety of sources
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.
 - using time management techniques to organise and prioritise work.

Required knowledge

Required knowledge for this unit is:

- work activity that needs to be planned and organised
- work safety, environmental and quality requirements
- workplace personnel that are to be involved in planning and organising tasks
- workplace reporting requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to plan and organise a variety of work activities. Evidence should be collected over a period of time in a range of general construction relevant contexts and include dealings with an appropriate range of situations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid

RANGE STATEMENT

	<ul style="list-style-type: none">• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices• use of firefighting equipment• use of tools and equipment• workplace environment and safety.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• noise and dust• vibration• waste management.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none">• Australian standards• internal company quality policy and standards• manufacturer specifications, where specified• workplace operations and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather, convey and receive information.	<p>1.1. Verbal and written instructions are gathered, received and responded to with correct actions.</p> <p>1.2. Instructions are conveyed accurately.</p> <p>1.3. Work <i>signage interpretation</i> and other <i>safety (OHS)</i> requirements are responded to with correct action.</p> <p>1.4. <i>Information</i> is conveyed in English, and the information is <i>interpreted</i> and message confirmed.</p> <p>1.5. Questions are used to gain additional information and to clarify understanding, using appropriate <i>communication transfer</i> techniques.</p>
2. Carry out face-to-face routine communication.	<p>2.1. Routine instructions and messages are received and followed.</p> <p>2.2. Workplace procedures are carried out to company requirements in <i>communication with others</i>.</p> <p>2.3. Information from a range of sources is accessed and interpreted using a variety of <i>communication modes</i>.</p> <p>2.4. Information is selected and sequenced correctly.</p> <p>2.5. Verbal and written reporting is completed where required.</p>
3. Apply visual communication.	<p>3.1. Visual communication is used that follows accepted industry practice or social conventions.</p> <p>3.2. Attention of communicating parties is obtained, confirmed and/or acknowledged.</p> <p>3.3. Intention of the visual communication is clarified and confirmed at each step.</p> <p>3.4. Visual communication that is unclear or ambiguous is questioned or visually cancelled.</p> <p>3.5. Instances of unclear visual communication are followed up to avoid repeated problems.</p>
4. Participate in simple on-site meeting processes.	<p>4.1. Correct process for on site meetings is identified and followed to predetermined or agreed procedures.</p> <p>4.2. Responses are sought and provided to others in the group.</p> <p>4.3. Constructive contributions are made.</p> <p>4.4. Goals or outcomes are identified and/or recorded.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to communicate with others to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - signage and other relevant documentation
 - simple instructions and messages
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to complete records and reports as required
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- participating in meetings
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- bulletins
- checklists
- communication devices
- company procedures
- construction terminology
- emergency procedures
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and materials handling methods
- memos
- OHS requirements
- project quality requirements

REQUIRED SKILLS AND KNOWLEDGE

- signage
- work instructions
- workplace policies.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use communication equipment
- communicate and work effectively and safely with others
- interpret all signage accurately
- complete tasks successfully following instruction
- convey pieces of information to other workers accurately
- fill out workplace documents accurately
- frame questions at an on-site meeting in a range of contexts or occasions over time.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Signage interpretation includes:

- directional signs
- facility or location signs and hazards
- site safety signs
- traffic signs.

Safety (OHS) is to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions are confirmed and applied using relevant <i>information</i>.</p> <p>1.2. <i>Safety (OHS)</i> requirements are obtained from site safety plan, other regulatory specifications or legal obligations, and are applied.</p> <p>1.3. Measuring and calculating <i>equipment</i> selected to carry out tasks is consistent with job requirements, is checked for serviceability, and any faults are rectified or reported.</p>
2. Obtain measurements.	<p>2.1. Method of obtaining the measurement is selected and applied.</p> <p>2.2. <i>Measurements</i> are obtained using a rule or tape accurate to 1mm.</p> <p>2.3. Measurements, including <i>areas and volumes</i>, are confirmed and recorded.</p>
3. Perform calculations.	<p>3.1. Appropriate <i>calculation factors</i> are determined and correct method is selected for achieving required result.</p> <p>3.2. <i>Material quantities</i> for the project are correctly calculated using appropriate factors.</p> <p>3.3. Results are confirmed and recorded.</p>
4. Estimate approximate quantities.	<p>4.1. Calculations for determining material requirements are taken.</p> <p>4.2. Appropriate formulas for calculating quantities are selected.</p> <p>4.3. Quantities are estimated from the calculations taken.</p> <p>4.4. Material quantities for the project are calculated, confirmed and recorded within enterprise tolerances.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record measurements, calculations and quantities
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements, calculations and geometry
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic calculators
- communication devices
- company procedures
- construction terminology
- job safety analysis (JSA) and safe work method statements
- measuring, calculating, geometry and determination of quantities
- processes for care of measuring equipment
- project quality requirements
- site and equipment safety (OHS) requirements
- tolerances.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- complete measurements, calculations and determination of quantities for different projects of varying complexity in a range of contexts or occasions over time
- calculate each of the following using a realistic construction task or example:
 - length
 - perimeter
 - circumference
 - area
 - volume
 - number
 - ratio
 - percentage
 - conversion of metres to millimetres and millimetres to metres
 - measure using a rule or tape measure five separate tasks within 1mm accuracy.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel

RANGE STATEMENT

	<ul style="list-style-type: none">• manufacturer specifications and instructions• maps• material safety data sheets (MSDS)• memos• organisation's work specifications and requirements• plans and specifications• regulatory and legislative requirements• relevant Australian standards• safe work procedures or equivalent• signage• verbal or written and graphical instructions• work bulletins• work schedules.
<i>Safety (OHS)</i> is to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan and may include:	<ul style="list-style-type: none">• clothing and equipment• handling of materials• hazard control• hazardous materials and substances• organisational first aid• use of firefighting equipment• use of tools and equipment• workplace environment and safety.
<i>Equipment</i> includes:	<ul style="list-style-type: none">• calculators and laser equipment• rulers• tape measures• trundle wheels.
<i>Measurements</i> are to:	<ul style="list-style-type: none">• be in metric scale• cover all necessary calculations.
<i>Areas and volumes</i> include:	<ul style="list-style-type: none">• calculating regular and irregular shapes, such as rectangles, squares, circles, triangles, trapeziums, cubes, cones, pyramids and cylinders that represent calculations taken in a construction environment.
<i>Calculation factors:</i>	<ul style="list-style-type: none">• include length, area, weight, height, width, depth, volume, mass, scales, ratios, perimeters, quantities, numbers, grade, percentages, addition, subtraction, multiplication and division• are to be performed manually and with the aid of a calculator.

RANGE STATEMENT

- Material quantities* are to be:
- calculated in either packed, bulk, loose or compacted states
 - converted to volumes in the other states.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify types of drawings and their functions.	<p>1.1. Main types of <i>plans and drawings</i> used in the construction sector of the industry are identified.</p> <p>1.2. <i>Key features</i> and functions of each type of drawing are identified.</p> <p>1.3. <i>Quality requirements</i> of company operations are recognised and adhered to.</p> <p>1.4. <i>Environmental requirements</i> and controls are identified from job plans, specifications and environmental plan.</p>
2. Recognise amendments.	<p>2.1. Title panel of <i>project documentation</i> is checked to verify latest amendments to drawing.</p> <p>2.2. Amendments to <i>specifications</i> are checked to ensure currency of <i>information</i> and conveyed to others where appropriate.</p>
3. Recognise commonly used symbols and abbreviations.	<p>3.1. Construction symbols and abbreviations are recognised.</p> <p>3.2. Legend is located on project drawings, and symbols and abbreviations are correctly interpreted.</p>
4. Locate and identify key features on a site plan.	<p>4.1. Orientation of the plan with the site is achieved.</p> <p>4.2. Key features of the site are identified and located.</p> <p>4.3. Access to site is gained and services, main features, contours and datum are identified.</p>
5. Identify project requirements.	<p>5.1. Dimensions for project and nominated locations are identified.</p> <p>5.2. Construction types and dimensions for nominated locations are identified.</p> <p>5.3. Environmental controls and locations are identified.</p> <p>5.4. Location, dimensions and tolerances for ancillary works are identified.</p>
6. Read and interpret job specifications.	<p>6.1. Job specifications are identified from drawings, notes and descriptions.</p> <p>6.2. Standards of work, finishes and tolerances are identified from the project specifications.</p> <p>6.3. <i>Material attributes</i> are identified from specifications.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations, including heights, areas, volumes and grades
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic calculations of heights, areas, volumes and grades
- commonly used construction symbols and abbreviations
- construction terminology
- drawing conventions
- features of plans and elevations, including direction, scale, key, contours, symbols and abbreviations
- job safety analysis (JSA) and safe work method statements
- key features of formal job specifications
- processes for application of scales in plan preparation and interpretation
- project quality requirements
- site and equipment safety (OHS) requirements
- techniques for orienting/confirming the orientation of a plan.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- for a minimum of two different projects, read and interpret the project plans, including:
 - confirmation of amendment status and drawings confirmed 'for construction'
 - orientation of plans to the ground
 - six key features on both the plan and the site
 - confirmation of six items of information from the title block of the project plans
 - six construction dimensions, levels and locations from the project plans
 - six ancillary works dimensions, levels and locations from the project plans
- for a minimum of two formal specifications, identify the dimensions, material requirements and processes to be followed.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plans and drawings include:

- construction plans
- cross-sectional plans
- dimensions and notes
- illustrations
- longitudinal plans

RANGE STATEMENT

	<ul style="list-style-type: none"> • project specifications • site plans • structural detail and specification providing illustrations and dimensions.
Key features of plans and specifications include:	<ul style="list-style-type: none"> • characteristics • compatibility • construction • location • pattern dimension • quantities • sizes • type of product or service.
Quality requirements include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications, where specified • workplace operations and procedures.
Environmental requirements include:	<ul style="list-style-type: none"> • clean-up management • waste management.
Project documentation includes:	<ul style="list-style-type: none"> • contracts • drawings • schedule of rates • specifications • standard procedures and practices • supplementary specifications • work schedules.
Specifications include:	<ul style="list-style-type: none"> • detail relating to materials and quality of work, quality assurance, nominated subcontractors, and provision of site access/facilities • details relating to performance, including: <ul style="list-style-type: none"> • characteristics • material types • standards of work • tolerances • treatments and finishes.
Information includes:	<ul style="list-style-type: none"> • diagrams or sketches and graphics • instructions issued by authorised organisational or external personnel • manufacturer specifications and instructions • maps

RANGE STATEMENT

- material safety data sheets (MSDS)
 - memos
 - organisation work specifications and requirements.
 - plans and specifications
 - regulatory and legislative requirements pertaining to operations and the environment
 - relevant Australian standards
 - safe work procedures related to construction site operations
 - signage
 - verbal or written and graphical instructions
 - work bulletins
 - work schedules.
- Material attributes* include:
- characteristics
 - construction requirements
 - treatments and finishes
 - types.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained, confirmed and applied from relevant information for planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications.</p> <p>1.6. Materials appropriate to the work application and quality requirements are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Locate excavation site and erect safety equipment.	<p>2.1. Excavation route is located, and line and depth are established from site plans and instructions.</p> <p>2.2. Site pegs/profiles are used to identify service markers and to set out service points and the excavation limits are marked.</p> <p>2.3. Safety barricades and signs appropriate to the project are erected in positions as required by site safety plan.</p> <p>2.4. Temporary drainage system is established to divert surface and sub-surface water from excavation.</p> <p>2.5. Service markers or taped areas are identified and damage or interference with underground services avoided.</p>
3. Dig excavations.	<p>3.1. Excavations are safely dug with hand tools to ensure correct route, line and depth, and that procedures are used to minimise risk to self and others.</p> <p>3.2. Machine operator is assisted with excavation to ensure correct route, line and depth, and that correct procedures are used to minimise risk to self and others.</p> <p>3.3. Trench/excavation support is installed where</p>

ELEMENT	PERFORMANCE CRITERIA
	specified by job specifications and regulations.
	3.4. Excavation is cleaned free from loose material with hand tools and according to job requirements and instructions.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - assist machine operator
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental

REQUIRED SKILLS AND KNOWLEDGE

abilities

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- commonly used in-ground services and identification by relevant markers
- construction terminology
- excavation materials
- excavation techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- regulatory requirements for excavation support for safe access
- safe work with common plant used on construction industry sites
- types, characteristics, uses and limitations of tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- determine from an existing set out, a mark out and then excavate site as part of an overall project to job specifications without damaging services.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- maps
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to carrying out excavations
- relevant Australian standards

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

Tools and equipment include:

- safe work procedures related to carrying out excavations
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.
- automatic levels

RANGE STATEMENT

- brooms
- buckets
- crow bars
- hammers
- hoses
- laser levels
- levels
- measuring tapes and rules
- picks
- profiles
- saws
- set out pegs
- shovels
- staff
- straight edges
- string lines
- wheelbarrows.

Materials include:

- nails
- pegs
- sheet material shoring (timber and metal)
- timber.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Set out includes:

- identification of services that can be damaged or impede excavation
- marking out of the project.

Excavations include:

- extension of existing structures, to provide provisions for new services and to modify or repair existing services
- provisions for footings/slabs to new structures
- shoring (timber, metal or piling)

RANGE STATEMENT

- those being undertaken on sloping ground, flat ground, wet ground, dry ground, loose ground or any type of foundation material, with mechanical assistance possibly required for rock
- trench/excavation support using sheet material.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information.	<p>1.1.Details of requirements are obtained and understood through discussion with customer or from information supplied.</p> <p>1.2.Plans and specifications are accessed and site is inspected to confirm full requirements.</p> <p>1.3.Details of products and services to be provided are developed and checked for availability and as fit for purpose.</p> <p>1.4.Delivery point and methods of transportation are determined where necessary.</p> <p>1.5.Details are accurately recorded and checked in accordance with workplace procedures.</p>
2. Estimate materials, labour and time.	<p>2.1.Work, including preparatory tasks, is planned and sequenced to cover all necessary activity.</p> <p>2.2.Types and quantities of materials required for product work are estimated based on availability, fitness for purpose and current costs.</p> <p>2.3.Labour requirements to perform work are estimated to complete the work activity.</p> <p>2.4.Time requirements to perform work are accurately estimated and checked with appropriate personnel.</p>
3. Calculate costs.	<p>3.1.Total materials, labour and overhead costs are calculated in accordance with workplace procedures and statutory requirements.</p> <p>3.2.Total work cost is calculated, including overheads and mark-up percentages set by appropriate personnel.</p> <p>3.3.Final cost for work is calculated and checked for accuracy.</p>
4. Document and verify details.	<p>4.1.Details of costs and charges are clearly and accurately documented in accordance with workplace procedures.</p> <p>4.2.Costs, calculations or other details are verified in accordance with workplace procedures and current costing data.</p> <p>4.3.Quotation/tender documentation is prepared and verified.</p> <p>4.4.Costing documents are accurately completed for future reference in accordance with workplace procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accessing current costing data
- accurately calculating labour costs
- accurately calculating material quantities
- producing accurate written costing information
- reading and interpreting drawings and material specifications.

Required knowledge

Required knowledge for this unit is:

- application of GST
- construction terminology
- environmental and sustainability requirements
- estimating and calculating processes
- impact of time on wages and other costs
- international system of units (SI) system of measurements relevant to the construction industry
- process of estimating and costing construction work
- quality requirements of construction projects
- relevant statutory and authority requirements related to estimating and costing work
- relevant tendering and contracting documentation
- safe work method statements
- sources of information and the processes for calculating material requirements
- standards applicable to the work to be undertaken, e.g. Australian standards and the Building Code of Australia.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications to the estimation and costing of work
- as a minimum, estimate and cost three varied jobs, including:
 - estimate quantities of material required
 - determine the types and amount of labour required to complete the work
 - estimate time required to complete the work
 - estimate overheads associated with the job
 - a written quotation/tender for each of the work requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Plans and specifications*** include:
- sketches or drawings
 - statements of requirements, including environmental requirements relating to the acquisition, use and disposal of materials
 - materials lists and quantity schedules
 - building codes
 - materials specifications, including specifications of material reuse and recycling.
- Types and quantities of materials*** include consumables such as:
- aluminium and steel framing and steel reinforcing
 - bricks, masonry blocks and pavers
 - cement, sand, aggregates and bonding agents
 - decorative finishing materials, such as wallpaper, laminates, gilding materials, lacquers and polishes
 - fixings, fastenings and adhesives

RANGE STATEMENT

Labour and overhead costs
include:

- fuel and lubricants
- paint, solvents and cleaning agents
- tiles and glass
- timber, plywoods, fibreboard and composites
- wall and ceiling lining materials, plaster and plasters products and external claddings.
- labour costs, such as:
 - personal protective equipment
 - site facilities
 - wages and on-costs
- overhead costs, such as:
 - administration
 - Insurance
 - local government fees and charges
 - plant and equipment hire
 - transport
 - use of communication technology
 - waste removal fees.

Costing documents include:

- job sheets
- materials list and estimates
- quotations and tenders
- work schedules.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained, confirmed and applied from relevant information for planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Manually handle, sort, stack and store construction materials.	<p>2.1. Construction materials are moved to specified location applying safe manual handling techniques.</p> <p>2.2. Construction materials and components in accordance with job specifications are sorted to suit material type and size, and stacked for ease of identification and retrieval for task sequence and job location.</p> <p>2.3. Construction materials and components are protected against physical and water damage and stored clear of access ways, for ease of identification, retrieval and distribution.</p> <p>2.4. Signage and barricades are erected to isolate, protect and secure stored materials from workplace traffic or access.</p> <p>2.5. Procedures are applied to ensure no cross-contamination of materials.</p> <p>2.6. Hazardous materials are identified and separated.</p> <p>2.7. Non-toxic materials are carried using correct handling procedures.</p> <p>2.8. Dust suppression procedures are used to minimise health risk to work personnel and others.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.9. <i>Protection of material</i> is provided in accordance with specific material needs.
3. Prepare for mechanical handling of materials.	<p>3.1. Construction materials and components are stacked/banded for <i>mechanical handling</i> in accordance with the type of material, plant and equipment to be used.</p> <p>3.2. Construction materials and components are loaded, unloaded, moved or located at specified locations.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- carpentry materials
- carpentry materials handling techniques
- construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- material sizes
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- safely handle, sort and stack varying lengths of timber, providing quick access and use
- safely move and stack a given quantity of sheet material
- safely handle other building and construction components and materials for one construction project.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- pertaining to handling construction materials
- relevant Australian standards
- safe work procedures related to handling construction materials
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment

RANGE STATEMENT

Tools and equipment include:

- workplace environment and safety.
- banders
- hammers
- pallets
- pinch bars
- scaffolding
- tin snips
- wheelbarrows.

Materials:

- include:
 - timber, reconstituted timber products and other building and sheet materials applicable to building and construction, bricks, bagged materials, sand, soil and aggregates
- may include:
 - building elements such as roof trusses, lining materials, flooring materials, prefabricated elements, boxed, drummed and tinned materials, concrete masonry units, joinery units, floor and wall tiles, roofing tiles, steel sections/components, insulation and glass.

Environmental requirements include:

- clean-up management
- noise and dust
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Manual handling includes:

- carrying materials using correct shifting techniques
- control of waste
- using pallets.

Preparing for ***manual handling*** includes:

- forklifts
- pallet jacks
- trucks.

Hazardous materials include:

- solvents, glues, coatings and inflammable materials
- non-toxic materials, including general building and construction materials.

RANGE STATEMENT

- Handling procedures* include:
- MSDS, calculation of quantities, stacking and storing of materials
 - handling activities may require assistance of others where size or weight is a factor.
- Dust suppression procedures* include:
- keeping dust in the air to a minimum.
- Protection of material* includes:
- correct handling and stacking techniques without damaging the material
 - protecting with covers.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained, confirmed and applied from relevant information for planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified in accordance with environmental plans and statutory and regulatory authority obligations and are applied.</p>
2. Identify and select hand, power and pneumatic tools.	<p>2.1. Hand tools and power and pneumatic tools, their functions, operations and limitations are identified and selected.</p> <p>2.2. OHS requirements for using hand, power and pneumatic tools are recognised and adhered to.</p> <p>2.3. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed according to manufacturer recommendations.</p>
3. Use tools.	<p>3.1. Hand tools used are appropriate to the task and materials, and are in accordance with OHS requirements.</p> <p>3.2. Power and pneumatic tools are safely and effectively used in accordance with manufacturer recommendations and state or territory OHS requirements.</p> <p>3.3. Tools are sharpened and maintained.</p>
4. Identify, select and use plant and equipment.	<p>4.1. Plant and equipment are selected and used consistent with OHS requirements and the needs of the job.</p> <p>4.2. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed according to manufacturer recommendations.</p> <p>4.3. Plant and equipment are maintained in accordance with manufacturer recommendations and standard work practices.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation,</p>

ELEMENT**PERFORMANCE CRITERIA**

regulations, codes of practice and job specification.

5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology

REQUIRED SKILLS AND KNOWLEDGE

- construction tool use techniques
- job safety analysis (JSA) and safe work method statements
- plans, specifications and drawings
- quality requirements
- relevant Acts, regulations and codes of practice
- safety manuals and instructions of tools and equipment
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- identify and select hand tools for given tasks
- safely use and maintain a minimum of rule, tape, square, hammer, hand saw, hand plane, chisel, shovel, wheelbarrow, sledge hammer, pick, mattock, crow bar and pinch bar for given tasks
- identify power and pneumatic tools, including electrical and compressed air safety, for a given task
- safely use and maintain a minimum of a:
 - power saw
 - electric plane
 - impact power drill
 - nail gun
 - impact hammer
 - generator compressor.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised

RANGE STATEMENT

	<ul style="list-style-type: none"> organisational or external personnel manufacturer specifications and instructions where specified material safety data sheets (MSDS) memos organisation work specifications and requirements plans and specifications regulatory and legislative requirements pertaining to using construction tools and equipment relevant Australian standards safe work procedures related to using construction tools and equipment signage verbal or written and graphical instructions work bulletins work schedules.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information to prepare for basic levelling activities.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set up and use levelling device.	<p>2.1. Heights or levels to be transferred/established are identified from project plans or instructions for levelling procedures.</p> <p>2.2. Levelling devices are set up and tested in accordance with manufacturer instructions, including levelling device tolerance checks.</p> <p>2.3. Levelling staffs are accurately applied.</p> <p>2.4. Levels are shot and heights transferred to required location and marked and/or recorded to job requirements.</p> <p>2.5. Results of levelling procedure are documented to organisational requirements.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Tools and equipment are cleaned, checked, maintained, including levelling device operator maintenance, and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application and requirements for line, level and plumb in construction projects
- basic construction processes
- basic mathematical techniques associated with levelling
- construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling device types, characteristics, technical capabilities and limitations
- levelling techniques related to essential tasks
- processes for interpreting engineering drawings and sketches
- processes for setting out
- project quality requirements
- site and equipment safety (OHS) requirements

REQUIRED SKILLS AND KNOWLEDGE

- site isolation and traffic control responsibilities and authorities
- symbols and construction terminology of construction plans.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- transfer levels and record differences in height on one project to job specifications using:
 - a spirit level and straight edge
 - levelling with water technique
 - laser levelling devices
 - optical levelling devices
- confirm accuracy of the readings taken for all above, including set-up and movement of device in two locations
- conduct a two peg test with an automatic level to confirm that instrument meets manufacturers' tolerances
- accurately record the results of each levelling procedure to organisational requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)

RANGE STATEMENT

- memos
- organisation work specifications and requirements.
- plans and specifications
- relevant Australian standards
- safe work procedures related to performing levelling
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Basic levelling activities include:

- setting up of devices
- recording of heights or level and the transfer of data points
- transferring levels/heights for formwork
- shooting levels for concrete slabs
- recording ground levels at respective critical set out points
- recording slab or pad levels for placement of steel columns or masonry piers
- recording or checking levels in drainage
- positioning offsets and recovery pegs for construction projects.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications.</p> <p>1.6. Materials appropriate to work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Set out fasteners.	<p>2.1. Minimum distances for set out from edge of substrate material are adhered to in accordance with legislation, regulations and codes of practice.</p> <p>2.2. Material is located and temporarily held or fixed into designed position according to detailed drawings.</p>
3. Use EPT.	<p>3.1. EPT is checked for operation according to manufacturer specifications and safety (OHS) requirements for use of EPT.</p> <p>3.2. Fastener is selected according to requirements of job.</p> <p>3.3. Charge is selected to assessed requirements for material, base and penetration.</p> <p>3.4. Attachments and accessories are installed to EPT in accordance with manufacturer specifications and safety (OHS) requirements.</p> <p>3.5. Fastener and charge in EPT are located to manufacturer specifications.</p> <p>3.6. EPT operation is carried out and fastener is fixed into place in accordance with manufacturer recommendations, legislation, regulations and codes</p>

ELEMENT	PERFORMANCE CRITERIA
	of practice.
	3.7. Fastening penetration is checked and appropriate depth into material is applied.
	3.8. Power regulating device is adjusted for conditions.
	3.9. Misfire procedures are carried out according to manufacturer recommendations, legislation, regulations and codes of practice.
	3.10. Temporary holding and fixings are removed without damage to material.
4. Secure and store equipment and charges.	4.1. Charges are stored in designated container in accordance with legislation, regulations and codes of practice and used charges are recorded.
	4.2. Unused fasteners, the EPT and attachments are stored in a carry case in line with manufacturer recommendations.
	4.3. Logbook is checked and maintenance recorded according to manufacturer recommendations.
5. Maintain EPT and kit.	5.1. Safety features of tools are checked for serviceability in accordance with manufacturer operating manual.
	5.2. Tools are cleaned and lubricated to manufacturer recommendations.
	5.3. Periodic maintenance service is carried out to manufacturer specifications.
	5.4. Diminished stocks of charges and fasteners are replenished to designed effectiveness of EPT kit.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record maintenance in logbook
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- EPT materials
- EPT charges and fasteners
- equipment safety manuals and instructions
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice

REQUIRED SKILLS AND KNOWLEDGE

- security and storage procedures for equipment and charges
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- fix metal or timber to a steel, concrete or masonry base on one project of each to job specifications, including:
 - completion of stripping and assembly of the tool
 - completing log of serviceability
 - maintaining and cleaning
 - selecting charges and fasteners applicable to base material and material being fixed
 - misfire procedures
 - using attachments
 - complying with storage and security regulations and OHS requirements for the working environment
 - selecting signage
 - test fire.

Context of and specific

This competency is to be assessed using standard

- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised

RANGE STATEMENT

	<ul style="list-style-type: none"> organisational or external personnel manufacturer specifications and instructions where specified memos MSDS organisation work specifications and requirements plans and specifications regulatory and legislative requirements pertaining to using EPT relevant Australian standards safe work procedures related to using EPT signage verbal or written and graphical instructions work bulletins work schedules.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> work site inspection equipment defect identification assessment of conditions and hazards determination of work requirements.
<i>Safety (OHS)</i> is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:	<ul style="list-style-type: none"> emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation handling of materials hazard control hazardous materials and substances safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> earth leakage boxes lighting power cables, including overhead service trays, cables and conduits restricted access barriers surrounding structures traffic control trip hazards work site visitors and the public working at heights working in confined spaces

RANGE STATEMENT

	<ul style="list-style-type: none">• working in proximity to others• working with dangerous materials
	<ul style="list-style-type: none">• organisational first aid• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices• use of firefighting equipment• use of tools and equipment• workplace environment and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none">• direct action EPT• indirect action EPT• clamps and levels.
<i>Materials</i> include:	<ul style="list-style-type: none">• timber• metals• patented fasteners.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• noise and dust• vibration• waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none">• federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Minimum distance for set out</i> of fasteners is to be in accordance with:	<ul style="list-style-type: none">• regulated minimum distances• bases, including concrete, masonry or steel.
<i>Use of EPT</i> includes:	<ul style="list-style-type: none">• stripping and assembling tools• completing log of serviceability• maintaining and cleaning tools• selecting charges and fasteners applicable to the base material and material being fixed• misfire procedures• using attachments• complying with storage and security regulations and OHS requirements for the working environment• selecting signage• test fire.
<i>Attachments</i> include:	<ul style="list-style-type: none">• channel, rebate and other manufacturer attachments.

RANGE STATEMENT

- Fastener and charge* include:
- firing a test shot with misfire procedures, complying with the regulated safety procedure for misfire.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained from relevant sources of <i>information</i>, confirmed and applied for <i>planning and preparation</i> purposes.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, <i>tools and equipment</i> are selected to carry out tasks consistent with job requirements, are checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. <i>Scaffolding</i> quantity requirements are calculated in accordance with plans, specifications and <i>quality requirements</i>.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and regulatory authority</i> obligations, and are applied.</p>
2. Erect scaffolding.	<p>2.1. <i>Purpose for scaffolding</i> is confirmed and associated work tasks are identified.</p> <p>2.2. Expected loading on scaffold and supporting structure is determined using load tables.</p> <p>2.3. Site access and egress routes are identified.</p> <p>2.4. Scaffolding and components are selected and inspected with damaged components labelled and rejected or repaired.</p> <p>2.5. Adequate footing is established in accordance with Australian standard for scaffolding.</p> <p>2.6. Scaffolding is erected in accordance with regulations, planned hazard prevention and control measures, acceptable safe work practices and manufacturer requirements.</p>
3. Inspect, repair and alter scaffolding.	<p>3.1. Critical structural and safety areas of scaffolding are inspected for damage, corrosion and wear.</p> <p>3.2. Current use of scaffolding is checked for compliance with type of scaffolding equipment.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Inspection log and handover are completed.
	3.4. Scaffolding is reviewed to determine if changes or modifications were scheduled as per original planning.
	3.5. Alteration or repair is carried out where specified.
4. Dismantle scaffolding.	4.1. Scaffolding is dismantled using reverse procedure as for erection.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record maintenance in logbooks
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- scaffolding equipment
- scaffolding techniques
- shifting devices
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete planning, erection and dismantling of a modular scaffolding system, in accordance with JSA and safe work method statements and regulations, including a minimum of:
 - three bays (one with a return)
 - one lift with ladder
 - fall and edge protection.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- engineers' design specifications and manufacturer specifications and instructions, where specified
- instructions issued by authorised organisational or external personnel
- memos
- MSDS
- regulatory and legislative requirements pertaining to erecting and dismantling restricted height scaffolding

RANGE STATEMENT

Planning and preparation include:

- relevant Australian standards
- safe work procedures related to erecting and dismantling restricted height scaffolding
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- work site inspection, equipment defect identification, assessment of conditions and hazards, and determination of work requirements
- erection of scaffolding to a maximum height of 4 metres, including placement, sequencing, squaring, levelling and the reverse for dismantling
- establishment of footings, including review of JSAs to determine bearing capacity of ground or working surfaces
- alteration and repair, which may be required due to storm damage, accidents, misuse and process changes.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

RANGE STATEMENT

	<ul style="list-style-type: none"> • working in proximity to others • working with dangerous materials
	<ul style="list-style-type: none"> • organisational first aid • personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices • use of firefighting equipment • use of tools and equipment • workplace environment and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • aluminium modular scaffolding equipment • hammers • ladders • scaffolding planks • shovels and spanners • spirit levels • steel box spanners • tape measures.
<i>Scaffolding</i> type and quantity requirements:	<ul style="list-style-type: none"> • types of restricted height scaffolding may include systems scaffolding, A frame, H frame, tube and coupler, and aluminium (and modular to a maximum height of 4 metres).
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications, where specified • workplace operations and procedures.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up protection • noise and dust • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Purpose for scaffolding</i> includes:	<ul style="list-style-type: none"> • work platforms for various occupational applications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning of basic demolition processes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment are selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Prepare demolition site.	<p>2.1. Requirements of the site demolition plan are interpreted in accordance with workplace procedures and construction type.</p> <p>2.2. Property/dilapidation survey is completed to assess condition of work site and surrounds prior to work commencing and for preparation of work areas.</p> <p>2.3. Confirmation is obtained from supervisor/regulatory authorities that all existing services have been disconnected before commencing demolition tasks.</p> <p>2.4. Hazardous material is identified for separate handling in accordance with workplace requirements and instructions.</p>
3. Remove components.	<p>3.1. Building components are removed in a directed sequence in accordance with site demolition plan, demolition method statement, standards and workplace procedures.</p> <p>3.2. Removed components are relocated to storage or disposal area in accordance with workplace requirements.</p> <p>3.3. Materials and building component parts are safely and effectively handled using selected material handling techniques.</p> <p>3.4. Materials and components identified for salvaging are handled, stored and stacked ready for transport in</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>accordance with standard material handling practices and workplace procedures.</p> <p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specifications.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones

REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic demolition processes and techniques
- construction terminology
- hazards associated with the conduct of manual demolition tasks
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- quality requirements
- types, characteristics, uses and limitations of tools and equipment involved in the conduct of manual demolition processes
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given a site demolition plan and instructions, remove the fixtures and fittings, ceiling, and external and internal non-load bearing walls; and clean up, disposing or salvaging materials, ensuring:
 - correct identification of requirement and conduct of demolition
 - confirmation that wall or structure is not load bearing
 - identification and correct response to services
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel

RANGE STATEMENT

	<ul style="list-style-type: none"> • manufacturer specifications and instructions where specified • memos • MSDS • organisation work specifications and requirements • plans and specifications • regulatory and legislative requirements pertaining to the conduct of basic demolition processes • relevant Australian standards • safe work procedures related to the conduct of basic demolition processes • signage • verbal or written and graphical instructions • work bulletins • work schedules.
<i>Basic demolition processes</i> include:	<ul style="list-style-type: none"> • dismantling or demolishing and removing materials and component parts of a building using only hand tools and small plant and equipment.
<i>Safety (OHS)</i> is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including emergency shutdown and stopping of equipment, extinguishing fires, organisational first aid requirements and evacuation • handling of materials • hazard control • hazardous materials and substances • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • lighting • overhead lines and cables • restricted access barriers • surrounding structures • traffic control • underground services and utilities • work site visitors and the public • working at heights • working in confined spaces

RANGE STATEMENT

	<ul style="list-style-type: none"> • working in proximity to others • working with dangerous materials
	<ul style="list-style-type: none"> • organisational first aid • personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices • use of firefighting equipment • use of tools and equipment • workplace environment and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • bars (crow and pinch), bolt cutters, sledge hammers, spanners and wrenches, chisels, hacksaws, handsaws, hammers and pliers • picks and mattocks • power drills and saws, pneumatic tools, concrete saws, angle grinders, compressors and electric testers • shovels, spades, brooms and wheelbarrows • signs and barricades • water hoses and attachments • scaffolds and elevated work platforms.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up protection • noise and dust • sedimentation control • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Site demolition plan</i> includes:	<ul style="list-style-type: none"> • documentation of the demolition process • safe work practices.
<i>Construction type</i> includes:	<ul style="list-style-type: none"> • brickwork, blockwork, brick veneer and concrete • timber framed and light steel framed structures.
<i>Preparation of work areas</i> include:	<ul style="list-style-type: none"> • assessing conditions of work site and surrounds • communicating with those who may be affected by the demolition task • identifying hazardous materials • identifying positions of hoses and cables, clear of hazards

RANGE STATEMENT

Services include:

- locating signage and barricades
- providing site safety.
- electricity
- gas
- telephone and computer/communication
- water.

Demolition tasks can be performed on:

- existing structure being renovated or extended, which involves complete or partial removal of components
- new construction site.

Building components include:

- concrete/masonry areas, including:
 - edge strips
 - pads
 - paths
 - retaining walls and fences
 - slabs
- external sections of buildings, including:
 - attached structures, carports and sheds
 - non-load bearing walls
 - patios and decks
- fixtures and fittings
- internal sections of buildings, including:
 - built-in components
 - ceilings
 - cladding
 - flooring
 - non-load bearing partition walling
 - wet area components.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify work area requirements.	<p>1.1. Site of proposed work at heights is identified from relevant information.</p> <p>1.2. Method of accessing work area is identified.</p> <p>1.3. Tasks to be completed are identified from work orders and supervisor instructions.</p> <p>1.4. Fall protection equipment is identified if required by site job safety (OHS) analysis or statutory and regulatory requirements.</p> <p>1.5. Approved methods of moving tools and equipment to work area are identified to minimise potential of falling objects, removal of scaffold components, inappropriate carrying of materials on ladders, and excessive bending or twisting in pass-up situations.</p>
2. Access work area.	<p>2.1. Fall protection equipment where required is correctly fitted, adjusted and anchored.</p> <p>2.2. Arrangements are made to appropriately install required equipment taking account of all potential hazards.</p> <p>2.3. Appropriate methods are used to access work area for self, tools and equipment, and materials.</p> <p>2.4. Tools and materials are placed to eliminate or at least minimise the risk of items being knocked down.</p>
3. Conduct work tasks.	<p>3.1. Work is conducted following workplace approved procedures.</p> <p>3.2. Fall protection equipment is kept in place and adjusted appropriately to cater for movement during work.</p> <p>3.3. Scaffold components and fall barriers are kept in place during work.</p> <p>3.4. Egress from work area is completed following work site supervisor approved methods for self, tools, materials and environmental requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- quality requirements
- types, characteristics, uses and limitation of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations and state and territory legislation applicable to workplace operations
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- select and use appropriate height access and fall protection equipment and work methods, including inspecting fall protection equipment, scaffold and fall barriers for faults
- apply knowledge of industry products to identify:
 - manual handling risks
 - types of lifting and support structures approved for use
- modify work activities to cater for variations in work site procedures, contexts and environment and use appropriate behaviour for safe work at heights
- use safe handling requirements, based on information provided, for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work at heights includes:

- assessment of conditions and hazards
- determination of work requirements
- identification of equipment defects
- inspection of work sites.

RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- material safety data sheets (MSDS)
- memos
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Safety (OHS) is to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- relevant OHS legislation applying in the jurisdiction where work is carried out, including:
 - AS6001 - 1999 Working platforms for domestic application
 - AS1576 - Scaffolding
 - AS/NZS4576 - 1995 Guidelines for

RANGE STATEMENT

	scaffolding
<i>Statutory and regulatory authorities include:</i>	<ul style="list-style-type: none"> • use of tools and equipment • workplace environment and safety. • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Hazards include:</i>	<ul style="list-style-type: none"> • air temperature • construction activity involving other workers and contractors • dust and vapours • electrical equipment • energy sources • equipment and materials • hazardous materials • light • manual handling • moisture • noise • stationary and moving plant • work at heights.
<i>Tools and equipment include:</i>	<ul style="list-style-type: none"> • air compressors and hoses • hand and power tools • nail guns • power leads • scaffolding.
<i>Materials include:</i>	<ul style="list-style-type: none"> • materials used on the construction work site.
<i>Environmental requirements include:</i>	<ul style="list-style-type: none"> • clean-up management • noise and dust • vibration • waste management.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Comply with tilt-up construction and risk management processes.	<p>1.1. Identify the relationship between each <i>stage of the tilt-up construction process</i> and the following stage, and typical faults, problems, hazards and possible effects if design and safety requirements are not met.</p> <p>1.2. Identify basic principles of risk management and duty holders responsible.</p> <p>1.3. Identify the minimum requirements for a safe work method statement for each task as outlined in the <i>national code of practice</i>, and the duty holder responsible for its preparation and compliance.</p> <p>1.4. Identify the minimum requirements for a work plan and/or OHS management plan for tilt-up construction, as outlined in the national code of practice.</p> <p>1.5. Identify available <i>skills training</i> opportunities as relevant to own work, role and responsibilities.</p>
2. Access and use information relating to safe tilt-up construction.	<p>2.1. Identify and use <i>regulatory information</i> relevant to own work, role and responsibilities.</p> <p>2.2. Identify roles and responsibilities of self and others as relevant to own work and role in tilt-up construction.</p> <p>2.3. Identify and interpret general work procedures, <i>documentation, drawings and plans</i> for carrying out the tilt-up construction process as relevant to own work, role and responsibilities.</p> <p>2.4. Identify general design and safety requirements for <i>equipment and tools</i> used in the tilt-up construction process as relevant to own work, role and responsibilities.</p>
3. Maintain safety of self and others.	<p>3.1. Communicate with others to establish that key design and safety requirements have been met for preceding stages of tilt-up construction.</p> <p>3.2. Use general procedures for responding, rectifying and reporting faults, problems and hazards as relevant to own work, role and responsibilities.</p> <p>3.3. Identify the methods and procedures used to control tilt-up construction <i>hazards</i>, including the content of the work plan and/or OHS management plan and <i>safe work method statements</i> as relevant to own work, role and responsibilities.</p> <p>3.4. Identify the sequence of tasks and activities relevant</p>

ELEMENT**PERFORMANCE CRITERIA**

to own work and review the adequacy of the associated safe work method statement by conducting a *job safety analysis*.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- Communication / interpersonal skills to contribute to the discussion of workplace hazards and risks, ask effective questions, collaborate with colleagues, relay information to others, and report on OHS issues.
- Comprehension skills to understand and comply with OHS requirements including safety signs and symbols, safe work method statements and safe working procedures.
- Ability to interpret and apply information from plans and procedures, and identify related hazards.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- hazard identification and risk control related to tilt-up work
- Job Safety Analysis and safe work method statements
- OHS standards, legislative requirements and codes of practice related to tilt-up work
- requirements for planning, preparing and carrying out the tilt-up construction process as relevant to own work, role and responsibilities
- safety equipment used on construction work sites
- stages in the tilt-up construction process.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Competency is to be assessed only after completion of the General Induction Training Program specified by the National Code of Practice for Induction for Construction Work.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence must confirm understanding and knowledge of the following:

- Relevant legal responsibilities, codes of practice and standards for tilt-up construction work;
- the range of common tilt-up construction hazards and procedures for the assessment of risks and application of the hierarchy of control; and
- the use of job safety analysis and safe work method statements.

Context of and specific resources for assessment

The relevant OHS authority may have specific requirements concerning the expertise necessary to be a subject expert for assessment of this unit. Assessment must be made in accordance with any such requirements.

Procedures and documentation should cover those used in the workplace.

Resources must be available to support the program including:

- relevant standards, regulations and code of practice for tilt-up construction
- Australian Standards AS 3850 and AS 3600
- participant materials and other information
- drawings and specifications
- tilt-up slab related plans
- safe load tables
- safe work method statements
- Job Safety Analysis materials.

A range of assessment tools and resources should be used to suit the learning preferences or special

EVIDENCE GUIDE

	learning needs of individual participants.
Method of assessment	<p>Assessment methods may include more than one of the following:</p> <ul style="list-style-type: none"> • practical assessment • oral questioning • written test • work-based activities • problem solving scenarios • simulated project based activity.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Stages of the tilt-up construction process</i> cover:	<ul style="list-style-type: none"> • design and manufacture • handling, storage and transportation • crange and erection • temporary bracing, stabilisation and incorporation of concrete panels • demolition
<i>National code of practice</i> refers to:	<ul style="list-style-type: none"> • National Code of Practice for Precast, Tilt-Up and Concrete Elements in Building Construction.
<i>Skills training</i> opportunities could include completing further training, including:	<ul style="list-style-type: none"> • CPCCBC4022A Supervise tilt-up work • CPCCCO3028A Carry out tilt panel construction • CPCCRI3015A Perform advanced tilt-up slab erection.
<i>Regulatory information</i> includes general OHS requirements, such as:	<ul style="list-style-type: none"> • Australian standards AS3850 and AS3600 • duty holder responsibilities • emergency procedures • relevant standards, regulations and codes of practice for tilt-up and pre-cast concrete

RANGE STATEMENT

	<ul style="list-style-type: none"> construction training, supervision and risk management in the context of tilt-up and pre-cast concrete construction.
<i>Documentation, drawings and plans</i> include:	<ul style="list-style-type: none"> design provisions and drawings erection and crane drawings and documentation Job Safety Analysis documentation marking plan and shop drawings prefabricators and engineers' inspection reports and statements safe work method statements specifications transport management plan work plan and/or OHS management plan.
<i>Equipment and tools</i> include:	<ul style="list-style-type: none"> bracing cranes elevated work platforms manual tools mobile scaffolding portable electric and pneumatic tools props rigging equipment rigging gear safety net and static lines.
<i>Hazards</i> include anything with the potential to cause injury, harm or ill health, such as:	<ul style="list-style-type: none"> environmental factors, e.g. wind, temperature, noise and lighting overhead or underground services trees, buildings and structures uneven or unstable ground unstable panels during lifting.
<i>Safe work method statement</i> is a statement that:	<ul style="list-style-type: none"> describes how safety measures will be implemented to do the work safely describes the control measures that will be applied to the work activities identifies work activities assessed as having safety risk or risks includes a description of the equipment used in the work, the qualifications of the personnel doing the work, and the training required to do the work safely

RANGE STATEMENT

Job safety analysis is:

- states the safety risk or risks.
- a technique that breaks a task into steps
- identifies the hazards and appropriate control measures for each step.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to safely and effectively operate some types of elevated work platforms (EWPs) in a variety of different terrains and situations to access isolated work areas. The unit includes locating, setting up, operating and shutting down EWPs.

In addition to achievement of this competency, an EWP operator may need to obtain additional certification of training and experience before being allowed to operate the equipment.

Application of the Unit

Application of the unit

This unit of competency assists in the safe and effective operation of electrical, hydraulic or mechanical EWPs. The unit does not cover powered telescoping devices, hinged devices or articulated devices, or any combination of these used to support a platform on which personnel, equipment and materials may be elevated to perform work and which has a boom length of 11 metres or more. An OHS authority Certificate of Competency may be required to operate boom type EWPs of 11 metres or more in some jurisdictions.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work planning and preparation are conducted using plans, specifications, quality requirements and operational details, obtained, confirmed and applied from relevant information.</p> <p>1.2. Safety (OHS) requirements for the types of EWP to be operated are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment and personal protective equipment are selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Conduct routine checks of platform.	<p>2.1. Power source is determined and connected to platform equipment according to manufacturer specifications.</p> <p>2.2. Routine pre-operational equipment checks are carried out in accordance with checklist from operator's manual or manufacturer specifications.</p> <p>2.3. Equipment is switched on in accordance with start up procedures and controls are checked for correct operation and ease of movement.</p> <p>2.4. Emergency safety devices are checked to comply with instructions from operator's manual and checked for manual operation.</p> <p>2.5. Work location is checked for level ground or floor surface to determine stabilising and safe working area requirements.</p>
3. Locate equipment in place for work application.	<p>3.1. Platform is positioned for work application and stabilisers are engaged to set equipment base level into place according to safe operating procedures.</p> <p>3.2. Tools, equipment and materials are placed into bucket or on platform according to job application</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements.
4. Elevate platform to work location.	<p>4.1. Harness is fitted securely and lanyard connected to attachment point.</p> <p>4.2. EWP operation and controls are operated to manufacturer recommendations and platform is elevated to work position.</p> <p>4.3. Power is switched off where specified and locking devices are engaged according to operator's manual.</p> <p>4.4. Work is carried out to job specification and safety (OHS) requirements of operator's manual.</p>
5. Lower platform and shut down.	<p>5.1. Controls are operated to manufacturer recommendations and platform is lowered to down position.</p> <p>5.2. Shut down procedures are carried out to operator's manual and equipment is switched off.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p> <p>6.3. Work completion procedures are applied and relevant personnel notified that work is finished.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to complete inspection log and handover
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- designs, functions and operational limitations of EWP equipment
- EWP equipment types and OHS authority certification of competency requirements
- EWP techniques
- fault finding and identification
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of load mass requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- safe working at heights
- signalling methods and communications
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete set up and operation of a range of EWP's as listed in the range statement, including all functions.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work planning and preparation include:

- assessment of conditions and hazards
- consideration that EWP's must not be operated anywhere with overhead powerlines above, or within specified clearance distances set out in documentation such as Electrical Safety - Power line NO GO Zones, unless permission has been obtained from the power authority and a JSA has been developed
- determination of work requirements
- equipment defect identification
- work site inspection.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions

RANGE STATEMENT

	where specified
	<ul style="list-style-type: none"> • MSDS • memos • regulatory and legislative requirements pertaining to EWPs • relevant Australian standards • safe work procedures related to operating EWPs, including the safe working load written on the EWP which must be checked to ensure it is not exceeded • signage • verbal or written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Safety (OHS)</i> is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:	<ul style="list-style-type: none"> • procedures related to equipment operation, including emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation • handling of materials • hazard control • hazardous materials and substances • organisational first aid • personal protective clothing and equipment • use of firefighting equipment • use of tools and equipment • workplace environment and safety.
<i>Types of EWP:</i>	<ul style="list-style-type: none"> • EWPs include scissor lifts, boom and knuckle boom lifts with a boom length under 11 metres • EWPs are classified as: <ul style="list-style-type: none"> • trailer mounted boom lift (TL) • self-propelled boom lift (BL) • vertical lift (VL) • scissor lift (SL) • truck-mounted boom lift (TM), which is not covered by this unit of competency.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • EWPs, extension leads, logbooks, service manuals, operation manuals, safety harnesses and lanyards • special attachments, which may have to be installed if equipment is to be shifted with the EWP, as lifting loads via cables and ropes

RANGE STATEMENT

	from an EWP is not permitted.
<i>Personal protective equipment</i> includes:	<ul style="list-style-type: none"> • that prescribed under legislation, regulations, codes of practice and workplace policies and practices.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up protection • noise and dust • sedimentation control • vibration • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Emergency safety devices</i> include:	<ul style="list-style-type: none"> • bleed valves • electronic override • emergency descent devices • ground controls • hydraulic accumulators.
<i>Safe operating procedures</i> include:	<ul style="list-style-type: none"> • conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • lighting • power cables, including overhead service trays, cables and conduits • restricted access barriers • surrounding structures • traffic control • trip hazards • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • working with dangerous materials • not using slab terrain EWPs on any surface other than concrete or level asphalt.
<i>Harnesses</i> include:	<ul style="list-style-type: none"> • energy or shock absorbers that must be used with all fall arrest lanyard, harness and inertia reel systems • full body rescue harness • lanyards and inertia reels, which should be attached to the harness installed so that the

RANGE STATEMENT

- EWP operation* includes:
- maximum distance a person equipped with a harness would free fall before the fall arrest system takes effect is 2 metres.
 - boom up and down
 - operate attachments
 - operate outriggers
 - slew left and right
 - telescope in and out.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Truck mounted crane is set up and operated.	<p>2.1. Truck mounted crane is positioned at the designated drop off point.</p> <p>2.2. Truck is positioned to ensure a level surface to operate the crane from.</p> <p>2.3. Crane is activated and manoeuvred to its operating position from its lock down position.</p> <p>2.4. Crane movements are checked for safe crane operations.</p> <p>2.5. Load is prepared for lifting in accordance with crane, truck and dogging requirements.</p> <p>2.6. Site is confirmed as clear and safe to receive or dispatch the load.</p> <p>2.7. Load is manoeuvred to position using the control levers to manufacturer specifications.</p> <p>2.8. Load is continually monitored throughout its travel.</p> <p>2.9. Crane is shut down and returned to its lock down position.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- designs and functions of truck mounted loading cranes
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of load mass requirements

REQUIRED SKILLS AND KNOWLEDGE

- quality requirements
- relevant Acts, regulations and codes of practice
- slinging equipment
- truck mounted crane techniques
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete a set up and operation of a truck mounted crane, including all functions to their maximum extension in the loading and unloading of at least two full loads of building and construction materials and products.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to truck mounted cranes
- relevant Australian standards

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- safe work procedures related to operating truck mounted cranes
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.
- emergency procedures related to equipment operation include emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

RANGE STATEMENT

<i>Tools and equipment</i> include:	<ul style="list-style-type: none">• truck mounted cranes• allocated slinging equipment.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up protection• noise and dust• vibration• waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none">• federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Truck mounted crane</i> includes:	<ul style="list-style-type: none">• a crane mounted on a semi-trailer or delivery truck, including cranes mounted on other vehicles• are generally used for loading and unloading building and construction products, however, larger versions are used for loading and unloading containers• may have electrical, hydraulic and mechanical operating systems.
<i>Safe crane operations</i> include:	<ul style="list-style-type: none">• boom up and down• operate attachments• operate outriggers• slew left and right• telescope in and out• load masses not exceeding the working capacity of the crane and recommended manufacturer limits.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment are selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.</p>
2. Apply safe work practices.	<p>2.1. Relevant authorities are contacted to identify electrical sources and type.</p> <p>2.2. Plant is positioned according to work method statement and job safety analyses (JSAs).</p> <p>2.3. Plant procedures are followed to comply with work method statement and JSAs.</p> <p>2.4. Work is conducted in or around the power source, service or asset.</p> <p>2.5. Personnel, plant and equipment are retracted from powered area following safe work method statement and JSAs.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p> <p>3.3. Work completion procedures are applied and relevant personnel are notified that work is finished.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify electrical source and type from relevant authorities
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and make calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- electrical safety on construction work sites
- first aid including cardiopulmonary resuscitation (CPR)
- JSA and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- quality requirements
- site specific emergency procedures
- types, characteristics, uses and limitations of plant, tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- working at heights
- working with electrical power techniques
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- contact relevant authorities
- apply work method statements and JSAs to oversee plant positioning and operation for one project, including erection and/or placement of barriers and safeguards.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- verbal or written and graphical instructions
- diagrams or sketches

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Handle and sort concrete materials and components.	<p>2.1. On delivery to site, concrete materials and components are identified and checked for conformity to material schedule, plans and specifications.</p> <p>2.2. Concrete materials are moved to specified location applying safe manual handling procedures.</p> <p>2.3. Concrete materials and components are stacked or stockpiled for ease of identification and retrieval for task sequence and job location in accordance with job specifications.</p> <p>2.4. Concrete materials and components are protected against physical and water damage and stored clear of access ways, for ease of identification, retrieval and distribution.</p> <p>2.5. Components are handled and positioned ready for installation in accordance with manufacturer recommendations, plans and specifications.</p>
3. Handle and remove concrete materials and components on completion.	<p>3.1. Materials are handled safely according to MSDS and requirements of regulatory authorities.</p> <p>3.2. Hazardous material is identified for separate handling.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Dust suppression procedures are used to minimise health risk to work personnel and others.
	3.4. Protection of materials is provided in accordance with specific material needs.
	3.5. Materials are stored safely and effectively according to MSDS and requirements of <i>statutory and regulatory authorities</i> .
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Hazardous material is identified for separate handling.
	4.3. Non-toxic materials are removed using correct procedures.
	4.4. Dust suppression procedures are used to minimise health risk to work personnel and others.
	4.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete materials handling techniques
- concreting materials
- general construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- MSDS
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of tools and equipment
- workplace and equipment safety requirements.

 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brooms
- rakes
- shovels
- tarpaulins and covers

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- wheelbarrows.
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials:

- include:
 - aggregates
 - cement
 - form release agents
 - non-toxic materials, including general concreting materials
 - sand
 - water
- may include:
 - additives
 - curing compound
 - oxides.

Environmental requirements includes:

- clean-up management
- dust and noise
- dust suppression, including:
 - covering
 - keeping dust in the air to a minimum
 - spraying with water
 - using a vacuum cleaner
- stormwater management
- vibration
- waste management.

Concrete materials and components:

- include:
 - bar chairs
 - bracing
 - plastic membrane
 - reinforcement mesh
 - spacers
 - steel and timber formwork
- may include:
 - bar steel
 - decking
 - key joints

RANGE STATEMENT

	<ul style="list-style-type: none">• push-pull props• reinforcement bars• scaffolding• support props• tilt panels.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify and select hand and power tools.	<p>2.1. Hand and power tools, their functions, operations and limitations are identified and selected.</p> <p>2.2. OHS requirements for using hand and power tools are recognised and adhered to.</p> <p>2.3. Lubricants, hydraulic fluid and water are checked according to manufacturer recommendations.</p> <p>2.4. Tools are selected consistent with job requirements.</p> <p>2.5. Tools, including leads and hoses, are checked for tags, serviceability and safety, and any faults are reported.</p> <p>2.6. Power tool guards, retaining bolts, couplings, gauges and controls are checked and maintained in accordance with manufacturer recommendations.</p> <p>2.7. Equipment to hold or support material during operation is selected.</p>
3. Use tools.	<p>3.1. Hand tools used are appropriate to the task and materials, and are in accordance with OHS requirements.</p> <p>3.2. Power tools are safely and effectively used in accordance with manufacturer recommendations and state or territory OHS requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Tools are sharpened and maintained.
4. Identify, select and use plant and equipment.	<p>4.1. Plant and equipment are checked for safety and faults are reported.</p> <p>4.2. Plant and equipment are selected and used consistent with OHS requirements, manufacturer specifications and the needs of the job.</p> <p>4.3. Lubricants, hydraulic fluid and water are checked according to manufacturer recommendations.</p> <p>4.4. Plant and equipment are maintained in accordance with manufacturer recommendations and standard work practices.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals

REQUIRED SKILLS AND KNOWLEDGE

- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concreting materials
- concreting tool use techniques
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- tools and equipment safety manuals and instructions
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- identify and apply OHS requirements for the safe use of floats, shovels, screeds and vibrating equipment.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to using concreting tools and equipment
- relevant Australian standards
- safe work procedures relating to using concreting tools and equipment
- signage
- verbal, written and graphical instructions

RANGE STATEMENT

Planning and preparation include:

- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- bolt cutters
- crow bars
- cutting knives

RANGE STATEMENT

- edging tools
- floats
- grinders
- hammers
- jointers
- kneel boards
- levelling equipment
- long handled shovels
- measuring tapes
- nail bags
- picks
- pinch bars
- pliers
- rakes
- screeds
- sledge hammers
- steel fixing reels
- string lines
- trowels
- vibrators.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Hand and power tools include:

- digging, transporting, levering, cutting, shaping, fixing, fastening and percussion tools
- electrically operated portable and static power tools and leads
- material shifting, holding tools and finishing tools
- setting out, marking out and levelling tools.

Plant and equipment include:

- 240v power supplied, hand held or small single person operated equipment
- compressor

RANGE STATEMENT

- generator.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Erect and strip simple formwork.	<p>2.1. Subgrade is prepared.</p> <p>2.2. Formwork design is identified from drawings.</p> <p>2.3. Formwork is erected safely on commencement.</p> <p>2.4. Form release agent is applied to erected formwork where specified.</p> <p>2.5. Timber components are de-nailed following stripping of formwork.</p> <p>2.6. Components are cleaned, stacked and stored for reuse or bundled for removal.</p> <p>2.7. Formwork components are removed from site.</p>
3. Place and tie reinforcement.	<p>3.1. Reinforcing components are handled and positioned safely.</p> <p>3.2. Reinforcing bars and mesh are positioned.</p> <p>3.3. Bar chairs and spacers are positioned, with minimum edge cover.</p>
4. Place concrete.	<p>4.1. Formwork or excavation is cleaned of excess material and debris prior to concrete placement.</p> <p>4.2. Concrete is safely transported by wheelbarrow.</p> <p>4.3. Pump line/chute is controlled and concrete placed.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.4. Concrete is placed in formwork to specified depth.
	4.5. Concrete is screeded to the alignment of formwork and project specified datums.
	4.6. Surface of concrete is finished in accordance with specifications.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations and codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and

REQUIRED SKILLS AND KNOWLEDGE

- contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete materials
- concreting techniques
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- simple formwork and reinforcing componentry
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare subgrade; erect formwork; cut, place and tie reinforcement; place and hand screed concrete for a slab of (4 square metres is recommended) and a minimum depth of 100mm to the required finished level and job specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare concreting materials.	<p>2.1. Location of steel reinforcement and formwork is determined from drawings and reinforcement schedule.</p> <p>2.2. Reinforcement is checked against reinforcement drawings and specifications.</p> <p>2.3. Formwork components and materials are selected consistent with job.</p> <p>2.4. Fixing and fasteners are selected and used consistent with requirements of the job.</p>
3. Set out for concrete work.	<p>3.1. String lines are set accurately from existing pegs.</p> <p>3.2. Grades are checked to ensure correct fall.</p> <p>3.3. Services are identified and protected to prevent damage.</p>
4. Construct and install reinforcement.	<p>4.1. Reinforcing fabric and bars are cut and bent as required to project drawings and specifications.</p> <p>4.2. Fabric and bars are tied or fixed to configuration from project drawings and specifications.</p> <p>4.3. Stiffening rods are attached to panels as required to facilitate handling.</p> <p>4.4. Reinforcement material is located in formwork and</p>

ELEMENT	PERFORMANCE CRITERIA
	placed on bar chairs/spacers as determined from drawings, noting clearance from formwork.
	4.5. Cast-in items are located and secured.
5. Erect formwork.	<p>5.1. Work area is cleared and surface prepared for safe erection of formwork.</p> <p>5.2. Formwork is set out to requirements of drawings and specifications.</p> <p>5.3. Formwork is assembled and erected to specifications.</p> <p>5.4. Debris, sawdust and other waste material are safely removed from formwork.</p> <p>5.5. Form release agent is applied to manufacturer specifications.</p>
6. Carry out concrete work.	<p>6.1. Concrete is transported correctly with wheelbarrow and discharged into formwork, using correct manual handling techniques.</p> <p>6.2. Discharge of concrete from concrete pump line and/or chute into the formwork is controlled correctly.</p> <p>6.3. Concrete is placed correctly to instruction and screeded to specified levels and grades.</p> <p>6.4. Concrete is compacted to specification using immersion vibrator or other specified method.</p> <p>6.5. Concrete is finished and curing process applied to specifications.</p> <p>6.6. Control joints are positioned and installed to specification and to current Australian standard or codes.</p> <p>6.7. Dowel joints are positioned to specification.</p> <p>6.8. Concrete surface is adequately covered and protected.</p>
7. Strip formwork.	<p>7.1. Edge boxing and braces are removed carefully, safely and sequentially.</p> <p>7.2. Timber components are dewatered, cleaned and stored or stacked.</p> <p>7.3. Steel components are cleaned, oiled and stored or stacked.</p> <p>7.4. Damaged formwork components are discarded after stripping.</p> <p>7.5. Screens are safely cleaned before movement, where applicable.</p>

ELEMENT	PERFORMANCE CRITERIA
8. Clean up.	<p>8.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>8.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete characteristics and properties
- concreting principles
- equipment types, characteristics, technical capabilities and limitations
- formwork
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials handling methods
- operational, maintenance and basic diagnostic procedures
- processes for interpreting engineering drawings
- quality requirements
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- steel reinforcement characteristics
- structural technology.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete at least three concreting projects (each a minimum of two cubic metres of concrete), incorporating a minimum of two different finishes with at least one project containing angled formwork and bent reinforcement and all projects being completed to job specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to carrying out concrete work
- relevant Australian standards
- safe work procedures relating to concreting

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

RANGE STATEMENT

Tools and equipment include:

- bolt cutters
- brushes
- buckets
- chutes
- curing agent applicator
- edging tools
- floats
- hammers
- hoses
- kibble
- mesh guillotine
- nips
- rakes
- reinforcement benders
- rods
- screeds
- short handle shovels
- shutters
- sponges
- steam generator
- tarpaulins
- tremmies
- trowels
- vibrators
- wheelbarrows.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials include:

- bar chairs
- cement
- concrete blend
- curing compounds
- form release agents
- formwork components
- membranes
- pre-mix concrete
- sand
- steel reinforcing

RANGE STATEMENT

	<ul style="list-style-type: none">• vapour barriers• water.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• dust and noise• stormwater management• vibration• waste management.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Receive and dispatch concrete.	<p>2.1. Delivery advice is checked for accuracy against ordered material.</p> <p>2.2. Concrete delivery vehicle is directed to location of discharge.</p> <p>2.3. Concrete is discharged via chute into wheelbarrow, kibble, pump or hopper.</p>
3. Define and prepare work area.	<p>3.1. Location of concrete placement is determined from plans and specifications and location for placement is checked to be free of debris and waste.</p> <p>3.2. Safe working area is maintained around pour location using barriers and signage consistent with OHS regulations.</p> <p>3.3. Plant, tools and equipment are located to suit planned placement.</p>
4. Place concrete.	<p>4.1. Concrete is placed in horizontal layers into location to levels indicated by markers, level pegs or lines.</p> <p>4.2. Height of vertical drop of concrete is minimised to avoid segregation of concrete materials.</p> <p>4.3. Poured concrete is consolidated during process using approved compaction or vibration method.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.4. Finished levels are checked against datum using appropriate levelling device.
5. Screed/level concrete.	5.1. Concrete is screeded to correct levels and grades using appropriate straight edged tool/formwork mounted screed.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental

REQUIRED SKILLS AND KNOWLEDGE

and sustainability frameworks or management systems

- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- cold joints
- compaction
- concrete materials
- concrete reinforcement techniques
- concreting techniques
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- mix specifications
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- segregation
- slump testing
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- move and place a minimum of 100 square metres, screed to level and compact/vibrate to specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to placing concrete
- relevant Australian standards
- safe work procedures relating to placing concrete
- signage
- verbal, written and graphical instructions
- work bulletins

RANGE STATEMENT

Planning and preparation
include:

- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
 - handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
 - hazard control
 - hazardous materials and substances
 - organisational first aid
 - PPE prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - use of firefighting equipment
 - use of tools and equipment
 - workplace environmental requirements and safety.
- Tools and equipment:***
- include:
 - chutes
 - measuring tapes and rules

RANGE STATEMENT

	<ul style="list-style-type: none"> • screed boards • shovels • trowels • may include: <ul style="list-style-type: none"> • brooms • compressors • concrete placing booms • kibbles • line pumps • mechanised dumpers • rakes • stipple devices • trowelling machines • vibrators • wheelbarrows.
<i>Quality requirements</i> include:	<ul style="list-style-type: none"> • internal company quality policy and standards • manufacturer specifications where specified • relevant regulations, including Australian standards • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • concrete.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater management • vibration • waste management.
<i>Concrete delivery</i> includes:	<ul style="list-style-type: none"> • crane and kibble • pre-mix truck • wheelbarrow.
<i>Placing of concrete</i> includes:	<ul style="list-style-type: none"> • kibble • pumping equipment • shovelling • tremmies • truck placed • vibrating • wheelbarrows.
Methods to <i>avoid segregation of concrete</i> include:	<ul style="list-style-type: none"> • using a tremmie, through minimising the height of a vertical drop (no greater than 2

RANGE STATEMENT

- metres high for 20MPA at 80 slump)
- using pumps with a flexible hose.
 - mechanical vibrators.
- Compaction or vibration methods*** include:
- Finishing*** techniques include:
- broom finished
 - brushed
 - mechanical trowelling machine
 - steel trowel
 - wood float.
- Screeding:***
- includes a hand screed
 - may include:
 - a mechanical vibrating screed
 - magic screeds.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Finish concrete.	<p>2.1. Float and trowel are applied after initial screeding to assist in maintaining a level surface and to remove screeding inaccuracies.</p> <p>2.2. Mechanical trowelling is applied to consolidate and densify the setting concrete surface.</p> <p>2.3. Control joints are installed, edges finished and concrete trowelled to specifications.</p> <p>2.4. Final trowel/ finish is applied to concrete surface to specifications.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:

- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete curing materials and techniques
- curing duration and effect on ultimate strength
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- processes for the calculation of material requirements
- quality requirements
- tools and equipment types, characteristics, uses and limitations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply a curing compound/method to projects of a minimum of 100 square metres of concrete according to project specifications, using at least two of the compounds/methods specified in the range statement.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to apply decorative finishes to concrete surfaces, providing a distinct featured face finish for driveways, patios, paths or other areas requiring a decorative finish.

The finish includes the use of stamps, stencils, colours, exposed aggregate and textured finishes.

Application of the Unit

Application of the unit This unit of competency supports the attainment of the understanding and skills to apply decorative finishes to concrete, which may include working with others and as a member of a team.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Carry out stencil finishes.	<p>2.1. Stencil finish is prepared so that any lapping will maintain alignment and bond.</p> <p>2.2. Stencil is laid carefully onto screeded surface to specifications ensuring alignment, bond and flat.</p> <p>2.3. Dry topping mix of colour, stone dust and cement is prepared and applied to specifications.</p> <p>2.4. Surface is finished with wood or steel float to a consistent texture in accordance with specifications.</p> <p>2.5. Stencil is lifted in accordance with setting time to manufacturer recommendations.</p> <p>2.6. Control joints are inserted during placement and/or cut into applied finish after setting, to specifications.</p>
3. Carry out stamp finishes.	<p>3.1. Method of applying pattern is determined in accordance with designed finish and specifications.</p> <p>3.2. Stamped finish pattern equipment is checked for cleanliness and serviceability.</p> <p>3.3. Design layout is planned and initial starting point determined to specifications and design.</p> <p>3.4. Base colour and topping dust are prepared and applied to specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.5. Base colour is floated into surface to specifications.</p> <p>3.6. Colours are randomly applied, where specified, on to surface at random locations to create decorative type colourings.</p> <p>3.7. Release agent is prepared and applied to specifications.</p> <p>3.8. Stamp is used to create designed pattern and surface effect to specifications.</p> <p>3.9. Control joints are inserted during placement and/or cut into applied finish after setting, to specifications.</p>
4. Carry out exposed aggregate finishes.	<p>4.1. Selected aggregates are incorporated in concrete mix to specifications.</p> <p>4.2. Surface matrix is removed to exposed aggregate.</p> <p>4.3. Exposed aggregate is left clean and free to designed effect and specifications.</p> <p>4.4. Control joints are inserted during placement and/or cut into applied finish after setting, to specifications.</p>
5. Carry out textured finishes.	<p>5.1. Method of applying texture is determined in accordance with designed finish and specifications.</p> <p>5.2. Base colour and topping dust are prepared and applied to specifications.</p> <p>5.3. Base colour is floated into surface to specifications.</p> <p>5.4. Colours are randomly applied, where specified, on to surface at random locations to create decorative type colourings.</p> <p>5.5. Finish is applied with trowel to create designed pattern and surface effect to specifications.</p> <p>5.6. Control joints are inserted during placement and/or cut into applied finish after setting, to specifications.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete decorative finishing techniques
- concrete placement, finishing and curing
- control joints
- decorative concrete finishing materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)

REQUIRED SKILLS AND KNOWLEDGE

- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete decorative finish projects to a minimum of 20 square metres each of concrete, using two out of four of the decorative techniques specified in the range statement to job specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to decorative concreting
- relevant Australian standards
- safe work procedures relating to decorative concreting
- signage

RANGE STATEMENT

Planning and preparation
include:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:

RANGE STATEMENT

- floats
- hand tools
- hoses
- shovels
- trowels
- may include:
 - brooms
 - concrete mixers
 - power trowels
 - rollers
 - spray attachments
 - spray bottles
 - stamps
 - stipple devices
 - wheelbarrows.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials include:

- colourants
- mortar additives
- release agents
- river gravel aggregates
- stencils.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Stencil finishes:

- can be applied with a decorative designed pre-prepared cut roll of material specified to customer's requirements
- can be floated into the surface of the concrete
- involve the application of colour.

Control joints:

- are cut using:
 - hand held power saw
 - walk behind power saw
- are included in the concrete surface to control cracking according to engineer's drawings and

RANGE STATEMENT

<i>Stamped finishes:</i>	specifications. <ul style="list-style-type: none">are applied with individual, specially designed rubber mats providing a slate look impression which are pressed into the concrete surface by even distribution of weightincludes the application of colour.
Form <i>release agents</i> include:	<ul style="list-style-type: none">release agent powder.
<i>Exposed aggregate</i> finishes:	<ul style="list-style-type: none">are achieved by hosing off the top layer of cement slurry from the concrete which exposes the added naturally coloured stone finish determined by the customer.
<i>Textured</i> finishes include:	<ul style="list-style-type: none">application of colourpolished finishrough textured finish (non-slip) applied with a trowelstipple device.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specification and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare for concrete resurfacing.	<p>2.1. Concrete is prepared for resurfacing technique to be applied.</p> <p>2.2. Resurfacing and preparation equipment is selected for the process.</p> <p>2.3. Retardant materials are prepared for application where specified.</p> <p>2.4. Preparation technique is performed using the selected application according to specifications.</p> <p>2.5. Existing control joints in the substrate are checked to ensure they are carried through and reflected in the proposed topping.</p>
3. Cure/seal concrete.	<p>3.1. Curing agents and curing techniques are applied to concrete to specifications, following setting.</p> <p>3.2. Curing/sealing is maintained for period specified in accordance with specifications.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work</p>

- include:

Tools and equipment:

RANGE STATEMENT

- brooms
- floats
- hoses
- screeds
- shovels
- trowels
- wheelbarrows
- may include:
 - concrete mixers
 - grinders
 - polishers
 - power trowels
 - rollers
 - water blasters.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials:

- include concrete
- may include:
 - acid solutions for cleaning and etching
 - bonding agents
 - chemical stains
 - curing compounds
 - surface retardants.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Resurfacing:

- includes:
 - placement of concrete
 - standard finishing techniques
- may include decorative finishes.

Preparation techniques include:

- abrasive blasting (sand or grit)
- acid etching
- chemical staining

RANGE STATEMENT

- Curing agents* include:
- grinding
 - polishing
 - scabbling.
- Curing techniques* include:
- acrylic co-polymers
 - resin-based compounds
 - silicate compounds
 - water
 - water-based compounds.
- Curing techniques* include:
- curing agents
 - hosing
 - plastic film
 - ponding
 - sprinklers.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete repairing materials and techniques
- concrete structures
- control joints
- formwork and reinforcement
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- mortar mix composition and additives
- placing and finishing of concrete
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- remove a section or whole defective area, cleaning and preparing the effected area and applying the necessary bonding
- identify and apply the correct rectification method and top coat to a minimum of one square metre of affected area for three of the minor repairs and one major repair listed in the range statement.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to repairing concrete
- relevant Australian standards
- safe work procedures relating to repairing

RANGE STATEMENT

	concrete
	<ul style="list-style-type: none"> • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • lighting • power cables, including overhead service trays, cables and conduits • restricted access barriers • surrounding structures • traffic control • trip hazards • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.

RANGE STATEMENT

<i>Tools and equipment</i> include:	<ul style="list-style-type: none">• brooms• concrete mixers• floats• grinders• hoses• polishers• power trowels• rollers• screeds• shovels• trowels• water blasters• wheelbarrows.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Cut and core concrete.	<p>2.1. Cutting and coring requirements are identified and assessed.</p> <p>2.2. Equipment for sawing and drilling is selected according to the task.</p> <p>2.3. Sawn joint is cut to specifications and job requirements.</p> <p>2.4. Sawn joint is cut in to penetrate to specified depth.</p> <p>2.5. Cored hole is drilled to specifications and job requirements.</p> <p>2.6. Cored hole is drilled clear through the concrete to the specified diameter.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete cutting and coring techniques
- control joints
- cooling drills and saws
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)

REQUIRED SKILLS AND KNOWLEDGE

- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of joint requirements
- quality requirements
- substructure construction
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete saw cutting a construction joint to a minimum of 3 metres straight or to the set line, to job specifications
- core a hole in a designated surface, clear through a minimum of 100mm in depth, to job specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies

- safe work procedures relating to coring concrete

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

RANGE STATEMENT

Tools and equipment:

- include:
 - concrete drilling equipment
 - concrete saws
 - coring equipment
 - diamond tip drill bits
- may include:
 - bolt cutters
 - hoses
 - measuring tapes
 - nips.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials:

- include water as a cooling agent
- may include other specialist cooling agents.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Cutting and coring activities include being applicable to:

- columns
- commercial buildings
- driveways
- foundations
- gutters
- hardstands
- kerbs
- pathways
- pits
- plinths
- residential buildings
- slabs
- walls.

Cutting of concrete includes:

- anti-cracking joints
- articulation joints
- construction joints
- control joints

RANGE STATEMENT

	<ul style="list-style-type: none">• expansion and contraction joints• joining new concrete components• structural joints.
<i>Coring</i> of concrete includes:	<ul style="list-style-type: none">• providing for fixtures• providing holes to accommodate services• testing core samples.
<i>Saw</i> types include:	<ul style="list-style-type: none">• hand held• walk behind.
<i>Drill</i> types include:	<ul style="list-style-type: none">• diamond tip drills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Set out and prepare formwork for panel.	<p>2.1. Location and size of tilt panel are set out to requirements of job drawings and specifications.</p> <p>2.2. Casting bed formwork is erected to specifications.</p> <p>2.3. Edge formwork is prepared, placed and fixed with plumb and alignment to specification requirements and set out.</p> <p>2.4. Form release agent is applied to formwork with mop or brush and to specifications.</p> <p>2.5. Bond breaker is applied to casting bed face or casting form face of previous panel to induce ease of panel separation.</p>
3. Place and tie reinforcement and cast in fittings.	<p>3.1. Reinforcement, accessories and cast-in fittings are checked for conformity with design and engineering specifications.</p> <p>3.2. Reinforcement and accessories are positioned to engineer's drawings and engineering specifications.</p> <p>3.3. Reinforcement is tied and/or welded in correct placement in accordance with engineer's drawings and specifications.</p>
4. Place, finish and cure	<p>4.1. Concrete is evenly placed and consolidated to</p>

ELEMENT	PERFORMANCE CRITERIA
concrete.	specification using approved vibration method.
	4.2. Concrete surface is screeded and finished to specification ensuring cast-in fittings are clear.
	4.3. Curing process is applied in accordance with specification.
	4.4. Edge formwork is stripped carefully ensuring no damage to panel.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Apply concrete using dry and wet spray process.	<p>2.1. Dry pumping and wet pumping equipment is prepared for delivery of concrete mix to spray nozzle.</p> <p>2.2. Constituent materials for spraying are selected and prepared.</p> <p>2.3. Concrete is applied to the surface using wet spray method or dry spray method within specified tolerances.</p> <p>2.4. Sprayed concrete is shaped and finished to the form required in accordance with specifications.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete placement
- concrete spray finishing techniques
- curing practices and durations
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)

REQUIRED SKILLS AND KNOWLEDGE

- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- specified finishes
- sprayed concrete materials
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply and finish wet or dry spray concreting methods for a minimum of 10 square metres to job specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to spray finished concreting
- relevant Australian standards
- safe work procedures relating to spray finished concreting
- signage
- verbal, written and graphical instructions
- work bulletins

RANGE STATEMENT

Planning and preparation include:

- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- compressed air delivery systems
- normal concreting tools
- portable water supply
- pumps

RANGE STATEMENT

	<ul style="list-style-type: none"> • steel floats • transport pipes • wood floats.
<i>Quality requirements</i> include:	<ul style="list-style-type: none"> • internal company quality policy and standards • manufacturer specifications, where specified • relevant regulations, including Australian standards • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • additives • aggregates • cements • curing compounds • fibres • pre-bagged materials • ready mix materials • site batching.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater management • vibration • waste management.
<i>Dry pumping and wet pumping:</i>	<ul style="list-style-type: none"> • differ in the level of rigidity and workability in respect of the project to be undertaken.
<i>Wet spray method:</i>	<ul style="list-style-type: none"> • includes: <ul style="list-style-type: none"> • a pre-mix of cement and aggregate being delivered to the spray nozzle and then combined with a powerful stream of compressed air using a wet spray machine • may include: <ul style="list-style-type: none"> • large scale projects • vertical sections devoid of formwork shuttering.
<i>Dry spray method:</i>	<ul style="list-style-type: none"> • includes: <ul style="list-style-type: none"> • cement and aggregate mix being delivered dry to the spray nozzle where water is then added and combined with a powerful stream of compressed air using a dry spray machine • may include: <ul style="list-style-type: none"> • dense compact repairs

RANGE STATEMENT

Concrete surfaces where <i>spray methods</i> may be applied include:	<ul style="list-style-type: none">• intricate work• overhead repairs• allows stop start applications.• barrel vaulting• caissons• canal linings• diaphragm walls• drainage channels• irrigation• piled wall facings• reservoirs• retaining walls• shell roofs and domes• silo structures• swimming pools• tunnel linings• walls• water towers.
<i>Sprayed concrete</i> may be installed:	<ul style="list-style-type: none">• to formwork or non-rigid formwork such as hessian, expanded metal reinforcement or other backgrounds to maximise adhesion.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to plan, prepare and place high performance concrete to structures requiring high strength attributes and durability, such as bridges, airport runways, dams, cooling towers, foundation supports for high rise facilities, roadways and tunnels.

The unit also includes the finish of high performance concrete.

Application of the Unit

Application of the unit

This unit of competency supports the attainment of the understanding and skills to carry out high performance concreting, which may include working with others and as a member of a team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Place high performance concrete.	<p>2.1. Concrete tests for each specified performance property are performed in accordance with specifications and associated testing standards.</p> <p>2.2. High performance concrete is transported and discharged correctly into formwork, using correct mechanical or manual handling techniques and processes.</p> <p>2.3. High performance concrete is placed by technique nominated in specifications to ensure timely placement and to avoid material segregation.</p> <p>2.4. High performance concrete is placed, compacted/vibrated and screeded to the nominated criteria into designated formwork according to specifications and supporting drawings.</p> <p>2.5. High performance concrete is finished to specified thickness and height.</p> <p>2.6. High performance concrete curing regime is documented and applied as per specifications to include a selection of curing methods.</p> <p>2.7. Concrete is protected from damage and pollution during construction.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- high performance concrete materials
- high performance concreting techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- placement, finishing and curing
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- strength and performance of concrete
- substructure construction
- testing techniques
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete planning, preparation, placement, finishing and curing of 10 square metres of high performance concrete to engineer's specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

- include:
 - bull floats

RANGE STATEMENT

- composite floats
- immersion vibrators
- magnesium floats
- power floats
- rakes
- screed boards
- shovels
- steel trowels
- vibrating screeds
- may include:
 - bolt cutters
 - brooms
 - concrete kibbles
 - curing compounds applicators
 - edging tools
 - measuring tapes
 - nips
 - tarpaulins and covers
 - tremmies
 - wheelbarrows
 - wooden floats.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials:

- include high performance concrete
- may include:
 - curing compounds
 - a range of specialist additives.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

High performance concrete:

- is defined as a concrete that possesses strength grades greater than 50 megapascal (MPa) or other high performance parameters as designated, nominating as required by the

RANGE STATEMENT

prefix 'S' for compressive strength grades, 'SF' for flexural strength grades and 'ST' for indirect tensile strength grades

- includes applications, such as:
 - airport runways
 - bridges
 - columns
 - cooling towers
 - dams
 - foundation supports for high rise facilities
 - foundations
 - gutters
 - hardstands
 - kerbs
 - pathways
 - pits
 - plinths
 - roadways
 - slabs
 - stairs
 - tunnels
 - walls.

Concrete placing methods include:

- kibble
- pumping equipment
- shovelling
- tremmies
- truck placed
- vibrating
- wheelbarrows.

Compaction or vibration methods include:

- all forms of mechanical vibration, both internal and external.

Screeding:

- includes a hand screed
- may include:
 - a mechanical vibrating screed
 - magic screeds.

Finishing techniques include:

- broom finished
- brushed
- bull float

RANGE STATEMENT

- Concrete protection* includes:
- mechanical trowelling machine
 - steel trowel
 - wood float.
 - plastic membrane.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Set out and prepare slip/jump form location.	<p>2.1. Location and size of pour are set out to requirements of job drawings and specifications.</p> <p>2.2. Equipment associated with the installation of slip/jump concrete projects is prepared.</p> <p>2.3. Edge formwork is prepared, placed and fixed with plumb and alignment to specification requirements and set out.</p> <p>2.4. Form release agent is applied to slip/jump formwork with appliance or machine to specifications.</p>
3. Place and tie reinforcement and cast-in fittings.	<p>3.1. Reinforcement, accessories and cast-in fittings are checked for conformity with design and specifications.</p> <p>3.2. Reinforcement and accessories are positioned to engineer's drawings and specifications.</p> <p>3.3. Reinforcement is tied and/or welded in correct placement in accordance with engineer's drawings and specifications.</p>
4. Place, finish and cure concrete.	<p>4.1. Sequencing of concrete placement is determined in accordance with specifications.</p> <p>4.2. Concrete is transported and evenly placed into formwork in layers and consolidated, avoiding</p>

ELEMENT	PERFORMANCE CRITERIA
	material segregation to specification using approved compaction method.
	4.3. Concrete surface is screeded and finished to specification ensuring cast-in fittings are clear.
	4.4. Curing process is applied in accordance with specification.
	4.5. Slip/jump formwork is progressed by riggers and placement cycle is continued, avoiding cold joint.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools,

REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- placing, finishing and curing concrete
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- sequencing and cold joints
- slip/jump form vertical concrete materials and techniques
- slip/jump formwork and reinforcing componentry
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete planning, preparation, reinforcement placement and installation of block out; installation of cast in fittings; and sequencing, placing, finishing and curing concrete minimising cold joint and undertaking compaction of concrete for one slip (or jump) of form to engineer's specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. 	<ul style="list-style-type: none"> • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • lighting • power cables, including overhead service trays, cables and conduits • restricted access barriers • surrounding structures • traffic control • trip hazards • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.

RANGE STATEMENT

Tools and equipment:

- include:
 - hydraulic accessories
 - measuring tapes and rules
 - nips
 - shovels
 - slip/jump forms
 - spanners
 - steel fixing reels
 - vibrators
- may include:
 - air compressors and hoses
 - hammers
 - nail guns
 - power drills
 - power leads
 - power saws
 - rakes
 - saw stools
 - scaffolding
 - screed boards
 - spirit levels
 - squares
 - wheelbarrows.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials include:

- cast-in fittings
- concrete
- foam
- release agents
- steel mesh.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

RANGE STATEMENT

<i>Slip/jump concreting</i> is conducted:	<ul style="list-style-type: none"> • in conjunction with other team members involved in the slip/jump form process, including concreters, carpenters, riggers, steel fixers and electricians.
<i>Formwork</i> includes:	<ul style="list-style-type: none"> • steel or timber slip/jump construction.
<i>Reinforcement</i> components include:	<ul style="list-style-type: none"> • ligatures • mesh • reinforcement bars and rods.
<i>Cast-in fittings</i> include:	<ul style="list-style-type: none"> • services and fixtures tied to the reinforcement.
<i>Sequencing</i> includes:	<ul style="list-style-type: none"> • minimisation of cold joint • timing and placement of concrete • vibrating to specified compaction.
<i>Transporting</i> of concrete for slip/jump form work includes:	<ul style="list-style-type: none"> • crane and kibble • on-site production • pre-mix truck.
<i>Placing</i> methods for concrete include:	<ul style="list-style-type: none"> • kibble • pumping equipment • shovelling • tremmies • truck placed • vibrating.
<i>Curing</i> includes:	<ul style="list-style-type: none"> • applied moisture • coating with a membrane • curing compounds • flooding • plastic sheeting • steam.
<i>Slip/jump formwork</i> includes:	<ul style="list-style-type: none"> • formwork which is initially erected and then continuously moved (slipped/jumped) up to its eventual completion point as a whole system.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to conduct concrete boom delivery operations, using a vehicle-borne pumping system, in support of construction projects. It covers systems with a minimum of two boom stages.

The unit covers planning and preparation for work; the conduct of operational checks; the safe and effective operation of the vehicle and pumping system; the safe establishment, use and monitoring of the boom distribution system; and the conduct of operator maintenance and work finalisation activities.

Application of the Unit

Application of the unit This unit of competency supports the attainment of the understanding and skills to conduct concrete boom delivery operations, which may include working with others and as a member of a team.

Licensing/Regulatory Information

Not Applicable

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Conduct boom delivery system pre-operational checks.	<p>2.1. Pre-start, start up, park and shut down procedures are carried out on the vehicle and pump in accordance with manufacturer and/or site specific requirements.</p> <p>2.2. Vehicle controls and functions, including steering, brakes and manoeuvrability are checked for serviceability and any faults are rectified or reported.</p> <p>2.3. Distribution system components, including boom components, lines, hoses and adaptors are checked before use.</p> <p>2.4. Hoppers are cleaned and serviced prior to use.</p>
3. Operate concrete boom delivery vehicle.	<p>3.1. Site hazards associated with vehicle operations are identified and safe operating techniques are used to minimise risk.</p> <p>3.2. Engine power is managed to ensure efficiency of concrete pump vehicle platform movements and to minimise damage to engine and gears.</p> <p>3.3. Engine power is coordinated with gear selection ensuring smooth transition and operation within torque range.</p> <p>3.4. Truck is operated to work instructions in accordance</p>

ELEMENT**PERFORMANCE CRITERIA**

	with company operating procedures.
	3.5. Road and traffic conditions are constantly monitored, taking into account road standards, traffic flow, distance and load, ensuring no injury to people or damage to property, equipment, loads and facilities.
	3.6. Truck is brought to a halt smoothly, minimising wear and tear on vehicle using the engine retarder, gears and brakes.
4. Deliver concrete.	<p>4.1. Site hazards associated with positioning of boom delivery components are identified and analysed and safe operating techniques are used to minimise risk.</p> <p>4.2. Boom delivery vehicle is positioned at site where it can best service the delivery task and provide access to concrete supply vehicles.</p> <p>4.3. Delivery platform stabilisers are prepared, deployed and checked to manufacturer requirements for operation and safety.</p> <p>4.4. Delivery system components, including booms, lines and adaptors, are positioned securely and safely, in accordance with manufacturer specifications, and checked prior to use.</p> <p>4.5. Pumping systems are test run and prepared for use in accordance with equipment specifications.</p> <p>4.6. Supply of bulk concrete mix to the hopper is coordinated safely with the supply vehicle operators.</p> <p>4.7. Boom delivery system is operated and its positioning is varied to maintain concrete delivery to the required destination.</p> <p>4.8. Boom delivery system is safely withdrawn at completion of delivery task.</p>
5. Carry out operator maintenance.	<p>5.1. Boom delivery vehicle is safely parked, prepared for maintenance and shut down as per manufacturers' manual and organisational requirements.</p> <p>5.2. Inspection and fault finding on the vehicle, pump and boom system components are conducted in accordance with manufacturer specifications and organisational requirements.</p> <p>5.3. Defective parts are removed and replaced safely and effectively according to manufacturers' manual and organisational requirements.</p> <p>5.4. Regular programmed maintenance tasks are carried out in accordance with manufacturer and</p>

ELEMENT	PERFORMANCE CRITERIA
6. Clean up.	<p>organisational requirements.</p> <p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with project environmental management plan.</p> <p>6.2. Vehicle, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- boom and line establishment techniques
- concrete boom delivery vehicle systems, characteristics, technical capabilities and limitations
- construction activity sequences related to bulk concreting operations
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials handling methods
- operational, maintenance and basic diagnostic procedures
- overhead safety requirements related to boom operations
- processes for interpreting engineering drawings and sketches
- pumps and pumping system operations
- quality requirements
- safe operating techniques in all terrain
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- state or territory regulatory requirements related to boom delivery system operations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- communicate and work effectively and safely with others
- conduct concrete boom delivery truck system operations, to be performed over not less than three shifts at two different sites and to include:
 - positioning of the vehicle
 - preparation and positioning of the booms and lines
 - preparation of the pump and hopper
 - coordination of maintenance of hopper levels
 - delivery of concrete to required location on work site
 - variation of the boom delivery system positioning to meet changing requirements
 - withdrawal of the boom delivery system
 - application of emergency procedures
 - conduct of authorised operator maintenance.

Context of and specific

This competency is to be assessed using standard

EVIDENCE GUIDE

resources for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to concrete boom delivery vehicle systems operations and the environment
- relevant Australian standards
- safe work procedures relating to concrete boom delivery vehicle systems operations and the environment
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control

RANGE STATEMENT

	<ul style="list-style-type: none"> • trip hazards • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
Tools and equipment include:	<ul style="list-style-type: none"> • hand tools and maintenance equipment associated with the particular concrete boom delivery vehicle system.
Quality requirements include:	<ul style="list-style-type: none"> • internal company quality policy and standards • manufacturer specifications, where specified • relevant regulations, including Australian standards • workplace operations and procedures.
Environmental requirements include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater management • vibration • waste management.
Vehicles:	<ul style="list-style-type: none"> • are purpose built vehicles which may vary in size • have 2 to 4 boom stages • have pumping systems that may have integral or independent power sources.
Delivery systems:	<ul style="list-style-type: none"> • are generally linked to a hopper, which is in turn supplied from secondary delivery sources or vehicles.
Concrete delivery systems:	<ul style="list-style-type: none"> • include: <ul style="list-style-type: none"> • boom mounted conveyors • lines • may include adaptors.
Concrete mixes vary in water content and in order from wet to dry and include:	<ul style="list-style-type: none"> • block-fill • pool-mix • topping • slab • footing • curb and guttering.

RANGE STATEMENT

Operator *maintenance*:

- includes:
 - authorised servicing
 - cleaning
 - monitoring, recording and reporting faults
- may include:
 - conducting authorised minor replacements
 - providing assistance to maintenance personnel during maintenance and repair activities.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Slump test concrete.	<p>2.1. Standard slumping cone is cleaned in preparation for slump testing.</p> <p>2.2. Sample of concrete, using the correct sampling procedure, is taken directly from the delivery truck's initial discharge.</p> <p>2.3. Slumping cone is placed on a steel tray and cone is filled to one third of its capacity.</p> <p>2.4. Concrete is compacted by rodding 25 times in an even pattern with a steel rod.</p> <p>2.5. Slumping cone is filled to two thirds its capacity and rodding 25 times is applied to penetrate the previous layer.</p> <p>2.6. Slumping cone is filled to overflowing and rodding 25 times is applied to penetrate the previous layer.</p> <p>2.7. Slumping cone is levelled off with the steel rod and surplus concrete is cleared from steel plate and slumping cone.</p> <p>2.8. Slumping cone is raised without moving the sample.</p> <p>2.9. Sample is measured against height of the slumping cone for conformity.</p> <p>2.10. Collapsed or sheared samples are recorded.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation,</p>

ELEMENT**PERFORMANCE CRITERIA**

regulations, codes of practice and job specification.

3.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

3.3. Work completion procedures are applied and relevant personnel notified that work is finished.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- properties of concrete (strength, water content ratio, transportation, placement, compaction and curing)
- quality requirements
- relevant Acts, regulations and codes of practice
- slump testing techniques
- slump testing tools and equipment types, characteristics, uses and limitations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete three slump tests from different batches in accordance with specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to slump testing concrete
- relevant Australian standards
- safe work procedures relating to slump testing concrete
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

RANGE STATEMENT

Planning and preparation
include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
 - handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
 - hazard control
 - hazardous materials and substances
 - organisational first aid
 - PPE prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - use of firefighting equipment
 - use of tools and equipment
 - workplace environmental requirements and safety.
- Tools and equipment:***
- include:
 - bullet nosed rod (600mm x 16mm)
 - sampling scoops
 - standard slump cones

RANGE STATEMENT

- steel rule
- steel slump plate (500mm x 500mm)
- may include:
 - brushes
 - buckets
 - sponges
 - trowels, including steel trowels
 - wooden floats.
- Quality requirements*** include:
 - internal company quality policy and standards
 - manufacturer specifications, where specified
 - relevant regulations, including Australian standards
 - workplace operations and procedures.
- Environmental requirements*** include:
 - clean-up management
 - dust and noise
 - vibration
 - waste management.
- Slump testing:***
 - is successful when the sample remains true and does not collapse or shear
 - if initial test fails, a second test must be undertaken, if that also fails the batch should be rejected.
- Sampling:***
 - includes that taken at initial discharge (after 0.2 square metre of the load has been placed)
 - may include routine samples taken at three places during the load
 - requires a standard slumping cone 200mm in diameter at the base, 100mm in diameter at the top and 300mm tall, with foot pieces for standing on while the sample is added.
- Rodding*** includes:
 - pushing a steel rod in and out of the concrete to compact it into the slump cone, 25 times for each layer applied.
- Measuring*** includes:
 - a steel rule placed in the centre of the sample to which the conformity of the slump is tested.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Conduct machine pre-operational checks.	<p>2.1. Pre-start, start up, park and shut-down procedures are carried out in accordance with manufacturer and site specific requirements.</p> <p>2.2. Vehicle controls and functions, including steering, brakes and manoeuvrability, are checked for serviceability and any faults are rectified or reported.</p> <p>2.3. Agitator controls and functions are checked for serviceability and any faults are rectified or reported.</p>
3. Operate the agitator truck.	<p>3.1. Site hazards associated with truck operations are identified and safe operating techniques are used to minimise risk.</p> <p>3.2. Engine power is managed to ensure efficiency of concrete agitator truck movements and to minimise damage to the engine and gears.</p> <p>3.3. Engine power is coordinated with gear selection ensuring smooth transition and operation within torque range.</p> <p>3.4. Truck is operated to work instructions in accordance with company operating procedures.</p> <p>3.5. Road and traffic conditions are constantly monitored taking into account road standards, traffic flow,</p>

ELEMENT	PERFORMANCE CRITERIA
	distance and load, ensuring no injury to people or damage to property, equipment, loads and facilities.
	3.6. Truck is brought to a halt smoothly, minimising the wear and tear on vehicle using the engine retarder, gears and brakes.
4. Load, transport and discharge concrete.	<p>4.1. Concrete agitator truck is positioned at load and discharge points with a minimum of manoeuvres.</p> <p>4.2. Concrete agitator truck is loaded to within authorised carrying capacity of concrete mixes to suit the site and task conditions.</p> <p>4.3. Concrete agitator truck is moved from loading to discharge point safely and smoothly avoiding surge and sway.</p> <p>4.4. Concrete is discharged in accordance with task specifications.</p> <p>4.5. Discharge systems, including chutes and adaptors, are monitored and maintained throughout the operations.</p>
5. Carry out driver maintenance.	<p>5.1. Concrete agitator truck is safely parked, prepared for maintenance and shut down as per manufacturers' manual and organisational requirements.</p> <p>5.2. Inspection and fault finding are conducted in accordance with manufacturer specifications and organisational requirements.</p> <p>5.3. Defective parts are removed and replaced safely and effectively according to manufacturers' manual and organisational requirements.</p> <p>5.4. Regular programmed maintenance tasks are carried out in accordance with manufacturer and organisational requirements.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with project environmental management plan.</p> <p>6.2. Vehicle, bowl, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- concrete agitator truck systems, characteristics, technical capabilities and limitations
- construction activity sequences related to concreting operations
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)

REQUIRED SKILLS AND KNOWLEDGE

- materials handling methods
- operational, maintenance and basic diagnostic procedures
- processes for interpreting engineering drawings and sketches
- quality requirements
- safe operating techniques in all terrain
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- state or territory regulatory requirements related to concrete agitator truck operations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- communicate and work effectively and safely with others
- conduct concrete agitator truck operations, to be performed over not less than three shifts and two different sites and are to include the tasks of:
 - positioning vehicle at the load point
 - loading and transporting concrete
 - discharging concrete at work site to specification
 - discharging directly to site
 - discharging to wheelbarrow and hopper
 - applying emergency procedures
 - conducting authorised operator maintenance.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos

RANGE STATEMENT

Planning and preparation include:

- regulatory and legislative requirements pertaining to operation of concrete agitator trucks on construction sites
- relevant Australian standards
- safe work procedures relating to operation of concrete agitator trucks on construction sites
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- hazards and risks including uneven/unstable terrain, trees, fires, overhead services, bridges, buildings, excavations, traffic, embankments, structures and hazardous materials
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards

RANGE STATEMENT

	<ul style="list-style-type: none"> • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • safe parking practices, including ensuring access ways are clear, equipment/ machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • hand tools and maintenance equipment associated with the particular concrete agitator truck.
<i>Quality requirements</i> include:	<ul style="list-style-type: none"> • internal company quality policy and standards • manufacturer specifications, where specified • relevant regulations, including Australian standards • workplace operations and procedures.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater management • vibration • waste management.
<i>Agitator controls:</i>	<ul style="list-style-type: none"> • are related to speed, revolutions, forward and return • may be air, mechanical or electrically actuated.
<i>Discharge points:</i>	<ul style="list-style-type: none"> • include: <ul style="list-style-type: none"> • directly to site • into a wheelbarrow and hopper • may include into a kibble.
<i>Concrete mixes:</i>	<ul style="list-style-type: none"> • may be relatively dry or increasingly wet • in order, from wet to dry • will include block-fill, pool mix, topping, slab, footing and kerb and guttering.
<i>Discharging concrete</i> means:	<ul style="list-style-type: none"> • movement of concrete from the agitator truck by mechanical/gravity feed through chutes and adaptors of varying sizes.

RANGE STATEMENT

Maintenance:

- includes:
 - authorised servicing
 - cleaning
 - monitoring, recording and reporting faults
- may include:
 - conducting authorised minor replacements
 - providing assistance to maintenance personnel during maintenance and repair activities.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify demolition tools and equipment.	<p>2.1. Types and functions of demolition tools and equipment to be used in the demolition process are identified, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>2.2. Methods of operation of demolition tools and equipment are identified from specifications, standards and manufacturers' instructions.</p> <p>2.3. Specific OHS requirements for the identified demolition tools and equipment are identified and applied.</p>
3. Use tools and equipment.	<p>3.1. Identified tools and equipment consistent with the requirements of the job, including personal protective equipment (PPE), are selected and checked for serviceability, and any faults are reported and/or rectified.</p> <p>3.2. Work area is prepared for the use of demolition tools and equipment.</p> <p>3.3. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed in accordance with manufacturer recommendations.</p> <p>3.4. Tools and equipment are used for their intended purpose in the performance of demolition tasks in accordance with regulations, standards, codes of practice and workplace requirements.</p> <p>3.5. Tools and equipment are safely located when not in immediate use.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with</p>

ELEMENT**PERFORMANCE CRITERIA**

manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- applications of portable power tools, hand tools and equipment applicable to demolition tasks
- general construction terminology
- hazards associated with the use of demolition tools and equipment
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measurement and calculation
- method of operation and maintenance requirements of demolition tools and equipment
- plans, drawings and specifications
- quality requirements
- techniques associated with the use of demolition tools and equipment
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- communicate and work effectively and safely with others
- follow work instructions, operating procedures and inspection practices to safely and effectively use the listed demolition tools and equipment for their appropriate application, ensuring:
 - there is no damage to tools or equipment
 - all work is completed to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the use of demolition tools and equipment
- relevant Australian standards

RANGE STATEMENT

Planning and preparation include:

- safe work procedures relating to the use of demolition tools and equipment
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- identification, selection, preparation and application of demolition tools and equipment for demolition tasks
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including asbestos, lead-based paints, dust, pesticide residue, animal residue and the safe handling or quarantining procedures for each
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - equipment tagging
 - fall protection
 - identification and preparation of access and egress points
 - identification of equipment guarding and cut-off switches
 - lighting
 - power cables, including overhead service trays, cables and conduits

RANGE STATEMENT

- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Environmental requirements
include:

- clean-up management
- dust and noise
- sedimentation control
- vibration
- waste management.

Tools and equipment:

- include:
 - angle grinders
 - barricades
 - bars (crow and pinch)
 - bolt cutters
 - brooms
 - chisels
 - concrete saws
 - electric testers
 - hacksaws
 - hammers
 - handsaws
 - picks and mattocks
 - pliers
 - pneumatic tools
 - power drills and saws
 - quick cut saws
 - safety and fall prevention equipment
 - scaffolds
 - shovels and spades
 - signs

RANGE STATEMENT

Preparation of work areas
includes:

- sledge hammers
- spanners and wrenches.
- communication with those who may be affected by the demolition task
- erection of scaffolding
- identification of positions of hoses and cables clear of hazards
- installation of supports and bracing
- location of signage and barricades
- provision for site safety.

Demolition tasks may be performed:

- at ground level
- at height
- in a confined space
- on a new construction site or an existing structure being renovated or extended which involves the complete or partial removal of components
- over water
- under water
- underground.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment are selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare demolition site.	<p>2.1. Requirements of site demolition plan are interpreted in accordance with workplace procedures.</p> <p>2.2. Audit of property/dilapidation survey is conducted to determine condition of work site and surrounds prior to work commencing.</p> <p>2.3. Confirmation is obtained from supervisor and regulatory authorities that all existing services have been disconnected.</p> <p>2.4. Hazardous material is identified for separate handling in accordance with workplace requirements and instructions.</p> <p>2.5. Fall protection devices are installed in accordance with workplace requirements.</p>
3. Remove components.	<p>3.1. Components are removed in a directed sequence in accordance with site demolition plan and demolition method statement, standards and workplace procedures.</p> <p>3.2. Removed components are relocated to storage or disposal area in accordance with workplace requirements.</p> <p>3.3. Materials and building components parts are safely and effectively handled using selected material handling techniques.</p> <p>3.4. Materials and components identified for salvaging are handled, stored and stacked ready for transport in accordance with standard material handling practices and workplace procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given a site demolition plan and instructions, remove fixtures and fittings, a pitched metal/tiled roof, trusses, ceiling, external and internal walls, floor and floor support system of a two storey house and clean up, disposing or salvaging materials, ensuring:
 - correct identification of requirement and conduct of the demolition
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies

 - signs
 - sledge hammers
 - spanners and wrenches
 - water hoses and attachments
 - wheelbarrows.

Environmental requirements

- clean-up management

RANGE STATEMENT

include:

- dust and noise
- sedimentation control
- vibration
- waste management.

Site demolition plan:

- documents the demolition process and safe work practices.

Manual **demolition** processes include:

- dismantling or demolishing and removing materials and component parts of a building using only hand tools and small plant and equipment.

Demolition tasks may be performed:

- at ground level
- at height
- in a confined space
- on a new construction site or an existing structure being renovated or extended which involves the complete or partial removal of components
- over water
- under water
- underground.

Audit and preparation of work areas include:

- assessment of condition of property and surrounds
- communication with those who may be affected by demolition task
- erection of scaffolding
- identification of hazardous materials
- identification of positions of hoses and cables clear of hazards
- installation of supports and bracing
- location of signage and barricades
- provision for site safety.

Services include:

- computer and communication
- electricity
- gas
- telephone
- water.

Building components include:

- concrete and masonry areas:
 - edge strips
 - pads
 - paths
 - retaining walls and fences

RANGE STATEMENT

- slabs
- external sections of buildings:
 - attached structures, carports and sheds
 - non-load bearing walls
 - patios and decks
- fixtures and fittings
- internal sections of buildings:
 - built-in components
 - ceilings
 - cladding
 - flooring
 - load bearing and non-load bearing partition walling
 - wet area components.

CPCCOHS2001A

Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant and tools and equipment are selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare demolition site.	<p>2.1. Requirements of site demolition plan are interpreted in accordance with workplace procedures.</p> <p>2.2. Structural engineering certificate for floor loadings is obtained and checked for plant and equipment use.</p> <p>2.3. Audit of property/dilapidation survey is conducted to determine condition of work site and surrounds prior to work commencing.</p> <p>2.4. Confirmation is obtained from supervisor and regulatory authorities that all existing services have been disconnected.</p> <p>2.5. Hazardous material is identified for separate handling in accordance with workplace requirements and instructions.</p> <p>2.6. Fall protection devices are installed and anchored/secured in accordance with workplace requirements.</p> <p>2.7. Mechanical equipment and plant are positioned in operating locations and appropriate exclusion zone and traffic control are arranged.</p>
3. Demolish structure.	<p>3.1. Mechanical plant is operated in accordance with manufacturer specifications, standards and workplace procedures to carry out demolition process.</p> <p>3.2. Direction and assistance is provided to plant operators in accordance with workplace procedures during the demolition process.</p> <p>3.3. Measures are used to reduce dangerous and</p>

ELEMENT	PERFORMANCE CRITERIA
	environmental hazards of fire, dust, noise and vibration in accordance with regulations, standards and workplace requirements.
4. Remove materials from site.	<p>4.1. Materials and debris are removed from demolition area according to demolition method statement and workplace procedures.</p> <p>4.2. Re-usable and recyclable materials are salvaged and stored in accordance with workplace procedures.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools,

REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- hazards associated with the conduct of mechanical demolition tasks
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measurement and calculation
- method of operation and maintenance requirements of demolition plant and equipment
- plans, drawings and specifications
- quality requirements
- techniques associated with the conduct of mechanical demolition processes
- types, characteristics, uses and limitations of plant and equipment involved in the conduct of mechanical demolition processes
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given a site demolition plan and instructions, using an excavator and selected attachments, knock down a single storey building, relocating salvage on site for later removal and disposal of debris and waste, ensuring:
 - correct identification of requirement and conduct of the demolition
 - correct selection and use of appropriate processes, plant and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions,

RANGE STATEMENT

	<ul style="list-style-type: none"> where specified • MSDS • memos • regulatory and legislative requirements pertaining to the conduct of mechanical demolition processes • relevant Australian standards • safe work procedures relating to the conduct of mechanical demolition processes • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances, including asbestos, lead-based paints, dust, pesticide residue, animal residue and the safe handling or quarantining procedures for each • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • falling objects • lighting • plant movement • power cables, including overhead service trays, cables and conduits

RANGE STATEMENT

- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of tools and equipment
- workplace environmental requirements and safety.

Plant:

- may be fitted with:
 - buckets, including 4 in 1 buckets
 - grabs
 - pulverisers
 - rippers
 - rock breakers
 - shears
- may include:
 - vibrating plates.

Tools and equipment include:

- angle grinders
- barricades
- bars (crow and pinch)
- bolt cutters
- brooms
- compressors
- concrete saws
- electric testers
- picks and mattocks
- pneumatic picks and rock breakers
- power drills and saws
- quick cut saws
- shovels and spades
- signs
- sledge hammers
- wheelbarrows.

Environmental requirements
include:

- clean-up management
- dust and noise
- sedimentation control

RANGE STATEMENT

<i>Audit:</i>	<ul style="list-style-type: none"> • vibration • waste management. • is in accordance with: <ul style="list-style-type: none"> • site demolition plan, which documents the demolition process and safe work practices • may include: <ul style="list-style-type: none"> • assessment of condition of property and surrounds • communication with those who may be affected by the demolition task • determination of floor loadings • erection of scaffolding • identification of hazardous materials • identification of position of hoses and cables clear of hazards • installation of supports and bracing • location of signage and barricades • provision for site safety.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, equipment and tools are selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare for crushing operations.	<p>2.1. Crushing plant daily schedule and the size and type of materials to be crushed are determined from work/supply schedule.</p> <p>2.2. Crushing plant is visually inspected for correct operational condition as per manufacturer requirements.</p> <p>2.3. Daily or other periodic maintenance is carried out in accordance with plant maintenance schedule and manufacturers' instructions.</p> <p>2.4. Faults are identified and corrected or reported to supervisor.</p> <p>2.5. Plant is prepared and set for initial size range of crushings.</p>
3. Operate crushing plant.	<p>3.1. Crushing plant and equipment are operated and tested for correct operation as per manufacturer specifications.</p> <p>3.2. Uncrushed materials are directed into hopper and feed of uncrushed materials is maintained according to manufacturers' instructions.</p> <p>3.3. Crushing plant is stopped, cleared of blocked materials and restarted in accordance with manufacturers' instructions and site safety plan.</p> <p>3.4. Crushing plant settings are maintained in accordance with manufacturers' instructions.</p>
4. Shut down plant.	<p>4.1. Crushing plant is shut down in accordance with manufacturers' instructions and site safety and operation plan.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Clean up.	<p>4.2. Faults identified are reported to supervisor and plant is tagged in accordance with workplace procedures.</p> <p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Replaces unit CPCCDE3012A Encapsulate and remove asbestos

Not equivalent

Unit Descriptor

This unit of competency specifies the outcomes required to remove non-friable asbestos containing material (ACM). The unit includes preparing, containing and removing non-friable ACM, and includes knowledge of decontamination and disposal requirements.

Application of the Unit

Site location for work may be either domestic or commercial, and may be a demolition site, a new work site or an existing structure being renovated, extended, restored or maintained.

Project sites may be construction sites and may also include ships, soils in relation to the non-friable asbestos removal process, and fences.

Licensing/Regulatory Information

Occupational licenses are required nationally.

Work must be completed according to relevant legislative, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures.

Regulatory mechanisms apply to this unit. This unit is required for all ACM removal workers engaged in the removal of non-friable ACM. Candidates are advised to check for regulatory requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|---|---|
| 1 | Prepare for asbestos removal. | <p>1.1 Work instructions and asbestos removal control plan (ARCP) are obtained and confirmed for preparation purposes.</p> <p>1.2 <i>Safety requirements</i> and data gathered from an on-site assessment, an asbestos register where available, and other information sources are used to prepare for a safe and compliant removal process.</p> <p>1.3 <i>Tools, equipment</i> and <i>personal protective equipment</i> (PPE) consistent with job requirements are selected to carry out tasks and checked for serviceability; and faults are rectified or reported prior to commencement.</p> <p>1.4 ARCP is accessed according to legislative and company requirements, and understood.</p> |
| 2 | Prepare asbestos removal area and removal site. | <p>2.1 <i>Non-friable asbestos containing materials</i> to be removed are identified, referring to the asbestos register or following clarification by an approved competent person as required and according to <i>workplace procedures</i>.</p> <p>2.2 Signage and barricade requirements are identified and implemented to delineate the work area.</p> <p>2.3 Decontamination procedure is tested according to workplace procedures.</p> <p>2.4 Materials and equipment required for removal of ACM from <i>project sites</i> are identified, checked and prepared for operation.</p> <p>2.5 Processes are undertaken to ensure the safety of the site, including deactivating or securing <i>utilities</i> where</p> |

necessary prior to commencing work.

- | | | | |
|---|-------------------------------------|-----|---|
| 3 | Isolate removal site. | 3.1 | <i>Requirements to isolate the removal site</i> safely are identified from the ARCP, and implemented according to legislative and company requirements. |
| | | 3.2 | Boundaries of asbestos removal site are designated according to ARCP requirements. |
| | | 3.3 | Occupants, neighbours and other affected parties are notified according to legislation and within limits of own responsibility and the code of practice. |
| 4 | Carry out asbestos removal process. | 4.1 | <i>Asbestos is removed</i> from work area and work site as specified by the supervisor and in the appropriate manner, ensuring the safe use of tools and according to ARCP, legislative and regulatory requirements, and codes of practice. |
| | | 4.2 | Removed <i>asbestos is contained</i> , wrapped or otherwise sealed, and placed into removal bags or bins, sealed, labelled and, where loaded into a truck, the tray or skip is lined prior to removal of ACM from site according to regulatory requirements and company standards. |
| 5 | Carry out decontamination process. | 5.1 | Decontamination of the work area and tools is carried out according to workplace procedures, ARCP and regulatory requirements. |
| | | 5.2 | <i>Decontamination of asbestos removal workers is carried out</i> according to workplace procedures, ARCP and regulatory requirements. |
| | | 5.3 | Asbestos removal and decontamination equipment is removed from the area according to ARCP and regulatory requirements. |

- | | | | |
|---|---|-----|--|
| 6 | Clean up work site. | 6.1 | Work area is cleared and materials disposed of according to legislation, regulations, codes of practice and job specification. |
| | | 6.2 | Plant, tools and equipment are cleaned, decontaminated, checked, maintained, removed from the work area, and stored according to manufacturer recommendations and regulatory requirements. |
| 7 | Contribute to and use documentation in line with regulatory requirements. | 7.1 | Contribution is made within limits of own responsibility to the preparation and use of documentation for regulatory notification processes according to legislative and company requirements. |
| | | 7.2 | Steps are taken within limits of own responsibility to ensure clearance inspection requirements are met and clearance certificate is gained from a competent person or licensed asbestos assessor. |
| | | 7.3 | Contribution is made within limits of own responsibility to the preparation and use of an emergency plan according to legislative and company requirements. |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and appropriate level of language skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and apply:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
- initiative and enterprise skills to:
 - evaluate own actions and make judgements about performance and necessary improvements
 - identify and report faults in tools, equipment and materials to appropriate personnel
- planning and organising skills to:
 - set out work
 - recognise procedures, follow instructions and contribute to workplace responsibilities, such as current environmental and safety systems and the ARCP
- teamwork skills to:
 - coordinate own work with others to action tasks
 - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- self-management skills to:
 - work independently and in teams to read and interpret relevant documentation and to prepare for non-friable asbestos removal tasks according to the recommended safe work method and ARCP
 - set up the asbestos removal area and removal site according to the safe work method and ARCP
 - check, fit and use PPE, and hand and power tools safely
 - apply general WHS procedures for construction work, including:
 - identifying, avoiding and eliminating electrical hazards
 - working safely at heights and in confined spaces
 - applying safe work practices to the use of tools appropriate to ACM removal
 - handling hazardous materials safely
 - applying safe work methods for the removal of non-friable asbestos

- follow correct cleaning, decontamination and disposal procedures

Required knowledge

- range of materials manufactured using asbestos, the type of asbestos used in each material, and the usual applications associated with the material, together with an understanding of:
 - health effects caused by exposure to ACM and requirement for safe handling and removal
 - health impacts on the community and requirement for safe handling and disposal
- general WHS procedures for construction work as required, including identifying and mitigating risks
- health hazards associated with friable ACM and circumstances that may change the nature of ACM from non-friable to friable, such as:
 - weathering
 - wear and tear
 - application of tools and equipment
 - accidental damage
- licensing requirements for the use of specific equipment, such as excavators
- safe work methods for the removal of non-friable asbestos
- requirements of current legislation and standards relating to asbestos safety, and the decontamination, transport and disposal of asbestos waste
- general construction terminology
- handling requirements of differing types of asbestos materials
- hazards associated with removal processes
- work area procedures
- job safety analysis (JSA) and safe work method statements (SWMS) if required for construction
- safety data sheets (SDS)
- materials storage and hazardous waste management
- method of operation, and cleaning, use and maintenance requirements of equipment
- plans, drawings and specifications, asbestos registers and register amendments
- quality requirements relating to the removal of non-friable asbestos
- risk assessment processes and contingency planning relating to the removal of non-friable asbestos
- techniques associated with enclosing and removing asbestos
- types, characteristics, uses and limitations of plant and equipment involved in enclosing and removing asbestos
- workplace and equipment safety requirements
- purpose and application of documentation for notification; and use of ARCP and clearance inspections

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person should demonstrate the ability to:</p> <ul style="list-style-type: none"> • obtain and apply work instructions for the safe and correct removal of non-friable asbestos • set up the work area and test equipment for use in the removal process of non-friable asbestos • isolate the site prior to removal, complying with regulatory requirements • remove non-friable asbestos safely and comply with regulatory requirements • contain the ACM and ensure its handling and disposal are safe and comply with requirements • decontaminate self, work equipment, and the work site safely and correctly • complete documentation that supports the removal process within limits of own responsibility.
Context of and specific resources for assessment	<p>This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • an induction procedure and requirement • realistic tasks or simulated tasks covering the mandatory task requirements • relevant specifications and work instructions • tools and equipment appropriate to applying safe work practices • support materials appropriate to activity • workplace instructions relating to safe work practices and addressing hazards and emergencies • research resources, including industry-related systems

	<p>information</p> <ul style="list-style-type: none"> • safety data sheets. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments. <p>Validity and sufficiency of evidence requires that:</p> <ul style="list-style-type: none"> • competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace • where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge • all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence. <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Safety requirements</i> will be specified from a range of sources that include:</p>	<ul style="list-style-type: none"> • asbestos removal control plan • company policies and procedures, including: <ul style="list-style-type: none"> • accessing toilets and other amenities • managing work hours to minimise risk from tiredness • working in heat and avoiding heat stress • JSA • legislation and regulations, including the Code of Practice for the Safe Removal of Asbestos • operating manuals and specifications for materials and equipment • SWMS • asbestos register.
<p><i>Tools and equipment</i> may require separate licensing for use and may include:</p>	<ul style="list-style-type: none"> • high efficiency particulate air (HEPA) vacuum cleaners to comply with AS3544-1988 and AS4260-1997 as amended from time to time • atomiser and water spray bottles (not pressurised) • hoses and spray fittings • barricades, including tape, para-webbing and fencing • bars (crow and pinch) • bolt cutters • buckets • cold chisels • excavators • hand drills (manual and low-speed only) • fire extinguishers • hammers • hand tools (full kit) • ladders conforming to construction regulations • scaffolds • scrapers • shovels and spades • staple guns.
<p><i>Personal protective equipment</i> will be specified to the requirements of the job and must include:</p>	<ul style="list-style-type: none"> • protective clothing, such as: <ul style="list-style-type: none"> • disposable coveralls with fitted hood and cuffs • safety footwear (pull-on, not lace-up) • protective eyewear

	<ul style="list-style-type: none"> • disposable or protective gloves • correct face fitting and use of respiratory protective equipment (RPE) • respiratory protection required for the job, including class P1 and P2 face masks • spare sets of PPE.
Materials may include:	<ul style="list-style-type: none"> • approved and branded plastic bags, including heavy-duty polythene bags (200 µm minimum thickness) • duct tape • foam infill spray • acrylic paint to seal ACM • polyvinyl alcohol (PVA) adhesive as spray to seal ACM • rags or other material wipes (used once) • signs • 200 µm unused (not recycled) plastic sheeting or drop sheet.
Non-friable asbestos containing materials may include: Note: <ul style="list-style-type: none"> • Non-friable asbestos is also known as bonded asbestos • ACM notionally listed as non-friable may become friable due to weathering or damage 	<ul style="list-style-type: none"> • asbestos cement • asbestos cement moulded guttering • asbestos cement sheets • asbestos tiles • bitumastic felts and materials • adhesives and glues • compressed asbestos cement panels • floor vinyl covering • mortar • resinous backing board • sealant mastic • tape.
Workplace procedures may include:	<ul style="list-style-type: none"> • environmental requirements, such as: <ul style="list-style-type: none"> • clean-up management • dust and noise management • notification to occupants, neighbours and other affected parties • sedimentation control • vibration management • waste management, including the safe disposal of ACM • quality requirements, such as: <ul style="list-style-type: none"> • internal company quality policy and standards • manufacturer specifications • relevant regulations, including Australian standards • workplace operations and procedures.

<i>Project sites</i> may include:	<ul style="list-style-type: none"> • residential, commercial, industrial and public buildings • plant, equipment and fire boards (e.g. friction plant and gaskets) • demolition sites • electricity supply authority or work site • fences • ships and other forms of transport • sites for new building development.
<i>Utilities</i> may include:	<ul style="list-style-type: none"> • air conditioning • electricity • water services.
<i>Requirements to isolate the removal site:</i>	<ul style="list-style-type: none"> • will reflect the nature of the site • must comply with legislative requirements and the ARCP • may include: <ul style="list-style-type: none"> • using barriers • using signage • ensuring occupants are aware of the need to stay away from the removal site • ensuring isolation has occurred by a licensed electrician and that this is documented.
<i>Asbestos is removed</i> in a manner that complies with legislative and company requirements, and may include:	<ul style="list-style-type: none"> • wet method (most preferred): <ul style="list-style-type: none"> • saturate material by gently spraying with water and surfactant mixture (PVA in water ratio of 5:1) • remove materials in sections with the minimum amount of cutting and separation and using hand tools as appropriate • place removed sections in appropriate containers or packaging • Note: The application of the wet asbestos removal method requires the disconnection of the building's power supply and use of a temporary power source fitted with earth leakage and residual current device (RCD) • dry method (least preferred): <ul style="list-style-type: none"> • to be used only where conditions prohibit use of the wet spray method, i.e. in the vicinity of electrical conductors • fully encapsulate the work area with plastic sheeting • use air respirators appropriate to the job • ensure removal methods minimise the production of airborne material, for example the use of asbestos vacuum cleaners for shadow vacuuming (Note: domestic vacuum cleaners even fitted with a HEPA filter are unsuitable) • place removed material immediately in appropriate containers and dampen with sprayed mist.

<p><i>Asbestos is contained</i> and sealed using a range of techniques, including:</p>	<ul style="list-style-type: none"> • double-bagging • using heavy-duty polythene bags (200 µm minimum thickness) labelled with an appropriate warning • using drums or bins in good condition with well-fitting lids labelled with appropriate warning signage or labels. <p>Note: If too large for a bin or bag, a skip or vehicle tray may be used provided it is double-lined with heavy-duty thick plastic sheeting. When ACMs are loaded on a truck tray, the ACMs must be wetted down and then fully wrapped and sealed with a layer of 200 µm sheeting or bagged. Labelling must occur.</p>
<p><i>Decontamination of asbestos removal workers is carried out:</i></p>	<ul style="list-style-type: none"> • using a range of techniques, including: <ul style="list-style-type: none"> • ‘buddy’ vacuuming • decontamination unit for large non-friable removals in certain circumstances • wet wiping.
<p><i>Documentation</i> may include:</p>	<ul style="list-style-type: none"> • air-monitoring results, where necessary • asbestos register • notification to regulator of asbestos removal work • clearance certificates • asbestos removal control plans • procedures for the WHS management system and the emergency plan • equipment test reports • health-monitoring program • RPE face fits • competency training certificates.

CPCCDE3015A Remove friable asbestos

Modification History

New to CPC08

Replaces unit CPCCDE3012A Encapsulate and remove asbestos

Not equivalent

Unit Descriptor

This unit of competency specifies the outcomes required to remove friable asbestos containing material (ACM). The unit includes preparing, enclosing and removing friable ACM, and includes knowledge of decontamination and disposal requirements.

Application of the Unit

Site location for work may be either domestic or commercial, and may be a demolition site, a new work site or an existing structure being renovated, extended, restored or maintained. Project sites may be construction sites and may also include ships, soils in relation to the friable asbestos removal process, and fences.

Licensing/Regulatory Information

Occupational licenses are required nationally.

Work must be completed according to relevant legislative, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures.

Regulatory mechanisms apply to this unit. This unit is required for all ACM removal workers engaged in the removal of friable ACM. Candidates are advised to check for regulatory requirements.

Pre-Requisites

CPCCOHS1001A Work safely in the construction industry

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|-------------------------------|-----|--|
| 1 | Prepare for asbestos removal. | 1.1 | Work instructions and asbestos removal control plan (ARCP) are obtained and <i>information</i> is confirmed and applied for preparation purposes. |
| | | 1.2 | <i>Safety</i> requirements and data gathered from an on-site assessment, an asbestos register where available, and other information sources are used to prepare for a safe and compliant removal process. |
| | | 1.3 | Required quantity of <i>materials</i> is calculated according to plans, specifications and <i>quality requirements</i> . |
| | | 1.4 | <i>Environmental requirements</i> are identified for the project according to environmental plans, and regulatory obligations are applied. |
| | | 1.5 | Processes required to meet health surveillance requirements are undertaken and contributions to air monitoring are made in line with level of authority and responsibility. |
| | | 1.6 | <i>Preparation</i> for the removal process is finalised and authorised obtained according to legislative and company requirements and the ARCP. |
| | | 1.7 | <i>Plant, equipment</i> and <i>personal protective equipment</i> (PPE) consistent with job requirements are selected to carry out tasks, checked for serviceability, and faults are rectified or reported prior to commencement. |

- | | | | |
|---|---|-----|---|
| 2 | Prepare asbestos removal area and removal site. | 2.1 | <i>Friable asbestos containing materials</i> to be removed are identified, asbestos register is checked, and clarification sought from supervisor as required according to workplace procedures. |
| | | 2.2 | Signage and barricade requirements are identified and implemented to delineate the work area from the site area. |
| | | 2.3 | Decontamination unit is positioned and assembled to manufacturer requirements. |
| | | 2.4 | Services are connected to decontamination unit according to regulatory requirements and codes of practice. |
| | | 2.5 | Decontamination procedure is tested within scope of own responsibility and according to workplace procedures and the ARCP. |
| | | 2.6 | Materials and equipment required for removal of ACM from <i>project sites</i> are identified, checked and prepared for operation. |
| | | 2.7 | Processes are undertaken to ensure the safety of the site, including ensuring where necessary that <i>utilities</i> are deactivated, contained, diverted or secured prior to commencing work. |
| | | 2.8 | Occupants, neighbours and other affected parties are notified according to legislation and the code of practice and within scope of own responsibility. |
| 3 | Enclose removal site. | 3.1 | <i>Requirements to enclose the removal site</i> safely to prevent the further release of fibres are followed according to the ARCP and legislative and company requirements. |
| | | 3.2 | Types of enclosures, impact of the size of the removal on the methodology selected, and types and use of <i>removal processes</i> are identified. |
| | | 3.3 | Contribution is made within limits of responsibility to ensure negative air pressure is maintained within the enclosure in line with legislative requirements, and enclosure is inspected and smoke tested for air tightness. |

- | | | | |
|---|-------------------------------------|-----|--|
| | | 3.4 | Notification of proposed asbestos removal is provided to the licensed assessor within required timeframe and limits of own responsibility. |
| 4 | Carry out asbestos removal process. | 4.1 | <i>Asbestos is removed from work site</i> and work area using <i>safe work methods</i> and according to ARCP, regulatory requirements and codes of practice. |
| | | 4.2 | Removed <i>asbestos is contained</i> and placed into double-lined removal bags or bins, sealed, labelled and removed from site according to regulatory requirements and the ARCP. |
| | | 4.3 | Manual-handling principles for bagged and sealed ACM are used wherever possible to prevent breakages of plastic. |
| 5 | Carry out decontamination process. | 5.1 | Decontamination unit is used according to manufacturer and regulatory requirements and codes of practice. |
| | | 5.2 | Decontamination of the work area is carried out according to workplace procedures, ARCP and regulatory requirements. |
| | | 5.3 | <i>Decontamination of asbestos removal workers is carried out</i> according to workplace procedures, ARCP and regulatory requirements. |
| | | 5.4 | Approval to dismantle asbestos removal and decontamination equipment is gained according to regulatory requirements and codes of practice. |
| | | 5.5 | Asbestos removal and decontamination equipment is removed from the area according to the ARCP and regulatory requirements, and following clearance from the licensed asbestos assessor. |
| 6 | Clean up work site. | 6.1 | Work area is cleared and materials disposed of according to legislation, regulations, codes of practice and job specification. |
| | | 6.2 | Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices. |

- 6.3 Work area is inspected for asbestos dust and debris to ensure compliance prior to a clearance inspection.
- 7 Contribute to and use documentation in line with regulatory requirements.
- 7.1 Contribution is made within limits of own responsibility to the preparation and use of **documentation** for regulatory notification processes, according to legislative and company requirements.
- 7.2 Steps are taken within limits of own responsibility to ensure clearance inspection requirements are met and clearance certificate is gained.
- 7.3 Contribution is made within limits of own responsibility to the preparation and use of an emergency plan and according to legislative and company requirements.
- 7.4 Contribution is made within limits of own responsibility to the preparation and use of a certified safety management systems (SMS) according to legislative and company requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and appropriate level of language skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and apply:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
- initiative and enterprise skills to:
 - evaluate own actions and make judgements about performance and necessary improvements
 - identify and report faults in tools, equipment and materials
- planning and organising skills to:
 - plan and set out work
 - recognise procedures, follow instructions and contribute to workplace responsibilities, such as current environmental and safety systems and the ARCP
- teamwork skills to:
 - coordinate own work with others to action tasks
 - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- self-management skills to:
 - work independently and in teams to read and interpret relevant documentation and to plan friable asbestos removal tasks according to the recommended safe work method
 - set up the asbestos removal area according to the safe work method
 - apply general WHS requirements and construction safety requirements, including applying safe work methods for the removal of friable asbestos
 - follow correct cleaning, decontamination and disposal procedures
 - use, fit and maintain PPE, decontamination equipment, and hand and power tools safely

Required knowledge

- range of materials manufactured using asbestos, the type and characteristics of asbestos used in each material, the usual applications associated with the material

- methods and purpose for assessing hazards relating to friable ACM, together with an understanding of:
 - health effects caused by exposure to ACM and requirement for safe handling and removal
 - health impacts on the community and requirement for safe handling and disposal
- decontamination techniques
- general WHS procedures for construction work
- health hazards associated with friable ACM, such as:
 - weathering
 - wear and tear
 - application of tools and equipment
 - accidental damage
- licensing requirements for the use of specific equipment, such as excavators
- hazards associated with using enclosures and removing friable asbestos
- requirements of current legislation and standards relating to asbestos safety, and the decontamination and disposal of asbestos waste
- general construction terminology
- handling requirements of differing types of asbestos materials
- work site and work area procedures
- job safety analysis (JSA) and safe work method statements (SWMS) if required for construction
- safety data sheets (SDS)
- materials storage and hazardous waste management
- method of operation, and cleaning, use and maintenance requirements of equipment
- demolition plant and equipment as applicable to asbestos removal only
- plans, drawings and specifications, asbestos registers and register amendments
- quality requirements relating to the removal of friable asbestos
- risk assessment processes and contingency planning relating to the removal of friable asbestos
- techniques associated with enclosing and removing asbestos, including:
 - use of large and small-scale enclosures for different sites
 - use of negative pressure exhaust units
 - encapsulation methods prior to removal
- types, characteristics, uses and limitations of plant and equipment involved in removing asbestos
- workplace and equipment safety requirements
- application of the documentation for notification; and use of ARCP, clearance inspections, visual and air-monitoring processes and clearance certificates
- use of certified WHS management system and emergency plan

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>A person should demonstrate the ability to:</p> <ul style="list-style-type: none"> • obtain and apply work instructions for the safe and correct removal of friable asbestos • set up the work area and test equipment for use in the removal process of friable asbestos • isolate the site prior to removal, complying with regulatory requirements • remove friable asbestos safely, complying with regulatory requirements • contain the asbestos containing material and ensure its handling and disposal are safe and comply with requirements • decontaminate self, work equipment and work site safely and correctly • complete documentation that supports the removal process within limits of own responsibility.
Context of and specific resources for assessment	<p>This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • an induction procedure and requirement • realistic tasks or simulated tasks covering the mandatory task requirements • relevant specifications and work instructions • tools and equipment appropriate to applying safe work practices • support materials appropriate to activity • workplace instructions relating to safe work practices and addressing hazards and emergencies • research resources, including industry-related systems

	<p>information</p> <ul style="list-style-type: none"> • safety data sheets. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments. <p>Validity and sufficiency of evidence requires that:</p> <ul style="list-style-type: none"> • competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace • where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge • all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence. <p>Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.</p> <p>Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Information to ensure the safe and correct completion of the job may include:</p>	<ul style="list-style-type: none"> • ARCP • licensed asbestos assessor's report • asbestos register • company policies and procedures, including: <ul style="list-style-type: none"> • accessing toilets and other amenities • managing work hours to minimise risk from tiredness • working in heat and avoiding heat stress • operating manuals and specifications for materials and equipment • SWMS or JSA for construction as required • diagrams or sketches • instructions issued by authorised organisational or external personnel • manufacturer specifications and instructions, where specified • SDS • regulatory and legislative requirements for enclosing and removing asbestos • relevant Australian standards and codes • safe work procedures relating to enclosing and removing asbestos • memos, verbal and written instructions, and diagrams • work bulletins • work schedules, plans and specifications.
<p>Safety procedures are to be according to state and territory legislation and regulations and project safety plan, and may include:</p>	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability, are a factor • hazard control • hazardous materials and substances • organisational first aid requirements • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures according to WHS management system, including the conduct of operational risk assessment and treatments associated with:

	<ul style="list-style-type: none"> • deactivating or securing utilities, including electrical, air conditioning and water services • earth leakage boxes • falling objects • lighting • plant movement • power cables, including overhead service trays, cables and conduits • restricted access barriers • surrounding structures • traffic control • trip hazards • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
Materials may include:	<ul style="list-style-type: none"> • acrylic paint to seal ACM • approved and branded or labelled plastic bags • duct tape • foam infill spray • gaffer tape • plastic sheeting • polyvinyl alcohol (PVA) adhesive as spray / spray tack glue • rags or other material wipes • heavy-duty polythene bags (200 µm minimum thickness) • 200 µm unused (not recycled) plastic sheeting or drop sheet • signs • timber frames, nails, aluminium poles and other materials required for enclosures • glove bag material.
Quality requirements may include:	<ul style="list-style-type: none"> • internal company quality policy and standards • manufacturer specifications • relevant regulations, including Australian standards • workplace operations and procedures.
Environmental requirements must fully reflect legislation and the Code of Practice for the	<ul style="list-style-type: none"> • clean-up management • dust and noise management • sedimentation control • vibration management

Safe Removal of Asbestos, including:	<ul style="list-style-type: none"> waste management, including the safe disposal of asbestos containing materials, including waste water from decontamination unit (DCU).
Preparation may include:	<ul style="list-style-type: none"> assessing conditions and hazards determining work requirements, and safety plans and policies identifying equipment defects identifying, preparing for enclosing, and removing asbestos from a work site according to an ARCP work site inspection.
Plant and equipment may require separate licensing for use and may include:	<ul style="list-style-type: none"> high efficiency particulate air (HEPA) vacuum cleaners to comply with AS3544-1988 and AS4260-1997 as amended from time to time anchorage points for the enclosure negative air pressure enclosures or bubbles enclosure equipment atomiser and water bottles (not pressurised) barricades, including barricade tape, para-webbing, hoarding or fencing bars (crow and pinch) decontamination unit and remote decontamination unit decontamination facilities excavators hammers ladders to comply with construction regulations if required hoses and spray fittings flame retardant polythene hardboard / corex scaffolds scrapers shovels and spades smoke-testing equipment static lines.
Personal protective equipment will be specified to the requirements of the job and may include:	<ul style="list-style-type: none"> protective clothing, such as: <ul style="list-style-type: none"> disposable coveralls with fitted hood and cuffs safety footwear (pull-on, not lace-up) protective eye wear, such as safety glasses full body safety harness disposable protective gloves correct respiratory protection class P3, full face respirators and airline respirators for negative air enclosures correct face fitting and use of respiratory protective equipment (RPE) spare sets of PPE.

<p><i>Friable asbestos containing materials</i> are easily crumbled or reduced to powder by hand, and may include:</p>	<ul style="list-style-type: none"> • asbestos backing on vinyl flooring • material in degraded condition that has rendered the material friable, including: <ul style="list-style-type: none"> • asbestos cement • asbestos cement moulded guttering • asbestos cement sheets • corrugated asbestos cement roofing sheets in degraded condition • asbestos in matrix of sprayed vermiculite • low density board • sprayed on fireproofing, soundproofing and thermal insulation • acoustic plaster soundproofing • thermal insulation • gaskets that have become friable • sealants that have become friable • pipe lagging • woven textiles, ropes, tapes and braids • decorative coatings.
<p><i>Project sites</i> may include:</p>	<ul style="list-style-type: none"> • residential, commercial, industrial and public buildings • plant, equipment and fire boards (e.g. friction plant and gaskets) • demolition sites • fences • ships and other forms of transport • sites for new building development.
<p><i>Utilities</i> may include:</p>	<ul style="list-style-type: none"> • air conditioning • electricity • water services.
<p><i>Requirements to enclose the removal site:</i></p>	<ul style="list-style-type: none"> • will reflect the nature of the site and must comply with legislative and company requirements • may include the use of: <ul style="list-style-type: none"> • negative pressure exhaust units to prevent the escape of asbestos fibres from contained asbestos work areas • enclosures for large-scale asbestos removal work, including: <ul style="list-style-type: none"> • design and installation considerations • testing of enclosures • decontamination • mini-enclosures for small-scale asbestos removal work • glove bag and wrap and cut removal method • decontamination unit

	<ul style="list-style-type: none"> waste water and filtration or handling unit.
Removal processes may include the following methods:	<ul style="list-style-type: none"> dry wet saturation.
Asbestos is removed from work site in a manner that complies with legislative and company requirements, and may include:	<ul style="list-style-type: none"> wet method, including: <ul style="list-style-type: none"> saturate material by gently spraying with water and surfactant mixture (PVA in water ratio of 5:1) remove materials in sections with the minimum amount of cutting and separation, using hand tools as appropriate place removed sections in appropriate containers or packaging Note: The application of the wet asbestos removal method requires the disconnection of the building's power supply and use of a temporary power source fitted with earth leakage and residual current device (RCD) dry method if required due to electrical safety issue saturation method.
Safe work methods may include:	<ul style="list-style-type: none"> compliant set-up of the asbestos work area, including set-up of negative air, lighting, water and emergency supplies placing adequate signage around friable asbestos work site fire and emergency system requirements enclosure of the asbestos removal area and the plant, equipment and fixtures remaining in the area testing the asbestos enclosure in the work area procedures for entering and leaving the enclosure in the asbestos work area safe techniques for removing friable asbestos packaging and removing contaminated plant, tools and equipment cleaning and decontaminating tools, equipment and the asbestos work area decontaminating and demobilising the asbestos work site final decontamination of personnel disposing of asbestos waste.
Asbestos is contained and sealed before removing from the work area and work site using a range of techniques, including:	<ul style="list-style-type: none"> double-bagging using heavy-duty polythene bags (200 µm minimum thickness) labelled with an appropriate warning using drums or bins in good condition with well-fitting lids labelled with appropriate warning signs or labels mini enclosures, such as glove bag and wrap and cut methods (suitable for friable ACM removal from small areas).

	<p>Notes:</p> <ul style="list-style-type: none"> • For larger-scale disposal, the supplier of a waste removal bin must be informed of the usage to ensure appropriate and legal disposal. • If too large for a bin or bag, a skip or vehicle tray may be used provided it is double-lined with heavy-duty thick plastic sheeting. When ACMs are loaded on a truck tray the ACMs must be wetted down and then fully wrapped and sealed with a layer of 200 µm sheeting or bagged. Labelling must occur.
<i>Decontamination of asbestos removal workers is carried out</i> using:	<ul style="list-style-type: none"> • 'buddy' vacuuming • decontamination unit for large non-friable removals in certain circumstances • wet wiping.
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • ARCP • air-monitoring plans for control air monitoring • air-monitoring results • asbestos register • notification of asbestos removal work to the regulator • clearance certificates • knowledge of the procedures in the certified SMS • emergency plan development • equipment test certificates • health-monitoring program • RPE face fits • competency training certificates.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Handle, sort and stack dogging equipment and associated tools.	<p>2.1. Tools are safely and effectively used according to manufacturer recommendations and state or territory OHS requirements.</p> <p>2.2. Dogging equipment is identified and checked for conformity to the materials schedule, plans and specifications.</p> <p>2.3. Dogging equipment is moved to specified location, applying safe manual handling techniques.</p> <p>2.4. Dogging equipment is sorted to suit material type and size, and stacked for ease of identification and retrieval for task sequence and job location in accordance with job specifications.</p> <p>2.5. Dogging equipment and associated tools are protected against physical and water damage and stored clear of access ways for ease of identification, retrieval and distribution.</p>
3. Prepare for mechanical handling of materials.	<p>3.1. Dogging equipment is stacked /banded for mechanical handling in accordance with the type of material and plant or equipment to be used.</p> <p>3.2. Dogging equipment is loaded, unloaded, moved or located at specified location assisting the forklift</p>

ELEMENT	PERFORMANCE CRITERIA
	driver, rigger and dogman.
	3.3. Dogging equipment and tools are safely <i>handled</i> with mechanical lifting devices.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to

REQUIRED SKILLS AND KNOWLEDGE

people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- crane operations
- designs and functions of lifting equipment
- dogging equipment
- dogging handling techniques
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- safe working load tags
- signalling methods
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

procedures.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- safely handle dogging equipment and associated tools for all mandatory equipment and tools specified in the range statement.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with

EVIDENCE GUIDE

disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be

EVIDENCE GUIDE

obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling and using dogging tools and equipment
- relevant Australian standards
- safe work procedures relating to handling and using dogging tools and equipment
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation

RANGE STATEMENT

project safety plan and may include:

- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- noise
- vibration
- waste management.

Dogging equipment:

- includes:
 - single leg slings
 - four leg slings

RANGE STATEMENT

- chain slings
- synthetic webbing slings
- two leg sling
- brick cages
- chocks and wedges
- flexible steel wire rope
- kibbles
- natural ropes
- packers
- personnel box
- rigging screws
- rubbish bins
- shackles and eye bolts
- spreader beams
- turn buckles
- whistles
- may include:
 - cantilevered crane loading platforms
 - perimeter safety screens and shutters
 - rescue boxes
 - two-way radios.

Stacking and storage include:

- banding
- pallets
- stillage.

Handling methods for dogging equipment include:

- manual handling
- assisting the forklift driver, rigger and dogman
- basic mechanical lifting devices
- slings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Select dogging equipment.	<p>2.1. Resources, materials and equipment are selected and inspected for compliance with job specifications.</p> <p>2.2. Job sequencing schedule is communicated with team members and others to ensure coordination.</p> <p>2.3. Load mass is calculated and confirmed using load charts and standard calculations.</p> <p>2.4. Loads in slings and equipment are calculated to suit job requirements.</p>
3. Sling loads.	<p>3.1. Lifting devices are assembled and erected for the movement of load.</p> <p>3.2. Using appropriate load slinging method, loads are slung to crane ready for lifting.</p>
4. Shift loads.	<p>4.1. Loads are shifted ensuring stability and in compliance with work method statement.</p> <p>4.2. Load is directed to landing position using communications in compliance with Australian standards and recognised work practices.</p> <p>4.3. Load is landed in required position on packing or bearers.</p>
5. Remove dogging	<p>5.1. Load shifting equipment is dismantled and inspected</p>

ELEMENT	PERFORMANCE CRITERIA
equipment.	for wear.
	5.2. Logbook and site records are completed to company requirements.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
	6.3. Work completion procedures are applied and relevant personnel notified that work is finished.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications

 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- crane operations and limitations
- designs and functions of lifting equipment
- dogging equipment
- dogging techniques
- elevated work platforms
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- logbooks
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- safe working at heights and fall arrest
- safe working load tags
- signalling methods and communications
- types, characteristics, uses and limitations of plant, tools and equipment
- weather and ground considerations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, read tags, sling, load, direct and land loads in conjunction with a slewing mobile crane with a telescopic boom and a winch, out of sight for:
 - rigid heavy loads to two thirds capacity of the crane
 - luff movements, boom retract and boom extend, slew right and slew left, winch up and down in combination
 - a flexible load with a minimum of three lifting points
 - using hand signals and whistle from minimum radius to maximum radius.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Interact with crane crew.	<p>2.1. Job sequencing schedule is prepared so that it enhances the work method statement and job safety analysis (JSA).</p> <p>2.2. Job sequencing schedule is communicated with crane crew.</p> <p>2.3. Work is coordinated and modified as other on-site activities progress or are modified.</p> <p>2.4. Crane driver is advised of changes to lifting schedule when a change is required or as requested by management.</p> <p>2.5. Changes to job sequencing schedule are recorded as per site requirements.</p>
3. Communicate with site members.	<p>3.1. Team members and others are communicated with to ensure coordination requirements.</p> <p>3.2. Contingency plans are discussed among team members.</p> <p>3.3. Team members are advised of changes to lifting schedule when a change is required or as requested by management.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation,</p>

ELEMENT**PERFORMANCE CRITERIA**

-
- regulations, codes of practice and job specification.
 - 4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

- sequencing and order of lifts
- signalling methods and communications
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- interpret and estimate load sizes (dimension and mass) and follow project drawings, scheduling the correct sequence of lifts for a project, for a minimum of three trades and to job specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. - verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Traffic control ***signage*** includes:

- highway traffic signs
- site safety signage

RANGE STATEMENT

<i>Tools and equipment</i> include:	<ul style="list-style-type: none">• temporary signage for the benefit of motorists and pedestrians• traffic conditions signage.• two-way radios.
<i>Quality requirements</i> include:	<ul style="list-style-type: none">• internal company quality policy and standards• manufacturer specifications, where specified• relevant regulations, including Australian standards• workplace operations and procedures.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• noise• vibration• waste management.
<i>Job sequencing schedule</i> includes:	<ul style="list-style-type: none">• building and construction procedures (e.g. concreting, steel fixing, carpentry and rigging)• procedures with JSA and safe work method statements.
<i>Cranes</i> include:	<ul style="list-style-type: none">• fixed cranes• gantry cranes• hydraulic mobile cranes• lattice boom mobile cranes• non slewing cranes• slewing cranes• tower cranes.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate assembled units are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Assemble and hold components in place.	<p>2.1. Component parts are identified for location in assembly and knockdown fittings are prepared and located for assembly.</p> <p>2.2. Adhesive is applied, where applicable, to specification.</p> <p>2.3. Components are located and held in their assembled positions to design specifications.</p>
3. Secure assembled components.	<p>3.1. Frame or unit is secured by appropriate assembly methods.</p> <p>3.2. Fastened joints are secured by fasteners or knockdown fittings, using appropriate tools to specification or as appropriate.</p> <p>3.3. Plated joints are secured by placement and pneumatic hammer or press of gangnail plates to specification or as appropriate.</p> <p>3.4. Weld joints are prepared for welding.</p>
4. Clean up.	<p>4.1. Assembly and holding system is dismantled carefully.</p> <p>4.2. Waste material is disposed of safely and reusable</p>

ELEMENT**PERFORMANCE CRITERIA**

material is stored/stacked.

4.3. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- manufacturing and assembly processes in constructing componentry units
- measuring and marking processes and techniques related to assembling units

REQUIRED SKILLS AND KNOWLEDGE

- temporary bracing techniques
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare components and assemble at least one of the assembled unit types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of assembling units
- select and use appropriate processes, tools and equipment to carry out tasks
- indicate visual checking of component parts to ensure right part and right location
- select and use appropriate packing material for protection of surfaces during assembly
- select and apply effective methods of holding components together in an assembly process
- demonstrate sound procedures to ensure joints are closed and true and assembly is square and out of winding
- display sound and safe procedures to fix or secure joints.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- work area appropriate to task
- working drawings and specifications relevant to task
- procedure documents appropriate to manufacturing processes
- tools, plant and equipment relevant to manufacture process
- material appropriate to proposed project activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with

EVIDENCE GUIDE

a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining assembling components
- relevant Australian standards
- safe work procedures relating to assembling components

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- air compressor and hoses
- chisels
- hammers
- measuring tapes and rules
- nail guns
- spirit levels
- squares.

Quality requirements include:

- control of handling procedures

RANGE STATEMENT

	<ul style="list-style-type: none"> • quality of materials • relevant regulations, including: <ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications where specified • workplace operations and procedures.
Materials include:	<ul style="list-style-type: none"> • aluminium • timber.
Assembled units include:	<ul style="list-style-type: none"> • door and window frames • doors • fitments, including cupboards, counters, shelving and robes • grills • louvres • relocatable structures • roof trusses • shopfronts • stairs • wall frames • window sashes.
Environmental requirements include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • waste management.
Statutory and regulatory authority includes:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
Assembly methods may involve:	<ul style="list-style-type: none"> • clamps • cramps • packers and wedges • platform or frame jigs • presses.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Identify, select and prepare materials for use in the off-site production process.	<p>2.1. Materials are identified and selected as suitable for off-site production of components.</p> <p>2.2. Fixings and fasteners, adhesives and sealants are identified and selected appropriate to manufacturing process and are used to manufacturer specifications and material safety data sheets (MSDS) data.</p> <p>2.3. Material acquisition and preparation techniques are identified and used as appropriate.</p>
3. Identify fabricated components and method of assembly.	<p>3.1. Types of component parts are identified from working drawings and specifications.</p> <p>3.2. Terminology and dimension limitations specified by standards governing design are referenced and able to be identified.</p> <p>3.3. Processes are identified for manufacture, assembly and joining techniques and components.</p>
4. Process for manufacture, assembly, fabrication and sequencing is monitored.	<p>4.1. Space requirements for preparation of manufactured units or products are identified and located.</p> <p>4.2. Component parts are acquired and checked for accuracy, quality and suitability according to plans, drawings and specification.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Clean up.	<p>4.3. Assembling process is identified according to sequential order of events.</p> <p>4.4. Typical common faults in product and/or process problems and appropriate remedial actions are identified according to set workplace operating procedures.</p> <p>5.1. Unused materials are recycled or returned to store.</p> <p>5.2. Tools, equipment and plant are cleaned, maintained and stored and work area is cleaned and waste disposed of safely.</p> <p>5.3. Packaging/handling technique and methods of protecting material edge and surface are used.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people

REQUIRED SKILLS AND KNOWLEDGE

from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and relevant Australian standards (e.g. AS1657 Fixed platforms, walkways, stairways and ladders - Design, construction and installation)
- construction materials and their characteristics
- fasteners and fixings relevant to unit assembly processes
- interpretation of workshop drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measurement and calculation processes relevant to manufacturing work
- types and uses of static machines
- types of adhesives relevant to unit assembly processes
- types of construction material and component manufacturing processes
- workplace and safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare materials and components for manufacture and assembly of at least one of the manufactured units or products listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of preparation of materials
- indicate a clear understanding of construction requirements of maximum and minimum dimension standards and governing authority, where applicable
- adopt and use sound techniques to identify material requirements, including allowances for joints
- indicate a clear understanding of joining methods and method of assembly of unit
- select and use appropriate processes, tools and equipment to carry out tasks
- demonstrate sound techniques in the selection and handling of material for components
- demonstrate sound techniques in handling and storing materials to ensure surfaces and edges are protected
- demonstrate sound and safe techniques to prepare material for manufacturing process
- communicate with others to ensure safe and

EVIDENCE GUIDE

effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- work area appropriate to task
- working drawings and specifications relevant to task
- procedure documents appropriate to manufacturing processes
- tools, plant and equipment relevant to manufacture process
- materials appropriate to proposed project activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials to be packaged appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Identify and select appropriate packaging.	<p>2.1. Packaging materials are selected to supervisor's instructions and job specification.</p> <p>2.2. Wrapping, enclosing and packaging techniques are identified.</p> <p>2.3. Special items in bulk, finish or value are identified for special packaging requirements.</p>
3. Prepare for handling and transporting manufactured products.	<p>3.1. Packaging processes are carried out to enclose and protect item or unit for handling and transporting.</p> <p>3.2. Loose packaging, such as cover sheets and packaging cushions, is selected for transporting.</p>
4. Undertake appropriate handling and transporting techniques for manufactured products.	<p>4.1. Special packaging, if required, is obtained and used.</p> <p>4.2. Packaged units are covered for transportation.</p> <p>4.3. Loaded units are packed and secured for transportation.</p>
5. Clean up.	<p>5.1. Area is cleaned and waste material removed.</p> <p>5.2. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic packaging techniques
- construction products and their protection requirements
- materials handling related to work orientation
- measurement and calculations related to packaging products
- organisation's quality assurance requirements
- transporting techniques
- types of packaging materials and packaging systems
- workplace safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to load and package products for transportation, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of protecting finished products
- select and use appropriate handling techniques to minimise opportunity of damage to material surface
- demonstrate safe and effective application of at least two types of packaging processes of products
- adopt and apply effective loose packaging to packaged material for transportation
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- packaging systems appropriate to proposed tasks
- workplace operations
- tools and equipment relevant to proposed activities
- finished products
- packaging and packing materials.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to packaging manufactured products for transport
- relevant Australian standards
- safe work procedures relating to packaging manufactured products for transport
- signage
- verbal, written and graphical instructions

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work bulletins
- work schedules, plans and specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Quality requirements include:

- control of handling procedures
- packaging and protection of products
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Materials to be packaged include:

- aluminium
- glass
- steel
- stone
- timber.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory

- federal, state and local authorities

RANGE STATEMENT

<i>authority</i> includes:	administering applicable Acts, regulations and codes of practice.
<i>Packaging materials</i> include:	<ul style="list-style-type: none">• bubble wrap• pallet wrapping• polystyrene foam moulding• shrink packaging• stretch wrap.
<i>Packaging processes</i> include:	<ul style="list-style-type: none">• banding applied to stacks/bundles to maintain stack stability• boxes/crates constructed to enclose and protect unit or components• separation packing applied to stacked or bundled components• vacuum sealing applied to stacks, bundles or units to designed packaging process.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Identify static machines, their operation and safety requirements.	<p>2.1. Types and functions of static machines are identified for use in off-site production.</p> <p>2.2. Method of operation of machines is identified in accordance with manufacturer's operating manual.</p> <p>2.3. OHS requirements for guard attachment and cut-off switches are identified.</p> <p>2.4. OHS requirements for personal protective equipment (PPE) associated with using machines are identified and used.</p> <p>2.5. Quality assurance requirements of organisation's machining operations are recognised and adhered to.</p>
3. Prepare machine for use.	<p>3.1. Particular safety requirements for preparing and using static machines are recognised and adhered to.</p> <p>3.2. Appropriate PPE is selected, correctly fitted and used.</p> <p>3.3. Machine is set up to required operating process and setting with fences/guides locked to position in accordance with standard operating procedures.</p>
4. Operate machine.	<p>4.1. Machine start-up procedure is carried out to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer recommendations.</p> <p>4.2. Material is fed to machine, where applicable, in accordance with manufacturer recommendations, safe handling procedures and standard operating procedures.</p> <p>4.3. Material is set up and held in place, where applicable, for mobile machine and moving table operations in accordance with manufacturer recommendations.</p> <p>4.4. Machine is operated in accordance with its designed capacity and purpose and to manufacturer specifications and OHS requirements.</p> <p>4.5. Machine shut-down procedure is carried out to manufacturer recommendations and under supervisor's instructions.</p>
5. Maintain machine and attachments.	<p>5.1. Machines are maintained through regular servicing to manufacturer's operating manual.</p> <p>5.2. Major faults are identified and reported to responsible supervisor.</p> <p>5.3. Minor faults are identified and corrected where applicable, under supervision.</p> <p>5.4. Assistance is given when cutters/blades and attachments are fitted and secured to manufacturer specifications, under supervisor's instruction.</p>
6. Clean up.	<p>6.1. Machine is cleaned and waste material disposed of safely under supervisor's instruction.</p> <p>6.2. Cutters, blades and attachments are cleaned, checked and stored under supervisor's instruction.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - Australian standards
 - operating manual
 - specifications
 - other relevant documentation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to workplace requirements
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic maintenance of static machines
- job safety analysis (JSA) and safe work method statements
- materials handling related to working with static machines
- types of static machines and their operation
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to set up three separate types of machines for processing at least one of the materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace and machine operations
- comply with organisational policies and procedures, including quality assurance requirements within context of carrying out machining operations
- identify and appropriately apply manufacturer recommendations in use of machine
- identify and correctly apply guarding requirements in operating machine
- demonstrate correct setting up procedures for machine operations prior to use
- demonstrate correct start-up procedures for operation of machines
- demonstrate safe and effective operation of machine
- demonstrate correct shut-down and switch-off procedures on completion of machining operation
- clean and maintain machine correctly
- place or remove cutters and blades safely and correctly.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workshop location
- access to a range of static machines
- materials appropriate to work orientation of machining operations
- information and specifications of material machining requirements.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to using static machines
- relevant Australian standards
- safe work procedures relating to using static

RANGE STATEMENT

	machines
	<ul style="list-style-type: none"> • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Carry out data input adjustments.	<p>2.1. Programming terms, methods and data storage capacity are determined and stated consistent with job requirements and machine specifications.</p> <p>2.2. Program is edited to produce straight and circular tool movements, compensating for tool profiles.</p> <p>2.3. Program is entered.</p>
3. Transfer program to machine control.	<p>3.1. Methods of transferring programs into machine memory are identified and listed.</p> <p>3.2. Program is loaded into machine memory using appropriate method.</p>
4. Demonstrate operation of the loaded program to control the machine.	<p>4.1. Program operations are tested through dry run simulation mode, and alarm settings and program are edited where required using the control station.</p> <p>4.2. Specified work piece is produced using automatic mode as per manufacturer specifications.</p>
5. Clean up.	<p>5.1. Debris and waste materials are removed on completion of process.</p> <p>5.2. Re-usable and recyclable materials are salvaged and stored.</p>

ELEMENT**PERFORMANCE CRITERIA**

5.3. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings, specifications and job designs
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- basic keyboarding skills
- basic problem and fault-finding skills with software applications
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply workplace requirements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- construction materials and their characteristics
- hardware requirements for relevant software
- job safety analysis (JSA) and safe work method statements

REQUIRED SKILLS AND KNOWLEDGE

- measuring techniques relevant to dimensions and shape
- range of software applications appropriate to computer numerically-controlled (CNC) equipment
- types and uses of computer-controlled machinery
- types of static machines and machining processes
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to produce two separate components using any of the materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- select and use appropriate processes, tools and equipment consistent with requirements of activity
- apply organisational quality procedures and processes within the context of operating computer-controlled machinery
- select and correctly apply program opening and shut-down procedures
- demonstrate correct procedures to provide data input to achieve requirements of job
- demonstrate sound procedures with machine operated through a reduced speed dry run to check functions and alarms
- produce products to design in accordance with job specifications and drawings
- communicate with others to ensure safe and effective workplace operations
- identify typical faults and problems that may occur and action required to rectify them.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- CNC machinery applicable to proposed activity
- range of cutters, heads and required tools and equipment
- machining projects and specifications relevant to activity
- data and software programs relevant to application activity
- material applicable to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected

EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to use computer-controlled machinery

RANGE STATEMENT

Planning and preparation include:

- relevant Australian standards
- safe work procedures relating to use of computer-controlled machinery
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Quality requirements include:

- control of handling procedures
- procedures for computer controlled production
- quality of materials
- relevant regulations, including:
 - Australian standards

RANGE STATEMENT

	<ul style="list-style-type: none"> • internal company quality policy and standards • manufacturer specifications where specified • workplace operations and procedures • use and maintenance of equipment • workplace operations and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements, including the use of personal protective equipment, are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Set up machine.	<p>2.1. Machines to be used and sequence of machining are selected according to machining processes to be carried out.</p> <p>2.2. Safety procedures associated with each machine are identified in accordance with manufacturer's operating procedures, OHS requirements and AS1473 Guarding and safe use of woodworking machinery or equivalent.</p> <p>2.3. Routers/cutters are installed to manufacturer specifications with fences and stops secured in place.</p> <p>2.4. Guarding is secured in position to manufacturer specifications and AS1473.</p> <p>2.5. Work area is prepared for machining.</p> <p>2.6. Components are selected for respective machining processes.</p>
3. Machine components.	<p>3.1. Components are correctly positioned on machine and securely clamped where required.</p> <p>3.2. Machine is operated to designed operating procedures and AS1473.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3.Components are machined accurately to set out lines and template.
	3.4.Process is completed with all components machined to specification and set-out requirements.
4. Clean up.	4.1.Cutters are removed where applicable and machine is left clean.
	4.2.Area and waste are cleared to specification.
	4.3.Components are restored correctly in preparation for assembly.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions

mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS1473 Guarding and safe use of woodworking machinery
- common material identification marking systems
- component setting out techniques
- job safety analysis (JSA) and safe work method statements
- manufacturing processes for door and window construction
- materials and their characteristics relevant to window and door construction
- measuring techniques relevant to setting up static machines
- setting up processes for static machines
- types and uses of static machines
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to machine components for window and door frames, sashes and panelled doors, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of machining components for door and window construction
- select appropriate machines to carry out each process
- demonstrate safe and accurate setting up of each machine for each process
- operate each machine safely and efficiently to produce designed result
- demonstrate sound and accurate techniques to produce manufactured components for window and door frames, sashes and a panelled door to set-out design for each component
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- workshop location relevant to activity
- static machines appropriate for application tasks
- tools and equipment appropriate to activity
- set out component material for application processes
- documentation and reference notation relevant to set-out material.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment and plant are selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Select and prepare materials for use in joinery production process.	<p>2.1. Fasteners, fixings, adhesives and sealants are identified and selected appropriate to manufacturing process and used to manufacture specifications and material safety data sheet (MSDS) data.</p> <p>2.2. Materials are identified and selected against characteristic and suitability of production components.</p> <p>2.3. Material acquisition and preparation techniques are identified and used, as appropriate.</p> <p>2.4. Appropriate handling and stacking processes are identified and used.</p>
3. Manufacture components.	<p>3.1. Types of component parts are identified from working drawings and specifications.</p> <p>3.2. Terminology and dimension limitations specified by standards governing design are referenced and able to be identified.</p> <p>3.3. Processes for manufacture and joining techniques and components are identified and used.</p> <p>3.4. Machines to be used and sequence of machining are selected according to machining processes to be</p>

ELEMENT	PERFORMANCE CRITERIA
	carried out.
	3.5. Safety procedures for each machine are checked as being in accordance with OHS requirements and AS1473 Guarding and safe use of woodworking machinery.
4. Secure and hold components in place.	<p>4.1. Component parts and knockdown fittings are identified and prepared for location in full component assembly.</p> <p>4.2. Adhesive is applied, where applicable, to specification.</p> <p>4.3. Components are located and held in their assembled positions to design specifications.</p>
5. Fabricate assembled components.	<p>5.1. Frame or unit is secured by adhesive and cramped to design specification.</p> <p>5.2. Fastened joints are secured by fasteners/knockdown fittings using appropriate tools to specification.</p> <p>5.3. Plated joints are secured by placement and pneumatic hammer or press of gangnail plates to specification.</p>
6. Process for manufacture and fabrication sequencing is monitored.	<p>6.1. Space requirements for preparation, manufacture or assembly of product is identified and located.</p> <p>6.2. Component parts are acquired and checked for accuracy, quality and suitability according to plans, drawings and specifications.</p> <p>6.3. Assembling process is identified according to sequential order of events and packaging and handling techniques and methods of protecting material edge and surface are used.</p> <p>6.4. Common faults in product and process problems are identified and appropriate remedial action taken according to workplace operating procedures.</p>
7. Clean up.	<p>7.1. Unused materials are recycled or returned to store.</p> <p>7.2. Tools, equipment and plant are cleaned, maintained and stored.</p> <p>7.3. Work area is cleaned and waste disposed of safely.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - drawings and specifications
 - MSDS data
 - standards
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations and to identify data
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS1473 Guarding and safe use of woodworking machinery
- interpretation of working drawings and specifications
- job safety analysis (JSA) and safe work method statements
- machining processes relevant to joining of joinery components
- materials and their characteristics relevant to joinery unit construction
- materials identification marking systems
- measuring and setting out processes relevant to joinery unit components
- types and characteristics of adhesives relevant to manufacture of joinery units and components
- types and characteristics of fixings and fasteners relevant to joinery unit

REQUIRED SKILLS AND KNOWLEDGE

construction

- types and uses of static machines
- types of fitments and their construction
- types of framework and their construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to manufacture at least two joinery units using the materials listed in the range statement, providing evidence of the ability to:

- identify types of joinery unit products
- identify components of joinery unit products
- identify construction and assembly method and process sequencing
- identify maximum and minimum standards and governing authority
- comply with OHS regulations applicable to workplace operations
- organisational quality procedures and processes applied within context of manufacturing components for joinery units
- identify machining processes required and select appropriate machines
- set up machines for machining applications safely and correctly
- safely and efficiently operate machines to accurately carry out designed processes to set-out material
- select and use appropriate processes, tools and equipment for hand application work
- set up and operate portable power tools safely and correctly
- demonstrate safe and efficient procedures in setting up work and using hand tools
- demonstrate safe and efficient procedures in holding components during manufacturing

EVIDENCE GUIDE

	<p>processes</p> <ul style="list-style-type: none"> • identify typical faults and problems that occur and action required to rectify them • communicate with others to ensure safe and effective workshop operations.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • work area and static machines appropriate to task • working drawings and specifications relevant to activity • procedure documents appropriate to manufacturing processes • tools, plant and equipment relevant to manufacture processes • materials and components appropriate to activity. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm a reasonable inference that

EVIDENCE GUIDE

competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to manufacturing joinery components
- relevant Australian standards
- safe work procedures relating to manufacturing joinery components
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others

RANGE STATEMENT

	<ul style="list-style-type: none"> • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • angle grinders • bevels • compressors • crimping machines • drop saws • hammers • hand and pneumatic pop-riveters • measuring tapes • overhead/pendant cranes and forklifts • pneumatic screwdrivers • punching and forming press tools • squares.
<i>Plant</i> includes:	<ul style="list-style-type: none"> • air compressors • portable power tools • power requirements • static machines.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • AS1473 Guarding and safe use of woodworking machinery • internal company quality policy and standards • manufacturer specifications where specified • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • laminated material • metallic and non-metallic materials • timber.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • waste management.
<i>Statutory and regulatory authority</i> includes:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Fasteners</i> include:	<ul style="list-style-type: none"> • adhesives • crimping • knockdown fittings • nails • nuts and bolts

RANGE STATEMENT

	<ul style="list-style-type: none">• pop rivets• screws.
<i>Preparation techniques</i> include:	<ul style="list-style-type: none">• cutting, routing and jointing processes• dressing process• stacking procedures.
<i>Processes for manufacture</i> include:	<ul style="list-style-type: none">• glass panels• panelling and laminates• timber framework• timber mouldings.
<i>Fastened joints</i> include:	<ul style="list-style-type: none">• bolts and nuts• metal rods and connection plates• nails.
<i>Assembling processes</i> include:	<ul style="list-style-type: none">• fitments and units• prefabricated timber framework• shopfronts.
<i>Packaging and handling techniques</i> include using:	<ul style="list-style-type: none">• bubble plastic• cardboard• clear plastic sheet• polystyrene• timber.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p> <p>1.8. Safe working area around glass installation is maintained in accordance with site requirements and OHS regulations.</p>
2. Cut glass to a straight line.	<p>2.1. Type, size and thickness of glass are selected appropriate for application (thickness less than 6.38mm) and location is determined from job drawings, specifications and glazing schedule.</p> <p>2.2. Openings to receive glass are inspected for obstructions and clearances in accordance with standard operating procedures.</p> <p>2.3. Cutting process is identified in accordance with AS1288 Glass in building - Selection and installation, and glass is cut to specification on a line using straight edge and scoring and breaking to run cut to tolerance of ± 1mm.</p> <p>2.4. Glass sheets are used in the most economical layout, with cutting defects recognised and corrective action taken.</p> <p>2.5. Sharp edges are removed to provide safe edges to glass.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Circle and hole cutting.	<p>3.1. Type and thickness of glass is selected appropriate for application and centre of hole or circle is set out using edge, rule and permanent marking pen.</p> <p>3.2. Circles and holes in glass are cut to specification using pyramid method, completing pre-cut checks before positioning circle cutter.</p> <p>3.3. Cutting defects are recognised and corrective action is taken in line with standard procedures and according to AS1288, with most economical layout used with glass sheets.</p> <p>3.4. Sharp edges are removed to provide safe edges to glass.</p>
4. Cut glass to simple shapes.	<p>4.1. Glass to be used is selected and template is marked and prepared to designed shape.</p> <p>4.2. Template is used to mark outline on glass with permanent marking pen.</p> <p>4.3. Glass is cut to shape and size to specification and glass offcuts are removed safely to AS1288 specification.</p> <p>4.4. Cutting defects are recognised and corrective action is taken in line with standard procedures and according to AS1288, with most economical layout used with glass sheets.</p> <p>4.5. Sharp edges are removed to provide safe edges to glass.</p>
5. Clean up.	<p>5.1. Recyclable material is sorted and stored for collection.</p> <p>5.2. Glass surface and surrounding frame are cleaned and cleared of waste material and assembled according to job specifications, with loose debris and waste material removed and disposed of safely.</p> <p>5.3. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - drawings and specifications
 - glazing schedules
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS1288 Glass in buildings - Selection and installation
- job safety analysis (JSA) and safe work method statements
- material handling processes related to glass
- measuring and setting out processes relevant to glass cutting
- safe procedures for glass cutting
- types of glass and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to set out and cut glass, providing evidence of the ability to:

- select and use appropriate processes, tools and equipment to carry out application tasks
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of glazing
- demonstrate sound techniques in selecting, handling and placing glass for cutting
- display sound and accurate techniques to set out glass or templates
- demonstrate sound and safe techniques to cut regular and irregular shaped glass and cut a hole in a glass panel
- communicate with others to ensure safe and effective workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workshop location and appropriate bench or table
- tools and equipment appropriate for

EVIDENCE GUIDE

application tasks

- range of glass suitable for proposed activities
- drawings and documentation relevant to tasks.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to cutting and installing glass
- relevant Australian standards
- safe work procedures relating to cutting and installing glass
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification

Planning and preparation include:

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- dividers and wing compasses
- glass cutters
- measuring tapes and rules
- pincers
- squares
- straight edges
- tee squares.

Quality requirements include relevant regulations, including:

- AS1288 Glass in buildings - Selection and installation
- internal company quality policy and standards
- manufacturer specifications where specified
- workplace operations and procedures.

Materials include:

- aluminium
- glass
- timber.

Environmental requirements

- clean-up management

RANGE STATEMENT

include:

- dust and noise
- stormwater protection
- waste management.
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Prepare strings for assembly.	<p>2.1. Strings are set out for treads and risers with nosing marked accurately, housings cut and waste removed accurately to set-out and depth.</p> <p>2.2. Grooves or mortises to receive balusters are run/carried out to set-out requirements.</p> <p>2.3. Open strings are cut to set-out shape for treads and risers and ends of strings are cut to set-out requirements for junction with newels/landing or are left long for on-site fitting with string marked for identification where applicable.</p>
3. Prepare post for spiral stair.	<p>3.1. Post is manufactured and/or dressed to designed shape and set-out to designed requirements of stair.</p> <p>3.2. Housings are cut and made accurately to set-out and required depth.</p>
4. Prepare newels for assembly.	<p>4.1. Housings are cut and made accurately to newel set-out and required depth.</p> <p>4.2. Mortises are cut and made accurately to set-out and required depth and newels are marked for identification, where applicable.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Cut treads, risers and wedges to length and shape.	5.1. Treads are cut to designed length and shape. 5.2. Risers are cut to designed length and requirement for junction with strings and wedges marked to design and cut to shape and quantity.
6. Prepare balustrade components.	6.1. Handrail is manufactured to shape with groove run for balusters where applicable, with mortises in handrail for balusters made accurately to set-out. 6.2. Balusters are accurately cut to designed length. 6.3. Handrail is cut to length and sections marked for identification, where applicable.
7. Finish surface and preassemble stair.	7.1. Exposed surfaces of components are sanded to specification for finish and component parts are checked to ensure fit to specification. 7.2. Components are preassembled to ensure stair will assemble appropriately.
8. Clean up.	8.1. Materials are stacked and/or stored for transportation. 8.2. Work area is cleared and waste material disposed of safely. 8.3. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic stair design
- Building Code of Australia (BCA) requirements relevant to stair building and installation
- commonly used stair construction and joining methods
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- materials identification marking systems
- measuring and setting out processes relevant to stair construction
- organisation's quality assurance requirements
- types and characteristics of adhesives, fixings and fasteners related to stair construction
- types and characteristics of stairs
- types and uses of static machines
- types of materials and their characteristics related to stair construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to produce components for one cut and one closed string stair, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of manufacturing components for stairs
- identify design of stair and details of component composition and design
- identify methods of manufacturing, setting out techniques and material required
- select and use appropriate processes, tools and equipment to construct and manufacture components
- select appropriate material and safe and effective procedures to use machines and prepare material to initial requirements
- adopt appropriate and efficient procedures to construct strings to designed requirements
- use correct procedures in setting out and using machines, power tools and hand tools to mould and manufacture components to designed shape
- safely and efficiently prepare all components for assembly
- appropriately check all component connections to ensure joints will fit in assembly
- adopt safe and effective handling procedures

EVIDENCE GUIDE

to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to manufacturing stair components
- relevant Australian standards
- safe work procedures relating to manufacturing stair components
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of static machines

RANGE STATEMENT

<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • use of tools and equipment • workplace environmental requirements and safety. • chisels • clamps • hammers • hand saws • jig saws • measuring tapes and rules • power drills • power saws • routers • saw stools • spirit levels • squares • work bench.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Select and prepare materials and components.	<p>2.1. Methods of assembling erected stairs are identified and components checked for appropriate locations in stair structure.</p> <p>2.2. Method of assembling and fixing are determined in accordance with stair design and location.</p>
3. Assemble strings and newels.	<p>3.1. Specific position for stairs is identified, measurements are checked and adjustments made where applicable.</p> <p>3.2. Strings and newels are assembled to design and fixed to specification.</p> <p>3.3. Strings to be fixed to walls are temporarily supported or directly fixed in position to specification.</p>
4. Install treads and risers.	<p>4.1. Assembled strings and newels are temporarily braced in vertical position.</p> <p>4.2. Treads and risers about newels are fitted and fixed to assembly and flight is checked for true and square.</p> <p>4.3. Intermediate treads and risers are fitted and wedged where applicable to fit tight to housings to specification.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Assemble and install landings.	<p>5.1. Bearers, where applicable, and joists are fitted and fixed to level according to fixing specification.</p> <p>5.2. Nosing and flooring are fitted and fixed to form landing to specified finish and fascia is fitted and fixed to landing according to finish specification.</p>
6. Install handrail and balustrade.	<p>6.1. Balusters/intermediate railing and handrails are fitted to form stair balustrade according to specification, with balusters checked to ensure plumb fit.</p> <p>6.2. Newels are checked prior to final fixing to ensure plumb fit.</p> <p>6.3. Handrailings are fitted and fixed to wall in accordance with specifications.</p>
7. Install spiral stair and curved strings.	<p>7.1. Location of stair and first step is accurately marked on floor and central post is erected into true position, fixed at floor and temporarily braced at top.</p> <p>7.2. Initial string section is temporarily supported in place for assembly, and treads and risers are fitted and fixed into position to specification.</p> <p>7.3. Stair is progressively developed with the extending, supporting and fixing of curved string, and completed with head secured to floor/landing, balustrade installed and central post fixed to specifications.</p>
8. Secure stair to structure and line spandril area.	<p>8.1. Securing of stair to building is carried out during/on completion of assembly.</p> <p>8.2. Spandril, where applicable, is framed, lined and fixed out to specified finish.</p>
9. Clean up.	<p>9.1. Stair is checked, with marks removed and surfaces left to specified finish.</p> <p>9.2. Area is cleared and waste material removed.</p> <p>9.3. Glue blocks are fitted to treads and risers according to specified locations.</p> <p>9.4. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- adhesives, fixings and fasteners related to stair construction
- assembling procedures for stairs
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- materials and their characteristics, relevant to stair construction
- marking of components
- materials identification
- measuring and setting out related to assembling and installing stairs
- organisation's quality assurance requirements
- stair construction and joining methods
- types of stairs
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to assemble and install a complete stair that includes flight and landing balustrades, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of assembling and installing timber stairs
- identify correct location, design of stair and method of attaching and securing to structure
- identify delivered components, materials and assembly diagram, if applicable
- accurately set out stair location and check levels for adjustments on newels
- select and use appropriate processes, tools and equipment to assemble stair components
- demonstrate safe and effective procedures in assembling strings and newels and installing landing bearers and joists
- select and use safe and efficient procedures in installing treads, risers, flooring and nosing
- adopt and use appropriate techniques to fit and fix balustrades
- complete installation with stair true to plumb and level, and fixed securely to structure with surfaces finished free of marks

EVIDENCE GUIDE

- adopt safe and effective handling procedures for movement and placement of material and components
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective stair installation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- site location for stair installation
- stair components, accessory materials and fixings and fasteners
- tools and equipment appropriate for activity
- drawings, specifications and documentation relevant to the installation.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able

EVIDENCE GUIDE

to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches

RANGE STATEMENT

- instructions issued by authorised organisational or external personnel
 - manufacturer specifications and instructions, where specified
 - material safety data sheets (MSDS)
 - memos
 - regulatory and legislative requirements pertaining to assembling and installing stairs
 - relevant Australian standards
 - safe work procedures relating to assembling and installing stairs
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.
- Planning and preparation* include:
- assessment of conditions and hazards
 - determination of work requirements and safety plans and policies
 - equipment defect identification
 - work site inspection.
- Safety (OHS)* is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
 - hazard control
 - hazardous materials and substances
 - organisational first aid
 - PPE prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working platforms
 - use of firefighting equipment
 - use of tools and equipment

RANGE STATEMENT

Tools and equipment
include:

- workplace environmental requirements and safety.
- air compressor and hoses
- chisels
- clamps
- hammers
- hand saws
- measuring tapes and rules
- nail guns
- power drills
- power leads
- power planers
- power saws
- saw stools
- screwdrivers
- set spanners
- spirit levels
- squares.

Quality requirements
include:

- control of handling procedures
- procedures for installing and finishing
- quality of materials
- relevant regulations, including:
 - Australian standards
 - internal company quality policy and standards
 - manufacturer specifications where specified
 - workplace operations and procedures
- use and maintenance of equipment
- workplace operations and procedures.

Materials include:

- medium density fibreboard (MDF)
- plastics
- plywood
- steel
- timber.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authority includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

RANGE STATEMENT

Components include:

- balusters
- flooring
- handrailing
- landing bearers
- landing joists
- newels
- nosing
- risers
- strings
- treads.

Fixing includes:

- bolts and nuts
- glue and wedging
- glue blocks
- handrail bolts
- nailing
- screws, including coach screws.

Installed stairs may involve:

- a piece by piece assembly on location, for example with a stair between two full height walls to allow for flights to be preassembled and lifted and fitted into place as part of a complete stair.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<ul style="list-style-type: none">1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.1.3. Signage and barricade requirements are identified and implemented.1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.
2. Prepare wreath for continuous handrailing.	<ul style="list-style-type: none">2.1. Pitch of stair and change of direction of handrail are identified from stair design.2.2. Area governing design of wreath is set out or assessed to determined thickness of material to be prepared.2.3. Material is prepared, cut square to wreath length and set out to shape for dressing.2.4. Wreath is formed to square section with designated twist and free of bumps.
3. Join and mould wreath to straight sections.	<ul style="list-style-type: none">3.1. Straight sections of handrail are measured and cut to length with ends square to join wreath and joined to specifications with joints tight and no movement.3.2. Wreath is moulded to handrail shape and fine sanded to smooth finish.3.3. Handrailing is installed in lengths practical to manage and rejoined in location.
4. Manufacture scroll and join to handrail.	<ul style="list-style-type: none">4.1. Design of scroll and wreath, where applicable, is identified, set out and prepared to designed shape.4.2. Materials are prepared to required overall scroll and wreath dimensions, set-out patterns are applied and

ELEMENT

PERFORMANCE CRITERIA

	scroll and wreath are formed to basic shapes.
	4.3. Scroll and wreath are moulded to design and connecting handrail shape and fine sanded to smooth finish.
	4.4. Scroll and wreath are joined to handrail to specification with joints tight and no movement.
5. Manufacture and install bullnosed steps.	5.1. Design of bullnosed steps is identified, method of constructing curve is determined, and riser of step is manufactured to design curve with block support fixed to specification.
	5.2. Tread is cut and dressed with nosing to shape according to design specification.
	5.3. Bullnosed step is fitted and fixed to stair and secured in location to specified fixing.
6. Manufacture and install brackets and decorative features.	6.1. Brackets and Scotia, where applicable, are fitted and secured into place to cut and mitred string to specified fixing.
	6.2. Decorative/ornamental features are fitted and secured to designed position and to specified fixing, and all surfaces are fine sanded to smooth finish.
7. Clean up.	7.1. Area is cleaned and waste material disposed of safely.
	7.2. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret drawings and specifications
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- interpret drawings and documentation
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- commonly used stair construction and joining methods
- identification marking of materials systems
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring and setting out processes relevant to manufacturing and installing stair components
- methods of forming and constructing handrails
- organisation's quality assurance requirements
- special feature components of stair construction
- timber carving and moulding techniques
- types and characteristics of stairs
- types and use of adhesives, fixings and fasteners relevant to stair construction
- types and uses of static machines
- types of materials and their characteristics relevant to stair construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to manufacture a scroll, ramp and wreath and join to a handrail where applicable plus manufacture and install bullnose and common stair brackets and decorative features, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of manufacturing and installing special features to stairs
- identify details of special features, design of stair and method of attaching to adjoining components
- identify method of manufacturing, setting out techniques and materials required
- select and use appropriate processes, tools and equipment to manufacture and install feature items
- select appropriate materials and use safe and effective procedures to operate machines and prepare material to initial requirements
- demonstrate correct procedures in setting out and using machines, power tools and hand tools to mould and manufacture designed shape
- adopt safe and effective handling procedures for movement and placement of materials and components
- safely and efficiently fit and secure feature item to designed location

EVIDENCE GUIDE

Context of and specific resources for assessment

- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workshop and site location for manufacturing and installation processes
- materials appropriate to application tasks
- tools and equipment appropriate to proposed processes
- drawings and documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Manufacture strings for geometric curves.	<p>2.1. Material is prepared to designed structural requirements.</p> <p>2.2. Curved wall/profile is constructed to curve design of stair.</p> <p>2.3. Developed pitch is set out to curved wall/profile location.</p> <p>2.4. String is manufactured in accordance with curved wall and set out to specifications.</p>
3. Prepare strings for assembly.	<p>3.1. Strings are set out for treads and risers with nosing marked accurately, housings cut and waste removed accurately to set-out and depth.</p> <p>3.2. Grooves or mortises to receive balusters are run/carried out to set-out requirements.</p> <p>3.3. Open strings are cut to set-out shape for treads and risers and ends of strings are cut to set-out requirements for junction with newels/landing or left long for on-site fitting with string marked for identification where applicable.</p>
4. Set out and manufacture curved	<p>4.1. Curved and geometric stairs are set out to specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
and geometric stair post for spiral stairs.	<p>4.2. Post is manufactured and/or dressed to designed shape and set out to designed requirements of stair.</p> <p>4.3. Housings are cut and made accurately to set-out and required depth.</p>
5. Prepare newels for assembly.	<p>5.1. Housings are cut and made accurately to newel set-out and required depth.</p> <p>5.2. Mortises are cut and made accurately to set-out and required depth and newels are marked for identification, where applicable.</p>
6. Cut treads, risers and wedges to length and shape.	<p>6.1. Treads are cut to designed length and shape.</p> <p>6.2. Risers are cut to designed length and requirement for junction with string.</p> <p>6.3. Wedges are marked to design and cut to shape and quantity.</p>
7. Prepare balustrade components.	<p>7.1. Handrail is manufactured to shape with groove run for balusters, where applicable, and mortises in handrail for balusters are made accurately to set-out.</p> <p>7.2. Balusters are cut to designed length.</p> <p>7.3. Handrail is cut to length and sections are marked for identification, where applicable.</p>
8. Finish surface and preassemble stair.	<p>8.1. Exposed surfaces of components are sanded to specification for finish and component parts are checked to ensure they will fit to specification.</p> <p>8.2. Components are preassembled to ensure stair will assemble appropriately.</p>
9. Clean up.	<p>9.1. Materials are stacked and/or stored for transportation.</p> <p>9.2. Work area is cleared and waste material disposed of safely.</p> <p>9.3. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic curved stair design
- Building Code of Australia (BCA) requirements relevant to stair construction
- commonly used stair construction and joining methods
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- material identification marking systems
- measuring and setting out processes relevant to curved stair construction
- organisation's quality assurance requirements
- types and characteristics of stairs
- types and use of adhesives, fixings and fasteners related to stair construction
- types and use of static machines
- types of materials and their characteristics related to stair construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to produce all components for assembly of two stair types, one with a cut and closed string and one an open string, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of manufacturing components for curved stairs
- identify design of stair and details of component composition and design
- identify methods of manufacturing, setting out techniques and materials required
- select and use appropriate processes, tools and equipment to construct and manufacture components
- select appropriate material and safe and effective procedures to use machines and prepare material to initial requirements
- adopt appropriate and efficient procedures to construct curved strings to designed requirements
- use correct procedures in setting out and using machines, power tools and hand tools to mould and manufacture components to designed shape
- safely and efficiently prepare all components for assembly
- check all component connections to ensure joints will fit in assembly

EVIDENCE GUIDE

- adopt safe and effective handling procedures for movement and placement of materials and components
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and efficient workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

1.1. Resource implications for assessment include:

- workshop location and appropriate workspace
- static machines appropriate for activity
- set-out materials and components prepared for manufacturing processes
- tools and equipment appropriate for activity
- drawings and documentation relevant to design.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that

EVIDENCE GUIDE

competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to manufacturing stair components
- relevant Australian standards
- safe work procedures relating to manufacturing stair components
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment

RANGE STATEMENT

	<ul style="list-style-type: none"> • use of static machines • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • chisels • clamps • hammers • hand saws • jig saws • measuring tapes and rules • power drills • power saws • routers • saw stools • spirit levels • squares • work bench.
<i>Quality requirements</i> include:	<ul style="list-style-type: none"> • attention to machining processes • control of handling procedures • quality of materials • relevant regulations, including: <ul style="list-style-type: none"> • AS1473 Guarding and safe use of woodworking machinery • internal company quality policy and standards • manufacturer specifications where specified • workplace operations and procedures • use and maintenance of equipment • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • metal • timber.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • waste management.
<i>Statutory and regulatory authority</i> includes:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Stair</i> includes:	<ul style="list-style-type: none"> • curved

RANGE STATEMENT

- geometric
 - open or closed strings
 - spiral.
- Manufactured* may include using:
- band saw
 - buzzer
 - docking saw
 - mortiser
 - spindle shaper.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Set out and prepare material.	<p>2.1. Exit and ground finish levels are determined from job drawings and site location.</p> <p>2.2. Rise, going and pitch of stair calculations are determined from job drawings and site location, with all measurements and requirements conforming to the Building Code of Australia (BCA).</p> <p>2.3. Full size set out of stairs is made to determine rise, going and pitch of stairs to actual location of landings, strings, treads and newels.</p> <p>2.4. Location of stair and newels is determined from job drawings and pitch of stairs or full size is set out.</p> <p>2.5. Location of footings, where applicable, is marked to layout of designed stairs to meet job drawings and specifications or full size set-out.</p> <p>2.6. Strings components are selected in accordance with set-out.</p> <p>2.7. Components for newels are selected and set out to design of stairs, storey rods and job drawings or from full size set-out.</p> <p>2.8. Newels are assembled and checked to provide tight</p>

ELEMENT	PERFORMANCE CRITERIA
	fit for strings and bearers, where applicable, to specifications.
	2.9. Material for treads is checked against set-out and square to length according to requirements of stair design and BCA.
3. Assemble and erect stair.	<p>3.1. Footings with post support, where applicable, are prepared to requirements of job drawings and specifications.</p> <p>3.2. Angle brackets are attached to strings to set-out locations for tread support according to requirements of detail drawings and specifications.</p> <p>3.3. Newels are erected into position and temporarily braced to plumbing position and strings are located and fixed into position according to specifications.</p> <p>3.4. Tie bolts, where applicable, are located and secured to specification to maintain stair width, and stair is attached to building using appropriate fixings and fasteners in accordance with detailed drawings and specifications.</p> <p>3.5. Treads and decking are fixed into location to detailed drawings and specifications, and bracing and lateral ties are fixed to newels to specifications, where applicable, to maintain rigidity to stair structure.</p>
4. Fit and fix handrailing and balustrade.	<p>4.1. Material for handrailing and balustrade is checked to length, and adjustment is made to specification where appropriate.</p> <p>4.2. Handrailing is fitted and fixed into place to specifications and measurements above nosing line of a flight and above a landing deck according to BCA.</p> <p>4.3. Balustrade is fitted and fixed into place to specifications and requirements of BCA.</p>
5. Finish stairs.	<p>5.1. Arises and sharp edges are removed and finished to specification, where appropriate.</p> <p>5.2. Non-slip surface is adhered to treads, where required, in accordance with specifications and BCA.</p>
6. Clean up.	<p>6.1. Area is cleared and waste disposed of safely.</p> <p>6.2. Unused materials are stored and/or stacked.</p> <p>6.3. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- BCA requirements relevant to stairs
- factors governing design of stairs
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measurement and calculation processes related to lineal measurements in stair design
- stair construction techniques
- terminology of stair components and dimensional relationships
- types and characteristics of stairs
- types and uses of materials used in stair construction.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to assemble and erect timber and other material component stairs covering one flight to a landing, including handrail or balustrade, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational quality procedures and processes within the context of constructing and installing fabricated stairs
- identify location and details of fabricated stair components and construction
- carry out accurate calculations to determine actual rise and going for each step and pitch of stairs
- prepare accurate set-out of stair in order to check all stair components
- adopt and use safe and effective procedures to prepare stair components, assemble and fix to position in accordance with BCA, specifications and site conditions
- identify typical faults and problems that occur and action required to rectify them
- identify types of stair construction and common terminology
- convey appropriate analysis and understanding of design concepts in drawings and specifications of nominated project
- communicate with others to ensure safe and effective workplace operations.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- drawings and information relevant to stair design activities
- suitable work location to carry out design work stair construction
- BCA documentation
- work location ready for stair construction and installation
- plant and equipment appropriate to construction process of stairs
- construction materials appropriate to proposed construction of stairs
- hand and power tools appropriate to construction process of stairs.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able

EVIDENCE GUIDE

to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to constructing stairs
- relevant Australian standards
- safe work procedures relating to constructing stairs
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment

RANGE STATEMENT

Tools and equipment include:

- working platforms and scaffolding
- workplace environmental requirements and safety.
- air compressor and hoses
- bevels
- chisels
- fencing bars
- hammers
- hand saws
- measuring tapes and rules
- mechanical nailing tools
- nail bags
- power drills
- power leads
- power planers
- power saws
- saw stools
- shovels
- spanners
- spirit levels
- squares
- steel squares and fences
- string lines.

Quality requirements include:

- attention to specification of work
- control of handling procedures
- quality of materials
- relevant regulations, including:
 - Australian standards
 - internal company quality policy and standards
 - manufacturer specifications where specified
 - workplace operations and procedures
- use and maintenance of equipment
- workplace operations and procedures.

Materials include:

- handrails and balustrades made of:
 - cast acrylic materials
 - glass
 - metal
 - timber

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for work.	<p>1.1. Quality assurance requirements with company's stair-building operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with setting out of stairs and workshop operations are recognised and adhered to.</p> <p>1.3. Design of stair is identified from job drawings and specifications for types of stair construction and stair components to be set out.</p> <p>1.4. Doorways and head height clearance are measured and dimensions governing stair pitch and factors of design are obtained directly from constructed building or drawing details.</p> <p>1.5. Rise and going for steps are determined and lengths of strings calculated appropriate for the stair use and structural design, including landings if specified.</p> <p>1.6. Use and structural design for winders are identified and considered for inclusion in stair set-out if required.</p> <p>1.7. Methods of joining stair components and balustrade members are identified for manufacturing processes and preparation of components for joining.</p> <p>1.8. Storey rod and full size set-out are prepared where applicable.</p>
2. Prepare stair material for setting out.	<p>2.1. Materials are selected and dressed in accordance with stair requirements and specifications.</p> <p>2.2. Laminated sections are formed and joined to designed curve and pitch to specifications.</p>
3. Set out strings for a stair.	<p>3.1. Tools and equipment are selected to carry out processes consistent with job requirements.</p> <p>3.2. Steel square or pitch board is prepared to stair pitch set-out.</p> <p>3.3. Strings are set out in temporary erected positions to show locations of treads and risers, with allowances for nosing and wedges on closed strings and to show lengths for junctions with newels and landings</p>
4. Set out newels.	<p>4.1. Floor/landing height relationships with allowances for floor discrepancies are accurately marked on newels.</p> <p>4.2. Newels are set out to show positions of strings, treads, flooring, joists, bearers and handrails.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3. Locations for housings are accurately marked on newels.
5. Set out component parts.	5.1. Lengths and bevels, where applicable, are determined from string and newel set-outs. 5.2. Component parts are set out to respective lengths and bevels where applicable.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA)

REQUIRED SKILLS AND KNOWLEDGE

- calculations related to lineal measurements in stair design
- component parts of balustrades, landings and stairs
- drawings and specifications
- handling of materials relevant to stair construction
- job safety analysis (JSA) and safe work method statements
- materials relevant to stair construction
- measuring and setting out related to stair construction
- organisation's quality assurance requirements
- stair construction and joining methods
- terminology of components and dimensional relationships
- tools and equipment related to stair setting out
- types of stairs
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to set out at least two types of stair designs listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of preparation of material and setting out for timber stairs
- identify details and specifications of nominated stair to be set out
- identify limitations on design in accordance with BCA
- demonstrate appropriate calculations to accurately determine number of rises, actual rise, run and going
- identify materials required and prepare accurate cutting list
- select materials and safely and effectively operate machines to dress material to specified sizes
- select and use appropriate processes, tools and equipment for setting out material
- display accurate application and clear marking in setting out materials for stair components
- demonstrate safe and effective handling procedures for movement and placement of material and components
- identify typical faults and problems that occur and action required to rectify them

EVIDENCE GUIDE

Context of and specific resources for assessment

- communicate with others to ensure safe and effective workplace operations.
- This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace operation, tools and equipment appropriate to activity
- static machines appropriate to material preparation for setting out
- material relevant to proposed activity
- drawings, set-out, specifications and documentation relevant to activities.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- control of handling procedures
- procedures for setting out
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Design of stair includes:

- open or closed string
- curved flight
- dog legged
- geometric stairs
- quarter spaced landings
- spiral stairs
- straight flights
- $\frac{1}{4}$ winder stairs that include:
 - a landing
 - cut and closed strings.

Factors of design include:

- area available for stair and rise of stair
- doorways and head height clearance
- structural limitations in accordance with BCA.

Rise and going for steps are determined by:

- going for step design in accordance with minimum going according to classification of building
- maximum allowable rise for each step

RANGE STATEMENT

Winders are:

- total rise of the stair.
- designed with dimensions for winder treads in accordance with BCA
- identified and included for use in lieu of landings.

Components include:

- balusters
- handrails
- landing bearers
- landing joists
- multiple railing
- newels
- risers
- strings
- treads.

Manufacturing processes include:

- docking to lengths
- grooving
- housing
- mortising
- rebating
- trenching.

Materials include:

- medium density fibreboard (MDF)
- plastics
- plywood
- steel
- timber.

Tools and equipment include:

- bevels
- marking gauge
- measuring tapes and rules
- squares
- steel squares.

Functional area

Functional area

CPCCLBM3001A Licence to operate a concrete placing boom

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to operate a concrete placing boom which is a mobile truck mounted plant incorporating a knuckle boom, capable of power operated slewing and luffing to place concrete by way of pumping through a pipeline attached to, or forming part of, the boom of the plant for licensing purposes.

Application of the Unit

Application of the unit This unit requires the operator to plan the work, conduct routine checks, check controls, set up and prepare for operation, deliver concrete, and shut down and secure concrete placing boom.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up and prepare for operation.	<p>1.1. Ground suitability is inspected and checked.</p> <p>1.2. Concrete placing boom is driven to or located at work area according to procedures.</p> <p>1.3. Concrete placing boom is positioned for work application and stability according to procedures.</p> <p>1.4. Concrete placing boom is started according to procedures and checked for any abnormal noise.</p> <p>1.5. All safety devices are tested according to procedures.</p> <p>1.6. Post start operational checks are carried out according to procedures.</p> <p>1.7. Delivery system components, including booms, lines and adaptors, are positioned securely and safely according to procedures.</p> <p>1.8. Appropriate hazard prevention/control measures are applied to the work area according to procedures.</p> <p>1.9. Pumping systems are tested and prepared for use according to procedures.</p>
2. Deliver concrete.	<p>2.1. Supply of bulk concrete to the hopper is coordinated safely with the supply vehicle operator/s.</p> <p>2.2. Concrete placing boom is operated safely using relevant boom movements to deliver the concrete as required.</p> <p>2.3. Safe operating techniques are applied for all operations.</p> <p>2.4. Communication signals are correctly interpreted according to the appropriate standard.</p> <p>2.5. Monitor boom movement constantly ensuring safety of personnel, delivery hose and stability.</p> <p>2.6. Unplanned and/or unsafe situations are responded to in line with procedures.</p> <p>2.7. Concrete placing boom is safely withdrawn from the work area at the completion of the delivery task.</p>
3. Shut down and secure concrete placing boom.	<p>3.1. Delivery lines and hopper are cleaned out according to procedures.</p> <p>3.2. Boom is correctly stowed and secured for travel according to procedures.</p> <p>3.3. Outriggers/stabilisers are stowed and secured according to procedures.</p> <p>3.4. Plates or packing are stowed and secured for travel.</p> <p>3.5. Concrete placing boom is shut down according to</p>

ELEMENT**PERFORMANCE CRITERIA**

procedures.

3.6. Routine post-operational equipment checks are carried out according to procedures.

3.7. All defects and damage are reported and recorded according to procedures and appropriate action is taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accurately record and maintain information relating to concrete placing boom operations
- communication techniques in the workplace including hand signals and use of fixed channel two-way radios
- complete the positioning, stabilising, set up and pack up of concrete placing booms, including the use of outriggers/stabilisers and packing
- communication skills at a level sufficient to communicate with other site personnel
- operation and control of a concrete placing boom including all functions to within their maximum capability
- risk assessment and hazard prevention strategies, including hierarchy of control as applied to the positioning and safe operation of the concrete placing boom (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping)
- verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- assessment of ground conditions to confirm that the site is suitable (eg. firm, level and safe) to set up the concrete placing boom
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for conducting concrete placing boom operations
- level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs

REQUIRED SKILLS AND KNOWLEDGE

- concrete placing boom delivery operations and operating techniques
- organisational and site standards, requirements, policies and procedures for conducting concrete placing boom operations
- procedures for the recording, reporting and maintenance of workplace records and information, including the use of the service logbook.
- understanding of the hierarchy of hazard identification and control
- read and interpret the data plate for the concrete placing boom.
- typical routine problems encountered in the process and with equipment and adjustments required for correction.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation
- assess ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to erect the concrete placing boom.
- assess risk and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the concrete placing boom (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping)
- complete the pre operational check, positioning, stabilising, set up, operation, post operational checks of a concrete placing boom including all functions to their maximum extension in the moving of the boom and placement of concrete to the safe working rated capacity of the concrete placing boom
- operate the concrete placing boom in conjunction with other appropriate personnel (where applicable).
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a

Context of and specific resources for assessment

EVIDENCE GUIDE

realistically simulated workplace setting

- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with relevant appropriate standard requirements
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the Performance Assessment
 - appropriate concrete placing boom and associated equipment in safe condition
 - communication equipment (e.g. two way radios, etc) where appropriate
 - other appropriate personnel to direct the placement of concrete (where applicable).

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground stability (eg. ground condition, recently filled trenches, slopes)
- overhead hazards (eg. power lines, service pipes)
- insufficient lighting
- traffic (eg. pedestrians, vehicles, other plant)
- environmental conditions (eg. wind, lightning, storms)
- other specific hazards (eg. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:

- codes of practice
- legislation
- Australian Standards,
- manufacturer's specifications
- industry standards (where applicable).

Concrete placing boom may include:

- a mobile truck mounted plant incorporating a knuckle boom, capable of power operated slewing and luffing to place concrete by way of pumping through a pipeline attached to, or forming part of, the boom of the plant.

Communication methods may

- verbal and non-verbal language

RANGE STATEMENT

include but not limited to:

- written instructions
- signage
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol.

Appropriate personnel may include but are not limited to:

- those associated with the operations of the concrete placing boom
- supervisors
- suppliers
- clients
- colleagues
- managers.

Procedures may include but are not limited to:

- manufacturer's guidelines (range chart, instructions, specifications or checklists)
- industry operating procedures
- workplace procedures (work instructions, operating procedures, checklists).

Service logbook may include but is not limited to:

- any logbook
- service book
- history record system where the service and maintenance history is kept.

Hoppers may include but not limited to:

- large receptacles mounted on the concrete placing boom which receive the concrete from supply vehicles and dispense the concrete to the pumping system.

Communication equipment may include but not limited to:

- fixed channel two way radios
- mobile phones.

NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane.

Ground suitability may include but not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete.

RANGE STATEMENT

Stability may include but not limited to:

- deploying outriggers
- establish correct size plates or packing
- correctly position plates or packing.

Safety devices may include but not limited to:

- horns/sirens
- audible and visual reversing devices
- operator restraint devices (where applicable)
- lights
- safety interlocks.

Hazard prevention/control measures may include but not limited to:

- safety tags on electrical switches/isolators
- powerlines are insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers
- movement of obstructions
- personal protective equipment
- adequate lighting
- earth chain.

Supply vehicle may include but not limited to:

- cement mixer trucks
- agitator trucks
- other concrete transport vehicles.

Relevant boom movements may include but not limited to:

- raising boom
- lowering boom
- slewing
- knuckling.

Safe operating techniques may include but not limited to:

- achieving a safe optimum output from the concrete delivery system within the manufacturers design specifications
- ensuring hopper levels are maintained at safe and recommended levels
- safe operation of the boom to ensure safety of operator and other personnel
- managing engine power to ensure efficiency of concrete pump truck platform movements and to minimise damage to the engine and gears
- coordinating engine power with gear selection ensuring smooth transition and operation within torque range.

RANGE STATEMENT

Communication signals may include but not limited to:

- boom up - hand
- boom down - hand
- boom left - hand
- boom right - hand
- open or extend boom -hand
- close or retract boom - hand
- stop boom - hand
- start pump speed up - hand
- slow pump down - hand
- little bit - hand
- add water - hand
- all done clean-up - hand.

Unplanned and/or unsafe situations may include but not limited to:

- failure/lose of control e.g. blown hose or concrete line
- failure of equipment e.g. hydraulic system
- environmental conditions (e.g. wind, lightning, storms, etc).

Shut down may include but is not limited to:

- retracting boom
- positioning/securing boom
- retracting outriggers/stabilisers
- idle engine to stabilise temperature
- disengage PTO (where applicable)
- turning off engine (where applicable)
- remove key from ignition (where applicable)
- lock and secure cabin (where applicable).

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	<p>1.1. Site information is obtained and related to the task.</p> <p>1.2. Hazards and potential hazards associated with the slinging and directing of loads are identified.</p> <p>1.3. Hazard control measures consistent with appropriate standards are identified to ensure the safety of personnel and equipment.</p> <p>1.4. The weight, dimensions and centre of gravity of the load are identified and assessed.</p> <p>1.5. Suitable lifting/slinging points on the load are identified.</p> <p>1.6. Appropriate lifting equipment needs are assessed.</p> <p>1.7. Appropriate communication methods are assessed with crane/ operators and other appropriate personnel.</p> <p>1.8. Manufacturer's specifications/information is obtained for special loads where necessary.</p>
2. Select and inspect equipment.	<p>2.1. Lifting equipment appropriate to the task is selected.</p> <p>2.2. Lifting equipment is inspected for serviceability.</p> <p>2.3. Damaged or excessively worn lifting equipment is identified, labelled and rejected.</p> <p>2.4. Appropriate communication methods for the crane/operator and appropriate personnel are selected.</p> <p>2.5. Appropriate communication equipment is selected and its serviceability is checked.</p> <p>2.6. Appropriate personal protective equipment (PPE) is selected and checked.</p>
3. Prepare site and equipment.	<p>3.1. Hazard prevention/control measures are applied consistent with appropriate standards to ensure the safety of personnel and equipment.</p> <p>3.2. Appropriate slinging method is selected.</p> <p>3.3. Lifting equipment is prepared and assembled where appropriate.</p> <p>3.4. Load destination is prepared.</p>
4. Perform task.	<p>4.1. Lifting equipment is attached and secured to the lifting hook using appropriate techniques.</p> <p>4.2. Lifting hook is positioned over the load centre of gravity.</p> <p>4.3. Lifting equipment is attached and secured to the load</p>

ELEMENT**PERFORMANCE CRITERIA**

	in an appropriate manner.
	4.4. Tag line is attached and secured where appropriate.
	4.5. Test lift is conducted to ensure security of load.
	4.6. Load is moved maintaining stability and control at all times.
	4.7. Appropriate communication methods and <i>communication signals</i> are applied to safely coordinate the load movement both within sight and out-of-sight of crane operator.
	4.8. The load is landed to ensure that it is stable and secure from movement.
	4.9. Lifting equipment is removed or disconnected from load and prepared for next task or storage.
5. Shut down job and clean up.	5.1. Unserviceable lifting equipment inspected and rejected.
	5.2. <i>Defective equipment</i> is isolated and tagged.
	5.3. Lifting equipment is stored in accordance with procedures and appropriate standards.
	5.4. Hazard prevention/control measures are removed where appropriate.
	5.5. Excess materials from the work area are removed (where applicable).
	5.6. Defects are reported and recorded according to procedures and appropriate action is taken.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication techniques in the workplace including whistles, hand signals and use of fixed channel two-way radios
- communication skills at a level sufficient to communicate with other site personnel
- calculate rated capacity of lifting equipment
- apply different methods for making temporary connections to loads using fibre and synthetic ropes

REQUIRED SKILLS AND KNOWLEDGE

- ability to interpret rated capacity and working load limit tags
- hazard identification and control
- slinging techniques
- selection and inspection of lifting equipment
- directing crane operators in the moving of loads in a safe manner, using a slewing crane
- inspection and care of a wide range of lifting equipment to appropriate Australian Standards and/or manufacturer's specifications.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- basic knowledge of types of cranes and their functions
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of techniques for undertaking dogging activities
- load stability and safety factors in line with manufacturer's specifications
- types of lifting equipment and slinging techniques for use, and their limitations and performance in a wide range of conditions (including but not limited to slings, beams, accessories, clamps, work-boxes, bins and pallets)
- understanding of the hierarchy of control.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment of this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with Commonwealth, state or territory OHS legislation, standards relevant to safe dogging and crane operations.
- communicate and work safely with others in the work area.
- apply Hazard prevention and control measures consistent with appropriate standards.
- apply to move loads in conjunction with cranes including, the reading of tags, slinging, loading, directing and landing loads with a slewing mobile crane with a telescopic boom and a winch, in and out of sight of the crane/operator, moving four loads of varying shapes, sizes and weights.
- use fibre and/or synthetic rope as tag lines, and connecting to loads using clove hitch, rolling hitch, bowline and single sheetbend.
- conduct pre and post operational checks of the lifting equipment.

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the national OHS endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting

EVIDENCE GUIDE

- Assessors must ensure that the assessment in the workplace is organised through a workplace supervisor to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with the requirements of any relevant Standards or operating procedures for dogging activities
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the performance assessment.
 - four different loads as prescribed in the endorsed assessment instrument
 - lifting and associated equipment
 - suitable slewing crane
 - communication equipment (eg. fixed channel, two-way radios) as applicable.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instrument. This Instrument provides instruction on the application of the assessment.

Assessment may be in conjunction with the assessment of other units of competency.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Site information may include but not be limited to

- local conditions such as access and egress
- work method statements.

Hazards may include but not limited to:

- ground stability (eg. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes, trees, buildings, etc)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles, plant)
- weather (e.g. wind, lightning, storms)
- other specific hazards (e.g. trip hazards, heights, radio interference, etc).

Hazard prevention/control measures

The systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of controls, including:

1. elimination.
2. substitution.
3. isolation.
4. engineered control measures.
5. safe work practices.
6. personal protective equipment.

Appropriate standard s may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards.

Lifting Equipment may include but not limited to:

- fibre ropes
- wire ropes
- chain

RANGE STATEMENT

	<ul style="list-style-type: none"> • wire and synthetic slings • shackles • eyebolts • beam clamps • plate clamps • spreader beams • lifting beams • pallet forks and cages • concrete kibbles • personnel boxes.
<i>Communication Methods</i> may include but are not limited to:	<ul style="list-style-type: none"> • written instructions • signage, • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol.
<i>Cranes</i> may include but not limited to:	<ul style="list-style-type: none"> • tower cranes (including self erecting) • portal boom cranes • vehicle loading cranes • slewing mobile cranes • non-slewing cranes • derrick cranes.
<i>Appropriate personnel</i> may include but are not limited to:	<ul style="list-style-type: none"> • supervisors • colleagues • managers who are authorised to take responsibility for the workplace or operations.
<i>Communication Equipment</i> may include but not limited to:	<ul style="list-style-type: none"> • fixed channel two-way radios • whistles • bells.
<i>Personal protective equipment (PPE)</i> may include but not limited to:	<ul style="list-style-type: none"> • hard hat • safety boots • gloves • high visibility clothing • reflective vest • relevant breathing, hearing, sight, skin and sun protection.
<i>Load destination</i> may include but not limited to:	<ul style="list-style-type: none"> • ground • loading platforms • suspended floors • vehicles.

RANGE STATEMENT

Communication signals may include but not limited to:

- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- telescope out - hand
- telescope out - whistle
- telescope in - hand
- telescope in - whistle
- slew left - hand
- slew left - whistle
- slew right - hand
- slew right - whistle.

Defective Equipment may include but not limited to:

- excessive wear
- damage
- stretched
- broken wires
- cut/damaged fibres.

Unit Descriptor

Unit descriptor

This unit specifies the outcomes required to operate a builder's hoist in which personnel, goods and/or materials may be hoisted, and which comprises a car, structure, machinery or other equipment associated with the hoist, and which may be a cantilever hoist, a tower hoist or a multiple winch operation. Included in this definition are situations where winches may be configured to operate as hoists for the transportation of personnel for licensing purposes.

Application of the Unit

Application of the unit

This unit requires the operator to plan work, conduct routine checks, conduct hoist operations and shut down and secure a hoist.

This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit, which is not acceptable to regulators for the purpose of licensing.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work.	<p>1.1. Potential workplace hazards are identified.</p> <p>1.2. Hazard prevention/control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment.</p> <p>1.3. The hoist is appropriate to the load/s and workplace conditions.</p> <p>1.4. The weight of the load is determined according to procedures.</p> <p>1.5. Appropriate communication methods are identified with appropriate personnel.</p>
2. Conduct routine checks.	<p>2.1. Hoist is visually checked for any damage or defects.</p> <p>2.2. Appropriate hazard prevention/control measures are applied to the work area according to procedures and potential hazards.</p> <p>2.3. Service logbook for the hoist is checked for compliance.</p> <p>2.4. Routine pre-start operational checks are carried out according to procedures.</p> <p>2.5. Main power supply is switched on.</p> <p>2.6. Hoist is started according to procedures and checks made for any abnormal noises.</p> <p>2.7. All controls located and checked for serviceability.</p> <p>2.8. Post start operational checks are carried out according to procedures.</p> <p>2.9. All communication equipment, lighting and alarm systems are checked for serviceability.</p> <p>2.10. All hoist safety devices are tested to their maximum according to procedures.</p> <p>2.11. All damage and defects are reported and recorded according to procedures and appropriate action taken.</p>
3. Conduct hoist operations.	<p>3.1. Hoist is operated according to procedures.</p> <p>3.2. Communication methods associated with hoist movements are conducted according to procedures and the appropriate standards.</p> <p>3.3. Loads and load distribution are continually monitored to ensure that the hoist is operated within its capacity according to procedures.</p> <p>3.4. Hoist movement is monitored constantly ensuring safety to appropriate personnel and hoist stability.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. <i>Unplanned and/or unsafe situations</i> are responded to in line with procedures.
4. Shut down and secure hoist.	4.1. Hoist is <i>shut down</i> according to procedures. 4.2. All fences and gates are secured according to procedures. 4.3. Routine post -operational checks are carried out according to procedures. 4.4. Power is isolated and secured against unauthorised access. 4.5. All damage and defects are reported and recorded according to procedures and appropriate action taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accurately record and maintain information relating to personnel and materials hoist operations
- communication techniques in the workplace including bells, lights, intercom and use of two-way radios
- conduct personnel and materials hoist operations
- operate emergency brake and decent system
- hazards associated with the operation of the personnel and materials hoist are identified, risks are assessed and effective hazard prevention/control measures for those hazards identified and put into place
- inspect personnel and materials hoist equipment, safety equipment and installation for safe operation including general maintenance
- communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- weight of the load is determined from labels, markings or load paperwork
- level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for the hoist class
- hoist operations and operating techniques
- understanding of the hierarchy of hazard identification and control
- materials safety data sheets and requirements for safe movement of materials
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the hoist class
- procedures for the recording, reporting and maintenance of workplace records and information
- rated capacity and working load limits
- typical routine problems encountered in the operation of a personnel and materials hoist, inspection techniques and adjustments required for correction.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation
- effectively communicate and work safely with others in the work area
- identify hazards associated with the operation of the hoist and put in place effective hazard controls for those hazards identified
- determine load weights
- effectively conduct personnel and materials hoist operations to include the tasks of raising and lowering loads with hoist; in conjunction with awareness of the limitations of the hoist according to manufacturer's specifications
- ensure hoist controls are attended throughout operation.
- effectively conduct emergency lowering of the hoist according to the emergency lowering procedure
- effectively conduct pre operational and shut down checks of the personnel and materials hoist (particular awareness of controls, alarms and lockout devices).
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument
- Assessment of performance must be

Context of and specific resources for assessment

EVIDENCE GUIDE

undertaken either in the workplace or in a realistically simulated workplace

- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with relevant appropriate standard requirements
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the Performance Assessment.
 - appropriate personnel and material hoist and associated equipment in safe condition
 - suitable loads as specified by the endorsed assessment instrument
 - communication equipment (e.g. two-way radios, intercoms, light systems, buzzers, bells etc)

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:

- ground conditions (e.g. condition of pavement, slopes)
- overhead hazards (e.g. power lines, service pipes)
- traffic (e.g. pedestrians, vehicles, other plant)
- environmental conditions (e.g. wind, lightning, rain)
- hoist overload
- other specific hazards (e.g. dangerous materials).

Hazard prevention/control measures may include:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes application of the hierarchy of control, the six step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment
- codes of practice
- legislation
- Australian standards
- manufacturer specifications.

Appropriate standards may include:

- the operation of a builder's hoist in which personnel, goods and/or materials may be hoisted, and which comprises a car, structure, machinery or other equipment associated with the hoist, and which may be a cantilever hoist, a tower hoist or a multiple winch operation. Included in this definition are situations where winches may be configured to operate as

RANGE STATEMENT

	hoists for the transportation of personnel.
<i>Procedures</i> may include but not limited to:	<ul style="list-style-type: none"> • manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists).
<i>Communication methods</i> may include but not limited to:	<ul style="list-style-type: none"> • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol • interfloor/level communications
<i>Appropriate personnel</i> may include but not limited to:	<ul style="list-style-type: none"> • those associated with the operations of the personnel and materials hoist • supervisors • colleagues • managers who are authorised to take responsibility for the workplace or operations.
<i>Service logbook</i> may include but is not limited to:	<ul style="list-style-type: none"> • any logbook • service book • history record system where the service and maintenance history is kept.
<i>Routine pre start operational checks</i> may include but not limited to:	<ul style="list-style-type: none"> • ground stability • tower ties/guys are secure • power supply is covered by earth leakage protection • power leads secured above ground level and not attached to scaffolds or building structure • tower guides are clean and free of rust and damage • signs are clearly displayed and legible • brakes and drive mechanism • overhead protection • intercom and signalling systems • barriers, fencing and gates • fuels, oil and water • lubrication (grease) • hoist rope • sheaves and anchorage points.

RANGE STATEMENT

Communication equipment may include but not limited to:

- fix frequency two-way radios
- bells
- buzzers
- lights.

NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the hoist.

Safety devices may include but not limited to:

- emergency braking system
- overrun limits
- gate interlocks
- personnel access interlock on hoist roof.

Appropriate standards may include but are not limited to:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Unplanned and/or unsafe situations may include but not limited to:

- failure/loss of control e.g. power supply, braking system
- failure of equipment e.g. hydraulic system, broken hoist cable, damaged gear drive
- environmental conditions e.g. wind, lightning, storms.

Shut down may include but not limited to:

- platform positioned at base of tower
- lock on manual safety brake
- landing gates secured to prevent unauthorised access
- power isolated from control panel
- mains power supply isolated and secured
- internal combustion engine idled to stabilise temperature
- engine turned off
- fencing/barriers around base secured to prevent unauthorised access
- key removed (where applicable).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accurately record and maintain information relating to materials hoist operations
- communication techniques in the workplace including bells, lights, hand signals intercom and use of two-way radios
- conduct materials hoist operations
- hazards associated with the operation of the materials hoist are identified, risks are assessed and effective hazard prevention/control measures for those hazards identified and put into place
- inspect materials hoist equipment, safety equipment and installation for safe operation
- interpersonal communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)
- verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- weight of the load is determined from labels, markings or load paperwork
- level of literacy to be able to read and comprehend manufacturer's instructions,

REQUIRED SKILLS AND KNOWLEDGE

procedures and safety signs

- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for the hoist class
- hoist operations and operating techniques
- understanding of the hierarchy of hazard identification and control
- materials safety data sheets and requirements for safe movement of materials
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the hoist class
- procedures for the recording, reporting and maintenance of workplace records and information
- rated capacity and working load limits
- typical routine problems encountered in the operation of a materials hoist, inspection techniques and adjustments required for correction.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- identify hazards associated with the operation of the hoist and put in place effective hazard prevention/controls
- determine load weights.
- effectively conduct materials hoist operations to include the tasks of raising and lowering loads with equipment and materials for cantilevered cars, buckets or platforms.
- ensure the hoist is attended at all times.
- effectively conduct pre operational and shut down checks of the materials hoist (particular awareness of controls, alarms and lockout devices).

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a

EVIDENCE GUIDE

suitable working area is made available to suit the assessment and the workplace

- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with relevant appropriate standard requirements
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the Performance Assessment.
 - appropriate material hoist and equipment in safe condition
 - suitable loads as specified by the endorsed assessment instrument
 - communication equipment (e.g. two-way radios, intercoms, light systems buzzers or bells etc)

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground conditions (e.g. condition of pavement, slopes)
- overhead hazards (e.g. power lines, service pipes)
- Insufficient lighting
- traffic (e.g. pedestrians, vehicles, other plant)
- environmental conditions (e.g. wind, lightning, rain)
- hoist overload
- other specific hazards (e.g. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.
- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standard (where applicable).

Appropriate standards may include but not limited to:

Hoist may include:

the operation of builder's hoist by which only goods or materials and not personnel may be hoisted and where the car, bucket or platform is cantilevered from, and travels up and down externally to, a face of the support structure.

Procedures may include but are

- manufacturer's guidelines (instructions,

RANGE STATEMENT

not limited to:

specifications or checklists)

- industry operating procedures
- workplace procedures (work instructions, operating procedures, checklists).

Communication methods may include but are not limited to:

- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol
- interfloor/ level communications.

Appropriate personnel may include but are not limited to:

- those associated with the operations of the hoist
- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

Hazard prevention/control measures may include but not limited to:

- safety tags on electrical switches/isolators
- traffic barricades and control
- pedestrian barricades
- movement of obstructions
- personal protective equipment
- hoist safety gates and guards
- hoist safety interlocks
- adequate illumination.

Service logbook may include but is not limited to:

- any logbook
- service book
- history record system where the service and maintenance history is kept.

Routine pre start operational checks may include but are not limited to:

- check ground stability
- tower ties/guys are secure
- power supply is covered by earth leakage protection
- power leads are secured above ground level and not attached to scaffolds or building structure
- tower guides are clean and free of rust and damage
- signage is clearly displayed and legible
- brakes and drive mechanism

RANGE STATEMENT

Communication equipment may include but is not limited to:

- overhead protection
- intercom and signalling systems
- barriers, fencing and gates
- fuels, oil and water (where applicable)
- lubrication (grease)
- hoist rope
- sheaves and anchorage points.
- fixed channel two-way radios
- intercoms
- bells
- lights
- buzzers.

NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the hoist.

Safety devices may include but not limited to:

- emergency braking system
- overrun limits
- gate interlocks.

Unplanned and/or unsafe situations may include but are not limited to:

- failure/lose of control e.g. power supply, braking system
- failure of equipment e.g. hydraulic system, broken hoist cable, damaged drive gear
- environmental conditions (e.g. wind, lightning, storms, etc).

Shut Down may include but not limited to:

- position platform at base of tower
- power isolated from control panel
- mains power supply isolated and secured
- fencing/barriers around base secured to prevent unauthorised access
- landing gates secured to prevent unauthorised access
- key removed from control panel (where applicable).

All defective rigging equipment, associated equipment, associated plant and safety equipment are isolated reported and recorded according to procedures.</p> <p>5.6. Rigging equipment and associated equipment are</p>

ELEMENT**PERFORMANCE CRITERIA**

stored. according to procedures and the appropriate standard.

5.7. Hazard prevention/control measures are removed (where appropriate).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of basic structural charts and structural plans (site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- apply methods of splicing and whipping fibre and synthetic ropes
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations.
- organisational and workplace standards, requirements, policies and procedures for rigging

REQUIRED SKILLS AND KNOWLEDGE

- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:-
 - inspection of all plant and equipment, and
 - installation of a fall arrest system (Static line), and
 - use of a safety harness / fall arrest system, and
 - installation of crane loading platforms and
 - installation of a safety net, and
 - installation of a shutter and safety screen, and
 - demonstrated ability to work safely at heights, and
 - erection of structural steel, and
 - erection of precast panel, and
 - set up and operation of a winch for load movement, and
 - installation of a materials hoist, or
 - installation of a mast climber.
- effectively demonstrate the following knots,

EVIDENCE GUIDE

	<p>bends and hitches:-</p> <ul style="list-style-type: none"> • Sheet bend, • Becket hitch, • Running bowline, • Double bowline. <p>• effectively demonstrate the following splices and whippings:-</p> <ul style="list-style-type: none"> • Eye splice, • Back splice, • Short splice, • Sail makers whipping, • Common whipping, • West countryman's

Functional area

Functional area

CPCCLRG3002A Licence to perform rigging intermediate level

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to perform rigging work at the intermediate level, which includes all the outcomes for rigging work at the basic level, and also includes rigging of cranes, rigging of conveyors, rigging of dredges and excavators, rigging associated with tilt slabs, rigging associated with demolition work, and dual lifts for licensing purposes.

Application of the Unit

Application of the unit This unit requires the applicant to be able plan the work, select and inspect equipment, set up task, erect structures and plant and dismantle structures and plant.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

This unit has a pre-requisite requirement. This requirement may be met by either the successful completion of the unit *CPCCLRG3001A Licence to perform rigging basic level* or holding a valid licence for basic rigging.

(where appropriate)

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of structural charts and structural plans (site information)
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations
- organisational and workplace standards, requirements, policies and procedures for rigging
- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated

REQUIRED SKILLS AND KNOWLEDGE

ground conditions for setting up plant and equipment.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:
 - adding and removing a tower crane section, or
 - adding and removing a crane lattice boom section, or
 - erecting a non guyed tower (e.g. light tower, and
 - perform a multiple crane lift, or
 - a multiple winch lift, or
 - a combination of a crane and winch lift, and
 - lifting and installing a series of tilt-up panels, or
 - lifting and installing a series of scenery panels (i.e. entertainment industry), and
 - demolish/remove a series of tilt-up panel structures, or
 - demolish/remove a series of scenery panel structures, and
 - demolishing a concrete encased structural steel column and beam.
- **NB:** All specifications for these performance

EVIDENCE GUIDE

Context of and specific resources for assessment

tasks are detailed in the endorsed assessment instrument.

- effectively conduct pre and post operational checks of intermediate rigging equipment.

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:

- personal protective equipment (PPE) for the purpose of the Performance Assessment
- appropriate safety equipment in safe condition
- appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. radios) where applicable
- appropriate materials as required for safe erection of structures.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

EVIDENCE GUIDE

	<p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.</p> <p>Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p>
Guidance information for assessment	<p>Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes) (**NB:** Minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of structural charts and structural plans (Site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations
- organisational and workplace standards, requirements, policies and procedures for rigging
- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:
 - rig a span rope, or
 - rig a flying fox, and
 - install a swinging stage, or
 - install a bosuns chair, and
 - set up a gin pole and conduct a lift with a powered winch, and
 - erect and dismantle a hung or suspended scaffold

NB: All specifications for these performance tasks are detailed in the endorsed assessment instrument.

- effectively demonstrate the following knots, bends and hitches:
 - Alpine hitch
 - Bosun chair hitch
 - Prusik hitch
 - Figure eight
- effectively conduct pre and post operational

EVIDENCE GUIDE

Context of and specific resources for assessment

checks of advanced rigging equipment.

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:

- personal protective equipment (PPE) for the purpose of the Performance Assessment
- appropriate safety equipment in safe condition
- Appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. radios) where applicable
- appropriate materials as required for safe erection and dismantling of performance tasks
- appropriate materials for conducting fibre rope knots, bends and hitches.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency

EVIDENCE GUIDE

	and accuracy of performance together with application of underpinning knowledge.
	Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. <i>Appropriate personnel</i> may include but are not limited to:	<ul style="list-style-type: none"> • other riggers • doggers • crane operators.
<i>Communication equipment</i> may include but is not limited to:	<ul style="list-style-type: none"> • fixed channel two-way radios.

RANGE STATEMENT

Hazard prevention/control

measures may include but are not limited to:

- safety tags on electrical switches/isolators
- powerlines are insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers
- movement of obstructions
- personal protective equipment
- adequate illumination.

Ground suitability may include but not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete
- suspended concrete floors
- building roofs
- landings
- ground bearing pressure.

Temporary connections may include but not limited to:

- knots
- bends
- hitches
- whipping.

Flexible Steel Wire Rope (FSWR) includes:

- identification, uses and connections.

May include termination for:

- static lines
- guys
- purchase systems
- lashing
- cranes
- hoist and winch ropes.

CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to erect, alter and dismantle scaffolding at the basic level, consisting of scaffolding work connected with the operation or use of modular or pre-fabricated scaffolds, cantilevered materials hoists with a maximum working load of 500kg, ropes and gin wheels, safety nets and static lines, and bracket scaffolds (tank and formwork) for licensing purposes.

Application of the Unit

Application of the unit This unit covers the scope of work to plan the job, select and inspect equipment, set up task, erect scaffold and scaffold equipment and dismantle scaffold and scaffold equipment.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form it state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	<p>1.1.Task to be undertaken is assessed.</p> <p>1.2.Potential workplace <i>hazards</i> are identified.</p> <p>1.3.<i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment.</p> <p>1.4.Site information is obtained.</p> <p>1.5.<i>Scaffold, associated equipment and scaffolding equipment</i> are identified from site information and in consultation with <i>appropriate personnel</i> (where applicable).</p> <p>1.6.<i>Safety equipment</i> is identified.</p> <p>1.7.All <i>forces and loads</i> exerted on and by the scaffold and/or scaffolding equipment are determined and calculated.</p> <p>1.8.Appropriate <i>communication methods</i> are identified with appropriate personnel.</p>
2. Select and inspect plant and equipment.	<p>2.1.Scaffold, associated equipment and scaffold equipment are selected and inspected according to <i>procedures</i> and site information.</p> <p>2.2.Safety equipment is selected and inspected according to procedures.</p> <p>2.3.All defective Scaffold, associated equipment, scaffold equipment and safety equipment are isolated according to procedures.</p> <p>2.4.All defective Scaffold, associated equipment, scaffold equipment and safety equipment are reported and recorded according to procedures.</p> <p>2.5.<i>Communication equipment</i> is selected and inspected for serviceability (where applicable).</p>
3. Set up task	<p>3.1.Appropriate <i>hazard prevention/control measures</i> are applied to the work area according to procedures.</p> <p>3.2.Ground suitability is checked.</p> <p>3.3.Appropriate footings are prepared to support scaffold and scaffold equipment according to procedures and the appropriate standard.</p> <p>3.4.Scaffold and scaffold equipment are prepared for erection according to procedures and the appropriate standard.</p> <p>3.5.Safety equipment is fitted and secured according to procedures (where applicable).</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6.Scaffold and scaffold equipment are positioned for work application and <i>stability</i> according to procedures and the appropriate standard.
4. Erect scaffold and scaffold equipment.	<p>4.1.Scaffold and scaffold equipment are erected according to procedures and the appropriate standard.</p> <p>4.2.Work is conducted safely at heights including safe and effective use of safety equipment.</p> <p>4.3.Scaffold and scaffold equipment are erected consistent with site information.</p> <p>4.4.Appropriate communication methods are used to coordinate the tasks.</p> <p>4.5.Completed tasks are inspected for compliance with the appropriate standard.</p> <p>4.6.Handover certificate is completed as required and handed to appropriate personnel.</p> <p>4.7.Excess materials from the work area are removed (where applicable).</p>
5. Dismantle scaffold and scaffold equipment.	<p>5.1.Scaffold and scaffold equipment are dismantled according to procedures and the appropriate standard.</p> <p>5.2.Work is conducted safely at heights including safe and effective use of safety equipment.</p> <p>5.3.Scaffold, associated equipment and scaffold equipment are inspected for damage and defects.</p> <p>5.4.All damaged and defective scaffold, associated equipment and scaffold equipment are tagged and isolated according to procedures.</p> <p>5.5.Hazard prevention/control measures are removed (where appropriate).</p> <p>5.6.All damaged and defective scaffold, associated equipment and scaffold equipment are reported and recorded according to procedures and appropriate action taken.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect scaffold within the scope of the basic scaffolder
- ability to erect, level, plumb and stabilise cantilever hoists and scaffolds
- ability to interpret manufacturer's specifications for plant and equipment
- ability to work safely at heights
- ability to set up fall arrest systems, including safety nets
- ability to work safely in confined spaces
- accurate interpretation of basic structural charts and structural plans
- applying methods for making temporary connection using fibre ropes
- correct application of all scaffolding equipment
- methods for making temporary connection of guy ropes and static lines using Flexible Steel Wire Rope (FSWR)
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking basic scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffolding erection and dismantling techniques
- knowledge of types of hoists, plant and equipment associated with basic scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- estimation of bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for basic scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing requirements.
- effectively communicate and work safely with others in the work area.
- effectively apply risk assessment and hazard management procedures at a basic scaffolder level.
- effectively complete the planning, erection and dismantling of a scaffolding system, in accordance with procedures, including a minimum of erect and dismantle:
 - Modular Scaffold with return and ladder access and platform brackets (hop-up brackets)
 - Bracket Scaffold
 - Mobile Scaffold
 - gin wheel
 - Cantilever Hoist
 - safety net and static line
 - safety screen

Scaffold to be of a minimum height of at least 5.0 metres above the supporting surface with full edge protection (includes safety screen) for each work platform including toe boards and handrails.

- correctly demonstrate fibre rope bends and hitches.

EVIDENCE GUIDE

Context of and specific resources for assessment

- effectively conduct pre and post operational checks of basic scaffolding.
- complete handover certificate as required.
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints for basic scaffolding
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the Performance Assessment
 - appropriate safety equipment in safe condition
 - appropriate scaffolding and associated scaffolding equipment
 - communication equipment (e.g. fixed channel two way radios) where applicable
 - appropriate personnel to assist with the erecting and dismantling of scaffold and scaffold equipment.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

Assessment may be in conjunction with the assessment of other units of competency.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

EVIDENCE GUIDE

Guidance information for assessment

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground conditions (e.g. ground bearing pressure/s, back filled trenches, underground services, slopes)
- overhead hazards (e.g. power lines, service pipes) (minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other site specific hazards (e.g. hazardous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination

RANGE STATEMENT

	<ul style="list-style-type: none"> • substitution • isolation • engineering control measures • using safe work practices • personal protective equipment.

Application of the unit This unit covers the scope of work to plan the job, select and inspect equipment, set up task, erect scaffold and scaffold equipment and dismantle scaffold and scaffolding equipment.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

This unit has a pre-requisite requirement. This requirement may be met by either the successful completion of the unit *CPCCLSF3001A Licence to erect, alter and dismantle scaffolding intermediate level* or holding a valid licence for intermediate scaffolding.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	<p>1.1.Task to be undertaken is assessed.</p> <p>1.2.Potential workplace <i>hazards</i> are identified.</p> <p>1.3.<i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment.</p> <p>1.4.Site information is obtained.</p> <p>1.5.Scaffold, associated equipment and scaffold equipment are identified from site information in consultation with appropriate personnel.</p> <p>1.6.<i>Safety equipment</i> is identified.</p> <p>1.7.All <i>forces and loads</i> exerted on and by the scaffold and/or scaffolding equipment are determined and calculated.</p> <p>1.8.Appropriate <i>communication methods</i> are identified with appropriate personnel.</p>
2. Select and inspect equipment.	<p>2.1.Scaffold, associated equipment and scaffold equipment are selected and inspected according to procedures and site information.</p> <p>2.2.Safety equipment is selected and inspected according to <i>procedures</i>.</p> <p>2.3.All defective scaffold, associated equipment and scaffold equipment are isolated according to procedures.</p> <p>2.4.All defective scaffold, associated equipment, scaffold equipment and safety equipment are reported and recorded according to procedures.</p> <p>2.5.<i>Communication equipment</i> is selected and inspected for serviceability (where applicable).</p>
3. Set up task.	<p>3.1.Appropriate <i>hazard prevention/control measures</i> are applied to the work area according to procedures.</p> <p>3.2.Scaffold and scaffold equipment are prepared for erection according to procedures.</p> <p>3.3.Fit safety equipment and secure according to procedures (where applicable).</p>
4. Erect scaffold and scaffolding equipment.	<p>4.1.Scaffold and scaffold equipment are erected according to procedures and the appropriate standard.</p> <p>4.2.Work is conducted safely at heights including safe and effective use of safety equipment.</p> <p>4.3.Scaffold and scaffold equipment are erected</p>

ELEMENT	PERFORMANCE CRITERIA
5. Dismantle scaffold and scaffolding equipment.	consistent with site information.
	4.4. Appropriate communication methods are used to coordinate the tasks.
	4.5. Completed tasks are inspected for compliance with the appropriate standard.
	4.6. Handover certificate is completed as required and handed to appropriate personnel.
	4.7. Excess materials from the work area are removed (where applicable).
	5.1. Scaffold and scaffold equipment is dismantled according to procedures and the appropriate standard.
	5.2. Work is conducted safely at heights including safe and effective use of safety equipment.
	5.3. Scaffold, associated equipment and scaffold equipment are inspected for damage and defects.
	5.4. All damaged and defective scaffold, associated equipment and scaffold equipment is tagged and isolated in accordance with procedures.
	5.5. Hazard prevention/control measures are removed (where appropriate).
	5.6. All damaged and defective scaffold, associated equipment and scaffold equipment are reported and recorded according to procedures and appropriate action taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to erect scaffold and scaffold equipment within the scope of the advanced scaffolder
- ability to erect, level, plumb and stabilise scaffolds and scaffold equipment within the scope of the advanced scaffolder
- ability to work safely at heights

REQUIRED SKILLS AND KNOWLEDGE

- ability to interpret manufacturer's specifications for plant and equipment
- accurate interpretation of structural charts and structural plans
- correct application of all scaffolding equipment
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking advanced scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffold and scaffold equipment erection and dismantling techniques
- knowledge of types scaffold and scaffold equipment, associated with advanced scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- application of safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for advanced scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- Effectively communicate and work safely with others in the work area.
- Effectively apply risk assessment and hazard management procedures at an advanced scaffolder level.
- Effectively complete the planning, erection and dismantling of scaffolding systems, in accordance with procedures, including a minimum of erection and dismantling of:
 - a hung scaffold, and
 - a suspended scaffold.

Hung scaffold means a scaffold that is hung from another structure and that is not capable of being raised or lowered when in use.

Suspended scaffold means a scaffold incorporating a suspended platform that is capable of being raised or lowered when in use.

- Effectively conduct compliance inspections of scaffold and scaffold equipment for advanced scaffolding.
- Complete handover certificate as required
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed

Context of and specific resources for assessment

EVIDENCE GUIDE

Assessment Instrument

- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints for basic scaffolding
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the Performance Assessment
 - appropriate safety equipment in safe condition
 - appropriate scaffolding and scaffold equipment in safe condition
 - site information as described in the mandated assessment instrument
 - communication equipment (e.g. fixed channel, two-way radios) where applicable
 - appropriate personnel to assist with the erecting and dismantling of scaffold and scaffold equipment.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

Assessment may be in conjunction with the assessment of other units of competency.

The use of **'simulators'** in the assessment of this unit of competency is **not acceptable**.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

EVIDENCE GUIDE

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- overhead hazards (e.g. power lines, service pipes) (minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other site specific hazards (e.g. hazardous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may

- codes of practice
- legislation

RANGE STATEMENT

include:	<ul style="list-style-type: none"> • Australian Standards • manufacturer's specifications • industry standards (where applicable).
<i>Site Information</i> may include, but not limited to:	<ul style="list-style-type: none"> • local conditions such as access and egress • work method statements • site-specific job safety analyses and other documentation as required.
<i>Scaffold</i> may include but not limited to:	<ul style="list-style-type: none"> • all scaffold at the basis and intermediate levels • hung scaffolds, including scaffolds hanging from tubes, wire ropes or chains • suspended scaffolds.
<i>Associated equipment</i> may include but not limited to:	<ul style="list-style-type: none"> • all associated equipment at the basic and intermediate levels • counterweights • prefabricated needles.
<i>Scaffolding equipment</i> may include but not limited to:	<ul style="list-style-type: none"> • all scaffold equipment at the basis and intermediate level • swinging stages.
<i>Appropriate personnel</i> may include, but is not limited to:	<ul style="list-style-type: none"> • supervisors • colleagues • managers who are authorised to take responsibility for the workplace or operations • other scaffolders • other site personnel as applicable.
<i>Safety equipment</i> may include but is not limited to:	<ul style="list-style-type: none"> • safety harness • energy absorber • lanyard • inertia reel.
<i>Forces and Loads</i> may include, but are not limited to:	<ul style="list-style-type: none"> • dead loads • live loads • static load • dynamic loads • wind loads.
<i>Communication Methods</i> may include but are not limited to:	<ul style="list-style-type: none"> • verbal and non-verbal language • written instructions • signage • communication signals • listening • questioning to confirm understanding, and

RANGE STATEMENT

Procedures may include but are not limited to:

- appropriate worksite protocol.
- manufacturer's guidelines (instructions, specifications or checklists)
- industry operating procedures, relevant codes of practice
- workplace procedures (work instructions, operating procedures, checklists)
- reporting and recording procedures such as e.g. equipment defect/s.

Communication equipment may include but is not limited to:

- fixed frequency radios
- mobile phones.

Hazard prevention/control measures may include but are not limited to:

- safety tags on electrical switches/isolators
- safety observer used inside exclusion zone (e.g. Spotter), to include the use of power line warning systems (e.g. Tiger tails)
- power disconnected by competent authority where applicable.
- traffic and pedestrian barricades and controls
- safe and adequate access / egress is established
- personal protective equipment
- adequate illumination.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work.	<p>1.1. Potential workplace hazards are identified.</p> <p>1.2. Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment.</p> <p>1.3. The weight of the load is identified and estimated in consultation with appropriate personnel.</p> <p>1.4. Crane is appropriate to the loads and workplace conditions.</p> <p>1.5. Appropriate paths for the movement of loads in the work area are inspected and determined.</p> <p>1.6. Appropriate communication methods are identified with appropriate personnel.</p>
2. Conduct routine checks.	<p>2.1. Crane is accessed in safe manner.</p> <p>2.2. Crane is visually checked for any damage or defects.</p> <p>2.3. All signage and labels are visible and legible according to the appropriate standard.</p> <p>2.4. Routine pre-operational crane checks are carried out according to procedures.</p> <p>2.5. All controls located and identified.</p> <p>2.6. Crane service logbook is checked for compliance.</p> <p>2.7. Crane is started according to procedures and checked for any abnormal noises.</p> <p>2.8. All crane safety devices are tested according to procedures.</p> <p>2.9. Post start operational checks are carried out according to procedures.</p> <p>2.10. All communication equipment is checked for serviceability</p> <p>2.11. All damage and defects are reported and recorded according to procedures and appropriate action taken.</p>
3. Transfer load.	<p>3.1. Determine lifts are within the capacity of the crane.</p> <p>3.2. Appropriate hazard prevention/control measures are applied to the work area according to procedures in consultation with appropriate personnel.</p> <p>3.3. Boom/jib and hoist block is positioned over load following directions from appropriate personnel.</p> <p>3.4. Test lift is carried out to procedures.</p> <p>3.5. Loads are transferred using all relevant crane</p>

ELEMENT	PERFORMANCE CRITERIA
	<i>movements</i> according to procedures and appropriate standards.
	3.6. All required <i>communication signals</i> are interpreted correctly according to procedures and the appropriate standard.
	3.7. Crane is operated according to procedures.
	3.8. Load movement is monitored constantly to ensure safety of personnel, load and structural stability.
	3.9. <i>Unplanned and/or unsafe situations</i> are responded to in line with procedures.
4. Shut down and secure crane.	4.1. Crane is placed in weather vane mode according to procedures (where applicable).
	4.2. Relevant motion locks and brakes are applied (where applicable).
	4.3. Crane and equipment is secured correctly, according to procedures and the appropriate standard.
	4.4. Crane is <i>shut down</i> according to procedures
	4.5. Routine post-operational checks on crane are carried out, according to procedures.
	4.6. All damage and defects are reported and recorded according to procedures and appropriate action taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accurate recording and maintenance of information relating to crane operations
- communication techniques in the workplace including whistles, hand signals and use of two-way radios
- interpersonal communication skills at a level sufficient to communicate with other site personnel
- loading of data into crane computer (where fitted) and checking of operation to accurately reflect the crane configuration
- operation of a tower crane for the lifting and moving of loads to the safe working

REQUIRED SKILLS AND KNOWLEDGE

- rated capacity in conjunction with other appropriate personnel where required
- risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, etc)
- use and interpretation of crane manufacturer's specifications and data, including load charts to enable the crane to be configured for the load
- verifying problems and equipment faults and demonstrating appropriate response procedures

Required knowledge

Required knowledge for this unit is:

- ability to read and comprehend manufacturer's instructions, procedures and safety signs
- appropriate mathematical procedures for estimation of loads
- commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- understanding of the hierarchy of hazard identification and control
- level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- tower crane operating techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- tower crane characteristics and capabilities to allow the operation of the crane to suit the range of loads
- rated capacity and working load limits (including use of crane load charts)
- typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OH&S licensing legislation
- communicate and work safely with others in the work area
- assess risks and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, etc)
- operate a tower crane for the lifting and moving of loads to the safe working rated capacity in conjunction with other appropriate personnel
- apply appropriate mathematical procedures for estimation of loads.

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and

EVIDENCE GUIDE

authorised work practices, safety requirements and environmental constraints

- Assessment is to comply with relevant appropriate standard requirements
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the Performance Assessment.
 - appropriate tower crane and associated equipment in safe condition
 - suitable loads as specified by the endorsed assessment instrument
 - communication equipment (eg. two way radios, whistles, etc)
 - other appropriate personnel to sling and direct the loads.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground stability (e.g. ground condition or slopes for load placement)
- overhead hazards (e.g. power lines, service pipes)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles, plant)
- environmental conditions (e.g. wind, lightning, storms, etc)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standard s may include but not limited to:

- codes of practice
- legislation
- Australian Standard
- manufacturer's specifications
- industry standards (where applicable).

Appropriate personnel may include but not limited to:

- riggers
- doggers

Crane

Covers a jib or boom/job crane mounted on a tower structure, demountable or permanent, including both horizontal and luffing jib types.

NB: Self-erecting tower cranes are excluded from this classification.

Appropriate may include but not

- crane capabilities

RANGE STATEMENT

limited to:	<ul style="list-style-type: none"> • environmental conditions (e.g. wind, lightning, storms, etc).
<i>Communication method</i> may include but not limited to:	<ul style="list-style-type: none"> • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol.
<i>Signage and labels</i> may include but not limited to:	<ul style="list-style-type: none"> • crane data plates/labels • load charts • crane decals • control labels.
<i>Procedures</i> may include but not limited to:	<ul style="list-style-type: none"> • manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists).
<i>Controls</i> may include but not limited to:	<ul style="list-style-type: none"> • luffing levers • hoisting and lowering levers • slewing levers including brake • trolleying levers (where applicable)
<i>Service logbook</i> may include but not limited to:	<ul style="list-style-type: none"> • any logbook • service book • history record system where the service and maintenance history is kept.
<i>Crane safety devices</i> may include but not limited to:	<ul style="list-style-type: none"> • audible and visual devices • operator restraint devices • lights.
<i>Communication equipment</i> may include but not limited to:	<ul style="list-style-type: none"> • two way radios • whistles • bells • buzzers. <p>NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane.</p>
<i>Hazard prevention/control measures</i> may include but not	<ul style="list-style-type: none"> • safety tags on electrical switches/isolators • powerlines are insulated

RANGE STATEMENT

limited to:

- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control/s
- pedestrian controls
- trench covers
- movement of obstructions
- personal protective equipment
- adequate illumination.

Test lift

The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with appropriate personnel to ensure that:

- near capacity loads do not overload the crane
- loads of unusual shape or weight distribution are correctly slung
- load measuring equipment can be used to verify the calculated weight of the load
- all crane equipment is functioning properly
- adjustments to the slinging can be made in a safe manner.

Relevant crane movements may include but not limited to:

- luffing
- slewing
- hoisting and lowering loads
- trolleying.

Communication signals may include but not limited to:

- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- trolleying out - hand
- trolleying out - whistle
- trolleying in - hand
- trolleying in - whistle
- slew left - hand
- slew left - whistle
- slew right - hand

RANGE STATEMENT

Unplanned and/or unsafe situations may include but not limited to:

- slew right - whistle.
- failure/lose of control e.g. slew brakes, hoist drums
- failure of equipment e.g. hydraulic system
- environmental conditions (e.g. wind, lightning, storms, etc).

Shut Down may include but not limited to:

- boom/jib raised to clear buildings and structures (where applicable)
- trolleying hoist block to park position (where applicable)
- retracting hoist rope&hook block
- idle engine to stabilise temperature
- weather vane mode
- turning off engine
- remove key from ignition
- lock and secure cabin (where applicable)
- lock and secure platform access hatch.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work.	<p>1.1. Potential workplace hazards are identified.</p> <p>1.2. Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment.</p> <p>1.3. Weight of the load is identified and estimated in consultation with appropriate personnel.</p> <p>1.4. Crane is appropriate for the load/s and workplace conditions.</p> <p>1.5. The appropriate paths for the movement of loads in the work area are inspected and determined.</p> <p>1.6. Appropriate communication methods are identified with appropriate personnel.</p>
2. Conduct routine checks.	<p>2.1. Crane is visually checked for any damage or defects.</p> <p>2.2. Crane is accessed in safe manner (where applicable).</p> <p>2.3. All signage and labels are visible and legible according to the appropriate standard.</p> <p>2.4. Routine pre-operational crane checks are carried out according to procedures.</p> <p>2.5. All controls located and identified.</p> <p>2.6. Crane service logbook is checked for compliance.</p> <p>2.7. Crane is started according to procedures and checked for any abnormal noises.</p> <p>2.8. All crane safety devices are tested according to procedures.</p> <p>2.9. Post start operational checks are carried out according to procedures.</p> <p>2.10. All communication equipment is checked for serviceability</p> <p>2.11. All damage and defects are reported and recorded according to procedures and appropriate action taken.</p>
3. Transfer loads.	<p>3.1. Lifts are determined within the capacity of the crane.</p> <p>3.2. Appropriate hazard prevention/control measures are applied to the work area according to procedures in consultation with appropriate personnel.</p> <p>3.3. Boom/jib and hoist block is positioned over load following directions from appropriate personnel.</p> <p>3.4. Test lift is carried out to procedures.</p> <p>3.5. Loads are transferred using all relevant crane</p>

ELEMENT	PERFORMANCE CRITERIA
	<i>movements</i> according to procedures and appropriate standards.
	3.6. All required <i>communication signals</i> are interpreted correctly according to procedures and the appropriate standard.
	3.7. Crane is operated according to procedures.
	3.8. Load movement is monitored constantly to ensure safety of personnel, load and crane stability.
	3.9. <i>Unplanned and/or unsafe situations</i> are responded to in line with procedures.
4. Shut down and secure crane.	4.1. Crane is placed in weather vain mode according to procedures (where applicable).
	4.2. Relevant motion locks and brakes are applied (where applicable).
	4.3. Crane and equipment is secured correctly, according to procedures and the appropriate standard.
	4.4. Crane is <i>shut down</i> according to procedures
	4.5. Routine post-operational checks on crane are carried out, according to procedures.
	4.6. All damage and defects are reported and recorded according to procedures and appropriate action taken.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- accurate recording and maintenance of information relating to crane operations
- communication techniques in the workplace including whistles, hand signals and use of two-way radios
- interpersonal communication skills at a level sufficient to communicate with other site personnel
- load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- operation of a self-erecting tower crane for the lifting and moving of loads to the

REQUIRED SKILLS AND KNOWLEDGE

- safe working rated capacity in conjunction with other appropriate personnel.
- risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane including particular awareness of the risks associated with overhead powerlines/electrical cables, wind, and crane stability
- use and interpretation of crane manufacturer's specifications and data, including load charts and ballast, to enable the crane to be configured for the load
- verify problems and equipment faults and demonstrate appropriate response procedures.

Required knowledge

Required knowledge for this unit is:

- ability to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- appropriate mathematical procedures for estimation of loads
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- understanding of the hierarchy of hazard identification and control
- level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- self erecting tower crane operating techniques
- procedures for the recording, reporting and maintenance of workplace records and information
- self-erecting tower crane characteristics and capabilities to allow the operation of the crane to suit the range of loads
- rated capacity and working load limits (including use of crane load charts)
- typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation
- effectively communicate and work safely with others in the work area
- assess risk and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, wind and crane stability)
- operate a self-erecting tower crane for the lifting and moving of loads to the safe working rated capacity in conjunction with other appropriate personnel
- apply standard mathematical procedures for estimation of loads.

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and

EVIDENCE GUIDE

authorised work practices, safety requirements and environmental constraints

- Assessment is to comply with relevant appropriate standard requirements
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the Performance Assessment.
 - appropriate self-erecting tower crane and associated equipment in safe condition
 - suitable loads as specified by the endorsed assessment instrument
 - communication equipment (eg. two-way radios, whistles, etc)
 - other appropriate personnel to sling and direct the loads.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed assessment instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground stability (e.g. ground condition or slopes for load placement)
- overhead hazards (e.g. power lines, service pipes)
- Insufficient lighting
- traffic (e.g. pedestrians, vehicles, plant)
- environmental conditions (e.g. wind, lightning, storms, etc)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Appropriate personnel may include but not limited to:

- riggers
- doggers.

Crane

Self-erecting tower crane covers the operation of a crane where the tower structure and boom/jib elements are not disassembled into component sections, which can be transported between sites as a complete unit, and where the erection and dismantling processes are an inherent part of the crane's function.

RANGE STATEMENT

<i>Appropriate</i> may include but is not limited to:	<ul style="list-style-type: none"> • crane capabilities • environmental conditions (e.g. wind, lightning, storms, etc).
<i>Communication methods</i> may include but are not limited to:	<ul style="list-style-type: none"> • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol.
<i>Signage and labels</i> may include but not limited to:	<ul style="list-style-type: none"> • crane data plates/labels • load charts • crane decals • control labels.
<i>Procedures</i> may include but are not limited to:	<ul style="list-style-type: none"> • manufacturer's guidelines (instructions, specifications or checklists), • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists).
<i>Controls</i> may include but not limited to:	<ul style="list-style-type: none"> • luffing levers (where applicable) • hoisting and lowering levers • slewing levers including brake • trolley levers (where applicable).
<i>Service logbook</i> may include but is not limited to:	<ul style="list-style-type: none"> • any logbook • service book • history record system where the service and maintenance history is kept.
<i>Crane safety devices</i> may include but not limited to:	<ul style="list-style-type: none"> • audible and visual warning devices • operator restraint devices (where applicable) • lights (where applicable).
<i>Communication equipment</i> may include but not limited to:	<ul style="list-style-type: none"> • two-way radios • whistles • bells • buzzers. <p>NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane.</p>
<i>Hazard prevention/control</i>	<ul style="list-style-type: none"> • safety tags on electrical switches/isolators

RANGE STATEMENT

measures may include but are not limited to:

- power lines are insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers
- movement of obstructions
- personal protective equipment
- adequate lighting
- suitable site for the crane
- counterweights (ballast).

Test lift

The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with appropriate personnel to ensure that:

- near capacity loads do not overload the crane
- loads of unusual shape or weight distribution are correctly slung
- load measuring equipment can be used to verify the calculated weight of the load
- all crane equipment is functioning properly
- adjustments to the slinging can be made in a safe manner.

Relevant crane movements may include but not limited to:

- luffing (where applicable)
- slewing
- trolleying
- hoisting and lowering loads.

Communication signals may include but not limited to:

- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand (where applicable)
- luff boom down - whistle (where applicable)
- luff boom up - hand (where applicable)
- luff boom up - whistle (where applicable)
- trolleying out - hand
- trolleying out - whistle
- trolleying in - hand
- trolleying in - whistle

RANGE STATEMENT

Unplanned and/or unsafe situations may include but not limited to:

- slew left - hand
- slew left - whistle
- slew right - hand
- slew right - whistle.
- failure/lose of control e.g. slew brake hoist drum
- failure of equipment e.g. hydraulic system
- environmental conditions (e.g. wind, lightning, storms, etc).

Shut Down may include but not limited to:

- boom/jib slewed to clear buildings and structures (where applicable)
- trolleying hoist block to park position (where applicable)
- weather vain mode
- retracting hoist rope&hook block
- idle engine to stabilise temperature
- turning off engine
- isolating power supply (where applicable)
- remove key from ignition/control panel
- lock and secure cabin (where applicable).

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to undertake Occupational Health and Safety (OHS) induction training within the construction industry.

It requires the ability to demonstrate personal awareness of OHS legislative requirements, and the basic principles of risk management and prevention of injury and illness in the construction industry.

Licensing requirements will apply to this unit of competency depending on the regulatory requirements of each jurisdiction.

Application of the Unit

Application of the unit This unit of competency supports the attainment of the basic OHS knowledge required prior to undertaking designated work tasks within any of the sectors within the construction industry. The unit relates directly to the general induction training program specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify OHS legislative requirements.	1.1. Applicable <i>OHS legislative requirements</i> relevant to own work, role and responsibilities are identified and explained. 1.2. Duty of care requirements are identified. 1.3. Own responsibilities to comply with <i>safe work practices</i> are identified and explained.
2. Identify construction hazards and control measures.	2.1. Basic principles of risk management are identified. 2.2. <i>Common construction hazards</i> are identified and discussed. 2.3. <i>Measures for controlling</i> hazards and risks are identified.
3. Identify OHS communication and reporting processes.	3.1. OHS communication processes, information and documentation are identified and discussed. 3.2. Role of <i>designated OHS personnel</i> is identified and explained. 3.3. <i>Safety signs and symbols</i> are identified and explained. 3.4. Procedures and <i>relevant authorities</i> for reporting hazards, <i>incidents</i> and injuries are identified.
4. Identify OHS incident response procedures.	4.1. <i>General procedures</i> for responding to incidents and <i>emergencies</i> are identified and explained. 4.2. Procedures for accessing first aid are identified. 4.3. Requirements for the selection and use of relevant <i>personal protective equipment</i> are identified and demonstrated. 4.4. <i>Fire safety equipment</i> is identified and discussed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - clarify OHS legislative requirements

REQUIRED SKILLS AND KNOWLEDGE

- verbally report construction hazards and risks
- ask effective questions
- relay information to others
- discuss OHS issues and information
- comprehension skills to:
 - explain the basic OHS legislative requirements which will be applicable to own work
 - explain the meaning of safety signs and symbols
 - identify common construction hazards
 - discuss the basic principles of risk management.

Required knowledge

Required knowledge for this unit is:

- applicable Commonwealth, State or Territory OHS legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work, role and responsibilities
- basic principles of risk management and assessment for construction work
- common construction hazards
- common construction safety signage and its meanings
- general construction emergency response and evacuation procedures
- general construction work activities that require licenses, tickets or certificates of competency
- general first aid response requirements
- general procedures for raising OHS issues
- general procedures for reporting OHS hazards, accidents, incidents, emergencies, injuries, near misses and dangerous occurrences
- general procedures for responding to hazards, incidents and injuries
- general workers' compensation and injury management requirements
- OHS hierarchy of controls
- OHS responsibilities and rights of duty holders, including:
 - persons in control of construction work/projects
 - employers and self-employed persons
 - supervisors
 - employees
 - designers
 - inspectors
 - manufacturers and suppliers
- own responsibilities to comply with safe work practices relating to:
 - housekeeping

REQUIRED SKILLS AND KNOWLEDGE

- identification of hazards
- preventing bullying or harassment
- smoking
- use of amenities
- use of drugs and alcohol
- role of OHS committees and representatives
- types of common personal protective equipment and fire safety equipment
- types of OHS information and documentation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence must confirm personal awareness of the following:

- applicable OHS legislative and safety requirements for construction work including duty of care
- the range of common construction hazards and procedures for the assessment of risk and application of the hierarchy of control
- OHS communication processes, information and documentation including the role of OHS committees and representatives, the meaning of common safety signs and symbols, and procedures for reporting hazards, incidents and injuries
- general procedures for responding to incidents and emergencies including evacuation, first aid, fire safety equipment and PPE.

Context of and specific resources for assessment

- Resources must be available to support the program including participant materials and other information or equipment related to the skills and knowledge covered by the program.
- It is recommended that the assessment tool designed specifically to support this unit of competency will provide consistency in assessment outcomes.
- Where applicable, physical resources should include equipment modified for people with disabilities
- Access must be provided to appropriate assessment support when required.
- Assessment processes and techniques must be culturally appropriate, and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed
- In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

EVIDENCE GUIDE

Questioning will be undertaken in such a manner as is appropriate to the oracy, language and literacy levels of the operator, any cultural issues that may affect responses to the questions, and reflecting the requirements of the competency and the work being performed.

Method of assessment

Assessment methods may include more than one of the following:

- practical assessment
- oral questioning
- written test
- work-based activities
- simulated project based activity

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS legislative requirements relate to:

- Australian standards
- construction industry OHS standards and guidelines
- duty of care
- health and safety representatives, committees and supervisors
- licences, tickets or certificates of competency
- National Code of Practice for Induction Training for Construction Work
- national safety standards
- OHS and welfare Acts and regulations
- safety codes of practice.

Duty of care requirements relate to:

- legal responsibility under duty of care to do everything reasonably practicable to protect others from harm

RANGE STATEMENT

	<ul style="list-style-type: none"> • own responsibilities to comply with safe work practices, including activities that require licences, tickets or certificates of competency • relevant state OHS requirements, including employers and self-employed persons, persons in control of the work site, construction supervisors, designers, manufacturers and suppliers, construction workers, subcontractors and inspectors.
<i>Safe work practices</i> include:	<ul style="list-style-type: none"> • access to site amenities, such as drinking water and toilets • general requirements for safe use of plant and equipment • general requirements for use of personal protective equipment and clothing • housekeeping to ensure a clean, tidy and safer work area • no drugs and alcohol at work • preventing bullying and harassment • smoking in designated areas • storage and removal of debris.
<i>Risk</i> relates to:	<ul style="list-style-type: none"> • likelihood of a hazard causing injury or harm.
<i>Principles of risk management</i> include:	<ul style="list-style-type: none"> • assessing the risks involved • consulting and reporting ensuring the involvement of relevant workers • controlling the hazard • identifying hazards • reviewing to identify change or improvement.
<i>Hazard</i> relates to:	<ul style="list-style-type: none"> • any thing (including an intrinsic property of a thing) or situation with the potential to cause injury or harm.
<i>Common construction hazards</i> include:	<ul style="list-style-type: none"> • confined spaces • electrical safety • excavations, including trenches • falling objects • hazardous substances and dangerous goods • HIV and other infectious diseases • hot and cold working environments • manual handling • noise • plant and equipment

RANGE STATEMENT

Measures for controlling risk to eliminate or minimise hazards in accordance with the hierarchy of control include:

- traffic and mobile plant
- unplanned collapse
- ultraviolet (UV) radiation
- working at heights.

OHS communication processes include:

- elimination
- substitution
- isolation
- engineering control
- administrative control
- personal protective equipment.
- discussions with OHS representatives
- OHS meetings
- OHS notices, newsletters, bulletins and correspondence
- OHS participative arrangements
- processes for raising OHS issues
- toolbox talks
- workplace consultation relating to OHS issues and changes.

OHS information and documentation includes:

- accident and incident reports
- Acts and regulations
- Australian standards
- codes of practice
- construction documentation and plans
- emergency information contact
- evacuation plans
- guidance notes
- job safety analyses
- labels
- material safety data sheets (MSDS)
- proformas for reporting hazards, incidents and injuries
- reports of near misses and dangerous occurrences
- risk assessments
- safe work method statements
- safety meeting minutes
- site safety inspection reports.

Designated OHS personnel includes:

- first aid officers
- OHS committee members

RANGE STATEMENT

- Safety signs and symbols*** include:
- OHS representatives
 - supervisors.
 - emergency information signs (e.g. exits, equipment and first aid)
 - fire signs (e.g. location of fire alarms and firefighting equipment)
 - hazard signs (e.g. danger and warning)
 - regulatory signs (e.g. prohibition, mandatory and limitation or restriction)
 - safety tags and lockout (e.g. danger tags, out of service tags).
- Relevant authorities*** include:
- emergency services (e.g. police, ambulance, fire brigade and emergency rescue)
 - OHS regulatory authority
 - supervisor.
- Incidents*** include:
- accidents resulting in personal injury or damage to property
 - near misses or dangerous occurrences which do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence, for example:
 - breathing apparatus malfunctioning to the extent that the user's health is in danger
 - collapse of the floor, wall or ceiling of a building being used as a workplace
 - collapse or failure of an excavation more than 1.5 metres deep (including any shoring)
 - collapse or partial collapse of a building or structure
 - collapse, overturning or failure of the load bearing of any scaffolding, lift, crane, hoist or mine-winding equipment
 - damage to or malfunction of any other major plant
 - electric shock.
 - electrical short circuit, malfunction or explosion
 - uncontrolled explosion, fire or escape of gas, hazardous substance or steam
 - any other unintended or uncontrolled incident or event arising from operations carried on at a

RANGE STATEMENT

	workplace.
General procedures for responding to incidents and emergencies include:	<ul style="list-style-type: none">• basic emergency response (keep calm, raise alarm, obtain help)• evacuation• notification of designated OHS personnel and authorities• notification of emergency services (e.g. when and how)• referring to site emergency plans and documentation.
Emergencies include:	<ul style="list-style-type: none">• chemical spill• fire• injury to personnel• structural collapse• toxic and/or flammable vapours emission• vehicle/mobile plant accident.
Personal protective equipment includes:	<ul style="list-style-type: none">• aprons• arm guards• eye protection• gloves• hard hat• hearing protection• high visibility retro reflective vests• protective, well fitting clothing• respiratory protection• safety footwear• UV protective clothing and sunscreen.
Fire safety equipment includes:	<ul style="list-style-type: none">• breathing apparatus• fire blankets• firefighting equipment.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to carry out OHS requirements through safe work practices at any on or off-site construction workplace. It requires the performance of work in a safe manner through awareness of risks and work requirements, and the planning and performance of safe work practices with concern for personal safety and the safety of others.

Application of the Unit

Application of the unit This unit of competency covers fundamental OHS necessary to undertake work tasks within any sector in the construction industry. It includes the identification of hazardous materials, including asbestos, and compliance with legislated work safety practices. It does not cover removal of asbestos, which is a licensed activity.

The unit relates directly to the general induction training program specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007) required to enter a construction work site. Completion of unit CPCCOHS1001A covers this requirement.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and assess risks.	<p>1.1. Hazards in the work area are identified, assessed and reported to designated personnel.</p> <p>1.2. Safety risks in the work area are identified, assessed and reported to designated personnel.</p> <p>1.3. Safe work practices, duty of care requirements and safe work instructions are followed for controlling risks.</p> <p>1.4. OHS, hazard, accident or incident reports are contributed to according to workplace procedures and Australian government and state or territory OHS legislation and relevant information.</p>
2. Identify hazardous materials and other hazards on work sites.	<p>2.1. Hazardous materials on a work site are correctly identified and, if appropriate, handled and used according to company and legislated procedures.</p> <p>2.2. Measures for controlling risks and construction hazards are applied effectively and immediately.</p> <p>2.3. Hazardous materials that have safety implications for self and other workers are secured immediately they are identified, using appropriate signs and symbols.</p> <p>2.4. Asbestos-containing materials are identified on a work site and reported to designated personnel.</p>
3. Plan and prepare for safe work practices.	<p>3.1. Correct personal protective equipment and clothing for each area of construction work are identified, worn, correctly fitted, used and stored according to enterprise procedures.</p> <p>3.2. Selection of tools, equipment and materials, and organisation of tasks are performed in conjunction with other personnel on site and in accordance with enterprise procedures.</p> <p>3.3. Required barricades and signage are determined and erected at the appropriate site location.</p> <p>3.4. Material safety data sheets (MSDS), and job safety analysis (JSA) and safe work method statements relevant to the work to be carried out are identified and applied.</p>
4. Apply safe work practices.	<p>4.1. Tasks are performed in a manner that is safe for operators, other personnel and the general community in accordance with legislative requirements, and enterprise policies and procedures.</p> <p>4.2. Plant and equipment guards are used in accordance with manufacturer specifications, work site</p>

ELEMENT

PERFORMANCE CRITERIA

	regulations and Australian standards where applicable.
	4.3.Procedures and relevant authorities for reporting hazards, incidents and injuries are used.
	4.4. <i>Prohibited tools and equipment</i> in areas with identified asbestos are recognised and not used.
	4.5.Work site safety signs and symbols are identified and followed.
	4.6.Work site area is cleared and maintained to prevent and protect self and others from incidents and accidents and to meet <i>environmental requirements</i> .
5. Follow emergency procedures.	5.1.Designated personnel are identified in the event of an emergency for communication purposes.
	5.2.Safe workplace procedures for dealing with accidents, various <i>types of fire</i> and other emergencies are followed, including identification or use, if appropriate, of <i>fire equipment</i> within scope of responsibilities.
	5.3. <i>Emergency response and evacuation procedures</i> are known, practised and carried out effectively when required.
	5.4.Emergency first aid treatment of minor injuries is carried out correctly and details of any treatment administered are reported accurately to designated personnel as soon as possible.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to accurately recognise OHS hazards, including asbestos and take all opportunities to alleviate safety problems in a variety of construction work sites and environments
- capacity to deal calmly and effectively with any potential safety problems and work closely with other team members and supervisors to ensure safe working conditions are maintained

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
 - determine and report hazards and risks
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - MSDS, JSA and safe work method statements
 - other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to contribute to reports
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- asbestos management code prevention of exposure
- basic first aid procedures
- common construction industry terminology
- common workplace safety hazards and risks and procedures for reporting these to designated personnel
- construction industry communications equipment and use
- construction industry health and safety signage
- emergency response and evacuation procedures
- JSA and safe work method statements
- MSDS
- OHS hierarchy of control and role of OHS committees and representatives
- relevant legislation, regulations and workplace requirements relating to OHS, including hazard reduction and personal safety, including duty of care responsibilities, workers' compensation and injury management requirements
- safe manual handling techniques
- safe work practices in normal working environment
- safety equipment, policies and requirements for working in confined spaces and at

REQUIRED SKILLS AND KNOWLEDGE

- height, including on rooves
- tools and equipment prohibited for use near identified asbestos-containing materials (ACM)
- types of fires and basic firefighting equipment
- types, possible location and risks of ACM, including serpentine and amphibole groups, and their use in common building materials
- types, purpose and use of construction industry personal protective equipment and clothing
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- correctly locate, interpret and apply relevant information, standards and specifications
- comply with a site safety plan, organisational policies, OHS regulations and state and territory legislation applicable to workplace operations, including quality requirements
- correctly identify ACM and policies and procedures for reporting this to designated personnel
- effectively communicate and work safely with others
- apply general procedures for responding to incidents and reporting hazards and injuries
- select and use firefighting equipment to extinguish a simulated mechanical fire
- evacuate a site through simulated response to an emergency, complying with workplace procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct,

EVIDENCE GUIDE

indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards include:

- chemical spills
- electrical safety work in confined spaces
- excavations, including trenches
- falling objects
- fires
- gases
- hazardous materials
- high or very low temperatures
- HIV and other infectious diseases
- liquids under pressure
- manual handling
- moving machinery and equipment
- noise, dust and vapours
- overhanging beams
- protrusions
- sharp equipment
- traffic
- ultraviolet (UV) radiation
- unplanned collapse

RANGE STATEMENT

Designated personnel to be contacted in case of an emergency, accident, fire or to report a risk such as identification of ACM are:

- working at heights.
- designated safety officers, determined by the enterprise, who have undertaken specific safety response training
- managers or other senior personnel
- personnel competent and/or licensed in the safe handling of asbestos
- supervisors.

Safe work practices:

- include:
 - day to day observation of OHS policies and procedures
 - emergency procedures
 - risk assessment
 - use of basic firefighting equipment
- relate to:
 - access to site amenities, such as drinking water and toilets
 - general requirements for safe use of plant and equipment
 - general requirements for use of personal protective equipment and clothing
 - housekeeping to ensure a clean, tidy and safer work area
 - no drugs and alcohol at work
 - preventing bullying and harassment
 - smoking in designated areas
 - storage and removal of debris.

Duty of care requirements:

- relate to:
 - legal responsibility under duty of care to do everything reasonably practicable to protect others from harm
 - relevant state and territory OHS requirements and include employers and self-employed persons, persons in control of the work site, construction supervisors, designers, manufacturers and suppliers, construction workers, subcontractors and inspectors
- may relate to:
 - own responsibilities to comply with safe work practices, including activities that

RANGE STATEMENT

	require licences, tickets or certificates of competency.
<i>Incidents</i> include:	<ul style="list-style-type: none">• accidents resulting in personal injury or damage to property• near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence, for example:<ul style="list-style-type: none">• breathing apparatus malfunctioning to the extent that the user's health is in danger• collapse of the floor, wall or ceiling of a building being used as a workplace• collapse or failure of an excavation more than 1.5 metres deep (including any shoring)• collapse or partial collapse of a building or structure• collapse, overturning or failure of the load bearing of any scaffolding, lift, crane, hoist or mine-winding equipment• damage to or malfunction of any other major plant• electric shock• electrical short circuit, malfunction or explosion• uncontrolled explosion, fire or escape of gas, hazardous substance or steam• any other unintended or uncontrolled incident or event arising from operations carried on at a workplace.
<i>Australian government and state or territory OHS legislative requirements</i> include:	<ul style="list-style-type: none">• Australian standards• construction industry OHS standards and guidelines• duty of care• health and safety representatives, committees and supervisors• JSA and safe work method statements• licences, tickets or certificates of competency• National Code of Practice for Induction Training for Construction Work• national safety standards

RANGE STATEMENT

Information includes:

- OHS and welfare Acts and regulations
- safety codes of practice.
- diagrams or sketches
- emergency situation contacts
- evacuation plans
- instructions issued by authorised organisational or external personnel
- labels
- manufacturer specifications and instructions
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements, such as Acts, regulations and codes of practice
- relevant Australian standards
- reports of near misses or accidents
- safe work procedures or equivalent documentation
- safety meeting minutes
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Hazardous materials include:

- ACM
- cleaning chemicals, including those in pressurised containers
- glues
- insulation materials
- solvents
- treated timber products.

Measures for controlling risk or minimising hazards in accordance with the hierarchy of control include:

- elimination
- substitution
- isolation
- engineering control
- administrative control
- personal protective equipment.

Signs and symbols include:

- emergency information signs (exits, equipment, first aid)
- fire signs (location of fire alarms and

RANGE STATEMENT

	<ul style="list-style-type: none"> firefighting equipment) hazard identification, facility or location signs regulatory signs (e.g. prohibition, mandatory and limitation or restriction), such as hazard signs (danger and warning) safety tags and lockout (danger tags, out of service tags) site safety, directional, traffic and warning signs and symbols.
<i>Asbestos-containing materials are identified:</i>	<ul style="list-style-type: none"> includes recognising common types of ACM that may be found in construction materials and buildings covers asbestos rope/fabrics, asbestos cement sheeting, asbestos cement piping and lagging on pipes, bituminous waterproof membrane, fire doors, electrical switchboards, millboard, and sheeting under ceramic or vinyl floor tiles in wet areas.
<i>Asbestos-containing materials are reported to:</i>	<ul style="list-style-type: none"> person in control of the workplace as set out in the relevant Asbestos Management Code.
<i>Personal protective equipment is to include:</i>	<ul style="list-style-type: none"> aprons arm guards caps dust mask/respirators ear muffs/plugs gloves hard hats high visibility retro reflective vests jackets overalls safety glasses/goggles steel capped boots UV protective clothing and sunscreen.
<i>Tools and equipment include:</i>	<ul style="list-style-type: none"> firefighting equipment first aid kit ladders and work platforms personal protective equipment.
<i>Materials include:</i>	<ul style="list-style-type: none"> first aid materials suitable for emergency first aid treatment of minor injuries.
<i>Prohibited tools and equipment that cannot be used near identified</i>	<ul style="list-style-type: none"> high-speed abrasive power and pneumatic tools, high pressure water cleaners, compressed

RANGE STATEMENT

ACM include:	<ul style="list-style-type: none">air or abrasive blastingany vacuum cleaning equipment not specifically designed for safe work with asbestos.
<i>Environmental requirements</i> are to cover workplace quality management and include:	<ul style="list-style-type: none">clean-up protectionstormwater protectionwaste management.
<i>Types of fire</i> includes:	<ul style="list-style-type: none">electrical, chemical, gas, mechanical, paper, wood or natural fire.
<i>Fire equipment</i> includes:	<ul style="list-style-type: none">breathing apparatusfire extinguishersfire hydrant and hosesfire reelfire truckmanual firefighting instruments, such as fire blankets.
<i>Emergency response and evacuation procedures</i> include:	<ul style="list-style-type: none">emergencies, such as fire, toxic and/or flammable vapours emission, vehicle/mobile plant accident, structural collapse, chemical spill and injury to personnelextinguishing fires, organisational first aid requirements and evacuation.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to prepare the subgrade, base and bedding courses in preparation for laying pavers.

It includes identifying soil type, drainage and materials for the base; calculating quantities of base material; compacting base; and screeding to determined levels.

Application of the Unit

Application of the unit This unit of competency supports the attainment of skills and knowledge to safely and effectively prepare subgrade, base and bedding course for segmental paving while working with others and in teams.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements and applied.</p> <p>1.8. Importance of the design and installation of the base, bedding and surface layers in the performance of the paving project are identified.</p>
2. Identify soil type.	<p>2.1. Class of soil is identified using soil class charts.</p> <p>2.2. Soil is assessed to determine its properties.</p> <p>2.3. Results of penetration tests are used to determine subgrade requirements.</p>
3. Prepare subgrade.	<p>3.1. Drainage and other features are identified within the area to be paved.</p> <p>3.2. Remedial actions are used where required.</p> <p>3.3. Drainage needs are identified and drains put in place where required.</p> <p>3.4. Services are identified in work area.</p> <p>3.5. Termite barriers are identified and not breached, or remedial action is taken if needed to ensure barrier integrity is maintained.</p> <p>3.6. Damp proof courses are identified and paving is constructed so that it does not compromise them.</p> <p>3.7. Components are cleaned, stacked and stored for</p>

ELEMENT	PERFORMANCE CRITERIA
	reuse or bundled for removal.
4. Excavate the site.	<p data-bbox="579 349 1313 421">4.1. Site is excavated in preparation for paving to remove top soil, weeds and their root systems.</p> <p data-bbox="579 432 1249 504">4.2. Factors that determine amount of excavation are identified.</p> <p data-bbox="579 515 1286 544">4.3. Bulking factor for different soil types is calculated.</p>
5. Install base course materials.	<p data-bbox="579 566 1313 669">5.1. Quantity of base course materials is calculated based upon the subgrade type and purpose of the paved area.</p> <p data-bbox="579 680 1214 752">5.2. Material is distributed over area, allowing for compaction.</p> <p data-bbox="579 763 1297 835">5.3. Area is compacted, taking care not to over-compact base materials.</p> <p data-bbox="579 846 1198 875">5.4. Compacting machinery is handled correctly.</p>
6. Install bedding course materials.	<p data-bbox="579 898 1297 969">6.1. Bedding course material is selected, ensuring that it is suitable for the purpose.</p> <p data-bbox="579 981 1193 1052">6.2. Need for geotextile materials as drainage or separation layers is determined.</p> <p data-bbox="579 1064 1241 1093">6.3. Quantity of layer course materials is calculated.</p> <p data-bbox="579 1104 1302 1176">6.4. Bedding course is stabilised for paths with slopes of greater than 1:15.</p> <p data-bbox="579 1187 1302 1290">6.5. Transverse concrete supports are installed for driveways with a sloping pavement of greater than 5 metres.</p> <p data-bbox="579 1301 1265 1373">6.6. Material is distributed over the area to be paved within tolerances stipulated by relevant standards.</p> <p data-bbox="579 1384 1305 1532">6.7. If using bedding sand, area is compacted to Australian standards taking care not to over-compact base materials, and allowance is made for compaction.</p> <p data-bbox="579 1543 1198 1572">6.8. Compacting machinery is handled correctly.</p> <p data-bbox="579 1583 1270 1686">6.9. If using concrete, area to be paved is framed and concrete is mixed to manufacturer's directions and spread to required depth.</p>
7. Screed base materials.	<p data-bbox="579 1709 1297 1780">7.1. Base materials are screeded to levels as determined, and set out by stringlines or other mechanisms.</p> <p data-bbox="579 1792 1257 1863">7.2. Excess base materials are screeded to a specified area.</p>
8. Clean up.	<p data-bbox="579 1886 1286 1989">8.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p>

ELEMENT**PERFORMANCE CRITERIA**

8.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones

REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- principles of California bearing ratio (CBR)
- properties of bedding course materials
- properties of geotextile materials
- relevant Australian standards
- stabilising bedding sand.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others.

Context of and specific resources This competency is to be assessed using standard

EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to paving and concreting materials
- relevant Australian standards
- safe work procedures relating to handling concreting materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers

RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- compactors
- concrete mixer
- levelling devices
- rakes
- screed
- shovels
- stringlines
- wheelbarrows.

Materials include:

- aggregates
- bedding sand
- cement
- concrete
- crushed rock
- road base
- sand.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Safely handled includes:

- correct calculation of quantities
- manual handling, including:
 - using pallets
 - carrying materials using correct lifting techniques
 - control of waste
- MSDS
- protection of materials
- stacking and storing of materials.

RANGE STATEMENT

Environmental requirements
include:

- clean-up management
- dust and noise
- dust suppression, which includes keeping dust in the air to a minimum and may include spraying with water
- vibration
- waste management.

Remedial actions include:

- soil stabilisation
- installing a capping layer
- making drainage improvements.

Factors determining amount of excavation include:

- compaction measurements
- achieving a consistent subgrade
- cost factors.

Quantity of layer course materials is based upon:

- purpose of the paved area (pedestrian or vehicle access)
- subgrade type
- type of paver.

Unit Sector(s)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements and applied.</p>
2. Assess pavers.	<p>2.1. Segmental pavers are assessed for fitness for purpose.</p> <p>2.2. Pavers are bulk sampled for consistency in size, dimensions, colour and imperfections, such as chips.</p> <p>2.3. Rejected pavers are assessed for use as cut pavers and put aside.</p>
3. Lay pavers.	<p>3.1. Pavers are moved to area for paving.</p> <p>3.2. Stringline grid squares are set up to establish the gauge of the paving project and guide levels and lines (where determined).</p> <p>3.3. Pavers are laid to design following efficient laying practices.</p> <p>3.4. Pavers are laid to reduce localised stresses between adjacent pavers.</p> <p>3.5. Laid pavers are checked for tolerances in allowable variations from an intended work size or position.</p> <p>3.6. Correct handling procedures are adhered to.</p> <p>3.7. Pavers are adjusted to ensure integrity of design with allowances for setting materials.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>3.8. A header or soldier course is laid where required (which may be at the outset of the paving project).</p> <p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements applied.</p>
2. Pavers are marked and cut.	<p>2.1. Segmental pavers are selected for cutting.</p> <p>2.2. Pavers for cutting are measured and marked for required types of cuts.</p> <p>2.3. Cutting saws are set up ensuring that they are level, trays are rolling freely and overflow water is discarded appropriately adhering to local regulations.</p> <p>2.4. Saw blades are examined to determine sharpness and, if water cooled, that water is supplied at the required quantities.</p> <p>2.5. Protective equipment for eyes, ears and breathing is appropriate, in serviceable condition and used to manufacturer specifications.</p> <p>2.6. Pavers are cut accurately within industry tolerances.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics of segmental pavers
- ordinances for noise in residential and other areas

REQUIRED SKILLS AND KNOWLEDGE

- ordinances for the use and disposal of water.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices

EVIDENCE GUIDE

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to paving and concreting materials
- relevant Australian standards
- safe work procedures relating to handling concreting materials
- signage

RANGE STATEMENT

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and treatment of:
 - efflorescence
 - white scum
 - dirt and grime
 - vanadium stains
 - fresh mortar stains
 - hard mortar stains
 - fungi, lichens, moulds and mosses
 - oil, bitumen and tar
 - food stains
 - tyre marks
 - chewing gum
- correct cleaning procedures, incorporating OHS
- types and applications of chemical cleaners.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify work requirements.	<p>2.1. Framing and substrate are checked to confirm suitability for the fixing work and problems are reported.</p> <p>2.2. Instructions to assemble required materials are identified and followed.</p> <p>2.3. Work sequences, fixing processes and back blocking wall sheets are identified from manufacturer recommendations.</p> <p>2.4. Wall dimensions are matched to sheet size.</p> <p>2.5. Cuts are planned to locate joints where the effect of glancing light highlighting the jointing is minimised.</p>
3. Plan and cut wallboard.	<p>3.1. Sheets are cut to minimise waste and joints in problem areas while maximising board use.</p> <p>3.2. Cutting process and provision for penetrations follow manufacturer and employer-approved procedures, minimising dust exposure to others and using appropriate personal protective equipment.</p> <p>3.3. Cut sheets are relocated to fixing site and stored to minimise damage and facilitate planned fixing activities.</p>
4. Fix standard	<p>4.1. Sheets are hung using manufacturer's recommended</p>

ELEMENT	PERFORMANCE CRITERIA
wallboard sheets.	methods and fasteners and employer-approved manual handling techniques.
	4.2. Work sequences and fixing processes are undertaken.
5. Check and complete work.	5.1. Completed work is checked to ensure stop-up activities will be easily completed, appropriate fastening systems have been used and work will retain structural integrity.
6. Clean up.	6.1. Work area is cleared and waste board, adhesives, waste fasteners and other materials are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Hazardous material is identified for separate handling.
	6.3. Non-toxic materials are removed using correct procedures.
	6.4. Dust suppression procedures are used to minimise health risk to work personnel and others.
	6.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and

REQUIRED SKILLS AND KNOWLEDGE

- confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- safely use equipment, and shift and handle products and materials
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plasterboard adhesives and fixings
- plasterboard fixing techniques
- plasterboard materials
- processes for the calculation of material requirements
- quality requirements
- tools and equipment types, characteristics, uses and limitations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others to identify faults in substrate/frame, plasterboard sheets, fasteners, adhesives and personal tools and equipment
- explain the reasons for:
 - lifting wall sheets off the floor and clear of windows and door openings
 - butt joints between studs and backblocking the join
 - position joins over windows and doors away from the corner of the opening
 - drilling or sawing openings for power points and light switches
 - marking wires without brackets as directed by the builder
 - using temporary surface fixing of wallboard
 - using paper tape
- execute work within agreed timeframes and

EVIDENCE GUIDE

standards

- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products and specifications to:
 - match manufacturers' components and materials
 - identify warranty compliance issues
 - identify suitable adhesives and fasteners for fixing plasterboard
 - identify common faults and problems that require reporting
 - follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - select and use appropriate personal protective equipment
 - work effectively alone or with others and minimise the risk of injury
 - modify work activities to cater for variations in work site procedures, personnel, contexts and environment
 - maintain workplace records in relation to materials use
 - use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to fixing plasterboard activities building framework, materials, tools and equipment activities appropriate to fixing

EVIDENCE GUIDE

plasterboard

- realistic activities covering the mandatory task requirements specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination

EVIDENCE GUIDE

of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in
accordance with state and territory
legislation and regulations and
project safety plan and may
include:

- MSDS
- memos
- regulatory and legislative requirements pertaining to fixing plasterboard
- relevant Australian standards
- safe work procedures relating to fixing plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

RANGE STATEMENT

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Work sequences and fixing processes include:

- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify work requirements.	<p>2.1. Framing is checked to ensure straightness of cornice line and problems reported.</p> <p>2.2. Instructions to assemble materials are identified and followed.</p> <p>2.3. Processes for fixing ceiling sheets are identified from manufacturer recommendations.</p> <p>2.4. Work sequencing and safety procedures to lift, place and support the sheets are identified and followed.</p>
3. Plan and cut ceiling sheets.	<p>3.1. Ceiling dimensions are matched to sheet size.</p> <p>3.2. Cuts are planned to locate joints where the effect of glancing light highlighting jointing is minimised.</p> <p>3.3. Cutting process follows employer-approved procedures, minimising dust exposure to others and using appropriate personal protective equipment.</p> <p>3.4. Cut sheets are relocated to fixing site and stored to minimise damage and facilitate planned fixing location.</p>
4. Fix standard ceiling sheets.	<p>4.1. Sheets are fixed using manufacturer's recommended methods and fastening systems, including backblocking and employer-approved manual</p>

ELEMENT	PERFORMANCE CRITERIA
	handling techniques.
	4.2. Work sequences and fixing processes are undertaken.
5. Check and complete work.	5.1. Completed work is checked to ensure stop-up activities will be easily completed and appropriate fastening systems have been used.
6. Clean up.	6.1. Work area is cleared and waste board, adhesives waste fasteners and other materials are disposed of, reused or recycled in accordance with legislation, regulations and codes of practice and job specification.
	6.2. Hazardous material is identified for separate handling.
	6.3. Non-toxic materials are removed using correct procedures.
	6.4. Dust suppression procedures are used to minimise health risk to work personnel and others.
	6.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change, and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plasterboard adhesives and fixings
- plasterboard fixing techniques
- plasterboard materials
- processes for the calculation of material requirements
- quality requirements
- tools and equipment types, characteristics, uses and limitations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate plasterboard ceiling materials and work methods
- explain the reasons for:
 - screw fixing of ceiling sheets
 - using particular types of screws for timber or metal frame and furring channel
 - using trimmers and noggins
 - butt joints centred between battens and staggered
 - drilling or sawing openings as required
 - using paper tape for all joints
 - backblocking and stitching of butt joints
- follow manufacturers' instructions for installation without constant supervision
- identify faults in plasterboard fixing, joining and finishing
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products and specifications to identify:
 - manufacturers' components and materials
 - warranty compliance issues
 - suitable materials for a wide range of applications

EVIDENCE GUIDE

- common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - select and use appropriate personal protective equipment
 - work effectively alone or with others and minimise the risk of injury
 - modify work activities to cater for variations in work site procedures, personnel, contexts and environment
 - maintain workplace records in relation to materials, plant and equipment use
 - use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of
