the Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to fixing plasterboard
- relevant Australian standards
- safe work procedures relating to fixing plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification

Planning and preparation include:

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include

- Australian standards

RANGE STATEMENT

relevant regulations, including:

- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Assemble materials includes:

- adhesives
- board
- equipment
- fasteners.

Processes for fixing and work sequencing include:

- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify work requirements.	<p>2.1. Requirements for fixing battens to support structures are identified and selected.</p> <p>2.2. Fasteners appropriate to fixing battens are identified and selected.</p> <p>2.3. Joists and trusses are checked to confirm suitability for fixing battens, and any requirement to correct unevenness in joists and trusses is noted.</p>
3. Cut and fix battens.	<p>3.1. Packing materials are used to correct uneven joists where required.</p> <p>3.2. Battens are measured and cut using approved work methods and required personal protective equipment.</p> <p>3.3. Battens are fixed using selected fasteners at specified centres according to manufacturer recommendations.</p> <p>3.4. Completed work is checked for correct alignment and fixing.</p>
4. Clean up.	<p>4.1. Work area is cleared and batten materials and fasteners are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Hazardous material is identified for separate</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>handling.</p> <p>4.3. Non-toxic materials are removed using correct procedures.</p> <p>4.4. Dust suppression procedures are used to minimise health risk to work personnel and others.</p> <p>4.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a

REQUIRED SKILLS AND KNOWLEDGE

range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identifying faults in operation of equipment or in materials quality
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identifying the purpose of tags and logs of use for equipment
- implications on work quality requirements for instruction to be followed
- manufacturer and supplier instructions for plant and equipment
- manufacturers' system installation procedures and nominated specifications for the work process
- names and functions of equipment, components and materials
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate batten materials and work methods
- operate from basic instructions without constant supervision
- identify faults in substrate/frame and rectify or report as required by contract
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders, and locate relevant materials
- apply knowledge of industry products to identify:
 - manufacturers' components and materials
 - Australian standards, Building Code of Australia (BCA) and manufacturer or contractor warranty compliance issues
 - suitable materials for a wide range of applications
 - common faults and problems that require reporting
- follow work instructions, select and use appropriate tools, materials, fasteners and equipment for safe work at heights to:
 - prevent damage to goods, equipment or products
 - select and use appropriate personal protective equipment
 - work effectively alone or with others and

EVIDENCE GUIDE

minimise the risk of injury

- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- use safe work behaviours and handling requirements for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- batten materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify work requirements.	<p>2.1. Framing/substrate is checked to confirm suitability for the fixing work.</p> <p>2.2. Processes for fixing sheets are identified from manufacturer recommendations.</p> <p>2.3. Sheets are measured to minimise waste and joins in problem areas while maximising board use.</p> <p>2.4. Where required, baths, shower bases and basins are covered with scrap sheets.</p>
3. Plan and cut wet area sheets.	<p>3.1. Wall dimensions are matched to sheet size.</p> <p>3.2. Cuts are planned to locate joints to minimise effect of jointing processes on function and visual appearance.</p> <p>3.3. Cutting process follows employer-approved procedures, minimising dust exposure to others and using appropriate personal protective equipment.</p> <p>3.4. Penetrations are made following manufacturer approved tools, personal protective equipment and procedures.</p> <p>3.5. Cut sheets are relocated to fixing site and stored to minimise damage and facilitate planned fixing activities.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Fix wet area sheets.	<p>4.1. Sheets are hung.</p> <p>4.2. <i>Work and fixing processes</i> are sequenced and undertaken.</p> <p>4.3. Completed work is checked.</p>
5. Clean up.	<p>5.1. Work area is cleared and board materials and fasteners are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Hazardous material is identified for separate handling.</p> <p>5.3. Non-toxic materials are removed using correct procedures.</p> <p>5.4. Dust suppression procedures are used to minimise health risk to work personnel and others.</p> <p>5.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate wet area materials and work methods
- operate from basic instruction without constant supervision
- explain the reasons for:
 - lifting sheets off the floor and clear of windows, door openings and plumbing fixtures
 - providing flashing for wet areas
 - only using mechanical fastening systems in tiled areas
 - using full sheets over windows and doors
 - drilling or sawing openings for plumbing, power points and light switches
 - marking wires without brackets clearly
 - using personal protective equipment
 - identifying faults in wet area fixing, joining and finishing
 - executing work within agreed timeframes and standards
 - interpreting delivery documentation and work orders
 - locating relevant materials
- apply knowledge of industry products to identify:
 - manufacturers' components and materials
 - warranty compliance issues

EVIDENCE GUIDE

- suitable materials for a wide range of applications
- common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and quality
 - select and use appropriate personal protective equipment
 - work effectively alone or with others and minimise the risk of injury
 - modify work activities to cater for variations in work site procedures, personnel, contexts and environment
 - maintain workplace records in relation to materials, plant and equipment use
 - use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the

 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identifying faults in operation of equipment or materials quality
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identifying purpose of tags and logs of use for equipment
- implications on work quality requirements for instruction to be followed
- manufacturer and supplier instructions for plant and equipment
- manufacturers' product installation procedures and nominated specifications for the work process
- names and functions of equipment, components and materials
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate plasterboard ceiling materials and work methods
- operate from basic instruction without constant supervision
- identify faults in plasterboard fixing, joining and finishing
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products to identify:
 - manufacturers' components and materials
 - warranty compliance issues
 - suitable materials for a wide range of applications
 - common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and quality
 - select and use appropriate personal protective equipment
 - work effectively alone or with others and

EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to fixing ceiling sheets
- relevant Australian standards
- safe work procedures relating to fixing ceiling sheets
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and

RANGE STATEMENT

treatments associated with:

- concealed services (water, power and gas)
- lighting
- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets

RANGE STATEMENT

Environmental requirements
include:

- water resistant plasterboard.
- clean-up management
- dust and noise
- vibration
- waste management.

Work sequences and fixing processes include:

- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

Sheets are fixed consistent with:

- manufacturer's recommended methods and fasteners
- employer-approved manual handling techniques.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Plan and cut board.	<p>2.1. Framing is checked to confirm suitability for fixing the ceiling sheets.</p> <p>2.2. Processes for fixing board are identified from manufacturer recommendations.</p> <p>2.3. Sheets are measured to minimise waste and joins in problem areas, while maximising board use.</p> <p>2.4. Wall dimensions are matched to sheet size.</p> <p>2.5. Cuts are planned to locate joints to minimise effect of jointing processes on function and visual appearance.</p> <p>2.6. Cutting process follows employer-approved procedures, minimising dust exposure to others and using appropriate personal protective equipment.</p> <p>2.7. Cut sheets are relocated to fixing site and stored to minimise damage and facilitate planned fixing activities.</p>
3. Fix fibre cement board.	<p>3.1. Sheets are hung.</p> <p>3.2. Work and fixing processes are sequenced and undertaken.</p> <p>3.3. Completed work is checked.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared and board materials and fasteners are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Hazardous material is identified for separate handling.</p> <p>4.3. Non-toxic materials are removed using correct procedures.</p> <p>4.4. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identifying faults in operation of equipment or materials quality
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identifying the purpose of tags and logs of use for equipment
- implications on work quality requirements for instruction to be followed
- manufacturer and supplier instructions for plant and equipment
- manufacturers' product installation procedures and nominated specifications for the work process
- names and functions of equipment, components and materials
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate fibre cement materials and work methods
- operate from basic instruction without constant supervision
- identify faults in materials and fixing methods
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products to identify:
 - manufacturers' components and materials
 - warranty compliance issues
 - suitable materials for a wide range of applications
 - common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and quality
 - select and use appropriate personal protective equipment
 - work effectively alone or with others and minimise the risk of injury

EVIDENCE GUIDE

- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and

EVIDENCE GUIDE

environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify levels of finish.	<p>2.1. Level of finish documentation is accessed.</p> <p>2.2. Features of each level of finish are identified.</p> <p>2.3. Differences between levels of finish are identified from photographs and personal observation.</p>
3. Establish level of finish requirements.	<p>3.1. Workplace documents, specifications, contract and/or supervisors are used to establish customer levels of finish requirements.</p> <p>3.2. Recommended work practices to produce required level of finish required by the customer are identified.</p> <p>3.3. Required modifications to materials or work processes to meet required level of finish are identified.</p> <p>3.4. Required modifications to materials or work methods are communicated to appropriate personnel.</p>
4. Inspect completed work for level of finish.	<p>4.1. Distinguishing features of levels of finish are identified in the completed work.</p> <p>4.2. Effects of framing tolerances, windows, light fittings and location of joins on finish of plasterboard are explained.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3. Identified features are compared to level of finish descriptions.
	4.4. Build-up on joins is inspected for influence on level of finish.
	4.5. Level of finish classification is allocated to inspected work.
5. Provide advice for surface finishing.	5.1. Requirements for painting are identified.
	5.2. Explanations are provided to customer and painter.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions and diagrams in manual for equipment and installation of plasterboard
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identification of architectural styles, structures and fittings that will influence glancing light
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers' product installation procedures and nominated specifications for the work process to produce level 4 and 5 finishes
- identifying faults in building structure, materials quality and finished joints and edges
- job safety analysis (JSA) and safe work method statements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- explain key differences and typical application of level 3, 4 and 5 finishes
- select and use appropriate level of finish standard
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
 - manufacturers' components and materials
 - warranty compliance issues
 - suitable materials for a wide range of applications
- identify problems to level of finish and suggest appropriate alternative rectifications
- interpret work order and locate and apply relevant information from building plans and delivery documents
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and product quality
 - select and use appropriate personal protective equipment
 - minimise the risk of injury to self or others

EVIDENCE GUIDE

Context of and specific resources for assessment

- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- completed plasterwork and planned work
- level of finish standards.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and

EVIDENCE GUIDE

environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Select materials, equipment and work area.	<p>2.1. Types of finishing compounds compatible with system performance are identified and selected to match work requirements and manufacturer specifications.</p> <p>2.2. Processes and equipment for mixing compounds are identified and selected to match tasks from manufacturer recommendations.</p> <p>2.3. Suitable work area is selected to minimise dust exposure to self and others and to minimise manual handling risks when shifting, mixing and blending.</p>
3. Mix compound.	<p>3.1. Work sequences and mixing requirements are followed.</p> <p>3.2. Mixture consistency is adjusted to suit intended use.</p> <p>3.3. Completed work is checked to ensure work meets manufacturer specifications and requirements for intended use.</p>
4. Clean up.	<p>4.1. Mixing equipment is cleaned using employer-approved work practices, disposing of silica-based material following required environmental controls.</p> <p>4.2. Site area is cleaned up, with waste materials</p>

ELEMENT**PERFORMANCE CRITERIA**

collected for recycling or disposal, containers covered to prevent spills and contamination.

4.3. Hazardous material is identified for separate handling.

4.4. Non-toxic materials are removed using correct procedures.

4.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations, regulatory and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers' product installation procedures and nominated specifications for the work process
- identifying by name and function equipment, components and materials
- identifying potential for health and safety risks from workplace information and labels
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate compounds, consistency and mixing methods
- apply a broad knowledge of industry products to identify:
 - manufacturers' components and materials
 - reasons why manufacturers recommend a three coat system for finishing plaster joins
 - finished textures for hand and mechanical finishing of joints
 - impact of glancing light on finished joins
 - suitable materials for a wide range of applications
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and product quality
 - select and use appropriate personal protective equipment
 - minimise the risk of injury to self or others
- work effectively with other workers on and off site
- follow safe handling requirements of equipment, products and materials.

Context of and specific

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

resources for assessment

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- finishing materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with

EVIDENCE GUIDE

a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to mixing plaster compounds
- relevant Australian standards
- safe work procedures relating to mixing plaster compounds

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.
 - assessment of conditions and hazards
 - determination of work requirements and safety plans and policies
 - equipment defect identification
 - work site inspection.
 - emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
 - hazard control
 - hazardous materials and substances
 - organisational first aid
 - PPE prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - use of firefighting equipment
 - use of tools and equipment
 - workplace environmental requirements and safety.
- Tools and equipment*** include:
- broad knives
 - brooms
 - electric screw guns
 - hand and power drills
 - hand saws
 - keyhole saws
 - measuring tapes and rules

RANGE STATEMENT

	<ul style="list-style-type: none">• paintbrushes• plasterboard hammers• plasterer's trowels• scaffold planks• T squares• taping knives• trestles.
Quality requirements include relevant regulations, including:	<ul style="list-style-type: none">• Australian standards• internal company quality policy and standards• manufacturer specifications• workplace operations and procedures.
Materials include:	<ul style="list-style-type: none">• beads• cement render• fibre cement sheets• finishing materials• plaster compounds• plasterboard• platerglass sheets• water resistant plasterboard.
Environmental requirements include:	<ul style="list-style-type: none">• clean-up management• dust and noise• vibration• waste management.
Finishing compounds include:	<ul style="list-style-type: none">• join finishing materials• quality checks for compound• sequences and number of coats.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify work requirements.	2.1. Customer requirements for joint finishing are identified.
3. Select materials, processes and equipment.	<p>3.1. Specifications and work requirements are compared and any variations identified.</p> <p>3.2. Equipment and processes are selected to match tasks.</p> <p>3.3. Base coat, cements and tapes compatible with system performance are selected from manufacturer specifications.</p>
4. Finish joins.	<p>4.1. Finishing techniques appropriate to joint system are identified and followed.</p> <p>4.2. Finishing problems are minimised by employing correct work sequencing and following manufacturer recommendations.</p> <p>4.3. Joins are finished to specifications.</p> <p>4.4. Completed work is checked to ensure work will meet manufacturer specifications and Australian standards.</p>
5. Clean up.	5.1. Site area is cleaned up with waste materials collected and disposed of, reused or recycled in accordance

ELEMENT	PERFORMANCE CRITERIA
	with legislation, regulations, codes of practice and job specification.
	5.2. Hazardous material is identified for separate handling.
	5.3. Non-toxic materials are removed using correct procedures.
	5.4. Dust suppression procedures are used to minimise health risk to work personnel and others.
	5.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work

REQUIRED SKILLS AND KNOWLEDGE

- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers' product installation procedures and nominated specifications for the work process
- identifying by name and function equipment, components and materials
- identifying faults in operation of equipment or materials quality
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identifying the purpose of tags and logs of use for equipment
- interpreting manufacturer and supplier instructions for plant and equipment
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate finishing materials and work methods
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
 - manufacturers' components and materials
 - warranty compliance issues
 - suitable materials for a wide range of applications
- report problems to supervisors and suggest appropriate alternative rectifications
- interpret work order and locate and apply relevant information from building plans and delivery documents
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and product quality
 - select and use appropriate personal protective equipment
 - minimise the risk of injury to self or others
- work effectively with other workers on and off site

EVIDENCE GUIDE

Context of and specific resources for assessment

- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- finishing materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting

RANGE STATEMENT

- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:

- Australian standards, including AS/NZ2589
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration

RANGE STATEMENT

- Finishing techniques* include:
- waste management.
 - join finishing materials
 - processes for finishing system joins
 - quality checks for joint finishing
 - work sequence.
- Joint finishing* specifications include:
- employer-approved manual handling techniques
 - manufacturer's recommended methods and materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Determine work requirements.	<p>2.1. Work area is inspected to determine work requirements.</p> <p>2.2. Level of finish as specified in the contract or job order is noted and any mismatches between quality of fixing and finishing are recorded and reported or rectified as appropriate.</p> <p>2.3. Personal protective equipment suitable for the task is selected based on manufacturers' recommended and employer-approved specification.</p>
3. Sand joins.	<p>3.1. Work site access is gained using approved workplace methods based on the risk assessment for the task, site and circumstance.</p> <p>3.2. Sanding floats and required dust protection or warning signs are set up for use.</p> <p>3.3. Sanding is completed to required standard of finish.</p>
4. Inspect work and clean up work area.	<p>4.1. Completed sanding work is inspected for compliance with workplace and customer requirements, including contracted level of finish.</p> <p>4.2. Problems are identified and reported.</p> <p>4.3. Sanded area is brushed down.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Clean up.	<p>5.1. Work area is cleared and materials are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Sanding dust is cleaned up and contained for disposal in accordance with approved workplace procedures, with any hazardous material identified for separate handling.</p> <p>5.3. Non-toxic materials are removed using correct procedures.</p> <p>5.4. Dust suppression procedures are used to minimise health risk to work personnel and others.</p> <p>5.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements

REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to identify problems and predict consequences
- effects of glancing light on plasterboard joins when paint is applied
- factors that influence level of finish
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- implications on work quality requirements for instruction to be followed
- job safety analysis (JSA) and safe work method statements
- manufacturers' product mixing and application procedures and nominated specifications for the work process
- manufacturer and supplier instructions for plant and equipment
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate sanding materials and work methods
- operate from basic instruction without constant supervision
- identify requirements to achieve specified level of finish
- identify faults in plasterboard fixing, joining and finishing
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- explain warranty, guarantee and liability requirements for plastering work
- apply knowledge of industry requirements to identify:
 - condition and colour of the top coat when set
 - manufacturers' components and materials
 - contract compliance requirements
 - reasons for use of P1 rating (protection against mechanically generated particles) or P2 rating (protection against mechanically and thermally generated particles) mask and protective clothing when sanding topcoats
 - common faults in materials and work and problems that require reporting

EVIDENCE GUIDE

- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - select and use appropriate personal protective equipment
 - work effectively alone or with others and minimise the risk of injury
 - modify work activities to cater for variations in work site procedures, contexts and environment
 - identify and use appropriate behaviour for interactions with other workers, supervisors, clients and members of the public.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- stopped plasterboard walls and ceilings
- sanding materials
- access methods.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or

EVIDENCE GUIDE

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified

EVIDENCE GUIDE

equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to sanding plaster work
- relevant Australian standards
- safe work procedures relating to sanding plaster work
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- grade of paper to be used
- joins to be hand sanded
- method of accessing work site

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- readiness of topcoat for sanding
- work site inspection equipment defect identification.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- trestles.
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Problems with completed work include:

- sand-through areas.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Select materials, processes and equipment.	<p>2.1. Substrate is inspected to confirm suitability for the installation of wet area system.</p> <p>2.2. Materials, equipment and processes for sealing wet area system to category 1 are identified and selected from manufacturer's installation advice.</p> <p>2.3. Materials, equipment and processes to finish wet areas to category 2 are identified and selected from manufacturer's installation advice.</p>
3. Stop and finish joins, penetrations and edges.	<p>3.1. Work sequences are planned and undertaken to implement manufacturer's requirements for wet finishing and sealing.</p> <p>3.2. Problems from glancing light are minimised in category 2 classified areas.</p> <p>3.3. Potential to perform within Australian standard are maximised in category 1 areas.</p> <p>3.4. Stopping material is used to match the wet area system.</p> <p>3.5. Edges of wet area board to be caulked are sealed using appropriate caulking material.</p> <p>3.6. Board in category 1 areas is sealed to meet manufacturers' instructions and Australian standard</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>requirements.</p> <p>3.7. Completed work is checked so that work will meet manufacturer specifications and Australian standards.</p> <p>4.1. Work area is cleared and board adhesives and fasteners are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Hazardous material is identified for separate handling.</p> <p>4.3. Non-toxic materials are removed using correct procedures.</p> <p>4.4. Dust suppression procedures are used to minimise health risk to work personnel and others.</p> <p>4.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- interpret manufacturers' instructions in diagrams, photographs and written form for equipment and installation of plasterboard
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- describing how Australian standards vary between categories 1 and 2
- identifying and applying appropriate safety precautions to safely use materials for wet area sealing and finishing
- identifying and reading manufacturers' product installation procedures and specifications for wet area installation
- identifying by name and function equipment, components and materials appropriate for wet areas
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks for wet area materials
- identifying category 1 and 2 wet areas on plans
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- interpret work order and locate and apply relevant information from building plans and delivery documents
- select and use appropriate wet area materials and work methods
- explain reasons for use of sealers in category 2 areas and care in finishing category 1 areas to deal with glancing light in wet areas
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
 - available wet area systems
 - implications of mixing and manufacturers' components and materials
 - warranty compliance issues for wet area installation and Australian standard requirements
- identify and report problems to supervisors and suggest appropriate alternative rectifications
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and product quality
 - select and use appropriate personal

EVIDENCE GUIDE

	<p>protective equipment</p> <ul style="list-style-type: none"> • minimise the risk of injury to self or others • work effectively with other workers on and off site • modify work activities to cater for variations in work site procedures, personnel, contexts and environment • maintain workplace records in relation to materials, plant and equipment use • follow safe handling requirements of equipment, products and materials.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none"> • building framework • wet area materials • tools and equipment. <p>Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.</p> <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none"> • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning

EVIDENCE GUIDE

knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to finishing wet areas
- relevant Australian standards
- safe work procedures relating to finishing wet areas
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control

RANGE STATEMENT

include:

- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:

- Australian standard 3740: 2004
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials for wet areas include:

- penetration seals
- sealers

RANGE STATEMENT

Environmental requirements include:

- finishing compounds.
- clean-up management
- dust and noise
- vibration
- waste management.

Work sequences include:

- facilitate finishing techniques appropriate to system
- maximise board use
- minimise finishing problems
- minimise joints
- minimise waste.

Stopping material includes:

- paper tape
- topcoat, applying the required number of coats and allowing for drying time
- wet area acrylic taping cement.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Plan and measure for cornice work.	<p>2.1. Style of paper-faced cornice to be fitted is determined from work instructions.</p> <p>2.2. Cornice length for each work area is determined and noted.</p> <p>2.3. Requirements for safe work at heights are identified and planned for use.</p>
3. Cut cornice lengths.	<p>3.1. Cornice is handled following approved manual handling procedures.</p> <p>3.2. Noted measurements are transferred to cornice stock, allowing for mitre requirements.</p> <p>3.3. Cornice is cut using workplace-approved guides and cutting methods, minimising bending and kneeling with use of personal protective equipment where required.</p>
4. Prepare cornice adhesive.	<p>4.1. Manufacturer's instructions are consulted and applied to the preparation of the adhesive.</p> <p>4.2. Preparation is carried out using clean container, clean water and approved personal protective equipment (PPE).</p> <p>4.3. Adhesive powder is added to water until powder can</p>

ELEMENT	PERFORMANCE CRITERIA
	absorb no more water.
	4.4. Consistency of mix is adjusted to suit hand or mechanical application of adhesive.
5. Fix cornice.	5.1. Means for safe access for work at heights is used where required.
	5.2. Methods of holding cornice temporarily in place at the wall or ceiling junction are planned and used following workplace-approved procedures.
	5.3. Appropriate amount of adhesive is applied to cornice.
	5.4. Cornice is fitted following workplace-approved practices for work at heights and manual handling.
6. Finish work.	6.1. Excess cornice adhesive on cornice faces is removed.
	6.2. Joins and junctions are filled and smoothed.
	6.3. If required, temporary fixings and supports are removed and holes are filled.
7. Clean up.	7.1. Work area is cleared and lengths of cornice and adhesives are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	7.2. Hazardous material is identified for separate handling.
	7.3. Non-toxic materials are removed using correct procedures.
	7.4. Dust suppression procedures are used to minimise health risk to work personnel and others.
	7.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers' product installation procedures and nominated specifications for mixing adhesives, and fixing and cutting cornices
- identifying by name and general application paper-faced and handmade cornices
- identifying faults in materials
- identifying from workplace information and labels the type and purpose of

REQUIRED SKILLS AND KNOWLEDGE

- materials and potential for health and safety risks for cornices and adhesives
- requirements to plan own work using a systematic approach to allow for efficient and safe handling of cornices and safe access to work at heights.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify work order or contract and delivery documentation and match to delivered cornice
- select and use appropriate cornice materials and work methods
- plan and execute work within agreed timeframe and to a high standard under general supervision
- identify problems in fitting cornices and suggest appropriate alternative rectifications
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - explain the reasons for use of cornice reinforcing systems
 - meet required work output and product quality
 - select and use appropriate personal protective equipment
 - minimise the risk of injury to self or others
- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of

EVIDENCE GUIDE

Context of and specific resources for assessment

equipment, products and materials.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework with plasterboard clad walls
- cast cornice
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over

EVIDENCE GUIDE

a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to fitting cornices
- relevant Australian standards
- safe work procedures relating to fitting cornices
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting

RANGE STATEMENT

- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant <i>information</i>, confirmed and applied for <i>planning and preparation</i> purposes.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify travel requirement.	<p>2.1. Reason for journey is determined.</p> <p>2.2. Route planning is varied to suit the type of vehicle and load to be carried.</p> <p>2.3. Relevant regulations regarding the transport of dangerous goods are identified and compared to the load to be transported.</p>
3. Identify and determine the most appropriate route.	<p>3.1. Street directory and road map symbols are recognised and interpreted.</p> <p>3.2. Points of departure and destination are identified in a directory index and the information is used to locate places on the appropriate map.</p> <p>3.3. Directions for a predetermined route are interpreted and the route is traced using a street directory and road map.</p> <p>3.4. Key intersections and other landmarks along the route are identified for use in following the planned route.</p> <p>3.5. Time required to complete the trip is estimated based on speed limits, time of day, expected traffic conditions, distance and controlled intersections.</p>
4. Follow planned route.	<p>4.1. Route is memorised or marked out on map.</p> <p>4.2. Predetermined route is followed.</p> <p>4.3. Time taken is compared to predicted time and reasons for any discrepancy are identified.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - recognise and interpret work related signs, including road signs, safety logos and warnings
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- compare counted quantities with delivery notes and orders
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- implications on work quality for instructions to be followed
- names and functions of equipment, components and materials
- safely use equipment, and shift and handle products and materials

REQUIRED SKILLS AND KNOWLEDGE

- traffic patterns, road rules and conditions that impact on travel route selection and travel times
- use of indexes, grid references and landmarks.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate travel routes using maps, street directory and verbal instructions
- operate from basic instruction without constant supervision
- interpret delivery documentation and work orders
- locate relevant materials
- follow work instructions to:
 - prevent damage to goods, equipment or products
 - meet required work output and quality
 - work effectively alone or with others and minimise the risk of injury
 - identify and use appropriate behaviour for interaction with other workers, supervisors, clients and members of the public
- maintain workplace records.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- travel requirement

EVIDENCE GUIDE

- street directory/map
- work order.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a

EVIDENCE GUIDE

combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- 1.1. ***Information*** includes:
- diagrams or sketches
 - instructions issued by authorised organisational or external personnel
 - manufacturer specifications and instructions, where specified
 - material safety data sheets (MSDS)
 - memos
 - regulatory and legislative requirements pertaining to transport
 - relevant Australian standards
 - safe work procedures relating to transport
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.
- 1.2. ***Planning and preparation*** include:
- assessment of conditions and hazards
 - determination of work requirements and safety plans and policies

RANGE STATEMENT

1.3. **Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify work requirements.	<p>2.1. Processes for installing insulation material are identified and implemented from manufacturer specifications.</p> <p>2.2. Appropriate work sequence and safety procedures are identified and implemented.</p> <p>2.3. Insulation material is measured to minimise waste while maximising insulation use.</p> <p>2.4. Insulation rating is confirmed.</p>
3. Cut and fix insulation.	<p>3.1. Insulation is cut to fit area using manufacturer-approved procedures.</p> <p>3.2. Insulation is installed using methods, handling techniques, work sequences, fixing processes and fasteners.</p> <p>3.3. Completed work is checked to ensure stop-up activities will be easily completed, appropriate fastening systems have been used and work will retain structural integrity.</p>
4. Clean up.	<p>4.1. Work area is cleaned and materials and fasteners are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. Hazardous material is identified for separate handling.
	4.3. Non-toxic materials are removed using correct procedures.
	4.4. Dust suppression procedures are used to minimise health risk to work personnel and others.
	4.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems

REQUIRED SKILLS AND KNOWLEDGE

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identifying faults in insulation materials
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identifying the purpose of tags and logs of use for equipment
- implications on work quality requirements for instruction to be followed
- manufacturers' product installation procedures and nominated specifications for the work process
- matching requirements for types and the following rating of insulation materials:
 - resistance to heat (R)
 - sound transmission class (STC)
 - field sound transmission class (FSTC)
- requirements for a systematic approach to planning own work
- safely use equipment, shift and handle products and materials and access work at height.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate insulation materials and work methods to match customer order and manufacturers' specified procedures
- operate from basic instruction without constant supervision
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products to identify:
 - manufacturers' components and materials
 - relationships of R rating with Building Code of Australia (BCA) requirements and energy ratings of a property
 - manufacturer specifications in relation to the insulation properties of the product available
 - suitable materials for a wide range of applications
 - common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - select and use appropriate personal

EVIDENCE GUIDE

EVIDENCE GUIDE

with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Install blanket insulation to walls.	<p>2.1. Stud configuration is identified for installation processes.</p> <p>2.2. Safety wire mesh is installed to plans and specifications.</p> <p>2.3. Insulating blanket is installed in full length runs where practicable or, if joined, joints are made at centre of frame member, according to plans and specifications.</p> <p>2.4. Adjacent runs of blanket insulation is abutted with closed joints.</p>
3. Install acoustic systems.	<p>3.1. Acoustic materials are selected to manufacturer specifications for the walls and ceiling.</p> <p>3.2. Sheeting or ceiling tile material is selected for use in buildings requiring acoustic properties in accordance with manufacturers' weighted sound reduction index (RW rating).</p> <p>3.3. Plaster sheeting and acoustic tile materials are fixed to walls and ceiling in accordance with specifications.</p> <p>3.4. Sealant is selected and used to manufacturer specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- acoustic and thermal protection systems materials and terminology
- acoustic systems installation techniques
- basic acoustic theory
- installation tools and equipment types, characteristics, uses and limitations
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- regulation and building codes related to acoustic and thermal protection requirements and systems
- thermal system installation techniques
- thermal theory related to heat loss
- types of acoustic protection systems available for wall and ceiling application and their characteristics, strengths and limitations
- types of thermal protection systems available for wall and ceiling application and their characteristics, strengths and limitations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

procedures.

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete not less than three installation tasks which cover acoustic and thermal protection systems, in accordance with regulatory requirements and related specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to the installation of acoustic and thermal protection systems
- hand and power tools and equipment appropriate to the installation of acoustic and thermal protection systems
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos

- work site inspection.
- emergency procedures, including

Planning and preparation include:

Safety (OHS) is to be in

RANGE STATEMENT

accordance with state and territory legislation and regulations and project safety plan and may include:

- extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - cutting tools
 - lighting
 - manual handling
 - traffic control
 - restricted access barriers
 - trip hazards
 - power sources and leads
 - power tools
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - broad knives
 - caulking guns
 - electric screw guns
 - etting boxes
 - hammers
 - manual levelling devices
 - measuring tapes and rules
 - nail bags
 - power drills
 - power leads
 - power saws
 - screwguns

Tools and equipment:

RANGE STATEMENT

- spanners
- spirit levels
- squares
- tin snips
- trestles
- trowels
- may include:
 - C clamps
 - air compressors and hoses
 - docking saw and drop saws
 - laser levelling devices
 - masonry drills
 - nail guns
 - pop riveters
 - saw stools
 - system scaffolding and planks.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- acoustic ceiling products
- adhesive
- fibrous plaster
- insulation blankets
- jointing tape
- loose fill insulation
- metal and aluminium type products
- nails
- plasterboard
- polystyrene sheets
- rigid sheet insulation
- screws
- sealants
- staples
- steel safety mesh.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

RANGE STATEMENT

Installation includes:

- acoustic and energy insulation materials
- acoustic ceiling tiles and sheets
- fibre cement sheeting
- fixing of plasterboard
- metal pan type ceiling cladding
- plaster products.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify and select materials, processes and equipment.	<p>2.1. Work site is inspected to confirm suitability for the installation of columns.</p> <p>2.2. Manual handling risks associated with shifting and lifting columns are identified and selected.</p> <p>2.3. Appropriate employer-approved methods and equipment are identified and selected.</p> <p>2.4. Processes for installing columns are identified and selected.</p> <p>2.5. Fasteners and compounds compatible with the column materials are selected from manufacturer specifications.</p> <p>2.6. Columns are checked to ensure they conform to quality requirements and non-compliance is reported.</p>
3. Fit column and collars.	<p>3.1. Work sequence is planned.</p> <p>3.2. Columns are installed following the plan.</p> <p>3.3. Collars and finials are fitted appropriate to customer requirements.</p>
4. Stop and finish joins and edges.	<p>4.1. Stopping material to match the columns is used.</p> <p>4.2. Ends of columns and collars are finished using appropriate materials.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Clean up.	<p>5.1. Work area is cleared and materials and fasteners are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools,

REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and interpreting manufacturers' product installation procedures and nominated specifications for the work process
- identifying by name and function equipment, components and materials appropriate for internal and external fixing and finishing of columns
- identifying faults in materials or structures where the column is to be fitted
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- names and architectural styles for different types of columns
- requirements to plan own work.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate materials and work methods to ensure safe shifting and fixing of columns
- identify application of plaster and fibre cement columns in building applications
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
 - manufacturers' components and materials for the system to be installed and the location of the column
 - warranty compliance issues
 - suitable materials for a wide range of applications
- report problems to supervisor and suggest appropriate alternative rectifications
- interpret work order and locate and apply relevant information from building plans and delivery documents
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - select and use appropriate personal protective equipment
 - minimise the risk of injury to self or others

EVIDENCE GUIDE

Context of and specific resources for assessment

- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework
- plaster sheet
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to

EVIDENCE GUIDE

be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to installing and finishing columns
- relevant Australian standards
- safe work procedures relating to installing and finishing columns
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and

RANGE STATEMENT

treatments associated with:

- concealed services (water, power and gas)
- lighting
- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets

RANGE STATEMENT

Environmental requirements
include:

- water resistant plasterboard.
- clean-up management
- dust and noise
- vibration
- waste management.

Work sequences planning
includes:

- approved manual handling techniques
- facilitating finishing techniques appropriate to columns
- implementing manufacturers' requirements for column installation
- minimising finishing problems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify faults.	<p>2.1. Perceived faults are identified in plaster work.</p> <p>2.2. Faults found are described using correct construction industry terminology.</p> <p>2.3. Appropriate measurements are taken to confirm observed faults.</p>
3. Determine causes of faults and recommend rectification.	<p>3.1. Investigation is conducted to establish cause of faults, including accessing substrate if necessary.</p> <p>3.2. Faults in structure or substrate are communicated to appropriate personnel.</p> <p>3.3. Plaster rectification is planned to achieve desired level of finish and rectification of faults is observed.</p> <p>3.4. Permission to proceed with planned rectification is sought and obtained.</p>
4. Rectify faults.	<p>4.1. Planned rectification process is followed to rectify faults.</p> <p>4.2. Completed rectifications are inspected to confirm perceived faults have been rectified.</p> <p>4.3. Sign-off on completed rectification work is sought and obtained from appropriate personnel.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- customer liaison skills

REQUIRED SKILLS AND KNOWLEDGE

- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers' product installation procedures and nominated specifications
- identifying fault types, causes and rectification methods
- identifying faults in materials quality and installation and finishing work
- identifying the implications of contract requirements
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- interpret faults in plaster work from descriptions and observation
- apply a broad knowledge of industry products to identify:
 - manufacturers' components and materials for finishing plaster products and completion of decorated surfaces to minimise effects of glancing light
 - contract and warranty compliance implications of faults
- suggest appropriate alternative rectification for identified problems
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and product quality
 - select and use appropriate personal protective equipment
 - minimise the risk of injury to self or others
- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to contract with customers and other trades for

EVIDENCE GUIDE

Context of and specific resources for assessment

disputed finishes

- follow safe handling requirements of equipment, products and materials.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- completed plasterwork with faults
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to plasterboard

RANGE STATEMENT

Faults are identified from:

- customers
- observation
- photographs
- supervisors.

Faults include:

- board fracture
- bullnose
- chisel edge
- damaged edges
- end peel
- hinge plasterboard
- hollow joins
- ink bleed through
- joint tape bubbles
- parrot beak
- pinholes
- scuffing
- shoulders
- wavy plasterboard.

Cause of faults includes:

- external causes
- inappropriate selection of work methods or level of finish
- materials or material selection faults
- poor workmanship.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant <i>information</i>, confirmed and applied for <i>planning and preparation</i> purposes.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. <i>Tools and equipment</i> selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and <i>quality requirements</i>.</p> <p>1.6. <i>Materials</i> appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Determine work requirements.	<p>2.1. Work area is inspected to determine work requirements.</p> <p>2.2. Level of finish as specified in the contract or job order is noted and mismatches between quality of fixing and finishing are recorded and reported or rectified as appropriate for contract.</p> <p>2.3. Personal protective equipment (PPE) suitable for the task is selected based on manufacturer recommended and employer-approved specification.</p>
3. Mechanically sand joins.	<p>3.1. Work site access is gained using approved workplace methods based on risk assessment for the task, site and circumstance.</p> <p>3.2. Sanding equipment, leads and any required dust protection or warning signs are set up for use.</p> <p>3.3. Appropriate stance and posture are used to hold and manipulate sanding equipment to minimise manual handling risks.</p> <p>3.4. Sanding is completed to required standard of finish.</p> <p>3.5. Completed sanding work is inspected for compliance with workplace and customer requirements and contracted level of finish.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	3.6. Any sand-through areas are reported to appropriate personnel.
	3.7. Sanded area is brushed down.
	4.1. Sanding dust is collected and contained for disposal in accordance with approved workplace procedures.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices using appropriate PPE; and recycled in accordance with legislation, regulations, codes of practice and job specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current

work site environmental and sustainability frameworks and management systems

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to identify problems and predict consequences
- effects of glancing light on plasterboard joins when paint is applied
- factors that influence level of finish
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- implications on work quality requirements for instruction to be followed
- job safety analysis (JSA) and safe work method statements
- manufacturer and supplier instructions for plant and equipment
- manufacturers' product mixing and/or application procedures and nominated specifications for the work process
- requirements to plan own work
- safely use equipment, shift and handle products and materials.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate sanding materials and work methods
- ensure that electrical equipment is inspected prior to use and includes required tags, logs and maintenance records prescribed by regulations
- operate from basic instruction without constant supervision
- identify requirements to achieve the specified level of finish
- identify faults in plasterboard fixing, joining and finishing
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- explain warranty, guarantee and liability requirements for plastering work
- apply knowledge of industry requirements to identify:
 - condition and colour of top coat when set
 - manufacturers' components and materials
 - contract compliance requirements
 - reasons for use of P1 rating (protection against mechanically generated particles) or P2 rating (protection against mechanically and thermally generated particles) mask and

EVIDENCE GUIDE

- protective clothing when emptying and cleaning equipment and disposing of dust
- common faults in materials and work and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - maintain equipment in good working condition and identify faults requiring repair by electrician
 - work effectively alone or with others and minimise the risk of injury
 - modify work activities to cater for variations in work site procedures, contexts and environment
 - identify and use appropriate behaviour for interactions with other workers, supervisors, clients and members of the public.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- stopped plasterboard walls and ceilings
- sanding materials
- access methods.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

EVIDENCE GUIDE

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Inspect equipment.	<p>2.1. Equipment is inspected prior to transport and set up.</p> <p>2.2. Warning systems are checked for operational effectiveness.</p>
3. Identify and assess impact of faults on work requirements.	<p>3.1. Faults are identified and assessment made of potential effect of the fault on operation of equipment for the required work.</p> <p>3.2. Faults that may affect the safe operation of the equipment are reported to appropriate personnel for rectification, and equipment is tagged and set aside for repair.</p> <p>3.3. Accurate reporting of the results of the inspection and testing is made in accordance with statutory requirements and company policy.</p> <p>3.4. Records are clear, unambiguous and concise with clear reference made to items that may require replacement or repair in the future.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to identify problems and predict consequences
- identifying potential for health and safety risks from workplace information and labels
- identifying the purpose of tags and logs of use for equipment
- implications for work output, safe operations and quality for instructions to be followed

REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- manufacturers' inspection procedures and specifications for the equipment
- names and functions of equipment, components and materials
- operating principles and working components of equipment used
- requirements to plan own work
- safely use equipment, shift and handle products and materials.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate equipment and work methods
- operate from basic instruction without constant supervision
- identify faults in equipment
- interpret delivery documentation and work orders
- locate relevant materials
- apply knowledge of industry products to identify:
 - manufacturers' instructions for equipment
 - wear that may require maintenance in the future
 - compatible components for running repairs
- follow work instructions, operating procedures and inspection practices to:
 - identify damage to goods, equipment or products
 - select and use appropriate personal protective equipment
 - work effectively alone or with others and minimise the risk of injury
 - maintain workplace records in relation to materials, plant and equipment use
 - use safe handling requirements, based on information provided for equipment, products and materials.

EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- equipment
- specifications
- maintenance records
- tools.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to equipment for serviceability

RANGE STATEMENT

Planning and preparation include:

- relevant Australian standards
- safe work procedures relating to equipment for serviceability
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- drills
- drop saws

RANGE STATEMENT

	<ul style="list-style-type: none"> • hand and power drills • hand saws • keyhole saws • ladders • measuring tapes and rules • paintbrushes • plasterboard hammers • plasterer's trowels • scaffold • screw guns • sheet lifters • T squares • taping knives • trestles and planks.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • beads • cement render • fibre cement sheets • finishing materials • plaster compounds • plasterboard • plasterglass sheets • water resistant plasterboard.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • vibration • waste management.
<i>Equipment is inspected</i> in accordance with:	<ul style="list-style-type: none"> • pre-operational functional safety check procedures and manufacturer specifications for: <ul style="list-style-type: none"> • damage • leaks • obstructions that may limit operational capability • worn requirements.
<i>Statutory requirements</i> include	<ul style="list-style-type: none"> • federal, state and local authorities administering the applicable Acts, regulations

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Plan and measure for cornice work.	<p>2.1. Style and type of cornice to be fitted is determined from work instructions.</p> <p>2.2. Cornice length for each work area is determined and noted.</p> <p>2.3. Cornice is handled following approved manual handling procedures.</p> <p>2.4. Requirements for safe work at heights are identified and planned for use.</p>
3. Cut cornice lengths.	<p>3.1. Matching points for ornamental cornice are determined and marked.</p> <p>3.2. Cornice is cut using workplace approved guides and cutting methods.</p> <p>3.3. Pattern match is checked.</p>
4. Prepare cornice adhesive.	<p>4.1. Manufacturers' instructions are consulted and applied to the preparation of the adhesive.</p> <p>4.2. Preparation of cornice adhesive is carried out.</p> <p>4.3. Adhesive powder is added to water until powder can absorb no more water.</p> <p>4.4. Consistency of mix is adjusted to suit hand or mechanical application of adhesive.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Fix cornice.	<p>5.1.Means for safe access for work at heights is used where required.</p> <p>5.2.Methods of holding cornice temporarily in place are planned and used following workplace-approved procedures.</p> <p>5.3.Appropriate amount of adhesive is applied to cornice.</p> <p>5.4.Cornice is fitted following workplace-approved practices for access to work at heights and manual handling.</p>
6. Finish work.	<p>6.1.Excess cornice adhesive is removed.</p> <p>6.2.Joins, pattern matches and junctions are filled and smoothed.</p> <p>6.3.Temporary fixings and supports are removed and holes filled.</p>
7. Clean up.	<p>7.1.Work area is cleared and materials and adhesives are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>7.2.Hazardous material is identified for separate handling.</p> <p>7.3.Non-toxic materials are removed using correct procedures.</p> <p>7.4.Dust suppression procedures are used to minimise health risk to work personnel and others.</p> <p>7.5.Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- recognise procedures
- report faults
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjusting work activity to maintain quality standards
- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and reading manufacturers' product installation procedures and nominated specifications for mixing adhesives, and fixing and cutting cornices
- identifying faults in materials and construction that may influence the match mitre process
- identifying materials used for hand and machine-made cornices by name and general application
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks for cornice and adhesives

REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- requirements for safe lifting and temporary fixing of cornice and safe work at heights.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify work order or contract and delivery documentation and match to delivered cornice
- plan materials use and match mitres to minimise waste and maximise decorative effect
- select and use appropriate cornice materials and work methods
- plan and execute work within agreed timeframe and to a high standard under general supervision
- apply a broad knowledge of industry products to identify:
 - hand manufactured and machine-made cornices
 - materials used in hand manufactured cornices and precautions for safe cutting
- identify problems in pattern matching and cornice fixing and suggest appropriate alternative rectifications
- interpret building plans and delivery documents to match cornice type to appropriate rooms
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and product quality

EVIDENCE GUIDE

- select and use appropriate personal protective equipment
- minimise the risk of injury to self or others
- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment
- maintain workplace records in relation to materials, plant and equipment use
- follow safe handling requirements of equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- building framework with plasterboard clad walls
- cast cornices
- materials
- tools and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or

EVIDENCE GUIDE

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes

EVIDENCE GUIDE

where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to fixing wall tiles
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- scaffold planks
- T squares
- taping knives
- trestles.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify work requirements.	<p>2.1. Substrate is inspected to confirm suitability for acoustic system rating specified.</p> <p>2.2. Manufacturers' installation advice is used to identify required processes for installing acoustic system.</p>
3. Select materials, processes and equipment.	<p>3.1. Equipment and processes are selected to match tasks.</p> <p>3.2. Fasteners, sealers and penetration seals compatible with system performance requirements are selected from manufacturer specifications.</p>
4. Fix acoustic system.	<p>4.1. Acoustic systems are hung to implement manufacturers' requirements for acoustic system installation.</p> <p>4.2. Edges of board are caulked using appropriate materials.</p> <p>4.3. Completed work is checked to confirm that it meets acoustic system rating specified, manufacturer specifications and Australian standards.</p>
5. Clean up.	<p>5.1. Site area is cleaned up with waste board collected for recycling, and adhesives and waste fasteners are disposed of in approved bins, reused or recycled in accordance with legislation, regulations, codes of</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>practice and job specification.</p> <p>5.2. Hazardous material is identified for separate handling.</p> <p>5.3. Non-toxic materials are removed using correct procedures.</p> <p>5.4. Dust suppression procedures are used to minimise health risk to work personnel and others.</p> <p>5.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current

REQUIRED SKILLS AND KNOWLEDGE

- work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- identifying and applying appropriate safety precautions to safely use equipment, and shift and handle products and materials
- identifying and interpreting manufacturers' product installation procedures and nominated specifications for the work process
- identifying faults in building construction that may influence the eventual sound rating
- interpreting manufacturer and supplier instructions for sound attenuation properties of materials
- job safety analysis (JSA) and safe work method statements
- requirements for a systematic approach to planning own work.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- assemble and use appropriate acoustic materials and work methods
- apply a broad knowledge of industry products to identify:
 - manufacturers' components and materials to the requirements of the building and the contract
 - contract and warranty compliance issues for inappropriate selection and installation of acoustic system
 - suitable materials for a wide range of applications
- report problems to supervisor and suggest appropriate alternative rectifications
- locate and apply relevant information from building plans to identify factors that may influence acoustic rating in different parts of the building structure
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and product quality
 - select and use appropriate personal protective equipment
 - minimise the risk of injury to self or others
- work effectively with other workers on and off

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Plan the use of mechanical taping and filling tools.	<p>2.1. Work requirements are identified and assessed.</p> <p>2.2. Penetrations and openings requiring barriers are identified.</p> <p>2.3. Amount of compound required is estimated.</p> <p>2.4. Length required for tool handle is measured.</p>
3. Prepare for work.	<p>3.1. Barriers are erected at identified points.</p> <p>3.2. Floor is cleared and cleaned.</p> <p>3.3. Compound is mixed to required consistency using appropriate personal protective equipment (PPE) and safe work methods when mechanically mixing compound.</p> <p>3.4. Tool handle is adjusted to required length.</p>
4. Complete mechanical filling and taping operations.	<p>4.1. Filling is completed with minimum compound loaded for immediate use.</p> <p>4.2. Internal angles are reinforced with a smooth and even appearance.</p> <p>4.3. Flat joins are completed so that they are smooth and even and properly reinforced to form a seamless appearance.</p> <p>4.4. Proper posture is maintained during use.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.5. Tasks are rotated in accordance with work site risk assessment.
5. Complete mechanical finishing operations.	5.1. Finishing is completed with minimum compound loaded for immediate use. 5.2. Joins are finished to produce a smooth and even, seamless appearance. 5.3. Proper posture is maintained during use.
6. Clean up.	6.1. Spilt compound is cleaned from floor. 6.2. Work area is cleared and excess compound is returned to container or disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 6.3. Hazardous material is identified for separate handling. 6.4. Non-toxic materials are removed using correct procedures. 6.5. Dust suppression procedures are used to minimise health risk to work personnel and others. 6.6. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults

REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to predict consequences and identify improvements
- identifying and rectifying faults in operation of equipment or materials quality
- identifying by name and function equipment and materials used for mechanical taping
- identifying from workplace information and labels the type and purpose of materials and potential for health and safety risks
- interpreting manufacturer and supplier safe use instructions for equipment and materials
- requirements for a systematic approach to planning own work.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the

EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- explain requirements for mechanically finished joins for:
 - flat joins
 - internal angles
 - external angles
 - ceiling joints
 - square set joins
- select and use appropriate materials and work methods
- plan and execute work within agreed timeframe and meet the contracted requirements under general supervision
- identify problems in mechanical taping and filling tool operations and suggest appropriate alternative rectifications
- interpret work order and locate and apply relevant information from building plans and delivery documents
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and product quality
 - select and use appropriate PPE
 - minimise the risk of injury to self or others
- work effectively with other workers on and off site
- modify work activities to cater for variations in work site procedures, personnel, contexts and environment

EVIDENCE GUIDE

Context of and specific resources for assessment

- follow workplace-approved safe manual handling requirements for equipment, products and materials.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- unfinished plasterboard wall and ceiling
- tools
- materials and equipment.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over

EVIDENCE GUIDE

a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting

RANGE STATEMENT

- traffic control
- restricted access barriers
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- measuring tapes and rules
- plasterboard hammers
- broad knives
- plasterer's trowels
- taping knives
- electric screw guns
- T squares
- keyhole saws
- hand saws
- hand and power drills
- brooms
- trestles
- scaffold planks
- paintbrushes.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration

RANGE STATEMENT

Assessment of *work requirements* includes:

- waste management.
- length of runs
- obstacles and barriers
- penetrations
- safe access for work.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Load and unload goods.	<p>2.1. Appropriate loading and unloading procedures are employed, based upon identified load characteristics.</p> <p>2.2. Loading follows loading regulations, including road transport lengths and widths and workplace safety requirements.</p> <p>2.3. Load shifting aids and appliances are selected and used to aid loading procedures following approved workplace procedures for manual handling.</p> <p>2.4. Unloading activities are conducted following approved work methods.</p> <p>2.5. Unloading is conducted efficiently, taking into account suitable locations, storage, safe use of equipment (where applicable) and balance of remaining load.</p>
3. Secure and protect load.	<p>3.1. Load is secured using appropriate load restraints and protection equipment for different loads and carrying and storage conditions.</p> <p>3.2. Load is protected from weather and to ensure safety in transit.</p> <p>3.3. Distribution of the load is checked to ensure that it is</p>

ELEMENT	PERFORMANCE CRITERIA
4. Complete documentation.	<p>even, legal and within safe working load limits.</p> <p>4.1. Load is inspected and checked for security to travel.</p> <p>4.2. Required documentation for the goods is completed following workplace, carrier and regulatory requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identify dimensions and mass of items to be shifted or transported and compare with vehicle and building
- identify shape, load and balance characteristics of products and equipment used
- identify faults in operation of equipment or materials quality
- identify from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identify the purpose of tags and logs of use for equipment
- implications on personal health and quality of delivered product for instruction to be followed
- job safety analysis (JSA) and safe work method statements
- manufacturer and supplier instructions for plant and equipment
- names and functions of equipment, components and materials
- requirements to plan own work
- safely use equipment, shift and handle products and materials
- total weights of individual items to estimate overall load and compare with safe working loads for vehicles, scaffold, equipment and manual handling.

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- select and use appropriate loading and securing materials and work methods
- operate from basic instruction without constant supervision
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- explain warranty, guarantee and liability requirements for plastering work
- apply knowledge of industry products to identify:
 - manual handling risks
 - warranty compliance issues
 - common faults and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - meet required work output and quality
 - select and use appropriate personal protective equipment
 - work effectively alone or with others and minimise the risk of injury
 - modify work activities to cater for

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Assess risks arising from the relocation of the load.	<p>2.1. Products, goods or materials to be relocated are identified.</p> <p>2.2. Characteristics of load in relation to weight, shape, balance and dimensions are identified.</p> <p>2.3. Environmental factors influencing the shift, including wind, trip hazards, wet conditions and traffic (vehicular and personal), are assessed for effect on personal safety.</p> <p>2.4. Appropriate strategies for shifting load are selected based on workplace-approved manual handling procedures.</p> <p>2.5. Location for storage is determined.</p> <p>2.6. Routes to be followed and potential risks are identified and strategies to minimise risks are identified.</p> <p>2.7. Points of balance are estimated.</p> <p>2.8. Procedures for safe use of lifting equipment to minimise risks are identified.</p>
3. Plan load relocation.	<p>3.1. Required load shifting equipment is selected and the safe working load (SWL) and working load limit (WLL) are identified and compared to the load to be</p>

ELEMENT	PERFORMANCE CRITERIA
	shifted.
	3.2.Process for relocating load proposed is determined, including planning for potential difficulties in the work environment.
	3.3.Proposed process is checked against relevant code of practice and workplace procedures for compliance.
	3.4.Lifting equipment and accessories are checked for safe operation following manufacturers' instructions and workplace procedures.
4. Relocate load.	4.1.Unsafe equipment is reported to appropriate personnel.
	4.2.Planned process and route are followed, using equipment within necessary range of limitations.
	4.3.Relocated materials are set down without damage to goods, personnel or equipment and checked for stability.
	4.4.Relocation is checked to see that it meets work requirements, and any variations are reported.
	4.5.Equipment is returned to storage area.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- adjust work activity to maintain quality standards
- application of product and process knowledge to identify problems and predict consequences
- identify dimensions and mass of items to be shifted or transported and compare with vehicle and building
- identify faults in operation of equipment or materials quality
- identify from workplace information and labels the type and purpose of materials and potential for health and safety risks
- identify shape, load and balance characteristics of products and equipment used
- identify the purpose of tags and logs of use for equipment
- implications on personal health and quality for product for instructions to be followed
- job safety analysis (JSA) and safe work method statements
- manufacturer and supplier instructions for plant and equipment
- names and functions of equipment, components and materials
- requirements to plan own work
- safely use equipment, shift and handle products and materials
- total weights of individual items to estimate overall load and compare with safe working loads for vehicles, scaffold, equipment and manual handling.

 - trip hazards
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- electrical equipment
- stationary and moving plant, equipment and materials.

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify products to be stored and appropriate stock records and inventory systems.	<p>2.1. Products to be stored are identified.</p> <p>2.2. Potential uses, frequency and order of use of materials, or frequency of dispatch to other parts of the job or to fill orders, are established.</p> <p>2.3. Size, shape and special storage requirements of the storage space are determined.</p> <p>2.4. Stock and inventory system requirements are identified.</p> <p>2.5. Relevant product information, including instructions, care labels and product identification information are located.</p>
3. Prepare storage area.	<p>3.1. Requirements for safe storage are identified.</p> <p>3.2. Storage arrangements take into account potential damage to goods.</p> <p>3.3. Appropriate work site clearances for use of storage area are obtained.</p> <p>3.4. Storage areas are cleared of waste and contaminants and required safety equipment is installed.</p> <p>3.5. Storage areas are planned to safely and effectively store goods based on frequency and order of use, safe</p>

ELEMENT	PERFORMANCE CRITERIA
	height, weight and size.
	3.6. Access and working space for <i>safe handling</i> of materials are established with others working in the work site.
4. Store materials and goods.	4.1. Condition of materials and goods is observed on arrival and any product below specification is returned to source.
	4.2. Materials and goods are stored and where appropriate, stacked appropriately for safe working load, size and crushability of goods.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current

REQUIRED SKILLS AND KNOWLEDGE

- work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- application of product and process knowledge to identify problems and predict consequences
- identify dimensions and mass of items to be shifted or transported and compare with vehicle and building
- identify shape, load and balance characteristics of products and equipment used
- identify faults in operation of equipment or materials quality
- identify potential for health and safety risks from inappropriate storage of plasterboard and plaster products
- identify the purpose of tags and logs of use for equipment
- implications on product quality for instruction for storage to be followed
- job safety analysis (JSA) and safe work method statements
- manufacturer and supplier instructions for safe use of plant, equipment and storage systems
- names and functions of equipment, components and materials
- requirements to plan own work
- safely use equipment, shift and handle products and materials
- total weights of individual items to estimate overall load and compare with safe working loads for vehicles, scaffold, equipment and manual handling.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- explain reasons for providing moisture protection
- protect the board from weather and moisture from slabs
- select and use appropriate storage methods
- operate from basic instruction without constant supervision
- execute work within agreed timeframes and standards
- interpret delivery documentation and work orders
- locate relevant materials
- explain warranty, guarantee and liability requirements for plastering work
- apply knowledge of industry products to identify:
 - warranty compliance issues that may arise from inappropriate storage
 - common faults in plasterboard and plaster products and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - work effectively with, and minimise the risk of injury to self and other workers
 - modify work activities to cater for

EVIDENCE GUIDE

	<p>variations in work site procedures, contexts and environment</p> <ul style="list-style-type: none">• identify and use appropriate behaviour for interactions with other workers, supervisors, clients and members of the public• maintain workplace records in relation to materials, plant and equipment use• use safe handling requirements, based on information provided for equipment, products and materials.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none">• work site• materials• plasterboard. <p>Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.</p> <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none">• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning

EVIDENCE GUIDE

knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to plasterboard
- relevant Australian standards
- safe work procedures relating to plasterboard
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - work site visitors and the public
 - working at heights

RANGE STATEMENT

	<ul style="list-style-type: none">• working in confined spaces• working in proximity to others
	<ul style="list-style-type: none">• use of firefighting equipment• use of tools and equipment• workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none">• broad knives• brooms• electric screw guns• hand and power drills• hand saws• keyhole saws• measuring tapes and rules• paintbrushes• plasterboard hammers• plasterer's trowels• scaffold planks• T squares• taping knives• trestles.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none">• Australian standards• internal company quality policy and standards• manufacturer specifications• workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none">• beads• cement render• fibre cement sheets• finishing materials• plaster compounds• plasterboard• plasterglass sheets• water resistant plasterboard.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• dust and noise• vibration• waste management.
<i>Requirements for safe storage</i> include:	<ul style="list-style-type: none">• horizontal stacking where possible• providing protection against moisture migration from below• risks of product falling or being damaged

RANGE STATEMENT

Potential damage to goods
includes from:

- safe working loads for racks and floor
- storing product type and quantity
- weatherproof area.

Safe handling includes:

- handling
- moisture
- other stored items
- other work activities on the site.

- forklifts
- manual handling equipment
- safe shifting by personnel
- scissor lifts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.</p> <p>1.6. appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Inspect work site.	<p>2.1. Type of trestle and plank system required is identified from work site and work instructions.</p> <p>2.2. Work area is cleaned of rubbish or unnecessary materials.</p> <p>2.3. Risks to other workers, power supply and other services are assessed.</p> <p>2.4. Access to erected trestle and plank platform is planned.</p> <p>2.5. Access of plaster products and tools from the plank is planned.</p>
3. Erect trestle and plank system.	<p>3.1. Trestle and plank system is selected to meet the Australian standard AS6001-1999 and work requirements.</p> <p>3.2. Trestle system components are collected and located at work site.</p> <p>3.3. Trestles and planks are inspected for serviceability as determined by the Australian standards.</p> <p>3.4. Trestles are appropriately positioned for the work and the planks to be used.</p> <p>3.5. Planks are fitted to the trestles at the required height using authorised procedures and within work site or</p>

ELEMENT	PERFORMANCE CRITERIA
4. Inspect system.	<p>regulatory restrictions.</p> <p>4.1. Trestle and plank work platform is inspected before and during use.</p> <p>4.2. Faults found are reported to supervisor and rectifications are conducted or system is labelled to prevent use pending repair.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - recognise procedures
 - report faults
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- identifying faults in operation of equipment
- identifying potential for health and safety risks from workplace information and labels
- identifying the purpose of tags and logs of use for equipment
- job safety analysis (JSA) and safe work method statements
- manufacturer and supplier instructions for plant and equipment
- names and functions of equipment, components and materials
- requirements to plan own work
- safely use equipment, shift and handle products and materials.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify situations where the use of trestle and plank system is appropriate
- explain benefits of one trestle and plank system compared to another
- select and use appropriate trestles, planks and work methods
- operate from basic instruction without constant supervision
- identify faults in trestles and planks
- execute work within agreed timeframes and standards
- interpret manufacturers' documentation
- apply knowledge of industry products to identify:
 - trestle and plank systems that meet the Australian standard
 - common faults in trestle and plank systems and problems that require reporting
- follow work instructions, operating procedures and inspection practices to:
 - prevent damage to goods, equipment or products
 - work effectively alone or with others and minimise the risk of injury
 - modify work activities to cater for variations in work site procedures, contexts and environment
 - identify and use appropriate behaviour for interactions with other workers, supervisors, clients and members of the public

EVIDENCE GUIDE

- maintain workplace records in relation to materials, plant and equipment use
- use safe handling requirements, based on information provided for equipment, products and materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- work site
- trestles
- planks.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a

EVIDENCE GUIDE

period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCCM2010A Work safely at heights.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT

work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel

CPCCPB3027A Install ceiling insulation

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to install ceiling insulation to comply with safety requirements as well as environmental requirements for energy efficiency ratings in accordance with sustainable building practices. It includes identifying and complying with applicable legislative requirements, planning and preparing for work, installing ceiling insulation, and completing installation and post-work clean-up activities.

This unit may be an essential requirement for registration to install ceiling insulation. Registration requirements may vary in different states and territories.

At the time of endorsement, this unit meets the regulatory requirements of the Government's *Energy Efficient Homes Package*.

Application of the Unit

Application of the unit

This unit supports those individuals who safely and efficiently install ceiling insulation while working with others as members of a team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify legislative, regulatory, and organisational requirements.	<p>1.1. Safety and applicable legislative requirements are identified and complied with.</p> <p>1.2. Organisational environmental and safety plans and policies are identified and complied with according to organisational requirements.</p> <p>1.3. Safe work methods and practices are identified and applied according to organisational safety plans and policies.</p> <p>1.4. Environmental requirements are identified and applied according to organisational environmental plans and regulatory requirements.</p> <p>1.5. Emergency response and evacuation procedures are identified and carried out when required.</p>
2. Plan and prepare for installing insulation.	<p>2.1. Work instructions and relevant information are obtained and confirmed for planning and preparation purposes.</p> <p>2.2. Risk assessment is undertaken to identify existing risks and hazards in the work area, including electrical risks and hazards.</p> <p>2.3. Identified risks are documented and appropriate response is undertaken according to safety requirements.</p> <p>2.4. Ceiling insulating material and insulation requirements are confirmed in accordance with work specifications.</p> <p>2.5. Appropriate personal protective equipment (PPE) and clothing are identified, correctly fitted, and used according to organisational policies and procedures.</p> <p>2.6. Tools and equipment are selected appropriate to the requirements of the work, confirmed for serviceability, and reported for repair or replacement where not serviceable.</p> <p>2.7. Associated material is determined and organised ready for use according to quality requirements and work plans and specifications.</p>
3. Install ceiling insulation.	<p>3.1. Insulation material is accurately measured to minimise waste.</p> <p>3.2. Insulation is installed using approved processes and handling techniques according to manufacturer specifications and relevant electrical and building regulations.</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|---------------------------|--|
| | 3.3. Dust-suppression procedures are used to minimise health risk in work area to self and others. |
| | 3.4. Insulation is installed safely without damage or distortion of the surrounding environment, electrical and other services and in a manner that maximises safety of self and others. |
| | 3.5. Variations and difficulties affecting performance or quality requirements of own work are identified and reported. |
| 4. Complete installation. | 4.1. Final inspections are conducted to ensure installed ceiling insulation conforms to job and manufacturer specifications. |
| | 4.2. Notification of work completion is made to designated personnel according to organisational procedures. |
| | 4.3. Work area is cleaned and <i>materials</i> are disposed of, reused or recycled according to organisational, safety and environmental requirements. |
| | 4.4. Tools and equipment are cleaned, checked, maintained and stored according to manufacturer specifications and organisational procedures. |
| | 4.5. Malfunctions, faults, wear or damage to tools, equipment and site are accurately documented and reported for repair or replacement according to organisational procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- self-management skills to:
 - adjust work activity to maintain quality standards
 - evaluate own actions and make judgments about performance and necessary improvements
- communication skills to:
 - communicate clearly and directly, using questioning to identify and confirm requirements

REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- listen and understand
- share information
- use and interpret non-verbal communication, such as hand signals
- use language and concepts appropriate to cultural differences
- literacy skills to:
 - read and interpret:
 - company procedures
 - documentation from a variety of sources
 - drawings and specifications
 - material safety data sheets (MSDS), job safety analyses (JSA), safe work method statements, and risk assessments
 - recognise and interpret work-related signs, such as safety logos and warnings
 - report faults, safety risks and hazards
 - record results of checks and tests and relevant work-completion procedures
- numeracy skills to calculate insulation material quantities
- identify and report to designated personnel any faults in tools, equipment or materials
- identify faults in insulation materials
- organisational skills to:
 - identify and document wiring that is likely to be adversely affected by the retrospective installation of thermal insulation
 - identify and document hazards, including electrical
 - plan, prioritise and set out work
- problem-solving skills to:
 - respond to change
 - address safety concerns and seek specialist advice where required
- teamwork skills to:
 - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
 - work with others to action tasks
- technological skills to:
 - use a range of mobile technology, such as two-way radios and mobile phones
 - voice and hand signals to access and understand site-specific instructions

Required knowledge

- appropriate PPE and its use to reduce injury and electric shock
- ceiling insulation material types and quality requirements
- common health and safety risks associated with handling ceiling insulation
- common workplace safety hazards and risks, and procedures for reporting these to

REQUIRED SKILLS AND KNOWLEDGE

designated personnel

- emergency response and evacuation procedures
- environmental requirements, including waste management and recycling
- hierarchy of hazard control
- legislation, regulation and building codes related to ceiling insulation
- MSDS, JSA and safe work method statements
- methods for calculating insulation material quantities
- organisational requirements and procedures relating to ceiling insulation installation, including requirements for a systematic approach to planning own work
- procedures to safely use equipment, shift and handle products and materials, and work at heights and in enclosed areas
- product and process knowledge to identify problems and predict consequences
- relationships of 'R' rating with Building Code of Australia (BCA) and Australian standards' requirements and energy ratings
- tools and equipment prohibited for use near identified asbestos-containing materials (ACM)
- type and purpose of tags and logs of use for equipment
- types, characteristics, uses and limitations of installation tools and equipment
- types, possible location and risks of ACM, including serpentine and amphibole groups, and their use on common building materials
- reason for the operating temperature limit of electrical cables
- effect on cables partially surrounded by thermal insulation and fully surrounded by thermal insulation
- common wiring systems used in domestic premises indicating the age of the installation
- wiring not likely to be adversely affected by the retrospective installation of thermal insulation; note: the following conditions shall apply:
 1. cables are thermoplastic sheathed (white), and
 2. cables are in continuous contact with a surface (e.g. laying on ceiling lining, fixed to structural members) or in a position where they cannot be partially or fully surrounded by thermal insulation
- clearance of thermal insulation from recessed downlights and ancillary equipment in accordance with AS/NZS 3000:2007 Clause 4.5.2.3; note:
 1. Clause 4.5.2.3 in part states:
 - recessed luminaires and their auxiliary equipment shall be installed in such a manner that necessary cooling air movement through or around the luminaire is not impaired by thermal insulation or other material
 - where thermal insulation is of a type that is not fixed in position (e.g. loose fill), a barrier or guard constructed of fire-resistant material shall be provided and secured in position to maintain the necessary clearance
 2. any barriers placed around recessed luminaires shall not be enclosed and allow the

REQUIRED SKILLS AND KNOWLEDGE

heat from the luminaire to dissipate freely

- electrical hazards in roof spaces, including unenclosed connections, unenclosed conductors, damaged cable sheaths and exposed conductors
- risk assessment documentation and actions to take where:
 - wiring is of a type likely to be adversely affected by the installation of thermal insulation, and
 - electrical hazards are present
 - note: this requires the engagement of a licensed electrician through an electrical contractor to evaluate the suitability of the wiring for the retrospective installation of thermal insulation and to rectify electrical hazards
- hazards related to polystyrene, polyurethane and metallic foil; note:
 1. polystyrene and polyurethane have a detrimental effect on electrical insulation, reducing the effective safe service life of the cables and should not be used where there is a likelihood of contact with electrical cables
 2. metallic foil is electrically conductive, therefore appropriate tools, equipment and fixings must be selected

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

In particular the person should demonstrate the ability to:

- apply knowledge of industry products to identify:
 - common faults and problems
 - manufacturer specifications in relation to insulation properties of the available product
 - manufacturer components and materials
 - relationships of 'R' rating with BCA and Australian standards' requirements and energy ratings
- apply knowledge for the safe installation of thermal insulation in relation to electrical equipment, including:

EVIDENCE GUIDE

- effects of thermal insulation on cables
- wiring likely to be adversely affected by the retrospective installation of thermal insulation
- clearance of thermal insulation from recessed downlights and ancillary equipment
- complete a risk assessment sheet for each installation which documents:
 - whether the wiring system is compatible with thermal insulation
 - number of recess luminaires in ceiling and how the clearances are to be met
 - electrical hazards, and measures taken to eliminate them
 - relevant work instructions
- communicate and work effectively and safely with others
- comply with organisational policies and procedures, including quality requirements
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- follow work instructions, operating procedures and inspection practices to:
 - maintain workplace records in relation to materials, plant and equipment use
 - modify work activities to cater for variations in workplace procedures, personnel, contexts and environment
 - prevent damage to the environment, equipment, products, or site
 - select and use appropriate PPE
 - work effectively alone or with others and operate with minimal supervision
 - select and use non-conductive and insulated tools and materials to minimise electrical hazards
- locate, interpret and apply relevant information, standards and specifications
- select and install ceiling insulation on at least two occasions within agreed timeframes and standards using safe handling methods for materials and equipment.

Context of and specific resources for

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment,

EVIDENCE GUIDE

assessment

provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- ceiling spaces
- materials and tools.

Assessment of this unit may be in conjunction with assessment of other units commonly performed at the same time in normal work roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and work roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a

EVIDENCE GUIDE

number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety requirements are to be in accordance with commonwealth, state and territory legislation and regulations, organisational safety plans and policies, and include:

- emergency procedures, including evacuation and provision of first aid
- hazard control procedures
- hazardous materials and substances
- electrical hazards
- PPE prescribed under legislation, regulations and workplace policies and practices
- reporting hazards, incidents, injuries, near misses and identified ACM
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - manual handling

RANGE STATEMENT

- concealed services, including water, power and gas
 - lighting
 - traffic control
 - restricted access barriers
 - trip hazards
 - power sources and leads
 - power tools, including cutting tools
 - workplace visitors and the public
 - working at heights
 - working in enclosed areas
 - working in proximity to others
 - types of fire and use of firefighting equipment
 - use of tools and equipment
 - workplace environmental requirements.
 - Australian standards, including working at heights requirements:
 - AS 6001:1999 Working platforms for domestic application
 - AS 1576 Scaffolding
 - AS/NZS4576:1995 Guidelines for scaffolding
 - conduct on-site operational assessment of electrical risk and implement control measures to prevent it
 - construction industry OHS standards and guidelines
 - duty of care
 - health and safety representatives, committees and supervisors
 - licences, tickets and certificates of competency
 - National Code of Practice for Induction Training for Construction Work
 - national safety standards
 - OHS and welfare Acts and regulations
 - safety codes of practice, and JSA and safe work method statements.
- Commonwealth, state and territory ***legislative requirements*** include:
- access and equity policy, principles and practice
 - client service standards
 - defined resource parameters
 - emergency and evacuation procedures
 - employer and employee rights and responsibilities
 - OHS policies, procedures and programs
 - organisational goals, objectives, plans, systems and
- Organisational requirements*** relate to:

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to handle, sort and store painting and decorating materials.

The unit includes planning and preparing for the work; identifying, handling and storing materials; and selecting and distributing appropriate housekeeping standards. Environmentally sustainable practices are required for waste disposal and equipment cleaning.

Application of the Unit

Application of the unit

This unit of competency supports the attainment of the understanding and skills to handle painting and decorating materials, which may include working with others and as a member of a team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify, handle and store painting and decorating materials.	<p>2.1. Materials and components are identified and checked for conformity to material schedule, plans and specifications and environmental characteristics.</p> <p>2.2. Handling characteristics of painting and decorating material and components are identified and safe and effective handling techniques adopted.</p> <p>2.3. Storage locations are confirmed as satisfying fire safety, ventilation and product dispersal requirements.</p> <p>2.4. Materials are handled safely and effectively according to material safety data sheets (MSDS) and requirements of regulatory authorities.</p>
3. Identify, handle and store painting and decorating materials.	<p>3.1. Painting and decorating materials are sorted to suit material type and size, and stacked for ease of identification and retrieval.</p> <p>3.2. Painting and decorating material and components are protected against physical and water damage and stored clear of traffic ways.</p>
4. Select and distribute painting and decorating materials in preparation for use.	<p>4.1. Painting and decorating products, material and components are identified, selected from stack and safely handled and distributed to required job location.</p> <p>4.2. Storage/holding area at job location is checked to</p>

ELEMENT**PERFORMANCE CRITERIA**

	ensure provision of adequate ventilation, fire safety and dispersal.
	4.3. Painting and decorating materials are stored to best serve their subsequent use.
	4.4. Work areas are prepared, including the removal of objects and the use of drop sheets to protect surrounding surfaces.
5. Clean up.	5.1. Hazardous material is identified for separate handling by authorised personnel.
	5.2. Work area is cleared and material disposed of in a safe and effective manner in accordance with state and territory requirements.
	5.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices.
	5.4. Non-paint <i>Waste materials and debris</i> are removed and placed into job waste bins or rubbish stockpile in a safe and effective manner in accordance with environmental requirements.
	5.5. <i>Paint waste, water and solvents</i> used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements
	5.6. Likelihood of spontaneous combustion is identified and suitable protective measures are applied.
	5.7. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations, <i>environmental sustainability requirements</i> and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- determine requirements
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic spontaneous combustion theory
- job safety analysis (JSA) and safe work method statements
- MSDS
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- painting and decorating terminology
- processes for the calculation of material requirements
- quality requirements
- types, titles, packaging and storage requirements for commonly encountered painting and decorating materials
- Australian Paint Approval Scheme (APAS) classifications
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- solid waste and paint sludge disposal techniques and relevant legislation, including

REQUIRED SKILLS AND KNOWLEDGE

Environmental Protection Authority (EPA) and local Council regulations

- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- safely and effectively identify, handle, store and distribute painting and decorating materials, which are to include a range of coatings and two each of:
 - cleaning solvents
 - fillers
 - adhesives.
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS

RANGE STATEMENT

Planning and preparation include:

- memos
- regulatory and legislative requirements pertaining to handling of painting and decorating materials
- relevant Australian standards
- safe work procedures relating to handling of painting and decorating materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including solvents, lead, chemicals, fumes/gases
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - electrical and fire and/or explosion from combustible materials
 - falling objects
 - lighting
 - manual handling
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers

RANGE STATEMENT

	<ul style="list-style-type: none"> • solvents, lead, chemicals, fumes/gases • surrounding structures • traffic control • trip hazards • work access platforms • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others, work site visitors and the public • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<i>Quality requirements</i> include:	<ul style="list-style-type: none"> • internal company quality policy and standards • manufacturer specifications, where specified • relevant regulations, including Australian standards • workplace operations and procedures.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • low odour and emissions • waste management.
<i>Materials and components:</i>	<ul style="list-style-type: none"> • include: <ul style="list-style-type: none"> • cleaning solvents • coatings • fillers and adhesives • may include wall and decorative covering materials.
<i>Environmental characteristics</i> <i>can Include but is not limited to:</i>	<ul style="list-style-type: none"> • low odour and low-VOC (Volatile Organic Compound) paint • no-VOC paint • non-toxic paint • alternative and natural paint and paint materials • brushware <ul style="list-style-type: none"> • natural bristle • nylon • microcellular synthetic bristles

RANGE STATEMENT

<i>Painting and decorating material</i> include:	<ul style="list-style-type: none"> • water-based • solvent-based • two-pack • textures.
<i>Protection</i> of stacked/stored materials includes:	<ul style="list-style-type: none"> • barricades • covering • lock away (for hazardous materials) • signs.
<i>Waste materials and debris</i> includes:	<ul style="list-style-type: none"> • banding straps • cardboard • excess material • packing pieces
<i>Paint waste, water and solvents</i> disposal includes:	<ul style="list-style-type: none"> • use of manual and machine environmentally sustainable cleaning methods • cleaning water re-cycling or professional disposal • solid waste disposal requirements
<i>Environmental sustainability requirements</i> include:	<ul style="list-style-type: none"> • correct paint storage to minimise waste • recycling • use and storage of volatile materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Identify hand and power tools.	<p>2.1. Hand and power tools, their functions, operations and limitations are identified.</p> <p>2.2. OHS requirements for using hand tools are recognised and adhered to.</p> <p>2.3. OHS requirements for using power tools are recognised and adhered to.</p>
3. Select tools for project.	<p>3.1. Tools and equipment are selected consistent with job requirements.</p> <p>3.2. Tools, including leads and hoses, are checked for tags, serviceability and safety and any faults are rectified or reported.</p> <p>3.3. Power tool guards, retaining bolts, couplings, gauges and controls are checked and maintained in accordance with manufacturer recommendations.</p> <p>3.4. Equipment to hold or support material during operation is selected.</p> <p>3.5. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed in accordance with manufacturer recommendations.</p>
4. Use tools.	<p>4.1. Power and compressed air supply are connected to work area.</p> <p>4.2. Start-up and shut-down procedures are followed.</p> <p>4.3. Tools are safely and effectively used according to manufacturer recommendations and OHS</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements.
	4.4. Tools are safely located when not in immediate use.
5. Select plant and equipment.	5.1. Function and limitations of plant and equipment used in painting and decorating are identified. 5.2. Plant and equipment are selected consistent with hazard minimisation and needs of job. 5.3. Method of operation of plant and equipment is identified. 5.4. OHS requirements for operating and using plant and equipment are recognised and adhered to. 5.5. Plant and equipment are checked for safety and faults are rectified or reported.
6. Use plant and equipment.	6.1. Plant and equipment are safely and effectively used. 6.2. Plant and equipment are safely located when not in immediate use. 6.3. Plant and equipment are cleaned, maintained and stored after use.
7. Clean up.	7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 7.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating industry terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of painting and decorating hand tools and power tools
- types, characteristics, uses and limitations of painting and decorating plant items
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- use and maintain the mandatory tools listed in the range statement
- use and maintain at least two of the mechanical sanding equipment types listed in the range statement
- use, operate and maintain conventional and airless spray equipment.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to painting and decorating tools and equipment
- relevant Australian standards
- safe work procedures relating to the use of

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Remove door and window furniture.	<p>2.1. Screens and fittings are carefully removed and stored safely.</p> <p>2.2. Window furniture is carefully removed and located or stored safely.</p> <p>2.3. Door furniture is carefully removed and located or stored safely.</p> <p>2.4. Doors are carefully removed and located or stored safely.</p>
3. Install glass to doors and windows.	<p>3.1. Old panes of glass are removed from doors and windows safely, without undue damage and demonstrating correct hacking procedure.</p> <p>3.2. Right type and style of glass for replacement in keeping with the finish and purpose of door or window is determined.</p> <p>3.3. Appropriate glass for replacement is sourced, measured and cut as required determining the correct fixing method for installation.</p> <p>3.4. Door or window aperture is cleaned, repaired and primed prior to installation of new glass.</p> <p>3.5. New glass is installed to specification and required finish.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Replace doors and door and window furniture.	<p>4.1. Doors are carefully handled, placed, hung and fixed into original place.</p> <p>4.2. Door furniture is refitted and fixed back into place to specifications and without marking door or surrounds.</p> <p>4.3. Window furniture is refitted and fixed back into place to specifications and without marking window surfaces or surrounds.</p> <p>4.4. Screens are replaced securely in position without damage to surrounds.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary

REQUIRED SKILLS AND KNOWLEDGE

improvements

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- correct and safe procedures for removal and replacement of glass
- door and window furniture removal and replacement techniques
- glass cutting techniques
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- painting and decorating and basic carpentry terminology
- plans, drawings and specifications
- quality requirements
- safe handling techniques for glass
- types, uses and limitations of tools used in the removal and replacement of door and window furniture
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- remove and replace components ensuring surrounding areas and furniture components remain undamaged
- safely and effectively remove and replace a minimum of:
 - one door with an independent screen
 - furniture from two different door types
 - furniture from two different window types with at least one having independent screens
 - glazing from a timber door or window.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- pertaining to the removal and replacement of doors and door and window furniture
- relevant Australian standards
- safe work procedures relating to the removal and replacement of doors and door and window furniture
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - manual handling
 - power cables, including overhead service trays, cables and conduits
 - power leads
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - use of hand and power tools

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p> <p>1.8. Finishes to be applied to all surfaces are identified in accordance with job requirements, and application that complies with manufacturer specifications.</p>
2. Prepare new or uncoated surfaces for painting or clear finish.	<p>2.1. Suitability of surface for painting or clear finish application is determined in accordance with manufacturer recommendations and job specifications.</p> <p>2.2. Surface preparation method is correctly selected in accordance with the environment, finish and substrate requirements.</p> <p>2.3. Surface is prepared to manufacturer specifications in compliance with substrate requirements, specifications and relevant standards.</p> <p>2.4. Surface imperfections are stopped, filled and sanded to a smooth finish ready for painting in accordance with manufacturer recommendations and job specifications.</p>
3. Prepare previously coated surfaces for painting or clear finish.	<p>3.1. Condition and nature of existing substrate and surface material are determined and tested in accordance with relevant standards.</p> <p>3.2. Potential hazards are identified and correct</p>

ELEMENT	PERFORMANCE CRITERIA
<p>4. Remove wallpaper and prepare surface for painting.</p>	<p>procedures are used to reduce risks in accordance with manufacturer recommendations and job specifications.</p> <p>3.3. Surface preparation method is correctly selected in accordance with the environment, finish and substrate requirements.</p> <p>3.4. Surfaces are prepared by removing unwanted coatings and loose debris.</p> <p>3.5. Surface defects are repaired and imperfections stopped, filled and sanded to smooth finish ready for painting in accordance with manufacturer recommendations and job specifications.</p> <p>4.1. Type, condition and nature of existing type of wallpaper are determined prior to removal.</p> <p>4.2. Surface preparation method is correctly selected in accordance with the environment, finish and substrate requirements.</p> <p>4.3. Wallpaper is removed using the most appropriate method.</p> <p>4.4. Surfaces are prepared for paint application by removing loose debris.</p> <p>4.5. Surface defects are repaired and imperfections stopped, filled and sanded to smooth finish ready for painting in accordance with manufacturer recommendations and job specifications.</p>
<p>5. Clean up.</p>	<p>5.1. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in accordance with sound work practices and compliance with environmental requirements.</p> <p>5.2. Painting tools and equipment are cleaned with correct solutions and without damage, and are stored safely and effectively to manufacturer specifications.</p> <p>5.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.</p> <p>5.4. Work area is cleared and materials disposed of or recycled in a manner to avoid spontaneous combustion in accordance with legislation, regulations, codes of practice and job specification.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- corrosion processes and techniques for the protection of metals
- hazards associated with lead, asbestos, solvents, chemicals and dust
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- paint application testing procedures

REQUIRED SKILLS AND KNOWLEDGE

- painting and decorating terminology
- plans, drawings and specifications
- prevention and/or rectification procedures for surface coating defects
- procedures, products and techniques associated with preparation of surfaces
- procedures, products and techniques associated with removal of wallpaper
- processes for the calculation of material requirements
- properties and surface preparation requirements of new substrates
- quality requirements
- required protection for application of clear or stained finishes
- surface coating technology
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare a minimum of four surfaces for painting to specification:
 - one being a new gyprock surface of a minimum 8 square metres and one new surface of a minimum of 1 square metre or 8 lineal metres
 - three being previously coated surfaces with one being an external timber surface, one an internal surface and one a metal or masonry surface
- remove wallpaper from a room, cubicle or equivalent and prepare the surface for painting.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- memos
- regulatory and legislative requirements pertaining to the preparation of surfaces for painting
- relevant Australian standards
- safe work procedures relating to the preparation of surfaces for painting
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - electrical and fire and/or explosion from combustible materials
 - falling objects
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - solvents, lead, asbestos, chemicals, fumes/gases, manual handling

RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- drop sheets
- duster brushes
- filling knives and blades
- hammers
- hand sanders
- heat removal equipment
- mechanical sanders
- nail punches
- putty knives
- scrapers
- water blasters
- wire brushes.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

Surface includes:

- horizontal or vertical
- inclined or curved
- internal or external
- timber, metal, masonry, concrete or plaster.

Existing substrate and surface may be contaminated with:

- dust
- films of grease
- mild chalking
- mild efflorescence

RANGE STATEMENT

<i>Tested</i> includes:	<ul style="list-style-type: none">• mould• paint films that are:<ul style="list-style-type: none">• blistering• flaking• peeling• cracking• smoke damage.• adhesion test• solvent test• testing procedures to determine the presence of lead-based paints and asbestos.
<i>Surface preparation method</i> includes:	<ul style="list-style-type: none">• chemical stripping• grinding• sanding• scraping (mechanical and hand)• use of heat guns• washing down• water blasting.
<i>Wallpaper removal</i> methods include:	<ul style="list-style-type: none">• dry stripping• soaking• steam stripping.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p> <p>1.8. Work planning is undertaken in consideration of environmental factors such as light, weather and dust.</p>
2. Prepare work area and materials.	<p>2.1. If necessary, materials and substrate surfaces are prepared in accordance with manufacturer recommendations and relevant Australian standards.</p> <p>2.2. Surrounding surfaces not to be painted are protected by drop sheets, masking or removal of objects in accordance with manufacturer recommendations and job specifications.</p> <p>2.3. Where doors, windows and associated furniture are removed they are stacked, stored and protected correctly and safely.</p> <p>2.4. Job location is checked to ensure provision of adequate ventilation and precautions are taken to prevent fire and explosion in accordance with manufacturer recommendations and material safety data sheet (MSDS) data.</p> <p>2.5. Materials for specified paint finish are mixed to designed proportion and consistency in accordance with manufacturer recommendations and job</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications.
	2.6. Paint and colours are thoroughly stirred, using separate stirring sticks or other suitable proprietary devices.
	2.7. Correct amounts of paint material are prepared to specified ratio and drying time in accordance with manufacturer recommendations and specifications.
3. Apply paint with brush or roller.	3.1. Brush, roller or brush/roller combination is selected for specified surface profile, size of area, type of paint and finish specified in accordance with manufacturer recommendations and job specifications.
	3.2. Paint is applied to achieve required level of opacity, finish, texture and sheen in accordance with manufacturer recommendations and job specifications.
4. Finish the application.	4.1. Finished paint surface is cured using curing method in accordance with manufacturer recommendations and job specifications.
	4.2. Finished paint surface is tested using testing procedures in accordance with manufacturer recommendations and job specifications.
	4.3. Doors, windows and furniture removed for painting application are re-installed correctly and without damage to finished surfaces.
5. Clean up.	5.1. Painting tools and equipment are cleaned with correct solutions and without damage, and are stored safely and effectively to manufacturer specifications.
	5.2. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.
	5.3. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
	5.4. Work area is cleared and materials disposed of or recycled in accordance with legislation, regulations, codes of practice and job specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- compatibility of preparatory materials and paint systems
- hazards associated with solvents, chemicals and dust
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- painting and decorating terminology
- plans, drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- processes for the calculation of material requirements
- quality requirements
- responsibilities with regard to:
 - conservation areas
 - environmental requirements
 - heritage listed buildings
- surface coating technology, including specification of paint systems for interior and exterior painting projects to maximise durability, protection and aesthetic considerations
- testing techniques and support materials
- theoretical principles relating to adhesion and cohesion of paint
- theoretical principles relating to pigmentation and colouring agents, drying and curing processes and the role of solvents
- types, uses and limitations of commonly used brushes and rollers
- variances in work carried out within sectors of painting and decorating industry for:
 - new building (residential, commercial and high rise)
 - maintenance, renovation and refurbishment
 - restoration
 - conservation
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply paint by brush and roller (with finishes being to specification, including in terms of defects, thickness, colour, level of opacity, finish, texture and sheen), to a range of surfaces, including:
 - four different surface types
 - a minimum application of 6 square metres brushed or rolled
 - a timber panel door
 - a flush door
 - a timber window, including architrave and frame with moving parts (e.g. box frame, hopper and awning).

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions,

RANGE STATEMENT

	<ul style="list-style-type: none"> where specified • MSDS • memos • regulatory and legislative requirements pertaining to the application of paint by brush and roller • relevant Australian standards • safe work procedures relating to the application of paint by brush and roller • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • falling objects • lighting • manual handling • power cables, including overhead service trays, cables and conduits • restricted access barriers • solvents, chemicals, fumes/gases

RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
 - brushware
 - brushware accessories
 - drop sheets
 - paint pots and buckets
 - paint stirrers
 - roller frames
- may include:
 - duster brushes
 - filling knives and blades
 - hammers
 - hand sanders
 - heat and flame paint removal equipment
 - mechanical sanders
 - nail punches
 - putty knives
 - scrapers
 - wire brushes.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Materials include:

- adhesives
- cleaning solvents
- fillers.

RANGE STATEMENT

Environmental requirements
include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

Surfaces to be painted include:

- horizontal or vertical
- inclined or curved
- internal or external
- timber, metal, masonry, concrete or plaster.

Paint coatings may be:

- solvent-based
- two-pack
- water repellent for timber
- water-based.

Paint products may be classified
as:

- sealers
- primers
- sealer and undercoats
- undercoats and intermediate coats
- finish coats.

Paint applications:

- are to be in accordance with Australian standards unless this is replaced by other authorised job specifications.

Tests include:

- wet film thickness test.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to apply texture coat paint finishes to different surfaces by using brush, roller and spray.

The unit includes planning and preparation for the work, preparation of the work area and materials, application of the texture coat paint and completion of clean-up activities.

Application of the Unit

Application of the unit

This unit of competency supports the attainment of the understanding and skills to apply texture coat paint finishes by brush, roller and spray, which may include working with others and as a member of a team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare materials and application area.	<p>2.1. Area is set up for application processes to suit application system being used.</p> <p>2.2. Adjoining surfaces to application area are protected by masking off or covering, prior to application of texture coat paint.</p> <p>2.3. Adequate ventilation to application area is provided to maintain a safe environment.</p> <p>2.4. Measures are taken to ensure application area remains free of dust and foreign matter.</p> <p>2.5. Application system and equipment are prepared for use.</p> <p>2.6. Fittings are checked for function and security prior to use in accordance with manufacturer recommendations.</p> <p>2.7. Texture coat paint is mixed and adjusted to allow for application process in accordance with manufacturer recommendations, plans and specification.</p>
3. Apply texture coat by brush and roller.	<p>3.1. Application equipment is used in accordance with manufacturer recommendations and job specifications.</p> <p>3.2. Texture coat paint is applied to surface using</p>

ELEMENT	PERFORMANCE CRITERIA
	correct application technique to achieve an even finish with opacity and sheen level in accordance with the job specification.
	3.3. Defects in coating are identified and corrective action is taken to achieve the required finish in accordance with job specification.
4. Apply texture coat by spray.	<p>4.1. Spray equipment is operated to standard operating procedures in accordance with manufacturer recommendations.</p> <p>4.2. Texture coat paint is applied to surface using correct application technique to achieve an even finish with opacity and sheen level in accordance with the job specification.</p> <p>4.3. Defects in coating are identified and corrective action taken to achieve the required paint finish in accordance with the job specification.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Paint waste, water and solvents used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements</p> <p>5.3. Paint waste, water and solvents used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements</p> <p>5.4. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- applicator system types, characteristics, uses and limitations
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- Australian Paint Approval Scheme (APAS) classifications
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- solid waste and paint sludge disposal techniques and relevant legislation, including

REQUIRED SKILLS AND KNOWLEDGE

Environmental Protection Authority (EPA) and local Council regulations

- surface preparation techniques related to texture coatings
- texture coat paint systems technology
- texture coatings and their properties, uses and limitations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare and apply to specification texture coat paints using brush and roller and either spray or one other applicator system, to a minimum of:
 - one complete wall a minimum of 5 square metre with 2 hard edges
 - one complete wall, ceiling to floor including an internal corner (e.g. wall junction and ceiling/wall junction)
 - one complete window reveal
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation

EVIDENCE GUIDE

systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and

EVIDENCE GUIDE

environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of texture coat paint
- relevant Australian standards
- safe work procedures relating to the application of texture coat paint
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - electrical and fire and/or explosion from combustible materials
 - falling objects
 - lighting
 - manual handling

RANGE STATEMENT

- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
 - brooms
 - brushes
 - mixers
 - roller equipment
 - sprays
 - vacuum cleaners
- may include:
 - compressors
 - hopper guns
 - hoses and fittings
 - mobile scaffold
 - stepladders
 - trestles and planks.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- sedimentation control

RANGE STATEMENT

	<ul style="list-style-type: none"> • low odour and emissions • vibration • waste management.
<i>Application processes:</i>	<ul style="list-style-type: none"> • is to conform with AS2311 The Painting of Buildings.
<i>Application</i> of texture coat paint:	<ul style="list-style-type: none"> • is to be by: <ul style="list-style-type: none"> • brush • roller • may be by: <ul style="list-style-type: none"> • spray • other application system.
<i>Texture coat paint</i> finishes:	<ul style="list-style-type: none"> • include high-build (acrylic or styrene/acrylic) coatings • may include proprietary products or lines.
<i>Surface</i> for application of textured paint finishes includes:	<ul style="list-style-type: none"> • brick and masonry • fibrous cement sheeting • off-form concrete • paper-faced plasterboard • tilt-up concrete slabs.
<i>Paint waste, water and solvents</i> disposal includes:	<ul style="list-style-type: none"> • use of manual and machine environmentally sustainable cleaning methods • cleaning water re-cycling or professional disposal • solid waste disposal requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare materials and application area.	<p>2.1. Area is set up for application processes to suit spray system being used.</p> <p>2.2. Adjoining surfaces to application area are protected by masking off or covering prior to application of spray paint.</p> <p>2.3. Adequate ventilation to application area is provided to maintain a safe environment.</p> <p>2.4. Measures are taken to ensure application area remains free of dust and foreign matter.</p> <p>2.5. Paint is mixed and viscosity adjusted to allow for application process for spray paint finishing materials, in accordance with equipment and manufacturer requirements and plans and specification.</p>
3. Set up and test spray equipment.	<p>3.1. Spray equipment, accessories and lines for selected spray system are identified, selected and set up in the operating location in accordance with manufacturer recommendations, plans and specification.</p> <p>3.2. Fittings are checked for function and security prior to use in accordance with manufacturer recommendations.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Safety devices are identified and tested, and defects corrected in accordance with standard operational and manufacturer requirements.
4. Apply paint using the spray system.	<p>4.1. Spray equipment is operated to standard operating procedures in accordance with manufacturer recommendations.</p> <p>4.2. Paint is applied to surface using correct application technique to achieve an even finish with opacity and sheen level in accordance with job specification.</p> <p>4.3. Defects in coating are identified and corrective action is taken to achieve required spray paint finish in accordance with the job specification.</p>
5. Clean up and store equipment.	<p>5.1. Spray gun and associated components and equipment are dismantled, checked, cleaned and maintained in accordance with manufacturer recommendations and operator's manual.</p> <p>5.2. Spray paint materials and solvents are stored safely to manufacturer specifications and company procedures.</p> <p>5.3. <i>Paint waste, water and solvents</i> used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements</p> <p>5.4. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- compatibility of surface coating to substrates
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- paint types, their uses and limitations
- painting and decorating terminology
- plans, drawings and specifications
- preparatory materials relevant to spray operations
- processes for the calculation of material requirements
- quality requirements
- rules, regulations, Australian standards and codes of practice of spray painting
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
- spray equipment types, characteristics, uses and limitations

REQUIRED SKILLS AND KNOWLEDGE

- techniques for the application of paint by spray
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- workplace and equipment safety requirements including respiratory protection.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply by spray to specification the following (with finishes being to specification, including in terms of defects, thickness, sheen, opacity, colour and sharpness):
 - one acrylic and one alkyd or solvent paint system to at least 6 square metres
 - airless applicator of acrylic paint

EVIDENCE GUIDE

Context of and specific resources for assessment

- HVLP
- application to a door of at least 2 square metres
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services

EVIDENCE GUIDE

Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to applying paint by spray
- relevant Australian standards
- safe work procedures relating to undertaking a applying paint by spray
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:

RANGE STATEMENT

- earth leakage boxes
- electrical and fire and/or explosion from combustible materials
- falling objects
- lighting
- manual handling
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brushes
- drop sheets
- masking equipment
- respirators
- sanders
- scaffold, including:
 - planks
 - trestles
 - stepladders
 - aluminium mobile
- spray equipment
- vacuum cleaners.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards

RANGE STATEMENT

Environmental requirements
include:

- workplace operations and procedures.
- clean-up management
- dust and noise
- low odour and emissions
- stormwater protection
- waste management.

Paint coatings may include:

- solvent-based (alkyd, urethane, urethane/alkyd, urethane oil or modified alkyd resins)
- two pack
- water based
- water repellents for timber
- low odour and low-VOC (Volatile Organic Compound) paint
- no-VOC paint
- non-toxic paint
- alternative and natural paint and paint materials.

Spray equipment, accessories and lines include:

- compressors
- diaphragm
- hoses
- piston airless spray unit (electrical, pneumatic and petrol)
- regulators
- spray guns
- spray tips and filters.

Spray systems:

- include:
 - airless spray units
 - conventional spray units
 - high volume, low pressure (HVLP) spray applications
- may include electrostatic spray applications.

Paint waste, water and solvents
disposal includes:

- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Match paint colour to specified sample.	<p>2.1. Base colour is identified from analysis of sample.</p> <p>2.2. Paint type, tint base and sheen level of sample are established in accordance with manufacturer recommendations and specifications.</p> <p>2.3. Colorants are selected as suitable for colour match.</p> <p>2.4. Colour is mixed and matched against sample and allowed to dry to establish accuracy of colour match.</p> <p>2.5. Full quantity of paint is mixed and colour match is retested prior to application in accordance with specifications.</p>
3. Clean up.	<p>3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>3.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- colour principles related to monochromatic, complementary, split complementary, analogous and triadic colours
- colour theory related to primary, secondary, tertiary and intermediate colours
- colours used in heritage painting or restoration
- effect, over time, of light on colours
- factors that affect the apparent colour of paint, including:

REQUIRED SKILLS AND KNOWLEDGE

- age and deterioration of painted sample if in situ
- colour and opacity of the paint
- colour considerations regarding durability of colours in exterior locations
- colour of drapes and other furnishings
- colour of surface covered by paint
- gloss level and paint type
- lighting conditions
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating terminology
- plans, drawings and specifications
- presentation of paint formulas
- processes for the calculation of material requirements
- quality requirements
- use of the colour wheel
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- colour match a minimum of two solvent-based and two latex/acrylic paints to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the colour matching of paint
- relevant Australian standards
- safe work procedures relating to the colour matching of paint
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - electrical and fire and/or explosion from combustible materials
 - falling objects
 - lighting
 - manual handling
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - solvents, lead, chemicals, fumes/gases
 - surrounding structures
 - traffic control
 - trip hazards
 - work access platforms
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment

RANGE STATEMENT

Tools and equipment:

- workplace environmental requirements and safety.
- include:
 - colorant dispenser
 - mixing receptacles
 - paintbrushes
 - stirring implements
- may include mechanical paint mixers (shakers).

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

Paints to be matched include:

- latex/acrylics
- solvent-based.

Sample includes:

- fan decks
- in situ previously painted unit or area
- paint manufacturers' colour card.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks, including work platforms where required are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p> <p>1.8. Stain colour to be applied is matched to previously treated timber or associated area or item.</p>
2. Prepare materials and application area.	<p>2.1. Area is set up for application processes to suit application system being used.</p> <p>2.2. Adjoining surfaces to application area are protected by masking off or covering, prior to application of stains and finishes.</p> <p>2.3. Adequate ventilation to application area is provided to maintain a safe environment.</p> <p>2.4. Measures are taken to ensure application area remains free of dust and foreign matter.</p> <p>2.5. Existing stained or finished surfaces for application are stripped using appropriate techniques.</p>
3. Stain bare timber surface.	<p>3.1. Stain is selected for type of timber allowing for aesthetics and durability in accordance with manufacturer recommendations and job specifications.</p> <p>3.2. Stain is prepared to proportions and consistency in accordance with manufacturer recommendations and job specification.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Application method for the specified surface, area size and type of finish is selected in accordance with manufacturer recommendations and job specifications.</p> <p>3.4. Stain is applied to bare timber surface to specifications and manufacturers' instructions.</p> <p>3.5. Wood filler and putty are selected, mixed, colour matched and applied to timber in accordance with job specifications.</p>
4. Apply clear finishes.	<p>4.1. Coats of selected clear finish are applied to achieve required level of opacity, finish and sheen in accordance with manufacturer recommendations and job specifications.</p> <p>4.2. Drying time is allowed between coats in accordance with manufacturer recommendations and job specifications.</p> <p>4.3. Clear finish surfaces are cured in accordance with manufacturer recommendations and job specifications.</p>
5. Clean up.	<p>5.1. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.</p> <p>5.2. Painting tools and equipment are cleaned with correct solutions and without damage, and stored safely and effectively to manufacturer specifications.</p> <p>5.3. Paint waste, water and solvents used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.</p> <p>5.4. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- basic softwood and hardwood timber technology
 - conservation
 - conservation areas
- hazards associated with solvents, chemicals and dust
 - heritage listed buildings
- job safety analysis (JSA) and safe work method statements
 - maintenance, renovation and refurbishment
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including

REQUIRED SKILLS AND KNOWLEDGE

- correct disposal of water-based, latex-based and solvent-based paints and finishes
 - new building (residential, commercial and high rise)
- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- responsibilities with regard to:
 - restoration
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
- surface preparation techniques for clear wood finishing
- testing techniques and support materials
- theoretical principles relating to pigmentation and colouring agents, drying and curing processes and the role of solvents
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- types, properties, uses and limitations of clear timber finishes and timber stains
- types, uses and limitations of commonly used brushes, rollers and other applicators
- variances in work carried out within sectors of painting and decorating industry for:
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply stains and clear timber finishes (with finishes being to specification, including in terms of defects, colour, level of opacity, finish and sheen) which is at a minimum to cover:
 - one oil-based stain product
 - one water and spirit-based timber stain
 - one water-based clear finish
 - one oil-based clear finish
 - grain filler applications
 - putty applications.
- apply at least one stain and one clear finish to two previously treated timber surfaces with each stain and clear finish application to be not less than 2 square metres or two lineal metres in each case

EVIDENCE GUIDE

- dispose of all paint and finishes in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and

EVIDENCE GUIDE

correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised**

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of stains and clear timber finishes
- relevant Australian standards
- safe work procedures relating to the application of stains and clear timber finishes
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes

RANGE STATEMENT

- electrical and fire and/or explosion from combustible materials
- falling objects
- lighting
- manual handling
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brushware
- brushware accessories
- buckets
- drop sheets
- duster brushes
- filling knives and blades
- hammers
- hand sanders
- heat guns
- mechanical sanders
- nail punches
- paint pots and buckets
- paint stirrers
- putty knives
- roller accessories
- roller frames
- scrapers
- spray equipment.

RANGE STATEMENT

Work platforms include:	<ul style="list-style-type: none">• stepladders• trestles• planks.
Quality requirements include:	<ul style="list-style-type: none">• internal company quality policy and standards• manufacturer specifications, where specified• relevant regulations, including Australian standards• workplace operations and procedures.
Materials:	<ul style="list-style-type: none">• include:<ul style="list-style-type: none">• grain fillers (water, spirit or oil)• putty• single pack clear finish• timber stains (water, spirit, oil or slightly pigmented varnish/polyurethane)• may include:<ul style="list-style-type: none">• acrylic clear and two pack epoxy clear, shellac, tinting agents and waxes• clear finishes for timber, including lacquers and two pack polyurethane.
Environmental requirements include:	<ul style="list-style-type: none">• clean-up management• dust and noise• low odour and emissions• stormwater protection• waste management.
Application methods:	<ul style="list-style-type: none">• include:<ul style="list-style-type: none">• brush• paint pad (sponge)• rag• roller• may include spray.
Application:	<ul style="list-style-type: none">• is to be in accordance with the relevant Australian standard unless this is replaced by other authorised job specifications.
Surfaces to be finished/pre-finished:	<ul style="list-style-type: none">• include:<ul style="list-style-type: none">• curved• horizontal• inclined• vertical• may be all common profiles encompassing:

RANGE STATEMENT

- building boards, including particle board
- doors
- floors
- in sound or unsound conditions
- medium density fibreboard (MDF)
- natural timber products
- panelling
- ply
- previously coated/treated timber surface
- stairs.

Finish includes:

- flat
- full gloss
- satin
- semi-gloss.

Paint waste, water and solvents
disposal includes:

- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks, including work platforms where required are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare surface for wallpaper.	<p>2.1. Condition, suitability and nature of existing substrate and surface material are determined and removal process is selected.</p> <p>2.2. Hazards are identified and correct procedures used to reduce risk to self and others in accordance with manufacturer recommendations and specifications.</p> <p>2.3. Surfaces are prepared for wallpapering application by removing existing coating and loose debris.</p> <p>2.4. Surface defects are repaired and imperfections stopped, filled and sanded to smooth finish ready for wallpapering in accordance with manufacturer recommendations and job specifications.</p>
3. Prepare for the hanging process.	<p>3.1. Final application plan for hanging wallpaper is determined and documented in accordance with manufacturer recommendations and client requirements.</p> <p>3.2. Selected adhesives are prepared in accordance with manufacturer recommendations.</p> <p>3.3. Materials are checked for conformity to dye lot, batch number and other shading requirements in</p>

ELEMENT	PERFORMANCE CRITERIA
	accordance with manufacturer recommendations and client requirements.
4. Apply wallpaper.	<p>4.1. Size coating is applied to work area in accordance with manufacturer recommendations.</p> <p>4.2. Wallpaper is applied to work area ensuring an even surface, seams are butted, paper is plumb and pattern is free of defects.</p> <p>4.3. Trimming around fittings is completed accurately and with minimal impact on surroundings.</p> <p>4.4. Wallpaper application is completed in accordance with manufacturer recommendations and job specifications.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- common wallpapering defects
- compatibility of preparatory materials and wallpaper
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating terminology
- plans, drawings and specifications
- procedures used to apply straight pattern match, drop pattern match and random match wallpapers
- processes for the calculation of material requirements
- responsibilities with regard to:
 - conservation areas
 - heritage listed buildings
- quality requirements
- surface preparation techniques for the application of wallpaper
- types and properties of wall coverings and their suitability to various substrates
- types, uses and limitations of commonly used adhesives
- wallpaper hanging processes and techniques
- wallpapering tools and equipment, their uses and limitations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply wallpaper to specification for a minimum of 6 square metres on a minimum of three jobs, covering:
 - lining paper, vinyl wallpaper and unpasted wallpaper
 - walls and internal and external corners, reveal, window and arch
 - walls containing power points and switches.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of wallpaper

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in
accordance with state and territory
legislation and regulations and
project safety plan and may
include:

- relevant Australian standards
- safe work procedures relating to the application of wallpaper
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - electrical and fire and/or explosion from combustible materials
 - falling objects
 - lighting
 - manual handling
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - solvents, lead, chemicals, fumes/gases
 - surrounding structures
 - traffic control
 - trip hazards
 - work access platforms

RANGE STATEMENT

	<ul style="list-style-type: none">• work site visitors and the public• working at heights• working in confined spaces• working in proximity to others, work site visitors and the public• use of firefighting equipment• use of tools and equipment• workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none">• applicators• broad knives• filling blades• lay brushes• plumb bobs and string lines• rubber rollers• scissors• scrapers• seam rollers• smoothing blocks• spirit levels• sponges• steam strippers• tape measures• trimming knives and cutters.
<i>Work platforms</i> include:	<ul style="list-style-type: none">• mobile scaffold• planks• stepladders• trestles.
<i>Quality requirements</i> include:	<ul style="list-style-type: none">• internal company quality policy and standards• manufacturer specifications, where specified• relevant regulations, including Australian standards• workplace operations and procedures.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• dust and noise• stormwater protection• waste management.
<i>Adhesives</i> include:	<ul style="list-style-type: none">• cellulose• latex• polyvinyl alcohol (PVA)

RANGE STATEMENT

Wallpaper includes:

- starch
- other special adhesive blends.
- borders
- lining paper
- unpasted and ready pasted wallpapers (simplex and duplex)
- vinyl wallpaper
- washable wallpaper.

Wallpaper applications include those to walls which may be:

- constructed of set plaster
- curved
- fibre cement products
- fibrous plaster
- flat
- medium density fibre board
- plasterboard.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to apply decorative paint finishes to a range of different material surfaces.

The unit includes planning and preparation for the work; preparation of the application area; application of mirror paint finishes, broken colour effects and lines by brush; and completion of clean-up activities.

Application of the Unit

Application of the unit This unit of competency supports the attainment of the understanding and skills to apply commonly used decorative paint finishes, which may include working with others and as a member of a team.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare application area.	<p>2.1. Area is set up for application processes to suit surfaces to be painted with decorative paint finishes.</p> <p>2.2. Adjoining surfaces to application area are protected by masking off or covering prior to application of decorative paint finishing materials.</p> <p>2.3. Ventilation is provided in application area to maintain safety of self and others.</p> <p>2.4. Measures are taken to ensure application area is dust free.</p>
3. Apply mirror paint finish.	<p>3.1. Paint viscosity is adjusted to suit climatic conditions and method of application in accordance with manufacturer specifications and/or job specifications for mirror finishing.</p> <p>3.2. Prime and intermediate coats are applied to specifications, allowed to dry thoroughly and sanded to a smooth, even finish.</p> <p>3.3. Final coat is applied without imperfections, flowing out to an even, smooth finish in accordance with manufacturer specifications and/or job specifications.</p>
4. Apply broken colour effects.	<p>4.1. Ground coat to specified colour and consistency is applied evenly to prepared surface for broken colour</p>

ELEMENT	PERFORMANCE CRITERIA
	<i>effects.</i>
	4.2.Scumble glaze is applied to prepared ground and desired broken colour effect is produced to match sample in accordance with manufacturer specifications and/or job specifications.
	4.3.Clear coating is applied to achieve an even finish to specified sheen level in accordance with manufacturer specifications and/or job specifications.
5. Apply modern acrylic finishes	5.1. Acrylic finishes are applied to achieve an even finish in accordance with manufacturer specifications and/or job specifications
6. Apply lining by brush.	6.1.Lining work is selected and set out to designed effect on prepared surface to specifications.
	6.2.Paint materials, applicators and brushware are identified and selected in accordance with suitability of use for lining application and job specifications.
	6.3.Specified application techniques are applied to produce designed lining work effects and finish in accordance with manufacturer specifications and/or job specifications.
7. Apply basic stencilling	7.1. Stencil design is selected and laid out onto recommended material.
	7.2.Specified transfer method, is used and design is cut accurately using a 'register' mark.
	7.3.Initial stencil is placed and taped to designed location and paint is applied to produce colour to specifications.
8. Apply basic special finishes	8.1.Special effect materials, applicators and brushware are identified and selected in accordance with suitability of use for application of special finishes and job specifications.
	8.2.A range of traditional and modern special finishes are applied to produce specified effects and finish in accordance with manufacturer specifications and/or job specifications.
9. Clean up and store equipment.	9.1.Special effect painting equipment and spray painting equipment are dismantled, cleaned, maintained and stored.
	9.2.Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in a safe and effective manner in accordance with sound work practices compliant with environmental

ELEMENT**PERFORMANCE CRITERIA**

requirements.

9.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.

9.4. **Paint waste, water and solvents** used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements

9.5. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

9.6. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer specifications and/or standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- colour fleck materials and application techniques
- compatibility of surface coatings to substrates
- decorative painted finishes technology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
- types of paints, including the characteristics and uses of paint materials with various volatile organic compound (VOCs) levels and alternative and natural paints
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete to specification, the following decorative finishes:
 - a mirror finish to a minimum of a door or standard panel
 - a minimum of two broken colour effects on walls or standard panel size surfaces
 - use of lining within a decorative finish
 - a minimum of two (one traditional and one modern) special effects including imitation marbling, imitation wood graining and basic gilding
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and

EVIDENCE GUIDE

	work practices including waste reticulation systems.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none">• an induction procedure and requirement• realistic tasks or simulated tasks covering the mandatory task requirements• relevant specifications and work instructions• tools and equipment appropriate to applying safe work practices• support materials appropriate to activity• workplace instructions relating to safe work practices and addressing hazards and emergencies• material safety data sheets• research resources, including industry related systems information. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none">• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application• reinforce the integration of employability skills with workplace tasks and job roles• confirm that competency is verified and able

EVIDENCE GUIDE

to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of decorative paint finishes
- relevant Australian standards
- safe work procedures relating to the application of decorative paint finishes
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - electrical and fire and/or explosion from combustible materials
 - falling objects
 - lighting

RANGE STATEMENT

- manual handling
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brushes
- compressors
- mobile scaffold
- planks
- rollers
- sanders
- scrapers
- spray equipment
- stepladders
- trestles
- vacuum cleaners.

Materials include:

- clear finishes
- fillers
- linseed oil
- manufacturers' proprietary products
- oil-based products
- scumbling mediums
- stainers
- terebine dryers
- water-based products.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified

RANGE STATEMENT

<p><i>Environmental requirements</i> include:</p>	<ul style="list-style-type: none"> • relevant regulations, including Australian standards • workplace operations and procedures. • clean-up management • dust and noise • low odour and emissions • stormwater protection • waste management.
<p><i>Decorative paint finishes:</i></p>	<ul style="list-style-type: none"> • include: <ul style="list-style-type: none"> • broken colour effects • lines • mirror finish • gilding • stencilling • basic imitation marbling • basic imitation wood graining. • may include: <ul style="list-style-type: none"> • gilding • luminescent finishes.
<p><i>Mirror finishing:</i></p>	<ul style="list-style-type: none"> • is applied by: <ul style="list-style-type: none"> • brush • brush/roller • may be applied by: <ul style="list-style-type: none"> • spray • flood coating.
<p><i>Broken colour effects:</i></p>	<ul style="list-style-type: none"> • are achieved using: <ul style="list-style-type: none"> • rag rolling • sponging • stippling • may use: <ul style="list-style-type: none"> • bagging • flouncing • dragging • blending • highlighting.
<p><i>Acrylic finishes include but are not limited to:</i></p>	<ul style="list-style-type: none"> • suede • metalescence • pearlescence/illuminescence

RANGE STATEMENT

- Stencilling*** includes the use of:
- lime washes.
 - cutting boards
 - cutting knives and scalpels
 - drawing and tracing materials
 - stencil brushes
 - stencil materials.
- Special finishes*** include:
- basic imitation marbling
 - basic imitation wood graining
 - basic gilding.
- Paint waste, water and solvents*** disposal includes:
- use of manual and machine environmentally sustainable cleaning methods
 - cleaning water re-cycling or professional disposal
 - solid waste disposal requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare site and materials.	<p>2.1. Site area is set up for graffiti removal and preventative application processes to suit surfaces to be treated.</p> <p>2.2. Adjoining surfaces to application area are protected by masking off or covering prior to application of graffiti preventative coatings.</p> <p>2.3. Adequate ventilation is provided for application area.</p> <p>2.4. Stormwater protection systems are installed where appropriate.</p>
3. Remove graffiti.	<p>3.1. Preparation processes are selected to suit substrate surfaces and graffiti circumstances.</p> <p>3.2. Type of coating previously used to cover graffiti is identified in accordance with current industry standards of practice, manufacturer recommendations and specifications.</p> <p>3.3. Graffiti removal processes are applied to affected area in accordance with current industry standards of practice, manufacturer recommendations and specifications.</p>
4. Apply preventative	<p>4.1. Substrate surfaces are cleaned and prepared for</p>

ELEMENT	PERFORMANCE CRITERIA
application material.	<p>preventative application coatings in accordance with current industry standards of practice and manufacturer recommendations.</p> <p>4.2. Type of <i>preventative coating</i> to cover specific type of graffiti is identified and prepared in accordance with manufacturer recommendations and job specifications.</p> <p>4.3. Preventative application coating to cover specific type of graffiti is <i>applied</i> in accordance with manufacturer recommendations and job specifications.</p>
5. Clean up and store equipment.	<p>5.1. Painting equipment is dismantled, cleaned, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p> <p>5.2. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and company procedure.</p> <p>5.3. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.4. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- graffiti resistant material technologies and applications
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- surface preparation techniques
- types and properties of commonly used graffiti materials
- types, characteristics, uses and limitations of graffiti removal materials
- types, uses, limitations and operating techniques of graffiti removal equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- remove graffiti from two different substrates of at least 1 square metre using two approved cleaning methods
- apply a minimum of one sacrificial and one non-sacrificial preventative coating, each to a different substrate of at least 1 square metre.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,

EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1.***Information*** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the removal of graffiti and application of protective coatings
- relevant Australian standards
- safe work procedures relating to the removal of graffiti and application of protective

RANGE STATEMENT

	coatings
	<ul style="list-style-type: none"> • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
1.2. <i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
1.3. <i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • electrical and fire and/or explosion from combustible materials • falling objects • lighting • manual handling • power cables, including overhead service trays, cables and conduits • restricted access barriers • solvents, lead, chemicals, fumes/gases • surrounding structures • traffic control • trip hazards • work access platforms • work site visitors and the public • working at heights

RANGE STATEMENT

- working in confined spaces
 - working in proximity to others, work site visitors and the public
 - use of firefighting equipment
 - use of tools and equipment
 - workplace environmental requirements and safety.
- 1.4. *Tools and equipment* include:
- airless spray equipment
 - brushes
 - mobile scaffold
 - planks
 - rollers
 - scrapers
 - stepladders
 - trestles
 - vacuum cleaners
 - water blasters.
- 1.5. *Quality requirements* include:
- internal company quality policy and standards
 - manufacturer specifications, where specified
 - relevant regulations, including Australian standards
 - workplace operations and procedures.
- 1.6. *Materials* include:
- solvents
 - cleaning materials.
- 1.7. *Environmental requirements* include:
- clean-up management
 - dust and noise
 - stormwater protection
 - waste management.
- 1.8. *Preventative coatings*:
- include:
 - sacrificial
 - non sacrificial
 - may include:
 - siliconised
 - other types.
- 1.9. *Application*:
- systems include:
 - brush/roller
 - spray
 - is to conform with relevant Australian standard.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to apply specialised paint coating systems as a protective measure against atmospheric conditions, sanitation and hygiene risks and the impacts of high traffic areas.

The unit includes planning and preparation for the work, preparation of the work area and materials, application of the coating system and completion of clean-up activities.

Application of the Unit

Application of the unit This unit of competency supports the attainment of the understanding and skills to apply protective coatings, which may include working with others and as a member of a team.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment are selected to carry out tasks, including work platforms where required are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare surfaces for protective coating.	<p>2.1. Suitability of surface for protective paint coating is determined in accordance with manufacturer recommendations and job specifications.</p> <p>2.2. Surface preparation method is correctly selected in accordance with the environment, finish and substrate requirements.</p> <p>2.3. Surface is prepared to manufacturer specifications in compliance with substrate requirements, specifications and relevant standards.</p> <p>2.4. Surface imperfections are repaired or stopped, filled and sanded to a smooth finish ready for the protective coating in accordance with manufacturer recommendations and job specifications.</p>
3. Apply protective coating system.	<p>3.1. Job location is checked to ensure provision of adequate ventilation and precautions taken to prevent fire and explosion.</p> <p>3.2. Application for paint coating is selected consistent with the job location, type of paint, type and condition of surface and climatic conditions.</p> <p>3.3. Protective coating system is applied and finished in</p>

ELEMENT	PERFORMANCE CRITERIA
	accordance with job/manufacture specifications and relevant standards.
	3.4. Measurement and dry and wet testing are carried out in accordance with manufacturer specifications and relevant standards.
4. Clean up.	<p>4.1. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in accordance with sound work practices and compliance with the environmental requirements.</p> <p>4.2. Painting tools, equipment and plant are cleaned with correct solutions and without damage, and stored safely and effectively to manufacturer specifications.</p> <p>4.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.</p> <p>4.4. Paint waste, water and solvents used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.</p> <p>4.5. Work area is cleared and materials disposed of or recycled in a manner to avoid spontaneous combustion and in accordance with legislation, regulations, codes of practice and job specification.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources

REQUIRED SKILLS AND KNOWLEDGE

- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- hazards associated with solvent vapour, chemical fumes, gases, harmful dusts, metal chips, abrasive grit and asbestos fibres
- impact of atmospheric conditions and high traffic on new and existing structures and coatings
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints
- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- protective paint coating application equipment and techniques and their uses and limitations
- protective surface coating technology
- quality requirements
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
- types of commonly used protective paint coatings, their uses and limitations
- types of paints, including the characteristics and uses of paint materials with

REQUIRED SKILLS AND KNOWLEDGE

- various volatile organic compound (VOCs) levels and alternative and natural paints
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare an application of a minimum of three different protective paint coating systems of at least 1 square metre to specification
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of protective paint

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- coating systems
- relevant Australian standards
- safe work procedures relating to the application of protective paint coating systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - electrical and fire and/or explosion from combustible materials
 - falling objects
 - lighting
 - manual handling
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - solvents, lead, chemicals, fumes/gases
 - surrounding structures
 - traffic control
 - trip hazards

RANGE STATEMENT

- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brushware
- brushware accessories
- buckets
- covers
- drop sheets
- duster brushes
- hand and mechanical wire brushes
- hand sanders
- high pressure water blasters
- mechanical grinders
- mechanical sanders
- paint pots and buckets
- paint stirrers
- rags
- roller accessories
- roller frames
- scrapers
- spray equipment
- wet and dry film thickness gauges.

Work platforms include:

- aluminium mobile scaffolds
- elevated work platforms
- hop ups
- in situ scaffold erected by qualified personnel
- ladders
- planks
- scissor lifts
- stepladders
- trestles.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified

RANGE STATEMENT

Materials include:	<ul style="list-style-type: none">• relevant regulations, including Australian standards• workplace operations and procedures.• cleaning aids• cleaning chemicals• solvents.
Environmental requirements include:	<ul style="list-style-type: none">• chemical fumes• clean-up management• dust and noise• low odour and emissions• stormwater protection• waste management.
Surface to be prepared and coated:	<ul style="list-style-type: none">• may be:<ul style="list-style-type: none">• new• previously coated• includes:<ul style="list-style-type: none">• concrete• fibreglass• metallic (iron, steel, ferrous and non-ferrous metals)• plastics, including polyvinyl chloride (PVC).
Paint coating includes:	<ul style="list-style-type: none">• polyurethane primer (two pack)• epoxy primer (two pack)• high build epoxy• high build chlorinated rubber.
Surface preparation method includes:	<ul style="list-style-type: none">• abrasive blasting• chemical stripping• grinding• heat gun• sanding• scraping (mechanical and hand)• washing down using sugar soap• water blasting.
Application:	<ul style="list-style-type: none">• is to comply with relevant Australian standards.
Paint coating includes:	<ul style="list-style-type: none">• corrosion control• decoration• hygiene and sanitation protection

RANGE STATEMENT

Measurement and dry and wet testing techniques:

- trafficable areas.
- are those required to confirm that wet film meets specifications.

Paint waste, water and solvents disposal includes:

- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Circumstances in which lead-based paints may be encountered are determined.</p> <p>1.2. Location of lead based paint to be treated is determined from plans/specifications.</p> <p>1.3. Testing is undertaken for presence of lead or asbestos using approved testing methods.</p> <p>1.4. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.5. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.6. Signage and barricade requirements are identified and implemented.</p> <p>1.7. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.8. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.9. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.10. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Define and prepare work area.	<p>2.1. Options for the management and treatment of pre-existing lead-based paints in buildings are considered and determined in accordance with regulatory requirements.</p> <p>2.2. A safe working area is maintained around lead-based paint locations using temporary control measures, barriers and signage.</p> <p>2.3. Plant, tools and equipment are positioned to suit job requirements.</p>
3. Remove contaminated materials.	<p>3.1. Appropriate removal processes are determined to suit job requirements.</p> <p>3.2. Contamination area is quarantined and people at risk are protected in accordance with regulatory requirements.</p> <p>3.3. Furnishings, other surfaces, surrounding ground</p>

ELEMENT

PERFORMANCE CRITERIA

	<p>areas, drinking vessels, water storage and foodstuffs are protected and all doors and windows sealed where appropriate.</p> <p>3.4. Debris and waste management procedures are identified for lead contamination from flake, chalk and dust.</p> <p>3.5. Removal processes are applied and contaminated materials are containerised for movement.</p> <p>3.6. Substrates are repaired, restored and prepared for subsequent coatings.</p>
4. Manage contaminated materials.	<p>4.1. Stabilisation method is determined to make the building lead safe by applying temporary control measures.</p> <p>4.2. Appropriate methods for the containment of existing surfaces are determined or confirmed in accordance with regulatory requirements.</p> <p>4.3. Over painting is conducted using oil-based paints by applying a high quality undercoat sealer and two coats of quality topcoats.</p> <p>4.4. Specialised liquid encapsulant is applied in accordance with manufacturer specifications.</p> <p>4.5. Contaminated surface is enclosed using overlaying materials such as plasterboard or weatherboard and applying warning notices of the latent lead hazard.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Waste and unwanted materials are removed and placed into containment vessels for disposal in accordance with authorised systems and relevant standards.</p> <p>5.3. Surface and soil tests are conducted to verify that no contamination has taken place and building is safe for occupation.</p> <p>5.4. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- agents and techniques available for encapsulation, their uses and limitations
- agents available for chemical stripping treatments, their uses and limitations
- containment techniques and processes for lead-based paint flakes, dust and chalk
- health risks associated with lead and lead-based paint products
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management

REQUIRED SKILLS AND KNOWLEDGE

- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- sanding equipment and techniques
- types and specifications of lead-based paints and the manufacturer recommendations for removal
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply treatments of at least 6 square metres for a minimum of two different lead paint hazards (where the processes and outcomes are to be in

EVIDENCE GUIDE

	<p>line with current regulations and relevant Australian standards), including:</p> <ul style="list-style-type: none">• a chemical stripping treatment• paint systems to contain lead or asbestos.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none">• an induction procedure and requirement• realistic tasks or simulated tasks covering the mandatory task requirements• relevant specifications and work instructions• tools and equipment appropriate to applying safe work practices• support materials appropriate to activity• workplace instructions relating to safe work practices and addressing hazards and emergencies• material safety data sheets• research resources, including industry related systems information. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none">• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

EVIDENCE GUIDE

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

RANGE STATEMENT

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Testing:

- includes lead test kits
- may include x-ray fluorescence equipment and laboratory testing of field samples.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the treatment of lead paint hazards
- relevant Australian standards
- safe work procedures relating to the treatment of lead paint hazards
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:

RANGE STATEMENT

- earth leakage boxes
- electrical and fire and/or explosion from combustible materials
- falling objects
- lighting
- manual handling
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - chemical strippers (caustic based, flammable and methylene chloride)
 - containment receptacles (heavy duty)
 - disposable heavy duty plastic
 - disposable personal boot covers and coveralls
 - high efficiency particulate accumulator (HEPA) filtered vacuum cleaner
 - HEPA filtered sanders
 - measuring tapes and rules
 - respirators (maintained to AS1716)
- may include:
 - heat guns
 - masking tape

Prerequisite units

CPCCOHS2001A

Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks, including work platforms where required are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare surface for wallpaper.	<p>2.1. Condition, suitability and nature of existing substrate and surface material are determined and removal process is selected.</p> <p>2.2. Hazards are identified and correct procedures used to reduce risk to self and others in accordance with manufacturer recommendations and specifications.</p> <p>2.3. Surfaces are prepared for wallpapering application by removing existing coating and loose debris.</p> <p>2.4. Surface defects are repaired and imperfections stopped, filled and sanded to smooth finish ready for wallpapering in accordance with manufacturer recommendations and job specifications.</p>
3. Prepare for the hanging process.	<p>3.1. Final application plan for hanging of wallpaper and specialty material is determined and documented in accordance with manufacturer recommendations and with client requirements.</p> <p>3.2. Selected adhesives are prepared in accordance with manufacturer recommendations.</p> <p>3.3. Materials are checked for conformity to dye lot, batch number and other shading requirements in</p>

ELEMENT	PERFORMANCE CRITERIA
	accordance with manufacturer recommendations and client requirements.
4. Apply wallpaper.	<p>4.1. Size coating is applied to work area in accordance with manufacturer recommendations.</p> <p>4.2. Wallpaper and specialty materials are applied to work area ensuring an even surface, seams are butted, paper is plumb and pattern is free of defects.</p> <p>4.3. Trimming around fittings is completed accurately and with minimal impact on surroundings.</p> <p>4.4. Application of wallpaper and specialty material is completed in accordance with manufacturer recommendations and job specifications.</p>
	5.
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- common wallpapering defects
- compatibility of preparatory materials and wallpaper
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- painting and decorating terminology
- plans, drawings and specifications
- procedures used to apply straight pattern match, drop pattern match and random match wallpapers
- processes for the calculation of material requirements
- responsibilities with regard to:
 - conservation areas
 - heritage listed buildings
- quality requirements
- surface preparation techniques for the application of wallpaper
- types and properties of wall coverings and their suitability to various substrates
- types, uses and limitations of commonly used adhesives
- wallpaper hanging processes and techniques
- wallpapering tools and equipment, their uses and limitations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- apply specialty wallpaper to specification on a minimum of two jobs for at least 6 square metres covering one anaglypta and one other with surfaces containing power points, vents and switches.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of advanced wallpaper techniques
- relevant Australian standards
- safe work procedures relating to the application of advanced wallpaper techniques

RANGE STATEMENT

Planning and preparation
include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - electrical and fire and/or explosion from combustible materials
 - falling objects
 - lighting
 - manual handling
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - solvents, lead, chemicals, fumes/gases
 - surrounding structures
 - traffic control
 - trip hazards
 - work access platforms
 - work site visitors and the public
 - working at heights

RANGE STATEMENT

	<ul style="list-style-type: none"> • working in confined spaces • working in proximity to others, work site visitors and the public • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • broad knives • filling blades • lay brushes • plastic applicators • plumb bobs and string lines • rubber rollers • scissors • scrapers • seam rollers • smoothing blocks • spirit levels • sponges • steam strippers • tape measures • trimming knives and cutters.
<i>Work platforms</i> include:	<ul style="list-style-type: none"> • mobile scaffold • stepladders • trestles and planks.
<i>Quality requirements</i> include:	<ul style="list-style-type: none"> • internal company quality policy and standards • manufacturer specifications, where specified • relevant regulations, including Australian standards • workplace operations and procedures.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • waste management.
<i>Adhesives</i> include:	<ul style="list-style-type: none"> • cellulose • latex • polyvinyl alcohol (PVA) • starch • other special adhesive blends.
<i>Wallpaper and speciality</i>	<ul style="list-style-type: none"> • anaglypta

RANGE STATEMENT

materials include:

- flock
- frontrunner
- linen backed vinyl
- lyncrusta
- metallic foils
- photo murals
- suede grass weaves
- other commercial grade materials.

Applications include those to walls and ceilings, which may be:

- constructed of:
 - set plaster
 - plasterboard
 - fibrous plaster
 - medium density fibre board
 - fibre cement products
- flat or curved.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare application area.	<p>2.1. Area is set up for application processes to suit surfaces to be painted.</p> <p>2.2. Adjoining surfaces to application area are protected by masking off or covering prior to application of decorative paint finishing materials.</p> <p>2.3. Ventilation is provided in application area to maintain safety of self and others.</p> <p>2.4. Measures are taken to ensure application area is dust free.</p> <p>2.5. Surface to be coated is checked to ensure sufficient clearance is available for the expansion of the coating in the case of a fire.</p>
3. Apply intumescent coatings to timber.	<p>3.1. Surface is completely stripped of any pre-existing finish to prepare for application of water-based intumescent coating suitable for timber.</p> <p>3.2. Suitable priming coat is applied to ensure coating adhesion.</p> <p>3.3. Intumescent coating is applied by brush, roller or airless spray, ensuring temperature and humidity requirements for application are maintained.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Apply intumescent coatings to structural metal.	3.4. Top/finish coat is applied to protect the finish against abrasion and humidity.
	4.1. Metal surface is blasted or wire-brushed to prepare for intumescent coating for <i>structural metal</i> .
	4.2. Galvanised steel is de-greased before application of coating.
	4.3. Suitable priming coat is applied if metal is not already primed to ensure coating adhesion.
	4.4. Intumescent coating is applied by brush, roller or airless spray ensuring temperature and humidity requirements for application are maintained.
	4.5. Required film thickness is measured using appropriate wet film <i>thickness measuring gauges</i> .
5. Clean up and store equipment.	4.6. Top/finish coat is applied to protect the finish against abrasion and humidity.
	5.1. Painting equipment and spray painting equipment are dismantled, cleaned, maintained and stored.
	5.2. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in a safe and effective manner in accordance with sound work practices compliant with environmental requirements.
	5.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.
	5.4. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.5. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer specifications and/or standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- chemical properties of the coating carbon supplier; acid source and expanding agent
- coating requirements for structural metal work, including coating performance differences between hollow and concrete filled structures
- coating requirements for timber
- compatibility of coatings to substrates
- fire resistance level (FRL) rating of intumescent coatings for a range of construction materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management

REQUIRED SKILLS AND KNOWLEDGE

- painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- volume solids behaviour and impact on intumescent coatings performance.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete to specification, ensuring correct film thickness, surface preparation and finishing techniques, the following intumescent coating applications:
 - a minimum of one application on a timber surface
 - a minimum of one application on a structural steel surface.

Context of, and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected

EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements

RANGE STATEMENT

	<p>pertaining to the application of intumescent coatings</p> <ul style="list-style-type: none"> • relevant Australian standards • safe work procedures relating to the application of intumescent coatings • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<p><i>Planning and preparation</i> include:</p>	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<p><i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:</p>	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • electrical and fire and/or explosion from combustible materials • falling objects • lighting • manual handling • power cables, including overhead service trays, cables and conduits • restricted access barriers • solvents, lead, chemicals, fumes/gases • surrounding structures • traffic control

RANGE STATEMENT

- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brushes
- compressors
- mobile scaffold
- planks
- rollers
- sanders
- scrapers
- spray equipment
- stepladders
- trestles
- vacuum cleaners.

Materials:

- include:
 - primers
 - water-based intumescent coatings
 - solvent-based intumescent coatings
 - suitable clear finishes for protection of the coating
- may include manufacturers' proprietary products.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

RANGE STATEMENT

Intumescent coatings:

- include:
 - surface coatings that in a fire situation undergo a chemical reaction with the increase in temperature, so the intumescent coating expands to many times its original thickness; the coating should provide an insulating foam-like coating or 'char' that protects the substrate
 - water or solvent-based, depending on the humidity requirements and job site environment
- may be applied by:
 - brush
 - roller or airless spray equipment
- must meet:
 - fire resistance level (FRL) requirements for the material it is applied to and the structure being coated.

Structural metal:

- includes:
 - beams
 - columns
- may be:
 - concrete filled
 - hollow.

Thickness measuring gauges:

- measure film thicknesses from 0.03mm to 13mm
- can be hand held.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant <i>information</i>, confirmed and applied for <i>planning and preparation</i> purposes.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. <i>Tools and equipment</i> are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. <i>Materials</i> quantity requirements are calculated in accordance with plans, specifications and <i>quality requirements</i>.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and regulatory obligations and applied.</p>
2. Prepare application area.	<p>2.1. Area is set up for application processes to suit surfaces to be painted.</p> <p>2.2. Adjoining surfaces to application area are protected by masking off or covering prior to application of decorative paint finishing materials.</p> <p>2.3. Ventilation is provided in application area to maintain safety of self and others.</p> <p>2.4. Measures are taken to ensure application area is dust free.</p>
3. Produce imitation marble effects.	<p>3.1. Ground coat of specified colour and consistency is applied evenly to prepared surface for both traditional and modern <i>imitation granite and lapis effects</i>.</p> <p>3.2. Marbling medium is mixed to designed proportions and colour and correctly applied to produce veins and markings as per sample in accordance with manufacturer specifications and job specifications.</p> <p>3.3. Clear coating is applied to achieve an even finish to specified sheen level in accordance with manufacturer specifications and job specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Produce imitation wood grain effects.	<p>4.1. Ground coat of specified colour and consistency is applied evenly to prepared surface for traditional <i>complex imitation wood grain effects including inlays.</i></p> <p>4.2. Wood graining medium is mixed to designed proportions and colour and correctly applied to produce grain markings as per sample and in accordance with manufacturer specifications and job specifications.</p> <p>4.3. Specific highlights are added to match sample of decorative paint finishing materials in accordance with manufacturer specifications and job specifications.</p> <p>4.4. Clear coating is applied to achieve an even finish to specified sheen level in accordance with manufacturer specifications and job specifications.</p>
5. Apply advanced stencils.	<p>5.1. <i>Stencil</i> design is selected and laid out onto recommended material.</p> <p>5.2. Specified multi-layering transfer method is used and design is cut accurately for multiple colours using a 'register' mark.</p> <p>5.3. Initial stencil is placed and taped to designed location and paint is applied to produce first colour to specifications.</p> <p>5.4. Subsequent stencils and overlays are located accurately to pattern with each separate colour applied to specifications to produce designed finish in accordance with manufacturer specifications and job specifications.</p>
6. Apply advanced lining and special finishes and techniques.	<p>6.1. Complex pattern lining and textures, including Gris Lais are applied to appropriate surfaces for decorative purposes as specified</p> <p>6.2. Gold leaf and other metallic finishes such as aluminium and bronze are applied to complex surfaces for decorative purposes.</p> <p>6.3. Gilding and gilding powder in mediums are applied to selected surfaces.</p> <p>6.4. Finishing techniques are applied, including waxes and other suitable finishes.</p> <p>6.5. Trowelled decorative finishes, including Stucco Venezia are applied using a range of tools and techniques</p>
7. Create large scale	<p>7.1. Ground coat of specified colour and consistency is</p>

ELEMENT	PERFORMANCE CRITERIA
decorative projects	<p>applied evenly to prepared surface for traditional application of large decorative effects</p> <p>7.2. Murals and trompe l'oeil projects are completed to specification.</p>
8. Clean up and store equipment.	<p>8.1. Special effect painting equipment and spray painting equipment are dismantled, cleaned, maintained and stored.</p> <p>8.2. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in a safe and effective manner in accordance with sound work practices compliant with environmental requirements.</p> <p>8.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.</p> <p>8.4. Paint waste, water and solvents used in cleaning painting equipment are disposed of in an environmentally sustainable manner and in accordance with relevant legislative requirements.</p> <p>8.5. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>8.6. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer specifications and/or standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- Australian Paint Approval Scheme (APAS) classifications
- compatibility of surface coatings to substrates
- decorative painted finishes technology
- gilding materials and application techniques
- imitation marble materials and application techniques
- imitation wood grain materials and application techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally sustainable waste management, including correct disposal of water-based, latex-based and solvent-based paints painting and decorating terminology
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- solid waste and paint sludge disposal techniques and relevant legislation, including Environmental Protection Authority (EPA) and local Council regulations
- stencilling materials and application techniques.
- types of paints, including the characteristics and uses of paint materials with

REQUIRED SKILLS AND KNOWLEDGE

various volatile organic compound (VOCs) levels and alternative and natural paints

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete to specification the following decorative finishes:
 - a minimum of one marble graining effect on a standard panel size surface
 - a minimum of one wood graining effect on a standard panel size surface
 - design and cutting of a multi-plate stencil and at least two applications of the stencil
- dispose of all paint types in an environmentally sustainable way compliant with relevant local legislation and regulations
- clean and store painting equipment using environmentally sustainable methods and work practices including waste reticulation systems.

Context of and specific resources This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

for assessment

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions,

RANGE STATEMENT

	where specified
	<ul style="list-style-type: none"> • MSDS • memos • regulatory and legislative requirements pertaining to the application of advanced decorative paint finishes • relevant Australian standards • safe work procedures relating to the application of advanced decorative paint finishes • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • electrical and fire and/or explosion from combustible materials • falling objects • lighting • manual handling • power cables, including overhead service trays, cables and conduits

RANGE STATEMENT

- restricted access barriers
- solvents, lead, chemicals, fumes/gases
- surrounding structures
- traffic control
- trip hazards
- work access platforms
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others, work site visitors and the public
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brushes
- compressors
- planks
- rollers
- sanders
- scrapers
- spray equipment
- stepladders
- trestles
- vacuum cleaners
- mobile scaffold.

Materials include:

- clear finishes
- fillers
- linseed oil
- manufacturers' proprietary products
- oil-based products
- scumbling mediums
- stainers
- terebine dryers
- water-based products.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

RANGE STATEMENT

Environmental requirements
include:

- clean-up management
- dust and noise
- low odour and emissions
- stormwater protection
- waste management.

Imitation granite and lapis and complex wood graining effects
may be achieved using:

- brush-grainer
- chamois
- check roller
- crayons
- cutters
- feathers
- fitches
- floggers
- heart grain simulator
- mottlers
- over-grainers
- pencils
- rubber combs
- softeners
- sponges
- steel combs
- stippling brushes
- veining horn.

Stencilling includes the use of:

- cutting boards
- cutting knives and scalpels
- drawing and tracing materials
- stencil brushes
- stencil materials.

Paint waste, water and solvents
disposal includes:

- use of manual and machine environmentally sustainable cleaning methods
- cleaning water re-cycling or professional disposal
- solid waste disposal requirements

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied in planning the work activities.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Types of hoist and tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements including appropriate quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations and applied.</p>
2. Conduct daily safety check.	<p>2.1. Hoisting details for the day are identified from proposed work schedule, and other relevant information and hoist work program is developed.</p> <p>2.2. Signalling system is confirmed with associated site personnel.</p> <p>2.3. Weather conditions for safe hoist operation are assessed.</p> <p>2.4. Personnel and materials hoist equipment and site are checked for damage, structural weakness or interference.</p> <p>2.5. Mechanical, electrical and safety functions are checked in accordance with operator's manual and checklist.</p> <p>2.6. Test run is conducted without a load through the full height of the hoist's travel, checking the operation and security of the mast and wall bolting.</p> <p>2.7. Braking system is checked and tested.</p> <p>2.8. Safety systems are checked and challenged.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Record results.	3.1. Results of checks and tests are recorded in hoist book to requirement of regulatory authority. 3.2. Faults are reported in accordance with company policy.
4. Operate hoist.	4.1. Loads are checked for conformity to safe load capacity of hoist. 4.2. Hoist is safely operated to requirements of operator's manual and state or territory regulatory authority. 4.3. Hoist is shut down, rendered safe and secured at end of work period in accordance with operator's manual. 4.4. Post-operational checks are conducted and recorded.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. 5.3. <i>Work completion details</i> and procedures are applied and relevant personnel notified that work is finished.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - notify completion of work
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- written skills to record results of checks and tests and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations, including load mass requirements
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- designs and functions of hoisting equipment
- emergency procedures (hoist specific)
- fault finding and identification
- general construction terminology
- hoist operation techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- personnel and materials hoist equipment
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of load mass requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- signalling methods and communications
- working at heights
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete pre-operational check, raise and lower to four limits including a top and bottom, conduct manual lowering between floors, shut down and carry out post-operational checks, finalise logbook, all to manufacturer specifications and complying with OHS legislation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Planning includes:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor

RANGE STATEMENT

- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Types of hoist include:

- bucket
- cantilevered
- car
- materials
- multiple winch and tower
- personnel and materials
- platform.

Tools and equipment include:

- associated equipment
- personnel and materials hoists.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration

RANGE STATEMENT

Statutory and regulatory authorities include:

- waste management.
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to operating personnel and materials hoists
- relevant Australian standards
- safe work procedures relating to operating personnel and materials hoists
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Personnel and materials hoist equipment include:

- rack and pinion
- self-climbing
- super hoist
- winch operated.

Safety systems include:

- anemometer
- emergency brakes
- limit switches
- manual lowering systems.

Work completion details include:

- check sheets
- equipment defect records
- job cards
- JSAs
- plant and maintenance records
- safe work method statements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained for relevant information, confirmed and applied for scope of work.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations and applied.</p>
2. Select equipment.	<p>2.1. Resources, materials and equipment are selected and inspected for compliance with job specifications.</p> <p>2.2. Lifting equipment is inspected according to manufacturer specifications.</p> <p>2.3. Lifting equipment identified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance.</p>
3. Connect equipment.	<p>3.1. Loads and slings are slung to protect the load and associated equipment.</p> <p>3.2. Whole or part loads are secured to prevent uncontrolled movement.</p> <p>3.3. Slings, or parts of slings, are attached to the load and positioned to ensure safe movement.</p> <p>3.4. Slings, or parts of slings, are attached to hook while the hoist wire is vertical.</p> <p>3.5. Tag lines are attached to the load where specified.</p> <p>3.6. Test lifts are performed to ensure safe and secure movement of the load where specified.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Move and position loads.	<p>4.1. Load destination is determined and landing area prepared to accept the load.</p> <p>4.2. Lifting or pulling device is assembled and erected where specified.</p> <p>4.3. Load is safely moved to required destination and secured in position to client specifications or job requirements.</p> <p>4.4. Standard communication signals are used to coordinate safe movement of the load.</p>
5. Remove rigging equipment.	<p>5.1. Lifting/moving equipment and packing are dismantled, lowered and inspected for wear.</p> <p>5.2. Logbook and site records are completed to company requirements.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p> <p>6.3. Work completion procedures are applied and relevant personnel notified that work is finished.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - notify completion of work
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to complete logbooks, site records and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic rigging equipment and techniques
- crane operations and limitations
- designs and functions of lifting equipment
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- relevant Acts, regulations and codes of practice
- signalling methods and communications
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the

EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete one of the following:
 - install and use a fall arrest system to sling, receive, place and brace a minimum 16 square metre module of structural steel in the correct sequence a minimum of 5 metres high
 - set up, place, install and brace perimeter safety screen and jump for two floors and a loading bay
 - skid, locate and install heavy industrial equipment using winches and creeper skids for at least one tonne of plant.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to performing basic rigging
- relevant Australian standards
- safe work procedures relating to performing

RANGE STATEMENT

Scope of work:

basic rigging

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements
- calculations include load charts, fleet angles, diverter sheaves, lead loads, head loads, load angle factors, multiple fall, load share, pre-cast compliance charts and safe working loads
- sling types include chain, flexible steel wire rope, and natural or synthetic fibre
- load slinging methods are to include straight sling, adjustable sling, reeved sling and inclined sling
- lifting devices include shackles, turn buckles, jacks, chain winches, hand operated creeper winches, chain blocks, pulley blocks, come alongs, air winches, trolleys, eye bolts, rigging screws, lifting lugs, lifting clutches and snatch blocks
- types of cranes include fixed cranes, tower cranes, hydraulic mobile cranes, lattice boom mobile cranes, slewing cranes, non-slewing cranes and gantry cranes.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

RANGE STATEMENT

treatments associated with:

- earth leakage boxes
- lighting
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- working at heights
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - automatic levels
 - drifts
 - hammers
 - podgers spanners
 - shifting spanners
 - sledge hammers
 - spirit levels
 - tape measures
 - wedges
 - wrenches
- may include:
 - angle grinders
 - elevated work platforms
 - explosive power tools
 - laser levels
 - oxy-acetylene equipment
 - pneumatic tools
 - scaffolding
 - skids
 - water levelling equipment.

Tools and equipment:

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied for the scope of work to be performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Select equipment.	<p>2.1. Resources, materials and equipment are selected in accordance with load charts and inspected for compliance with job specifications.</p> <p>2.2. Lifting equipment is inspected according to manufacturer specifications.</p> <p>2.3. Lifting and load shifting equipment identified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance.</p> <p>2.4. Elevated work platforms and other means of mechanical access systems are determined and selected where specified.</p> <p>2.5. Fall arrest equipment, with ground level installation, is installed.</p> <p>2.6. Personnel cartage systems are determined and selected.</p>
3. Connect equipment.	<p>3.1. Loads are slung to ensure encapsulation of the whole of load.</p> <p>3.2. Part loads are slung to ensure full encapsulation of</p>

ELEMENT	PERFORMANCE CRITERIA
	the part load.
	3.3. Whole or part loads are slung to protect loads and secured to prevent uncontrolled movement.
	3.4. Load steorage lines are attached and used to prevent unnecessary load movement.
4. Move and position loads.	4.1. Load lifting/shifting order is determined to minimise necessity of double lifts.
	4.2. Lifting/shifting equipment is connected to the load.
	4.3. Test lift/shift is performed to ensure lift suitability.
	4.4. Load is safely moved to required destination and secured in position to client specifications or job requirements.
	4.5. Standard communication signals are used to coordinate safe movement of the load.
5. Remove rigging equipment.	5.1. Lifting/shifting equipment and packing is dismantled, lowered and inspected for wear.
	5.2. Logbook and site records are completed to company requirements.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
	6.3. Work completion procedures are applied and relevant personnel notified that work is finished.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements

REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- notify completion of work
- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to complete logbooks, site records and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- crane operations and limitations
- designs and functions of lifting equipment
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- rigging equipment and techniques
- signalling methods and communications
- tilt-up slab and pre-cast construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- erect and dismantle at least one lattice boom crane and fly with correct rigging and slinging techniques
- erect a multi point pre-cast tilt-up slab of at least 10 tonne with correct rigging, slinging and de-rigging techniques, including determination of lifting points, temporary supports and permanent fixing points from drawings
- apply both single and dual lifting techniques.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to performing intermediate rigging

RANGE STATEMENT

Scope of work:

- relevant Australian standards
- safe work procedures relating to performing intermediate rigging
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements
- calculations include load charts, fleet angles, diverter sheaves, lead loads, head loads, load angle factors, multiple fall, load share, load share distribution, pre-cast compliance charts and safe working loads
- sling types include chain, flexible steel wire rope, and natural or synthetic fibre
- load slinging methods are to include straight sling, adjustable sling, reeved sling and inclined sling
- lifting techniques include single and dual lifts
- lifting devices include shackles, turn buckles, jacks, chain winches, hand operated creeper winches, chain blocks, pulley blocks, come alongs, air winches, trolleys, eye bolts, include rigging screws, lifting lugs, lifting clutches and snatch blocks
- load shifting equipment includes skates, hydraulic jacks, winches and rails
- personnel cartage systems include man boxes and elevated work platforms
- types of cranes include fixed cranes, tower cranes, hydraulic mobile cranes, lattice boom mobile cranes, slewing cranes, non-slewing cranes and gantry cranes.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

RANGE STATEMENT

- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - working at heights
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - automatic levels plumbing and levelling equipment
 - drifts
 - hammers
 - podgers spanners
 - shifting spanners
 - sledge hammers
 - spirit levels
 - tape measures
 - wedges
 - wrenches
- may include:
 - angle grinders

Tools and equipment:

RANGE STATEMENT

	<ul style="list-style-type: none">• elevated work platforms• explosive power tools• laser levels• oxy-acetylene equipment• skids and pneumatic tools• water levelling equipment.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none">• Australian standards• internal company quality policy and standards• manufacturer specifications• workplace operations and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work to be performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Select equipment.	<p>2.1. Resources, materials and equipment are selected in accordance with load charts and inspected for compliance with job specifications.</p> <p>2.2. Lifting equipment is inspected according to manufacturer specifications.</p> <p>2.3. Lifting and load shifting equipment identified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance.</p> <p>2.4. Elevated work platforms and other means of mechanical access systems are determined and selected where specified.</p> <p>2.5. Fall arrest equipment is installed.</p> <p>2.6. Personnel cartage systems are identified and selected.</p>
3. Connect equipment.	<p>3.1. Loads are slung to protect the load and prevent damage to the slings.</p> <p>3.2. Whole or part loads are secured to prevent uncontrolled movement.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Slings, or parts of slings, are attached to the load and positioned to ensure safe movement.</p> <p>3.4. Slings, or parts of slings, are attached to hook while the hoist wire is vertical.</p> <p>3.5. Tag lines are attached to the load where specified.</p> <p>3.6. Test lifts are performed to ensure safe and secure movement of the load where specified.</p>
4. Move and position loads.	<p>4.1. Load destination is determined and landing area prepared to accept the load.</p> <p>4.2. Lifting or pulling device is assembled and erected where specified.</p> <p>4.3. Load is safely moved to required destination and secured in position to client specifications or job requirements.</p> <p>4.4. Standard communication signals are used to coordinate safe movement of the load.</p>
5. Remove rigging equipment.	<p>5.1. Lifting/moving equipment and packing is dismantled, lowered and inspected for wear.</p> <p>5.2. Logbook and site records are completed to company requirements.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p> <p>6.3. Work completion procedures are applied and relevant personnel notified that work is finished.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to complete logbooks, site records and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic rigging equipment and techniques
- crane operations and limitations
- designs and functions of lifting equipment
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements

- relevant Australian standards
- signalling methods and communications
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete the erection of a portal frame building, including trusses, bracing, purlins and girts, incorporating at least one strongback lift and one bowstring lift, all in accordance with manufacturer and engineer's specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,

EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work to be performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Select equipment.	<p>2.1. Resources, materials and equipment are selected in accordance with load charts and inspected for compliance with job specifications.</p> <p>2.2. Lifting equipment is inspected according to manufacturer specifications.</p> <p>2.3. Lifting and load shifting equipment identified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance.</p> <p>2.4. Elevated work platforms and other means of mechanical access systems are determined and selected where specified.</p> <p>2.5. Fall arrest equipment is installed.</p> <p>2.6. Personnel cartage systems are identified and selected.</p>
3. Erect tilt-up slabs.	<p>3.1. Job sequencing schedule and documentation are identified and communicated to team members to ensure coordination.</p> <p>3.2. Load mass is calculated and confirmed.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Erection sequence for tilt-up slab components is identified.</p> <p>3.4. Lifting or pulling devices are assembled and erected for the movement of loads.</p> <p>3.5. Load is slung.</p> <p>3.6. Load is shifted in accordance with job safety analysis (JSA) and safe work method statement.</p> <p>3.7. Stability of load is maintained during lifting, tilting and transportation.</p> <p>3.8. Load is directed to landing position in accordance with engineer's specifications.</p>
4. Position and anchor.	<p>4.1. Tilt slab components are positioned in accordance with engineer's specifications.</p> <p>4.2. Shape of structure is achieved by checking dimensions and applying temporary bracing.</p> <p>4.3. Tilt slab components are anchored in accordance with manufacturer and engineer's specifications.</p>
5. Remove rigging equipment.	<p>5.1. Lifting/shifting equipment and packing is dismantled, lowered and inspected for wear.</p> <p>5.2. Logbook and site records are completed to company requirements.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p> <p>6.3. Work completion procedures are applied and relevant personnel notified that work is finished.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
 - determine requirements
 - follow instructions
 - notify completion of work
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to complete logbooks, site records and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- cast in lifting and bracing inserts
- crane types operations and limitations
- designs and functions of lifting equipment
- documentation requirements
- elevated work platforms
- general construction terminology
- JSA and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- panel lifting point design
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice

REQUIRED SKILLS AND KNOWLEDGE

- rigging equipment and techniques
- signalling methods and communications
- tilt-up slab and pre-cast construction
- tilt-up slab code of practice
- tilt-up slab storage
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- erect one multi-point pre-cast tilt-up slab and one cast in situ tilt-up slab, each of at least 10 tonne with correct rigging, slinging and de-rigging techniques, including determination of lifting points, temporary supports and permanent fixing points from panel erection drawings and following the lift plan, including:
 - positioning and bracing the slab
 - safe unloading from the truck
 - rotating panel from one plane to another
 - incorporating at least two bracing techniques.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to performing advanced tilt-up slab

RANGE STATEMENT

	erection
	<ul style="list-style-type: none"> • relevant Australian standards • safe work procedures relating to performing advanced tilt-up slab erection • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
Scope of work:	<ul style="list-style-type: none"> • planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements • calculations include charts, fleet angles, diverter sheaves, lead loads, head loads, load angle factors, multiple fall, load share, load share distribution, pre-cast compliance charts and safe working loads • sling types include to chain and flexible steel wire rope • load slinging methods include straight sling, adjustable sling, reeved sling and inclined sling • personal cartage systems include personnel boxes and elevated work platforms • types of cranes include fixed cranes, tower cranes, hydraulic mobile cranes, lattice boom mobile cranes, slewing cranes, non-slewing cranes and gantry cranes • tilt-up slabs include prefabricated and cast in situ tilt-up slabs and slabs with cast-in lifting and/or bracing inserts • tilt-up slabs are to be erected following panel erection drawings and lift plans • bracing of tilt-up slabs is to include lateral bracing, end bracing, main bracing, knee bracing and deadman bracing • advanced lifting techniques include rotation (turning panel from one plane to another), standard lift from a truck and lift from flat on ground all to engineer's specifications. • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the
Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan	

RANGE STATEMENT

and may include:

assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor

- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - working at heights
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
 - air winches
 - chain blocks
 - chain winches
 - come alongs
 - drifts
 - eye bolts
 - hammers
 - hand operated creeper winches
 - jacks
 - podgers spanners
 - pulley blocks

RANGE STATEMENT

- shackles
- shifting spanners
- sledge hammers
- spirit levels and automatic levels
- plumbing/levelling equipment
- tape measures
- trolleys
- turn buckles
- wedges
- wrenches
- may include:
 - angle grinders
 - elevated work platforms
 - explosive power tools
 - hydraulic jacks
 - laser levels
 - lifting clutches and snatch blocks
 - lifting lugs
 - oxy-acetylene equipment
 - pneumatic tools
 - rigging screws
 - skates
 - skids
 - water levelling equipment
 - winches and rails.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to conduct advanced tower crane erection coordinating the slinging, stability, lifting, moving and placement of tower cranes and tower crane sections in conjunction with the crane operator.

It includes equipment selection, load distribution and calculation.

Application of the Unit

Application of the unit

This unit supports the attainment of skills and knowledge to erect a tower crane, including coordination of all aspects of lifting, moving and placing sections, which includes working with others and as a member of a team.

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units

CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry
CPCCRI3013A	Perform intermediate rigging

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied for the scope of work required.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Plan crane erection.	<p>2.1. Crane erection, rigging and dismantling plan are identified and checked for conformity with manufacturer and engineer's specifications.</p> <p>2.2. Hazard control measures are planned and implemented.</p> <p>2.3. Foundation to support crane base is checked for conformity and structural suitability in accordance with engineer's specifications.</p>
3. Select equipment.	<p>3.1. Resources, materials and equipment are selected in accordance with load charts and inspected for compliance with job specifications.</p> <p>3.2. Lifting equipment is inspected according to regulatory requirements and manufacturer specifications.</p> <p>3.3. Lifting and load shifting equipment identified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance.</p> <p>3.4. Elevated work platforms and other means of</p>

ELEMENT	PERFORMANCE CRITERIA
4. Assemble and erect tower crane.	<p>mechanical access systems are determined and selected where specified.</p> <p>3.5. Fall arrest equipment is installed.</p> <p>3.6. Personnel cartage systems are identified and selected.</p> <p>4.1. Base of crane is located and positioned in accordance with manufacturer and engineer's specifications.</p> <p>4.2. Bottom tower and climbing frame/transition piece are erected and installed level and plumb to manufacturer and engineer's specifications.</p> <p>4.3. Tower braces or guys are installed and secured to support tower crane.</p> <p>4.4. Mast, turntable, machine deck and power pack of crane are assembled, erected and installed in accordance with manufacturer specifications.</p> <p>4.5. Main jib and counter jib are assembled and erected in accordance with manufacturer specifications.</p> <p>4.6. Counter weights are lifted into cradles and secured in accordance with manufacturer specifications.</p> <p>4.7. Wire ropes and hook and block reeving are installed to manufacturer specifications.</p>
5. Climb (raise/lower) tower crane.	<p>5.1. Drop ladder is removed and monorail is placed and secured.</p> <p>5.2. Crane is secured and placed at balance point ready for climbing.</p> <p>5.3. Tower bolts to transition piece are removed, drifts fitted and rollers checked.</p> <p>5.4. Tower section is moved into place in accordance with manufacturer specifications.</p> <p>5.5. Crane is reconnected with bolts and a visual check of all components and connectors is conducted.</p>
6. Dismantle crane.	<p>6.1. Electrical and hydraulic lines are safely disconnected.</p> <p>6.2. Power pack, counterweights, climbing frame and crane deck are dismantled and safely lowered to the ground.</p>
7. Clean up.	<p>7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>7.2. Plant, tools and equipment are cleaned, checked,</p>

ELEMENT**PERFORMANCE CRITERIA**

maintained and stored in accordance with manufacturer recommendations and standard work practices.

7.3. Work completion procedures are applied and relevant personnel notified that work is finished.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - notify completion of work
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to complete work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- crane erection, climbing and dismantling techniques
- crane types, capabilities, operations and limitations
- designs and functions of lifting equipment
- documentation requirements
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- rigging equipment and techniques
- signalling methods and communications
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- fully erect and rig one hammerhead tower crane and one luffing boom tower crane (including a jib for each) to manufacturer and engineer's specifications
- complete the raising of one hammerhead tower crane and one luffing boom tower crane by installing at least two extra sections for each.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied for the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Receive, sort and distribute roof tiling materials.	<p>2.1. Roof tiling products, materials and components are identified and checked for conformity to material schedule, plans, quality requirements and specifications on delivery to site.</p> <p>2.2. Handling characteristics of roof tiling material and components are identified and safe and effective handling techniques are applied in accordance with safe work method statements and workplace procedures.</p> <p>2.3. Fall safety devices are installed to roof perimeter and handled in accordance with regulatory and workplace requirements.</p> <p>2.4. Elevator is handled, assembled and erected at job location to manufacturer specifications and workplace requirements.</p> <p>2.5. Roof surface sarking and batten materials are handled and loaded onto roof and positioned ready for installation in accordance with specified tile and job specifications.</p> <p>2.6. Roof tiling material and components are sorted to suit material type and size, and stacked for ease of identification and retrieval for task sequence.</p> <p>2.7. Roof tiling material and components are transferred, loaded onto roof, supported and evenly distributed.</p>
3. Handle and remove	<p>3.1. Materials are handled safely and effectively</p>

ELEMENT	PERFORMANCE CRITERIA
surplus material from roof.	<p>according to material safety data sheets (MSDS) and regulatory authorities' requirements.</p> <p>3.2. Hazardous material is identified for separate handling by authorised personnel.</p> <p>3.3. Surplus roof tiling material and components are loaded and transferred from roof to ground.</p> <p>3.4. Materials are stored safely and effectively according to MSDS and requirements of regulatory authorities.</p> <p>3.5. Roof, guttering and downpipes are cleared free of waste and surplus material.</p>
4. Clean up	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

REQUIRED SKILLS AND KNOWLEDGE

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- quality requirements
- roof construction systems and structures and tiling considerations
- roof tiling materials handling and disposal techniques and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice

EVIDENCE GUIDE

Context of and specific resources for assessment

- applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, transfer sufficient materials to sark, batten and tile 45 square metres of roof from ground level to the roof working area, greater than 1.8m high; relocate the above materials from the work area to ground level, position a bucket and dispose of waste material from a typical tiling task, ensuring:
 - correct identification of requirement and sorting and distributing roof tiling material
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with

EVIDENCE GUIDE

disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be

EVIDENCE GUIDE

obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling roof tiling materials
- relevant Australian standards
- safe work procedures relating to handling roof tiling materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- includes receiving, handling, sorting and loading roof tiling products in support of a tiling job; and removing surplus materials from the roof and disposing of waste materials
- waste materials include banding straps, packing pieces, broken or damaged goods; and cardboard, plastic, paper and surplus material
- specifications include tile colour, tile profile, type of bond, nailing sequence and wind

Scope of work:

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- category
 - tiles may be interlocking (terracotta) or non-interlocking (concrete) and conform to the requirements of relevant Australian Standards
 - pointing material may be flexible pointing material or its equivalent.
 - emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
 - handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
 - hazard control
 - hazardous materials and substances, including cement and curing agents
 - organisational first aid
 - PPE prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - working at heights
 - work site visitors and the public
 - working in proximity to others
 - use of firefighting equipment
 - use of tools and equipment
 - workplace environmental requirements and safety.
- include:
 - air compressors and hoses
 - bedding frames
 - blowers

Tools and equipment:

RANGE STATEMENT

- brooms
- buckets
- calculators
- chalk lines
- chisels
- chutes
- concrete mixers
- elevators
- eyelets
- gutter protectors
- hammers
- hand saws
- hoppers high pressure
- ladders
- measuring tapes and rules
- nail bags
- nail guns
- pincers
- power drills
- power leads
- power saws
- safety harness and static lines
- safety rails
- shovels
- signage and barricades
- squares
- string lines
- tile cutters
- trowels
- water cleaners
- may include:
 - blocks
 - breaks or cutting irons
 - elevated work platforms
 - guillotines
 - rippers
 - scaffolds
 - slate cutters

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant <i>information</i>, confirmed and applied for the <i>scope of work</i> performed.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and legislative authority</i> obligations and applied.</p>
2. Select tools.	<p>2.1. <i>Tools</i> are selected consistent with needs of the job.</p> <p>2.2. Tools, including leads and hoses, are checked for tags, serviceability and safety and any faults are reported to supervisor in accordance with workplace requirements.</p> <p>2.3. Power tool guards, retaining bolts, couplings, gauges and controls are checked and maintained in accordance with manufacturer recommendations.</p> <p>2.4. Equipment is selected to hold, position or support material for hand tool application where applicable.</p> <p>2.5. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed in accordance with manufacturer recommendations.</p>
3. Use tools.	<p>3.1. Power and compressed air supply are connected to work area.</p> <p>3.2. Start up and shut down procedures are performed in accordance with workplace procedures.</p> <p>3.3. Tools are safely and effectively used according to manufacturer recommendations and workplace requirements.</p> <p>3.4. Tools are safely located when not in immediate use.</p>
4. Select plant and equipment.	<p>4.1. Functions and limitations of plant and equipment used in roof tiling are identified.</p> <p>4.2. Plant and equipment are selected consistent with hazard minimisation and needs of job.</p> <p>4.3. Method of operation of plant and equipment is identified.</p> <p>4.4. Plant and equipment are checked for safety, and</p>

ELEMENT	PERFORMANCE CRITERIA
	faults are reported to supervisor.
	4.5. Requirements for guarding, cut-off switches, retaining bolts, couplings, gauges and controls are identified and checked.
	4.6. Requirements for operating and using plant and equipment are recognised and adhered to.
5. Use plant and equipment.	5.1. Material is located and held in position for application where applicable.
	5.2. Plant and equipment are safely and effectively used in accordance with workplace requirements.
	5.3. Plant and equipment are safely located and switched when not in immediate use.
	5.4. Plant and equipment are inspected, maintained and tagged and any faults are reported in accordance with workplace procedures.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques and procedures for using roof tiling tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, follow work instructions, operating procedures and inspection practices to use the listed roof tiling tools and equipment for their appropriate application, ensuring:
 - correct selection and use of appropriate processes, tools and equipment
 - no damage to materials, tools or equipment
 - completion of all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements

RANGE STATEMENT

	<p>pertaining to the use of roof tiling tools and equipment</p> <ul style="list-style-type: none"> • relevant Australian standards • safe work procedures relating to the use of roof tiling tools and equipment • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
Scope of work:	<ul style="list-style-type: none"> • includes the operation of hand and power tools and equipment in roof tiling applications • involves their identification, correct application and effective operation and storage.
Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances, including cement and curing agents • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • earth leakage boxes • lighting • power cables, including overhead service trays, cables and conduits • restricted access barriers • surrounding structures • traffic control • trip hazards • working at heights • work site visitors and the public • working in proximity to others

RANGE STATEMENT

Environmental requirements
include:

- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Statutory and regulatory authorities include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice

Tools:

- include:
 - bedding frames
 - blowers
 - brooms
 - buckets
 - calculators
 - chisels
 - concrete mixers
 - elevators
 - embossing mallets
 - fall safety devices
 - gutter protectors
 - hammers
 - hand saws
 - high pressure water cleaners
 - ladders
 - measuring tapes and rules
 - nail bags
 - nail guns
 - pincers
 - power drills
 - power leads
 - power saws
 - shovels
 - squares
 - string and chalk lines
 - tile cutters

RANGE STATEMENT

- trowels
- may include:
 - blocks
 - breaks or cutting irons
 - guillotines
 - rippers
 - scaffolds
 - slate cutters
 - slate reefers
 - slater's hammers
 - slating knives
 - small compressors
 - small petrol or diesel engines.

Materials:

- include:
 - adhesives
 - concrete and terracotta tiles
 - fastenings and other mechanical fixings
 - flashings
 - mortar
 - sarking materials
 - timber and metal battens
- may include:
 - flexible pointing materials
 - lead
 - shingles and other hand manufactured products
 - slate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained for relevant information, confirmed and applied for the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare roof face.	<p>2.1. Fall arrest system is installed to roof perimeter following regulations and workplace requirements.</p> <p>2.2. Elevator is assembled and operated in accordance with manufacturer instructions and workplace procedures.</p> <p>2.3. Roof surface and structure are checked for stability and safe access to roof for tile installation.</p> <p>2.4. Roof surface is set out and sarked to manufacturer recommendations for specified tile and job specifications.</p>
3. Cut and fix battens.	<p>3.1. Battens are measured and cut using approved work methods and required personal protective equipment.</p> <p>3.2. Battens are fixed using selected fasteners at specified centres according to manufacturer recommendations.</p> <p>3.3. Completed work is checked for correct alignment and fixing.</p>
4. Install tiles.	<p>4.1. Tiles are loaded onto roof, supported and evenly distributed.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Clean up.	<p>4.2. Roof tiles are spread, cut, secured and installed to manufacturer specifications.</p> <p>4.3. Roof tiles are bedded using correct mortar mix, maintaining alignment.</p> <p>4.4. Roof tiles are pointed with mortar to a flush, smooth finish in accordance with job specifications and are installed to manufacturer specifications.</p> <p>5.1. Roof, guttering and downpipes are cleared free of waste and surplus material.</p> <p>5.2. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.3. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to complete logbooks, site records and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- roof construction systems and structures and tiling considerations
- roof tiling techniques and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tile 45 square metres of a roof frame, incorporating a 1.5m hip, a 1.5m valley, a 1.5m gable and a 1.5m top ridge, including the appropriate sarking, battens, tile cutting, bedding and pointing, ensuring:
 - correct identification of requirement and installation and finishing of the tiles
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1.***Information*** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to tiling a regular roof

RANGE STATEMENT

1.2. *Scope of work:*

- relevant Australian standards
- safe work procedures relating to tiling a regular roof
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- includes preparing a regular roof for tiling by sarking and battening; and fixing and finishing tiles, including their installation, bedding and pointing
- regular roofs include gable, hip, hip and valley, pitch roofs, skillion, Dutch gable and layback gable
- specifications include tile colour, tile profile, type of bond, nailing sequence and wind category
- tiles may be interlocking or non-interlocking and conform to Australian standards
- types of terracotta tiles include Marseille, modern French, Swiss, Spanish and French
- types of concrete tiles include Elebane, Villa, Centurian, Chateau and shingle (concrete)
- pointing material may be mortar, flexible pointing material or its equivalent.

1.3. *Safety (OHS)* is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting

RANGE STATEMENT

- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- working at heights
- working in proximity to others, work site visitors and the public
- working safely on roofs
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- 1.4. *Tools and equipment:*
 - include:
 - air compressors and hoses
 - bedding frames
 - blowers
 - brooms
 - buckets
 - calculators
 - chalk lines
 - chisels
 - concrete mixers
 - elevators
 - fall safety devices
 - gutter protectors
 - hammers
 - hand saws
 - high pressure water cleaners
 - ladders
 - measuring tapes and rules
 - nail bags
 - nail guns
 - pinchers
 - power drills
 - power leads
 - power saws

RANGE STATEMENT

- shovels
- squares
- string lines
- tile cutters
- trowels
- may include:
 - blocks
 - breaks or cutting irons
 - guillotines
 - knives
 - planes
 - rippers
 - scaffolds
 - slate cutters
 - slate reefers
 - slater's hammers
 - slating knives
 - small compressors
 - small petrol or diesel engines
 - tin snips.

1.5. *Materials:*

- include:
 - adhesives
 - concrete and terracotta tiles
 - fastenings and other mechanical fixings
 - flashings
 - mortar
 - sarking materials
 - timber and metal battens
- may include:
 - flexible pointing materials
 - lead
 - shingles
 - slate
 - other hand manufactured products.

1.6. *Quality requirements* include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

RANGE STATEMENT

1.7. *Environmental requirements* include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

1.8. *Statutory and regulatory authorities* include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare roof face.	<p>2.1. Fall arrest system is installed to roof perimeter following regulatory and workplace requirements.</p> <p>2.2. Elevator is assembled and operated in accordance with manufacturer instructions and workplace procedures.</p> <p>2.3. Roof surface is set out, sarked and battened to manufacturer recommendations for the specified tile and job specifications.</p> <p>2.4. Roof surface and structure are checked for stability and safe access to roof for tile installation.</p> <p>2.5. Tiles are loaded onto roof, supported and evenly distributed.</p>
3. Install tiles.	<p>3.1. Roof tiles are spread, cut, secured and installed to manufacturer specifications.</p> <p>3.2. Hip and ridge tiles are bedded using correct mortar mix, maintaining alignment.</p> <p>3.3. Valley, hips, ridges, flexible point plus acrylic finishes and gables are pointed with like-colour mortar to a flush, smooth finish in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
	job specifications.
4. Tile roof openings and lay back surfaces and/or facades.	<p>4.1. Opening surrounds are checked for soakers and flashings, and prepared for tiles.</p> <p>4.2. Surrounds and weatherproofing are tiled to job specifications.</p> <p>4.3. Tiles are spread and secured to steep and vertical surfaces, by individual tile fixing to specifications.</p>
5. Clean up.	<p>5.1. Roof, guttering and downpipes are cleared free of waste and surplus material.</p> <p>5.2. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.3. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to complete logbooks, site records and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- irregular roofs and tiling considerations
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- roof construction systems and structures
- roof tiling techniques and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tile 45 square metres of an irregular roof frame of any type, incorporating a 1.5m hip, a 1.5m valley, a 1.5m gable and a 1.5m top ridge, including the appropriate sarking, battens, tile cutting, bedding and pointing, ensuring:
 - correct identification of requirement and installation and finishing of the tiles
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements

RANGE STATEMENT

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- pertaining to tiling an irregular roof
- relevant Australian standards
- safe work procedures relating to tiling an irregular roof
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- includes preparation for tiling an irregular roof by sarking and battens and the fixing and finishing of tiles, including their installation, bedding and pointing
- irregular roofs include roofs constructed to irregular shaped plans where corners are not right angled and include Dutch hip, turrets, spires, unequal pitch surfaces and Cape Cod, mansard, bellcast, pyramid, bed and point valleys, and steel framed roof trusses
- openings in irregular roofs include chimneys, roof ventilators, cupolas, dormer windows, two storey inserts, skylights, pipes and flues
- specifications include tile colour, tile profile, type of bond, nailing sequence and wind category
- tiles may be interlocking (terracotta) or non-interlocking (concrete) and conform to the requirements of relevant Australian Standards
- types of terracotta tiles include Marseille, modern French, Swiss, Spanish, Roman and new French
- types of concrete tiles include Elebane, Villa, Centurian, Chateau and shingle (concrete)
- pointing material may be flexible pointing material or its equivalent.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including

RANGE STATEMENT

cement and curing agents

- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - working at heights
 - work site visitors and the public
 - working in proximity to others
 - working safely on roofs
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
 - air compressors and hoses
 - blowers
 - brooms
 - buckets
 - calculators
 - chalk lines
 - chisels
 - concrete mixers
 - elevators
 - fall safety devices
 - gutter protectors
 - hammers
 - hand saws
 - high pressure water cleaners
 - ladders

RANGE STATEMENT

- measuring tapes and rules
- nail bags
- nail guns
- pincers
- power drills
- power leads
- power saws
- shovels
- squares
- string lines
- tile cutters
- trowels
- may include:
 - blocks
 - breaks or cutting irons
 - guillotines
 - rippers
 - scaffolds
 - slate cutters
 - slate reefers
 - slater's hammers
 - slating knives
 - small compressors
 - small petrol or diesel engines.

Materials:

- include:
 - adhesives
 - concrete and terracotta tiles
 - fastenings and other mechanical fixings
 - flashings
 - mortar
 - sarking materials
 - timber and metal battens
- may include:
 - flexible pointing material
 - lead
 - shingles
 - slate
 - other hand manufactured products.

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare valley section for repair.	<p>2.1. Damaged area is identified and located in accordance with plans and specifications.</p> <p>2.2. Fall arrest system is installed to roof perimeter in accordance with regulatory and workplace requirements.</p> <p>2.3. Tiles to be repaired or replaced are identified from a removed sample.</p> <p>2.4. Damaged tiles are removed to ensure minimum disturbance to remaining roof tiles.</p> <p>2.5. Pointing or mortar is removed ensuring no damage to roof tiles.</p> <p>2.6. Damaged area is left clean and free of loose waste.</p> <p>2.7. Roof structure valleys and flashing installations are checked for soundness and adequacy according to specifications and manufacturer recommendations.</p>
3. Repair valley sections.	<p>3.1. Damaged structural components of valley section of roof are disassembled and repaired or replaced in accordance with job specifications and manufacturer recommendations.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Replace roof tiles.	<p>3.2. Roof tie down fixings are replaced or installed to roof structure in accordance with job specifications and manufacturer recommendations.</p> <p>3.3. Replacement valley flashings are fabricated and installed in accordance with job specifications and manufacturer recommendations.</p> <p>3.4. Work area and material surface are cleaned free of debris and waste materials in accordance with workplace procedures.</p> <p>3.5. Replacement and recycled roof tiles are retained and sorted to ensure conformity to requirements in matching original roof tiles to specification.</p> <p>3.6. Loose mortar is removed from roof tile surface and mortar joints are struck to match existing or specified colour of roof tiles.</p> <p>4.1. Roof tiles are examined individually to ensure conformity to requirements in matching original tiles.</p> <p>4.2. Mortar is mixed to required composition to match original specifications.</p> <p>4.3. Roof tiles are laid to maintain conformity to original gauge and alignment, while maintaining bond to specifications.</p> <p>4.4. Roof tiles are laid to produce designed features in accordance with original design and specifications.</p>
5. Replace pointing material.	<p>5.1. Pointing material is prepared and distributed for use to design specifications.</p> <p>5.2. Pointing material is applied to ridge tile joints to specification.</p> <p>5.3. Joints are pointed to produce matching finish to existing surrounds, and loose material is removed from roof tile surface.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of materials used in repairing tiled roof valleys, valley irons and flashings
- general construction terminology
- installation of roof battens, sarking and flashing
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements

REQUIRED SKILLS AND KNOWLEDGE

- roof construction systems and structures and tiling considerations
- techniques and procedures for repairing tiled roof valleys, valley irons and flashings
- working on roof structures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, remove and replace 1.5 lineal metres of a tiled roof and damaged roof valley iron, ensuring:
 - correct identification of requirement and completion of repairs and replacement
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification
 - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare roof area.	<p>2.1. Damaged area is identified and located in accordance with job drawings and specifications.</p> <p>2.2. Fall arrest system is installed in accordance with regulatory and workplace procedures.</p> <p>2.3. Roofing materials and building component parts are safely and effectively handled using appropriate material handling techniques.</p> <p>2.4. Damaged tiles are removed to ensure minimum disturbance to remaining roof tiles.</p> <p>2.5. Pointing or mortar to be replaced is removed ensuring no damage to roof tiles.</p> <p>2.6. Area to be repaired is left clean and free of loose waste.</p> <p>2.7. Roof battens, sarking, boarding and flashing installations are checked for soundness and adequacy and replaced in accordance with job specifications.</p>
3. Replace roof tiles.	<p>3.1. Roof tiles are individually examined to ensure conformity to original roof tiles.</p> <p>3.2. Mortar is mixed to required composition and job</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications.
	3.3. Roof tiles are laid to maintain conformity to gauge, level alignment and plumb, while maintaining bond to specifications.
	3.4. Roof tiles are laid to produce design features in accordance with original design and specifications.
	3.5. Mortar joints are struck to match existing colour and loose mortar is removed from roof tile surface.
4. Replace pointing material.	4.1. Pointing material is mixed to specifications.
	4.2. Pointing material is applied to ridge tile joints to specification.
	4.3. Joints are pointed to produce matching finish to existing surrounds and loose material is removed from roof tile surface.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of roof tiling materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- roof construction systems and structures and tiling considerations
- roof tiling techniques and procedures and the process of repairing/renovating tiled roofs
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, replace approximately 1 square metre of damaged tiles in 5 square metre of a roof frame, including appropriate tile cutting, bedding and pointing, ensuring:
 - correct identification of requirement and installation and finishing of replacement tiles
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to install slate to a conventional hip and valley roof.

It includes preparing for, setting out and installing slate to a roof.

Application of the Unit

Application of the unit This unit supports the attainment of skills and knowledge to safely slate a hip and valley roof, which includes working with others and as a member of a team.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare roof surface.	<p>2.1. Fall arrest system is installed to roof perimeter by regulatory and workplace requirements.</p> <p>2.2. Elevator is assembled and used in accordance with manufacturer instructions and workplace procedures.</p> <p>2.3. Roof surface is set out, sarked, boarded and battened as required by job specifications.</p> <p>2.4. Roof surface and structure are checked for stability and safe access to roof for tile installation.</p> <p>2.5. Tiles are loaded onto roof, supported and evenly distributed.</p>
3. Prepare slate.	<p>3.1. Slate is graded, marked and holed to alignment requirements.</p> <p>3.2. Slate is loaded on to roof, supported and evenly distributed.</p>
4. Lay and secure slate.	<p>4.1. Slate is laid and secured to designed layout of gauge, bond and line.</p> <p>4.2. Ridges and hips are finished in accordance with placement of slate to specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3. Hip covering is installed, measured, prepared, fitted and secured to specifications.
	4.4. Roof and guttering are cleared free of waste and surplus material.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones

REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of slate and slating materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- roof construction systems and structures and slating considerations
- slating techniques and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice

EVIDENCE GUIDE

	<p>applicable to workplace operations</p> <ul style="list-style-type: none">• comply with organisational policies and procedures, including quality requirements• safely and effectively use tools, plant and equipment• communicate and work effectively and safely with others• as a minimum, slate 45 square metres of a roof frame, incorporating a 1.5m hip, a 1.5m valley, a 1.5m gable and a 1.5m top ridge, including the appropriate sarking, boarding, battening, bedding and pointing, ensuring:<ul style="list-style-type: none">• correct identification of requirement and installation and finishing of the slate• correct selection and use of appropriate processes, tools and equipment• completing all work to specification.
--	---

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to

EVIDENCE GUIDE

modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing

EVIDENCE GUIDE

supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to slating a roof
- relevant Australian standards
- safe work procedures relating to slating a roof
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- includes preparation of a regular roof for slating by sarking, boarding and battening; and laying and securing slate
- preparation tasks of ridge and hip covering include marking for length, cutting, folding and drilling holes for securing slate
- safety hazards include steepness of roof, flatness of roof and adequacy of footholds
- hip finishes to slate work may be mitred or covered
- groundwork for slate may be battened and felted (sarked), boarded and felted (sarked),

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- boarded, felted (sarked) and battened and boarded, felted (sarked), counter battened and battened.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - working at heights
 - work site visitors and the public
 - working in proximity to others
 - working safely on roofs
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - air compressors and hoses
 - blocks
 - blowers
 - breaks or cutting irons
 - brooms

Tools and equipment:

RANGE STATEMENT

- buckets
- calculators
- chalk lines
- chisels
- concrete mixers
- elevators
- guillotines
- gutter protectors
- hammers
- hand saws
- high pressure water cleaners
- ladders
- measuring tapes and rules
- nail bags
- nail guns
- pincers
- power drills
- power leads
- power saws
- rippers
- safety devices
- shovels
- slate cutters
- slate reefers
- slater's hammers
- slating knives
- squares
- string lines
- surface ladders
- trowels
- may include:
 - scaffolds
 - small compressors
 - small petrol or diesel engines.

Materials include:

- adhesives
- cats eyes and picket ridge
- fastenings and other mechanical fixings
- finials and saddles

RANGE STATEMENT

Quality requirements include relevant regulations, including:

- flashings
- metal ridging
- mortar
- sarking materials
- slate
- terracotta and concrete ridging
- timber and metal battens.
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks that are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare roof face.	<p>2.1. Run-off devices are installed and maintained as appropriate to the task.</p> <p>2.2. Fall arrest system is installed to roof perimeter by regulatory and workplace requirements.</p> <p>2.3. Elevator is assembled and operated in accordance with manufacturer instructions and workplace procedures.</p> <p>2.4. Roof surface is set out, sarked and boarded where required to job specifications.</p> <p>2.5. Battens are cut, fitted and fixed to line and spacing to shingle manufacturer and job specifications.</p> <p>2.6. Metal valley sheets are laid and fixed into place by nailing on edge extremities.</p> <p>2.7. Protrusions for installation of flashing are prepared with covered roof surface.</p>
3. Install shingles/shakes.	<p>3.1. Shingles/shakes are loaded, supported and evenly distributed on roof.</p> <p>3.2. Sarking is laid below initial course of shingles/shakes to job specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Finish hips and ridges.	<p>3.3. Shingles/shakes are fixed in line, with spacing between and guttering overhang to standards and job specifications.</p> <p>3.4. Subsequent courses are laid with sarking and shingles fixed to standards and job specifications.</p> <p>3.5. Staggered joints are maintained with overlapping shingles/shakes to job specifications.</p> <p>3.6. Shingles/shakes are split and cut to form junctions with walls or roof surfaces.</p> <p>3.7. Valleys are finished to specifications.</p> <p>3.8. Gable ends are finished to line and specified overhang.</p> <p>4.1. Same size shingles/shakes are selected for hips and ridges.</p> <p>4.2. Edges of shingles/shakes are bevel cut to provide butt joints in capping sections.</p> <p>4.3. Hips and ridges are covered, fixed and finished to line.</p>
5. Clad walls and facades.	<p>5.1. Method of finishing shingles/shakes on wall or facade is identified from specifications.</p> <p>5.2. Sheathed surfaces are sheeted and fixed to framework.</p> <p>5.3. Wall or facade is set out to spacing for battens and exposure of shingles/shakes is specified.</p> <p>5.4. Sarking and shingles/shakes are fitted according to specified method for fixing.</p> <p>5.5. Junctions are constructed at corners to specified finishes.</p> <p>5.6. Flashings are finished to job specifications.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of shingle/shake materials
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- roof and facade construction systems and structures, and shingling considerations
- roof and facade shingling techniques and procedures
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, fix shingles/shakes to 8 square metres of a roof frame, incorporating a 1.5m hip, a 1.5m valley, a 1.5m gable and a 1.5m top ridge, including appropriate sarking, battening and finishing; and fixing shingles/shakes to an external wall of 8 square metres, incorporating an internal corner, including appropriate sarking, battening and finishing, ensuring:
 - correct identification of requirement and installation and finishing of the shingles
 - correct selection and use of appropriate processes, tools and equipment
 - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the

EVIDENCE GUIDE

workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos

RANGE STATEMENT

Scope of work:

- regulatory and legislative requirements pertaining to fixing shingles to roofs and facades
- relevant Australian standards
- safe work procedures relating to fixing shingles to roofs and facades
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- includes preparation of a roof and a wall for fitting with shingles/shakes by sarking and battens, as well as fixing and finishing shingles/shakes
- shingles/shakes may be terracotta or timber
- timber shingles/shakes may be straight split, taper split or hand split and re-sawn
- groundwork for shingles/shakes on roof surfaces may be battened and sarked, board and sarked, and board, battened and sarked
- types of roof protrusions include chimneys, dormer windows, two storey insert, skylights, pipes and flues, roof ventilators and cupolas
- wall or facade covering method may be single coursing or double coursing
- joining at wall corners includes butted against boards and laced for external, laced with flashing behind for internal, and butted against timber stop for both external and internal.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

RANGE STATEMENT

conduct of operational risk assessment and treatments associated with:

- earth leakage boxes
- lighting
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- working at heights
- work site visitors and the public
- working in proximity to others
- working safely on roofs
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
 - air compressors and hoses
 - blowers
 - brooms
 - buckets
 - calculators
 - chalk lines
 - chisels
 - concrete mixers
 - cutting blades
 - elevators
 - fall safety devices
 - gutter protectors
 - hammers
 - hand saws
 - high pressure water cleaners
 - ladders
 - measuring tapes and rules
 - nail bags
 - nail guns

RANGE STATEMENT

- pincers
- power drills
- power leads
- power planers
- power saws
- saw stools
- shovels
- spirit levels
- squares
- string lines
- trowels
- may include:
 - scaffolds
 - small compressors
 - small petrol or diesel engines.

Materials include:

- fastenings and other mechanical fixings
- flashings
- mortar
- sarking materials
- shingles/shakes
- timber and metal battens.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults or concerns regarding quality requirements are rectified or reported prior to commencement.</p> <p>1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Handle, sort and stack scaffolding equipment and associated tools.	<p>2.1. Tools and equipment are safely and effectively used according to manufacturer recommendations and state or territory OHS requirements.</p> <p>2.2. Scaffolding equipment is moved to specified location, applying safe manual and mechanical handling techniques.</p> <p>2.3. Scaffolding equipment is sorted to suit material type and size, and stacked for ease of identification and retrieval for task sequence and job location in accordance with job specifications.</p> <p>2.4. Scaffolding equipment and associated tools are protected against physical, chemical, environmental and water damage and stored clear of access ways, for ease of identification, retrieval and distribution.</p>
3. Prepare for mechanical handling of materials.	<p>3.1. Scaffolding equipment is stacked/banded for mechanical handling in accordance with the type of material and plant or equipment to be used.</p> <p>3.2. Scaffolding equipment is loaded, unloaded, moved or located at specified location assisting the forklift driver, rigger and dogman.</p> <p>3.3. Scaffolding equipment and tools are safely handled</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>with mechanical lifting devices.</p> <p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions

confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT

work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling and using scaffolding tools and equipment
- relevant Australian standards
- safe work procedures relating to handling and using scaffolding tools and equipment
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards, and determination of work requirements
- handling methods for scaffolding include manual handling; assisting the forklift driver, rigger and dogman; and basic mechanical lifting devices and gin wheels
- mechanical lifting devices include pallet trolley, forklift, barrow hoist or teleporter
- scaffolding equipment types include tubes, planks, sole boards, timber, metal, stairs, connectors and couplers, toe boards, bolts, frames, ledgers, transoms, bracing, clips and fittings, brick guards, standards, screw jacks, adjustable wheels, steel wire rope, fibre ropes, ladder beams, catch platforms, prefabricated toner scaffold, bracket scaffolds and ropes
- stacking and storage are to include pallets, stillage and banding.

Safety (OHS) is to be in

- emergency procedures, including extinguishing

RANGE STATEMENT

accordance with state and territory legislation and regulations and project safety plan and may include:

- fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - working at heights
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - hammers
 - ladders
 - nips
 - pallet trolleys
 - planks, including laminated
 - spanners
 - spirit levels
 - tape measures

Tools and equipment:

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults or concerns regarding quality requirements are rectified or reported prior to commencement.</p> <p>1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Whip, tie, splice and inspect ropes.	<p>2.1. Whipping cord and fibre rope are inspected for damage and wear.</p> <p>2.2. Designated rope ends are whipped in accordance with regulations and project specifications.</p> <p>2.3. Designated rope ends are spliced in accordance with regulations and project specifications.</p> <p>2.4. Bends and hitches are applied and inspected in accordance with project specifications.</p>
3. Erect scaffolding.	<p>3.1. Purpose for scaffolding is confirmed and associated work tasks are identified.</p> <p>3.2. Expected loading on scaffold and supporting structure is determined using load tables and manufacturer specifications.</p> <p>3.3. Site access and egress routes are identified.</p> <p>3.4. Scaffolding and components are selected and inspected, and damaged components are labelled and rejected.</p> <p>3.5. Sole board/base plate is selected in accordance with regulations, legislation, codes of practice and manufacturer specifications.</p> <p>3.6. Scaffolding is set out and erected in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
	regulatory and manufacturer requirements.
	3.7. Static lines are erected and installed where specified in accordance with regulatory requirements.
	3.8. Lifting device is assembled and erected where specified.
4. Inspect, repair and alter erected scaffolding.	4.1. Erected modular scaffolding is inspected for damage, corrosion, wear and compatibility.
	4.2. Current use of scaffolding is checked against original design and is in accordance with regulations and specifications.
	4.3. Scaffolding stability is inspected and confirmed.
	4.4. Alteration or repair is carried out where specified.
	4.5. Inspection log and handover is completed and dated, ready for signing by a certified scaffolder.
5. Dismantle scaffolding.	5.1. Scaffolding is isolated and appropriately signed and barricaded to ensure safe dismantling.
	5.2. Scaffolding is dismantled using reverse procedure as for erection.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to complete inspection log and handover
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- lifting devices
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- scaffolding equipment and techniques
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete whipping, splicing, tying and inspecting of five fibre ropes in accordance with regulations
- complete planning, erection and dismantling of a modular scaffolding system, in accordance with JSA and safe work method statements and regulations, including a minimum of:
 - five bays with an internal and external return
 - four lifts, including ties
 - ladder and stair access
 - fall and edge protection.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS

RANGE STATEMENT

Scope of work:

- memos
- regulatory and legislative requirements pertaining to erecting and dismantling modular scaffolding
- relevant Australian standards
- safe work procedures relating to erecting and dismantling modular scaffolding
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards, and determination of work requirements
- erection of scaffolding is to include placement, sequencing, squaring, levelling, tying to structure, and the reverse for dismantling
- purposes of scaffolding include provision of work platforms, edge protection, access ways, falsework, grandstands and covered walkways
- lifting devices include cantilevered hoists and gin wheels
- establishment of footings includes review of JSA and safe work method statements to determine the bearing capacity of ground or working surfaces
- whipping methods include common, west countryman, American and sail makers
- splicing methods include end splice and eye splice
- types of bends and hitches include clove hitch around a tube, rolling hitch around a tube, single bow line, timber hitch and half hitch around a plank, and sheet bend to another rope
- alteration and repair may be required due to storm damage, accidents, misuse and process changes.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

RANGE STATEMENT

mechanical lifting devices where size, weight or other issues, such as a disability are a factor

- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - earth leakage boxes
 - lighting
 - power cables, including overhead service trays, cables and conduits
 - restricted access barriers
 - surrounding structures
 - traffic control
 - trip hazards
 - working at heights
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - adjustable base plates
 - bends and hitches
 - box spanners
 - braces
 - bracket scaffolds (tank and formwork)
 - cantilevered hoists (materials only with maximum capacity of 500kg)
 - couplers and accessories
 - fibre ropes
 - guard rails
 - hammers
 - ledgers

Tools and equipment:

RANGE STATEMENT

- mesh guards
 - mid rails
 - modular and prefabricated scaffolds
 - podgers hammers
 - prefabricated components
 - scaffold belts
 - scaffolding planks
 - spirit levels
 - stairs or ladders
 - standards
 - steel and aluminium tubes
 - tape measures
 - torpedo levels
 - transoms
 - wire nips
 - wrenches
 - may include:
 - gin wheels
 - safety nets
 - shovels
 - spanners
 - static lines.
- Quality requirements*** include relevant regulations, including:
- Australian standards
 - internal company quality policy and standards
 - manufacturer specifications
 - workplace operations and procedures.
- Environmental requirements*** include:
- clean-up management
 - dust and noise
 - vibration
 - waste management.
- Statutory and regulatory authorities*** include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

	specified.
3. Inspect, repair and alter erected scaffolding.	<p>3.1. Erected tube and coupler scaffolding is inspected for damage, corrosion, wear and compatibility prior to use.</p> <p>3.2. Faulty components are isolated, labelled, tagged, rejected or replaced immediately.</p> <p>3.3. Current use of scaffolding is checked against original design.</p> <p>3.4. Scaffolding stability is inspected and confirmed.</p> <p>3.5. Alteration or repair is carried out where specified or where required to ensure regulatory compliance.</p> <p>3.6. Inspection log and handover is completed and dated, ready for signing by a certified scaffolder.</p>
4. Dismantle scaffolding.	<p>4.1. Scaffolding is isolated and appropriately signed and barricaded to ensure safe dismantling.</p> <p>4.2. Scaffolding is dismantled using reverse procedures as for erection.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources

REQUIRED SKILLS AND KNOWLEDGE

- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to complete inspection log and handover
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- lifting devices
- logbooks
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- scaffolding equipment and techniques
- signalling methods
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete planning, designing, erecting and dismantling tube and coupler intermediate scaffolding, in accordance with JSA and safe work method statements and regulations, including a minimum of:
 - three bays and two lifts with an internal or external return
 - one barrow ramp
 - one spur
 - fall/edge protection.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Handle, sort and stack materials and components manually.	<p>2.1. Materials and components are identified and checked for conformity to material schedule, plans, quality requirements and specifications.</p> <p>2.2. Handling requirements of materials and components are identified and safe and effective handling techniques are applied.</p> <p>2.3. Materials and components are sorted to suit material type and size and are stacked for ease of identification and retrieval for task sequence.</p> <p>2.4. Materials and components are protected against physical damage and stacked/stored clear of trafficways.</p> <p>2.5. Signage and barricades are erected where applicable to isolate stored materials from workplace traffic or access.</p> <p>2.6. Dust suppression procedures are used to minimise health risk to work personnel and others.</p>
3. Handle and remove waste safely.	<p>3.1. Waste materials and components are handled correctly and safely according to material safety data sheets (MSDS) and requirements of regulatory authorities.</p> <p>3.2. Hazardous material is identified for separate handling in accordance with regulatory requirements.</p> <p>3.3. Non-toxic materials are removed using correct procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction and steelfixing terminology

REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- mechanical lifting techniques
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- site traffic management and storage principles
- steelfixing tools and equipment types, uses and limitations
- systems and techniques for the safe handling of materials
- types, uses, packaging arrangements and handling techniques for steelfixing materials
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- individually, or as a part of a team, handle, sort and store the mandatory steelfixing materials listed in the range statement on a minimum of two occasions at two different sites
- dispose of waste and excess materials according to environmental protection requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling steelfixing materials
- relevant Australian standards
- safe work procedures relating to handling

RANGE STATEMENT

	steelfixing materials
	<ul style="list-style-type: none"> • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Scope of work:</i>	<ul style="list-style-type: none"> • steelfixing materials include wire ties, ligatures and spacer/spreader assemblies, deformed bars, plain rods, bar chairs, mesh sheets of plain bars and mesh sheets of deformed bars; and include scaffolding components, pipe sections and structural steel sections • methods of protecting stacked/stored materials include covering, tying or banding, barricades, signs and locking away (hazardous materials) • dust suppression procedures include spraying with water and covering • waste material and debris include banding straps, broken or damaged goods, cardboard, plastic, paper and loose materials.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor • hazard control • hazardous materials and substances, including cement and curing agents • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • cutting, grinding and welding equipment • lighting • power equipment • power leads and sources • trip hazards • work site visitors and the public

RANGE STATEMENT

	<ul style="list-style-type: none"> • working in confined spaces • working in proximity to others • working with metals under stress
	<ul style="list-style-type: none"> • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • angle grinders • bolt cutters • general and hand power tools • measuring tapes and rules • mesh guillotines • oxy-acetylene sets and cutting attachments • reinforcement benders • tie wire reels • wire nippers.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering the applicable Acts, regulations and codes of practice.
<i>Materials</i> include:	<ul style="list-style-type: none"> • labelling • specialist material handling gloves.
<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications • workplace operations and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Materials quantity requirements are calculated in accordance with plans, specifications.</p> <p>1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Identify hand and power tools.	<p>2.1. Hand and power tools and their functions, operations and limitations are identified.</p> <p>2.2. OHS requirements for using hand tools are recognised and adhered to.</p> <p>2.3. OHS requirements for using power tools are recognised and adhered to.</p>
3. Select tools for project.	<p>3.1. Tools and equipment are selected consistent with job requirements.</p> <p>3.2. Tools, including leads and hoses, are checked for tags, serviceability and safety, and any faults are rectified or reported.</p> <p>3.3. Power tools guards, retaining bolts, couplings, gauges and controls are checked and maintained in accordance with manufacturer recommendations.</p> <p>3.4. Equipment to hold or support material during operation is selected.</p> <p>3.5. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed according to manufacturer recommendations.</p>
4. Use tools.	<p>4.1. Power and compressed air supply are connected to work area.</p> <p>4.2. Start-up and shut-down procedures are followed.</p> <p>4.3. Tools are safely and effectively used according to</p>

ELEMENT	PERFORMANCE CRITERIA
	manufacturer recommendations and OHS requirements.
	4.4. Tools are safely located when not in immediate use.
5. Select plant and equipment.	5.1. Function and limitations of plant and equipment used in steelfixing are identified.
	5.2. Plant and equipment are selected consistent with hazard minimisation and needs of job.
	5.3. Method of operation of plant and equipment is identified.
	5.4. OHS requirements for operating and using plant and equipment are recognised and adhered to.
	5.5. Plant and equipment are checked for safety and faults are rectified or reported.
6. Use plant and equipment.	6.1. Plant and equipment are safely and effectively used.
	6.2. Plant and equipment are safely located when not in immediate use.
	6.3. Plant and equipment are cleaned, maintained and stored after use.
7. Clean up.	7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	7.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- steelfixing industry terminology
- systems and techniques for safe handling of materials
- types, characteristics, uses and limitations of:
 - steelfixing hand tools
 - steelfixing power tools
 - steelfixing plant and equipment
 - steelfixing materials
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- select, use and maintain the hand and power tools and equipment listed in the range statement
- select, use and provide operator maintenance for the equipment items listed in the range statement.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the use of steelfixing tools and equipment

RANGE STATEMENT

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- relevant Australian standards
- safe work procedures relating to steelfixing tools and equipment
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- may involve reinforcement for foundations, pits and slabs, columns, walls, stairs, plinths, kerbs, gutters, pathways and hard standings.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - cutting, grinding and welding equipment
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - working with metals under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - deformed bars

Materials:

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Set up and test equipment.	<p>2.1. Correct fire extinguisher is selected and located to be readily accessible prior to and during operations.</p> <p>2.2. Regulators are attached to oxy and acetylene bottles in accordance with manufacturer specifications and OHS regulations.</p> <p>2.3. Lines are purged to manufacturer recommendations prior to lighting up.</p> <p>2.4. Equipment is tested for leaks and corrective action undertaken or faults reported.</p> <p>2.5. Correct pressures and cutting tips are selected in accordance with material to be cut and manufacturer specifications.</p>
3. Cut material.	<p>3.1. Material is accurately marked and secured or clamped ready for cutting.</p> <p>3.2. Torch is lit correctly and safely according to manufacturer specifications.</p> <p>3.3. Setting of flame is adjusted for cutting to manufacturer recommendations.</p> <p>3.4. Correct cutting position is adopted during cutting to</p>

ELEMENT	PERFORMANCE CRITERIA
	set-out mark.
4. Heat and bend material.	<p>4.1. Material is accurately marked and securely clamped ready for cutting.</p> <p>4.2. Torch is lit correctly and safely according to manufacturer specifications.</p> <p>4.3. Heat is applied to specified material and weakening effects of the heating process are minimised.</p> <p>4.4. Material is bent to specification and correctly cooled.</p>
5. Shut down.	<p>5.1. Torch is switched off according to manufacturer specifications.</p> <p>5.2. Gas supply is shut off according to manufacturer specifications.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to cut and bend materials using oxy/LPG equipment
- relevant Australian standards
- safe work procedures relating to cut and bend materials using oxy/LPG equipment

RANGE STATEMENT

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- cutting of steel includes cutting up of waste for salvage, cutting reinforcement steel and cutting holes in plate
- bending includes reinforcement steel
- all work is to conform to the requirements of relevant Australian standards.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - cutting, grinding and welding equipment
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - working with metals under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Equipment includes:

- cylinders
- regulators

RANGE STATEMENT

Materials:

- gas tubing
- cutting blowpipes
- flint lighters
- measuring tapes and rules
- clamps and support stands.
- include:
 - cutting consumables
 - deformed bars
 - mesh sheets of deformed bars
 - mesh sheets of plain bars
 - plain rods
- may include:
 - pipe sections
 - scaffolding components
 - structural steel sections.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Stock of reinforcement materials is checked for correct type, quality and quantities against reinforcement schedule and details in plans/specifications.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare for reinforcement placement.	<p>2.1. Formwork is checked for completion and conformity to receive reinforcement.</p> <p>2.2. Reinforcement bars are cut and bent to required set out and plans and specifications.</p> <p>2.3. Bars are tied to designed configuration from plans and specifications.</p> <p>2.4. Reinforcement sheets are cut to required sizes.</p> <p>2.5. Stiffening rods are attached to panels as required to facilitate handling processes.</p> <p>2.6. Bar chairs and spacers are located to requirements of reinforcement schedule and plans and specifications.</p>
3. Place and fix reinforcement.	<p>3.1. Fabric reinforcement sheets are placed into position in accordance with engineer's drawings and specifications.</p> <p>3.2. Reinforcement bars are located and positioned in accordance with engineer's drawings and specifications.</p> <p>3.3. Reinforcement is located and placed using bar chairs, ligatures and spacers according to engineer's drawings and specifications.</p> <p>3.4. Reinforcement material is supported and secured</p>

ELEMENT	PERFORMANCE CRITERIA
	into position in accordance with engineer's drawings and specifications.
	3.5.Cast-in items are secured to reinforcement in accordance with engineer's drawings and specifications.
	3.6.Ends of protruding reinforcement material are covered and protected in accordance with plans and specifications.
4. Check reinforcement prior to concrete pour.	4.1.Location and position of reinforcement and fixing ties to reinforcement are checked for accuracy.
	4.2.Depth of coverage, clearance, spacing and overlap of reinforcement material are checked in accordance with engineer's drawings and job specification.
5. Clean up.	5.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	5.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools,

REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction and steelfixing terminology
- job safety analysis (JSA) and safe work method statements
- job specifications related to the layout of reinforcement materials
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- reinforcement materials placement and fixing techniques
- types, properties, uses and limitations of reinforcement materials
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- place and fix reinforcement materials to specification on a minimum of three different jobs and involving deformed bars, rods and mesh sheets.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the placement and fixing of reinforcement materials

RANGE STATEMENT

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- relevant Australian standards
- safe work procedures relating to the placement and fixing of reinforcement materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- steelfixing may involve reinforcing concrete for foundations, pits and slabs, columns, walls, stairs, plinths, kerbs, gutters, pathways and hard standings.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - cutting, grinding and welding equipment
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - working with metals under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:

Tools and equipment:

RANGE STATEMENT

	<ul style="list-style-type: none"> • bolt cutters • measuring tapes and rules • mesh guillotines • reinforcement benders • tie wire reels • wire nippers • may include: <ul style="list-style-type: none"> • general hand and power tools • manual metal arc welding (MMAW) machines • oxy-acetylene setting and cutting attachments.
<i>Reinforcement materials:</i>	<ul style="list-style-type: none"> • include: <ul style="list-style-type: none"> • bar chairs • deformed bars • ligatures • mesh sheets of deformed bars • mesh sheets of plain bars • plain rods • spacer/spreader assemblies • wire ties • may include: <ul style="list-style-type: none"> • pipe sections • scaffolding components • structural steel sections.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • waste management.
<i>Statutory and regulatory authorities</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to arc weld reinforcement to non-load bearing structural components forming part of the construction process.

It includes planning and preparation for the work, setting up for welding, welding the reinforcement, checking the reinforcement, and completing clean-up activities.

Application of the Unit

Application of the unit

This unit supports the attainment of skills and knowledge to perform arc welding on reinforcement steel in a construction project, which includes working with others and as a member of a team. It does not involve specialist welding techniques.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, tools and welding equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare for welding reinforcement.	<p>2.1. Appropriate welding method and material are identified and selected in relation to job and site specifications.</p> <p>2.2. Area is cleaned of flammable material and barriers are erected to eliminate potential hazards.</p> <p>2.3. Mill scale and loose residual debris are removed from reinforcement prior to welding.</p>
3. Weld reinforcement.	<p>3.1. Reinforcement is welded to specifications, instructions and job requirements.</p> <p>3.2. Tack welds are conducted to meet specifications relating to the diameter of the bar.</p> <p>3.3. Welding is conducted to the required distance from bends or re-bends of reinforcement bars.</p>
4. Check reinforcement prior to use.	<p>4.1. Location and position of reinforcement and fixing ties are checked for accuracy.</p> <p>4.2. Depth of coverage, clearance, spacing and overlap are checked before use.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of,</p>

ELEMENT**PERFORMANCE CRITERIA**

reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction arc welding terminology

REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- mechanical lifting techniques
- manual metal arc welding (MMAW) equipment types, characteristics, uses and limitations
- MMAW set-up, operating and welding sequence and techniques
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types and properties of materials to be welded
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- for a minimum of five separate tasks, arc weld reinforcement steel materials, as listed in the range statement, to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to arc welding of reinforcement steel
- relevant Australian standards
- safe work procedures relating to arc welding of reinforcement steel
- signage
- verbal, written and graphical instructions

RANGE STATEMENT

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work bulletins
- work schedules, plans and specifications.
- welding is to be conducted using MMAW equipment
- reinforcing material to be welded includes deformed bars, plain rods, mesh sheets of plain bars and mesh sheets of deformed bars
- welding is to conform to relevant Australian standard.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - cutting, grinding and welding equipment
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - working with metals under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- angle grinders
- bolt cutters
- measuring tapes and rules

Tools and welding equipment include:

RANGE STATEMENT

Materials:

- mesh guillotine
- reinforcement benders
- tie wire reels
- wire nippers.
- include:
 - bar chairs
 - deformed bars
 - ligatures and spacer/spreader assemblies
 - mesh sheets of deformed bars
 - mesh sheets of plain bars
 - plain rods
 - welding consumables
 - wire ties
- may include:
 - pipe sections
 - scaffolding components
 - structural steel sections.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Cutting machine and tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Set up for cutting.	<p>2.1. Appropriate cutting method is identified and selected, in relation to the job specification and site conditions.</p> <p>2.2. Area is cleaned of flammable material and barriers are erected to contain waste material from cutting process.</p> <p>2.3. Secure and safe work environment with stable base and platform is provided for the reinforcing material.</p> <p>2.4. Cutting machine is set up for operation in accordance with manufacturer and job specifications.</p>
3. Cut reinforcement steel.	<p>3.1. Cutting machine is operated safely in accordance with manufacturer recommendations.</p> <p>3.2. Reinforcement steel is cut or docked to prescribed lengths and configurations as per job specifications.</p> <p>3.3. Fabric reinforcement is cut to ensure allowances for element penetrations.</p> <p>3.4. Cut lengths are stacked and bundled for inclusion to reinforcing layout.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>3.5. Area is cleaned of waste products to allow for next process as required.</p> <p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Machinery, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations

 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- construction and steelfixing terminology
- job safety analysis (JSA) and safe work method statements
- machine cutting equipment set-up and operating techniques
- machine cutting equipment types, uses and limitations
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types and properties of steelfixing materials
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safe and effective operational use of machinery, tools, plant and equipment
- communicate and work effectively and safely with others
- machine cut a range of reinforcement steel materials using a guillotine shear/cropper and a minimum of one other mechanical device.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to machine cutting of reinforcement materials
- relevant Australian standards
- safe work procedures relating to machine cutting of reinforcement materials
- signage
- verbal, written and graphical instructions

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work bulletins
- work schedules, plans and specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents

 - cutting, grinding and welding equipment
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - working with metals under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - angle grinder
 - guillotine shear/cropper
- may include:
 - diamond tipped or carbide tipped radial saw
 - friction disc saw (static bench fold or manual handheld grinding friction disc).

Cutting machines:

Tools and equipment include:

- angle grinders

RANGE STATEMENT

Materials:

- bolt cutters
- general hand and power tools
- measuring tapes and rules
- tie wire reels
- wire nippers.
- include:
 - cutting consumables
 - deformed bars
 - mesh sheets of deformed bars
 - mesh sheets of plain bars
 - plain rods
- may include:
 - pipe sections
 - scaffolding components
 - structural steel sections.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant <i>information</i>, confirmed and applied to the <i>scope of work</i> performed.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Plant, <i>tools and equipment</i> are selected to carry out tasks and are consistent with the requirements of the job, checked for serviceability, and any faults are rectified or reported prior to commencement.</p> <p>1.5. <i>Materials</i> quantity requirements are calculated in accordance with plans, specifications and <i>quality requirements</i>.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and legislative authority</i> obligations and applied.</p>
2. Carry out mechanical splicing and anchoring.	<p>2.1. Reinforcement bars are threaded as detailed in job specifications.</p> <p>2.2. Detail of splicing arrangement is configured as per job specifications.</p> <p>2.3. Splicing couplers are fitted and secured to reinforcing bar in accordance with manufacturers' handling instructions and job specifications.</p> <p>2.4. Reinforcement is secured in accordance with prescribed tolerances.</p> <p>2.5. Coupler connections and reinforcing bars are freed of mill scale and residual debris that may foul connections.</p> <p>2.6. Reinforcement is located and anchored as prescribed in job specifications and relevant standards.</p>
3. Check reinforcement prior to use.	<p>3.1. Location and position of reinforcement and fixing ties to reinforcement are checked for accuracy.</p> <p>3.2. Depth of coverage, clearance, spacing and overlap of reinforcement material are checked for conformance with job specifications and relevant standards.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- basic theory related to mechanical splicing and anchoring as a reinforcement technology
- construction and steelfixing tensioning terminology
- factors affecting concrete bonding, curing and strength
- handling, storage and environmentally friendly waste management
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- mechanical anchoring systems, materials and techniques
- mechanical splicing systems, materials and techniques
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete the full mechanical splicing and anchoring cycle on a minimum of three occasions covering foundations, a slab and one other structure.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to splicing and anchoring using mechanical methods
- relevant Australian standards
- safe work procedures relating to splicing and anchoring using mechanical methods
- signage

RANGE STATEMENT

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- mechanical splicing and anchoring used in reinforcement in foundations, pits and slabs, columns, walls, stairs, plinths, kerbs, gutters, pathways and hard standings.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - cutting, grinding and welding equipment
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - working with metals under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - bolt cutters
 - couplers
 - mechanical cutting equipment
 - nippers

Tools and equipment:

RANGE STATEMENT

	<ul style="list-style-type: none">• tool belts• measuring tapes• may include:<ul style="list-style-type: none">• electric cold cut-off saw• oxy-acetylene equipment and metal inert gas (MIG), tungsten inert gas (TIG) and manual metal arc welding (MMAW) equipment.
Materials include:	<ul style="list-style-type: none">• labelling• specialist material handling gloves.
Quality requirements include relevant regulations, including:	<ul style="list-style-type: none">• Australian standards• internal company quality policy and standards• manufacturer specifications• workplace operations and procedures.
Environmental requirements include:	<ul style="list-style-type: none">• clean-up management• dust and noise• waste management.
Statutory and regulatory authorities include:	<ul style="list-style-type: none">• federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Reinforced concrete construction schedule is identified from project schedule.</p> <p>1.3. Elements of structure are identified from project construction schedule and job drawings.</p> <p>1.4. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Read and interpret schedule.	<p>2.1. Structural element to be constructed is confirmed from site and structural detail drawings.</p> <p>2.2. Reinforcement schedule is read to identify the appropriate reinforcement type for the structural element.</p> <p>2.3. Number of reinforcement pieces/sheets is identified from structural detail drawings.</p> <p>2.4. Reinforcement schedule is read to identify coding and number related to labels.</p> <p>2.5. Discrepancies in coding and numbering are identified and situation is reported to schedule contact for clarification.</p>
3. Check contents of bundles.	<p>3.1. Content of reinforcement material bundles is checked for conformity to schedule and proposed structural element.</p> <p>3.2. Discrepancies between the schedule and actual material quantities are investigated and resolved or reported.</p> <p>3.3. Discrepancies between the schedule and actual material shape, size or length are investigated and resolved or reported.</p> <p>3.4. Cranked or bent items of reinforcement are identified, segregated and reported.</p> <p>3.5. Schedule is marked where content conforms to schedule and structural element's requirements.</p>
4. Locate reinforcement for element	<p>4.1. Reinforcement is marked or placed and noted ready</p>

ELEMENT	PERFORMANCE CRITERIA
construction.	for transportation to element location.
	4.2.Reinforcement is directed to structural location for placement and fixing.
5. Communicate schedule information.	5.1.Job sequencing schedule detail is communicated to steel fixers and team members to ensure efficient work practices.
	5.2.Changes to job sequencing schedule are recorded as per site requirements.
	5.3.Work completion procedures are identified and relevant personnel notified when finished, as per site requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - communicate job sequencing schedule detail to steel fixers
 - determine requirements
 - follow instructions
 - notify completion of work
 - read and interpret:
 - construction and reinforcement schedule
 - documentation from a variety of sources
 - drawings and specifications
 - report discrepancies and faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record changes to job sequencing schedule detail
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a

REQUIRED SKILLS AND KNOWLEDGE

range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction and steelfixing terminology
- construction site traffic control and signage arrangements
- conventional symbols, markings and numbering systems relevant to reinforcement schedules
- job safety analysis (JSA) and safe work method statements
- presentation and contents of reinforcement schedules
- presentation and general content of typical construction schedules
- quality requirements
- reinforcement material types, appearance standards, packaging and labelling arrangements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- for a minimum of two different sites:
 - confirm the reinforcement material to the schedule
 - direct the location of the reinforcement materials for element construction
 - communicate schedule information and variations to steel fixers.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of reinforcement schedules
- relevant Australian standards
- safe work procedures relating to the application of reinforcement schedules
- signage

RANGE STATEMENT

Reinforced concrete construction schedule:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- information includes:
 - grade of steel reinforcing
 - length of material
 - location for material, size and shape of bars
 - number of bars in a bundle
 - shape of formed bars
 - size of mesh
 - surface markings
 - type of steel bars, cranks and bends
- structural elements include:
 - beams
 - columns
 - footings
 - slabs
 - walls.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces

RANGE STATEMENT

Environmental requirements
include:

- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Statutory and regulatory authorities include:

- clean-up management
- dust and noise
- waste management.
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Lay and fix anchorages and cables.	<p>2.1. Tendons and recess formers are fixed in location according to job plans and drawings.</p> <p>2.2. Ducting profile is laid and specified number of strands pushed through and verified according to job drawings.</p> <p>2.3. Profile anchorages are positioned to specifications.</p> <p>2.4. Form head and anchorages are positioned in accordance with specifications.</p> <p>2.5. Installed cables are inspected in accordance with specifications and relevant standards.</p> <p>2.6. Grout tubes are fixed in accordance with manufacturer and engineer's specifications.</p> <p>2.7. Grout tubes are monitored during concrete pour.</p>
3. Define the work area.	<p>3.1. Safe working area is defined according to safe work practices and OHS regulations.</p> <p>3.2. Barricades and signage are erected where required to isolate safe work areas.</p>
4. Stress tendons.	<p>4.1. Recess formers are removed.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. Anchor blocks and wedges are set up to manufacturers' design.
	4.3. Stressing operations are carried out to nominated loads and to engineer standards using authorised calibrated stressing equipment.
	4.4. Extensions are measured and recorded on standard forms for approval by the engineer.
5. Finish the tensioning.	5.1. Protruding strands are cut and sealed according to manufacturer specifications.
	5.2. Cement grout is mixed and pumped in accordance with the specifications and relevant standards.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record extensions
- identifying and accurately reporting to appropriate personnel any faults in tools,

REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic theory related to cable stressing as a reinforcement technology
- calibration procedures related to stressing techniques and equipment
- construction and steelfixing tensioning terminology
- factors affecting concrete bonding, curing and strength
- grouting equipment and procedures
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- requirements and processes for recording stressing operations
- safe stressing procedures and monostrand techniques
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- carry out the full monostrand post-tensioning cycle to specification, covering:
 - five strand tendon
 - a minimum of thirty metres
 - standard tensioning
 - completion of site tensioning documentation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with

EVIDENCE GUIDE

a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to monostrand post-tensioning
- relevant Australian standards
- safe work procedures relating to monostrand post-tensioning

RANGE STATEMENT

Scope of work:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- monostrand post-tensioning is designed to replace standard reinforcement materials with cables and through tensioning, and provide required strength in a reduced thickness of concrete
- post-tensioning plans will contain position of cables, height of chairs, cable specifications, number of strands per cable and the stressing loads
- monostrand is a single cable with a standard seven wire strand with sizes ranging from 12.7mm to 15.2mm
- tensioning is stipulated in the job specifications but is not to exceed 85% of the ultimate tensile strength of the cable
- types of structural elements include slabs, beams, columns and ground anchors
- types of structures include buildings, bridges, towers, tanks, silos, stayed structures, offshore platforms, and underground and submerged structures
- work is to conform to relevant Australian standard, unless this is replaced by superior specifications.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and

RANGE STATEMENT

treatments associated with:

- cutting and grinding equipment
- lighting
- power equipment
- power leads and sources
- trip hazards
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- working with cables under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- angle grinders (power)
- grouting equipment
- hacksaws
- hammers
- hydraulic power packs
- measuring tapes and rules
- monostrand jacks
- nips
- spanners
- staple guns
- steelfixing reels.

Materials include:

- labelling
- specialist material handling gloves.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Lay and fix anchorages and cables.	<p>2.1. Tendons and recess formers are fixed in location according to job plans and drawings.</p> <p>2.2. Ducting profile is laid and specified number of strands pushed through and verified according to job drawings.</p> <p>2.3. Profile anchorages are positioned to specifications.</p> <p>2.4. Form head and anchorages are positioned in accordance with specifications.</p> <p>2.5. Installed cables are inspected in accordance with specifications and relevant standards.</p> <p>2.6. Grout tubes are fixed in accordance with manufacturer and engineer's specifications.</p> <p>2.7. Grout tubes are monitored during concrete pour.</p>
3. Define the work area.	<p>3.1. Safe working area is defined according to safe work practices and OHS regulations.</p> <p>3.2. Barricades and signage are erected where required to isolate safe work areas.</p>
4. Stress tendons.	<p>4.1. Recess formers are removed.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. Anchor blocks and wedges are set up to manufacturers' design.
	4.3. Stressing operations are carried out to nominated loads and to engineer standards using authorised calibrated stressing equipment.
	4.4. Extensions are measured and recorded on standard forms for approval by the engineer.
5. Finish the tensioning.	5.1. Protruding strands are cut and sealed according to manufacturer specifications.
	5.2. Cement grout is mixed and pumped in accordance with the specifications and relevant standards.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record extensions
- identifying and accurately reporting to appropriate personnel any faults in tools,

REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic theory related to cable stressing as a reinforcement technology
- calibration procedures related to stressing techniques and equipment
- construction and steelfixing tensioning terminology
- factors affecting the concrete bonding, curing and strength
- grouting equipment and procedures
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- requirements and processes for recording stressing operations
- safe stressing procedures and multistrand techniques
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- carry out the full multistrand post-tensioning cycle to specification covering:
 - a multistrand cable of at least fifteen strands
 - a minimum of thirty metres
 - standard tensioning
 - completion of site tensioning documentation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to multistrand post-tensioning
- relevant Australian standards
- safe work procedures relating to multistrand

RANGE STATEMENT

Scope of work:

post-tensioning

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- multistrand post-tensioning is designed to replace standard reinforcement materials with cables and, through tensioning, provide required strength in a reduced thickness of concrete
- post-tensioning plans will contain position of cables, height of chairs, cable specifications, number of strands per cable, and the stressing loads
- multistrand cable contains at least fifteen wire strands with sizes ranging from 12.7mm to 15.2mm
- tensioning is stipulated in the job specifications but is not to exceed 85% of the ultimate tensile strength of the cable
- types of structural elements include slabs, beams, columns and ground anchors
- types of structures include buildings, bridges, towers, tanks, silos, stayed structures, offshore platforms and underground and submerged structures
- work is to conform to relevant Australian standard, unless this is replaced by superior specifications.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the

RANGE STATEMENT

conduct of operational risk assessment and treatments associated with:

- cutting and grinding equipment
- lighting
- power equipment
- power leads and sources
- trip hazards
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- working with cables under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- angle grinders (power)
- grouting equipment
- hacksaws
- hammers
- hydraulic power packs
- measuring tapes and rules
- multistrand jacks
- nips
- spanners
- staple guns
- steelfixing reels.

Materials include:

- labelling
- specialist material handling gloves.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant <i>information</i>, confirmed and applied to the <i>scope of work</i> performed.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. <i>Tools and equipment</i> are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. <i>Materials</i> quantity requirements are calculated in accordance with plans, specifications and <i>quality requirements</i>.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and legislative authority</i> obligations and applied.</p>
2. Place and inspect bar, fit components and seal ducts.	<p>2.1. Bar and components are placed and fitted according to manufacturer specifications and job instructions.</p> <p>2.2. Bar layout is inspected for compliance with job specifications and relevant standards.</p> <p>2.3. Ducts are sealed in accordance with manufacturer specifications.</p>
3. Define the work area.	<p>3.1. Safe work area is defined according to safe work practice and OHS regulations.</p> <p>3.2. Barricades and signage are erected where required to isolate safe work areas.</p>
4. Stress bars.	<p>4.1. Stressing jack and accessories are placed and stressing is carried out in accordance with manufacturer and engineer's specifications.</p> <p>4.2. Nuts are tightened and locked off during stressing procedure in accordance with normal stressing safety standards.</p> <p>4.3. Extensions are measured and recorded on standard quality assurance forms for approval by engineer.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Finish the tensioning.	5.1. Anchorages are sealed to prevent grout loss. 5.2. Cement grout is mixed and pumped in accordance with the specifications and relevant standards.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
 - written skills to record extensions
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p> <p>1.8. Finishes to be applied to all surfaces are identified in accordance with job requirements and manufacturer specifications.</p>
2. Prepare new or uncoated surfaces.	<p>2.1. Suitability of surface is determined in accordance with manufacturer recommendations and job specifications.</p> <p>2.2. Surface preparation method is correctly selected in accordance with the environment, finish and substrate requirements.</p> <p>2.3. Surface is prepared to manufacturer specifications in compliance with substrate requirements, specifications and relevant standards.</p> <p>2.4. Surface imperfections are stopped, filled and sanded to required finish in accordance with manufacturer recommendations and job specifications.</p>
3. Prepare previously coated surfaces.	<p>3.1. Condition and nature of existing substrate and surface material are determined and tested in accordance with relevant standards.</p> <p>3.2. Potential hazards are identified and correct procedures are used to reduce risks in accordance</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>with manufacturer recommendations and job specifications.</p> <p>3.3. Surface preparation method is correctly selected in accordance with the environment, finish and substrate requirements.</p> <p>3.4. Surfaces are prepared by removing unwanted coatings and loose debris.</p> <p>3.5. Surface defects are repaired and imperfections stopped, filled and sanded to smooth finish ready for required finish in accordance with manufacturer recommendations and job specifications.</p>
4. Clean up.	<p>4.1. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in accordance with sound work practices and compliance with environmental requirements.</p> <p>4.2. Tools and equipment are cleaned and stored safely and effectively to manufacturer specifications.</p> <p>4.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.</p> <p>4.4. Work area is cleared and materials disposed of or recycled in a manner to avoid spontaneous combustion in accordance with legislation, regulations, codes of practice and job specifications.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret drawings, specifications and documentation from a variety of sources
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set-out work
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- corrosion processes and techniques for the protection of metals
- hazards associated with lead, asbestos, solvents, chemicals and dust
- interpretation of plans, drawings and specifications
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials handling and environmentally friendly waste management processes
- prevention and rectification procedures for surface coating defects
- procedures, products and techniques associated with preparation of surfaces
- processes for the calculation of material requirements
- properties and surface preparation requirements of new substrates
- surface coating technology
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare all surfaces listed in the range statement for finishing, providing evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare to specification a minimum of four surfaces:
 - one being a new gyprock surface
 - three being previously coated surfaces with one being an external timber surface, one an internal surface and one a metal or masonry surface.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- drawings and documentation relevant to activities
- materials relevant to proposed activities
- range of surfaces for painting preparation
- tools and equipment appropriate to required tasks.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language,

EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the preparation of surfaces for painting
- relevant Australian standards
- safe work procedures relating to the preparation of surfaces for painting
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - electrical fires and/or explosion from combustible materials
 - falling objects
 - manual handling
 - solvents, lead, asbestos, chemicals, fumes and gases
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- drop sheets
- duster brushes
- filling knives and blades
- hammers
- hand sanders
- heat removal equipment
- mechanical sanders
- nail punches
- putty knives
- scrapers
- water blasters
- wire brushes.

RANGE STATEMENT

<i>Quality requirements</i> include relevant regulations, including:	<ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications where specified • workplace operations and procedures.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • waste management.
<i>Statutory and regulatory authority</i> includes:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Surfaces</i> include:	<ul style="list-style-type: none"> • horizontal or vertical • inclined or curved • internal or external • timber, metal, masonry, concrete or plaster.
<i>Surface preparation method</i> includes:	<ul style="list-style-type: none"> • chemical stripping • grinding • sanding • scraping (mechanical and hand) • use of heat guns • washing down • water blasting.
<i>Existing substrate and surface</i> may be contaminated with:	<ul style="list-style-type: none"> • dust • films of grease • mild chalking • mild efflorescence • mould • paint films, which are: <ul style="list-style-type: none"> • blistering • flaking • peeling • cracking • smoke damage.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Work instructions and operational details are obtained using relevant <i>information</i>, confirmed and applied for <i>planning and preparation</i> purposes.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. <i>Tools and equipment</i> selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and <i>quality requirements</i>.</p> <p>1.6. <i>Materials</i> appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. <i>Environmental protection requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and regulatory authority</i> requirements, and are applied.</p>
2. Identify extruded aluminium sections.	<p>2.1. Types of <i>aluminium sections</i> are identified for sectional size and design.</p> <p>2.2. Uses of various sections are recognised consistent with their specific design.</p>
3. Identify methods of joining sections.	<p>3.1. Characteristics of sections are identified for method of <i>joining</i>.</p> <p>3.2. Securing of joints is identified with types of sections.</p>
4. Use sections to construct frames.	<p>4.1. Aluminium sections designed for frames are set out and prepared for joining.</p> <p>4.2. Door and sash type sections are set out and prepared for joining.</p> <p>4.3. Joints are made and secured to structural design requirements.</p>
5. Clean up.	<p>5.1. Work area is cleaned and waste material disposed of safely.</p> <p>5.2. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- design and use of aluminium extrusions
- interpretation of workshop drawings
- job safety analysis (JSA) and safe work method statements
- measuring and marking processes related to aluminium fabrication
- types and performance of materials relevant to aluminium fabrication work
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to identify six and assemble four different types of aluminium extruded sections, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- display compliance with organisational policies and procedures, including quality assurance requirements within the context of aluminium fabrication
- identify designed purpose of six separate aluminium sections
- identify methods of joining different sections
- demonstrate sound and safe techniques in preparing component sections for joining
- demonstrate safe and effective application in the fitting and securing of four different types of construction joints
- display safe and effective handling applications to minimise opportunities for damage of material surfaces
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- workshop location
- tools and equipment appropriate to required tasks
- materials relevant to proposed activities
- drawings and documentation relevant to activities.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1.***Information*** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets
- memos
- regulatory and legislative requirements pertaining to the use of aluminium sections in fabrication
- relevant Australian standards
- safe work procedures relating to the use of aluminium sections in fabrication
- signage
- verbal, written and graphical instructions

RANGE STATEMENT

1.2. *Planning and preparation* include:

- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

1.3. *Safety (OHS)* is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

1.4. *Tools and equipment* include:

- air compressor and hoses
- docking saws
- files
- grinders
- hammers
- measuring tapes and rules
- power drills
- power leads
- screwdrivers
- squares.

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Sealant material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Prepare surface to receive sealants.	<p>2.1. Surface is cleaned free of contaminants such as oil, grease, dust or moisture.</p> <p>2.2. Surface is prepared by sanding and/or cleaning in accordance with preparation specifications.</p>
3. Apply sealant.	<p>3.1. Sealant materials are applied to manufacturer recommendations and specifications.</p> <p>3.2. Care is taken to ensure no air is trapped within applied sealant.</p> <p>3.3. Surfaces are aligned and fixings correctly installed to specifications.</p>
4. Install sealant devices.	<p>4.1. Sealant devices are fitted securely to specified positions.</p> <p>4.2. Assistance is provided to secure installation of fixtures, assuring level and plumb to line.</p>
5. Clean up.	<p>5.1. Excessive sealant is removed from joints and surrounding surfaces, and cartridge nozzle or container is sealed securely.</p> <p>5.2. Sealants are promptly removed from tools and equipment.</p>

ELEMENT**PERFORMANCE CRITERIA**

-
- 5.3. Work area is cleared and *waste material and debris* are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specifications.
- 5.4. Tools and equipment are cleaned, routinely maintained and returned to store.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations relevant to surface areas
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS1940 The storage and handling of flammable combustible liquids
- behaviour of sealant materials used in structures
- job safety analysis (JSA) and safe work method statements
- measurement and calculation techniques relevant to surface areas

REQUIRED SKILLS AND KNOWLEDGE

- safe materials handling techniques and requirements, including hazardous materials relevant to sealant application work
- safe use of scaffolding and working platforms
- types and performance of sealants used in buildings
- types and use of hand tools and equipment relevant to sealant application and installation work
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to handle and use all the sealant materials and application devices listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements
- select and use appropriate processes, tools and equipment to carry out tasks
- adopt and carry out correct procedures prior to and during handling and application of materials
- demonstrate safe and effective operational use of tools and equipment
- demonstrate safe application in the process of cleaning up application area and cleaning equipment
- communicate with others to ensure safe and effective operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- sealants and sealant devices appropriate to application tasks
- plant and equipment appropriate to application processes
- hand tools appropriate to application processes
- work location appropriate to activity processes
- MSDS information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to application of sealants and sealant devices
- relevant Australian standards
- safe work procedures relating to application of sealants and sealant devices
- signage

RANGE STATEMENT

Planning and preparation include:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling hazardous materials where applicable in accordance with AS1940 The storage and handling of flammable combustible liquids
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brooms
- brushes
- cartridge applicators
- putty knives and paring knives
- rollers
- sanders
- spray equipment.

RANGE STATEMENT

Quality requirements include:

- attention to job specifications
- control of handling procedures
- preparation of surfaces
- quality of materials
- relevant regulations, including:
 - Australian standards
 - internal company quality policy and standards
 - manufacturer specifications where specified
 - workplace operations and procedures
- use and maintenance of equipment.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authority includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Sealant materials include:

- bitumen
- mastic
- putty
- silicone
- waterproof paint.

Sealant materials can be ***applied*** to:

- acrylic sheeting
- bricks and concrete masonry
- concrete
- glass
- metal sheeting
- paints
- plaster sheeting
- plywood and particle board
- structural metallic sections and components
- timber.

Sealant devices include:

- cover plates to aluminium framework
- cover straps or beading to sheet jointing
- flashings to window and door frames
- impregnated material for masonry expansion joints
- strip or sheet membrane.

RANGE STATEMENT

Waste material and debris
include:

- broken or damaged goods
- cardboard
- loose material
- paper
- plastic
- sealants and sealing materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<ul style="list-style-type: none">1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.1.3. Signage and barricade requirements are identified and implemented.1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.1.8. Set-out material is prepared to specified sectional dimensions.
2. Develop set-out.	<ul style="list-style-type: none">2.1. Overall width, height and depth of carcase construction are marked out to specifications using set-out boards with benchtop length, thickness overhang and edge profile indicated as specified.2.2. Plinth/kicker is accurately depicted, including length, depth, set back, position of intermediate bearers and joint detail.2.3. Position and thickness of vertical carcase components are marked in to specifications with position of shelving, including thickness, depth and type (fixed/adjustable), all accurately depicted on set-out and overall height of unit marked in to specified dimension.2.4. Drawer is detailed, including height, width, clearances and runner type as specified.2.5. Position, width and design of drawer fronts and doors are accurately marked in on set-out.2.6. Capital or bolection moulding detail and position are

ELEMENT	PERFORMANCE CRITERIA
	clearly indicated to specification and relevant joint detail is indicated as specified to allow accurate calculations of quantities.
	2.7.Height of drawer fronts and doors, including clearances, are accurately marked in.
	2.8.Position and dimensions of fixing rails are clearly defined as specified.
	2.9.Drawer detail, including height and clearance, is defined to specifications.
	2.10. Relevant joint detail is drawn in to specification.
3. Mark out material for components.	3.1.Materials are selected and prepared to design requirements for components, including face and edge marked on each component.
	3.2.Length and joint details are transferred from set-out to component material with marking out on each component checked in preparation for <i>machining</i> .
	3.3.Set-out material is marked, where required, for appropriate identification of components.
4. Carry out manufacturing processes on components.	4.1.Machines are set up and used to carry out machining processes of set-out component material, with overall sequence of assembly determined in accordance with carcass structure.
	4.2.Components are prepared to set-out details, and joints are checked for design requirements prior to assembling.
5. Assemble carcass.	5.1.Carcass is assembled in line with determined procedures, with faces and edges flush and joints secured to specified fixing.
	5.2.Carcass is squared and held square with temporary brace or back fixed into position, with shelves and mullions installed as specified in accordance with fitment design.
	5.3.Plinth/kicker is assembled to designed construction, square and out of wind with adjoining surfaces flush and face panels fitted kicker with all joints close fitting and adjoining surfaces flush.
	5.4.Plinth/kicker is positioned to specified location and screwed to carcass.
	5.5.External fixed panels are prepared to specifications for assembling and secured to carcass.
6. Assemble and fit	6.1.Bench/counter top components are assembled to

ELEMENT	PERFORMANCE CRITERIA
benchtops.	specified design and finished in preparation for installation.
	6.2. Bench/counter top is positioned on carcass to specified dimensions and fixed by specified fixing method and appropriate <i>fixings and fasteners</i> .
7. Assemble and install drawers.	7.1. Drawers are assembled to specifications, with bottoms fitted and fixed.
	7.2. Drawer runner type is determined and installed to specified dimensions and manufacturer specifications.
	7.3. Drawers are installed parallel to carcass bottom showing specified clearances, and drawer fronts and doors are prepared for installation.
8. Fit doors and drawer fronts.	8.1. Door hinges are installed to plan and manufacturer specifications and doors are hinged and hung to carcass with faces flush and specified clearances allowed.
	8.2. Drawer fronts are secured to drawers by nominated method with specified clearances allowed and handles and catches accurately installed to specification.
	8.3. Unit is cleaned up and <i>surface edge finishes</i> are sanded to specified finish for proposed coated finish, where applicable.
9. Clean up.	9.1. <i>Free standing fitments</i> are stored safely to avoid damage to surfaces.
	9.2. Work area is cleared to specifications and waste and unwanted material is removed safely.
	9.3. Plans, specifications and set-outs are stored for future reference and tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- types of fitments
- adhesives, fixings and fasteners relevant to fitment construction
- clearances associated with types of finishes to surfaces
- organisation's quality assurance requirements
- drawings and specifications
- handling of materials relevant to fitment construction
- manufacturing processes for fitment components
- materials and their characteristics relevant to fitment construction
- measurement and marking related to making set-out for fitments
- methods of constructing fitments
- setting out, assembling and fixing procedures for fitment construction
- use of tools and equipment relevant to setting out materials, manufacturing and assembling processes for fitments
- workplace and safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to manufacture and assemble either a cabinet, showcase, wall unit, counter or workstation, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of manufacturing and assembling fitments
- select and use appropriate setting out techniques, tools and equipment
- correctly apply details and dimensions to make set-out for fitment
- show clear details of sectional material and method of joining components on set-out
- accurately apply set-out to mark each component correctly for length and machining processes
- efficiently identify marking and stacking of each different marked component
- identify details and specifications of nominated fitment to be constructed
- identify components and manufacturing processes to be carried out
- safely and efficiently set up and use machines for required machining processes
- safely and efficiently use hand tools and equipment
- select and use appropriate processes, tools and equipment for assembling components

EVIDENCE GUIDE

- demonstrate sound techniques in checking and adjusting component joints for fitting
- safely and efficiently assemble and fix carcass and components parts
- accurately and safely fit and fix/secure drawers and doors
- apply appropriate processes to finish surfaces to specified requirement
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workshop location and set-out bench appropriate to activity
- dressed and sheet materials relevant to fitment designs
- material appropriate for set-out boards
- drawings and specifications relevant to activities
- tools and equipment appropriate for activity
- materials and components related to proposed activity
- static machines relevant to proposed manufacturing processes
- drawings, specifications and documents relevant to the fitment.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

EVIDENCE GUIDE

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to setting out and assembling cabinets, showcases, wall units, counters and workstations
- relevant Australian standards
- safe work procedures relating to setting out and assembling cabinets, showcases, wall units, counters and workstations
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations

RANGE STATEMENT

and workplace policies and practices

- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- air compressor and hoses
- bevels
- chisels
- clamps
- hammers
- hand saws
- marking gauges
- measuring tapes and rules
- nail guns
- power drills
- power leads
- power planers
- power routers
- power saws
- sanders
- sash cramps
- screwdrivers
- set-out bench
- squares
- straight edge.

Quality requirements include:

- assembling procedures
- attention to specifications of work
- control of handling procedures
- quality of materials

RANGE STATEMENT

	<ul style="list-style-type: none">• relevant regulations, including:<ul style="list-style-type: none">• AS1473 Guarding and safe use of woodworking machinery• internal company quality policy and standards• manufacturer specifications where specified• storing and packaging• use and maintenance of equipment• workplace operations and procedures.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• dust and noise• stormwater protection• waste management.
<i>Statutory and regulatory authority</i> includes:	<ul style="list-style-type: none">• federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Carcase construction:</i>	<ul style="list-style-type: none">• materials include:<ul style="list-style-type: none">• medium density fibreboard (MDF)• particle board• plywood• timber• veneered particle board• types include:<ul style="list-style-type: none">• framed and panelled• hollow frame flush• solid core flush• solid panel• type and thickness of backing.
<i>Set-out boards</i> may be:	<ul style="list-style-type: none">• paper on solid base• particle board• plywood.
<i>Machining</i> manufacturing processes include:	<ul style="list-style-type: none">• band sawing to shape• cutting to lengths• dressing to shape• grooving and rebating• mortising• moulding to shape• sanding

RANGE STATEMENT

Fixings and fasteners used in assembling fitments include:

- trenching for housings
- trenching for tenons.
- brads
- director screws
- knockdown fittings
- nails
- self-tapping screws
- wood screws.

Surface edge finishes include:

- aluminium mouldings
- plastic laminates
- thermo plastics
- timber veneers.

Free standing fitments may be constructed of:

- acrylic
- glass
- laminates
- manufactured board
- solid timber.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<ul style="list-style-type: none">1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.1.3. Signage and barricade requirements are identified and implemented.1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.1.5. Personal protective equipment selected, correctly fitted and used.1.6. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.1.7. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.1.8. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.
2. Undertake site measurements.	<ul style="list-style-type: none">2.1. Datums and gridlines or reference points are located and confirmed using levelling techniques.2.2. Surrounding structures and surfaces are checked for plumb, level, line and square.2.3. Measurements are taken of internal width and height, if applicable, and are recorded.2.4. Inconsistencies in dimensions, layout or location of structure outside the specified tolerances are noted and reported to appropriate personnel.2.5. Position of proposed frames and fittings are marked out on surrounding surfaces using non-permanent markers.
3. Assemble components of framework.	<ul style="list-style-type: none">3.1. Appropriate area is selected and material components are laid out for assembly.3.2. Framework is assembled, with overall dimension checked for conformity to location and design and using appropriate fixings and fasteners.3.3. Frame is checked for square and adjusted where

ELEMENT	PERFORMANCE CRITERIA
	required.
	3.4.Areas are laminated where required and finishes applied where applicable.
4. Pre-fit component fittings.	4.1.Component fittings are pre-fitted where applicable. 4.2.Fittings are fixed to locations according to specifications.
5. Prepare for packaging.	5.1.Fittings too large for safe transport are disassembled. 5.2.Packaging of separate components is identified and arranged.
6. Clean up.	6.1.Components and assembly diagram are numbered for inclusion in delivery instructions. 6.2.Waste and unwanted material are disposed of safely. 6.3.Unused materials are stored/stacked. 6.4.Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant

REQUIRED SKILLS AND KNOWLEDGE

resources and sequence tasks

- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- aluminium construction materials and methods
- AS1873 Powder actuated (PA) hand-held fastening tools
- AS2047.2 Windows in buildings - Construction, installation and maintenance
- commonly used shopfitting materials and their characteristics
- job safety analysis (JSA) and safe work method statements
- measuring and levelling processes related to setting out and checking lineal measurements and levels of surfaces
- measuring and squaring processes relevant to lineal measurements for framework
- organisation's quality assurance requirements
- shopfront design processes
- timber construction methods
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare all components for manufacture of a shopfront, providing evidence of the ability to:

- demonstrate operational safety compliance with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of assembling and installing a shopfront
- identify design, delivered assemblies, components, fittings and assembly diagram
- identify and select components and fittings to locations in assembled shopfront
- select and use appropriate processes, tools and equipment to assemble and install nominated unit
- demonstrate appropriate and effective applications to prepare opening to receive framework
- safely and efficiently assemble sections, components and fittings
- safely and efficiently install bulkhead into position
- safely and efficiently locate and install assembly into place
- safely and efficiently install components and fittings and, where applicable, check for designed operation
- identify typical faults and problems that occur

EVIDENCE GUIDE

	<p>and action required to rectify them</p> <ul style="list-style-type: none">• communicate with others to ensure safe and effective workplace operations.
Context of and specific resources for assessment	<p>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</p> <p>Assessment is to comply with relevant regulatory or Australian standards' requirements.</p> <p>Resource implications for assessment include:</p> <ul style="list-style-type: none">• workshop location with appropriate area• tools and equipment appropriate to required tasks• materials and prepared components for assembly processes• drawings, specifications and other documentation relevant to activity. <p>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</p>
Method of assessment	<p>Assessment methods must:</p> <ul style="list-style-type: none">• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application• reinforce the integration of employability skills with workplace tasks and job roles• confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<ul style="list-style-type: none">1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.1.3. Signage and barricade requirements are identified and implemented.1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.1.8. Fittings and/or pre-assembled frames are unloaded carefully to protect finishes and are placed in well protected area until ready to reassemble.
2. Establish datum and plumb lines.	<ul style="list-style-type: none">2.1. Datum is struck for level as required for installation.2.2. Plumb lines are marked at all connecting points.
3. Prepare opening.	<ul style="list-style-type: none">3.1. Opening dimensions are checked in accordance with dimensions of fabrication and plumb lines are checked for similarity to original site measurement.3.2. Drawings are checked for position of lease line or where unavailable checked with building contractor.3.3. Protrusions are scraped, chipped and cut away to connecting points to facilitate installation.3.4. Narrowest part of opening is determined and sill packing is set up to specified level for installation that to conforms to AS2047 Windows in buildings.
4. Assemble shopfront.	<ul style="list-style-type: none">4.1. Fittings are placed into position to commence installation.4.2. Holes are pre-drilled for fixing positions suitable to connect to brickwork, timber and stone.

ELEMENT

PERFORMANCE CRITERIA

	4.3. Measurements of completed assembly are checked against opening and glazier is contacted for site measurements.
5. Fit bulkhead.	<p>5.1. Bulkhead is prepared for installation by drilling, cutting and routing holes and openings to accept fittings and fixtures.</p> <p>5.2. Scaffolding is erected to fit bulkhead into position.</p> <p>5.3. Bulkhead is raised into position using mechanical lifting equipment and secured to specifications using fixing methods required to securely support installation.</p>
6. Install assembly.	<p>6.1. Door are checked for square to ensure glazier has blocked glass correctly and assembly is positioned into opening allowing it to rest on packing at highest position in floor.</p> <p>6.2. Datum line is transferred on assembly and position is measured and transferred to all connecting points.</p> <p>6.3. Assembly is installed to level using appropriate equipment for levelling process, plumbed off narrowest point of width and packed to position.</p> <p>6.4. Assembly is anchored at all connecting points to specifications, doors are fitted where applicable and glazier is contacted to notify that assembly is ready for glass installation.</p> <p>6.5. Door closures are checked to ensure that they face mount, floor or transom and that automatic and floor or head-fixed tracks operate freely.</p> <p>6.6. Closures, door furniture and scribe fillers are fitted and any remaining gaps are sealed with approved sealant.</p> <p>6.7. Sealants are applied to specification to protect against water, wind and dust penetration.</p>
7. Clean up.	<p>7.1. Assembly is cleaned free from excess sealant, finger marks and masking tape.</p> <p>7.2. Waste and unwanted material are disposed of safely with any waste aluminium stored for recycling and any unused material stored/stacked.</p> <p>7.3. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- Australian standards, including AS1873 Powder actuated (PA) hand-held fastening tools, and AS2407 Windows in buildings
- design and construction processes for shopfronts
- interpretation of relevant drawings and specifications
- job safety analysis (JSA) and safe work method statements
- organisation's quality assurance requirements
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare and assemble all components of a shopfront, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of setting out and fabricating a shopfront
- identify details and specifications of nominated shopfront to be set out
- accurately apply tools and equipment to set out and mark location of frame material thickness and components
- accurately apply measuring devices to read and record dimensions, plumb and level
- identify inconsistencies in dimensions, plumb and level recorded for notification to appropriate personnel
- identify and select prepared materials for components
- display sound procedures for the safe and accurate preparation of each component for assembling
- select and use appropriate processes, tools and equipment for assembling components
- demonstrate safe and efficient use of tools and equipment
- demonstrate sound techniques in the safe and efficient assembly of components to form

EVIDENCE GUIDE

	framework for shopfront
	<ul style="list-style-type: none">• display sound and accurate fitting of component fittings to locations• complete assembly free of scratches, dents and blemishes• safely and efficiently disassemble components and fittings and identify for delivery and assembling instructions• identify typical faults and problems that occur and action required to rectify them• communicate with others to ensure safe and effective workshop operations.

Context of and specific resources for assessment This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workshop location with appropriate area
- tools and equipment appropriate to required tasks
- materials and prepared components for assembly processes
- drawings, specifications and documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning

EVIDENCE GUIDE

knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised**

RANGE STATEMENT

wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Identify various types of finishing applications.	<p>2.1. Various types of finishing surfaces are identified in accordance with type of material surface and specified finish.</p> <p>2.2. Methods of applying finishes to surfaces are identified.</p> <p>2.3. Characteristics for type of material to be applied are identified to determine means of application.</p>
3. Apply stain to a surface/veneered surface.	<p>3.1. Surface is checked to ensure that it is clean, dry and ready for stain application.</p> <p>3.2. Stain is applied in an even and consistent manner with cloth, pad or brush to instructions and specifications.</p>
4. Apply lacquers to a surface.	<p>4.1. Stained surface is checked as being fully dry and light sanded to ensure clean surface.</p> <p>4.2. Surface is sanded to ensure that it is clean and free of imperfections.</p> <p>4.3. Consistent coverage of lacquer is applied to surface in accordance with manufacturer recommendations.</p>
5. Apply paint/sealer to	<p>5.1. Surface is checked to ensure it is smooth and clean,</p>

ELEMENT	PERFORMANCE CRITERIA
a surface.	then paint or sealer is applied with roller/brush to obtain an even coverage to specifications.
	5.2. Paint or sealer is applied with spray gun to obtain an even coverage to specifications.
6. Apply powder coating to a surface.	6.1. Surface to be covered is prepared to specifications for process.
	6.2. Powder coating is applied in accordance with manufacturer specifications.
7. Clean up.	7.1. Area is cleaned and waste material disposed of safely.
	7.2. Unused materials are sealed and stored.
	7.3. Equipment is cleaned safely using correct solvent in accordance with material safety data sheet (MSDS) instructions, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings, specifications and relevant Australian standards
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to workplace requirements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and

REQUIRED SKILLS AND KNOWLEDGE

problems

- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS3754 Safe application of powder coatings by electrostatic spraying
- interpretation of construction specifications
- job safety analysis (JSA) and safe work method statements
- organisation's quality assurance requirements
- surface preparation relevant to material surfaces and applied finishes
- types and performance of finished surfaces
- types and uses of finishing materials
- types of applicators and equipment relevant to applying finishing materials
- types of hazardous materials and safe handling requirements
- types of material substrates and surfaces
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to apply finishes to all the surfaces listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of applying finishes to timber and aluminium surfaces
- identify designed finish and surface to be covered
- identify and select appropriate materials and applicators to apply three separate types of finishes
- select and use appropriate processes and safety requirements to prepare materials, application and area
- select and use appropriate personal protective equipment
- safely and effectively apply material to provide designed base coat
- safely and efficiently sand and prepare surface before coat applications, where applicable
- correctly and efficiently use applicators
- safely and effectively apply coats of three specified finishes to surfaces, free from blemishes
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and

EVIDENCE GUIDE

effective workshop operations.

Context of and specific resources for assessment This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location appropriate for application processes
- spray booth and appropriate spray equipment for activity
- materials and equipment applicable to activity processes
- documentation and specifications relevant to the application and finishes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified

RANGE STATEMENT

	<ul style="list-style-type: none"> • MSDS • memos • regulatory and legislative requirements pertaining to applying finishes • relevant Australian standards • safe work procedures relating to applying finishes • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • concealed services (water, power and gas) • lighting • restricted access barriers • traffic control • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • air spray equipment • airless spray equipment

RANGE STATEMENT

	<ul style="list-style-type: none"> • benches • brushes • buckets • dusting brushes • pads • paint stirrers • rags • roller accessories • rollers • spray guns • stools.
<i>Quality requirements</i> include:	<ul style="list-style-type: none"> • control of handling procedures • finishing of surfaces • quality of materials • relevant regulations, including: <ul style="list-style-type: none"> • AS3754 Safe application of powder coatings by electrostatic spraying • internal company quality policy and standards • manufacturer specifications where specified • workplace operations and procedures • spray application procedures • use and maintenance of equipment • workplace operations and procedures.
<i>Materials</i> include:	<ul style="list-style-type: none"> • lacquers • paints and sealers • powder coating.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • waste management.
<i>Statutory and regulatory authority</i> includes:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Surfaces</i> to be finished may be:	<ul style="list-style-type: none"> • aluminium • medium density fibreboard (MDF) • particleboard • timber • veneered panelling.

RANGE STATEMENT

Methods for *applying finishes* for both horizontal and vertical applications include:

- brush
- pad
- roller
- spray gun.
- AS3754 Safe application of powder coatings by electrostatic spraying.

Powder coating is applied in accordance with:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Appropriate personal protective equipment selected, correctly fitted and used.</p> <p>1.6. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.7. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.8. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Identify types of decorative finishes and requirements for fixing.	<p>2.1. Types of decorative add-ons and finishes are identified and applied.</p> <p>2.2. Methods of fixing and finishing add-ons are identified and applied.</p>
3. Carry out fixing processes and finishing techniques.	<p>3.1. Preparation requirements for fixing of add-ons are carried out to instructions and specifications.</p> <p>3.2. Decorative add-ons are fitted and fixed according to instructions and specifications.</p> <p>3.3. Applied add-ons are trimmed and finished to specifications.</p>
4. Clean up.	<p>4.1. Work area is cleared and waste material disposed of safely.</p> <p>4.2. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- commonly used decorative and ornamental finishes
- fixings and fasteners relevant to affixing decorative edgings and add-ons
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- materials and their characteristics relevant to decorative edgings and add-ons
- measuring and setting out related to decorative finishes
- organisation's quality assurance requirements
- workplace and environment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to select finishes, and fix and finish at least two types of decorative add-ons in two different materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of applying decorative finishes
- identify four designed decorative or ornamental finishes to be applied in application projects
- identify and select required materials and components for project
- select and use appropriate processes, tools and equipment for application tasks
- appropriately and accurately set out materials and locate for placement
- adopt safe and effective handling procedures for movement and placement of materials and components
- safely and efficiently fix or secure two separate add-ons into place
- apply appropriate and efficient applications of at least two specified finishes
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and

EVIDENCE GUIDE

environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location and unit associated with application tasks
- materials and components relevant to proposed activity
- tools and equipment appropriate for activity
- drawings and documentation relevant to designed activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further

EVIDENCE GUIDE

learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to applying and trimming decorative finishes
- relevant Australian standards
- safe work procedures relating to applying and trimming decorative finishes
- signage

RANGE STATEMENT

Planning and preparation include:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - working platforms and scaffolding
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- air compressor and hoses
- bevels
- chisels
- clamps
- hammers
- hand saws
- measuring tapes and rules
- nail guns

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply colour matching systems.	1.1.Colour matching systems are identified. 1.2.Attributes of different colour matching systems are identified and applied. 1.3.Different colour matching systems are applied for specific functions.
2. Identify and apply the theory of colour to signage.	2.1.Principles of colour legibility and contrast are identified and applied to signage. 2.2.Principles of <i>colour harmony</i> are identified and applied to signage. 2.3. <i>Colour schemes</i> are identified and applied to signage.
3. Apply computer colour matching systems.	3.1.Colour matching by computer colour matching systems is applied to signage.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to apply design concepts and principles of colour
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - design principles
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or

REQUIRED SKILLS AND KNOWLEDGE

- external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- problem solving skills to recognise, and take action to rectify, minor faults and problems.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- quality assurance requirements, including:
 - Australian and international standards relevant to the sign industry
 - internal company quality assurance policy and risk management strategies
 - workplace operations and procedures
- relevant Australian and New Zealand standards and:
 - manufacturer specifications
 - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in signage design.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
 - principles of colour
 - colour theory
 - colour matching
 - signage for visual impact
- applying appropriate software in order to design and apply the principles of colour to signage.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to using colour for signage
- support materials appropriate to activity
- workplace instructions relating to using colour for signage
- material safety data sheets
- research resources, including industry-related

EVIDENCE GUIDE

systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in

EVIDENCE GUIDE

relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- 1.1. ***Colour matching systems*** include:
- black and white
 - cyan, magenta, yellow and black (CMYK)
 - grey scale
 - pantone matching system (PMS)
 - red, green and blue (RGB).
- 1.2. ***Colour harmony*** includes:
- analogous
 - complementary
 - monochromatic
 - split complementary.
- 1.3. ***Colour schemes*** include:
- analogous
 - complementary
 - monochromatic
 - split complementary.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use correct layout principles to maximise signage effect.	1.1.Type of formal or informal layout is determined from <i>client</i> specifications. 1.2. Correct <i>principles of layout</i> appropriate to given brief are identified and applied.
2. Develop layout roughs/sketches from specifications.	2.1.Job specifications are established and applied. 2.2. Sketches are produced to meet job specifications using appropriate techniques.
3. Reproduce layouts from layout roughs/sketches using computer programs.	3.1. Layouts are produced using appropriate <i>computer software</i> to accurately interpret sketches and apply <i>principles of legibility and spacing of letters</i> . 3.2. Layouts are reviewed following feedback from client. 3.3. Layouts are saved and stored safely.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to apply layout and design concepts and principles and sound techniques to produce layout accurately to a balanced design
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - design principles
 - job drawings
 - charts and hand drawings
 - manufacturer specifications and instructions

REQUIRED SKILLS AND KNOWLEDGE

- organisational work specifications
- computer programs
- requirements and instructions issued by authorised organisational or external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- quality assurance requirements, including:
 - Australian and international standards relevant to the sign industry
 - internal company quality assurance policy and risk management strategies
 - workplace operations and procedures
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in signage design.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
 - principles of layout and design
 - layout and design theory
 - signage for visual impact
- applying appropriate software in order to design and apply the principles of layout and design to signage
- correct and effective protocols for using computers and software.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to layout and design signage
- support materials appropriate to activity
- workplace instructions relating to layout and design signage
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources,

EVIDENCE GUIDE

and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training

EVIDENCE GUIDE

staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Clients include:

- business owners
- printers
- property owners
- sign manufacturers
- statutory bodies.

Principles of layout include:

- balance
- colour
- contrast
- harmony
- letter styles
- spacing.

Computer software includes:

- Adobe Illustrator
- Adobe Photoshop
- CorelDraw
- FlexiSign
- Vinyl Master Pro.

Principles of legibility and spacing of letters include:

- bold, normal and light
- format of text - capitals, lowercase, etc.
- spacing issues
- type of font used.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements are recognised and adhered to in accordance with application tasks and workplace operations.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and/or client briefs.</p> <p>1.4. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.5. Paint systems and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.6. Tools and equipment are selected to carry out tasks consistent with job requirements.</p> <p>1.7. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.8. Temporary or permanent application of materials is determined from job requirements.</p>
2. Prepare surface and apply undercoat or primer.	<p>2.1. Surface is cleaned and/or abraded with appropriate tools and equipment to manufacturer specifications.</p> <p>2.2. Undercoat or primer is applied to manufacturer specifications.</p>
3. Apply paint coating using spray application.	<p>3.1. Appropriate spray gun is selected, used safely and effectively and set to meet manufacturer specifications.</p> <p>3.2. Air compressor is set to meet manufacturer specifications.</p> <p>3.3. Compatible coating type for substrate is selected and the correct viscosity of paint is determined for specified application.</p> <p>3.4. Coating is applied evenly over the surface area.</p> <p>3.5. Tools and equipment are cleaned using the correct cleaning products and procedures.</p>
4. Apply paint coating using brush application.	<p>4.1. Appropriate brushware and compatible coating type for the substrate are selected.</p> <p>4.2. Coating is applied evenly over the surface area.</p> <p>4.3. Brushes are cleaned using correct cleaning products and procedures.</p>
5. Apply paint coating	<p>5.1. Appropriate roller and roller sleeve, and compatible</p>

ELEMENT	PERFORMANCE CRITERIA
using roller application.	coating type for the substrate are selected.
	5.2. Coating is applied evenly over the surface area.
	5.3. Rollers and sleeves are cleaned using correct cleaning products.
6. Clean up.	6.1. Surrounding surface environment/area is cleaned using correct solvent.
	6.2. Waste materials are removed in accordance with <i>statutory and regulatory authority requirements</i> .
	6.3. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to prepare surfaces using correct applicators and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - computer programs
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- organisational skills, including the ability to plan and set out work
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- coating types characteristics and uses for:
 - acrylic lacquers and their thinner/reducer
 - clear finishes and their thinner
 - oil based paints and their solvents
 - spraying enamel and its thinner
 - two-pack paints and their thinner
 - water-based paints and their thinner
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- quality assurance requirements, including:
 - Australian and international standards relevant to the sign industry
 - internal company quality assurance policy and risk management strategies
 - workplace operations and procedures
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals
- terminology and definitions used in signage.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
 - correct coating products for particular applications according to their characteristics
 - solvents, thinners and reducers safely and correctly
- using spray guns, brushes and rollers effectively to apply coatings on surfaces being prepared for signage.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to preparing surfaces for signage
- support materials appropriate to activity
- workplace instructions relating to preparing surfaces for signage
- material safety data sheets

EVIDENCE GUIDE

- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language,

EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing signage
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)

RANGE STATEMENT

- lighting
 - restricted access barriers
 - traffic control
 - working at heights
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
 - use of firefighting equipment
 - use of machines
 - use of tools and equipment
 - workplace environmental requirements and safety.
- Job requirements*** include:
- assessment of conditions and hazards
 - determination of work requirements
 - equipment defect identification
 - safety plans and policies
 - work site inspection.
- Tools and equipment*** include:
- air compressor
 - brushware
 - roller and roller sleeve
 - spray gun.
- Cleaned and/or abraded*** materials include:
- alcohol
 - garnet paper
 - methylated spirits
 - mineral turpentine
 - silicon paper
 - thinners
 - wax and grease remover.
- Undercoats and primers*** include:
- acrylic undercoat
 - enamel undercoat
 - galvanised primer
 - wood primer.
- Coating types*** include:
- acrylic lacquers and their thinner/reducer
 - clear finishes and their thinner
 - oil based paints and their solvents
 - spraying enamel and its thinner
 - two-pack paints and their thinner
 - water-based paints and their thinner.
- Substrate*** includes:
- corflute

RANGE STATEMENT

Statutory and regulatory authority requirements include:

- masonry
- metal
- plastics, including polyvinyl chloride (PVC)
- rough finish
- smooth finish
- timber.
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
 - removal of waste products
 - storage of chemicals.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.5. Tools, equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.6. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.7. Temporary or permanent application of materials is determined from job requirements.</p> <p>1.8. Potential material shrinkage is determined to ensure quality of completed work.</p>
2. Work with files for digital output.	<p>2.1. Image resolution is adjusted to suit output requirements.</p> <p>2.2. Uncompressed file formats are used as required.</p> <p>2.3. Files are stored safely and securely to maintain their integrity.</p>
3. Use computer programs to produce designs for digital printing.	<p>3.1. Observing design principles, appropriate software is selected to produce designs for digital printing and used according to manufacturer specifications to produce designs for digital printing.</p> <p>3.2. Digital design is checked to ensure it is suitable for the media and purpose of the application.</p>
4. Manage digital colour.	<p>4.1. Digital colour management techniques are applied with principles of colour theory for signage and colour corrected where required.</p> <p>4.2. Colour is adjusted using electronic aides and colour profiles for the job are maintained.</p>
5. Select media and set up printer.	<p>5.1. Media is selected appropriate to its usage and type of digital printing required.</p> <p>5.2. Feed calibration is adjusted to suit given media.</p> <p>5.3. Bi-directional calibration is adjusted to suit given media.</p>

ELEMENT	PERFORMANCE CRITERIA
	5.4. Print heads are monitored and adjusted when required.
6. Produce printed signage.	6.1. Characteristics and functions of raster image processor (RIP) are identified and applied. 6.2. Correct profile for the media to be printed is selected to meet job requirements.
7. Laminate printed signage.	7.1. Characteristics and application of laminator and laminating media types are identified and selected to meet job requirements. 7.2. Laminate is applied to digitally printed media to manufacturer specifications.
8. Clean up.	8.1. Equipment is cleaned, maintained and stored. 8.2. Work area is cleaned and tidied. 8.3. Waste materials are disposed of safely.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - computer programs
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or

REQUIRED SKILLS AND KNOWLEDGE

- external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
- using applicators and materials correctly to prepare surfaces.

Required knowledge

Required knowledge for this unit is:

- characteristics of different types of digital printing, including:
 - aqueous
 - dye sublimation
 - eco solvent
 - flatbed printers
 - grand format
 - thermal transfer
 - true solvent
 - ultraviolet (UV) printers
- colour theory principles
- laminating theory and methods
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- procedures for routine maintenance and cleaning of printers
- quality assurance requirements, including:
 - Australian and international standards relevant to the sign industry
 - internal company quality assurance policy and risk management strategies
 - workplace operations and procedures
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products

REQUIRED SKILLS AND KNOWLEDGE

- storage of chemicals
- terminology and definitions used in signage
- uncompressed file formats, such as:
 - EPS
 - PDF
 - RAW
 - TIFF.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- digital printing products of various types and characteristics
- uncompressed file formats
- digital colour management principles
- media used in digital printing
- printer set-up methods and procedures
- laminating processes
- RIP software
- routine maintenance of printers.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to producing digital signage
- support materials appropriate to activity
- workplace instructions relating to producing

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.5. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.6. Routine maintenance requirements of equipment is identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.7. Temporary or permanent application of materials is determined from job requirements.</p>
2. Fabricate and assemble three-dimensional acrylic or light metal signage.	<p>2.1. Correct materials for three-dimensional acrylic or light metal signage are identified and assembled for job.</p> <p>2.2. CAD CAM routing equipment is correctly used to cut signage to job specifications.</p> <p>2.3. Acrylic heating equipment is correctly selected and used to form acrylic signage safely and to design specifications.</p> <p>2.4. Three-dimensional signage is correctly assembled using appropriate techniques.</p> <p>2.5. Sign is assembled using attachments and techniques suitable for the signage materials.</p>
3. Clean up finished sign.	<p>3.1. Completed three-dimensional acrylic or light metal signage is trimmed to a professional finish.</p> <p>3.2. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.</p> <p>3.3. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to fabricate signage using correct applicators and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - computer programs
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- directory systems in signage manufacture
- extrusion systems used in signage manufacture
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)

REQUIRED SKILLS AND KNOWLEDGE

- quality assurance requirements, including:
 - Australian and international standards relevant to the sign industry
 - internal company quality assurance policy and risk management strategies
 - workplace operations and procedures
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- terminology and definitions used in signage
- three-dimensional acrylic fabrication techniques.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying to fabrication of a range of signs:

- acrylic fabrication materials and processes
- light metal fabrication materials and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Layout is set out to scale using setting out techniques applicable to sign design.</p> <p>1.5. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.6. Tools, equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.7. Substrates are identified and prepared in accordance with planned material application.</p> <p>1.8. Colour selection is determined, consistent with job requirements.</p> <p>1.9. Scaffold requirements are identified to comply with OHS regulations and safe work practices.</p> <p>1.10. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.11. Temporary or permanent application of materials is determined from job requirements.</p> <p>1.12. Potential material shrinkage is determined to ensure quality of completed work.</p>
2. Apply layout methods for lettering.	<p>2.1. Direct and indirect layout methods are identified and applied.</p> <p>2.2. Pounce method of lettering is identified and applied.</p>
3. Use signwriting equipment.	<p>3.1. Mahl stick is used correctly, observing ergonomic principles.</p> <p>3.2. Signwriting pencils and brushes and glass-marking pencils and pens are used correctly for signwriting application.</p> <p>3.3. Work pots are used correctly and safely.</p>
4. Draw alphabets and signwrite using a sign cutter.	<p>4.1. Range of simple alphabets is constructed according to job specifications.</p> <p>4.2. Principles of letter spacing are identified and</p>

ELEMENT	PERFORMANCE CRITERIA
	applied.
	4.3. Signwriting is applied using a sign cutter on uneven surfaces.
5. Clean up finished sign.	5.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with <i>statutory and regulatory authority requirements</i> .
	5.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- ability to use correct applicators and materials
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- identification and use of appropriate material for application to substrate

REQUIRED SKILLS AND KNOWLEDGE

- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- sound techniques to design, set out and produce sign for designed signwriting
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- alphabet construction
- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- layout methods for signwriting
- layout of various types of lettering
- material safety data sheets (MSDS)
- signwriting equipment
- OHS requirements and relevant Australian standards, including:
 - AS1319 Safety signs for the occupational environment
 - AS1530.3 Fire retardant systems
- relevant Australian and New Zealand standards, AS2311 General workmanship - painting and AS2700 Colour range - painting, and:
 - manufacturer specifications
 - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- terminology and definitions used in signage
- theory of letter spacing.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying to a range of signwriting tasks:

- principles of layout
- construction of alphabets
- theory of letter spacing.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to signwriting to simple forms
- support materials appropriate to activity
- workplace instructions relating to signwriting to simple forms
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with

EVIDENCE GUIDE

disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be

EVIDENCE GUIDE

obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers

RANGE STATEMENT

	<ul style="list-style-type: none">• traffic control• work site visitors and the public• working at heights• working in confined spaces• working in proximity to others• use of firefighting equipment• use of machines• use of tools and equipment• workplace environmental requirements and safety.
<i>Job requirements</i> include:	<ul style="list-style-type: none">• assessment of conditions and hazards• determination of work requirements• equipment defect identification• safety plans and policies• work site inspection.
<i>Relevant Australian standards</i> include:	<ul style="list-style-type: none">• Australian standards:<ul style="list-style-type: none">• AS1319 Safety signs for the occupational environment• AS1530.3 Fire retardant systems• AS2311 General workmanship - painting• AS2700 Colour range - painting• regulatory requirements• standard drawings and details• urban design manuals.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none">• cutting knives• Mahl stick• oils• signwriting pencils, pens and brushes• stirring sticks• tape measures and rulers• tapes• work pots.
<i>Substrates</i> include:	<ul style="list-style-type: none">• corflute• glass• masonry• metals• plastics• wood.
<i>Layout methods</i> include:	<ul style="list-style-type: none">• computer-generated layout

RANGE STATEMENT

- Simple alphabets* include:
- direct onto substrate
 - overhead projection
 - pounce method.
 - block lettering
 - footed alphabets
 - freestyle alphabets
 - sans serif alphabets
 - script lettering
 - serif alphabets.
- Statutory and regulatory authority requirements* include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
 - removal of waste products
 - storage of chemicals.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements are in accordance with application tasks and workplace operations recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Specifications, drawings and instructions interpreted and job requirements and sequence, determined.</p> <p>1.5. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.6. Substrates are identified and prepared in accordance with planned material application.</p> <p>1.7. Material safety data sheets (MSDS) are referred to as required.</p>
2. Assess substrate and material to be fastened or fixed and apply fasteners and fixings.	<p>2.1. Substrate is assessed for its compatibility with fasteners and fixings proposed to fix sign.</p> <p>2.2. Material is assessed for its compatibility with proposed fasteners and fixings to be used.</p> <p>2.3. Purpose of materials to be fastened or fixed is identified and assessed for tolerances.</p> <p>2.4. Fasteners and fixings are applied according to manufacturer specifications.</p>
3. Clean up finished sign.	<p>3.1. Sign and surrounding surface environment/area are cleaned and waste materials are removed in accordance with statutory and regulatory authority requirements.</p> <p>3.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- ability to correctly access and use substrate and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- ability to transfer measurements accurately from drawings to surfaces
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings, specifications and documentation from a variety of sources
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- bonding ability of mechanical and chemical fasteners and fixings
- effect of mechanical and chemical products on substrates
- load bearing specifications for a range of fastener and fixing measurements and calculations related to material quantities
- MSDS
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials

REQUIRED SKILLS AND KNOWLEDGE

- types and uses of tools and equipment relevant to fasteners and fixings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- recognising the correct fastening and fixing method for particular substrates
- using the appropriate fastener or fixing for safe and secure fastening.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to apply fasteners and fixings
- support materials appropriate to activity
- workplace instructions relating to applying fasteners and fixings
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes

EVIDENCE GUIDE

where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated

EVIDENCE GUIDE

documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings and specifications/instructions and/or client brief.</p> <p>1.4. Specifications, drawings and instructions are interpreted and job requirements and sequence, determined.</p> <p>1.5. Layout is set out to scale using setting out techniques applicable to sign design.</p> <p>1.6. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.7. Tools, equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.8. Substrates are identified and prepared in accordance with planned material application.</p> <p>1.9. Colour selection is determined, consistent with job requirements.</p> <p>1.10. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.11. Temporary or permanent application of materials is determined from job requirements.</p> <p>1.12. Potential material shrinkage is determined to ensure quality of completed work.</p>
2. Layout sign.	<p>2.1. Substrate compatibility with vinyl is determined and correct vinyl type is identified according to job specifications.</p> <p>2.2. Surface is appropriately cleaned and any previously applied self-adhesive tape is removed carefully, minimising risk of damage to surface.</p>
3. Apply appropriate software to produce vinyl signage.	<p>3.1. Layout of sign is produced on computer as per job specifications.</p> <p>3.2. Cut files are prepared and configured correctly to plotter/output device.</p>
4. Operate plotter.	<p>4.1. Media is loaded onto plotter to ensure correct</p>

ELEMENT	PERFORMANCE CRITERIA
	tracking.
	4.2. Cutting pressure and speed settings are adjusted to suit media.
	4.3. Cut area dimensions are determined to suit given media.
	4.4. <i>Vinyl layout is cut</i> using appropriate processes, tools and equipment to ensure minimum waste.
5. Apply vinyl.	5.1. Vinyl is applied and lettering or background is weeded out using appropriate tools and minimising risk of damage to vinyl.
	5.2. Transfer or application tape is applied to either lettering or graphics and vinyl is applied to surface consistent with layout design to specifications.
	5.3. Surface of vinyl is finished consistent with job requirements.
6. Clean up finished sign.	6.1. Sign and surrounding surface environment/area is cleaned and waste materials removed in accordance with <i>statutory and regulatory authority requirements</i> .
	6.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:

REQUIRED SKILLS AND KNOWLEDGE

- design principles
- job drawings
- charts and hand drawings
- manufacturer specifications and instructions
- organisational work specifications
- computer programs
- requirements and instructions issued by authorised organisational or external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- theory of cutting vinyl, including:
 - test cut requirements
 - function of plotters
 - blade offset setting
 - blade types
 - required cutting pressure
 - appropriate cutting speed
 - vinyl tracking characteristics
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in signage
- vinyl types and uses.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
 - principles of vinyl cutting to a range of signage jobs
 - vinyl material characteristics and composition when used in a signage job
 - attributes of vinyl when used in signage
- using appropriate computer software to produce vinyl signage.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to producing vinyl signage
- support materials appropriate to activity
- workplace instructions relating to producing vinyl signage
- material safety data sheets
- research resources, including industry-related

RANGE STATEMENT

Statutory and regulatory authority requirements include:

- cutting pressure
- cutting speed
- function of plotters
- test cut
- vinyl tracking.
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
 - removal of waste products
 - storage of chemicals.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.5. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.6. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.7. Temporary or permanent application of materials is determined from job requirements.</p>
2. Work with materials and equipment.	<p>2.1. Routing materials are selected according to job specifications.</p> <p>2.2. Correct type of routing system to be used is selected according to job specifications and materials to be routed.</p> <p>2.3. Cutter types and their applications are identified for the specified job.</p> <p>2.4. Appropriate routing systems are used to rout on a range of surfaces.</p>
3. Use software in engraving.	<p>3.1. Appropriate software is selected and used to rout for the required signage job.</p> <p>3.2. Software and equipment are used according to manufacturer specifications to rout cleanly and effectively.</p>
4. Maintain cutters.	<p>4.1. Cutters are sharpened using correct techniques.</p> <p>4.2. Cutters are cleaned and stored safely and correctly after use.</p>
5. Clean up.	<p>5.1. Work area is cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.</p> <p>5.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to prepare surfaces using correct applicators and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - computer programs
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- maintenance of routers and cutters
- material safety data sheets (MSDS)
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in routing
- theory of routing:
 - cutter types
 - guillotine systems
 - routing depths
 - routing materials and their uses
 - routing software
 - types of routing systems.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- characteristics and uses of routing materials and equipment in a range of signage jobs
- uncompressed file formats used in signage
- router set-up and safe use
- correct and safe maintenance of routers and cutters.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to engrave using laser/rotary router
- support materials appropriate to activity
- workplace instructions relating to engraving using laser/rotary router
- material safety data sheets
- research resources, including industry-related

EVIDENCE GUIDE

systems information

- relevant software.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language,

EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)

RANGE STATEMENT

	<ul style="list-style-type: none"> • lighting • restricted access barriers • traffic control • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of machines • use of tools and equipment • workplace environmental requirements and safety.
<i>Job requirements</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements • equipment defect identification • safety plans and policies • work site inspection.
<i>Relevant Australian standards</i> include:	<ul style="list-style-type: none"> • regulatory requirements • standard drawings and details • urban design manuals.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • laser routers • range of router cutting tools • rotary routers.
<i>Routine maintenance</i> includes:	<ul style="list-style-type: none"> • checking for damage or non-standard performance • cleaning.
<i>Materials</i> include:	<ul style="list-style-type: none"> • acrylic • laminated acrylic • medium density fibreboard (MDF).
<i>Statutory and regulatory authority requirements</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to: <ul style="list-style-type: none"> • removal of waste products • storage of chemicals.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Specifications, drawings and instructions are interpreted and job requirements and sequence, determined.</p> <p>1.5. Layout is set out to scale using setting out techniques applicable to sign design.</p> <p>1.6. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.7. Tools, equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.8. Substrates are identified and prepared in accordance with planned material application.</p> <p>1.9. Colour selection is determined, consistent with job requirements.</p> <p>1.10. Any scaffold requirements are identified to comply with OHS regulations and safe work practices.</p> <p>1.11. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.12. Temporary or permanent application of materials is determined from job requirements.</p>
2. Apply layout methods for lettering.	<p>2.1. Direct and indirect layout methods are identified and applied.</p> <p>2.2. Pounce method of lettering is identified and applied.</p>
3. Use signwriting equipment.	<p>3.1. Mahl stick and paint pot combination is used correctly observing ergonomic principles.</p> <p>3.2. Signwriting pencils and brushes and marking pencils are used correctly.</p>
4. Draw alphabets and add in letter decoration.	<p>4.1. Range of decorative alphabets is used for the specified signwriting job.</p> <p>4.2. Principles of letter spacing are identified and</p>

ELEMENT	PERFORMANCE CRITERIA
	applied.
	4.3. Range of <i>on and off-face decorative effects</i> are used where required by job specifications.
5. Clean up finished sign.	5.1. Sign and surrounding surface environment/area is cleaned and waste materials removed in accordance with <i>statutory and regulatory authority requirements</i> .
	5.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- ability to signwrite to decorative forms using correct applicators and materials
- applying signwriting using brush strokes
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences

REQUIRED SKILLS AND KNOWLEDGE

- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- alphabet construction
- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- layout methods for signwriting
- layout of various types of lettering
- material safety data sheets (MSDS)
- OHS legislation applicable to workplace activity/operation
- signwriting equipment
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- sound techniques to produce layout accurately to balanced design
- terminology and definitions used in signage
- theory of letter spacing.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying in a range of signwriting activities:

- principles of sign layout
- construction of alphabets
- theory of letter spacing
- decorative techniques.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to signwriting to decorative forms
- support materials appropriate to activity
- workplace instructions relating to signwriting to decorative forms
- material safety data sheets
- research resources, including industry-related systems information.

EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings and specifications/instructions and/or client brief.</p> <p>1.4. Specifications, drawings and instructions are interpreted and job requirements and sequence, determined.</p> <p>1.5. Layout is set out to scale using setting out techniques applicable to sign design.</p> <p>1.6. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.7. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.8. Substrates are identified and prepared in accordance with planned material application.</p> <p>1.9. Colour selection is determined, consistent with job requirements.</p> <p>1.10. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.11. Temporary or permanent application of materials is determined from job requirements.</p> <p>1.12. Potential material shrinkage is determined to ensure quality of completed work.</p>
2. Layout sign.	<p>2.1. Substrate compatibility with vinyl is determined and correct vinyl type identified according to job specifications.</p> <p>2.2. Surface is appropriately cleaned and any previously applied self-adhesive tape is removed carefully, minimising risk of damage to surface.</p> <p>2.3. Layout of sign is produced on computer as per job specifications.</p> <p>2.4. Cut files are prepared and configured correctly to plotter/printer device, outputted and managed.</p>
3. Operate plotter.	<p>3.1. Media is loaded to ensure correct tracking and cutting pressure and speed settings are adjusted to</p>

ELEMENT	PERFORMANCE CRITERIA
	suit media.
	3.2. Cut area dimensions are determined to suit given media.
	3.3. <i>Vinyl layout is cut</i> using appropriate processes, tools and equipment to ensure minimum waste.
4. Operate digital printer.	4.1. Media is loaded to ensure correct tracking, and feed calibration is adjusted to suit given media.
	4.2. Bi-directional calibration is adjusted to suit given media.
	4.3. Print area dimensions are determined to suit given media and digital layout is printed using appropriate processes, tools and equipment to ensure minimum waste.
5. Apply vinyl.	5.1. Lettering or background is weeded out using appropriate tools and minimising risk of damage to vinyl.
	5.2. Transfer or application tape is applied to either lettering or graphics.
	5.3. Laminate is applied to printed vinyl and vinyl <i>applied to surface</i> free of air bubbles and creases and according to layout that conforms to design specifications.
	5.4. Surface of vinyl is finished and trimmed consistent with job requirements.
6. Clean up finished sign.	6.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with <i>statutory and regulatory authority requirements</i> .
	6.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

REQUIRED SKILLS AND KNOWLEDGE

- ability to apply layout and design concepts and principles
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - computer programs
 - design principles
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in signage
- theory of cutting vinyl, including:
 - blade offset setting

REQUIRED SKILLS AND KNOWLEDGE

- blade types
- cutting pressure
- cutting speed
- function of plotters
- function of printers
- printer calibration settings
- purpose of test cut
- vinyl tracking
- vinyl types and uses in sign manufacture.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
 - principles of vinyl cutting
 - vinyl theory
 - attributes of vinyl
- applying appropriate software to produce vinyl signage
- correct and effective protocols for using computers and software
- applying vinyl to vehicle panels, free of air bubbles.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to producing vinyl signage
- support materials appropriate to activity
- workplace instructions relating to producing vinyl signage

EVIDENCE GUIDE

- material safety data sheets
- research resources, including industry-related systems information
- range of digital printers
- relevant software.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and

supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the

RANGE STATEMENT

conduct of operational risk assessment and treatments associated with:

- concealed services (water, power and gas)
- lighting
- restricted access barriers
- traffic control
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:

- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Clients include:

- business owners
- printers
- property owners
- sign manufacturers
- statutory bodies.

Relevant Australian standards include:

- regulatory requirements
- standard drawings and details
- urban design manuals.

Tools and equipment include:

- application fluid
- application tape
- applicators
- coloured marking pencils
- metal rules
- weeding tools.

Substrates types include:

- corflute
- glass surfaces
- illuminated surfaces
- metals
- plastics

RANGE STATEMENT

<i>Vinyl</i> includes:	<ul style="list-style-type: none"> • vehicle panels. • calendared (polymeric/monomeric) • cast • easy apply (vehicle wrap) • translucent.
<i>Layout of sign</i> includes:	<ul style="list-style-type: none"> • function of printers • printer calibration settings • test print • vinyl tracking.
<i>Vinyl layout cut</i> includes:	<ul style="list-style-type: none"> • blade types • cutting pressure • cutting speed • function of plotters • test cut • vinyl tracking.
<i>Applied to surface</i> includes:	<ul style="list-style-type: none"> • curved (irregular) • flat • illuminated.
<i>Statutory and regulatory authority requirements</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to: <ul style="list-style-type: none"> • removal of waste products • storage of chemicals.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.5. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.6. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.7. Temporary or permanent application of materials is determined from job requirements.</p> <p>1.8. Potential material shrinkage is determined to ensure quality of completed work.</p>
2. Work with engraving materials and equipment.	<p>2.1. Engraving materials to be used for specified job are identified and selected.</p> <p>2.2. Types of engraving systems and cutter types appropriate to job specifications are identified and applied.</p> <p>2.3. Appropriate engraving systems to engrave on flat or curved surfaces are used where required.</p>
3. Use software in engraving and maintain cutters.	<p>3.1. Appropriate software is selected to engrave sign and used when engraving according to manufacturer specifications.</p> <p>3.2. Cutters are sharpened as required using correct techniques.</p> <p>3.3. Cutters are cleaned and stored after use safely and correctly.</p>
4. Clean up.	<p>4.1. Work area is cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.</p> <p>4.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - computer programs
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- maintenance of engravers and cutters
- material safety data sheets (MSDS)
- relevant Australian and New Zealand standards, and:

REQUIRED SKILLS AND KNOWLEDGE

- manufacturer specifications
- OHS requirements
- other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to removal of waste products
- terminology and definitions used in engraving
- theory of engraving, including:
 - cutter types
 - engraving depths
 - engraving materials and their uses
 - engraving software
 - guillotine systems
 - types of engraving systems.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- characteristics and uses of engraving materials and equipment
- engraving set up
- maintenance of engravers and cutters.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to engrave using laser/rotary router
- support materials appropriate to activity
- workplace instructions relating to engraving using laser/rotary router
- material safety data sheets
- research resources, including industry-related systems information
- relevant software.

EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers

RANGE STATEMENT

	<ul style="list-style-type: none"> • traffic control • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of machines • use of tools and equipment • workplace environmental requirements and safety.
<i>Job requirements</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements • equipment defect identification • safety plans and policies • work site inspection.
<i>Relevant Australian standards</i> include:	<ul style="list-style-type: none"> • regulatory requirements • standard drawings and details • urban design manuals.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • cutting tools • laser routers • rotary routers.
<i>Engraving materials</i> include:	<ul style="list-style-type: none"> • acrylic • glass • metal.
<i>Statutory and regulatory authority requirements</i> include:	<ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to: <ul style="list-style-type: none"> • removal of waste products • storage of chemicals.

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Specifications, drawings and instructions interpreted and job requirements and sequence, determined.</p> <p>1.5. Layout set out to scale using setting out techniques applicable to sign design.</p> <p>1.6. Gilding materials product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.7. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.8. Substrates are identified and prepared in accordance with planned material application.</p> <p>1.9. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.10. Potential material shrinkage is determined to ensure quality of completed work.</p>
2. Identify and draw to scale lettering and decorative forms of signage.	<p>2.1. Drafted designs are set out and drawn to appropriate scale and transferred to prepared surface using direct and indirect layout methods.</p> <p>2.2. Decorative process is applied to create desired finish to specifications.</p>
3. Use gilding tools and equipment.	<p>3.1. Tools and equipment are selected for cutting and shaping process.</p> <p>3.2. Materials are safely held in correct position ready for cutting and shaping operation.</p>
4. Apply water gilding to signage.	<p>4.1. Gilding material is cut to required size and shape as specified and sign surface is prepared to receive gilding.</p> <p>4.2. Appropriate size is mixed, with colour added as designed and applied to prepared surface.</p> <p>4.3. Gilding material is applied to surface and excess material is trimmed and removed.</p> <p>4.4. Appropriate cleaning procedure and materials are</p>

ELEMENT	PERFORMANCE CRITERIA
	selected and applied to gilded sign surface.
5. Apply surface gilding to signage.	<p>5.1. Size is applied carefully to surface using appropriate application techniques to contain within design.</p> <p>5.2. Gilding material is applied to size using appropriate rubbing techniques, ensuring no gaps and design shape is fully covered.</p> <p>5.3. Applied gilding leaf is burnished to ensure loose particles are removed.</p> <p>5.4. Design shape is trimmed carefully where applicable, and appropriate cleaning procedure and materials are selected and applied to clean the gilded and surrounding surface.</p>
6. Clean up finished gilded signage.	<p>6.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with <i>statutory and regulatory authority requirements</i>.</p> <p>6.2. Re-usable and recyclable materials are salvaged and stored.</p> <p>6.3. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- apply gilding operations:
 - cutting
 - melting
 - shaping
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and

REQUIRED SKILLS AND KNOWLEDGE

- confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
 - charts and hand drawings
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- draft design of sign to scale
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- prepare surfaces
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- requirements and instructions issued by authorised organisational or external personnel
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
- transfer design to location.

Required knowledge

Required knowledge for this unit is:

- design and layout of signs
- design transfer methods
- finishing techniques for gilding and gilded surfaces
- gilding materials and their characteristics
- gilding techniques
- handling materials relevant to gilding operations
- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- measuring and setting out relevant to layout of signs
- preparation of surfaces for gilding
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements

REQUIRED SKILLS AND KNOWLEDGE

- other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- terminology and definitions used in signage
- traditional and contemporary font styles
- types and characteristics of tools and equipment used to apply water gilding
- types of metal leaf used for gilding.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
 - principles of surface preparation and application of gilding
 - construction of alphabets
 - theory of letter spacing
- sound techniques in preparing sign surface to receive gilding
- sound and accurate techniques to produce design to sign and gilding requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying gilding
- support materials appropriate to activity
- workplace instructions relating to applying gilding
- material safety data sheets

EVIDENCE GUIDE

- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in

EVIDENCE GUIDE

relation to the competency being assessed.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Specifications, drawings and instructions are interpreted, and job requirements and sequence are determined.</p> <p>1.5. Shape and form of lines and scrolls are accurately checked from copy.</p> <p>1.6. Line and scroll layout is set out using appropriate techniques.</p> <p>1.7. Colour selection is determined, consistent with job requirements or to relevant Australian standards for general purposes.</p> <p>1.8. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.9. Substrates are identified and prepared in accordance with planned material application and line work or scroll work application.</p> <p>1.10. Material safety data sheets (MSDS) are referred to as required.</p>
2. Apply materials to layout.	<p>2.1. Materials are applied to surface using application consistent with job requirements and layout of lines and scroll work.</p> <p>2.2. Line work and scroll work are produced accurately to set out and specified colours.</p>
3. Clean up finished sign.	<p>3.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.</p> <p>3.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to apply lines and scrolls using correct applicators and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings, specifications and documentation from a variety of sources
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- select and record colours
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
- transfer measurements from drawings to scroll work on surfaces.

Required knowledge

Required knowledge for this unit is:

- Australian standards:
 - AS1319 Safety signs for the occupational environment
 - AS2311 General workmanship - painting
- brushes used in line and scroll work
- colour selection techniques and principles
- design of line and scroll work
- job safety analysis (JSA) and safe work method statements
- materials relevant to drawings and specifications for scroll work on surfaces
- measurements and calculations related to material quantities

REQUIRED SKILLS AND KNOWLEDGE

- measuring and setting out relevant to layout of signs
- MSDS
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- symbols, dimensions and terminology relating to scroll work on surfaces
- techniques in producing line work
- techniques in producing scroll work
- terminology and definitions used in signage
- types and uses of drawings and layouts used for line and scroll work on surfaces.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- accurately interpreting designs, drawings and job specifications for application of line and scroll work to a range of surfaces, including:
 - flat surfaces
 - curved surfaces.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

 - determination of work requirements
 - equipment defect identification
 - safety plans and policies
 - work site inspection.
- 1.4. ***Relevant Australian standards*** include:
- AS2700 Colour range - painting
 - AS1319 Safety signs for the occupational environment
 - AS2311 General workmanship - painting
 - regulatory requirements
 - standard drawings and details
 - urban design manuals.
- 1.5. ***Tools and equipment*** include:
- artist brushes
 - dagger liners
 - drafting equipment
 - guides
 - ladders
 - lining fitches
 - measuring tapes and rules
 - planks
 - pots
 - quill liners
 - rollers
 - scaffolding
 - spray equipment
 - stirrers
 - straight edges
 - templates.
- 1.6. ***Application*** includes:
- brush with lining or template guide
 - freehand brush application
 - spray, roller and brush application to substrate.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	1.1. Quality assurance requirements of signage operations are recognised and adhered to. 1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to. 1.3. Job requirements are identified from drawings, specifications, instructions and client briefs. 1.4. Spelling of brief content is checked from copy and confirmed as correct. 1.5. Layout is set out to scale using setting out techniques applicable to sign design. 1.6. Tools, equipment and materials are selected to carry out tasks consistent with job requirements. 1.7. Substrates are identified and prepared in accordance with planned material application. 1.8. Colour selection is determined, consistent with job requirements.
2. Use correct layout principles to maximise	3.1. Type of formal or informal layout is determined from specifications, client brief and relevant Australian standards .
3. impact.	3.2. Correct principles of layout are identified and applied in line with given brief.
4. Identify materials and methods of application for effective showcards/chalkboards.	4.1. Substrates, backgrounds, materials and equipment used in preparation are identified and applied. 4.2. Compatible surfaces, paints, mediums and various methods of their application for showcards/chalkboards are identified and applied. 4.3. Appropriate and effective colour combinations for showcards/chalkboards are identified and applied.
5. Develop layout roughs and sketches from specifications.	5.1. Job specifications are established from specified material. 5.2. Sketches are produced as required to meet job specifications.
6. Produce showcards/chalkboards using effective layout and illustrations from sketched roughs.	6.1. Layout design is produced to specifications from layout roughs and sketches. 6.2. Appropriate drawing instruments, mediums and background materials are selected and prepared. 6.3. Layout is produced incorporating lettering and illustrations and using appropriate techniques and mediums.

ELEMENT	PERFORMANCE CRITERIA
	6.4. Accurate proportion and perspective are applied to the illustration using light and shade effects.
	6.5. Completed work is cleaned and presented to specification.
7. Clean up.	7.1. Work environment/area is cleaned and waste materials removed in accordance with <i>statutory and regulatory authority requirements</i> .
	7.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel.
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action

REQUIRED SKILLS AND KNOWLEDGE

- interpret drawings and documentation and make sketches of work
- measure accurately and calculate material quantities
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- select and record colours
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- colour selection techniques and principles
- commonly used drawings and layouts for showcards/chalkboards
- designs of showcards/chalkboards
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- measurement and calculation techniques related to material quantities
- measuring and setting out methods relevant to layout of showcards/chalkboards
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- symbols, dimensions and terminology relating to showcards/chalkboards
- techniques for writing tickets and showcards/chalkboards
- types and characteristics of brushes and applicators relevant to showcards/chalkboards
- types and use of appropriate materials for application to substrates.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

construction workplace conditions, materials, activities, responsibilities and procedures.

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
 - principles of layout
 - construction of alphabets
 - theory of letter spacing
- identification of dimensions, symbols, abbreviations and key features of signage
- sound checking techniques to ensure spelling and dates are correct
- sound and accurate application to produce design to colours and specification
- identification of typical faults or problems that occur and action required to rectify them.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to writing showcards/chalkboards
- support materials appropriate to activity
- workplace instructions relating to writing showcards/chalkboards
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources,

EVIDENCE GUIDE

and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. ***Quality assurance requirements*** include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

1.2. ***Safety (OHS)*** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment

RANGE STATEMENT

- use of machines
 - use of tools and equipment
 - workplace environmental requirements and safety.
- 1.3. *Job requirements* include:
- assessment of conditions and hazards
 - determination of work requirements
 - equipment defect identification
 - safety plans and policies
 - work site inspection.
- 1.4. *Tools and equipment* include:
- brushes
 - drawing equipment
 - roller and tray
 - omnichrome pencil
 - measuring equipment.
- 1.5. *Materials* include:
- adhesives
 - blackboard paint
 - crayons
 - felt tip pens
 - fixatives
 - pastels
 - polyvinyl acetate (PVA) paints
 - transfer paper.
- 1.6. *Substrates* include:
- card
 - chalkboard surfaces to include composite timber substrates, such as medium density fibreboard (MDF) and masonite
 - corflute
 - paper
 - tyvek.
- 1.7. *Clients* include:
- advertising agencies
 - business owners
 - marketing agencies
 - property owners
 - retail outlets
 - sign manufacturers
 - statutory bodies.
- 1.8. *Relevant Australian standards* include:
- AS1319 Safety signs for the occupational environment
 - AS2311 General workmanship - painting
 - AS2700 Colour range - painting.

RANGE STATEMENT

1.9. *Principles of layout*
include:

- balance
- colour
- contrast
- harmony
- letter styles
- space.

1.10. *Statutory and
regulatory authority
requirements* include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
 - removal of waste products
 - storage of chemicals.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Specifications, drawings and instructions are interpreted and job requirements and sequence, determined.</p> <p>1.5. Design for printing is identified and accurately reproduced for screen face.</p> <p>1.6. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.7. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.8. Material to be screen-printed is prepared and located to position for printing.</p> <p>1.9. Material for screen face is marked by transferring design and is cut accurately to set out shape.</p> <p>1.10. Colours of paint or ink are selected and tested to match specification.</p> <p>1.11. Multiple screen-printing is identified and number of screens required, determined and produced to specifications.</p> <p>1.12. Material safety data sheet (MSDS) requirements are determined and followed.</p> <p>1.13. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p>
2. Screen-print.	<p>2.1. Stencils/screens are prepared and manufactured to job specification.</p> <p>2.2. Paint or ink is prepared to specification ready for application.</p> <p>2.3. Printing process is set up for operation with material and screen aligned to specification.</p> <p>2.4. Screens are printed onto substrates to achieve accurate registration in accordance with job specification.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Identify and solve problems.	3.1. Painting application problems and faults are resolved by reference to painting manuals and manufacturer instructions.
4. Clean up finished sign.	4.1. Sign and surrounding surface environment/area cleaned and waste materials removed in accordance is with <i>statutory and regulatory authority requirements</i> . 4.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- draft design of sign to scale
- innovation skills to select appropriate tools and equipment, respond to workplace

REQUIRED SKILLS AND KNOWLEDGE

challenges and put ideas into action

- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- colour selection techniques and principles
- design transfer methods
- designs of signs
- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- layout of signs principles
- MSDS
- process for manufacture of screens
- relevant Australian and New Zealand standards:
 - AS1319 Safety signs for the occupational environment
 - AS2311 General workmanship - painting
 - AS2700 Colour range - painting
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- screen-printing techniques and uses
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- techniques for cutting designs for screens
- traditional and contemporary font styles
- terminology and definitions used in screen-printing.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- sound procedures to accurately reproduce a design for screen-printing
- sound techniques to transfer design to material for screen
- accurate and safe techniques to cut screen design to shape
- sound and safe procedures to construct screen ready for printing
- sound techniques in identifying and recording colours
- application of material accurately to sign surface for printing
- sound techniques to apply paint or ink to print from screen
- identification of typical faults and appropriate remedial action taken to rectify problem.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to screen-printing
- support materials appropriate to activity
- workplace instructions relating to screen-printing

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Specifications, drawings and instructions interpreted and job requirements and sequence, are determined.</p> <p>1.4. Material quantities are estimated in accordance with size of sign and materials to be used.</p> <p>1.5. Sample is accurately checked from copy and substrates identified and prepared in accordance with planned material application.</p> <p>1.6. Tools and equipment and materials selected to carry out tasks consistent with job requirements and relevant Australian standards.</p> <p>1.7. Layout is set out to scale using appropriate setting out techniques.</p> <p>1.8. Colour selection is determined, consistent with job requirements.</p> <p>1.9. Material safety data sheets (MSDS) are referred to as required.</p> <p>1.10. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p>
2. Identify materials and methods of application for effective pictorial signage.	<p>2.1. Substrates, backgrounds, materials and equipment used in preparation for pictorial signs are identified and assembled.</p> <p>2.2. Compatible surfaces, paints, solvents, mediums and various methods of their application for pictorials are identified and applied.</p> <p>2.3. Appropriate colour combinations in the effectiveness of colour on/for pictorials are identified and applied.</p> <p>2.4. Methods of transferring and reproducing pictorials are identified and applied.</p>
3. Produce effective drawn illustrations for pictorial signage.	<p>3.1. Appropriate drawing instruments, mediums and background materials are selected and prepared.</p> <p>3.2. Given illustrations are reproduced using appropriate drawing techniques, applying appropriate and accurate proportion and perspective.</p> <p>3.3. Light and shade effects to given illustration creating</p>

ELEMENT	PERFORMANCE CRITERIA
	visual realism are applied using appropriate technique suitable to the selected medium.
4. Apply mediums to paint illustrations.	<p>4.1. Appropriate mediums and equipment are selected and applied to produce various <i>painting techniques</i>.</p> <p>4.2. Accurate visual texture, light and shade are achieved.</p> <p>4.3. Appropriate colours are determined and applied, achieving correct tones and tonal order.</p> <p>4.4. Lettering/letter decoration and illustration are applied to pictorial sign accurately and cleanly.</p>
5. Clean up finished sign.	<p>5.1. Sign and surrounding surface environment/area is cleaned and waste materials removed in accordance with <i>statutory and regulatory authority requirements</i>.</p> <p>5.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or

REQUIRED SKILLS AND KNOWLEDGE

- external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- interpret drawings and documentation
- measure accurately
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- select and record colours
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
- transfer measurements from drawings to sign in pictorial forms.

Required knowledge

Required knowledge for this unit is:

- Australian standards:
 - AS2311 General workmanship - painting
 - AS2700 Colour range - painting
- application techniques with paint
- colour selection
- commonly used drawings and layouts for signs
- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- measure and set out relevant to layout of signs
- measurements and calculations related to material quantities
- MSDS
- pictorial designs and reproduction
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- symbols, dimension and terminology relating to signage
- techniques to set out sign for designed signwriting
- terminology and definitions used in signage.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
 - principles of layout
 - construction of alphabets
 - theory of letter spacing
- identification of dimensions, symbols, abbreviations and key features of signage
- identification and correct application of designed material to substrate
- sound and accurate techniques to reproduce pictorial to size requirements
- appropriate techniques to identify and record colours
- sound techniques to produce colour fully to boundary limits
- completion of pictorial to design and specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to hand rendering pictorials
- support materials appropriate to activity
- workplace instructions relating to hand rendering pictorials
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:

RANGE STATEMENT

	<ul style="list-style-type: none">• concealed services (water, power and gas)• lighting• restricted access barriers• traffic control• work site visitors and the public• working at heights• working in confined spaces• working in proximity to others• use of firefighting equipment• use of machines• use of tools and equipment• workplace environmental requirements and safety.
<i>Job requirements</i> include:	<ul style="list-style-type: none">• assessment of conditions and hazards• determination of work requirements• equipment defect identification• safety plans and policies• work site inspection.
<i>Substrates</i> include:	<ul style="list-style-type: none">• canvas• glass• metal• paper• timber.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none">• artist brushes• charcoal• easel• mediums• oil and acrylic paints• pencils• sketch pad.
<i>Relevant Australian standards</i> include:	<ul style="list-style-type: none">• AS2311 General workmanship - painting• regulatory requirements• AS2700 Colour range - painting• standard drawings and details• urban design manuals.
<i>Painting techniques</i> include:	<ul style="list-style-type: none">• posterisation• scumbling• stippling• wet blend.

RANGE STATEMENT

Statutory and regulatory authority requirements include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
 - removal of waste products
 - storage of chemicals.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings and specifications/instructions and/or client brief.</p> <p>1.4. Product range assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.5. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.6. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.7. Temporary or permanent application of materials is determined from job requirements.</p> <p>1.8. Potential material shrinkage is determined to ensure quality of completed work.</p>
2. Use LED technology.	<p>2.1. LED systems appropriate to specified job are identified and evaluated for use.</p> <p>2.2. LED system packages available for the work are identified, evaluated and appropriate choices are made.</p> <p>2.3. LED semi-conductor chip technology and characteristics are evaluated for the specified application.</p> <p>2.4. LED colour systems are identified and applied in the appropriate environments.</p> <p>2.5. Expected lifetime of different LED systems is evaluated and communicated to clients.</p> <p>2.6. Electrical current feed to the LED system is regulated according to manufacturer specifications.</p> <p>2.7. Heat emanating from LED signage systems is calculated and managed according to manufacturer specifications.</p>
3. Clean up finished sign.	<p>3.1. Sign and surrounding surface environment/area is cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.</p> <p>3.2. Tools and equipment, including personal protective</p>

ELEMENT**PERFORMANCE CRITERIA**

equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate heat from LED systems and apply appropriate managing techniques
- ability to evaluate and use a variety of LED systems for correct signage applications
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying

REQUIRED SKILLS AND KNOWLEDGE

physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- LED colour types and limitations
- LED components
- LED lifetime characteristics
- LED semi-conductor chip technology characteristics
- LED systems and system packages
- management of heat in LED signage
- material safety data sheets (MSDS)
- regulation of electrical current in LED systems
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- terminology and definitions used in signage.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding of and techniques for evaluating and using:
 - LED systems and packages
 - LED components
 - regulation of electrical current in LED systems
- management of heat in LED signage.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to using LED technology for illuminated signage
- support materials appropriate to activity
- workplace instructions relating to using LED technology for illuminated signage
- material safety data sheets
- research resources, including industry-related systems information.

EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers

RANGE STATEMENT

	<ul style="list-style-type: none"> • traffic control • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of machines • use of tools and equipment • workplace environmental requirements and safety.
<i>Job requirements</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements • equipment defect identification • safety plans and policies • work site inspection.
<i>Clients</i> include:	<ul style="list-style-type: none"> • business owners • printers • property owners • sign manufacturers • statutory bodies.
<i>Relevant Australian standards</i> include:	<ul style="list-style-type: none"> • regulatory requirements • standard drawings and details • urban design manuals.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • circuit testing equipment • electrical connection tools • hand and power tools.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client brief.</p> <p>1.4. Illuminated signage product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p>
2. Apply electrical principles for illuminated signage.	<p>2.1. Properties and availability of electricity as the energy source are identified and evaluated for specified job.</p> <p>2.2. Characteristics of electricity are applied to the illuminated sign activity carried out.</p> <p>2.3. Power consumption of illuminated signage types is evaluated and communicated to clients.</p>
3. Clean up finished sign.	<p>3.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.</p> <p>3.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret:
 - charts and hand drawings
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- calculate electrical loads and necessary supply conditions for illuminated and LED sign installations
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- characteristics of electricity:
 - current
 - voltage
 - circuits:
 - series
 - parallel
 - series-parallel
 - watts
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- power consumption in illuminated signage
- regulation of electrical current in illuminated signage
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements

REQUIRED SKILLS AND KNOWLEDGE

- other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- terminology and definitions used in signage.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- electrical theory to a range of illuminated sign installations, including light emitting diode (LED).

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying electrical theory to illuminated signage
- support materials appropriate to activity
- workplace instructions relating to applying electrical theory to illuminated signage
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes

EVIDENCE GUIDE

where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated

EVIDENCE GUIDE

documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings, specifications, instructions and client briefs.</p> <p>1.4. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.5. Tools and equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.6. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.7. Temporary or permanent application of materials is determined from job requirements.</p>
2. Work with materials and equipment.	<p>2.1. LED materials are selected according to job specifications.</p> <p>2.2. Correct type of routing tools and equipment to be used is selected according to job specifications.</p> <p>2.3. Cutter types and their applications are identified for the specified job.</p> <p>2.4. Appropriate routing systems are used to rout LED installation.</p>
3. Install LED system.	<p>3.1. LED system is installed according to manufacturer specifications.</p> <p>3.2. LED bulbs and wiring is placed into correct position.</p> <p>3.3. Wires are marked ready for connection to power source in consideration of characteristics of electric supply.</p>
4. Clean up.	<p>4.1. Work area is cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.</p> <p>4.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to prepare surfaces using correct applicators and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - charts and hand drawings
 - electrical systems
 - job drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
 - report faults
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- material safety data sheets (MSDS)
- job safety analysis (JSA) and safe work method statements

REQUIRED SKILLS AND KNOWLEDGE

- maintenance of routers and cutters
- relevant Australian and New Zealand standards, and:
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in LED
- theory of LED and routing:
 - routing materials and their uses
 - cutter types
 - LED systems
 - routing depths
 - routing software
 - types of routing systems
 - wiring.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency can be assessed in a real or simulated environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- characteristics and uses of routing materials and equipment in a range of signage jobs
- LED bulbs and wiring used in signage
- router set up and safe use
- correct and safe maintenance of routers and cutters
- correct techniques for connecting and sealing LED wiring.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to using laser/rotary router for LED system
- support materials appropriate to activity
- workplace instructions relating to using laser/rotary router for LED systems
- material safety data sheets

EVIDENCE GUIDE

- research resources, including industry-related systems information
- relevant software.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far

EVIDENCE GUIDE

as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:

RANGE STATEMENT

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work.	<p>1.1. Quality assurance requirements of signage operations are recognised and adhered to.</p> <p>1.2. Safety (OHS) requirements in accordance with application tasks and workplace operations are recognised and adhered to.</p> <p>1.3. Job requirements are identified from drawings and specifications/instructions and/or client brief.</p> <p>1.4. Specifications, drawings and instructions are interpreted and job requirements and sequence determined.</p> <p>1.5. Layout is set out to scale using setting out techniques applicable to sign design.</p> <p>1.6. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.</p> <p>1.7. Tools, equipment and materials are selected to carry out tasks consistent with job requirements.</p> <p>1.8. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.</p> <p>1.9. Temporary or permanent application of materials is determined from job requirements.</p>
2. Mark out design.	<p>2.1. Direct and indirect layout methods are identified and applied.</p> <p>2.2. Sections are calculated and marked out to design specifications.</p> <p>2.3. Joint locations are determined from layout and marked out on pattern.</p> <p>2.4. Electrodes are marked out to indicate double backed/right angled position.</p>
3. Bend glass.	<p>3.1. Glass is heated with care over a gas flame until pliable.</p> <p>3.2. Glass is bent to form shape consistent with pattern and specifications.</p>
4. Attach electrodes and connect glass to form sections.	<p>4.1. Electrodes are attached in accordance with pattern specification and Australian standards requirements.</p> <p>4.2. Glass tubing is connected using appropriate procedures and techniques.</p>
5. Prepare glass for lighting system.	<p>5.1. Pumping station is activated in accordance with job requirements and section is connected to pumping</p>

ELEMENT	PERFORMANCE CRITERIA
	station in accordance with job specifications.
	5.2. Glass is vacuumed in accordance with job requirements and filled with gas pumped using equipment and materials consistent with job requirements.
	5.3. Glass is sealed and bombarded using equipment consistent with job requirements and industry standards.
	5.4. Glass is cooled safely and aged in accordance with job requirements.
	5.5. Neon sections are tested to determine transformer loadings in accordance relevant Australian standards.
	5.6. Doubled sections of glass are blackened to form design shape.
6. Install tube supports to board/panel.	6.1. Neon glass sign is securely attached to board/panel using tube supports.
	6.2. Illuminated sign components are fixed to board/panel using appropriate attachments .
7. Clean up finished sign.	7.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with statutory and regulatory authority requirements .
	7.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - determine requirements
 - effectively communicate verbally with others within a team environment

REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
 - job drawings
 - charts and hand drawings
 - manufacturer specifications and instructions
 - organisational work specifications
 - requirements and instructions issued by authorised organisational or external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
- work, shape and join glass-tubed sections safely.

Required knowledge

Required knowledge for this unit is:

- identification of dimensions, symbols, abbreviations and key features of signage
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- measurement and setting out related to layout of signs
- methods of pumping gas into glass
- shaping and forming glass techniques
- statutory and regulatory authority requirements, particularly those relating to:
 - removal of waste products
 - storage of chemicals and materials
- terminology and definitions used in signage
- types and characteristics of gas-charged glass-formed illuminated signs
- types and correct handling of materials and their characteristics relevant to construction of glass illuminated signs
- types and uses of electrodes and transformers

REQUIRED SKILLS AND KNOWLEDGE

- relevant Australian and New Zealand standards:
 - Australian standards, including:
 - AS2508.2.012 Safe storage and handling; information cards for hazardous materials
 - AS3100 Approval and test specification - General requirements for electrical equipment
 - AS3953 Loading guide for dry-power transformers
 - manufacturer specifications
 - OHS requirements
 - other applicable codes or standard operating procedures relevant to the sector.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying principles of sign layout
- effective operational use of tools and equipment to handle and form glass to design shapes
- safe techniques to attach electrodes and connect glass tubing
- safe and controlled techniques to prepare glass and pump gas to glass assembly
- safe techniques to bombard, cool and age glass to specifications
- handling and securing procedures to affix sign to board or panel to complete job to requirement
- identification of typical faults in illuminated signage and appropriate remedial action taken to rectify problems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to manufacturing gas-charged glass-formed illuminated signage
- support materials appropriate to activity
- workplace instructions relating to manufacturing gas-charged glass-formed illuminated signage
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,

EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.
- emergency procedures, including extinguishing fires, organisational first aid

Safety (OHS) is to be in accordance with state and territory

RANGE STATEMENT

legislation and regulations and project safety plan and may include:

- requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:

- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Clients include:

- business owners
- printers
- property owners
- sign manufacturers
- statutory bodies.

Relevant Australian standards include:

- AS3100 Approval and test specification - General requirements for electrical equipment
- AS3953 Loading guide for dry-power transformers
- regulatory requirements
- standard drawings and details
- urban design manuals.

Tools and equipment include:

- glass heaters

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Handle, sort and store solid plaster material and components.	<p>2.1. Solid plastering material and components are identified on delivery to site and checked for conformity to material schedule, plans and quality requirements.</p> <p>2.2. Handling characteristics of solid plastering material and components are identified and safe handling techniques are selected and applied in accordance with workplace requirements.</p> <p>2.3. Solid plastering material and components are sorted to suit material type and size, stacked for ease of identification, retrieval for task sequence, and job location in accordance with work specifications.</p> <p>2.4. Solid plastering material and components are protected against physical and water damage and are stored clear of traffic ways.</p> <p>2.5. Signage and barricades are erected to isolate stored materials from workplace traffic or unauthorised access.</p>
3. Handle and position solid plastering material and components in preparation for installation.	<p>3.1. Solid plastering material and components are identified from stack and safely handled and distributed to required job location.</p> <p>3.2. Solid plastering materials and components are positioned ready for fixing in accordance with manufacturer recommendations and job requirements.</p>
4. Handle and remove	<p>4.1. Materials are handled safely and effectively according</p>

ELEMENT	PERFORMANCE CRITERIA
solid plastering material and components on completion.	<p>to material safety data sheets (MSDS) and requirements of regulatory authorities.</p> <p>4.2. Hazardous material is identified for separate handling by authorised personnel.</p> <p>4.3. Dust suppression procedures are used to minimise health risk to self and others.</p> <p>4.4. Protection of materials is provided in accordance with specific material needs.</p> <p>4.5. Materials are stored safely and effectively according to MSDS and requirements of regulatory authorities.</p>
5. Clean up.	<p>5.1. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.</p> <p>5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p> <p>5.3. Stormwater system is protected during clean-up process in accordance with sound work practices compliant with Environment Protection Authority (EPA) requirements.</p> <p>5.4. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in a safe and effective manner in accordance with sound work practices compliant with EPA requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources

REQUIRED SKILLS AND KNOWLEDGE

- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- plans, drawings and specifications
- plastering terminology
- plastering tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- systems and techniques for safe handling of materials
- types, characteristics, uses and limitations of solid plastering materials and components
- workplace and equipment safety requirements including common manual handling injuries and handling techniques.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- handle and store the mandatory solid plastering materials and components listed in the range statement
- dispose of waste and excess materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling and storage of solid plastering materials and components
- relevant Australian standards
- safe work procedures relating to solid plastering materials
- signage

RANGE STATEMENT

Scope of work:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- solid plastering materials and components include corner beads, casing beads, render and setting coats mix composition (including additives like plasticisers, colour and waterproofing agents), timber or metal lathing, fasteners, sand, lime, lime putty, plaster compounds and finish coats
- protection of stacked/stored materials from moisture or damage includes isolation/separation, covering, tying or banding, barricades, signs and locking away (hazardous materials)
- waste material and debris include banding straps, packing pieces, broken or damaged goods, cardboard, plastic, paper and excess plaster and render material
- dust suppression procedures include spraying with water, covering or using a vacuum cleaner.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - manual handling
 - surrounding structures
 - traffic control
 - trip hazards

RANGE STATEMENT

	<ul style="list-style-type: none"> • working at heights • work site visitors and the public • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
<i>Tools and equipment</i> include:	<ul style="list-style-type: none"> • mortar boards and stands • shovels • sieves • straight edges • wheelbarrows.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant <i>information</i>, confirmed and applied to the range of <i>plant, tools and equipment</i> used.</p> <p>1.2. <i>Safety (OHS)</i> requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented. in accordance with <i>quality requirements</i>.</p> <p>1.4. <i>Materials</i> appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.5. <i>Environmental requirements</i> are identified for the project in accordance with environmental plans and <i>statutory and legislative authority</i> obligations and applied.</p>
2. Identify hand and power tools.	<p>2.1. Hand and power tools and their functions, operations and limitations are identified.</p> <p>2.2. OHS requirements for using hand tools are recognised and adhered to.</p> <p>2.3. OHS requirements for using power tools are recognised and adhered to.</p>
3. Select tools for project.	<p>3.1. Tools are selected consistent with job requirements.</p> <p>3.2. Tools, including leads and hoses, are checked for tags, serviceability and safety, and any faults are rectified or reported.</p> <p>3.3. Power tools guards, retaining bolts, couplings, gauges and controls are checked and maintained in accordance with manufacturer recommendations.</p> <p>3.4. Equipment to hold or support material during operation is selected.</p> <p>3.5. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed according to manufacturer recommendations.</p>
4. Use tools.	<p>4.1. Power and compressed air supply are connected to work area.</p> <p>4.2. Start-up and shut-down procedures are followed.</p> <p>4.3. Tools are safely and effectively used according to manufacturer recommendations and OHS</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements.
	4.4.Tools are safely located when not in immediate use.
5. Select plant and equipment.	5.1.Function and limitations of plant and equipment used in solid plastering are identified.
	5.2.Plant and equipment are selected consistent with hazard minimisation and needs of job.
	5.3.Method of operation of plant and equipment is identified.
	5.4.OHS requirements for operating and using plant and equipment are recognised and adhered to.
	5.5.Plant and equipment are checked for safety, and faults are rectified or reported.
6. Use plant and equipment.	6.1.Plant and equipment are safely and effectively used.
	6.2.Plant and equipment are safely located when not in immediate use.
	6.3.Plant and equipment are cleaned, maintained and stored after use.
7. Clean up.	7.1.Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	7.2.Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources

REQUIRED SKILLS AND KNOWLEDGE

- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work

- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- quality requirements
- systems and techniques for safe handling of materials
- types, characteristics, uses and limitations of:
 - solid plastering hand tools
 - solid plastering materials
 - solid plastering power tools
 - solid plastering plant items
- wall and ceiling industry terminology
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- select, use and maintain the tools and equipment listed in the range statement
- select, use and perform operator maintenance of the plant listed in the range statement.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the use of solid plastering tools and equipment
- relevant Australian standards
- safe work procedures relating to solid plastering tools and equipment
- signage
- verbal, written and graphical instructions
- work bulletins

RANGE STATEMENT

Plant, tools and equipment:

- work schedules, plans and specifications.
- general tools include:
 - brushes
 - hammers
 - measuring tapes and rules
 - scaffolding and work platforms
 - screed boards
 - trowels
- power tools include:
 - power grinders
 - power mixers
 - power saws
- plant includes:
 - earth leakage protection
 - lighting sets and power routers
 - power actuated fasteners
 - small compressors, air operated
 - small petrol or diesel engine driven generators
- levelling devices include:
 - line level
 - spirit level
 - straight edge
 - string line
 - water level and laser
- hand tool processes include:
 - boring and shaping of material
 - cutting
 - marking and levelling
 - material shifting and holding
 - placing and finishing concrete and mortar products
 - planing
 - setting out.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare surface.	<p>2.1. Preparation requirements are identified from site inspection, plans and specifications.</p> <p>2.2. Hazards, obstructions and attachments are removed, or arrangements made for their removal.</p> <p>2.3. Surface preparation tools are selected and set up in accordance with surface condition and job requirements.</p> <p>2.4. Tools are used to prepare surface in accordance with manufacturer specifications and job requirements.</p> <p>2.5. Loose or protruding material is removed by sander or grinder and brush so that surface is prepared to specification.</p>
3. Patch and fill holes and depressions.	<p>3.1. Patching method of hole is determined from type of material surface, size of hole, compatibility of materials and planned finish.</p> <p>3.2. Patching materials are selected to suit material surface and are mixed to manufacturer specifications.</p> <p>3.3. Material is applied to manufacturer specifications using appropriate application method.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Surface is brushed, washed and scraped clean of surplus material in accordance with type of patching material and material surface.
	3.5. Patched areas are sealed by application of prime or sealing coat, to suit requirements of specified finishes.
4. Clean up.	4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plastering and wall and ceiling terminology
- processes for the calculation of material requirements
- quality requirements
- surface preparation techniques, including sanding, planing, levelling, packing, patching and filling
- surface preparation tools and equipment types, characteristics, uses and limitations
- types, uses and limitations of surface preparation materials
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- prepare surfaces for plastering for either solid plastering (masonry or concrete) or sheet plastering (timber, steel or masonry) including:
 - both wall and ceiling surfaces to a level and plumb surface finish
 - patching or filling holes and depressions.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the

EVIDENCE GUIDE

point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the preparation of surfaces for plastering
- relevant Australian standards
- safe work procedures relating to the preparation of surfaces for plastering

RANGE STATEMENT

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- surface preparations include preparation for solid plastering and sheet plastering or lining material, and may include pre-cast cladding
- surfaces may include timber, plasterboard and plasterglass, masonry, brick, metal (ferrous and non-ferrous), concrete and solid plaster.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
- include:
 - brooms
 - brushes
 - buckets

Tools and equipment:

RANGE STATEMENT

- chisels
- filling blades
- hammers
- power grinders
- power sanders
- sanding blocks
- scrapers
- shovels
- sponges
- trowels
- may include:
 - elevated work platforms
 - hoses
 - ladders
 - planks
 - trestles
 - water sprayers.

Materials include:

- caulking compounds
- cellulose and plaster
- lime putty
- plaster
- proprietary fillers
- sand and cement
- sheet material.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare templates for curved work or circular columns.	<p>2.1. Material is selected to manufacturer templates.</p> <p>2.2. Radiuses and shapes are established for curves and columns according to plans and specifications.</p> <p>2.3. Templates are manufactured and formed to suit job requirements.</p>
3. Prepare background surface.	<p>3.1. Background surface is identified and wire-brushed if required.</p> <p>3.2. Dash coat is mixed and applied liberally to wetted surface.</p> <p>3.3. Bonding coats using patent products are applied to specifications.</p> <p>3.4. Metal beads are selected for external or squint arises.</p> <p>3.5. Metal beads are fixed to arises and checked for accuracy.</p>
4. Apply floating and rendering to flat and curved surfaces.	<p>4.1. Screeding lines or guides are established to specified tolerances.</p> <p>4.2. Float is used and applied to Australian standards and plans and specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Apply floating and rendering coats to piers.	<p>4.3. Floating coat is applied and ruled off to screed.</p> <p>4.4. Surface is finished, plumb and levelled to specified alignment tolerance.</p> <p>4.5. Heads, reveals and sills are finished square off to wall face and back into opening.</p> <p>4.6. Internal angles, ceiling and floor lines are accurately cut.</p> <p>5.1. Floating coat is applied using floating profiles and rules, and Dutch pins or hooks so that face of pier is plumb and ruled off.</p> <p>5.2. Face is squared off to form returns and reveals, rules are removed and arises are left square or radiused as required.</p>
6. Apply floating coat within metal beading.	<p>6.1. Metal beading is fixed to base surface to form a panel with expansion joint so that panel is plumb and square to specified position.</p> <p>6.2. Panels are finished to true, flat surfaces, suitable for applying plaster and lime setting.</p>
7. Finish rendering coats on flat walls, piers and curved work.	<p>7.1. Walls are hand floated to fill slacks and voids.</p> <p>7.2. Walls are scoured and fined using water and hand float systems.</p>
8. Clean up.	<p>8.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>8.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare backgrounds for set coat application.	<p>2.1. Background surface is identified and surface preparation process is selected in accordance with requirements of the setting coat to be applied.</p> <p>2.2. Surface is cleaned in preparation for application.</p> <p>2.3. Surface is wet down to provide an even suction appropriate to the setting rate for the setting coat being applied.</p> <p>2.4. Surface is checked for appropriate level of suction appropriate to the setting rate of the setting coat being applied.</p>
3. Mix plaster and lime setting.	<p>3.1. Mix ratios of plaster and lime are selected for appropriate backgrounds, or to architect's specifications.</p> <p>3.2. Products are mixed to standard requirements and manufacturer specifications.</p>
4. Apply plaster and lime set coat.	<p>4.1. Application of set coats are in accordance with relevant standards and architect's requirements.</p> <p>4.2. Surface is trowelled until a hard, smooth finish is achieved to specified tolerances or levels of finish.</p>
5. Clean up.	<p>5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

 - one horizontal
 - one curved.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of set coats
- relevant Australian standards
- safe work procedures relating to the application of set coats
- signage

RANGE STATEMENT

Scope of work:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- application of set coats covers horizontal, vertical, and flat and curved surfaces, including walls, heads, arises, soffits, reveals and radiused angles
- set mix is to be in accordance with relevant Australian standard
- setting coats may incorporate synthetic proprietary products
- background surfaces include cement, sand plastered walls; cement, lime, sand plastered walls; sand, plaster and lime walls; and smooth concrete surfaces
- cleaning of background surfaces includes wire brushing, grinding, washing down, scraping, wetting, chipping and blast cleaning.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment

RANGE STATEMENT

Tools and equipment include:

- use of tools and equipment
- workplace environmental requirements and safety.
- brushes
- concrete mixers
- floats
- grinders
- hawks
- joint rules
- measuring tapes and rules
- mortar boards and stands
- plumb bobs and mason's squares
- scaffolding
- screed boards
- shovels
- small tools
- spirit levels
- squares
- straight edges
- trowels
- wheelbarrows.

Materials include:

- casing beads
- corner beads
- lime
- lime putty
- plaster compounds and finish coats
- render and setting coats mix composition, including additives such as plasticisers, colour and waterproofing agents
- sand.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations

RANGE STATEMENT

and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare surface area.	<p>2.1. Materials and substrate surfaces are prepared for the specified trowelled texture coat finish in accordance with manufacturer recommendations.</p> <p>2.2. Dash coat is mixed and applied liberally to wetted surface in accordance with manufacturer recommendations and specifications.</p>
3. Mix and apply materials.	<p>3.1. Texture coating materials are mixed to designed proportion and consistency in accordance with manufacturer recommendations and job specifications.</p> <p>3.2. Texture coat is applied with trowel to specified surfaces and correct thickness.</p> <p>3.3. Texture coat is applied in accordance with manufacturer recommendations and job specifications.</p>
4. Finish and cure the texture coat.	<p>4.1. Texture coat is surface finished plumb and level in accordance with manufacturer recommendations and job specifications.</p> <p>4.2. Finished texture coat surface is cured in accordance</p>

ELEMENT	PERFORMANCE CRITERIA
	with manufacturer recommendations and job specifications.
5. Clean up.	5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plastering tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- solid plastering terminology
- systems and techniques for safe handling of materials
- trowelled texture coat finish application techniques
- types, characteristics, uses and limitations of solid plastering materials and components
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- prepare for and apply to specification a minimum of two different types of texture coat finishes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1.***Information*** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of trowelled texture coat finishes
- relevant Australian standards
- safe work procedures relating to the application of trowelled texture coat finishes
- signage
- verbal, written and graphical instructions
- work bulletins

RANGE STATEMENT

1.2. *Scope of work:*

- work schedules, plans and specifications.
- application of trowelled texture coat finishes includes application to horizontal or vertical surfaces to a maximum thickness of 8mm
- trowelled texture coat finishes includes high build (acrylic or styrene/acrylate) coatings, proprietary products or lines of finish, and cement render
- surfaces used for application of trowelled texture coat finishes include concrete, concrete blockwork, brickwork, stonework, timber or metal lathing, off-form concrete, fibre cement sheeting and tilt-up concrete slabs, and other brick and masonry surfaces
- cleaning of surfaces includes wire brushing, grinding, shipping and washing down
- dash coat may be applied using trowel, brush or nozzle spray.

1.3. *Safety (OHS)* is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment

- solid plastering, restoration and renovation techniques
- systems and techniques for safe handling of materials
- types, characteristics, uses and limitations of solid plastering materials and components
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- restore solid plasterwork to specification on a minimum of three tasks, including:
 - one curved surface
 - one ceiling
 - one archway or column
- renovate lettering to specification where the task requires the preparation and use of significant moulds.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Prepare work area for application processes.	<p>2.1. Work area and substrate are prepared for installation of pre-cast mouldings according to plans and specifications.</p> <p>2.2. Substrate is checked for conformance in accordance with the relevant Australian standard and appropriate fixing methods.</p>
3. Fix and stop pre-cast moulded archways.	<p>3.1. Plasterboard wall sheets are confirmed to be in accordance with plans and specifications.</p> <p>3.2. Archway profile is set out and cut to architect's drawings and specifications.</p> <p>3.3. Timber arch soffit templates are cut and fixed to position.</p> <p>3.4. Infill moulding is fixed to arch soffit and reveals of opening.</p> <p>3.5. Arch is stopped in accordance with job specifications and required level of finish.</p>
4. Fix and stop plaster panelled ceiling.	<p>4.1. Ceiling battens are positioned and spaced for cornice margins and flush-mounted panels.</p> <p>4.2. Panels are located on ceiling, and levelled, lined up</p>

ELEMENT	PERFORMANCE CRITERIA
5. Fix ornamental mouldings.	<p>and fastened into position in accordance with approved specification.</p> <p>4.3. Jointing is finished to specification.</p> <p>5.1. Ornamental mouldings are measured and cut to specification.</p> <p>5.2. Ornamental mouldings are fixed by fastening or bonding with adhesive, straight and level to architect's specifications.</p> <p>5.3. Mouldings are finished, including straight stoppings and finishing mitres to specification.</p>
6. Clean up.	<p>6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plastering and wall and ceiling terminology
- pre-cast decorative moulding installation tools and equipment types, characteristics, uses and limitations
- pre-cast decorative moulding measuring, cutting, placement, stopping and finishing techniques
- processes for the calculation of material requirements
- quality requirements
- type, characteristics, uses and limitation of pre-cast decorative moulding installation materials
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- complete the installation and finishing of three different pre-cast decorative mouldings with at least one being installed on a ceiling.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1.***Information*** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the installation of pre-cast decorative mouldings
- relevant Australian standards
- safe work procedures relating to the installation of pre-cast decorative mouldings
- signage
- verbal, written and graphical instructions
- work bulletins

RANGE STATEMENT

1.2. *Scope of work:*

- work schedules, plans and specifications.
- decorative mouldings are to include any three of panels, arches, corbels, belection moulds, roses and motifs
- substrates include timber and steel framing, concrete walls and ceilings, masonry walls and plaster/board surfaces
- material applications are to be in accordance with the relevant Australian standard (for plasterboard) and fibre cement to manufacturer instructions.

1.3. *Safety (OHS)* is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - cutting tools
 - lighting
 - power equipment
 - power leads and sources
 - trip hazards
 - work site visitors and the public
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

1.4. *Tools and equipment:*

- include:
 - broad knives

RANGE STATEMENT

- curved trowels
 - electric screw guns
 - hammers
 - hand saws
 - joint rules
 - keyhole saws
 - measuring tapes and rules
 - mitre boxes
 - nail bags
 - paintbrushes and sponges
 - plasterer's trowels
 - power leads
 - sanding floats
 - small tools
 - spirit levels
 - squares
 - T-squares
 - may include:
 - cement mixers and power drills
 - internal angle finishing tools
 - trestles and scaffold planks.
- 1.5. **Materials** include:
- adhesives
 - corner beads
 - cornice cements and casting plaster
 - moulded panels.
- 1.6. **Quality requirements** include relevant regulations, including:
- Australian standards
 - internal company quality policy and standards
 - manufacturer specifications
 - workplace operations and procedures.
- 1.7. **Environmental requirements** include:
- clean-up management
 - dust and noise
 - stormwater protection
 - vibration
 - waste management.
- 1.8. **Statutory and regulatory authorities** include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.
- 1.9. **Fixing methods** include:
- adhesives
 - clouts

RANGE STATEMENT

- nails
- screws
- threaded nails.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied.</p>
2. Set out and prepare base.	<p>2.1. Blockwork is set out to position in accordance with plans, specifications and quality requirements.</p> <p>2.2. Base is prepared so that the surface is dry, horizontal, clean and flat to specifications.</p>
3. Lay plaster blockwork.	<p>3.1. Plaster adhesive is prepared in accordance with quantity requirements and block manufacturer recommendations.</p> <p>3.2. Plaster blocks are laid to set out line, level and plumb in accordance with plans and specifications.</p> <p>3.3. Vertical abutments with other walls are made plumb and aligned to specification.</p> <p>3.4. Surplus adhesive is removed from joints to specification requirements.</p>
4. Clean up.	<p>4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.</p> <p>4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - determine requirements
 - follow instructions
 - notify completion of work
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
 - report faults
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
 - use a range of mobile technology, such as two-way radio and mobile phones
 - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- cast plaster blockwork installation materials and techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plasterwork and wall and ceiling terminology
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of cast plaster blockwork tools and

REQUIRED SKILLS AND KNOWLEDGE

equipment

- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- install a pre-cast gypsum plaster blockwork wall that meets specifications and is plumb with other walls.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials, including correct type of stone and materials other than stone appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Prepare work area suitable for construction process.	<p>2.1. Activities to be carried out in work area are identified from type of stonemasonry work and planned procedures according to layout of construction and access to location.</p> <p>2.2. Work area is prepared for construction process according to supervisor's instructions.</p>
3. Use tools, plant and equipment appropriate for construction process.	<p>3.1. Regular hand and power tools suitable for application process are identified from job requirements.</p> <p>3.2. Hand and power tools are used safely and effectively to carry out processes.</p>
4. Assist with stonemasonry work.	<p>4.1. Selected stone is visually checked to ensure it meets specifications, including colour and matching surrounding area, and is distributed to location.</p> <p>4.2. Surface is brushed, scraped and washed cleaned of surplus mortar material on completion of stonemasonry process.</p>
5. Clean up.	<p>5.1. Materials are stacked and/or stored for re-use or removal.</p>

ELEMENT	PERFORMANCE CRITERIA
	5.2. Work area is cleared.
	5.3. Tools and equipment are cleaned, maintained and stored.
	5.4. Waste is disposed of appropriately.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - drawings and specifications
 - material safety data sheets
 - plans
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to calculate measurement requirements related to lengths and allowances
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

REQUIRED SKILLS AND KNOWLEDGE

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- material handling techniques associated with stonemasonry work
- measurement techniques relevant to stone
- types and characteristics of materials used in stonemasonry work
- types and safe use of portable power tools for stonemasonry work
- types and use of hand tools and equipment relevant to stonemasonry work
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare for a range of stonemasonry activities, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements
- carry out correct procedures prior to and during the construction processes
- demonstrate safe and effective operational use of tools, plant and equipment
- adopt and use correct procedures to handle and place materials
- communicate with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- construction materials relevant to stonemasonry work
- hand and power tools appropriate to stonemasonry work processes

EVIDENCE GUIDE

- plant and equipment appropriate to stonemasonry work processes
- suitable work area appropriate to construction processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1.***Information*** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to preparation for stonemasonry production process
- relevant Australian standards
- safe work procedures relating to preparation for stonemasonry production process
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

1.2.***Planning and preparation*** include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies

RANGE STATEMENT

1.3. **Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - dust
 - lighting
 - restricted access barriers
 - traffic control
 - wind
 - work site visitors and the public
 - working at heights
 - working from platforms
 - working in confined spaces
 - working in proximity to others
 - working with heavy stone
- use of firefighting equipment
- use of shifting equipment
- use of tools and equipment
- working platforms and scaffolding
- workplace environmental requirements and safety.

1.4. **Tools and equipment** include:

- angle grinders
- bolsters
- brushes and brooms
- hammers
- hoses
- masonry saws
- measuring tapes and rules
- mortar boards
- power leads

RANGE STATEMENT

- | | |
|---|---|
| <p>1.5. <i>Quality requirements</i> include:</p> | <ul style="list-style-type: none"> • scaffolding • shovels • wheelbarrows. • handling of materials • preparation of surfaces • relevant regulations, including: <ul style="list-style-type: none"> • Australian standards • internal company quality policy and standards • manufacturer specifications where specified • workplace operations and procedures • storage of materials • use and maintenance of tools and equipment. |
| <p>1.6. <i>Materials:</i></p> | <ul style="list-style-type: none"> • include: <ul style="list-style-type: none"> • cement • lime • sand • may vary in accordance with stone: <ul style="list-style-type: none"> • colour • shape • size • type • preparation may include: <ul style="list-style-type: none"> • cutting stone • preparing materials for batching for mortar. |
| <p>1.7. <i>Environmental requirements</i> include:</p> | <ul style="list-style-type: none"> • clean-up management • dust and noise • stormwater protection • waste management. |
| <p>1.8. <i>Statutory and regulatory authority</i> includes:</p> | <ul style="list-style-type: none"> • federal, state and local authorities administering applicable Acts, regulations and codes of practice. |
| <p>1.9. <i>Work area preparation</i> includes:</p> | <ul style="list-style-type: none"> • cleaning of strip footings or slab • erecting scaffolding • establishing temporary water and power supply • locating mortar boards |

RANGE STATEMENT

1.10. *Construction processes* include:

- preparing access for supply of mortar
- setting up concrete mixer.
- cleaning stone face
- laying stone
- preparing for stone laying
- work site preparation.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Identify types, size, defects and function of stone products.	<p>2.1. Common types of stone used are identified for job specifications.</p> <p>2.2. Key features and orientation of patterns in stone are identified and applied.</p> <p>2.3. Bed and face of stone and association to fretting of stone are identified and applied.</p>
3. Recognise terms used in the identification and usage of stone products.	<p>3.1. Common terms, instructions and information relating to usage of stone are understood and used in the workplace.</p> <p>3.2. Commonly used symbols and abbreviations are identified and applied.</p> <p>3.3. Key architectural types used in stonemasonry are identified and applied.</p>
4. Explain processes and procedures used in stone production and manufacture.	<p>4.1. Methods used in processing and manufacture of stone products are identified and applied.</p> <p>4.2. Common type of plant and tools used for stone production are identified and applied.</p> <p>4.3. Main difference between off-site and in situ stone production are identified and applied as part of</p>

ELEMENT	PERFORMANCE CRITERIA
5. Correctly handle, saw and store stone products.	<p>construction process.</p> <p>5.1.Characteristics of common types of stone are identified and appropriate handling techniques are applied.</p> <p>5.2.Work practices are identified and sequenced according to performance requirements of product.</p>
6. Clean up.	<p>6.1.Work area is cleared to specifications.</p> <p>6.2.Unused materials are stored.</p> <p>6.3.Tools, plant and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply calculations
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measurement techniques related to stonemasonry work
- types and uses of accessories associated with stone construction
- types of stone and stone products
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to select and use two stones types suitable for nominated construction purposes, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements
- carry out correct procedures prior to and during handling processes
- select and use appropriate processes, tools and equipment to cut stone
- adopt and use correct procedures to handle and place materials
- communicate with others to ensure safe and effective work site operations.

EVIDENCE GUIDE

Context of and specific resources for assessment This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- construction materials relevant to stone product application
- hand and power tools appropriate to work processes
- plant and equipment appropriate to work processes
- suitable work area appropriate to application processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role

EVIDENCE GUIDE

- and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1.***Information*** includes:

- diagrams or sketches

 - working in proximity to others
 - use of firefighting equipment
 - use of tools and equipment
 - working platforms and scaffolding
 - workplace environmental requirements and safety.
- 1.4. ***Tools and equipment*** include:
- angle grinders
 - bolsters
 - brushes and brooms

RANGE STATEMENT

- hammers
 - hoses
 - masonry saws
 - measuring tapes and rules
 - mortar boards
 - power leads
 - scaffolding
 - shovels
 - wheelbarrows.
- 1.5. *Quality requirements* include:
- attention to specifications of work
 - control of handling procedures
 - quality of materials
 - relevant regulations, including:
 - Australian standards
 - internal company quality policy and standards
 - manufacturer specifications where specified
 - workplace operations and procedures
 - use and maintenance of equipment.
- 1.6. *Materials* include:
- basalt
 - granite
 - marble
 - pre-cast concrete
 - sandstone.
- 1.7. *Environmental requirements* include:
- waste management
 - dust and noise
 - vibration
 - clean-up management
- 1.8. *Statutory and regulatory authority* includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.
- 1.9. *Processing and manufacture of stone products* include:
- crushed to aggregate size
 - crushed to fine particle (dust) size
 - cut and polished to tile size
 - cut or finished to pavement section size.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Stone hardness is identified using Moh's scale.</p> <p>1.8. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Use abrasives.	<p>2.1. Coolant is used as required by selected abrasives, stones and job requirements.</p> <p>2.2. Range of grades of abrasives is used in accordance with job requirements and specifications.</p> <p>2.3. Polishing compounds are used in accordance with job requirements and specifications.</p> <p>2.4. Various polishing heads are used in correct sequence to provide finish to specification.</p>
3. Use stone cutting equipment.	<p>3.1. Stone is set into place on cutting table to obtain maximum efficiency in cutting.</p> <p>3.2. Stone is wedged or fixed into place by nailed timber strips to ensure stability and is aligned correctly to cutting blade.</p> <p>3.3. Adjustments are made to machinery as required by maximum depth of cut and size of stone.</p> <p>3.4. Primary cutting machines are used appropriate to their cutting capacity.</p> <p>3.5. Secondary cutting machines are used appropriate to</p>

ELEMENT	PERFORMANCE CRITERIA
	their cutting capacity.
	3.6.Stone is marked out and cut according to job drawings, specifications and schedules.
4. Polish stone and form edges.	4.1.Adhesives are applied as fillers to stone as required by job.
	4.2.Grinding and polishing heads are set up and operated as required by job.
	4.3.Adjustments are made to machinery in accordance with job requirements.
	4.4.Polishing machinery is used in a manner appropriate to its capacity.
	4.5.Various hand-operated polishing machines are used as required by job to achieve specified finish.
5. Use adhesives and fillers.	5.1.Various filling compounds are selected and used according to job requirements.
	5.2.Various types of adhesives are selected and used according to job requirements.
	5.3.Tinting procedures for fillers and adhesives are selected and used, where required.
	5.4.Various reinforcing materials and techniques are selected and used, where required.
6. Clean up.	6.1.Surfaces are cleaned as required by job in preparation for transport or installation.
	6.2.Surface finishes, such as wax, are applied as required by job.
	6.3.Work area is cleaned up and waste materials disposed of in an appropriate manner and in accordance with Environment Protection Authority (EPA) requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace

REQUIRED SKILLS AND KNOWLEDGE

responsibilities, such as current work site environmental or sustainability frameworks or management systems

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - drawings and specifications
 - other relevant workplace documentation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- numeracy skills to workplace requirements including measurements
- problem solving skills to recognise and take action to rectify minor faults and problems
- read and interpret drawings and documentation
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- methods of finishing stone
- Moh's scale of stone hardness
- OHS regulations relating to guarding and using static and hand-held power tools and equipment on stone
- range and grades of polishing compounds
- regulations related to safe waste disposal and dust suppression
- role of coolant in stone polishing process
- types and characteristics of adhesives and fillers relevant to finishing stone surfaces
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to finish two types of stone, one hard and one soft, using at least two types of equipment listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to machinery, equipment and workplace operations
- apply organisational quality procedures and processes within the context of finishing stone
- stabilise stone or equipment, prior to cutting or polishing
- select cutting and polishing processes appropriate to stone shape, size and specified finish
- use polishing heads in a logical sequence to achieve specified finish
- polish, using both hand-held and static polishing machinery
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations
- complete finishing process to stone to specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace operations
- access to equipment and materials for cutting and polishing stone
- stone relative to cutting and polishing proposed activity
- drawings, specifications and documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Bed stone into mortar.	<p>2.1. Prepared stone is selected appropriate to the job and mortar is prepared to designed mix, including any required mortar admixtures, and spread or screeded to form a bed as required.</p> <p>2.2. Mechanical ties, fixtures and reinforcing are placed as required and stones are laid to line and in sequence as required by job.</p> <p>2.3. Packers, wedges, mortar consistency, propping, shoring and forming structures are used to ensure correct joint size, plumb, level and shape.</p> <p>2.4. Backing materials are used in a manner consistent with job requirements, with cavities maintained as required or specified.</p>
3. Dry bed stone and grout.	<p>3.1. Prepared stone appropriate to job is set in place dry and supported as required by wedges, packers and props.</p> <p>3.2. Joints are prepared and grout is poured gradually as required to fill voids.</p>
4. Dry stone construction.	<p>4.1. Stone is prepared or selected in a manner appropriate to job and laid to achieve maximum stability using</p>

ELEMENT	PERFORMANCE CRITERIA
	chips, flat faces and battered angles, on stones, earth sods and clay.
	4.2. Capping stone is laid as required by job.
	4.3. Walling is laid in a manner that maximises the force of gravity as a stabilising element in structure.
5. Fix slab stone using metal ties and adhesives.	5.1. Prepared stone slabs are fixed to metal or masonry surfaces using adhesives, cement mortar or plaster.
	5.2. Metal ties and dowels are used to secure stone slabs as required.
	5.3. Dowel cavity is filled with grout or slurry as required in job specification.
6. Finish stone surfaces and joints.	6.1. Stone surfaces are finished as required by job specifications.
	6.2. Joints are cleaned and/or raked as required to achieve either final appearance or as preparation for pointing.
	6.3. Pointing mortars or adhesives are applied to joints as required by job specifications.
7. Clean up.	7.1. Surfaces are cleaned as required by job.
	7.2. Waste materials are disposed of in an appropriate manner and in accordance with Environment Protection Authority (EPA) requirements.
	7.3. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret:
 - drawings and specifications
 - material safety data sheets
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to calculate measurement requirements related to lengths and allowances
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS3700 Masonry in buildings
- Building Code of Australia (BCA) requirements relevant to stonemasonry work
- common finishes used for mortar in masonry
- commonly used range of mortar additives, including plasticisers and their application
- interpretation of work drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring and levelling processes relevant to stonemasonry work
- mortar mix types and composition
- techniques for laying and securing stone
- types of stone and their characteristics
- types of stone wall construction
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to construct three stone walls using different types of stone materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- display compliance with organisational policies and procedures, including quality assurance requirements within the context of laying stone
- select and use appropriate processes, tools and equipment to carry out tasks
- demonstrate sound techniques in preparing mortar
- display sound and safe application methods to handle stone
- demonstrate sound techniques in laying stone to line, level, plumb or to designed alignment
- select and use sound techniques to finish stone face to specification
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- workplace location
- appropriate tools, plant and equipment
- scaffolding where applicable
- materials suitable to the task
- relevant drawings, specifications and documentation.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins

RANGE STATEMENT

Planning and preparation include:

- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- working platforms and scaffolding
- workplace environmental requirements and safety.

Tools and equipment include:

- angle grinders
- bolsters
- hammers
- jointing tools
- measuring tapes and rules
- screed boards
- shovels
- spirit levels
- trowels
- wheelbarrows.

RANGE STATEMENT

<i>Quality requirements</i> include:	<ul style="list-style-type: none">• control of handling procedures• control of quality of stone• relevant regulations, including:<ul style="list-style-type: none">• AS3700 Masonry in buildings• internal company quality policy and standards• manufacturer specifications where specified• workplace operations and procedures• specification of mix• specified finish• use and maintenance of equipment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Move, locate and secure load.	<p>2.1. Shifting/anchorage points are located and identified and slings, tackles, associated lifting gear and tools are selected consistent with needs of task.</p> <p>2.2. Shifting equipment and tools are inspected and damaged work items are reported to supervisor.</p> <p>2.3. Strongbacks/stiffeners are positioned and securely attached as required.</p> <p>2.4. Load is safely slung, connected to lifting gear and packing is secured to protect load.</p> <p>2.5. Destination location is prepared to receive load.</p> <p>2.6. Load is stood vertically if necessary, safely moved to required location and secured in position.</p>
3. Clean up.	<p>3.1. Slings, associated lifting equipment and packing are removed and loose debris and waste material removed and disposed of safely.</p> <p>3.2. Slings, lifting equipment and tools are cleaned, maintained and safely stored.</p> <p>3.3. Necessary documentation is completed.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change, and contribute to workplace responsibilities such as current work site environmental/sustainability frameworks or management system
- communication skills to:
 - communicate with team
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - report damaged work items to supervisor
 - use and interpret non-verbal communication, including the use of hand signals
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to workplace requirements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic hand signalling techniques
- basic tools, plant and equipment related to materials handling
- hazard identification and prevention methods to be adopted
- job safety analysis (JSA) and safe work method statements
- measurement techniques relevant to slinging and placing materials
- techniques for stacking and storing materials safely and for allowing egress to others and easy access to materials for retrieval
- types and characteristics of materials used in stonemasonry work
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to sling and move materials, providing evidence of the ability to:

- comply with workplace and equipment safety requirements of state and territory regulatory authorities
- comply with organisational policies and procedures within the context of handling materials and using valuable equipment
- select and use appropriate lifting equipment to suit load movement process
- connect lifting equipment safely and effectively
- apply safe and effective techniques to carry out movement and placement of materials
- use appropriate communication techniques with others to assist with moving a load, ensuring safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace
- plant and equipment relative to activity

EVIDENCE GUIDE

- tools and equipment appropriate to materials and activities
- materials appropriate to proposed activities.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. ***Information*** includes:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Prepare stone for dressing.	<p>2.1. Stone is checked for defects or natural inclusions and dimensions of stone are checked for accuracy as required by job and specifications.</p> <p>2.2. Bedding plane is checked where relevant for correct orientation to suit function and location of finished job.</p>
3. Mark details on stone.	<p>3.1. Templates are applied square to stone or appropriate to job requirements and marked on adjacent ends of stone.</p> <p>3.2. Placed templates are checked for twist/wind to ensure stone is marked out true.</p> <p>3.3. Required template details are scribed or marked so that lines remain indelible for duration of job.</p>
4. Dress a simple moulding.	<p>4.1. Mouldings are dressed in a staged sequence of fillets and chamfers, or as required by job.</p> <p>4.2. Each stage of dressing is marked out accurately and as required by job before proceeding with dressing and each stage is checked upon completion for accuracy before proceeding.</p>
5. Finish moulded stone surfaces.	<p>5.1. Stone surfaces are finished using chisels or other hand tools as required by job and specifications.</p> <p>5.2. Abrasives are used to finish surfaces if required by job and specifications.</p>
6. Clean up.	<p>6.1. Stone is cleaned using water and brush or other appropriate non-corrosive method.</p>

ELEMENT**PERFORMANCE CRITERIA**

-
- 6.2. Tools and equipment are cleaned, maintained and stored.
 - 6.3. Work area is cleared and waste materials disposed of in an appropriate manner and in accordance with Environment Protection Authority (EPA) requirements.
 - 6.4. Templates are cleaned, labelled and stored for reuse.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to workplace requirements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of working drawings and specifications
- job safety analysis (JSA) and safe work method statements

REQUIRED SKILLS AND KNOWLEDGE

- material handling techniques associated with stonemasonry work
- measuring and marking techniques relevant to stonemasonry work.
- methods of dressing stone
- regulations related to safe waste disposal and dust suppression
- types of stone and their characteristics
- use of templates for stonemasonry work
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to dress hard and soft stone to at least three separate simple moulding types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of dressing stone
- select and use appropriate processes, tools and equipment consistent with task requirements
- sound and accurate techniques used to set out and prepare stone for dressing processes
- demonstrate sound techniques in dressing hard and soft stone
- display sound application processes in sequencing tasks associated with the shaping of stone
- adoption and use of accurate techniques to set out stone and set up templates to mark mould
- adopt and use safe and effective procedures to dress and shape stone
- complete mould to designed shape and surface finish.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- hand tools and equipment appropriate to tasks
- working drawings, specifications and templates relevant to tasks
- workshop and related equipment appropriate for required activity
- stone appropriate to the relevant tasks.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Use various hand working methods for shaping dimensional stone.	<p>2.1. Stone is dressed using each tool according to correct application and in appropriate sequence to specification.</p> <p>2.2. Soft stone is cut accurately to squared sizes as required by job.</p> <p>2.3. Hard stone is dressed using hammers and axes.</p>
3. Use various power-assisted hand tools for shaping dimensional stone.	<p>3.1. Range of percussion hammers and chisels is used to shape stone at different stages of processing as required by job.</p> <p>3.2. Rotary, chain and/or oscillating saws are used to cut stone to size and shape as required by job.</p> <p>3.3. Abrasive machines are used to dress stone surfaces as required by job.</p> <p>3.4. Equipment is operated in conjunction with jigs and guides for repetitive and fine tolerance work as required by job.</p> <p>3.5. Adjustments are made to machinery, as required, in accordance with stone and application processes.</p>
4. Set up and operate static machinery for shaping dimensional stone.	<p>4.1. Circular diamond saws are operated to cut squared blocks and operated with rise and fall functions for cutting to profiles as required by job.</p> <p>4.2. Stone is shaped on lathes both between centres and facework as required by job.</p> <p>4.3. Core drilling machinery is operated as required by job.</p> <p>4.4. Moulded sections are shaped on planing machines as required by job.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Clean up work.	<p>4.5. Water-jet cutting machinery is operated as required by job.</p> <p>5.1. Work is cleaned on completion with fresh water and brushes if necessary.</p> <p>5.2. Waste materials are disposed of in an appropriate manner and in accordance with Environment Protection Authority (EPA) requirements.</p> <p>5.3. Finished stone surfaces are protected as required by job specification.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - drawings and specifications
 - plans
 - schedules
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and

REQUIRED SKILLS AND KNOWLEDGE

mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring and marking techniques used in stonemasonry work
- methods of shaping stone
- regulations related to safe waste disposal and dust suppression
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to shape one hard and one soft stone type to design specifications, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of shaping stone
- select and use appropriate processes, tools and equipment to carry out required tasks
- adopt and use sound and safe techniques in handling and manoeuvring stone
- sound and accurate techniques used to set out stone for shaping processes
- display effective and sound procedures to control dust, noise and hazards
- demonstrate sound and safe application techniques to use equipment and shape stone.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- hand tools and equipment appropriate to tasks
- stone materials applicable to required activities
- suitable work area appropriate to application

EVIDENCE GUIDE

tasks

- work drawings and documentation.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as

EVIDENCE GUIDE

far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - control of dust and noise
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment used to shape stone include:

- axes
- bush hammers
- chisels
- patent axes
- poky
- spalling hammers.

Quality requirements include:

- attention to specifications of work
- control of handling procedures
- relevant regulations, including:
 - Australian standards
 - internal company quality policy and standards
 - manufacturer specifications where specified
 - workplace operations and procedures
- use and maintenance of equipment.

RANGE STATEMENT

Materials include both hard and soft stones, such as:

- basalt (blue stone)
- granite
- limestone
- sandstone.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authority includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Use a range of methods for splitting stone.	<p>2.1. Alternative methods are identified for drilling and splitting stone.</p> <p>2.2. Stone is split and squared by drilling and using plugs and feathers.</p> <p>2.3. Holes are set out to line and spacings and drilled to depths as specified for type and size of stone.</p> <p>2.4. Guillotine principles are applied and used for splitting various thicknesses of slabbed stone as required by job or organisation.</p> <p>2.5. Stone is split using natural lines of cleavage.</p>
3. Clean up work.	<p>3.1. Stone surfaces are finished as required by job and specifications.</p> <p>3.2. Work is cleaned on completion with fresh water and brushes if necessary.</p> <p>3.3. Waste materials are disposed of in an appropriate manner and in accordance with Environment Protection Authority (EPA) requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of working drawings and specifications relevant to stonemasonry work
- job safety analysis (JSA) and safe work method statements
- material handling techniques associated with stonemasonry work
- measuring and marking techniques relevant to splitting stone
- methods of splitting stone
- regulations related to safe waste disposal and dust suppression
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to split stones to thickness both with and against the grain, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of splitting stone
- select and use appropriate processes, tools and equipment to carry out tasks
- split both hard and soft stone
- sequence appropriate tasks associated with splitting stone
- adopt and use safe and effective procedures when using power tools and splitting of stone.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location
- hand tools and equipment appropriate to splitting stone
- stone appropriate to activity
- drawings, specifications and documentation

EVIDENCE GUIDE

relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language,

EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Select stone.	<p>2.1. Stone is selected in accordance with type and colour of stone, where applicable and checked for defects or natural inclusions inappropriate for job.</p> <p>2.2. Stone is checked for dimensions to allow dressing to produce final design.</p>
3. Dress stone.	<p>3.1. Stone is marked out in a manner appropriate to job plan and specifications at each progressive stage of dressing.</p> <p>3.2. Rough blocks are primarily dressed to establish an oversized stone appropriate to job plan and specifications.</p> <p>3.3. Face of stone is dressed to flat surface and sides of stone are dressed off face in accordance with job plan and specifications.</p> <p>3.4. Cylinder is dressed in accordance with job plan and specifications.</p> <p>3.5. Sphere is dressed in accordance with job plan and specifications.</p>
4. Clean up.	<p>4.1. Surfaces are finished to a standard appropriate to job plan and specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.2. Stone is cleaned using water and brush or other appropriate non-corrosive method.
	4.3. Work area is cleared and cleaned and waste material disposed of safely.
	4.4. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of working drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- material handling techniques related to stonemasonry work
- measuring and marking techniques related to shaping stone
- methods of dressing stone
- regulations related to safe waste disposal and dust suppression
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to dress both hard and soft stone types from those listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of dressing stone
- select and use appropriate processes, tools and equipment to carry out tasks
- demonstrate sound and safe techniques to produce dressed face on stone
- demonstrate accurate setting out of each side and end of stone
- select appropriate sequencing of tasks associated with shaping of stone
- adopt and use safe and effective procedures to dress stone
- regularly check dressing process to ensure work is to set out and size
- dress and finish stone to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

EVIDENCE GUIDE

- workplace location
- hand tools and equipment appropriate to setting out and dressing processes
- stone appropriate to activity
- drawings, specifications and documentation relative to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured

EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Transfer dimensions from an engineering drawing to work.	<p>2.1. Specifications and work requirements are determined in accordance with materials and drawings, and marking off of material is carried out to requirements for profile work to specifications.</p> <p>2.2. Datum points are correctly established on stone for application of profile set-out.</p>
3. Develop patterns.	<p>3.1. Consideration of dressing procedures are analysed and most appropriate development method is chosen and applied for type of stone.</p> <p>3.2. Calculations are carried out and accurately used to develop true shape of profile mould.</p> <p>3.3. Patterns are set out accurately for profile mould, reverse mould and bed mould to dimensions and specified shapes.</p> <p>3.4. Allowances for fabrication processes with guide/roller working off template are correctly determined and transferred to bed mould.</p>
4. Use hand or hand-held power cutting tool.	<p>4.1. Tool is adjusted for operation in consideration of application work.</p> <p>4.2. Hand tool or power cutting tool is used safely and</p>

ELEMENT	PERFORMANCE CRITERIA
	correctly to cut patterns for templates.
	4.3. Materials are cut to size in accordance with drawing and job requirements, minimising wastage.
	4.4. Templates are trimmed to set-out, where required, to specifications.
5. Shape and form stone.	5.1. Equipment is set up and adjusted to meet job requirements and standard operating procedures.
	5.2. Stone is located and fixed into place on table ready for machine operation.
	5.3. Appropriate cutter is set to machine to carry out initial cutting processes and cutters are changed as required during overall process.
	5.4. Bed template is located and aligned with stone and machine operation to requirements of job and manufacturer specifications.
	5.5. Machine is set up and operated with allowances for thickness of template and gauges.
	5.6. Machine is operated and stone is shaped and formed to specifications, with material checked for accuracy against required dimensions and shape.
6. Clean up.	6.1. Area is cleaned to specification.
	6.2. Waste material is removed and placed into job waste bins.
	6.3. Tools and equipment are cleaned, inspected, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and

REQUIRED SKILLS AND KNOWLEDGE

- confirm requirements, share information, listen and understand
- follow instructions
- read and interpret drawings and specifications
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring and marking techniques related to stonemasonry work
- methods of dressing stone
- types and use of templates for stonemasonry work
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to fix a stone facade to a single or multi-storied structure, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures
- select and use appropriate processes, tools and equipment to carry out tasks
- apply organisational quality procedures and processes within the context of setting and anchoring stone facades
- demonstrate sound techniques in dressing hard and soft stone
- select stone consistent with specification for material and colour
- accurately set out and install fixing brackets
- demonstrate safe handling practices in moving and placing stone
- fix stone to position and structure
- fix stone to line, level and plumb with clamps securing components
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations
- complete stone facade to specification.

Context of and specific resources This competency is to be assessed using standard and authorised work practices, safety requirements

EVIDENCE GUIDE

for assessment

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- work location for installation of stone
- tools, plant and equipment appropriate to installation processes
- construction materials relevant to proposed activity
- appropriate documentation relevant to task.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances

EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling

RANGE STATEMENT

	stone
	<ul style="list-style-type: none"> • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • concealed services (water, power and gas) • lighting • restricted access barriers • traffic control • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Operate stone machining equipment.	<p>2.1. Stone machining equipment is selected for the machining operation required and safely started up and shut down to standard operating procedures in accordance with manufacturer specifications.</p> <p>2.2. Materials and safety guards are correctly positioned, fitted and used to designed applications.</p> <p>2.3. Stone machining equipment is operated, monitored and adjusted to achieve specified size, shape and finish.</p> <p>2.4. Measurements and tolerances are checked for consistency with job requirements and specifications.</p>
3. Operate static diamond saw.	<p>3.1. Stone is located on movable table aligned with saw blade in accordance with designed cut.</p> <p>3.2. Stone is fixed or secured into position on table by use of wedges or nailed timber sections to provide stability for sawing.</p> <p>3.3. Cutting blade is adjusted for depth of first cut in accordance with type of blade, hardness of stone and safety considerations of operator and other persons.</p> <p>3.4. Water is turned on for operating of machine and saw</p>

ELEMENT**PERFORMANCE CRITERIA**

	<p>is started up and operated in accordance with manufacturer's safe working and operating procedures.</p> <p>3.5. Stone is moved by table movement so that blade cutting is at efficient rate without affecting designed operating revolutions of machine.</p> <p>3.6. Additional cuts are made by lowering saw after each cut and then cutting on return movement of table, until complete.</p>
4. Operate travelling beam saw.	<p>4.1. Stone is located on adjustable table and fixed into stable position, and table is adjusted to align designed cut with saw blade.</p> <p>4.2. Settings for operation are carried out on a digital panel designed for length of stone as well as width of blade.</p> <p>4.3. Blade is set to initial cut for operation and machine is switched on and automatically operated in accordance with manufacturer specifications.</p>
5. Operate multi-function cutter, grinder and polisher.	<p>5.1. Machine and equipment are set up with appropriate head/plate fitted and secured to operating spindle according to work application.</p> <p>5.2. Stone is fixed into location on table according to requirements for machining processes.</p> <p>5.3. Template is set into place, where applicable, for profile work and cutting and moulding operations.</p> <p>5.4. Machinery is set up with cutting head set to initial cut and aligned with template in accordance with manufacturer specifications for setting up and operation of machine.</p> <p>5.5. Machinery operations are carried out to machine manufacturer specifications and job processes for dressing stone to requirements.</p>
6. Carry out grinding and polishing.	<p>6.1. Appropriate grinding plate is selected and fitted to machine according to machine manufacturer specifications and stone surface to be cut and polished.</p> <p>6.2. Machine is set up for grinding operations and operated in accordance with job and machine manufacturer specifications with grinding and polishing processes carried out using appropriate changes of grit abrasive pads fitted in accordance with type of stone being finished.</p> <p>6.3. Machine operations are monitored and water support</p>

ELEMENT	PERFORMANCE CRITERIA
7. Shut down machine operations.	<p data-bbox="612 297 1238 338">maintained to cutting and polishing applications.</p> <p data-bbox="568 349 1251 421">7.1. Machine shut-down procedures are carried out to machine manufacturer specifications.</p> <p data-bbox="568 432 1318 504">7.2. Supporting material, wedges and clamps are removed from stone and machine table.</p> <p data-bbox="568 515 1246 586">7.3. Finished or machined stone is removed carefully without damage and stored.</p> <p data-bbox="568 598 1283 741">7.4. Machine and supporting equipment and accessories are cleaned, maintained and checked for wear or deterioration in accordance with manufacturer specifications.</p>
8. Clean up.	<p data-bbox="568 757 1027 797">8.1. Area is cleaned to specification.</p> <p data-bbox="568 808 1299 880">8.2. Waste material is removed and placed into job waste bins.</p> <p data-bbox="568 891 1187 952">8.3. Tools and equipment are cleaned, inspected, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- interpret drawings and specifications
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant

REQUIRED SKILLS AND KNOWLEDGE

resources and sequence tasks

- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring and marking techniques relevant to stonemasonry work
- methods of dressing stone
- types and use of templates for stonemasonry work
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to cut, grind and polish to specification at least three types of stone products listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures
- select and use appropriate processes, tools and equipment to carry out tasks
- apply organisational quality procedures and processes within the context of setting and anchoring stone facades
- demonstrate sound techniques in dressing hard and soft stone
- select stone consistent with specification for material and colour
- accurately set out and install fixing brackets
- demonstrate safe handling practices in moving and placing stone
- fix stone to position and structure
- fix stone to line, level and plumb with clamps securing components
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations
- complete stone facade to specification.

Context of and specific resources This competency is to be assessed using standard

EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- work location for installation of stone
- tools, plant and equipment appropriate to installation processes
- construction materials relevant to proposed activity
- appropriate documentation relevant to task.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected

EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards

RANGE STATEMENT

Planning and preparation include:

- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- brooms
- brushes
- clamps
- hammers
- jigs
- measuring tapes and rules

RANGE STATEMENT

	<ul style="list-style-type: none">• shovels• spanners• spirit levels• squares• wedges.
<i>Quality requirements</i> include:	<ul style="list-style-type: none">• internal company quality policy and standards• manufacturer specifications• relevant regulations including Australian standards• workplace operations and procedures.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• dust and noise• vibration• waste management.
<i>Statutory and regulatory authority</i> includes:	<ul style="list-style-type: none">• federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Stone machining equipment</i> includes:	<ul style="list-style-type: none">• block squaring machines• drilling machines• frame or gang saws• Jenny Lind type polishers• multi-blade saws• multi-functional cutter, grinder and polisher (Jenny Lind type)• multi-head static polishers• planing machines• shaping machines• slab splitting machines• static diamond circular saws• travelling beam circular saws.
<i>Machining operation</i> includes:	<ul style="list-style-type: none">• bevelling• drilling• grinding• polishing• sawing.
Types of <i>stone</i> include:	<ul style="list-style-type: none">• igneous rock, including basalt (blue stone) and granite• limestone• marble• sandstone.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Stone quality identified, selected and prepared for turning.</p> <p>1.8. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Construct templates.	<p>2.1. Appropriate template material is selected and template prepared and cut to required shape or design using appropriate tools.</p> <p>2.2. Template is applied to stone for basic roughing out procedure as required by design, and appropriate tools and machines are selected consistent with job requirements.</p>
3. Identify applications of lathe work to stonemasonry.	<p>3.1. Specific features of lathe applications and methods of handling and holding work applicable to lathe operation are identified and used.</p> <p>3.2. Machine operations, including pre-service checks, are identified and machine speeds and feed rates are calculated.</p>
4. Operate lathe and turn stone.	<p>4.1. Job sheet is prepared as service record of lathe operation where applicable, and correct lathe cutting tools are selected and prepared for use.</p> <p>4.2. Correct alignment of talkstock is accurately performed.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Pre-service checks are correctly performed in accordance with manufacturer specifications and machine working speeds and feed rates.</p> <p>4.4. Roughing and finishing areas are set by calculations from operations sheet specifications.</p> <p>4.5. Holding devices are correctly applied to work piece and lathe is operated through a dry run check before lathe start-up procedure is applied.</p> <p>4.6. Lathe <i>operation</i> is performed to turn stone to match contour of template.</p>
5. Finish and seal stone.	<p>5.1. Correct contour conformity to template is checked, stone is turned and surface is finished to specification.</p> <p>5.2. Completed stonemasonry work is removed from lathe and prepared for sealant application as specified.</p> <p>5.3. Sealing solutions and compounds are applied to manufacturer specifications.</p>
6. Clean up.	<p>6.1. Debris and waste materials are removed on completion of process.</p> <p>6.2. Re-usable and recyclable materials are salvaged and stored.</p> <p>6.3. Lathe accessories are removed and tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measurement techniques relative to design shapes in stone
- processes and techniques for finishing stone surfaces
- processes for preparation of stone
- techniques for operating a lathe
- techniques for safe handling of material relevant to stonemasonry work
- techniques for turning and shaping stone
- types and uses of templates for lathe work
- types and uses of cutting tools associated with turning stone
- types and uses of hand tools and equipment relevant to setting up and turning stone
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare and turn stone and produce two different finished, turned products using at least two of the stone material types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of producing turned stone
- demonstrate safe and effective operational use of tools and equipment with processes
- adopt and use correct procedures to handle and place material
- demonstrate sound techniques to accurately produce template to designed profile
- demonstrate sound and safe procedures to dress stone to requirements in preparation for turning
- display sound understanding of turning work applications and selection of appropriate cutting tools
- demonstrate sound techniques to set up and prepare material and lathe for lathe operation
- display sound and safe techniques to cut, dress and finish stone to shape and specifications
- communicate with others to ensure safe and effective workplace operations.

EVIDENCE GUIDE

Context of and specific resources for assessment This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- materials relative to the activity
- hand tools, machinery and equipment appropriate to activity
- suitable work area
- drawings and documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace

EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- abrasive heads
- abrasive sheets
- dividers and calipers
- grinders

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Prepare background surface.	<p>2.1. Appropriate equipment is selected and used for removing excess material so that surface is even and flat.</p> <p>2.2. Surface is made suitable for designed treatment as per specifications for setting out and cutting letters, with protection to surrounds of lettering area applied using appropriate masking and covering technique.</p> <p>2.3. Surface is painted with weak water-based paint to specifications for ease of marking out letters and shapes.</p>
3. Identify and draw to scale various types of lettering, insignias and monograms.	<p>3.1. Drafted designs are set out and drawn to appropriate scale on set-out material.</p> <p>3.2. Designs are transferred to prepared surface either directly or by using templates or stencils.</p> <p>3.3. Designs are marked by pencils or scribes accurately to stencil/template or direct set-out.</p>
4. Use hand and power tools for cutting letters.	<p>4.1. Material is safely held in most suitable position ready for cutting/shaping operation with stone, less than 30mm thick, fixed to a larger section of stone to minimise risk of breaking.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Tools and equipment are selected for cutting/shaping process in accordance with size and shape of letters, and are adjusted correctly for operation according to standard operating procedures and work to be undertaken.</p> <p>4.3. Start-up and shut-down procedures for use of equipment are carried out in accordance with specifications, where applicable, and tools and equipment are used to carefully cut letters to set-out.</p> <p>4.4. Letters are cut to size and depth specified and holes are drilled for cut out letters to specifications, to provide keying for securing load.</p>
5. Perform lead inlay process on lettering of stone surfaces.	<p>5.1. Pre-cut lettering is inlaid with solid or melted lead using appropriate tools or method and without damage to stone.</p> <p>5.2. Molten lead is heated and handled safely in accordance with job and OHS requirements.</p> <p>5.3. Lead is inlaid to give a flat or raised finish to stone in accordance with specifications.</p> <p>5.4. Letters or insignias are finished clean on their edges and surface is finished to specifications.</p>
6. Clean up.	<p>6.1. Waste and unwanted material is disposed of safely.</p> <p>6.2. Re-usable and recyclable materials are salvaged and stored.</p> <p>6.3. Tools and equipment are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and

REQUIRED SKILLS AND KNOWLEDGE

- confirm requirements, share information, listen and understand
- follow instructions
- identify letters in order to check spelling
- read and interpret drawings and specifications
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- effect of lead on the human body and organs, and related safety precautions
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring and marking techniques used in stonemasonry work
- methods of inlaying lead to stone
- methods of working stone
- traditional and contemporary font styles used in stonemasonry work
- types and use of templates or stencils
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to lead inlay lettering using both solid and melted metal, providing evidence of the ability to:

- select and use appropriate tools, equipment and processes consistent with requirements of activity
- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of inlaying lead to stone
- prepare face for lettering and finish to specification
- accurately set out lettering to form balanced presentation
- check spelling prior to cutting letters
- provide appropriate protection to surrounding area
- use safe and effective procedures to inlay lead to recesses
- complete inlaying of lead and finishing of surface to specifications
- accurately cut letters on design to specifications
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location
- tools and equipment appropriate to inlaying processes
- stone relevant to proposed activity
- drawings, specifications and documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling lead and stone
- relevant Australian standards
- safe work procedures relating to handling lead

stored.

5.3. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings, specifications and job designs
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- basic keyboarding skills
- basic problem and fault finding skills with software applications
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to workplace requirements
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- construction materials and their characteristics
- handling techniques for material relative to stonemasonry work
- hardware requirements for software use

REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- measuring techniques relevant to dimensions and shape
- range of software applications appropriate to computer numerically-controlled (CNC) equipment
- types of machines and machining processes, including computer-controlled machinery
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to produce three separate stone components using two types of stone material listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- select and use appropriate processes, tools and equipment to carry out application tasks
- apply organisational quality procedures and processes within context of operating computer-controlled machinery
- input data to achieve job requirements
- demonstrate sound procedures with machine operated through a reduced speed dry run to check functions and alarms
- demonstrate sound and safe techniques to set stone into place for machine operations
- demonstrate correct procedures in start-up and shut-down procedures for machining operations
- produce products to design in accordance with job specifications and drawings
- identify faults or problems that may occur and necessary action taken to rectify
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- CNC machinery applicable to proposed activity
- range of cutters, heads and required tools and equipment
- machining project and specifications relevant to activity
- data and software programs relevant to application activity
- material applicable to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Select stone.	<p>2.1. Stone is selected for quality, grain and dimensions to suit job specifications.</p> <p>2.2. Surface for lettering is prepared for setting out process in accordance with type of stone and specifications.</p>
3. Set out for lettering.	<p>3.1. Drafting skills are used to accurately set out lettering to full size for transference to work surfaces using templates or stencils and fonts appropriate to cemetery monument set-out and design.</p> <p>3.2. Fonts are set out appropriate to architectural settings and to suit a variety of commercial signage applications.</p> <p>3.3. Set out lettering is accurately transferred to stone face by use of appropriate transfer method.</p>
4. Cut and form traditional and contemporary letters.	<p>4.1. Raised and flush letters are cut and formed in stone to set-out designed shapes.</p> <p>4.2. V-formed letters are cut and formed in stone to set-out designed shapes.</p> <p>4.3. Decorative ornamental work in lettering is cut and formed in stone to set-out designed shapes.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Cut and form innovative forms of lettering.	<p>5.1. Innovative design and technique for working letters in stone are developed and drafted into set-out.</p> <p>5.2. Drafted <i>design is transferred</i> to prepared surface by an appropriate method.</p> <p>5.3. Lettering is cut and formed in stone to designed shapes and style of cut.</p>
6. Clean up.	<p>6.1. Final stone finish is cleaned to specification.</p> <p>6.2. Waste materials are disposed of according to EPA requirements.</p> <p>6.3. Tools are cleaned, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - identify letters in order to check spelling
 - read and interpret:
 - client's brief
 - drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and

REQUIRED SKILLS AND KNOWLEDGE

problems

- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- drawing and sketching techniques
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- lettering techniques relevant to stonemasonry work
- materials handling techniques
- measuring and setting out processes related to layout of signs or lettering
- methods of working stone
- traditional and contemporary font styles used in stonemasonry work
- types and use of portable power tools relevant to stonemasonry work
- types and use of stencils and templates
- types and use of tools and equipment relevant to dressing stone and processes for cutting letters
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to produce a range of stone letters in different fonts, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of lettering in stone
- select and use appropriate processes, tools and equipment to carry out tasks
- demonstrate sound and accurate techniques to draft lettering to design requirements
- prepare face for lettering, carried out to surface finish and setting out specifications
- accurate setting out of letters to form balanced presentation
- check spelling prior to transference or cutting processes
- demonstrate sound and accurate techniques to transfer design to stone face
- demonstrate correct procedures and sound techniques to use tools and equipment to produce lettering to design
- provide protection to surrounding area during application processes
- complete lettering and finish surface to design and specifications
- communicate with others to ensure safe and

EVIDENCE GUIDE

effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- materials relative to the activity
- hand and power tools appropriate to activity
- plant and equipment appropriate to activity
- suitable work area appropriate to activity
- appropriate drawings, documentation and drawing or sketching equipment relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over

EVIDENCE GUIDE

- a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)

RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- memos
 - regulatory and legislative requirements pertaining to handling and cutting stone
 - relevant Australian standards
 - safe work procedures relating to handling and cutting stone
 - signage
 - verbal, written and graphical instructions
 - work bulletins
 - work schedules, plans and specifications.
 - assessment of conditions and hazards
 - determination of work requirements and safety plans and policies
 - equipment defect identification
 - work site inspection.
 - emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
 - hazard control
 - hazardous materials and substances
 - organisational first aid
 - PPE prescribed under legislation, regulations and workplace policies and practices
 - safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
 - use of firefighting equipment
 - use of tools and equipment
 - workplace environmental requirements and safety.
- Tools and equipment*** include:
- clamps
 - drafting equipment
 - hammers

RANGE STATEMENT

	<ul style="list-style-type: none">• lettering chisels• mallets• masonry drills• measuring tapes and rules• pneumatic chisels, including lettering chisels• power grinders• punch• scribes• sculptor's chisels• squares.
<i>Quality requirements</i> include:	<ul style="list-style-type: none">• attention to specifications of work• control of handling procedures• finishing of stone surfaces• quality of materials• relevant regulations, including:<ul style="list-style-type: none">• Australian standards• internal company quality policy and standards• manufacturer specifications where specified• workplace operations and procedures• use and maintenance of equipment.
<i>Materials</i> include:	<ul style="list-style-type: none">• granite• marble• reconstituted stone• slate.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none">• clean-up management• dust and noise• vibration• waste management.
<i>Statutory and regulatory authority</i> includes:	<ul style="list-style-type: none">• federal, state and local authorities administering applicable Acts, regulations and codes of practice.
<i>Surfaces for lettering</i> include:	<ul style="list-style-type: none">• dressing• milling or cutting• painting surface for setting out• polishing• sandblasting.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Identify design requirements for various monuments.	<p>2.1. Range of monuments covered by AS4204 Headstones and cemetery monuments, and features and components involved in monumental construction are identified and applied.</p> <p>2.2. Legislation, regulations and codes relating to masonry work are identified and site features influencing design are applied from site visit or report.</p>
3. Prepare plans and specifications for construction and installation.	<p>3.1. Foundation design is selected in accordance with AS4204, job safety analysis (JSA) and safe work method statements, proposed monument and foundations.</p> <p>3.2. Materials are selected in accordance with regulations, site conditions and customer requirements.</p> <p>3.3. Drawings and specifications are prepared to requirements of approving authority, where applicable.</p>
4. Check details, edit drawings and specifications for submission.	<p>4.1. Specifications and drawing details are checked to ensure consistency with client brief and regulatory authority requirements.</p> <p>4.2. Documentation and drawings are accurately copied and distributed.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret:
 - documentation
 - plans
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS4204 Headstone and cemetery monuments
- basic design of cemetery monuments
- Building Code of Australia (BCA) requirements relevant to stonemasonry work
- common materials used in monumental construction
- interpretation of drawings and specifications
- JSA and safe work method statements
- measuring and levelling techniques and processes relevant to stonemasonry work
- regulatory authorities and agencies controlling monumental construction
- types and characteristics of soils and foundations

REQUIRED SKILLS AND KNOWLEDGE

- types and performance of concrete footings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to design and plan installation of a stone monument to a client's brief, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- appropriately select available data consistent with requirements of activity
- apply organisational quality procedures and processes within the context of planning monumental construction
- gather and address in planning process, information relating to site regulations/caveats and construction requirements
- identify burial site location on site drawing and location on site
- select materials in accordance with cemetery proposed monument and AS4204 requirements
- use construction fixing, fastening and finishing requirements specified in final design.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- drawing equipment and appropriate workplace

EVIDENCE GUIDE

- Australian standards and BCA
- brief relevant to proposed activity
- cemetery data relevant to the design project.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification

RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Quality requirements include:

- internal company quality policy and standards
- manufacturer specifications
- proposed monument and foundations
- relevant regulations, including AS4204 Headstones and cemetery monuments
- workplace operations and procedures.

Materials include:

- basalt
- granite
- marble
- pre-cast concrete sections
- reconstituted stone.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory

- federal, state and local authorities

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with hazards, safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented. in consideration of hazards.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Select and prepare materials and equipment.	<p>2.1. Appropriate shifting equipment is installed and tested to OHS regulations and job requirements, where applicable.</p> <p>2.2. Working platforms and scaffolding are erected in accordance with OHS regulations and job requirements.</p>
3. Set out veneer stonemasonry work.	<p>3.1. Location and structural details of stonemasonry work are identified from drawings and job specifications and datum or level line is established.</p> <p>3.2. Stonemasonry work is set out to location and dimensions from drawings and specifications.</p>
4. Construct base stonemasonry work.	<p>4.1. Mortar is mixed to specifications and in accordance with AS1316 Masonry cement.</p> <p>4.2. Stonemasonry work gauge is determined and set-out rod prepared.</p> <p>4.3. Base stonemasonry work is constructed for veneer construction to requirements of AS3700 Masonry in buildings.</p>
5. Construct veneer	<p>5.1. Timber/steel structural frame is checked to ensure it is ready for stonemasonry work veneer, without</p>

ELEMENT	PERFORMANCE CRITERIA
walls.	<p data-bbox="624 304 1043 331">protrusion into required cavities.</p> <p data-bbox="576 349 1294 488">5.2. Stonemasonry work is laid and completed to job drawings and specifications with damp proof course laid in accordance with specifications and AS2904 Damp proof courses and flashings.</p> <p data-bbox="576 506 1278 600">5.3. Reflective foil laminate is installed to comply with AS1940 The storage and handling of flammable combustible liquids and AS3700.</p> <p data-bbox="576 618 1310 757">5.4. Ventilation for veneer construction is built in to specifications to requirements of as per AS1684 Residential timber framed construction, and Building Code of Australia (BCA).</p> <p data-bbox="576 775 1246 869">5.5. Wall ties are positioned and fixed to timber/steel framework correctly to AS2699 Wall ties on masonry construction.</p> <p data-bbox="576 887 1310 981">5.6. Openings are constructed and flashings installed to job specification and cavities are kept clear of mortar droppings and bridging.</p> <p data-bbox="576 999 1278 1093">5.7. Lintels are installed to job specifications and top stonemasonry work is constructed to eaves level to AS3700 requirements.</p> <p data-bbox="576 1111 1310 1182">5.8. Scaffolding is erected as required in accordance with job requirements and OHS regulations.</p> <p data-bbox="576 1200 1278 1294">5.9. Walls are built to gauge straight and true in plumb, line and level within the tolerances set out in AS3700.</p> <p data-bbox="576 1312 1294 1406">5.10. Control joints are formed in accordance with locations on job drawings and specifications and AS3700 requirements.</p> <p data-bbox="576 1424 1278 1518">5.11. Weepholes, brick/block reinforcing, vermin proofing and wall flashing are located and built in, where required, to job specifications.</p> <p data-bbox="576 1536 1310 1630">5.12. Sills are cut where required and laid to line in accordance with job specifications.</p>
6. Rake and rule joints.	<p data-bbox="576 1648 1294 1742">6.1. Joints to laid stonemasonry work are raked or ruled to correct depth and profile in accordance with job specifications.</p> <p data-bbox="576 1760 1294 1832">6.2. Stonemasonry work is brushed down prior to drying to remove unwanted mortar.</p>
7. Clean up.	<p data-bbox="576 1850 1310 1944">7.1. Stonemasonry work is cleaned using dry, liquid or chemical means in accordance with type of stone and specifications.</p> <p data-bbox="576 1962 1262 2007">7.2. Area is cleared of waste, material, scaffolding and</p>

ELEMENT**PERFORMANCE CRITERIA**

equipment and waste and unwanted material are disposed of safely.

7.3. Unused materials are stored/stacked and tools and equipment cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- Australian standards
- BCA
- interpretation of drawings and specifications

REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- measuring, levelling and calculation processes relevant to stonemasonry work
- methods of fixing stone veneer
- range of commonly used mortar additives
- safe use of scaffolding
- types and safe use of lifting equipment
- types of mortar mix and composition
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to fix stone veneer to at least one of the structural types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- select and use of appropriate processes, tools and equipment for carrying out tasks
- apply organisational quality procedures and processes within the context of stone veneer construction
- select stone consistent with specification for material and colour
- use safe handling practices in moving and placing stone
- fix stone to position and structure
- use safe and effective procedures to lay a stone wall to alignment and plumb
- fix and finish wall ties of stone face to specifications
- comply with organisational policies and procedures
- demonstrate accurate measuring and setting out techniques
- determine wall location and set-out accurately
- lay stone to line level, plumb and gauge
- apply safe and effective procedures in erecting scaffolds
- identify faults and problems that occur and take necessary action to rectify

EVIDENCE GUIDE

- communicate interactively with others to ensure safe and effective work operations are carried out
- clean up cavities, wall and work area
- complete base and stone veneer construction to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- work location for stone veneer activity
- tools, plant and equipment appropriate to construction processes
- construction materials relevant to proposed activity
- appropriate documentation relevant to task.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and

EVIDENCE GUIDE

environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Construct footings and prepare monument stones.	<p>2.1. Monument footings are set out and excavated to dimensions from drawings and specifications.</p> <p>2.2. Reinforcement is placed, formwork fixed and concrete poured to provide footings to specifications.</p> <p>2.3. Delivered stone is checked for conformity to size, design and specifications.</p> <p>2.4. Layout is set out on footings to dimensions of design and appropriate lifting equipment is installed and tested or made ready to OHS regulations and job requirements, where applicable.</p>
3. Set up side stones into place.	<p>3.1. Side stones are stood up into position on packing of cement sheet or stone pieces with packing adjusted to provide slight fall towards front stone.</p> <p>3.2. Side stones are checked for plumb and packing is adjusted where required.</p> <p>3.3. Measurement for diagonals and parallel are checked to be true and stones are checked for alignment by levelling at both front and back ends of side stones.</p>
4. Prepare dowel joints.	<p>4.1. Depth of abutting dowel holes is checked for measurement and dowels are measured and marked</p>

ELEMENT	PERFORMANCE CRITERIA
	to length (10 mm) and cut to marks.
	4.2. Dowels are inserted in or located near applicable holes.
5. Stand up front and back stones.	<p>5.1. Mortar is mixed to specification and inserted into side stone holes and designated dowels are inserted into mortared holes to full depth.</p> <p>5.2. Back stone is positioned on timber packing ready for lifting into place.</p> <p>5.3. Timber pieces are placed against side stones to avoid chipping in lifting.</p> <p>5.4. Mortar is placed to fill holes, back stone is raised into position and manoeuvred into close joints, and packing is adjusted to ensure back stone level.</p> <p>5.5. Front stone is located, raised and manoeuvred into position to finish with joints to specifications and level.</p>
6. Grout base and joints.	<p>6.1. Grout is prepared and mixed to specification and joints between kerb stones and base is packed slightly with grout to specifications.</p> <p>6.2. Kerb joints are cleaned with wet cloth and grouted to specifications.</p>
7. Fix headstone to backstone.	<p>7.1. Dowels for joints are measured and cut to specifications with dowel holes filled with mortar and dowels placed fully into backstone.</p> <p>7.2. Headstone is raised and lowered carefully into place and finished plumb and level to specification.</p>
8. Fill centre and finish with chip top.	<p>8.1. Centre area is filled and finished to specified base.</p> <p>8.2. Brick or concrete supports are placed in each corner and maximum 50 mm thick reinforced concrete slab is poured to specification.</p> <p>8.3. Bluestone and granite screening are mixed and spread to specified finished level.</p>
9. Fit cover stone and finish monument.	<p>9.1. Dowels for joints, where applicable, are measured and cut to specifications.</p> <p>9.2. Centre area is filled to specifications, dowel holes are filled with mortar and dowels are placed fully into position.</p> <p>9.3. Cover stone is <i>shifted</i> into place and rested upon timber packing pieces and lowered into place using wedges to finish in position.</p> <p>9.4. Pointing/grouting material is prepared and applied to</p>

ELEMENT	PERFORMANCE CRITERIA
	joints, finishing to specification.
10. Clean up.	10.1. Monument is cleaned down and polished where applicable to specification.
	10.2. Area is cleared and waste material disposed of safely.
	10.3. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- Australian standards: 4204 Headstones and Cemetery Monuments, AS2904 Damp proof courses and flashings, AS3700 Masonry in buildings and AS2699 Wall ties on masonry construction
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measure and levelling techniques relevant to stonemasonry work
- properties and performance of concrete footings
- stone monument construction methods
- types and performance of adhesives and sealants used in stonemasonry work
- types and safe use of shifting equipment
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to install a cemetery monument using any of the materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures
- select and use appropriate processes, tools and equipment to carry out installation tasks
- apply organisational quality procedures and processes within the context of installing cemetery monuments
- install concrete footings to location and level
- demonstrate accurate measurement of stone sections and setting out for monument
- adopt and use safe and effective procedures to fit and fix front, side and backstones
- use correct procedures to place and fix headstone
- complete installation and finish to specifications. identify typical faults and problems that occur and action required to rectify them interactively communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge

EVIDENCE GUIDE

will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- site location for proposed activity
- materials appropriate to required constructions activity
- hand and power tools, plant and equipment appropriate to applications tasks
- drawings and specifications relevant to proposed activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone and concrete
- relevant Australian standards
- safe work procedures relating to handling

RANGE STATEMENT

	stone and concrete
	<ul style="list-style-type: none"> • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.
<i>Planning and preparation</i> include:	<ul style="list-style-type: none"> • assessment of conditions and hazards • determination of work requirements and safety plans and policies • equipment defect identification • work site inspection.
<i>Safety (OHS)</i> is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	<ul style="list-style-type: none"> • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation • hazard control • hazardous materials and substances • organisational first aid • PPE prescribed under legislation, regulations and workplace policies and practices • safe operating procedures, including the conduct of operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • concealed services (water, power and gas) • lighting • restricted access barriers • traffic control • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	<p>1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.</p> <p>1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.</p> <p>1.3. Signage and barricade requirements are identified and implemented in consideration of hazards.</p> <p>1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.</p> <p>1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.</p> <p>1.6. Fixing connection materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.</p> <p>1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied.</p>
2. Prepare stone for dressing.	<p>2.1. Stone facade erection is planned consistent with AS3850 Tilt up concrete construction.</p> <p>2.2. Delivered stone is checked for conformity to size and colour against specifications and provided material sample.</p> <p>2.3. Area of structure to receive stone for facade is set out for line and level in accordance with job drawings and dimensions and datum or level line is established for base course of stone components.</p> <p>2.4. Area of structure to receive stone components is prepared consistent with manufacturer's fixing recommendations, site drawings and specifications.</p> <p>2.5. Brackets or anchors are installed to structure for line of placement to specifications for structural fixing.</p> <p>2.6. Steel dowels are fitted to base where specified to provide key for base course of components.</p> <p>2.7. Stone is checked for faults prior to installation and stone components are prepared, lifting locations checked and lifting gear attached in accordance with manufacturer requirements and AS3850.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Shift, erect and fix stone.	<p>3.1. Scaffolding is erected, where required, to job requirements and OHS regulations.</p> <p>3.2. Slings, clutches and other predetermined rigging equipment are selected to job requirements and inspected for correct function.</p> <p>3.3. Stone components are shifted and transferred to fixing location at structure in accordance with job safety requirements.</p> <p>3.4. Base components are prepared for placement by drilling holes for dowels where applicable, and placement of wedges or packers for adjustment.</p> <p>3.5. Initial stone is manoeuvred, placed and adjusted in position to be fixed level, to line and plumb.</p> <p>3.6. Base course of stone components are placed and fixed to lines, level, aligned on face and plumb to specifications with location of each stone component to align and tie components together, adjusted and secured to specifications.</p> <p>3.7. Corners of stone facade are joined and fixed to designed junction, to specifications.</p> <p>3.8. Stone facade is installed using appropriate <i>fixing methods</i> to engineer's specifications.</p> <p>3.9. Shifting gear/rigging equipment is removed from stone facade upon engineer's or site authority's approval of fixing.</p> <p>3.10. Stone facade is caulked, sealed and flashed in accordance with job drawings and engineer's specifications.</p>
4. Clean up.	<p>4.1. Area is cleaned to specification.</p> <p>4.2. Waste material is removed and placed into job waste bins.</p> <p>4.3. Tools and equipment are cleaned, inspected, maintained and stored.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - follow instructions
 - read and interpret drawings and specifications
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and AS3850 Tilt up concrete construction
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring, levelling and calculation techniques for stonemasonry work
- methods of fixing stone to structures
- safe use of scaffolding
- types and safe use of lifting equipment
- types of stone and their characteristics
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to set and anchor a stone facade to at least one of the structural types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures
- select and use appropriate processes, tools and equipment to carry out tasks
- apply organisational quality procedures and processes within the context of setting and anchoring stone facades
- demonstrate sound techniques in dressing hard and soft stone
- select stone consistent with specification for material and colour
- accurately set out and install fixing brackets
- demonstrate safe handling practices in moving and placing stone
- fix stone to position and structure
- fix stone to line, level and plumb with clamps securing components
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations
- complete stone facade to specification.

Context of and specific resources This competency is to be assessed using standard

EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- work location for installation of stone
- tools, plant and equipment appropriate to installation processes
- construction materials relevant to proposed activity
- appropriate documentation relevant to task.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected

EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards

RANGE STATEMENT

Planning and preparation include:

- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
 - concealed services (water, power and gas)
 - lighting
 - restricted access barriers
 - traffic control
 - work site visitors and the public
 - working at heights
 - working in confined spaces
 - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Hazards include:

- barricades
- dust
- excessive noise nearby
- obstructions to clear access for supply
- other work personnel
- power leads

RANGE STATEMENT

Tools and equipment include:

- wind.
- air compressor and hoses
- chalk lines
- clogging tools
- hammers
- lifting gear and equipment
- masonry chisels
- measuring tapes and rules
- power drills, including impact
- power grinders
- power leads
- rollers
- rubber mallets
- scaffolding
- screw cramp and wedges
- spirit levels
- squares
- string lines.

Quality requirements include relevant regulations, including:

- internal company quality policy and standards
- manufacturer specifications
- AS3850 Tilt up concrete construction
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authority includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Structure types include:

- brick/concrete masonry walls
- in situ reinforced concrete
- pre-cast reinforced concrete
- structural steel frame.

Fixing methods include:

- chemical masonry anchor
- mechanical masonry anchor
- metal bracket for connection to steel frame
- supporting and tying stone components together:
 - S hook
 - back cramp

RANGE STATEMENT

- corbel plate bracket
- dog cramp
- fish tailed cramp
- pin bracket
- slotted bracket
- turned end cramp.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research for compliance with building and planning legislation.	<p>1.1. Compliance with building and construction planning legislation is investigated, interpreted and communicated to others throughout design and construction of the building project for <i>planning and preparation</i> purposes.</p> <p>1.2. Planning and construction effects of the BCA and construction requirements of relevant Australian standards are researched and documented following <i>construction principles for domestic scale buildings</i>.</p> <p>1.3. Effects of state or territory, local government and service supply authorities' legislation, including <i>reporting systems</i> on design and construction are researched and documented.</p> <p>1.4. Methods of foundation assessment and classification are identified and evaluated.</p> <p>1.5. Effects of the Disability Discrimination Act (DDA) regarding access for people with a disability are researched and documented.</p>
2. Record all relevant planning and construction information.	<p>2.1. Building planning and construction information is determined and recorded using appropriate industry terminology and symbols.</p> <p>2.2. Salient features of a site, sufficient for the preparation of design and construction documents, are recorded on the plan.</p>
3. Investigate and evaluate a site for establishment, preparation and excavation requirements.	<p>3.1. Salient features of a building site and methods of soil investigation, assessment and clarification are appraised and recorded on documents available to site services.</p> <p>3.2. Principles and practices of site establishment and different types and uses of builders' plant and equipment are identified and evaluated.</p>
4. Determine trade sequencing.	<p>4.1. Trade sequencing appropriate to the different forms of residential construction are identified and evaluated.</p> <p>4.2. Structural systems commonly used in domestic scale buildings are described and sketched.</p> <p>4.3. Types and principles of construction relevant to the domestic design and construction are identified and evaluated according to <i>relevant legislation</i>, including BCA, and construction standards and</p>

ELEMENT	PERFORMANCE CRITERIA
	practices.
5. Evaluate and apply cyclone-resistant construction to buildings.	<p>5.1. Cyclone category areas and code specification are defined.</p> <p>5.2. Terrain categories and their application to cyclone design are defined.</p> <p>5.3. Methods of 'tie down' construction are identified from BCA.</p> <p>5.4. Applications of structural bracing principles are identified in specifications.</p> <p>5.5. Alternative approaches of construction in cyclone areas are evaluated in accordance with BCA.</p>
6. Evaluate construction standards and practices.	<p>6.1. Standards and practices for claddings, linings, finishes and coatings associated with domestic scale buildings are identified and evaluated.</p> <p>6.2. Construction standards and practices of window, door and joinery fabrication and installation are identified and evaluated.</p> <p>6.3. Basic principles and integration of building services into the building are identified and evaluated.</p> <p>6.4. Structural principles of loads, forces, stresses and strains applied in the design and construction of single storey domestic scale buildings are identified and evaluated.</p> <p>6.5. <i>Types, principles, standards and practices</i> for the installation of the services in single and two storey residential dwellings are identified and evaluated.</p> <p>6.6. Types, principles, construction standards and practices relating to domestic stair construction, balustrading and handrails are identified and evaluated.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

REQUIRED SKILLS AND KNOWLEDGE

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - communicate effects of planning and construction legislation to others
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - BCA
 - legislation
 - reports
 - specifications
 - standards
 - working drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - document effects of legislation and standards
 - draft evaluation of own actions to make judgements about performance and necessary improvements
 - record planning and construction information
- numeracy skills to interpret complex mathematical information
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- access requirements for people with a disability and requirements of the DDA with regard to access
- authorities and powers of a building surveyor
- codes of conduct and ethics
- design and construction principles of buildings
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods

REQUIRED SKILLS AND KNOWLEDGE

- terminology, definitions and hazard identification.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- apply the principles of construction, standards and services, and design and maintenance specifications; associated reporting of data, findings, recommendations and strategies for at least one domestic scale building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.
- apply strategic plans, workplace policies and procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements
- identification of any equipment defects
- safety plans and policies
- work site inspection.

Construction principles for domestic scale buildings include:

- evaluation and identification of construction methods, standards and services in compliance with relevant legislation, design specifications, maintenance specifications
- domestic scale building projects requiring the application of principles of construction include provision of site access/facilities, work schedules, project milestones and the calculation and processing of application or

RANGE STATEMENT

	inspection fees.

CPCCSV5002A Evaluate materials for construction of domestic scale buildings

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to evaluate and select materials for domestic scale buildings.

It relates to a range of building materials, including concrete, glass, timber, plastic and plasterboard in accordance with the Building Code of Australia (BCA).

Application of the Unit

Application of the unit This unit of competency supports the attainment of the understanding and skills to evaluate materials for construction of domestic scale buildings, requiring the demonstration of research, analysis and evaluation for the choice and application of building materials and subsequent reporting skills within the context of relevant legislation, the BCA and Australian standards.

Licensing/Regulatory Information

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse building materials.	<p>1.1. Properties of materials are analysed and selected for performance in domestic scale building projects requiring evaluation.</p> <p>1.2. Quality standards and performance of materials are identified according to BCA, <i>adherence to legislative requirements</i> and <i>types of structures</i>.</p> <p>1.3. Methods of testing materials are recorded.</p> <p>1.4. Visual characteristics of materials are identified and recorded.</p> <p>1.5. Compatibility between materials and their performance are identified and documented.</p>
2. Investigate suitability of materials for typical domestic scale buildings.	<p>2.1. Samples of commonly used construction materials are identified and selected for investigation according to their purpose and standard work practices.</p> <p>2.2. <i>Materials</i> identified as structurally adequate and meeting <i>standard specifications</i> are selected in accordance with BCA.</p> <p>2.3. Materials of a required fire resistance are selected in accordance with BCA.</p> <p>2.4. Materials are selected based on cost-effectiveness and in accordance with manufacturer specifications.</p> <p>2.5. Alternative materials for a given application are selected according to BCA.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and

REQUIRED SKILLS AND KNOWLEDGE

confirm requirements, share information, listen and understand

- written skills to:
 - produce detailed specification notes
 - provide notations and dimensions on drawings
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- innovation skills to select suitable materials for building, taking into account a range of factors such as cost and environmental issues
- numeracy skills to produce drawings for residential buildings
- planning and organisational skills to collect, organise and analyse information
- problem solving skills to carry out tests on materials and to use and apply data for decision making
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- environmental issues impacting on material selection
- grading processes and grade markings used to categorise timber and timber products
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural and design principles for buildings
- terminology, definitions and hazard identification.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the

EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- evaluate, choose and apply various building materials; their subsequent maintenance; and associated reporting of data, findings, recommendations and strategies for at least one domestic scale building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.
- apply strategic plans, workplace policies and procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices

EVIDENCE GUIDE

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured

EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Properties of materials include:

- environmental considerations
- adherence to legislative requirements for the BCA.

Domestic scale building projects requiring evaluation include:

- domestic scale buildings, including existing and proposed structures
- provision of site access/facilities, work schedules and project milestones.
- domestic scale buildings (similar in characteristics to those of residential dwellings in terms of loading, construction and size and may include small industrial, commercial and public buildings).

Adherence to legislative requirements is limited to:

Types of structures include:

- residential structures with concrete skeleton and slabs
- residential structures with steel and metallic column and member construction
- residential structures with timber and other

RANGE STATEMENT

	composite material construction
	<ul style="list-style-type: none">• residential structures constructed from non-metallic materials.
Materials include:	<ul style="list-style-type: none">• adhesives and sealants• admixtures• clay products• concrete and concrete products• glass• masonry• metal• mortar for load bearing walls• new relevant proprietary materials• plaster and plasterboard• plastic• pre-stressed structural concrete components• protective and fire-rated protective coatings• timber and timber products.
Standard specifications include industry standard specifications and may be:	<ul style="list-style-type: none">• preliminary or outline specifications• developed specifications• detailed specifications addressing specific components such as structural or other requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use drawing instruments, equipment and materials to set out drawings.	1.1. Drawing instruments, equipment and materials are used to produce <i>working drawings for residential buildings</i> with scaled line work, simple geometric shapes, lettering, numbering and correct setting out of drawings.
2. Produce drawings at varying scales using architectural conventions for linework, lettering and symbols.	2.1. Linework is applied in a range of different types and media in accordance with standard industry drawing practice for <i>production of building drawings</i> . 2.2. Hand letter text is formed in a variety of formats. 2.3. Different drawing scales are identified and used. 2.4. Graphic symbols are identified and used. 2.5. Orthographic projection in building drafting applications is drawn accurately to scale. 2.6. Notations and dimensions are added to complete drawing.
3. Read and interpret plans and specifications for a single storey dwelling.	3.1. Interrelationships between plans and specifications are identified and interpreted. 3.2. Key information is located and interpreted according to drawings, specifications and <i>application of Australian standards</i> .
4. Draw three dimensional sketches.	4.1. Annotated 3-D sketches of various building components are produced to specifications using parametric (e.g. isometric) or perspective techniques.
5. Produce building permit approval drawings.	5.1. Building permit approval drawings, including detailed specification notes for residential dwellings, are completed to architectural conventions.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management

REQUIRED SKILLS AND KNOWLEDGE

systems

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - written skills to:
 - produce detailed specification notes
 - provide notations and dimensions on drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- interpret and apply information from plans and specifications to develop required drawings
- numeracy skills to produce drawings for residential buildings
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
 - enable production of working drawings
 - complete documentation and calculations.

Required knowledge

Required knowledge for this unit is:

- codes of conduct and ethics
- drafting and drawing protocols
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural, design and construction principles of buildings
- terminology, definitions and fault identification.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- produce two and three-dimensional drawings for residential building projects, including at least one orthographic, one isometric and one perspective drawing
- produce drawings to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- Working drawings for residential buildings*** include:
- area analysis
 - BCA Class 1 and 10 buildings
 - computer-generated or paper-based presentations
 - construction notes
 - details
 - elevations
 - floor plans
 - general notes
 - location
 - neighbouring buildings
 - plan and specification interpretation
 - projections
 - sections
 - services
 - single storey dwellings (elementary or conventional)

RANGE STATEMENT

Production of building drawings
includes:

- site plans
- two and three-dimensional drawings.
- banks and landscaping
- base structure - timber and masonry
- cathedral ceilings
- certificate of title to land
- chimney construction
- complex roof and wall shapes
- composite construction (e.g. steel and timber)
- conversion of plans and specifications to architectural and building detail
- drawing protocols, including:
 - abbreviations
 - legends
 - lettering standards
 - numbering
 - paper size
 - scale
 - standard units of measurement
 - symbols
- electrical connections plan
- excavation cut and fill
- flashings and box gutters
- general plumbing services plan
- glazing, including bay window construction
- insulation and sarking
- internal and external wall claddings
- joinery
- land surveyor plans
- large span timber beams and connections, including glue laminated beams
- levels and contours
- retaining walls
- roof construction
- sewerage connection and easement plan
- soil classification and tests
- stairs
- stormwater connection and easement plan
- timber and masonry
- upper floor construction

RANGE STATEMENT

Application of Australian standards includes:

- wall construction
- window and door schedules.
- AS1100 Architectural drawing and supplement
- AS1684 Residential timber framing
- AS2870 Residential slabs and footings
- AS3700 Masonry.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, questioning to identify and confirm requirements, sharing information, listening and understanding
 - written skills to:
 - record and report information and evaluations
 - prepare development application notices and responses
 - read and interpret:
 - BCA
 - legislation
 - reports
 - specifications
 - working drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- control and appeal system
- current home/commercial building development criteria
- land use management models and concepts
- local market conditions
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- socioeconomic data.
- urban zoning.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- evaluate, report data findings, recommend and classify at least one conventional building development in compliance with applicable local government planning scheme for urban development and building control projects associated with relevant legislation and the BCA
- provide reports to appropriate body/individual as determined by the project brief.
- apply strategic plans, and workplace policies and procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the

EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at

EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislation is limited to:

- compliance with building and land use legislation and the Building Code of Australia for the purposes of applying building controls and evaluating urban development procedures. It interrogates impacts of settlement, the physical environment and land use.

Application of building and land use legislation includes:

- commercial environment - may be affected by rising, steady or falling markets
- cadastral maps
- demographic and socioeconomic data on populations in catchment areas
- enterprise management reports
- environmental impact statements

RANGE STATEMENT

- locality maps
- market indicators:
 - absorption rates
 - current market in the area
 - perceptions of the area
 - type of client likely to be attracted to the market
- notices and orders issued with respect to applications and site safety signage requirements
- property statistics
- relevant local authority
- urban planning and local government databases.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate geological formation of rocks and their subsequent weathering to form various soil types.	<p>1.1. Formation of igneous, sedimentary and metamorphic rocks is identified and documented.</p> <p>1.2. Mode of transportation, deposition and formation of sands, gravels and clays are identified and documented.</p>
2. Read and evaluate both topographical and geological maps.	<p>2.1. Topographical and geological maps are interpreted without error.</p> <p>2.2. Maps of both types are interpreted by drawing sections indicating features.</p> <p>2.3. Retaining structures and systems suitable for various situations are identified.</p>
3. Identify soil types and their behaviour.	<p>3.1. Cohesive and granular soils are identified from hand specimens without error.</p> <p>3.2. <i>Soil types</i> and <i>soil properties</i> are identified and calculated with reference to standards, codes and industry literature.</p> <p>3.3. Effects of depth on overburden and pore water pressure are estimated.</p>
4. Determine suitability of foundation soils to support various types of structures.	<p>4.1. Meaning of total and differential settlement of a building is interpreted without error.</p> <p>4.2. Factors influencing settlement and the ultimate bearing capacity of the ground are interpreted.</p> <p>4.3. Total and net pressure on foundation soils due to the load of a structure is calculated to determine suitable <i>foundation systems</i>.</p>
5. Identify and apply the various methods and applications of soil testing.	<p>5.1. Australian standard laboratory testing of permeability, strength, consolidation and point load tests (for rocks) is identified and interpreted.</p> <p>5.2. Australian standard for carrying out sub-soil investigations and in situ testing is identified and interpreted.</p> <p>5.3. Soil testing methods are selected and applied or accessed through competent agencies.</p>
6. Determine footing systems for the site conditions and building type.	<p>6.1. Mechanism of soil shrinkage and swelling is interpreted.</p> <p>6.2. Site classification for the design and construction of a footing system for a single storey dwelling is in accordance with the BCA.</p> <p>6.3. <i>Application of footings and geomechanical principles</i> for the footing system for a domestic scale</p>

ELEMENT

PERFORMANCE CRITERIA

	building is determined in accordance with BCA and <i>adherence to legislative requirements</i> .
7. Determine site maintenance requirements necessary to minimise long-term damage to the structure.	<p>7.1. Influence of moisture content changes in clay soils on <i>maintenance requirements</i> is determined.</p> <p>7.2. Minimisation strategies for long-term damage to a structure with respect to the soil conditions found on a particular site where active clays are located are recommended.</p>

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - written skills to report evaluations
 - read and interpret:
 - BCA
 - legislation
 - reports
 - specifications
 - working drawings
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
- numeracy skills to interpret complex mathematical information
- planning and organisational skills to collect, organise and analyse information
- problem solving skills to carry out tests and calculations and to use and apply data for decision making
- technological skills to:

REQUIRED SKILLS AND KNOWLEDGE

- complete documentation and calculations
- enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- design principles and concepts for footings
- geomechanical engineering principles
- nature of materials and effect on performance
- nature of soil mechanics and effect of performance in problem soils
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural design principles in buildings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- assess the footing requirements for at least one domestic scale building project or equivalent, which includes advice on positioning and sizing
- analyse and report on the soil types and properties of at least two domestic scale building projects or equivalent
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Soil types include:

- clay soils and rock
- saturated granular soils.

Soil properties include:

- bulk density
- degree of saturation
- dry density
- moisture content
- porosity
- void ratio.

Foundation systems must be suitable for:

- building type
- site conditions.

Application of footings and geomechanical principles includes:

- assessment of geomechanical and footing design for domestic scale buildings
- identification of the nature, composition, classification and distribution of soil type.

RANGE STATEMENT

Adherence to legislative requirements is limited to:

- domestic scale buildings (similar in characteristics to those of residential dwellings in terms of loading, construction and size and may include small industrial, commercial and public buildings).

Maintenance requirements include:

- identification of surface water, ground water and tree root systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and analyse construction faults arising on residential building sites.	<p>1.1. Information to identify and analyse construction faults is collected relating to the specific construction problem.</p> <p>1.2. Construction problem in <i>construction in residential buildings</i> is identified relative to original specifications and <i>form of construction</i>.</p> <p>1.3. Construction problem is communicated to appropriate personnel and documented in accordance with standard work practices.</p> <p>1.4. Problem solving techniques are used and typical <i>construction faults</i> and problems for <i>building categories</i> are identified and action to rectify is deemed to be in accordance with the BCA.</p>
2. Identify construction techniques, methods and materials.	<p>2.1. Building terminology is used accurately in the communication of issues.</p> <p>2.2. Existing or designed construction problems are identified and evaluated from working drawings and specifications.</p> <p>2.3. Alternative methods and materials to meet construction aims and objectives are prepared to specification nominated in the BCA and <i>Australian standards</i>.</p> <p>2.4. Detailed sketches of available alternative methods and materials available to meet the construction aims and objectives are prepared to specification.</p>
3. Resolve construction faults using alternative construction methods.	<p>3.1. Suitable construction methods from available alternative solutions are evaluated and recommended to resolve the problem in accordance with project aims and objectives, the BCA, relevant State and Territory Appendix to the BCA and Australian standard.</p> <p>3.2. Selected method is integrated into the project in order to resolve the construction problems in accordance with project aims.</p> <p>3.3. Evaluation of available alternative forms of construction is carried out in accordance with project aims.</p>
4. Resolve common on-site faults with building materials.	<p>4.1. Commonly occurring on-site problems with building materials and their causes are evaluated.</p> <p>4.2. Corrective and preventative measures are identified and implemented.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - communicate construction problems to appropriate personnel
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - Australian standards
 - BCA
 - legislation
 - reports
 - specifications
 - working drawings
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - use accurate terminology
 - written skills to document construction problems and solutions and recommendations to resolve problems
- numeracy skills to calculate workplace requirements
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- design and construction principles of buildings
- nature of materials and effect on performance

REQUIRED SKILLS AND KNOWLEDGE

- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- assess construction faults in residential buildings, determine rectification strategy and consider alternative construction methods, as well as the associated reporting of data, findings, recommendations and strategies for at least one residential building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Measure linear distances on site using building and basic surveying equipment.	<p>1.1. Areas and volumes of regular shapes and figures are calculated.</p> <p>1.2. Distances are measured accurately, independent of site characteristics and measurement methods, using basic surveying equipment.</p> <p>1.3. Distances are measured on building sites within a tolerance of 1mm error in 4.0m (1:4000) or without error.</p> <p>1.4. Overall distances are calculated from field data without error.</p> <p>1.5. Slope corrections are recorded accurately.</p>
2. Carry out a closed level transverse procedure using the rise and fall recording method.	<p>2.1. Levelling equipment is inspected for damage, wear and serviceability.</p> <p>2.2. Set-up steps are performed and instruments made ready for use without error.</p> <p>2.3. Instruments are checked for accuracy and adjusted (where possible) within 3mm over 60 metres using the two peg test.</p> <p>2.4. Closed level traverse procedure is completed with a minimum of 15 points, including an inverted reading, with a minimum of 5 change points all within a closing tolerance of 10mm.</p> <p>2.5. Data of traverse is correctly recorded and extended including mathematical column checks by use of the rise and fall method.</p>
3. Perform grid surveys for contour purposes.	<p>3.1. Site identification for site surveying and setting out procedures is established and all survey pegs are located without error.</p> <p>3.2. Grid distances are determined and grid is pegged correctly.</p> <p>3.3. Site detail that may effect building operation is recorded without error.</p> <p>3.4. Reduced levels of all grid points are determined from a close performed onto the bench mark to within 10mm, without error.</p> <p>3.5. Contour lines are plotted on the site plan at intervals appropriate to the site with longitudinal and cross sections pegged and measured as nominated within 100mm. Sections are plotted to scale without error.</p> <p>3.6. Grades of line are determined within a 0.5% tolerance and expressed as percentage, rise to run</p>

ELEMENT	PERFORMANCE CRITERIA
	ratio, or degrees.
	3.7. Cut and fill volumes of soil are calculated from site plan using contour lines for determining reduced levels (RLs) within 5% tolerance.
4. Set out T-shaped or L-shaped buildings on a selected site with minimal profiles.	<p>4.1. Site information is identified from site plan and dimensions are checked on plan drawings without error.</p> <p>4.2. Site is identified and survey pegs are measured to ensure correct identification occurs before pilot pegs are positioned within 50mm of true location of the squared building dimensions.</p> <p>4.3. Profile pegs are set up on site at a working distance from pilot pegs and parallel to pilot line.</p> <p>4.4. Profile boards are fixed to pegs and level within 5mm and 15mm of each other.</p> <p>4.5. Profiles are set out on steep slopes accurately.</p>
5. Set up and use levelling devices to determine horizontal and vertical angles.	<p>5.1. Basic tests on levelling devices' accuracy/adjustment are performed to manufacturer specifications.</p> <p>5.2. Temporary adjustments to set up levelling devices are carried out to standard operating procedures.</p> <p>5.3. Levelling devices are used to determine (read) both horizontal and vertical angles to an accuracy of 20 seconds.</p> <p>5.4. Levelling devices are used to set out horizontal angles to an accuracy of 20 seconds.</p> <p>5.5. Site is set out to specifications using a typical levelling device and tape.</p>
6. Identify suitability of levelling and surveying equipment for large building projects.	<p>6.1. Differences between various types of specialised surveying equipment are researched and recorded.</p> <p>6.2. Equipment is used to control set out and vertical is identified.</p> <p>6.3. Basic differences in survey control and set out between frame and concrete multi-storey buildings is outlined.</p> <p>6.4. Survey of each level for vertical accuracy of 10mm is carried out using two levelling devices.</p>
7. Compute coordinates, bearings and distances related to grids and general set out work on large building sites.	<p>7.1. Angular relationship between different bearings (whole circle) is demonstrated and bearings from angles and fixed lines are determined.</p> <p>7.2. Bearing and distance between two sets of coordinates (north and east) are calculated.</p>

ELEMENT	PERFORMANCE CRITERIA
Evaluate documents and plans incorporated in land titles.	7.3.Coordinates of a point, given the bearing and distance from a point with known coordinates, are calculated.
	7.4.Offsets from a coordinated point, given the bearing and distance from a point with known coordinates, are determined.
	7.5.Information necessary to set out a structure, or part thereof, using a site plan with positions fixed by a mixture of bearings and distances, offsets and coordinates is calculated.
	7.6.Documents that make up a land title are listed and their relationship to each other outlined according to relevant government legislation.
	7.7.Different restrictions on the use of land title and restricted development are illustrated.
	7.8.Building covenants and statutory bodies responsible are identified.
	7.9.Restrictions stated in legislation that regulate setbacks for residential buildings are identified and differentiated.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - communicate construction problems to appropriate personnel
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - field data
 - reports

REQUIRED SKILLS AND KNOWLEDGE

- site plan
- specifications
- working drawings
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
 - document suitability of surveying equipment
 - record mathematical information
- numeracy skills to apply measurements and calculations
- planning and organisational skills to collect, organise and analyse information
- problem solving skills to identify faults and problems in, and accuracy of, equipment and take appropriate remedial action
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- level and grade checking to perform survey control to accuracy criteria
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- specifications and capabilities of surveying and levelling equipment and their componentry
- structural, design and construction principles of buildings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the Australian administrative legal system.	<p>1.1. Differences between <i>Australian common law</i>, statute law, delegated legislation and local government law are analysed and documented.</p> <p>1.2. Civil law and examples of civil action relevant to <i>building control legislation</i> are identified and analysed.</p> <p>1.3. Administrative law relevant to building control is determined and interpreted.</p>
2. Evaluate administrative law applicable to building control activities.	<p>2.1. Individual elements of judicial review legislation are evaluated and documented.</p> <p>2.2. Natural justice is identified and evaluated as it relates to decision making through the building control process.</p>
3. Analyse the procedures and benefits of enforcing the law.	<p>3.1. Legislative benefits and examples from building control enforcement are investigated and documented.</p> <p>3.2. Major regulatory enforcement strategies are identified and recorded.</p> <p>3.3. Powers of entry are identified and analysed.</p> <p>3.4. Warrants and legal considerations in obtaining a warrant are identified and documented.</p> <p>3.5. Types of <i>evidence</i> and the gathering of evidence for the purposes of investigating and proving a breach of legislation are identified and documented.</p> <p>3.6. Offences are identified and the process for drafting and issuing a notice is evaluated and documented.</p>
4. Analyse the impact of other legislation on state and territory building and development control legislation.	<p>4.1. Implications of <i>federal legislation</i> on state and territory building and development control legislation are examined and documented.</p> <p>4.2. Implications of other <i>state and territory legislation</i> on building and development control legislation are examined and documented.</p>
5. Analyse the professional code of conduct and ethics applicable to building control.	<p>5.1. Concepts regarding conflict of interest as specified by relevant legislation are identified and recorded.</p> <p>5.2. Concepts regarding duty of care as it relates to common law are evaluated and documented.</p>
6. Analyse the concepts of liability and responsibility of	<p>6.1. Liability of building practitioners as specified by relevant legislation is evaluated and documented.</p> <p>6.2. Responsibilities and statutory duties of building</p>

ELEMENT	PERFORMANCE CRITERIA
building practitioners as detailed in legislation.	practitioners as specified by relevant legislation are evaluated and documented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - enforcement strategies
 - legislation
 - reports
 - other relevant documentation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to record and evaluate building control legislation to evaluation of own actions to make judgements about performance and necessary improvements
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- access requirements for people with a disability and requirements of the Disability Discrimination Act (DDA) with regard to access
- applications of law and legal principles in building surveying
- Australian legal system

REQUIRED SKILLS AND KNOWLEDGE

- building policy and legislation
- legal terminology, definitions, processes and procedures used in standard court operations
- processes for the administration and preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research processes and strategies.

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and

EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Australian common law includes:

- professional code of ethics required for the assessment and inspection of buildings
- system and laws applicable to building surveying.

Building control legislation includes:

- domestic scale buildings and structures.

Evidence includes:

- oral, documented, real, direct, secondary, hearsay and admissible and inadmissible evidence.

Federal legislation includes:

- DDA.

RANGE STATEMENT

State and territory legislation
includes:

- environmental health
- local government by-laws
- OHS
- planning.

CPCCSV5009A Assess the impact of fire on building materials

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to assess the impact of fire on building materials.

It includes the research, analysis and reporting of testing conducted on a range of building materials and structures in differing circumstances to determine combustion, flammability, heat transfer, burning conditions, building material behaviour, fire loads of buildings and fire resistance.

Application of the Unit

Application of the unit This unit of competency supports the attainment of the understanding and skills to assess the impact of fire on building materials within the context of relevant legislation, the Building Code of Australia (BCA) and Australian standards.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research combustion process as it relates to different materials.	<p>1.1. Processes and flame characteristics of combustion of solids, liquids and gases are identified and recorded from a <i>research and analysis process</i>.</p> <p>1.2. Factors contributing to combustion are identified and recorded.</p> <p>1.3. Endothermic and exothermic processes are researched and recorded.</p> <p>1.4. Heat of combustion fuels is calculated without error.</p> <p>1.5. Factors contributing to propagating flame front are analysed and recorded.</p>
2. Analyse flammability of matter in different states.	<p>2.1. Flammability in terms of fire triangle and fire tetrahedron theories is analysed and recorded.</p> <p>2.2. Flammability of matter in physical states is examined and recorded.</p> <p>2.3. Flammability in terms of upper and lower flammability limits is identified and recorded.</p> <p>2.4. Factors contributing to the explosiveness of dusts are identified and recorded.</p>
3. Identify conditions of burning at the fire point.	<p>3.1. Limiting adiabatic flame temperature (LAFT) values are interpreted accurately.</p> <p>3.2. Process of extinguishment related to the combustion process is analysed and recorded.</p>
4. Record mechanisms of heat transfer during fire growth, development and spread.	<p>4.1. Heat transfer factors in fire situations are identified and recorded.</p> <p>4.2. Processes of self-induced heating are analysed and recorded.</p> <p>4.3. Behaviour of fires in partially and fully enclosed compartments are observed and recorded.</p> <p>4.4. Amount of smoke produced from a fire is calculated.</p>
5. Record the behaviour of building materials subjected to extreme levels of heat.	<p>5.1. Building <i>materials</i> are evaluated for fire safety and fire resistance levels are recorded.</p> <p>5.2. Effect of fire on structural and non-structural elements is identified and recorded.</p> <p>5.3. Effect of fire on plastic and textile materials is identified and recorded.</p>
6. Devise the fire load of a building and	<p>6.1. Effect of building occupancy on potential fire load is calculated.</p>

ELEMENT	PERFORMANCE CRITERIA
describe the effect on the BCA classification and compartmentation.	6.2. Factors that may increase the severity of a fire are researched and recorded. 6.3. Fire load, fire severity and general burning behaviour of materials are researched and recorded.
7. Report the requirements of fire resistance of building elements and forms of construction.	7.1. Fire resistance levels of building elements and forms of construction are researched and recorded. 7.2. Early fire hazard indices are applied to the BCA requirements. 7.3. Australian standards relating to fire testing of building materials and forms of construction are researched and recorded.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - evaluate own actions to make judgements about performance
 - read and interpret Australian standards
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to report testing of building materials
- numeracy skills to apply calculations and interpret data
- problem solving skills to carry out tests and calculations and to use and apply data for decision making
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- characteristics of endothermic and exothermic processes
- extinguishment principles
- LAFT values
- principles of combustion and flammability
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- perform fire research, analysis, identification and reporting of findings for at least one fire assessment or equivalent, including at least three different materials
- assess applicable fire safe suitable building materials for at least one building project
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying

EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Research and analysis process includes:

- definitions and test outcomes
- material safety data sheets (MSDS)
- reports
- written records and historical data.

Materials:

- include timber, plastic and fabric building materials and structures
- may include other types of fire load forming building materials.

Effect of fire on structural and non-structural elements includes:

- behaviour of building materials subject to extreme heat
- combustion of materials
- fire loads of buildings
- fire resistance of materials
- flammability circumstances
- heat transfer characteristics
- point of fire burning conditions.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Devise interaction strategies.	1.1. Interested and affected individuals and parties are identified. 1.2. Range of <i>interaction strategies</i> is identified, assessed for suitability and selected. 1.3. Resources required to conduct interaction are determined. 1.4. Regulations are reviewed to ensure strategies meet all criteria.
2. Assess demographic, cultural, social and psychological considerations.	2.1. Needs of disadvantaged individuals and groups are identified and incorporated from <i>relevant information and social theory</i> . 2.2. Cultural, social and psychological factors are considered and incorporated. 2.3. Urban, <i>demographic</i> , technological, political and economic effects are considered and incorporated. 2.4. Collective community behaviour is assessed.
3. Communicate legislative requirements to individuals and groups.	3.1. Information is prepared that is clear, accurate and <i>appropriate to the needs of the parties involved</i> . 3.2. All parties involved are informed of the applicable legislation through <i>presentation of information</i> . 3.3. Information is provided to affected parties at an appropriate time and place and in <i>an appropriate way</i> . 3.4. Interaction is undertaken in an orderly manner to ensure all viewpoints are canvassed.
4. Record, analyse and report results.	4.1. Responses are assessed and checked against the project brief. 4.2. Appropriate suggestions for improvement are incorporated into the project brief. 4.3. Accurate report is prepared, including recommendations for approval. 4.4. Overall effectiveness of the interaction is reviewed and evaluated, with action taken where required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to prepare information in alternative formats and to provide access to consultations for diverse groups through interpreters, etc.
- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - consult with the community, including provision of information about legislation
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - regulations
 - legislation
 - other relevant documentation
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
 - written skills to:
 - record and report results of interaction with the community
 - prepare information
- innovation skills to identify and implement appropriate and diverse strategies for interacting with diverse communities
- organisational and time management skills to prepare information for meetings and to arrange and conduct meetings to timelines
- problem solving skills to review feedback and select appropriate suggestions for improvement for inclusion in report
- technological skills to:
 - complete documentation, including information materials and reports
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- effects and psychological theories relevant to working with clients in a regulated environment, such as:
 - social stratification
 - social change

REQUIRED SKILLS AND KNOWLEDGE

- technological change
- local factors affecting communities and individuals
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- strategies for consultation
- urbanisation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- perform a management role in the identification and implementation of at least one client negotiation and consultation process or equivalent
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the purpose and basic intent of the BCA.	<p>1.1. Objectives of the BCA and the purpose of its respective components in relation to <i>construction in residential buildings</i> and <i>building categories</i> are evaluated and documented.</p> <p>1.2. Deemed-to-satisfy (DTS) concept for construction to meet BCA requirements is evaluated and documented.</p>
2. Locate and interpret code and standard requirements applicable to particular projects.	<p>2.1. Clauses from the BCA that apply to particular <i>residential building projects requiring review of compliance issues</i> are identified and documented.</p> <p>2.2. Prescriptive requirements of relevant BCA clauses and <i>standard specifications</i> are determined.</p> <p>2.3. Requirements of Australian standards referenced in the BCA are identified and documented.</p> <p>2.4. Special requirements that may be applicable to specific areas of <i>building surveying procedures</i> are identified and documented.</p>
3. Classify buildings.	<p>3.1. Nature of a building is determined in regard to its proposed use and site arrangement.</p> <p>3.2. BCA criteria are applied to determine the defined classification.</p> <p>3.3. BCA requirements are interpreted for multiple classifications.</p>
4. Apply solutions to construction problems for compliance with the BCA.	<p>4.1. Criteria to ensure construction methods comply with the intent of the BCA are determined.</p> <p>4.2. Alternative approaches to construction problems that comply with the requirements of the BCA are reported.</p> <p>4.3. Assessment methods used to determine whether a building solution complies with performance requirements or DTS provisions of BCA are analysed and applied.</p> <p>4.4. Assessment methods are confirmed and identified as appropriate to meet the DTS provisions of BCA.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - Australian standards
 - BCA
 - other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to:
 - document building requirements
 - report alternative approaches to construction problem
- innovation skills to develop compliant alternative solutions to construction problems
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- BCA and primary referenced Australian standards
- criteria for Class 1 and 10 buildings
- design, construction and structural principles of buildings
- DTS provisions
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures

REQUIRED SKILLS AND KNOWLEDGE

- research methods.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- classify construction in residential buildings through the evaluation and interpretation of compliance with the BCA and associated reporting of data, findings, recommendations and strategies for at least one residential building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory

EVIDENCE GUIDE

or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured

EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Construction in residential buildings includes:

- compliance with relevant legislation
- design specifications
- evaluation, interpretation and adherence to legislative requirements for BCA Class 1 and 10 buildings
- maintenance specifications
- relevant Australian standards.

Building categories include:

- low-rise residential buildings

RANGE STATEMENT

Residential building projects requiring review of compliance issues include:

- single storey buildings.
- calculation and processing of application or inspection fees
- project milestones
- provision of site access/facilities
- work schedules.

Standard specifications include:

- developed or detailed specifications addressing specific components, such as structural or other requirements
- industry standard specifications
- preliminary and outline specifications.

Building surveying procedures include:

- mechanical, structural, electrical and other services.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess plans and specifications for size, span and spacing of structural members required in ceiling and roof framing.	<p>1.1. Access is obtained to relevant plans, specifications and documentation related to <i>structural members required in ceiling and roof framing</i> for required <i>building categories</i>.</p> <p>1.2. Specified timber species and stress grading are identified.</p> <p>1.3. True length of common rafter and overhand and economical size of common rafter are determined to support specified roof structure and covering.</p> <p>1.4. Maximum span of common rafter is determined.</p> <p>1.5. Position, location and direction of struts and strutting beams to support roof and ceiling loads are determined and documented.</p> <p>1.6. Method of support at hip and valley rafters is determined and documented.</p> <p>1.7. Location, direction and span of ceiling joists and hanging beams to support specified roof design are determined and documented.</p> <p>1.8. Nominated member sizes, spans, spacings and locations are listed, documented and checked for accuracy against plans and specifications.</p>
2. Assess plans and specifications for permanent wind bracing requirements for nominated design gust wind speeds.	<p>2.1. Access is obtained to relevant plans, specifications and documentation for <i>assessment of timber-framed designs</i>.</p> <p>2.2. Location and category of building site is identified against design gust wind speed calculations.</p> <p>2.3. Wind directions are selected and noted on plans.</p> <p>2.4. Type and number of bracing units for each wind direction are selected.</p> <p>2.5. Bracing details and description are documented, based upon calculations.</p>
3. Assess plans and specifications for size, span and spacings of structural members for timber wall frames.	<p>3.1. Access is obtained to relevant plans, specifications and documentation.</p> <p>3.2. Specified timber species and stress grading are identified.</p> <p>3.3. Roof load width for walls supporting ceiling and roof structures for a specified roof covering is determined.</p> <p>3.4. Economical size for common wall studs is determined.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Assess plans and specifications for size, span and spacing of structural members for timber stumps, floor bearers and joists.	3.5. Size of top and bottom wall plates is determined according to load bearing conditions.
	3.6. Size of studs at side window and door opening is determined.
	3.7. Size of lintels to nominated openings is determined.
	3.8. Size of timber posts and beams supporting overhands is determined.
	3.9. Nominated member sizes, spans, spacings and locations are identified, listed, documented and checked against plans and specifications for accuracy.
	4.1. Access is obtained to relevant plans, specifications and documentation.
	4.2. Specified timber species and stress grading are identified.
	4.3. Economical size for floor bearer and joist to suit maximum spans and spacings is determined.
	4.4. Size of timber stumps and footing type and size required to support structural members are determined.
	4.5. Size for timber trimmers, working and trimming joists for stair opening to suit maximum spans and spacings is determined.
	4.6. Location, direction and span of bearers and joists to support specified structure are determined.
	4.7. Nominated member sizes, spans, spacings, direction and bracings are identified, listed, documented and checked for accuracy against plans and specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management

REQUIRED SKILLS AND KNOWLEDGE

systems

- communication skills to:
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - plans and specifications
 - other relevant documentation
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - written skills to record mathematical information
- numeracy skills to apply measurements and calculations
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
 - complete documentation and calculations
 - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- grading processes and grade markings used to categorise timber and timber products
- manufactured timber framing systems
- nature of timber and effect of physiology and timber pests on its performance
- processes for the administration and preparation of documentation
- processes for the application of wind force, raking forces, and bracing and tie down systems
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural, design and construction principles of buildings, including the application of timber in buildings.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- assess timber-framed designs, evaluate plans and specifications, and identify faults; select structural members for roofs, ceilings, walls, floors and stumps relating to performance and the associated reporting of data, findings, recommendations and rectification strategies for at least one building project of up to two storeys or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete

EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCSV5001A Assess the construction of domestic scale buildings
- CPCCSV5006A Assess construction faults in residential buildings.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
