

**Australian Government**

# **MAR Maritime Training Package**

**Release 6.0**

## CONTENTS

MAR Maritime Training Package .....	23
MAR10120 Certificate I in Maritime Operations (General Purpose Hand Near Coastal) .....	24
MAR10318 Certificate I in Maritime Operations (General Purpose Hand Near Coastal) .....	26
MAR10418 Certificate I in Maritime Operations (Coxswain Grade 2 Near Coastal) .....	28
MAR20116 Certificate II in Maritime Operations (Linesperson) .....	30
MAR20120 Certificate II in Maritime Operations (Linesperson) .....	32
MAR20318 Certificate II in Maritime Operations (Coxswain Grade 1 Near Coastal) .....	34
MAR20418 Certificate II in Maritime Operations (Marine Engine Driver Grade 3 Near Coastal) .....	36
MAR30118 Certificate III in Maritime Operations (Marine Engine Driver Steam) .....	38
MAR30120 Certificate III in Maritime Operations .....	40
MAR30215 Certificate III in Maritime Operations (Marine Surveying) .....	43
MAR30218 Certificate III in Maritime Operations (Integrated Rating) .....	45
MAR30220 Certificate III in Maritime Operations (Integrated Rating) .....	48
MAR30318 Certificate III in Maritime Operations .....	52
MAR30320 Certificate III in Maritime Operations (Marine Cookery) .....	54
MAR30415 Certificate III in Maritime Operations (Marine Cookery) .....	56
MAR30818 Certificate III in Maritime Operations (Marine Engine Driver Grade 2 Near Coastal) .....	58
MAR30918 Certificate III in Maritime Operations (Master up to 24 metres Near Coastal) .....	61
MAR31018 Certificate III in Maritime Operations (Master Inland Waters) .....	63
MAR40118 Certificate IV in Maritime Operations (Marine Surveying) .....	65
MAR40120 Certificate IV in Maritime Operations (Chief Integrated Rating) .....	67
MAR40218 Certificate IV in Maritime Operations (Chief Integrated Rating) .....	70
MAR40220 Certificate IV in Maritime Operations (Marine Engine Driver Grade 1 Near Coastal) .....	72
MAR40320 Certificate IV in Maritime Operations (Master up to 35 metres Near Coastal) .....	75
MAR40518 Certificate IV in Maritime Operations (Marine Engine Driver Grade 1 Near Coastal) .....	78
MAR40618 Certificate IV in Maritime Operations (Master up to 35 metres Near Coastal) .....	81
MAR50115 Diploma of Maritime Operations (Engineer Watchkeeper) .....	83
MAR50120 Diploma of Marine Engineering .....	86
MAR50215 Diploma of Maritime Operations (Marine Surveying) .....	92
MAR50220 Diploma of Maritime Operations .....	94
MAR50315 Diploma of Maritime Operations (Watchkeeper Deck) .....	99
MAR50415 Diploma of Maritime Operations (Master up to 500 GT) .....	102
MAR50613 Diploma of Maritime Operations (Marine Engineering Class 3 Near Coastal) .....	105
MAR50713 Diploma of Maritime Operations (Master up to 80 metres Near Coastal) .....	107
MAR60115 Advanced Diploma of Maritime Operations (Marine Engineering Class 2) .....	110
MAR60120 Advanced Diploma of Marine Engineering (Class 1) .....	113
MAR60215 Advanced Diploma of Maritime Operations (Marine Engineering Class 1) .....	118
MAR60220 Advanced Diploma of Maritime Operations (Master Unlimited) .....	121
MAR60315 Advanced Diploma of Maritime Operations (Master Unlimited) .....	125
MARA011 Contribute to basic operations of ships in polar waters .....	128
Assessment Requirements for MARA011 Contribute to basic operations of ships in polar waters .....	133
MARA012 Contribute to basic cargo operations on liquefied gas tankers .....	137
Assessment Requirements for MARA012 Contribute to basic cargo operations on liquefied gas tankers .....	141

<b>MARA013 Contribute to basic cargo operations on oil and chemical tankers (basic oil and chemical).....</b>	<b>144</b>
<b>Assessment Requirements for MARA013 Contribute to basic cargo operations on oil and chemical tankers (basic oil and chemical) .....</b>	<b>148</b>
<b>MARA014 Contribute to basic operations of a ship subject to IGF Code .....</b>	<b>154</b>
<b>Assessment Requirements for MARA014 Contribute to basic operations of a ship subject to IGF Code .....</b>	<b>158</b>
<b>MARA015 Contribute to safe anchor handling and towing operations.....</b>	<b>164</b>
<b>Assessment Requirements for MARA015 Contribute to safe anchor handling and towing operations .....</b>	<b>168</b>
<b>MARA016 Contribute to safe cargo operations on offshore support vessels .....</b>	<b>173</b>
<b>Assessment Requirements for MARA016 Contribute to safe cargo operations on offshore support vessels .....</b>	<b>177</b>
<b>MARA017 Maintain seaworthiness of the ship (ship stability).....</b>	<b>183</b>
<b>Assessment Requirements for MARA017 Maintain seaworthiness of the ship (ship stability).....</b>	<b>186</b>
<b>MARA018 Manage advanced chemical tanker cargo operations .....</b>	<b>189</b>
<b>Assessment Requirements for MARA018 Manage advanced chemical tanker cargo operations .....</b>	<b>193</b>
<b>MARA019 Manage advanced liquefied gas tanker cargo operations .....</b>	<b>199</b>
<b>Assessment Requirements for MARA019 Manage advanced liquefied gas tanker cargo operations .....</b>	<b>204</b>
<b>MARA020 Manage advanced oil tanker cargo operations .....</b>	<b>211</b>
<b>Assessment Requirements for MARA020 Manage advanced oil tanker cargo operations .....</b>	<b>215</b>
<b>MARA021 Manage advanced operations of a ship subject to IGF Code .....</b>	<b>220</b>
<b>Assessment Requirements for MARA021 Manage advanced operations of a ship subject to IGF Code .....</b>	<b>224</b>
<b>MARA022 Manage loading, discharging and stowing of cargo.....</b>	<b>230</b>
<b>Assessment Requirements for MARA022 Manage loading, discharging and stowing of cargo.....</b>	<b>234</b>
<b>MARA023 Manage trim, stability and stress of a vessel .....</b>	<b>238</b>
<b>Assessment Requirements for MARA023 Manage trim, stability and stress of a vessel .....</b>	<b>241</b>
<b>MARA024 Manage vessel stability .....</b>	<b>245</b>
<b>Assessment Requirements for MARA024 Manage vessel stability .....</b>	<b>248</b>
<b>MARA025 Monitor, loading, unloading, securing and stowage of cargo.....</b>	<b>251</b>
<b>Assessment Requirements for MARA025 Monitor, loading, unloading, securing and stowage of cargo.....</b>	<b>255</b>
<b>MARB033 Assist with routine maintenance of a vessel.....</b>	<b>259</b>
<b>Assessment Requirements for MARB033 Assist with routine maintenance of a vessel....</b>	<b>263</b>
<b>MARB034 Carry out basic welding, brazing, cutting and machining operations on a coastal vessel.....</b>	<b>265</b>
<b>Assessment Requirements for MARB034 Carry out basic welding, brazing, cutting and machining operations on a coastal vessel.....</b>	<b>269</b>
<b>MARB035 Contribute to routine engine maintenance on a vessel.....</b>	<b>273</b>
<b>Assessment Requirements for MARB035 Contribute to routine engine maintenance on a vessel.....</b>	<b>277</b>
<b>MARB036 Implement vessel planned maintenance system.....</b>	<b>281</b>
<b>Assessment Requirements for MARB036 Implement vessel planned maintenance system.....</b>	<b>284</b>
<b>MARB037 Maintain and repair bridge navigation equipment and ship communication systems.....</b>	<b>287</b>
<b>Assessment Requirements for MARB037 Maintain and repair bridge navigation equipment and ship communication systems.....</b>	<b>291</b>
<b>MARB038 Maintain and repair marine electrical and electronic equipment.....</b>	<b>294</b>

Assessment Requirements for MARB038 Maintain and repair marine electrical and electronic equipment.....	299
MARB039 Maintain and repair shipboard machinery and equipment.....	303
Assessment Requirements for MARB039 Maintain and repair shipboard machinery and equipment.....	310
MARB040 Maintain control and safety systems of hotel equipment.....	317
Assessment Requirements for MARB040 Maintain control and safety systems of hotel equipment.....	321
MARB041 Manage refuelling.....	323
Assessment Requirements for MARB041 Manage refuelling.....	327
MARB042 Manage reported defects, damage, repairs and maintenance of a vessel.....	330
Assessment Requirements for MARB042 Manage reported defects, damage, repairs and maintenance of a vessel.....	334
MARB043 Manage stores for planned maintenance system.....	337
Assessment Requirements for MARB043 Manage stores for planned maintenance system.....	340
MARB044 Operate and maintain ship power systems exceeding 1,000 volts .....	343
Assessment Requirements for MARB044 Operate and maintain ship power systems exceeding 1,000 volts .....	347
MARB045 Perform routine maintenance and repairs on a vessel.....	349
Assessment Requirements for MARB045 Perform routine maintenance and repairs on a vessel.....	354
MARB046 Plan and supervise routine maintenance on a vessel up to 80 metres .....	357
Assessment Requirements for MARB046 Plan and supervise routine maintenance on a vessel up to 80 metres.....	360
MARB047 Undertake maintenance of 240 to 440 voltage alternating current electrical systems.....	362
Assessment Requirements for MARB047 Undertake maintenance of 240 to 440 voltage alternating current electrical systems .....	367
MARB048 Undertake maintenance of machinery, machinery systems and structural components.....	370
Assessment Requirements for MARB048 Undertake maintenance of machinery, machinery systems and structural components.....	376
MARB049 Use internal communication systems, operate computers and computer networks on ships .....	379
Assessment Requirements for MARB049 Use internal communication systems, operate computers and computer networks on ships .....	383
MARC045 Contribute to the operation of engine equipment and associated propulsion plant .....	386
Assessment Requirements for MARC045 Contribute to the operation of engine equipment and associated propulsion plant.....	390
MARC046 Employ tools, equipment and materials in a shipboard context.....	393
Assessment Requirements for MARC046 Employ tools, equipment and materials in a shipboard context .....	399
MARC047 Manage a propulsion unit using appropriate engine systems and support services.....	404
Assessment Requirements for MARC047 Manage a propulsion unit using appropriate engine systems and support services .....	407
MARC048 Monitor and manage vessel operations .....	411
Assessment Requirements for MARC048 Monitor and manage vessel operations.....	415
MARC049 Operate 240 to 440 voltage alternating current electrical systems.....	417
Assessment Requirements for MARC049 Operate 240 to 440 voltage alternating current electrical systems .....	420
MARC050 Operate auxiliary machinery systems up to 1500 kW .....	423

Assessment Requirements for MARC050 Operate auxiliary machinery systems up to 1500 kW.....	426
MARC051 Operate deck machinery and steering gear on a vessel up to 80 metres .....	429
Assessment Requirements for MARC051 Operate deck machinery and steering gear on a vessel up to 80 metres.....	432
MARC052 Operate deck machinery, cargo handling gear and equipment on a vessel....	434
Assessment Requirements for MARC052 Operate deck machinery, cargo handling gear and equipment on a vessel.....	438
MARC053 Operate marine internal combustion engines and associated systems up to 1500 kW.....	443
Assessment Requirements for MARC053 Operate marine internal combustion engines and associated systems up to 1500 kW .....	446
MARC054 Operate propulsion transmission systems up to 1500 kW .....	449
Assessment Requirements for MARC054 Operate propulsion transmission systems up to 1500 kW.....	452
MARC055 Operate remote controls of propulsion plant, engineering systems and services.....	455
Assessment Requirements for MARC055 Operate remote controls of propulsion plant, engineering systems and services .....	458
MARC056 Operate roll-on and roll-off machinery and equipment on board a vessel.....	462
Assessment Requirements for MARC056 Operate roll-on and roll-off machinery and equipment on board a vessel.....	465
MARC057 Perform dogging on board a vessel.....	467
Assessment Requirements for MARC057 Perform dogging on board a vessel.....	471
MARC058 Perform rigging on board a vessel .....	475
Assessment Requirements for MARC058 Perform rigging on board a vessel.....	478
MARC059 Transmit and receive information by marine VHF radio within Australian Territorial Waters .....	482
Assessment Requirements for MARC059 Transmit and receive information by marine VHF radio within Australian Territorial Waters .....	485
MARC060 Use and care for hand and power tools .....	488
Assessment Requirements for MARC060 Use and care for hand and power tools.....	491
MARD004 Manage business and administration on vessels limited by tonnage or near coastal operations .....	494
Assessment Requirements for MARD004 Manage business and administration on vessels limited by tonnage or near coastal operations .....	501
MARD005 Manage operations and maintenance on vessels limited by tonnage or near coastal operations .....	506
Assessment Requirements for MARD005 Manage operations and maintenance on vessels limited by tonnage or near coastal operations .....	510
MARD006 Monitor and control compliance with legislative requirements.....	513
Assessment Requirements for MARD006 Monitor and control compliance with legislative requirements.....	517
MARF031 Apply leadership and team working capability .....	520
Assessment Requirements for MARF031 Apply leadership and team working capability .....	523
MARF032 Apply medical first aid on board ship .....	526
Assessment Requirements for MARF032 Apply medical first aid on board ship .....	529
MARF033 Assist in an emergency response.....	531
Assessment Requirements for MARF033 Assist in an emergency response .....	535
MARF034 Carry out fast rescue craft operations .....	538
Assessment Requirements for MARF034 Carry out fast rescue craft operations.....	543
MARF035 Contribute to fire prevention and firefighting (basic firefighting).....	548
Assessment Requirements for MARF035 Contribute to fire prevention and firefighting (basic firefighting).....	552

<b>MARF036 Coordinate search and rescue operations .....</b>	<b>555</b>
<b>Assessment Requirements for MARF036 Coordinate search and rescue operations.....</b>	<b>559</b>
<b>MARF037 Follow vessel security procedures (security awareness training) .....</b>	<b>562</b>
<b>Assessment Requirements for MARF037 Follow vessel security procedures (security awareness training).....</b>	<b>565</b>
<b>MARF038 Manage provision of medical care on board a vessel .....</b>	<b>569</b>
<b>Assessment Requirements for MARF038 Manage provision of medical care on board a vessel.....</b>	<b>574</b>
<b>MARF039 Manage safety and security of vessel, crew and passengers .....</b>	<b>577</b>
<b>Assessment Requirements for MARF039 Manage safety and security of vessel, crew and passengers.....</b>	<b>582</b>
<b>MARF040 Manage ship security (Ship Security Officer).....</b>	<b>585</b>
<b>Assessment Requirements for MARF040 Manage ship security (Ship Security Officer).....</b>	<b>589</b>
<b>MARF041 Observe personal safety and social responsibility (PSSR).....</b>	<b>592</b>
<b>Assessment Requirements for MARF041 Observe personal safety and social responsibility (PSSR) .....</b>	<b>596</b>
<b>MARF042 Operate emergency equipment and apply emergency procedures .....</b>	<b>600</b>
<b>Assessment Requirements for MARF042 Operate emergency equipment and apply emergency procedures .....</b>	<b>603</b>
<b>MARF043 Operate survival craft, rescue boats and lifesaving appliances (proficiency in survival craft) .....</b>	<b>605</b>
<b>Assessment Requirements for MARF043 Operate survival craft, rescue boats and lifesaving appliances (proficiency in survival craft) .....</b>	<b>609</b>
<b>MARF044 Prevent, control and fight fires on board a vessel (advanced fire fighting) .....</b>	<b>613</b>
<b>Assessment Requirements for MARF044 Prevent, control and fight fires on board a vessel (advanced fire fighting).....</b>	<b>617</b>
<b>MARF045 Provide leadership and managerial capability .....</b>	<b>622</b>
<b>Assessment Requirements for MARF045 Provide leadership and managerial capability.....</b>	<b>625</b>
<b>MARF046 Survive at sea in the event of vessel abandonment and personal survival techniques (PST).....</b>	<b>628</b>
<b>Assessment Requirements for MARF046 Survive at sea in the event of vessel abandonment and personal survival techniques (PST).....</b>	<b>632</b>
<b>MARF047 Monitor compliance with legislative requirements .....</b>	<b>636</b>
<b>Assessment Requirements for MARF047 Monitor compliance with legislative requirements.....</b>	<b>641</b>
<b>MARG007 Manage a small crew .....</b>	<b>645</b>
<b>Assessment Requirements for MARG007 Manage a small crew.....</b>	<b>649</b>
<b>MARG008 Manage a vessel and its crew .....</b>	<b>652</b>
<b>Assessment Requirements for MARG008 Manage a vessel and its crew.....</b>	<b>657</b>
<b>MARG009 Manage an engine room and small engineering team in emergencies .....</b>	<b>661</b>
<b>Assessment Requirements for MARG009 Manage an engine room and small engineering team in emergencies.....</b>	<b>665</b>
<b>MARG010 Supervise a crew.....</b>	<b>667</b>
<b>Assessment Requirements for MARG010 Supervise a crew .....</b>	<b>672</b>
<b>MARG011 Work effectively as part of a crew on a vessel up to 80 metres .....</b>	<b>675</b>
<b>Assessment Requirements for MARG011 Work effectively as part of a crew on a vessel up to 80 metres .....</b>	<b>678</b>
<b>MARH018 Apply command navigation procedures on vessels limited by tonnage or near coastal operations .....</b>	<b>680</b>
<b>Assessment Requirements for MARH018 Apply command navigation procedures on vessels limited by tonnage or near coastal operations.....</b>	<b>684</b>
<b>MARH019 Forecast weather and oceanographic conditions.....</b>	<b>688</b>
<b>Assessment Requirements for MARH019 Forecast weather and oceanographic conditions.....</b>	<b>691</b>

MARH020 Forecast weather and oceanographic conditions to plan a safe passage .....	694
Assessment Requirements for MARH020 Forecast weather and oceanographic conditions to plan a safe passage .....	697
MARH021 Manage the navigation of a vessel.....	700
Assessment Requirements for MARH021 Manage the navigation of a vessel .....	705
MARH022 Plan and conduct a passage and determine position .....	709
Assessment Requirements for MARH022 Plan and conduct a passage and determine position.....	713
MARH023 Use of electronic chart display and information system (ECDIS) to maintain the safety of navigation .....	717
Assessment Requirements for MARH023 Use of electronic chart display and information system (ECDIS) to maintain the safety of navigation .....	720
MARH024 Use of radar and other bridge equipment to maintain safety of navigation ..	725
Assessment Requirements for MARH024 Use of radar and other bridge equipment to maintain safety of navigation.....	729
MARJ008 Ensure compliance with pollution prevention requirements .....	732
Assessment Requirements for MARJ008 Ensure compliance with pollution prevention requirements.....	737
MARK009 Manoeuvre a vessel up to 80 metres.....	741
Assessment Requirements for MARK009 Manoeuvre a vessel up to 80 metres .....	745
MARK010 Manoeuvre and handle a ship in all conditions .....	748
Assessment Requirements for MARK010 Manoeuvre and handle a ship in all conditions	751
MARK011 Manoeuvre the ship.....	756
Assessment Requirements for MARK011 Manoeuvre the ship.....	759
MARK012 Steer a vessel under direction of the Master .....	762
Assessment Requirements for MARK012 Steer a vessel under direction of the Master ..	766
MARL038 Apply advanced principles of marine electrotechnology .....	768
Assessment Requirements for MARL038 Apply advanced principles of marine electrotechnology.....	779
MARL039 Apply advanced principles of marine engineering thermodynamics .....	783
Assessment Requirements for MARL039 Apply advanced principles of marine engineering thermodynamics .....	792
MARL040 Apply advanced principles of marine mechanics.....	797
Assessment Requirements for MARL040 Apply advanced principles of marine mechanics	806
MARL041 Apply advanced principles of trim, stability and stress .....	810
Assessment Requirements for MARL041 Apply advanced principles of trim, stability and stress.....	821
MARL042 Apply basic principles of marine electrotechnology .....	825
Assessment Requirements for MARL042 Apply basic principles of marine electrotechnology.....	830
MARL043 Apply basic principles of marine engineering thermodynamics .....	834
Assessment Requirements for MARL043 Apply basic principles of marine engineering thermodynamics .....	839
MARL044 Apply basic principles of marine mechanics.....	842
Assessment Requirements for MARL044 Apply basic principles of marine mechanics ..	846
MARL045 Apply basic principles of naval architecture .....	849
Assessment Requirements for MARL045 Apply basic principles of naval architecture ..	853
MARL046 Carry out engineering calculations .....	857
Assessment Requirements for MARL046 Carry out engineering calculations .....	860
MARL047 Demonstrate advanced knowledge of marine auxiliary boilers.....	862
Assessment Requirements for MARL047 Demonstrate advanced knowledge of marine auxiliary boilers .....	869
MARL048 Demonstrate advanced knowledge of marine auxiliary machinery and systems	873

Assessment Requirements for MARL048 Demonstrate advanced knowledge of marine auxiliary machinery and systems .....	881
MARL049 Demonstrate advanced knowledge of marine control systems and automation.....	885
Assessment Requirements for MARL049 Demonstrate advanced knowledge of marine control systems and automation.....	894
MARL050 Demonstrate advanced knowledge of marine diesel engines and systems .....	898
Assessment Requirements for MARL050 Demonstrate advanced knowledge of marine diesel engines and systems.....	905
MARL051 Demonstrate advanced knowledge of marine electrical systems .....	909
Assessment Requirements for MARL051 Demonstrate advanced knowledge of marine electrical systems .....	917
MARL052 Demonstrate advanced knowledge of marine steam turbines and main boilers.....	922
Assessment Requirements for MARL052 Demonstrate advanced knowledge of marine steam turbines and main boilers .....	930
MARL053 Demonstrate advanced knowledge of ship operations and maintenance .....	934
Assessment Requirements for MARL053 Demonstrate advanced knowledge of ship operations and maintenance .....	949
MARL054 Demonstrate basic knowledge of marine auxiliary boilers .....	956
Assessment Requirements for MARL054 Demonstrate basic knowledge of marine auxiliary boilers .....	960
MARL055 Demonstrate basic knowledge of marine auxiliary machinery and equipment.....	963
Assessment Requirements for MARL055 Demonstrate basic knowledge of marine auxiliary machinery and equipment .....	970
MARL056 Demonstrate basic knowledge of marine control systems and automation ....	974
Assessment Requirements for MARL056 Demonstrate basic knowledge of marine control systems and automation.....	980
MARL057 Demonstrate basic knowledge of marine diesel engines and systems .....	984
Assessment Requirements for MARL057 Demonstrate basic knowledge of marine diesel engines and systems .....	988
MARL058 Demonstrate basic knowledge of marine electrical systems.....	992
Assessment Requirements for MARL058 Demonstrate basic knowledge of marine electrical systems .....	996
MARL059 Demonstrate basic knowledge of marine steam turbines and main boilers....	999
Assessment Requirements for MARL059 Demonstrate basic knowledge of marine steam turbines and main boilers .....	1004
MARL060 Demonstrate knowledge of ships and ship routines .....	1008
Assessment Requirements for MARL060 Demonstrate knowledge of ships and ship routines.....	1013
MARL061 Perform basic marine engineering calculations .....	1017
Assessment Requirements for MARL061 Perform basic marine engineering calculations.....	1020
MARN010 Apply general purpose hand skills aboard a vessel .....	1022
Assessment Requirements for MARN010 Apply general purpose hand skills aboard a vessel.....	1026
MARN011 Maintain seaworthiness of the ship (ship construction).....	1029
Assessment Requirements for MARN011 Maintain seaworthiness of the ship (ship construction).....	1032
MARN012 Manage advanced operations of ships in polar waters .....	1036
Assessment Requirements for MARN012 Manage advanced operations of ships in polar waters .....	1040
MARN013 Manage seaworthiness of a vessel up to 80 metres.....	1044
Assessment Requirements for MARN013 Manage seaworthiness of a vessel up to 80 metres.....	1047
MARN014 Plan and manage safe loading, unloading, securing and stowage of cargo ..	1049

Assessment Requirements for MARN014 Plan and manage safe loading, unloading, securing and stowage of cargo.....	1054
MARN015 Use seamanship skills on board a vessel.....	1059
Assessment Requirements for MARN015 Use seamanship skills on board a vessel.....	1063
MARO007 Contribute to monitoring and controlling a safe engine watch.....	1066
Assessment Requirements for MARO007 Contribute to monitoring and controlling a safe engine watch.....	1069
MARO008 Contribute to monitoring and controlling a safe navigational watch .....	1072
Assessment Requirements for MARO008 Contribute to monitoring and controlling a safe navigational watch.....	1075
MARO009 Maintain a safe navigational watch.....	1078
Assessment Requirements for MARO009 Maintain a safe navigational watch .....	1083
MARO010 Perform basic lookout duties .....	1087
Assessment Requirements for MARO010 Perform basic lookout duties.....	1090
MARO011 Transmit and receive information by the Global Maritime Distress and Safety System (GMDSS).....	1092
Assessment Requirements for MARO011 Transmit and receive information by the Global Maritime Distress and Safety System (GMDSS) .....	1095
MARO012 Transmit and receive information by visual signalling .....	1098
Assessment Requirements for MARO012 Transmit and receive information by visual signalling.....	1101
AURREA2001 Apply environmental and sustainability best practice in a marine workplace .....	1103
BSBADM307 Organise schedules .....	1111
Assessment Requirements for BSBADM307 Organise schedules.....	1114
BSBCMM201 Communicate in the workplace .....	1116
Assessment Requirements for BSBCMM201 Communicate in the workplace .....	1119
BSBCMM211 Apply communication skills.....	1121
Assessment Requirements for BSBCMM211 Apply communication skills .....	1124
BSBCUS201 Deliver a service to customers .....	1126
Assessment Requirements for BSBCUS201 Deliver a service to customers.....	1129
BSBFLM303 Contribute to effective workplace relationships .....	1131
Assessment Requirements for BSBFLM303 Contribute to effective workplace relationships .....	1135
BSBINN201 Contribute to workplace innovation.....	1137
Assessment Requirements for BSBINN201 Contribute to workplace innovation.....	1140
BSBOPS203 Deliver a service to customers .....	1142
Assessment Requirements for BSBOPS203 Deliver a service to customers .....	1145
BSBPWF301 Organise personal work priorities .....	1147
Assessment Requirements for BSBPWF301 Organise personal work priorities.....	1150
BSBSTR301 Contribute to continuous improvement.....	1152
Assessment Requirements for BSBSTR301 Contribute to continuous improvement ....	1155
BSBTWK201 Work effectively with others.....	1157
Assessment Requirements for BSBTWK201 Work effectively with others .....	1160
BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements .....	1162
Assessment Requirements for BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements .....	1166
BSBWHS411 Implement and monitor WHS policies, procedures and programs.....	1168
Assessment Requirements for BSBWHS411 Implement and monitor WHS policies, procedures and programs .....	1172
BSBWOR203 Work effectively with others .....	1174
Assessment Requirements for BSBWOR203 Work effectively with others .....	1177

<b>BSB WOR301 Organise personal work priorities and development .....</b>	<b>1179</b>
<b>Assessment Requirements for BSB WOR301 Organise personal work priorities and development.....</b>	<b>1182</b>
<b>CHCCOM002 Use communication to build relationships .....</b>	<b>1184</b>
<b>Assessment Requirements for CHCCOM002 Use communication to build relationships .....</b>	<b>1187</b>
<b>MARA001 Contribute to safe cargo operations on liquefied gas tankers .....</b>	<b>1190</b>
<b>Assessment Requirements for MARA001 Contribute to safe cargo operations on liquefied gas tankers.....</b>	<b>1195</b>
<b>MARA002 Contribute to safe cargo operations on oil and chemical tankers .....</b>	<b>1198</b>
<b>Assessment Requirements for MARA002 Contribute to safe cargo operations on oil and chemical tankers.....</b>	<b>1203</b>
<b>MARA003 Manage loading, discharging and stowing of cargo.....</b>	<b>1205</b>
<b>Assessment Requirements for MARA003 Manage loading, discharging and stowing of cargo.....</b>	<b>1210</b>
<b>MARA004 Manage vessel stability .....</b>	<b>1213</b>
<b>Assessment Requirements for MARA004 Manage vessel stability .....</b>	<b>1216</b>
<b>MARA005 Maintain vessel stability.....</b>	<b>1218</b>
<b>Assessment Requirements for MARA005 Maintain vessel stability .....</b>	<b>1221</b>
<b>MARA006 Monitor loading, unloading and stowage of cargo.....</b>	<b>1223</b>
<b>Assessment Requirements for MARA006 Monitor loading, unloading and stowage of cargo.....</b>	<b>1228</b>
<b>MARA007 Contribute to safe cargo operations on offshore support vessels .....</b>	<b>1231</b>
<b>Assessment Requirements for MARA007 Contribute to safe cargo operations on offshore support vessels .....</b>	<b>1236</b>
<b>MARA008 Contribute to safe anchor handling and towing operations.....</b>	<b>1239</b>
<b>Assessment Requirements for MARA008 Contribute to safe anchor handling and towing operations .....</b>	<b>1243</b>
<b>MARA009 Manage stability of a vessel 500 gross tonnage or more .....</b>	<b>1246</b>
<b>Assessment Requirements for MARA009 Manage stability of a vessel 500 gross tonnage or more .....</b>	<b>1250</b>
<b>MARA010 Manage loading, unloading and stowage of cargo .....</b>	<b>1252</b>
<b>Assessment Requirements for MARA010 Manage loading, unloading and stowage of cargo .....</b>	<b>1257</b>
<b>MARB001 Assist with routine maintenance of a vessel.....</b>	<b>1260</b>
<b>Assessment Requirements for MARB001 Assist with routine maintenance of a vessel.....</b>	<b>1264</b>
<b>MARB008 Carry out basic welding, brazing, cutting and machining operations on a coastal vessel.....</b>	<b>1266</b>
<b>Assessment Requirements for MARB008 Carry out basic welding, brazing, cutting and machining operations on a coastal vessel.....</b>	<b>1270</b>
<b>MARB009 Manage refuelling .....</b>	<b>1273</b>
<b>Assessment Requirements for MARB009 Manage refuelling.....</b>	<b>1278</b>
<b>MARB010 Plan and supervise routine maintenance on a vessel up to 80 metres .....</b>	<b>1280</b>
<b>Assessment Requirements for MARB010 Plan and supervise routine maintenance on a vessel up to 80 metres.....</b>	<b>1285</b>
<b>MARB011 Undertake maintenance of 240 to 440 voltage alternating current electrical systems.....</b>	<b>1287</b>
<b>Assessment Requirements for MARB011 Undertake maintenance of 240 to 440 voltage alternating current electrical systems .....</b>	<b>1293</b>
<b>MARB012 Undertake maintenance of machinery, machinery systems and structural components.....</b>	<b>1295</b>
<b>Assessment Requirements for MARB012 Undertake maintenance of machinery, machinery systems and structural components .....</b>	<b>1302</b>
<b>MARB013 Maintain and repair marine electrical and electronic equipment.....</b>	<b>1305</b>

Assessment Requirements for MARB013 Maintain and repair marine electrical and electronic equipment.....	1311
MARB014 Maintain and repair shipboard machinery and equipment.....	1315
Assessment Requirements for MARB014 Maintain and repair shipboard machinery and equipment.....	1325
MARB015 Maintain fire fighting appliances .....	1329
Assessment Requirements for MARB015 Maintain fire fighting appliances .....	1332
MARB016 Contribute to routine engine maintenance on a vessel.....	1334
Assessment Requirements for MARB016 Contribute to routine engine maintenance on a vessel.....	1338
MARB017 Perform routine maintenance and repairs on a vessel.....	1342
Assessment Requirements for MARB017 Perform routine maintenance and repairs on a vessel.....	1347
MARB018 Implement vessel planned maintenance system.....	1351
Assessment Requirements for MARB018 Implement vessel planned maintenance system.....	1355
MARB019 Manage stores for planned maintenance system .....	1357
Assessment Requirements for MARB019 Manage stores for planned maintenance system.....	1361
MARB020 Manage repairs and maintenance of a vessel 500 gross tonnage or more ....	1363
Assessment Requirements for MARB020 Manage repairs and maintenance of a vessel 500 gross tonnage or more.....	1369
MARB021 Perform routine tasks in a marina .....	1372
Assessment Requirements for MARB021 Perform routine tasks in a marina .....	1375
MARB022 Refuel a vessel.....	1377
Assessment Requirements for MARB022 Refuel a vessel.....	1380
MARB023 Maintain marina infrastructure .....	1383
Assessment Requirements for MARB023 Maintain marina infrastructure .....	1386
MARB024 Undertake basic boatyard operations.....	1389
Assessment Requirements for MARB024 Undertake basic boatyard operations .....	1392
MARB025 Maintain mooring equipment .....	1394
Assessment Requirements for MARB025 Maintain mooring equipment .....	1397
MARB026 Apply knowledge of marine terminology and port procedures.....	1399
Assessment Requirements for MARB026 Apply knowledge of marine terminology and port procedures .....	1402
MARB027 Perform basic servicing and maintenance of main propulsion unit and auxiliary systems.....	1404
Assessment Requirements for MARB027 Perform basic servicing and maintenance of main propulsion unit and auxiliary systems.....	1407
MARB028 Service marine internal combustion engines and propulsion and auxiliary systems.....	1410
Assessment Requirements for MARB028 Service marine internal combustion engines and propulsion and auxiliary systems.....	1413
MARB029 Perform routine maintenance on a vessel up to 24 metres.....	1416
Assessment Requirements for MARB029 Perform routine maintenance on a vessel up to 24 metres .....	1421
MARB030 Slip or dock a vessel and maintain hull on a vessel up to 80 metres.....	1424
Assessment Requirements for MARB030 Slip or dock a vessel and maintain hull on a vessel up to 80 metres.....	1429
MARB031 Maintain marine internal combustion engines, propulsion plant and auxiliary systems.....	1433
Assessment Requirements for MARB031 Maintain marine internal combustion engines, propulsion plant and auxiliary systems.....	1437
MARB032 Undertake basic maintenance of electrical systems .....	1441

Assessment Requirements for MARB032 Undertake basic maintenance of electrical systems.....	1445
MARC011 Manage a propulsion unit using appropriate engine systems and support services .....	1448
Assessment Requirements for MARC011 Manage a propulsion unit using appropriate engine systems and support services .....	1452
MARC012 Monitor and manage vessel operations .....	1454
Assessment Requirements for MARC012 Monitor and manage vessel operations .....	1458
MARC013 Operate auxiliary machinery systems up to 1500 kW .....	1460
Assessment Requirements for MARC013 Operate auxiliary machinery systems up to 1500 kW.....	1463
MARC014 Operate deck machinery and steering gear on a vessel up to 80 metres .....	1466
Assessment Requirements for MARC014 Operate deck machinery and steering gear on a vessel up to 80 metres.....	1469
MARC015 Operate marine internal combustion engines and associated systems up to 1500 kW.....	1471
Assessment Requirements for MARC015 Operate marine internal combustion engines and associated systems up to 1500 kW .....	1475
MARC016 Operate propulsion transmission systems up to 1500 kW .....	1478
Assessment Requirements for MARC016 Operate propulsion transmission systems up to 1500 kW.....	1481
MARC017 Operate 240 to 440 voltage alternating current electrical systems.....	1483
Assessment Requirements for MARC017 Operate 240 to 440 voltage alternating current electrical systems .....	1486
MARC018 Employ tools, equipment and materials in a shipboard context .....	1489
Assessment Requirements for MARC018 Employ tools, equipment and materials in a shipboard context .....	1496
MARC019 Transmit and receive information by marine VHF radio within Australian Territorial Waters .....	1500
Assessment Requirements for MARC019 Transmit and receive information by marine VHF radio within Australian Territorial Waters .....	1503
MARC022 Perform mooring and unmooring activities .....	1506
Assessment Requirements for MARC022 Perform mooring and unmooring activities.....	1511
MARC023 Operate and maintain a boiler.....	1515
Assessment Requirements for MARC023 Operate and maintain a boiler.....	1520
MARC024 Operate and maintain a steam engine up to 750 kW and steam auxiliary equipment.....	1523
Assessment Requirements for MARC024 Operate and maintain a steam engine up to 750 kW and steam auxiliary equipment .....	1528
MARC025 Operate and maintain engines for auxiliary systems other than steam auxiliary systems.....	1531
Assessment Requirements for MARC025 Operate and maintain engines for auxiliary systems other than steam auxiliary systems .....	1535
MARC026 Operate remote controls of propulsion plant and engineering systems .....	1538
Assessment Requirements for MARC026 Operate remote controls of propulsion plant and engineering systems .....	1541
MARC027 Contribute to the operation of engine equipment and associated propulsion plant .....	1545
Assessment Requirements for MARC027 Contribute to the operation of engine equipment and associated propulsion plant.....	1549
MARC028 Operate deck machinery, cargo handling gear and equipment on a vessel.....	1553
Assessment Requirements for MARC028 Operate deck machinery, cargo handling gear and equipment on a vessel.....	1559

MARC029 Perform rigging on board a vessel .....	1563
Assessment Requirements for MARC029 Perform rigging on board a vessel.....	1566
MARC030 Use and care for hand and power tools .....	1572
Assessment Requirements for MARC030 Use and care for hand and power tools.....	1575
MARC031 Shift mooring lines using mechanical means .....	1579
Assessment Requirements for MARC031 Shift mooring lines using mechanical means.....	1583
MARC032 Perform dogging on board a vessel.....	1587
Assessment Requirements for MARC032 Perform dogging on board a vessel.....	1592
MARC033 Complete engine room tasks .....	1596
Assessment Requirements for MARC033 Complete engine room tasks .....	1600
MARC034 Maintain hull out of water .....	1603
Assessment Requirements for MARC034 Maintain hull out of water.....	1606
MARC035 Operate and maintain extra low and low voltage electrical systems and equipment.....	1609
Assessment Requirements for MARC035 Operate and maintain extra low and low voltage electrical systems and equipment.....	1613
MARC036 Operate deck machinery .....	1616
Assessment Requirements for MARC036 Operate deck machinery .....	1619
MARC037 Operate inboard and outboard motors .....	1621
Assessment Requirements for MARC037 Operate inboard and outboard motors .....	1624
MARC038 Operate main propulsion unit and auxiliary systems .....	1626
Assessment Requirements for MARC038 Operate main propulsion unit and auxiliary systems.....	1629
MARC039 Operate marine internal combustion engines, and propulsion and auxiliary systems.....	1632
Assessment Requirements for MARC039 Operate marine internal combustion engines, and propulsion and auxiliary systems .....	1636
MARC040 Manage fuel systems .....	1640
Assessment Requirements for MARC040 Manage fuel systems.....	1643
MARC041 Operate and monitor marine internal combustion engines, propulsion plant and auxiliary systems.....	1646
Assessment Requirements for MARC041 Operate and monitor marine internal combustion engines, propulsion plant and auxiliary systems .....	1650
MARC042 Operate electrical systems.....	1654
Assessment Requirements for MARC042 Operate electrical systems .....	1657
MARC043 Transmit and receive information by marine radio .....	1660
Assessment Requirements for MARC043 Transmit and receive information by marine radio .....	1664
MARC044 Transmit and receive information by marine VHF radio.....	1668
Assessment Requirements for MARC044 Transmit and receive information by marine VHF radio.....	1672
MARD001 Manage business and administration on vessels limited by tonnage or near coastal operations .....	1676
Assessment Requirements for MARD001 Manage business and administration on vessels limited by tonnage or near coastal operations .....	1684
MARD002 Manage operations and maintenance on vessels limited by tonnage or near coastal operations .....	1688
Assessment Requirements for MARD002 Manage operations and maintenance on vessels limited by tonnage or near coastal operations .....	1692
MARD003 Manage legal requirements of a vessel .....	1695
Assessment Requirements for MARD003 Manage legal requirements of a vessel.....	1700
MARE001 Communicate effectively when performing engineering duties .....	1703

Assessment Requirements for MARE001 Communicate effectively when performing engineering duties.....	1707
MARE002 Communicate during mooring and unmooring activities .....	1709
Assessment Requirements for MARE002 Communicate during mooring and unmooring activities.....	1713
MARF003 Follow vessel security procedures.....	1716
Assessment Requirements for MARF003 Follow vessel security procedures .....	1720
MARF006 Observe personal safety and social responsibility.....	1722
Assessment Requirements for MARF006 Observe personal safety and social responsibility	1727
MARF007 Operate survival craft and other lifesaving appliances.....	1730
Assessment Requirements for MARF007 Operate survival craft and other lifesaving appliances .....	1734
MARF008 Prevent and fight fires on board a vessel.....	1737
Assessment Requirements for MARF008 Prevent and fight fires on board a vessel.....	1742
MARF009 Survive at sea in the event of vessel abandonment.....	1745
Assessment Requirements for MARF009 Survive at sea in the event of vessel abandonment.....	1749
MARF010 Work safely in confined spaces on a vessel.....	1752
Assessment Requirements for MARF010 Work safely in confined spaces on a vessel...	1760
MARF011 Manage firefighting and fire prevention activities on board a vessel.....	1762
Assessment Requirements for MARF011 Manage firefighting and fire prevention activities on board a vessel.....	1767
MARF012 Control safe access to and on vessel.....	1770
Assessment Requirements for MARF012 Control safe access to and on vessel .....	1775
MARF013 Provide medical first aid on board a vessel.....	1778
Assessment Requirements for MARF013 Provide medical first aid on board a vessel ..	1782
MARF014 Respond to emergencies .....	1784
Assessment Requirements for MARF014 Respond to emergencies.....	1788
MARF015 Manage provision of medical care on board a vessel .....	1790
Assessment Requirements for MARF015 Manage provision of medical care on board a vessel.....	1796
MARF016 Carry out fast rescue craft operations.....	1799
Assessment Requirements for MARF016 Carry out fast rescue craft operations.....	1804
MARF017 Follow work health and safety, and emergency procedures during mooring and unmooring activities.....	1808
Assessment Requirements for MARF017 Follow work health and safety, and emergency procedures during mooring and unmooring activities.....	1812
MARF018 Assist in an emergency response.....	1816
Assessment Requirements for MARF018 Assist in an emergency response .....	1820
MARF019 Operate emergency equipment and apply emergency procedures.....	1823
Assessment Requirements for MARF019 Operate emergency equipment and apply emergency procedures .....	1826
MARF020 Coordinate search and rescue operations .....	1829
Assessment Requirements for MARF020 Coordinate search and rescue operations.....	1835
MARF021 Manage safety and security of vessel crew and passengers .....	1838
Assessment Requirements for MARF021 Manage safety and security of vessel crew and passengers.....	1845
MARF022 Apply maritime resource management principles .....	1848
Assessment Requirements for MARF022 Apply maritime resource management principles	1852
MARF023 Apply safe work practices in a marina .....	1855
Assessment Requirements for MARF023 Apply safe work practices in a marina .....	1858
MARF024 Classify marina infrastructure, vessels and staffing structure .....	1860

Assessment Requirements for MARF024 Classify marina infrastructure, vessels and staffing structure .....	1864
MARF025 Respond to marina emergencies .....	1866
Assessment Requirements for MARF025 Respond to marina emergencies.....	1869
MARF026 Follow port and terminal security procedures.....	1872
Assessment Requirements for MARF026 Follow port and terminal security procedures.....	1875
MARF027 Apply basic survival skills in the event of vessel abandonment.....	1878
Assessment Requirements for MARF027 Apply basic survival skills in the event of vessel abandonment.....	1882
MARF028 Follow procedures to minimise and fight fires on board a vessel.....	1886
Assessment Requirements for MARF028 Follow procedures to minimise and fight fires on board a vessel.....	1889
MARF029 Meet work health and safety requirements .....	1892
Assessment Requirements for MARF029 Meet work health and safety requirements .....	1896
MARF030 Survive at sea using survival craft .....	1900
Assessment Requirements for MARF030 Survive at sea using survival craft .....	1904
MARG001 Work effectively as part of a crew on a vessel up to 80 metres .....	1907
Assessment Requirements for MARG001 Work effectively as part of a crew on a vessel up to 80 metres .....	1911
MARG002 Manage a small crew .....	1913
Assessment Requirements for MARG002 Manage a small crew.....	1918
MARG003 Manage an engine room and small engineering team.....	1920
Assessment Requirements for MARG003 Manage an engine room and small engineering team.....	1925
MARG004 Provide leadership to crew .....	1927
Assessment Requirements for MARG004 Provide leadership to crew.....	1933
MARG005 Supervise a crew.....	1935
Assessment Requirements for MARG005 Supervise a crew .....	1940
MARG006 Manage a vessel and its crew .....	1943
Assessment Requirements for MARG006 Manage a vessel and its crew.....	1949
MARH006 Forecast weather and oceanographic conditions.....	1951
Assessment Requirements for MARH006 Forecast weather and oceanographic conditions.....	1954
MARH007 Apply command navigation procedures on vessels limited by tonnage or near coastal operations .....	1956
Assessment Requirements for MARH007 Apply command navigation procedures on vessels limited by tonnage or near coastal operations.....	1961
MARH008 Plan and conduct a passage .....	1964
Assessment Requirements for MARH008 Plan and conduct a passage .....	1969
MARH009 Use an electronic chart display and information system to navigate safely.....	1972
Assessment Requirements for MARH009 Use an electronic chart display and information system to navigate safely.....	1976
MARH010 Use bridge equipment to determine vessel position.....	1978
Assessment Requirements for MARH010 Use bridge equipment to determine vessel position.....	1982
MARH011 Forecast weather and oceanographic conditions to plan a safe passage .....	1985
Assessment Requirements for MARH011 Forecast weather and oceanographic conditions to plan a safe passage .....	1988
MARH012 Manage the navigation of a vessel 500 gross tonnage or more.....	1991
Assessment Requirements for MARH012 Manage the navigation of a vessel 500 gross tonnage or more.....	1997
MARH013 Plan and navigate a passage for a vessel up to 12 metres .....	2000
Assessment Requirements for MARH013 Plan and navigate a passage for a vessel up to 12 metres.....	2004

MARH014 Apply weather information when navigating inland waters as Master .....	2007
Assessment Requirements for MARH014 Apply weather information when navigating inland waters as Master.....	2010
MARH015 Manage and maintain a navigational watch on board vessels up to 80 metres	2012
Assessment Requirements for MARH015 Manage and maintain a navigational watch on board vessels up to 80 metres.....	2016
MARH016 Plan and navigate a passage for a vessel up to 80 metres .....	2019
Assessment Requirements for MARH016 Plan and navigate a passage for a vessel up to 80 metres.....	2023
MARH017 Use wheelhouse equipment for safe navigation.....	2028
Assessment Requirements for MARH017 Use wheelhouse equipment for safe navigation.....	2031
MARI003 Comply with regulations to ensure safe operation of a vessel up to 12 metres	2034
Assessment Requirements for MARI003 Comply with regulations to ensure safe operation of a vessel up to 12 metres .....	2037
MARI004 Observe regulations to ensure safe operation of a vessel up to 80 metres .....	2039
Assessment Requirements for MARI004 Observe regulations to ensure safe operation of a vessel up to 80 metres.....	2043
MARJ003 Ensure compliance with environmental management legislation.....	2046
Assessment Requirements for MARJ003 Ensure compliance with environmental management legislation.....	2051
MARJ004 Inspect and report defects and damage to vessel.....	2053
Assessment Requirements for MARJ004 Inspect and report defects and damage to vessel.....	2057
MARJ005 Manage compliance with environmental management legislation.....	2059
Assessment Requirements for MARJ005 Manage compliance with environmental management legislation.....	2064
MARJ006 Follow environmental work practices .....	2066
Assessment Requirements for MARJ006 Follow environmental work practices.....	2069
MARJ007 Monitor environmental management on a vessel.....	2072
Assessment Requirements for MARJ007 Monitor environmental management on a vessel.....	2076
MARK003 Manoeuvre a vessel up to 80 metres.....	2079
Assessment Requirements for MARK003 Manoeuvre a vessel up to 80 metres .....	2084
MARK004 Perform basic vessel manoeuvres .....	2087
Assessment Requirements for MARK004 Perform basic vessel manoeuvres .....	2092
MARK005 Steer a vessel under direction of the Master .....	2094
Assessment Requirements for MARK005 Steer a vessel under direction of the Master .....	2098
MARK006 Manoeuvre a vessel 500 gross tonnage or more .....	2101
Assessment Requirements for MARK006 Manoeuvre a vessel 500 gross tonnage or more.....	2107
MARK007 Handle a vessel up to 12 metres .....	2110
Assessment Requirements for MARK007 Handle a vessel up to 12 metres.....	2113
MARK008 Manoeuvre a vessel up to 24 metres within Near Coastal waters .....	2117
Assessment Requirements for MARK008 Manoeuvre a vessel up to 24 metres within Near Coastal waters .....	2121
MARL001 Carry out engineering calculations .....	2124
Assessment Requirements for MARL001 Carry out engineering calculations .....	2127
MARL002 Apply basic principles of naval architecture .....	2129
Assessment Requirements for MARL002 Apply basic principles of naval architecture .....	2134
MARL003 Demonstrate basic knowledge of marine auxiliary boilers .....	2136
Assessment Requirements for MARL003 Demonstrate basic knowledge of marine auxiliary boilers .....	2140
MARL004 Demonstrate basic knowledge of marine auxiliary machinery and equipment.....	2142
Assessment Requirements for MARL004 Demonstrate basic knowledge of marine auxiliary machinery and equipment .....	2149
MARL005 Demonstrate basic knowledge of marine control systems and automation .....	2151

Assessment Requirements for MARL005 Demonstrate basic knowledge of marine control systems and automation.....	2156
MARL006 Demonstrate basic knowledge of marine diesel engines and systems .....	2158
Assessment Requirements for MARL006 Demonstrate basic knowledge of marine diesel engines and systems .....	2163
MARL007 Demonstrate basic knowledge of marine electrical systems .....	2165
Assessment Requirements for MARL007 Demonstrate basic knowledge of marine electrical systems .....	2169
MARL008 Demonstrate basic knowledge of ships and ship routines .....	2171
Assessment Requirements for MARL008 Demonstrate basic knowledge of ships and ship routines.....	2177
MARL009 Perform basic marine engineering calculations .....	2179
Assessment Requirements for MARL009 Perform basic marine engineering calculations	2182
MARL010 Apply basic principles of marine electrotechnology .....	2184
Assessment Requirements for MARL010 Apply basic principles of marine electrotechnology .....	2188
MARL011 Apply basic principles of marine engineering thermodynamics .....	2191
Assessment Requirements for MARL011 Apply basic principles of marine engineering thermodynamics .....	2196
MARL012 Apply basic principles of marine mechanics.....	2199
Assessment Requirements for MARL012 Apply basic principles of marine mechanics	2203
MARL013 Demonstrate basic knowledge of marine steam turbines and main boilers..	2206
Assessment Requirements for MARL013 Demonstrate basic knowledge of marine steam turbines and main boilers .....	2211
MARL014 Apply intermediate principles of marine electrotechnology .....	2214
Assessment Requirements for MARL014 Apply intermediate principles of marine electrotechnology .....	2220
MARL015 Apply intermediate principles of marine engineering thermodynamics .....	2223
Assessment Requirements for MARL015 Apply intermediate principles of marine engineering thermodynamics .....	2229
MARL016 Apply intermediate principles of marine mechanics.....	2232
Assessment Requirements for MARL016 Apply intermediate principles of marine mechanics .....	2236
MARL017 Apply intermediate principles of naval architecture .....	2239
Assessment Requirements for MARL017 Apply intermediate principles of naval architecture .....	2245
MARL018 Apply advanced principles of marine electrotechnology .....	2248
Assessment Requirements for MARL018 Apply advanced principles of marine electrotechnology .....	2253
MARL019 Apply advanced principles of marine engineering thermodynamics .....	2256
Assessment Requirements for MARL019 Apply advanced principles of marine engineering thermodynamics .....	2261
MARL020 Apply advanced principles of marine mechanics.....	2264
Assessment Requirements for MARL020 Apply advanced principles of marine mechanics	2269
MARL021 Apply advanced principles of naval architecture .....	2272
Assessment Requirements for MARL021 Apply advanced principles of naval architecture	2279
MARL022 Demonstrate basic knowledge of ship construction .....	2282
Assessment Requirements for MARL022 Demonstrate basic knowledge of ship construction.....	2288
MARL023 Demonstrate basic knowledge of ship operation and maintenance .....	2291
Assessment Requirements for MARL023 Demonstrate basic knowledge of ship operation and maintenance .....	2298
MARL024 Demonstrate intermediate knowledge of marine auxiliary boilers .....	2301

Assessment Requirements for MARL024 Demonstrate intermediate knowledge of marine auxiliary boilers .....	2305
MARL025 Demonstrate intermediate knowledge of marine auxiliary machinery and systems.....	2308
Assessment Requirements for MARL025 Demonstrate intermediate knowledge of marine auxiliary machinery and systems .....	2314
MARL026 Demonstrate intermediate knowledge of marine control systems and automation.....	2317
Assessment Requirements for MARL026 Demonstrate intermediate knowledge of marine control systems and automation.....	2322
MARL027 Demonstrate intermediate knowledge of marine diesel engines and systems	2325
Assessment Requirements for MARL027 Demonstrate intermediate knowledge of marine diesel engines and systems.....	2332
MARL028 Demonstrate intermediate knowledge of marine electrical systems .....	2335
Assessment Requirements for MARL028 Demonstrate intermediate knowledge of marine electrical systems .....	2340
MARL029 Demonstrate intermediate knowledge of marine steam turbines and main boilers .....	2343
Assessment Requirements for MARL029 Demonstrate intermediate knowledge of marine steam turbines and main boilers .....	2348
MARL030 Demonstrate advanced knowledge of marine auxiliary boilers.....	2351
Assessment Requirements for MARL030 Demonstrate advanced knowledge of marine auxiliary boilers .....	2356
MARL031 Demonstrate advanced knowledge of marine auxiliary machinery and systems	2359
Assessment Requirements for MARL031 Demonstrate advanced knowledge of marine auxiliary machinery and systems .....	2365
MARL032 Demonstrate advanced knowledge of marine control systems and automation	2368
Assessment Requirements for MARL032 Demonstrate advanced knowledge of marine control systems and automation.....	2374
MARL033 Demonstrate advanced knowledge of marine diesel engines and systems ....	2377
Assessment Requirements for MARL033 Demonstrate advanced knowledge of marine diesel engines and systems.....	2385
MARL034 Demonstrate advanced knowledge of marine electrical systems .....	2388
Assessment Requirements for MARL034 Demonstrate advanced knowledge of marine electrical systems .....	2395
MARL035 Demonstrate advanced knowledge of marine steam turbines and main boilers	2398
Assessment Requirements for MARL035 Demonstrate advanced knowledge of marine steam turbines and main boilers .....	2404
MARL036 Demonstrate advanced knowledge of ship operation and maintenance .....	2407
Assessment Requirements for MARL036 Demonstrate advanced knowledge of ship operation and maintenance.....	2418
MARL037 Demonstrate knowledge of ships and ship routines.....	2421
Assessment Requirements for MARL037 Demonstrate knowledge of ships and ship routines.....	2427
MARM001 Apply knowledge of safety management system legal framework in the workplace .....	2430
Assessment Requirements for MARM001 Apply knowledge of safety management system legal framework in the workplace.....	2435
MARM002 Apply vessel construction theory to marine survey tasks .....	2437
Assessment Requirements for MARM002 Apply vessel construction theory to marine survey tasks .....	2441
MARM003 Identify factors that affect a commercial vessel's fitness for purpose .....	2443

Assessment Requirements for MARM003 Identify factors that affect a commercial vessel's fitness for purpose .....	2447
MARM004 Work in the marine surveying sector .....	2449
Assessment Requirements for MARM004 Work in the marine surveying sector.....	2455
MARM005 Assess compliance with marine environment protection requirements .....	2458
Assessment Requirements for MARM005 Assess compliance with marine environment protection requirements.....	2463
MARM006 Assist in the survey of commercial vessels .....	2466
Assessment Requirements for MARM006 Assist in the survey of commercial vessels...	2473
MARM007 Assist in the survey of vessel mechanical features .....	2476
Assessment Requirements for MARM007 Assist in the survey of vessel mechanical features.....	2483
MARM008 Evaluate vessel stability .....	2486
Assessment Requirements for MARM008 Evaluate vessel stability .....	2489
MARM009 Implement a systematic approach to the audit of safety management systems	2492
Assessment Requirements for MARM009 Implement a systematic approach to the audit of safety management systems .....	2497
MARM010 Survey lifesaving appliances, fire and other safety systems .....	2500
Assessment Requirements for MARM010 Survey lifesaving appliances, fire and other safety systems.....	2504
MARM011 Calculate, assess and report on vessel trim and stability .....	2506
Assessment Requirements for MARM011 Calculate, assess and report on vessel trim and stability.....	2510
MARM012 Conduct a range of surveys on domestic commercial vessels.....	2514
Assessment Requirements for MARM012 Conduct a range of surveys on domestic commercial vessels .....	2520
MARM013 Conduct an audit of safety management systems .....	2524
Assessment Requirements for MARM013 Conduct an audit of safety management systems	2531
MARM014 Develop marine survey reports .....	2535
Assessment Requirements for MARM014 Develop marine survey reports .....	2539
MARM015 Participate in investigating marine incidents .....	2541
Assessment Requirements for MARM015 Participate in investigating marine incidents	2547
MARM016 Survey hull and superstructure of a commercial vessel.....	2550
Assessment Requirements for MARM016 Survey hull and superstructure of a commercial vessel.....	2557
MARM017 Survey vessel operational systems .....	2561
Assessment Requirements for MARM017 Survey vessel operational systems.....	2565
MARM018 Undertake a periodic statutory survey .....	2568
Assessment Requirements for MARM018 Undertake a periodic statutory survey.....	2574
MARM019 Establish a marine surveyor practice .....	2577
Assessment Requirements for MARM019 Establish a marine surveyor practice.....	2584
MARN001 Apply general purpose hand skills aboard a vessel .....	2587
Assessment Requirements for MARN001 Apply general purpose hand skills aboard a vessel.....	2592
MARN004 Manage seaworthiness of a vessel up to 80 metres.....	2594
Assessment Requirements for MARN004 Manage seaworthiness of a vessel up to 80 metres.....	2597
MARN005 Maintain seaworthiness of a vessel.....	2599
Assessment Requirements for MARN005 Maintain seaworthiness of a vessel .....	2603
MARN006 Manage cargo operations.....	2605
Assessment Requirements for MARN006 Manage cargo operations .....	2612

## MAR10120 Certificate I in Maritime Operations (General Purpose Hand Near Coastal)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for people working in entry-level positions in the maritime industry as a General Purpose Hand on deck or in the engine room of a vessel less than 80 metres within the exclusive economic zone (EEZ) or in the engine room only for a vessel with propulsion power less than 3000 kW.

## Licensing/Regulatory Information

This level of qualification is currently cited as meeting some of the requirements for certification as a General Purpose Hand Near Coastal as defined by the National Standard for Commercial Vessels (NSCV) Part D.

Certification will require achievement of the MAR10120 Certificate I in Maritime Operations (General Purpose Hand Near Coastal) and an Australian Maritime Safety Authority (AMSA) approved first aid certificate.

People seeking certification should check with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

Total number of units = 9 units

9 core units

### Core units

HLTAID011	Provide first aid
MARB033	Assist with routine maintenance of a vessel
MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARF030	Survive at sea using survival craft
MARG011	Work effectively as part of a crew on a vessel up to 80 metres
MARN010	Apply general purpose hand skills aboard a vessel
MARO010	Perform basic lookout duties

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR10318 Certificate I in Maritime Operations (General Purpose Hand Near Coastal).

# **MAR10318 Certificate I in Maritime Operations (General Purpose Hand Near Coastal)**

## **Modification History**

Release 1. New qualification.

## **Qualification Description**

This qualification is suitable for people working in entry level positions in the maritime industry as a General Purpose Hand on deck or in the engine room of a vessel up to 80 metres within the exclusive economic zone (EEZ) or in the engine room only for a vessel with propulsion power up to 3000 kW.

### **Licensing/Regulatory Information**

This level of qualification is currently cited as meeting some of the requirements for certification as a General Purpose Hand Near Coastal as defined by the National Standard for Commercial Vessels (NSCV) Part D. Certification will require achievement of the MAR10318 Certificate I in Maritime Operations (General Purpose Hand Near Coastal) and an Australian Maritime Safety Authority (AMSA) approved first aid certificate; people seeking certification should check with AMSA.

## **Entry Requirements**

Not applicable.

## **Packaging Rules**

Total number of units = 8 units

8 core units

MARB001	Assist with routine maintenance of a vessel
MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARF030	Survive at sea using survival craft
MARG001	Work effectively as part of a crew on a vessel up to 80 metres

MARN001                      Apply general purpose hand skills aboard a vessel

MARO001                      Perform basic lookout duties

## **Qualification Mapping Information**

This qualification is equivalent to MAR10313 Certificate I in Maritime Operations (General Purpose Hand).

# MAR10418 Certificate I in Maritime Operations (Coxswain Grade 2 Near Coastal)

## Modification History

Release 1. First release of this qualification.

## Qualification Description

This qualification applies to people working in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certificate of competency to:

- command and operate the engines of a vessel:
  - <12 m in length
  - with propulsion power that is unlimited for an outboard engine or <100 kW for an inboard engine
  - that is not carrying passengers
  - that is in sheltered waters or within 5 nautical miles (nm) from point of departure, shore base or aquaculture lease
- command and operate the engines of a vessel:
  - as a tender or auxiliary vessel within 3 nm of a parent vessel within the exclusive economic zone (EEZ)
  - with propulsion power that is unlimited for an outboard engine or <100 kW for an inboard engine
  - that is not carrying passengers.

## Licensing/Regulatory Information

This qualification is required to obtain an AMSA certificate of competency as a Coxswain Grade 2 NC as defined in the National Standard for Commercial Vessels (NSCV) Part D.

AMSA certification will require:

- achieving MAR10418 Certificate I in Maritime Operations (Coxswain Grade 2 Near Coastal)
- sea service consisting of:
  - 7 days qualifying sea service and a completed AMSA approved task bookor
  - 60 days qualifying sea service
- meeting the medical and eyesight requirements specified in the NSCV Part D and
- assessment by an AMSA approved assessor using the AMSA mandated practical assessment (AMPA) conducted on a vessel  $\geq 5.0$  m in length.

## Entry Requirements

Not applicable.

## Packaging Rules

**Total number of units = 8 units**

8 core units

### Core units

MARC037	Operate inboard and outboard motors
MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARI003	Comply with regulations to ensure safe operation of a vessel up to 12 metres
MARJ006	Follow environmental work practices
MARK007	Handle a vessel up to 12 metres
MARN008	Apply seamanship skills aboard a vessel up to 12 metres

## Qualification Mapping Information

This qualification supersedes and is equivalent to MAR10413 Certificate I in Maritime Operations (Coxswain Grade 2 Near Coastal).

# MAR20116 Certificate II in Maritime Operations (Linesperson)

## Modification History

Release 1. New qualification.

## Qualification Description

This qualification is suitable for people working in the maritime industry as a Linesperson engaged in a range of tasks in mooring and unmooring operations.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

**Total number of units = 11**

11 core units

### Core units

BSBWOR301 Organise personal work priorities and development

HLTAID003 Provide first aid

MARB025 Maintain mooring equipment

MARB026 Apply knowledge of marine terminology and port procedures

MARC019 Transmit and receive information by marine VHF radio within Australian Territorial Waters

MARC022 Perform mooring and unmooring activities

MARC031 Shift mooring lines using mechanical means

MARE002	Communicate during mooring and unmooring activities
MARF017	Follow work health and safety, and emergency procedures during mooring and unmooring activities
MARF026	Follow port and terminal security procedures
TLID1001	Shift materials safely using manual handling methods

## Qualification Mapping Information

This qualification replaces **but** is not equivalent to MAR10213 Certificate I in Maritime Operations (Linesperson).

MAR10213 replaces TDM10207 Certificate I in Transport & Distribution (Maritime Operations - Shorebased Linesperson).

## **MAR20318 Certificate II in Maritime Operations (Coxswain Grade 1 Near Coastal)**

### **Modification History**

Release 1. First release of this qualification.

### **Qualification Description**

This qualification applies to people working in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certificate of competency to command and operate the engines of a vessel:

- <12 m in length
- with propulsion power that is unlimited for an outboard engine or <500 kW for an inboard engine
- that is in inshore waters or designated waters

or

- as a tender or auxiliary vessel within 3 nautical miles (nm) of a parent vessel within the exclusive economic zone (EEZ).

### **Licensing/Regulatory Information**

This qualification is required to obtain an AMSA certificate of competency as a Coxswain Grade 1 NC as defined in the National Standard for Commercial Vessels (NSCV) Part D.

AMSA certification will require:

- achieving MAR20318 Certificate II in Maritime Operations (Coxswain Grade 1 Near Coastal)
- a Marine Radio Operators VHF Certificate of Proficiency
- sea service consisting of:
  - 30 days qualifying sea service and a completed AMSA approved task book;

or

- 240 days qualifying sea service
- meeting the medical and eyesight requirements specified in the NSCV Part D and
- assessment by an AMSA approved assessor using the AMSA mandated practical assessment (AMPA) conducted on a commercial vessel  $\geq 5.0$  m in length.

### **Entry Requirements**

Not applicable.

## Packaging Rules

**Total number of units = 13 units**

13 core units

### Core units

HLTAID003	Provide first aid
MARB027	Perform basic servicing and maintenance of main propulsion unit and auxiliary systems
MARC037	Operate inboard and outboard motors
MARC038	Operate main propulsion unit and auxiliary systems
MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARF030	Survive at sea using survival craft
MARH013	Plan and navigate a passage for a vessel up to 12 metres
MARI003	Comply with regulations to ensure safe operation of a vessel up to 12 metres
MARJ006	Follow environmental work practices
MARK007	Handle a vessel up to 12 metres
MARN008	Apply seamanship skills aboard a vessel up to 12 metres

## Qualification Mapping Information

This qualification supersedes and is equivalent to MAR20313 Certificate II in Maritime Operations (Coxswain Grade 1 Near Coastal).

## **MAR20418 Certificate II in Maritime Operations (Marine Engine Driver Grade 3 Near Coastal)**

### **Modification History**

Release 1. First release of this qualification.

### **Qualification Description**

This qualification applies to people working in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certificate of competency in the capacity of:

- chief engineer on vessels with an inboard engine with propulsion power <500 kW within the exclusive economic zone (EEZ) or
- second engineer on vessels with an inboard engine with propulsion power <750 kW within the EEZ or
- chief or second engineer on vessels with an outboard engine with unlimited propulsion power within the EEZ or
- assistant under direct supervision of a chief engineer or
- worker in the engine room of vessels <80 m long with propulsion power <3000 kW.

#### **Licensing/Regulatory Information**

This qualification is required to obtain an AMSA certificate of competency as a Marine Engine Driver Grade 3 NC as defined in the National Standard for Commercial Vessels (NSCV) Part D.

AMSA certification will require:

- achieving MAR20418 Certificate II in Maritime Operations (Marine Engine Driver Grade 3 Near Coastal)
  - sea service consisting of:
    - 20 days qualifying sea service and a completed AMSA approved task book
- or
- 60 days qualifying sea service
  - meeting the medical and eyesight requirements specified in the NSCV Part D and
  - assessment by an AMSA approved assessor using the AMSA mandated practical assessment (AMPA).

### **Entry Requirements**

Not applicable.

## Packaging Rules

**Total number of units = 13 units**

13 core units

### Core units

BSBWOR203	Work effectively with others
HLTAID003	Provide first aid
MARB028	Service marine internal combustion engines, and propulsion and auxiliary systems
MARC033	Complete engine room tasks
MARC034	Maintain hull out of water
MARC035	Operate and maintain extra low and low voltage electrical systems and equipment
MARC036	Operate deck machinery
MARC039	Operate marine internal combustion engines, and propulsion and auxiliary systems
MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARF030	Survive at sea using survival craft
MARJ006	Follow environmental work practices

## Qualification Mapping Information

This qualification supersedes and is equivalent to MAR20413 Certificate II in Maritime Operations (Marine Engine Driver Grade 3 Near Coastal).

# MAR30118 Certificate III in Maritime Operations (Marine Engine Driver Steam)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for a Chief Engineer of a vessel that has steam as its main method of propulsion with propulsion power up to 750 kW within the exclusive economic zone (EEZ). This qualification is currently cited as meeting some of the requirements for certification as a Marine Engine Driver (Steam) by the Australian Maritime Safety Authority (AMSA). Certification will require achievement of other requirements; people seeking certification should check with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

Total number of units = 12 units

12 core units

Core units

MARB032	Undertake basic maintenance of electrical systems
MARB015	Maintain firefighting appliances
MARC040	Manage fuel systems
MARC042	Operate electrical systems
MARC023	Operate and maintain a boiler
MARC024	Operate and maintain a steam engine up to 750 kW and steam auxiliary equipment
MARC025	Operate and maintain engines for auxiliary systems other than steam auxiliary systems
MARF027	Apply basic survival skills in the event of vessel abandonment

MARF028 Follow procedures to minimise and fight fires on board a vessel

MARF029 Meet work health and safety requirements

MARF030 Survive at sea using survival craft

MARJ006 Follow environmental work practices

## **Qualification Mapping Information**

This qualification replaces and is equivalent to MAR30115 Certificate III in Maritime Operations (Marine Engine Driver Steam).

## **Links**

# MAR30120 Certificate III in Marina Operations

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for people working in the marina industry performing a range of tasks such as berthing, mooring and storage of vessels and a range of boatyard tasks connected to sailing, cruising and general boating.

### Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

Total number of units = 17

11 core units plus

6 elective units

The elective units can be selected from the elective units list below – up to 2 of these 6 elective units may be selected from any endorsed Training Package where the unit is packaged in a qualification at the same level or one level higher.

Imported units must be relevant to the job role, work outcome and enterprise and individual needs.

### Core units

BSBOPS203	Deliver a service to customers
BSBSTR301	Contribute to continuous improvement
BSBTWK201	Work effectively with others
MARB021	Perform routine tasks in a marina
MARB022	Refuel a vessel

MARB023	Maintain marina infrastructure
MARF023	Apply safe work practices in a marina
MARF024	Classify marina infrastructure, vessels and staffing structure
MARF025	Respond to marina emergencies
MEM50003	Follow work procedures to maintain the marine environment └ MEM13015 Work safely and effectively in manufacturing and engineering
MEM50004	Maintain quality of environment by following marina codes └ MEM13015 Work safely and effectively in manufacturing and engineering └ MEM16006 Organise and communicate information └ MEM50003 Follow work procedures to maintain the marine environment

### **Elective units**

BSBCMM211	Apply communication skills
BSBWHS411	Implement and monitor WHS policies, procedures and programs
HLTAID011	Provide first aid
MARB024	Undertake basic boatyard operations
MARC059	Transmit and receive information by marine VHF radio within Australian Territorial Waters
MARF027	Apply basic survival skills in the event of vessel abandonment
MARN008	Apply seamanship skills aboard a vessel up to 12 metres
MEM11010	Operate mobile load shifting equipment └ MEM11011 Undertake manual handling └ MEM13015 Work safely and effectively in manufacturing and engineering └ MEM16006 Organise and communicate information

## **Qualification Mapping Information**

This qualification replaces and is equivalent to MAR30318 Certificate III in Marina Operations.

# MAR30215 Certificate III in Maritime Operations (Marine Surveying)

## Modification History

Release 1. First release of this qualification in the MAR Maritime Training Package.

Release 2. Codes of imported units have been updated to include most current.

## Qualification Description

This qualification is suitable for people who assist marine surveyors or who undertake administration duties in the maritime industry and/or marine surveying sector.

This qualification is currently cited as meeting some of the requirements for accreditation as a statutory marine surveyor of domestic commercial vessels by the Australian Maritime Safety Authority (AMSA).

Accreditation will require achievement of other requirements, people seeking accreditation should check with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

**Total number of units = 9 units**

9 core units

### Core units

MARF006	Observe personal safety and social responsibility
MARM001	Apply knowledge of safety management system legal framework in the workplace
MARM002	Apply vessel construction theory to marine survey tasks
MARM003	Identify factors that affect a commercial vessel's fitness for purpose

MARM004	Work in the marine surveying sector
BSBADM307	Organise schedules
BSBWOR301	Organise personal work priorities and development
PSPGOV314A	Contribute to conflict management
PSPREG201A	Carry out inspections and monitoring under guidance

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR30613 Certificate III in Maritime Operations (Marine Surveying).

# MAR30218 Certificate III in Maritime Operations (Integrated Rating)

## Modification History

Release 1. New qualification.

## Qualification Description

This qualification is suitable for people working in the rating stream in the maritime industry as a crew member on a ship, carrying out maintenance and lookout duties on decks and in ship engine rooms. Integrated ratings steer a vessel under the direction of the officer of the watch, and work on deck and in the engine room under the direction of the officer of the watch. This qualification meets the competency requirements of an Integrated Rating as described in Marine Orders 70 and 73 (2014) under the Australian Navigation Act 2012 administered by the Australian Maritime Safety Authority (AMSA). Other requirements include sea-service, a declaration of medical fitness and completion of a task record book. People seeking AMSA certification should check the requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

Total number of units = 22

22 core units

Core units

HLTAID003      Provide first aid

MARB016      Contribute to routine engine maintenance on a vessel

MARB017      Perform routine maintenance and repairs on a vessel

MARC027	Contribute to the operation of engine equipment and associated propulsion plant
MARC028	Operate deck machinery, cargo handling gear and equipment on a vessel
MARC029	Perform rigging on board a vessel
MARC030	Use and care for hand and power tools
MARC032	Perform dogging on board a vessel
MARF003	Follow vessel security procedures
MARF006	Observe personal safety and social responsibility
MARF007	Operate survival craft and other lifesaving appliances
MARF008	Prevent and fight fires on board a vessel
MARF009	Survive at sea in the event of vessel abandonment
MARF018	Assist in an emergency response
MARF019	Operate emergency equipment and apply emergency procedures

MARJ006	Follow environmental work practices
MARK005	Steer a vessel under direction of the Master
MARN007	Use seamanship skills on board a vessel
MARO005	Contribute to monitoring and controlling a safe engine watch
MARO006	Contribute to monitoring and controlling a safe navigational watch
MSMPER200	Work in accordance with an issued permit
MSMPER205	Enter confined space

## Qualification Mapping Information

This qualification supersedes and is equivalent to MAR30116 Certificate III in Maritime Operations (Integrated Rating)

## Links

# MAR30220 Certificate III in Maritime Operations (Integrated Rating)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for people who work in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certification in the capacity of:

- Navigational Watch Rating (STCW Reg II/4)
- Engine Room Watch Rating (STCW Reg III/4)
- Able Seafarer Deck (STCW Reg II/5)
- Able Seafarer Engine (STCW Reg III/5)
- Integrated Rating (STCW Reg II/4, III/4 and II/5, III/5).

***Please note: RTO to insert on the testamur, the specialist unit group selected from the group choice below.***

## Licensing /Regulatory Information

Legislative and regulatory requirements are applicable to this qualification.

- This qualification is currently cited as meeting some of the requirements for certification by the AMSA as Able Seafarer Deck, Able Seafarer Engine and Integrated Rating as defined in Marine Orders and the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

This qualification is required to obtain an AMSA certificate of competency as an Integrated Rating as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulations STCW A-II/4, A-II/5, A-III/4 and A-III/5 (Certificate III in Maritime Operations Integrated Rating)
- holding or have held certificates of competency as defined in Marine Order 73
- qualifying sea service as defined in Marine Order 73
- completing STCW short courses as defined in Marine Order 73
- holding a valid AMSA certificate of medical fitness
- meeting any other regulatory requirements as defined in Marine Order 73.

This qualification is required to obtain an AMSA certificate of competency as an Able Seafarer

Deck as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulations STCW A-II/4 and A-II/5 (Able Seafarer Deck)
- holding or have held certificates of competency as defined in Marine Order 73
- qualifying sea service as defined in Marine Order 73
- completing STCW short courses as defined in Marine Order 73
- holding a valid AMSA certificate of medical fitness
- meeting any other regulatory requirements as defined in Marine Order 73.

This qualification is required to obtain AMSA certificate of competency as an Able Seafarer Engine as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulations STCW A-III/4 and A-III/5 (Able Seafarer Engine)
- holding or have held certificates of competency as defined in Marine Order 73
- qualifying sea service as defined in Marine Order 73
- completing STCW short courses as defined in Marine Order 73
- holding a valid AMSA certificate of medical fitness
- meeting any other regulatory requirements as defined in Marine Order 73.

Seafarers seeking certification should check requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

Total number of units to be completed:

- Able Seafarer Deck = 24 units: 17 core units, plus all units from Group A
- Able Seafarer Engine = 20 units: 17 core units, plus all units from Group B
- Integrated Rating = 27 units: 17 core units, plus all units from Group A and B

**Where a prerequisite is attached to a unit it is identified by the symbol ⊏.**

### Core units

HLTAID011	Provide first aid
MARA012	Contribute to basic cargo operations on liquefied gas tankers
MARA013	Contribute to basic cargo operations on oil and chemical tankers (basic oil

and chemical)

MARB045	Perform routine maintenance and repairs on a vessel
MARC057	Perform dogging on board a vessel
MARC060	Use and care for hand and power tools
MARF033	Assist in an emergency response
MARF035	Contribute to fire prevention and firefighting (basic firefighting)
MARF037	Follow vessel security procedures (security awareness training)
MARF041	Observe personal safety and social responsibility (PSSR)
MARF042	Operate emergency equipment and apply emergency procedures
MARF043	Operate survival craft, rescue boats and lifesaving appliances (proficiency in survival craft)
MARF046	Survive at sea in the event of vessel abandonment and personal survival techniques (PST)
MARJ006	Follow environmental work practices
MARN015	Use seamanship skills on board a vessel
MSMPER200	Work in accordance with an issued permit
MSMPER205	Enter confined space
	└ MSMPER200 Work in accordance with an issued permit

### **Group A: Able Seafarer Deck**

MARB025	Maintain mooring equipment
MARC022	Perform mooring and unmooring activities
MARC031	Shift mooring lines using mechanical means
MARC052	Operate deck machinery, cargo handling gear and equipment on a vessel
MARC058	Perform rigging on board a vessel
MARK012	Steer a vessel under direction of the Master
MARO008	Contribute to monitoring and controlling a safe navigational watch

### **Group B: Able Seafarer Engine**

MARB035	Contribute to routine engine maintenance on a vessel
MARC045	Contribute to the operation of engine equipment and associated propulsion plant
MARO007	Contribute to monitoring and controlling a safe engine watch

## **Qualification mapping information**

This qualification replaces and is not equivalent to MAR30218 Certificate III in Maritime Operations (Integrated Rating).

# MAR30318 Certificate III in Marina Operations

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package Release 3.0.

## Qualification Description

This qualification is suitable for people working in the marina industry performing a range of tasks such as berthing, mooring and storage of vessels and a range of boatyard tasks connected to sailing, cruising and general boating.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

Total number of units = 17

11 core units plus

6 elective units

The elective units can be selected from the elective units list below – up to 2 of these 6 elective units may be selected from any endorsed Training Package where the unit is packaged in a qualification at the same level or one level higher.

Imported units must be relevant to the job role, work outcome and enterprise and individual needs.

Core units

BSBCUS201	Deliver a service to customers
BSBINN201	Contribute to workplace innovation
BSBWOR203	Work effectively with others
MARB021	Perform routine tasks in a marina
MARB022	Refuel a vessel

MARB023	Maintain marina infrastructure
MARF023	Apply safe work practices in a marina
MARF024	Classify marina infrastructure, vessels and staffing structure
MARF025	Respond to marina emergencies
MEM50003B	Follow work procedures to maintain the marine environment
MEM50004B	Maintain quality of environment by following marina codes
Elective units	
AURREA2001	Apply environmental and sustainability best practice in a marine workplace
BSBCMM201	Communicate in the workplace
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements
HLTAID003	Provide first aid
MARB024	Undertake basic boatyard operations
MARC019	Transmit and receive information by marine VHF radio within Australian Territorial Waters
MARF027	Apply basic survival skills in the event of vessel abandonment
MARN008	Apply seamanship skills aboard a vessel up to 12 metres
MEM11010B	Operate mobile load shifting equipment

## Qualification Mapping Information

This qualification supersedes and is equivalent to MAR30315 Certificate III in Marina Operations

# MAR30320 Certificate III in Maritime Operations (Marine Cookery)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for persons carrying out marine cook duties on a ship.

This qualification is currently cited as meeting some of the requirements for certification as a Marine Cook by the Australian Maritime Safety Authority (AMSA).

People seeking certification should check the requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

**Total number of units = 14**

14 core units

### Core units

HLTAID011	Provide first aid
MARF037	Follow vessel security procedures (security awareness training)
MARF041	Observe personal safety and social responsibility (PSSR)
MARF035	Contribute to fire prevention and firefighting (basic firefighting)
MARF046	Survive at sea in the event of vessel abandonment and personal survival techniques (PST)
SITHCCC002	Prepare and present simple dishes
	└ SITXFSA001 Use hygienic practices for food safety
SITHCCC005	Prepare dishes using basic methods of cookery
	└ SITXFSA001 Use hygienic practices for food safety

SITHCCC011	Use cookery skills effectively
	└ SITXFSA001 Use hygienic practices for food safety
SITHKOP001	Clean kitchen premises and equipment
	└ SITXFSA001 Use hygienic practices for food safety
SITXCCS006	Provide service to customers
SITXFSA001	Use hygienic practices for food safety
SITXINV002	Maintain the quality of perishable items
	└ SITXFSA001 Use hygienic practices for food safety
SITXINV004	Control stock
SITXWHS001	Participate in safe work practices

## Qualification Mapping Information

## **MAR30818 Certificate III in Maritime Operations (Marine Engine Driver Grade 2 Near Coastal)**

### **Modification History**

Release 1. First release of this qualification.

### **Qualification Description**

This qualification applies to people working in maritime industry seeking an Australian Maritime Safety Authority (AMSA) certificate of competency in the capacity of:

- chief engineer on vessels with an inboard engine with propulsion power <750 kW within the exclusive economic zone (EEZ) or
- second engineer on vessels with an inboard engine with propulsion power <1500 kW within the EEZ or
- chief or second engineer on vessels with an outboard engine with unlimited propulsion power within the EEZ or
- assistant under direct supervision of a chief engineer or
- worker in an engine room of a vessel <80 m long with propulsion power <3000 kW.

#### **Licensing/Regulatory Information**

This qualification is required to obtain an AMSA certification as a Marine Engine Driver Grade 2 Near Coastal NC as defined in the National Standard for Commercial Vessels (NSCV) Part D.

AMSA certification will require:

- achieving MAR30818 Certificate III in Maritime Operations (Marine Engine Driver Grade 2 NC
- sea service consisting of:
  - 180 days qualifying sea service and a completed AMSA approved task bookor
  - 360 days qualifying sea serviceor
  - 120 days qualifying sea service and a completed AMSA approved task book, while holding a Coxswain 1 (Cox 1), Coxswain 2 endorsed for 500 kW inboard propulsion (Cox 2 500 kW), or Marine Engine Driver Grade 3 (MED 3)or
  - 240 days qualifying sea service while holding a Cox 1, Cox 2 500 kW or MED 3or
  - 90 days qualifying sea service and a completed AMSA approved task book while holding a workshop skill equivalent qualification

or

- 180 days qualifying sea service while holding a workshop skill equivalent qualification
- meeting the medical and eyesight requirements specified in the NSCV Part D and
- assessment by an AMSA approved assessor using the AMSA mandated practical assessment (AMPA).

## Entry Requirements

Not applicable.

## Packaging Rules

**Total number of units = 17 units**

**17 core units**

### Core units

BSBWOR203	Work effectively with others
HLTAID003	Provide first aid
MARB031	Maintain marine internal combustion engines, propulsion plant and auxiliary systems
MARB032	Undertake basic maintenance of electrical systems
MARC033	Complete engine room tasks
MARC034	Maintain hull out of water
MARC035	Operate and maintain extra low and low voltage electrical systems and equipment
MARC036	Operate deck machinery
MARC039	Operate marine internal combustion engines, and propulsion and auxiliary systems
MARC040	Manage fuel systems
MARC041	Operate and monitor marine internal combustion engines, propulsion plant and auxiliary systems
MARC042	Operate electrical systems
MARF027	Apply basic survival skills in the event of vessel abandonment

MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARF030	Survive at sea using survival craft
MARJ006	Follow environmental work practices

## Qualification Mapping Information

This qualification supersedes and is equivalent to MAR30813 Certificate III in Maritime Operations (Marine Engine Driver Grade 2 Near Coastal).

## Links

## **MAR30918 Certificate III in Maritime Operations (Master up to 24 metres Near Coastal)**

### **Modification History**

Release 1. First release of this qualification.

### **Qualification Description**

This qualification applies to people working in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certificate of competency in the capacity of:

- master on commercial vessels up to 24 m in length within the exclusive economic zone (EEZ) or
- chief mate or deck watchkeeper on vessels up to 35 m in length within the EEZ or
- chief mate or deck watchkeeper on vessels up to 80 m in length in inshore waters.

### **Licensing/Regulatory Information**

This qualification is required to obtain an AMSA certificate of competency as a Master <24 metres NC as defined in the National Standard for Commercial Vessels (NSCV) Part D.

AMSA certification of competency will require:

- achieving MAR30918 Certificate III in Maritime Operations (Master <24 m Near Coastal)
- a Marine Radio Operators Certificate of Proficiency
- sea service consisting of:
  - 120 days qualifying sea service and a completed AMSA approved task book

or

- 600 days qualifying sea service
- meeting the medical and eyesight requirements specified in the NSCV Part D and
- assessment by an AMSA approved assessor using the AMSA mandated practical assessment (AMPA) conducted on a commercial vessel  $\geq 7.5$  m in length.

### **Entry Requirements**

Not applicable.

### **Packaging Rules**

**Total number of units = 15 units**

15 core units

**Core units**

BSBFLM303	Contribute to effective workplace relationships
HLTAID003	Provide first aid
MARB029	Perform routine maintenance on a vessel up to 24 metres
MARB030	Slip or dock a vessel and maintain hull on a vessel up to 80 metres
MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARF030	Survive at sea using survival craft
MARH015	Manage and maintain a navigational watch on board vessels up to 80 metres
MARH016	Plan and navigate a passage for a vessel up to 80 metres
MARH017	Use wheelhouse equipment for safe navigation
MARI004	Observe regulations to ensure safe operation of a vessel up to 80 metres
MARJ007	Monitor environmental management on a vessel
MARK008	Manoeuvre a vessel up to 24 metres within near coastal waters
MARN009	Perform seamanship operations on board a vessel up to 24 metres

## Qualification Mapping Information

This qualification supersedes and is equivalent to MAR30913 Certificate III in Maritime Operations (Master up to 24 metres Near Coastal).

# MAR31018 Certificate III in Maritime Operations (Master Inland Waters)

## Modification History

Release 1. First release of this qualification.

## Qualification Description

This qualification applies to people working in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certificate of competency in the capacity of:

- master on commercial vessels <24 m in length in inland waters.

### Licensing/Regulatory Information

This qualification is required to obtain an AMSA certificate of competency as a Master Inland Waters as defined in the National Standard for Commercial Vessels (NSCV) Part D.

AMSA certification will require:

- achieving MAR31018 Certificate III in Maritime Operations (Master Inland Waters)
- sea service consisting of:
  - 60 days qualifying sea service and a completed AMSA approved task book

or

- 120 days qualifying sea service
- meeting the medical and eyesight requirements specified in the NSCV Part D and
- assessment by an AMSA approved assessor using the AMSA mandated practical assessment (AMPA) conducted on a commercial vessel  $\geq 7.5$  m in length.

## Entry Requirements

Not applicable.

# MAR40118 Certificate IV in Maritime Operations (Marine Surveying)

## Modification History

Release 1. First release of this qualification in the MAR Maritime Training Package.

Release 2. Codes of imported units have been updated to include most current.

## Qualification Description

This qualification is suitable for people working in the maritime industry as a domestic commercial vessel surveyor assistant. This qualification is currently cited as meeting some of the requirements for accreditation as a surveyor of domestic commercial vessels by the Australian Maritime Safety Authority (AMSA). Accreditation will require achievement of other requirements; people seeking accreditation should check with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

Total number of units = 14 units

14 core units

Core units

MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARM002	Apply vessel construction theory to marine survey tasks
MARM005	Assess compliance with marine environment protection requirements
MARM006	Assist in the survey of commercial vessels
MARM007	Assist in the survey of vessel mechanical features
MARM008	Evaluate vessel stability
MARM009	Implement a systematic approach to the audit of safety management

systems

MARM010	Survey lifesaving appliances, fire and other safety systems
CHCCOM002	Use communication to build relationships
PSPGEN038	Identify and treat risks
PSPGEN042	Exercise delegations
PSPREG003	Apply regulatory powers

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR40115 Certificate IV in Maritime Operations (Marine Surveying).

# **MAR40120 Certificate IV in Maritime Operations (Chief Integrated Rating)**

## **Modification History**

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## **Qualification Description**

This qualification is suitable for people who work in the maritime industry as:

- Chief Integrated Rating.

## **Licensing/Regulatory Information**

- This qualification is cited as meeting some of the requirements for certification by the Australian Maritime Safety Authority (AMSA) as a Chief Integrated Rating as defined in Marine Orders.

This qualification is required to obtain AMSA certificate of competency as a Chief Integrated Rating as defined in Marine Orders.

AMSA certification of competency will require:

- completing an approved program of study appropriate for the grade of certificate (MAR40120 Certificate IV in Maritime Operations Chief Integrated Rating)
- holding or have held certificates of competency as defined in Marine Order 73
- qualifying sea service as defined in Marine Order 73
- completing STCW short courses as defined in Marine Order 73
- holding a valid AMSA certificate of medical fitness
- meeting any other regulatory requirements as defined in Marine Order 73.

Seafarers seeking certification should check requirements with AMSA.

## **Entry Requirements**

There are no entry requirements for this qualification

## **Packaging Rules**

Total number of units to be completed:

- Chief Integrated Rating = 31 core units

**Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .**

**Core units**

HLTAID011	Provide first aid
MARA012	Contribute to basic cargo operations on liquefied gas tankers
MARA013	Contribute to basic cargo operations on oil and chemical tankers (basic oil and chemical)
MARB025	Maintain mooring equipment
MARB035	Contribute to routine engine maintenance on a vessel
MARB036	Implement vessel planned maintenance system
MARB043	Manage stores for planned maintenance system
MARB045	Perform routine maintenance and repairs on a vessel
MARC022	Perform mooring and unmooring activities
MARC031	Shift mooring lines using mechanical means
MARC045	Contribute to the operation of engine equipment and associated propulsion plant
MARC052	Operate deck machinery, cargo handling gear and equipment on a vessel
MARC057	Perform dogging on board a vessel
MARC058	Perform rigging on board a vessel
MARC060	Use and care for hand and power tools
MARF033	Assist in an emergency response
MARF035	Contribute to fire prevention and firefighting (basic firefighting)
MARF037	Follow vessel security procedures (security awareness training)
MARF041	Observe personal safety and social responsibility (PSSR)
MARF042	Operate emergency equipment and apply emergency procedures
MARF043	Operate survival craft, rescue boats and lifesaving appliances (proficiency in survival craft)
MARF044	Prevent, control and fight fires on board a vessel (advanced firefighting)
MARF046	Survive at sea in the event of vessel abandonment and personal survival

	techniques (PST)
MARG010	Supervise a crew
MARJ006	Follow environmental work practices
MARK012	Steer a vessel under direction of the Master
MARN015	Use seamanship skills on board a vessel
MARO007	Contribute to monitoring and controlling a safe engine watch
MARO008	Contribute to monitoring and controlling a safe navigational watch
MSMPER200	Work in accordance with an issued permit
MSMPER205	Enter confined space
	└ MSMPER200 Work in accordance with an issued permit

## Qualification Mapping Information

This qualification replaces and is not equivalent to MAR40218 Certificate IV in Maritime Operations (Chief Integrated Rating).

# MAR40218 Certificate IV in Maritime Operations (Chief Integrated Rating)

## Modification History

Release 1. New qualification.

## Qualification Description

This qualification is suitable for people working in the maritime industry in charge of the Integrated Ratings on a ship, who are responsible for implementing the planned maintenance system and maintaining relevant stores. This qualification meets the competency requirements of a Chief Integrated Rating as described in Marine Orders 70 and 73 (2014) under the Australian Navigation Act 2012 administered by the Australian Maritime Safety Authority (AMSA). Other requirements include sea-service, a declaration of medical fitness and completion of a task record book. People seeking AMSA certification should check the requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

Total number of units = 27

27 core units

Core units

HLTAID003	Provide first aid
MARB016	Contribute to routine engine maintenance on a vessel
MARB017	Perform routine maintenance and repairs on a vessel
MARB018	Implement vessel planned maintenance system
MARB019	Manage stores for planned maintenance system
MARC027	Contribute to the operation of engine equipment and associated propulsion plant
MARC028	Operate deck machinery, cargo handling gear and equipment on a vessel
MARC029	Perform rigging on board a vessel

MARC030	Use and care for hand and power tools
MARC032	Perform dogging on board a vessel
MARF003	Follow vessel security procedures
MARF006	Observe personal safety and social responsibility
MARF007	Operate survival craft and other lifesaving appliances
MARF008	Prevent and fight fires on board a vessel
MARF009	Survive at sea in the event of vessel abandonment
MARF011	Manage firefighting and fire prevention activities on board a vessel
MARF018	Assist in an emergency response
MARF019	Operate emergency equipment and apply emergency procedures
MARG005	Supervise a crew
MARJ006	Follow environmental work practices
MARK005	Steer a vessel under direction of the Master
MARN007	Use seamanship skills on board a vessel
MARO005	Contribute to monitoring and controlling a safe engine watch
MARO006	Contribute to monitoring and controlling a safe navigational watch
MSMPER200	Work in accordance with an issued permit
MSMPER205	Enter confined space
TAEASS402	Assess competence

## Qualification Mapping Information

This qualification supersedes and is equivalent to MAR40116 Certificate IV in Maritime Operations (Chief Integrated Rating).

## **MAR40220 Certificate IV in Maritime Operations (Marine Engine Driver Grade 1 Near Coastal)**

### **Modification History**

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

### **Qualification Description**

This qualification is suitable for people working in the maritime industry operating as Chief Engineer on vessels with propulsion power up to 1500 kW and Second Engineer on vessels with propulsion power up to 3000 kW in the exclusive economic zone (EEZ).

### **Licensing/Regulatory Information**

This level of qualification is currently cited as meeting some of the requirements for certification as a Marine Engine Driver Grade 1 Near Coastal as defined by the National Standard for Commercial Vessels (NSCV) Part D.

Certification will require achievement of the MAR40220 Certificate IV in Maritime Operations (Marine Engine Driver Grade 1 Near Coastal), qualifying sea service and completed Australian Maritime Safety Authority (AMSA) approved task book or qualifying sea service, or qualifying sea service and a workshop skill equivalent qualification, AMSA final assessment and an AMSA approved first aid certificate.

People seeking certification should check with AMSA.

### **Entry Requirements**

There are no entry requirements for this qualification.

### **Packaging Rules**

Total number of units = 29 units

29 core units

#### **Core units**

HLTAID011	Provide first aid
BSBTWK201	Work effectively with others
MARA024	Manage vessel stability

MARB032	Undertake basic maintenance of electrical systems
MARB034	Carry out basic welding, brazing, cutting and machining operations on a coastal vessel
MARB041	Manage refuelling
MARB047	Undertake maintenance of 240 to 440 voltage alternating current electrical systems
MARB048	Undertake maintenance of machinery, machinery systems and structural components
MARC033	Complete engine room tasks
MARC034	Maintain hull out of water
MARC035	Operate and maintain extra low and low voltage electrical systems and equipment
MARC036	Operate deck machinery
MARC039	Operate marine internal combustion engines, and propulsion and auxiliary systems
MARC040	Manage fuel systems
MARC041	Operate and monitor marine internal combustion engines, propulsion plant and auxiliary systems
MARC042	Operate electrical systems
MARC049	Operate 240 to 440 voltage alternating current electrical systems
MARC050	Operate auxiliary machinery systems up to 1500 kW
MARC053	Operate marine internal combustion engines and associated systems up to 1500 kW
MARC054	Operate propulsion transmission systems up to 1500 kW
MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARF030	Survive at sea using survival craft
MARG009	Manage an engine room and small engineering team in emergencies

MARJ006	Follow environmental work practices
MARJ007	Monitor environmental management on a vessel
MARL046	Carry out engineering calculations
RIIWHS202E	Enter and work in a confined space

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR40518 Certificate IV in Maritime Operations (Marine Engine Driver Grade 1 Near Coastal).

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

## **MAR40320 Certificate IV in Maritime Operations (Master up to 35 metres Near Coastal)**

### **Modification History**

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

### **Qualification Description**

This qualification is suitable for those sailing as Master on vessels up to 35 metres in length within the exclusive economic zone (EEZ) or a Mate on vessels up to 80 metres in length.

### **Licensing/Regulatory Information**

This level of qualification is currently cited as meeting some of the requirements for certification as a Master up to 35 metres Near Coastal as defined by the National Standard for Commercial Vessels (NSCV) Part D.

Certification as a Master less than 35 metres Near Coastal (as defined by the NSCV Part D) will require achievement of the MAR40320 Certificate IV in Maritime Operations (Master up to 35 metres Near Coastal), certification as a Master less than 24 metres Near Coastal, an appropriate radio certificate of proficiency, Australian Maritime Safety Authority (AMSA) final assessment and an AMSA approved first aid certificate.

People seeking certification should check with AMSA.

This level of qualification is also currently cited as meeting some of the requirements for certification as a Mate less than 80 metres Near Coastal as defined by the NSCV Part D. Certification as a Mate less than 80 metres Near Coastal will require achievement of the MAR40320 Certificate IV in Maritime Operations (Master up to 35 metres Near Coastal), qualifying sea service and completion of AMSA approved task book or qualifying sea service, an appropriate radio certificate of proficiency, AMSA final assessment and an AMSA approved first aid certificate.

People seeking certification should check with AMSA.

### **Entry Requirements**

There are no entry requirements for this qualification.

### **Packaging Rules**

Total number of units = 22 units

22 core units

## Core units

HLTAID011	Provide first aid
MARA022	Manage loading, discharging and stowing of cargo
MARA024	Manage vessel stability
MARB030	Slip or dock a vessel and maintain hull on a vessel up to 80 metres
MARB046	Plan and supervise routine maintenance on a vessel up to 80 metres
MARC047	Manage a propulsion unit using appropriate engine systems and support services
MARC048	Monitor and manage vessel operations
MARC051	Operate deck machinery and steering gear on a vessel up to 80 metres
MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARF030	Survive at sea using survival craft
MARG007	Manage a small crew
MARH015	Manage and maintain a navigational watch on board vessels up to 80 metres
MARH016	Plan and navigate a passage for a vessel up to 80 metres
MARH017	Use wheelhouse equipment for safe navigation
MARH019	Forecast weather and oceanographic conditions
MARI004	Observe regulations to ensure safe operation of a vessel up to 80 metres
MARJ007	Monitor environmental management on a vessel
MARK009	Manoeuvre a vessel up to 80 metres
MARN013	Manage seaworthiness of a vessel up to 80 metres
RIIWHS202E	Enter and work in a confined space

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR40618 Certificate IV in Maritime

Operations (Master up to 35 metres Near Coastal).

## **Links**

Companion Volume implementation guide can be found in VetNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

## **MAR40518 Certificate IV in Maritime Operations (Marine Engine Driver Grade 1 Near Coastal)**

### **Modification History**

Release 1. New qualification.

Release 2. Codes of imported units have been updated to include most current.

### **Qualification Description**

This qualification is suitable for people who work in the maritime industry operating as Chief Engineer on vessels with propulsion power up to 1500 kW and Second Engineer on vessels with propulsion power up to 3000 kW in the exclusive economic zone (EEZ).

#### **Licensing/Regulatory Information**

This level of qualification is currently cited as meeting some of the requirements for certification as a Marine Engine Driver Grade 1 Near Coastal as defined by the National Standard for Commercial Vessels (NSCV) Part D. Certification will require achievement of the MAR40513 Certificate IV in Maritime Operations (Marine Engine Driver Grade 1 Near Coastal), qualifying sea service and completed Australian Maritime Safety Authority (AMSA) approved task book or qualifying sea service or qualifying sea service and a workshop skill equivalent qualification, AMSA final assessment and an AMSA approved first aid certificate; people seeking certification should check with AMSA.

### **Entry Requirements**

Not applicable.

### **Packaging Rules**

Total number of units = 27 units

27 core units

BSBWOR203	Work effectively with others
MARA004	Manage vessel stability
MARB032	Undertake basic maintenance of electrical systems
MARB008	Carry out basic welding, brazing, cutting and machining operations on a coastal vessel
MARB009	Manage refuelling

MARB011	Undertake maintenance of 240 to 440 voltage alternating current electrical systems
MARB012	Undertake maintenance of machinery, machinery systems and structural components
MARC033	Complete engine room tasks
MARC034	Maintain hull out of water
MARC035	Operate and maintain extra low and low voltage electrical systems and equipment
MARC036	Operate deck machinery
MARC039	Operate marine internal combustion engines, and propulsion and auxiliary systems
MARC040	Manage fuel systems
MARC041	Operate and monitor marine internal combustion engines, propulsion plant and auxiliary systems
MARC042	Operate electrical systems
MARC013	Operate auxiliary machinery systems up to 1500 kW
MARC015	Operate marine internal combustion engines and associated systems up to 1500 kW
MARC016	Operate propulsion transmission systems up to 1500 kW
MARC017	Operate 240 to 440 voltage alternating current electrical systems
MARF027	Apply basic survival skills in the event of vessel abandonment
MARF028	Follow procedures to minimise and fight fires on board a vessel
MARF029	Meet work health and safety requirements
MARF030	Survive at sea using survival craft
MARG003	Manage an engine room and small engineering team
MARJ006	Follow environmental work practices
MARJ007	Monitor environmental management on a vessel
MARL001	Carry out engineering calculations

## Qualification Mapping Information

This qualification is equivalent to MAR40513 Certificate IV in Maritime Operations (Marine Engine Driver Grade 1).

## Links

# MAR50115 Diploma of Maritime Operations (Engineer Watchkeeper)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for people who work in the maritime industry as an Engineer Watchkeeper on a seagoing ship powered by main propulsion machinery of any propulsion power in any operating area.

This qualification is currently cited as meeting some of the requirements for certification as an Engineer Watchkeeper by the Australian Maritime Safety Authority (AMSA). People seeking certification should check requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

**Total number of units = 22 units**

18 core units, plus

4 elective units from the elective units list below:

- at least 1 unit must be from Group A
- the remaining units must be from Group A or Group B.

### Core units

MARE001	Communicate effectively when performing engineering duties
MARF003	Follow vessel security procedures
MARF008	Prevent and fight fires on board a vessel
MARF010	Work safely in confined spaces on a vessel
MARF022	Apply maritime resource management principles

MARG004	Provide leadership to crew
MARJ003	Ensure compliance with environmental management legislation
MARL002	Apply basic principles of naval architecture
MARL003	Demonstrate basic knowledge of marine auxiliary boilers
MARL004	Demonstrate basic knowledge of marine auxiliary machinery and equipment
MARL005	Demonstrate basic knowledge of marine control systems and automation
MARL007	Demonstrate basic knowledge of marine electrical systems
MARL009	Perform basic marine engineering calculations
MARL010	Apply basic principles of marine electrotechnology
MARL011	Apply basic principles of marine engineering thermodynamics
MARL012	Apply basic principles of marine mechanics
MARL037	Demonstrate knowledge of ships and ship routines
HLTAID003	Provide first aid

**Elective units: Group A**

MARL006	Demonstrate basic knowledge of marine diesel engines and systems
MARL013	Demonstrate basic knowledge of marine steam turbines and main boilers

**Elective units: Group B**

MARA001	Contribute to safe cargo operations on liquefied gas tankers
MARA002	Contribute to safe cargo operations on oil and chemical tankers

MARB013	Maintain and repair marine electrical and electronic equipment
MARB014	Maintain and repair shipboard machinery and equipment
MARC014	Operate deck machinery and steering gear on a vessel up to 80 metres
MARC018	Employ tools, equipment and materials in a shipboard context
MARF006	Observe personal safety and social responsibility
MARF007	Operate survival craft and other lifesaving applications
MARF009	Survive at sea in the event of vessel abandonment
MARF011	Manage firefighting and fire prevention activities on board a vessel
MARF013	Provide medical first aid on board a vessel

## Qualification Mapping Information

This qualification replaces MAR50213 Diploma of Maritime Operations (Engineer Watchkeeper) – not equivalent.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# MAR50120 Diploma of Marine Engineering

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for people working in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certification in the capacity of:

- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited).

*Please note: RTO to insert on the testamur the job role and specialisation, if applicable, selected from the group choice below.*

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this qualification:

- This qualification is currently cited as meeting some of the requirements for certification by AMSA as an Engineer Class 3 Near Coastal as defined in Marine Order 505 (Certificates of competency – National Law) 2013.
- This qualification is currently cited as meeting some of the requirements for certification by AMSA as an Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) or Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) as defined in Marine Orders and the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

This qualification is required to obtain AMSA certificate of competency as an Engineer Class 3 Near Coastal as defined in Marine Order 505 (Certificates of competency – National Law) 2013.

AMSA certification of competency will require:

- completing an approved program of study that meets Engineer Class 3 Near Coastal at Diploma level (MAR50120 Diploma of Marine Engineering - Engineer Class 3 Near Coastal)
- holding or have held certificates of competency as defined in National Standards for Commercial Vessels (NSCV) Part D
- qualifying sea service as defined in the NSCV Part D
- meeting the medical and eyesight requirements specified in NSCV Part D
- having passed a final AMSA assessment

- meeting any other regulatory requirements as defined in the NSCV Part D.

This qualification is required to obtain an AMSA certificate of competency as an Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulation STCW A-III/1 (MAR50120 Diploma of Marine Engineering - Engineer Watchkeeper)
- holding or have held certificates of competency as defined in Marine Order 72
- qualifying sea service as defined in Marine Order 72
- completing STCW short courses as defined in Marine Order 72
- holding a valid AMSA certificate of medical fitness
- having passed a final AMSA assessment
- meeting any other regulatory requirements as defined in Marine Order 72.

This qualification is required to obtain an AMSA certificate of competency as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulation STCW A-III/6 (MAR50120 Diploma of Marine Engineering - Electro-Technical Officer)
- holding or have held certificates of competency or trade certificate as defined in Marine Order 72
- qualifying sea service as defined in Marine Order 72
- completing STCW short courses as defined in Marine Order 72
- holding a valid AMSA certificate of medical fitness
- having passed a final AMSA assessment
- meeting any other regulatory requirements as defined in Marine Order 72.

Seafarers seeking certification should check requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

### Total number of units

- **Engineer Class 3 Near Coastal** = 19 core units.

- **Engineer Watchkeeper** = 28 units: 19 core units, plus all units from Group A.
- **Electro-Technical Officer** = 32 units: 19 core units, plus all units from Group B.
- **Electro-Technical Officer and Engineer Watchkeeper** = 34 units: 19 core units, plus all units from Group B, plus 2 units from Group A: MARL043 Apply basic principles of marine engineering thermodynamics and MARL044 Apply basic principles of marine mechanics.

### AMSA specialisation – Group C

- **Engineer Class 3 Near Coastal Specialist** = 21 units: 19 core units, plus 2 units from Group C.
- **Engineer Watchkeeper Specialist** = 30 units: 19 core units, plus all units from Group A, plus 2 units from Group C.
- **Electro-Technical Officer Specialist** = 34 units: 19 core units, plus all units from Group B, plus 2 units from Group C.
- **Electro-Technical Officer and Engineer Watchkeeper Specialist** = 36 units: 19 core units, plus all units from Group B, plus 2 units from Group A: MARL043 Apply basic principles of marine engineering thermodynamics and MARL044 Apply basic principles of marine mechanics, plus 2 units from Group C.

### Core units

#### Controlling the Operation of the Ship and Care for Persons on Board at the Operational Level (Part A)

HLTAID011	Provide first aid
MARF031	Apply leadership and team working capability
MARF035	Contribute to fire prevention and firefighting (basic firefighting)
MARF037	Follow vessel security procedures (security awareness training)
MARF041	Observe personal safety and social responsibility (PSSR)
MARF043	Operate survival craft, rescue boats and lifesaving appliances (proficiency in survival craft)

MARF044	Prevent, control and fight fires on board a vessel (advanced firefighting)
MARF046	Survive at sea in the event of vessel abandonment and personal survival techniques (PST)
MARF047	Monitor compliance with legislative requirements
MARJ008	Ensure compliance with pollution prevention requirements
RIIWHS202E	Enter and work in confined spaces

### **Marine Engineering at the Operational Level Mathematics (Part A)**

MARL045	Apply basic principles of naval architecture
MARL061	Perform basic marine engineering calculations

### **Marine Engineering at the Operational Level (Part A)**

MARL054	Demonstrate basic knowledge of marine auxiliary boilers
MARL055	Demonstrate basic knowledge of marine auxiliary machinery and equipment
MARL057	Demonstrate basic knowledge of marine diesel engines and systems

### **Electrical, Electronic and Control Engineering at the Operational Level (Part A)**

MARL056	Demonstrate basic knowledge of marine control systems and automation
MARL058	Demonstrate basic knowledge of marine electrical systems

### **Maintenance and Repair at the Operational Level (Part A)**

MARL060	Demonstrate knowledge of ships and ship routines
---------	--

## **GROUP A: Engineer Watchkeeper**

### **Marine Engineering at the Operational Level Mathematics (Part B)**

MARL043	Apply basic principles of marine engineering thermodynamics
MARL044	Apply basic principles of marine mechanics

### **Marine Engineering at the Operational Level (Part C)**

MARL059	Demonstrate basic knowledge of marine steam turbines and main boilers
---------	---

### **Maintenance and Repair at the Operational Level (Part B)**

MARB038	Maintain and repair marine electrical and electronic equipment
---------	--

**Electrical, Electronic and Control Engineering at the Operational Level (Part B)**

MARB044 Operate and maintain ship power systems exceeding 1,000 volts

MARL042 Apply basic principles of marine electrotechnology

**Controlling the Operational of the Ship and Care for Persons on Board at the Operational Level (Part B)**

MARA012 Contribute to basic cargo operations on liquefied gas tankers

MARA013 Contribute to basic cargo operations on oil and chemical tankers (basic oil and chemical)

MARF032 Apply medical first aid on board ship

**GROUP B: Electro-Technical Officer****Controlling the Operation of the Ship and Care for Persons on Board at the Operational Level (Part B)**

MARA012 Contribute to basic cargo operations on liquefied gas tankers

MARA013 Contribute to basic cargo operations on oil and chemical tankers (basic oil and chemical)

MARF032 Apply medical first aid on board ship

**Maintenance and Repair at the Operational Level**

MARB037 Maintain and repair bridge navigation equipment and ship communication systems

MARB040 Maintain control and safety systems of hotel equipment

MARB049 Use internal communication systems, operate computers and computer networks on ships

**Electrical, Electronic and Control Engineering at the Operational Level (Part C)**

MARL038 Apply advanced principles of marine electrotechnology

MARL049 Demonstrate advanced knowledge of marine control systems and automation

**Marine Engineering at the Operational Level (Part C)**

MARL059 Demonstrate basic knowledge of marine steam turbines and main boilers

**Maintain and Repair at the Operational Level (Part B)**

MARB038 Maintain and repair marine electrical and electronic equipment

**Electrical, Electronic and Control Engineering at the Operational Level (Part D)**

MARB044 Operate and maintain ship power systems exceeding 1,000 volts

MARL042 Apply basic principles of marine electrotechnology

MARL051 Demonstrate advanced knowledge of marine electrical systems

**GROUP C: Specialist Electives**

MARA011 Contribute to basic operations of ships in polar waters

MARA014 Contribute to basic operations of a ship subject to IGF Code

MARA018 Manage advanced chemical tanker cargo operations

MARA019 Manage advanced liquefied gas tanker cargo operations

MARA020 Manage advanced oil tanker cargo operations

MARA021 Manage advanced operations of a ship subject to IGF Code

MARB039 Maintain and repair shipboard machinery and equipment

MARC046 Employ tools, equipment and materials in a shipboard context

MARC056 Operate roll-on and roll-off machinery and equipment on board a vessel

MARF034 Carry out fast rescue craft operations

MARF040 Manage ship security (Ship Security Officer)

MARN012 Manage advanced operations of ships in polar waters

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR50115 Diploma of Maritime Operations (Engineer Watchkeeper) and MAR50613 Diploma of Maritime Operations (Marine Engineering Class 3 Near Coastal).

## Links

Companion Volume implementation guide can be found in VetNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# MAR50215 Diploma of Maritime Operations (Marine Surveying)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for people working in the maritime industry as a domestic commercial vessel marine surveyor.

This qualification is currently cited as meeting some of the requirements for accreditation as a surveyor of domestic commercial vessels by the Australian Maritime Safety Authority (AMSA).

Accreditation will require achievement of other requirements; people seeking accreditation should check with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

**Total number of units = 10 units**

10 core units

### Core units

MARM011	Calculate, assess and report on vessel trim and stability
MARM012	Conduct a range of surveys on domestic commercial vessels
MARM013	Conduct an audit of safety management systems
MARM014	Develop marine survey reports
MARM015	Participate in investigating marine incidents

MARM016	Survey hull and superstructure of a commercial vessel
MARM017	Survey vessel operational systems
MARM018	Undertake a periodic statutory survey
MARM019	Establish a marine surveyor practice
PUALAW003B	Give evidence in a judicial or quasi-judicial setting

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR50513 Diploma of Maritime Operations (Marine Surveying).

# MAR50220 Diploma of Maritime Operations

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for people working in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certification in the capacity of:

- Master less than 24 metres (foreign going)
- Chief Mate less than 3000 gross tonnage (GT)
- Master of commercial vessel less than 500 gross tonnage (GT)
- Mate less than 500 gross tonnage (GT)
- Master less than 80 metres Near Coastal
- Waterkeeper Deck
- Watchkeeper Deck less than 3000 gross tonnage (GT)

*Please note: RTO to insert on the testamur the job role and specialisation, if applicable, selected from the group choice below*

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this qualification:

- This qualification is currently cited as meeting some of the requirements for certification by AMSA as a Master less than 80 metres Near Coastal as defined in Marine Order 505 (Certificates of competency – National law) 2013.
- This qualification is currently cited as meeting some of the requirements for certification by AMSA as a Master of a commercial vessel less than 500 gross tonnage (GT) or Watchkeeper Deck as defined in Marine Orders and the International Convention on Standards of Training Certification and Watchkeeping for Seafarers (STCW).

This qualification is required to obtain an AMSA certificate of competency as a Master less than 80 metres Near Coastal as defined in Marine Order 505 (Certificates of competency – National law) 2013.

AMSA certification of competency will require:

- completing an approved program of study that meets Master less than 80 metres course at Diploma level (MAR50220 Diploma of Maritime Operations - Master less than 80 metres Near Coastal)
- holding or have held certificates of competency as defined in the National Standards for

### Commercial Vessels (NSCV) Part D

- holding a Marine Radio Operators certificate of proficiency as defined in NSCV Part D
- qualifying sea service as defined in NSCV Part D
- meeting the medical and eyesight requirements specified in NSCV Part D
- having passed a final AMSA assessment
- meeting any other regulatory requirements as defined in NSCV Part D.

This qualification is required to obtain an AMSA certificate of competency as a Master of a commercial vessel less than 500 GT as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulations STCW A-II/1 and A-II/2 (MAR50220 Diploma of Maritime Operations - Masters less than 500 GT)
- holding or have held certificates of competency as defined in Marine Order 71
- qualifying sea service as defined in Marine Order 71
- completing STCW short courses as defined in Marine Order 71
- holding a valid AMSA certificate of medical fitness
- having passed a final AMSA assessment
- meeting any other regulatory requirements as defined in Marine Order 71.

This qualification is required to obtain an AMSA certificate of competency as a Watchkeeper Deck as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulation STCW A-II/I (MAR50220 Diploma of Maritime Operations - Watchkeeper Deck)
- holding or have held certificates of competency as defined in Marine Order 71
- qualifying sea service as defined in Marine Order 71
- completing STCW short courses as defined in Marine Order 71
- holding a valid AMSA certificate of medical fitness
- having passed a final AMSA assessment
- meeting any other regulatory requirements as defined in Marine Order 71.

Seafarers seeking certification should check requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

### Total number of units

- **Master less than 80 metres Near Coastal** = 22 units: 19 core units, plus all units from

### Group C

- **Masterless than 500 GT** = 26 units: 19 core units, plus all units from Group B
- **Watchkeeper Deck** = 22 units: 19 core units, plus all units from Group A

### AMSA specialisation

- **Masterless than 80 metres Near Coastal Specialist** = 24 units: 19 core units, plus all units from Group C, plus 2 units from Group D
- **Masterless than 500 gross tonnage (GT) Specialist** = 28 units: 19 core units, plus all units from Group B, plus 2 units from Group D
- **Watchkeeper Deck Specialist** = 24 units: 19 core units, plus all units from Group A, plus 2 units from Group D

### Core units

#### Navigation at the operational level

MARH022	Plan and conduct a passage and determine position
MARH023	Use of electronic chart display and information system to maintain the safety of navigation (ECDIS)
MARH024	Use of radar and other bridge equipment to maintain safety of navigation
MARK011	Manoeuvre the ship
MARO009	Maintain a safe navigational watch
MARO012	Transmit and receive information by visual signalling

#### Cargo handling and stowage at the operational level

MARA025	Monitor loading, unloading, securing and stowage of cargo
MARN011	Maintain seaworthiness of the ship (ship construction)

#### Controlling the operation of the ship and care for persons on board at the operational level

HLTAID011	Provide first aid
MARA017	Maintain seaworthiness of the ship (ship stability)
MARF031	Apply leadership and team working capability
MARF035	Contribute to fire prevention and firefighting (basic firefighting)
MARF037	Follow vessel security procedures (security awareness training)

MARF041	Observe personal safety and social responsibility (PSSR)
MARF044	Prevent, control and fight fires on board a vessel (advanced firefighting)
MARF046	Survive at sea in the event of vessel abandonment and personal survival techniques (PST)
MARF047	Monitor compliance with legislative requirements
MARJ008	Ensure compliance with pollution prevention requirements
RIIWHS202E	Enter and work in a confined space

### **Group A: Watchkeeper Deck**

#### **Controlling the operations of the ship and care for persons on board at the operational level**

MARF032	Apply medical first aid on board ship
MARF043	Operate survival craft, rescue boats and lifesaving appliances (proficiency in survival craft)
MARO011	Transmit and receive information by the Global Maritime Distress and Safety System (GMDSS)

### **Group B: Master less than 500 GT**

#### **Controlling of the operations of the ship and care for persons on board at the operational level**

MARD006	Monitor and control compliance with legislative requirements
MARF032	Apply medical first aid on board ship
MARF038	Manage provision of medical care on board a vessel
MARF043	Operate survival craft, rescue boats and lifesaving appliances (proficiency in survival craft)
MARG008	Manage a vessel and its crew
MARK010	Manoeuvre and handle a ship in all conditions
MARO011	Transmit and receive information by the Global Maritime Distress and Safety System (GMDSS)

### **Group C: Master less than 80 metres Near Coastal**

#### **Controlling the operation of the ship**

MARD004	Manage business and administration on vessels limited by tonnage or near coastal operations
MARD005	Manage operations and maintenance on vessels limited by tonnage or near coastal operations
MARH018	Apply command navigation procedures on vessels limited by tonnage or near coastal operations

### **Group D: Specialist Electives**

MARA011	Contribute to basic operations of ships in polar waters
MARA014	Contribute to basic operations of a ship subject to IGF Code
MARA018	Manage advanced chemical tanker cargo operations
MARA019	Manage advanced liquefied gas tanker cargo operations
MARA020	Manage advanced oil tanker cargo operations
MARA021	Manage advanced operations of a ship subject to IGF Code
MARC056	Operate roll on and roll off machinery and equipment on board a vessel
MARF034	Carry out fast rescue craft operations
MARF040	Manage ship security (Ship Security Officer)
MARN012	Manage advanced operations of ships in polar waters

## **Qualification Mapping Information**

This qualification replaces and is equivalent to:

MAR50315 Diploma of Maritime Operations (Watchkeeper Deck),

MAR50415 Diploma of Maritime Operations (Master up to 500 GT) and

MAR50713 Diploma of Maritime Operations (Master up to 80 metres Near Coastal).

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# MAR50315 Diploma of Maritime Operations (Watchkeeper Deck)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package Release 3.0.

## Qualification Description

This qualification is suitable for people who work in the maritime industry as a Watchkeeper Deck.

This qualification meets some of the requirements for the certification as a Watchkeeper (Deck) as described in Marine Orders 70, 71 and 74 under the Navigation Act 2012 by the Australian Maritime Safety Authority (AMSA).

People seeking certification should check the requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

**Total number of units = 25**

25 core units

### Core units

HLTAID003	Provide first aid
MARA005	Maintain vessel stability
MARA010	Manage loading, unloading and stowage of cargo
MARF003	Follow vessel security procedures
MARF006	Observe personal safety and social responsibility
MARF007	Operate survival craft and other lifesaving appliances

MARF008	Prevent and fight fires on board a vessel
MARF009	Survive at sea in the event of vessel abandonment
MARF010	Work safely in confined spaces on a vessel
MARF011	Manage firefighting and fire prevention activities on board a vessel
MARF012	Control safe access to and on vessel
MARF013	Provide medical first aid on board a vessel
MARF014	Respond to emergencies
MARF022	Apply maritime resource management principles
MARG004	Provide leadership to crew
MARH008	Plan and conduct a passage
MARH009	Use an electronic chart display and information system to navigate safely
MARH010	Use bridge equipment to determine vessel position
MARJ003	Ensure compliance with environmental management legislation
MARJ004	Inspect and report defects and damage to vessel
MARK004	Perform basic vessel manoeuvres
MARN005	Maintain seaworthiness of a vessel
MARO002	Maintain a safe navigational watch
MARO003	Transmit and receive information by the global maritime distress and safety system
MARO004	Transmit and receive information by visual signalling

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR50313 Diploma of Maritime Operations (Watchkeeper Deck).

MAR50313 replaces TDM50307 Diploma of Transport Distribution (Maritime Operations - Deck Watchkeeper).

# MAR50415 Diploma of Maritime Operations (Master up to 500 GT)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package Release 3.0.

## Qualification Description

This qualification is suitable for people who work in the maritime industry as a Master, Chief Mate or Watchkeeper Deck on ships of less than 500 gross tonnage (GT) in any operating area.

This qualification is currently cited as meeting some of the requirements for certification as a Master <500 GT as described in Marine Order 70 and 71 (2014) under the Navigation Act 2012 by the Australian Maritime Safety Authority (AMSA).

People seeking certification should check with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

**Total number of units = 29**

29 core units

### Core units

HLTAID003 Provide first aid

MARA005 Maintain vessel stability

MARA010 Manage loading, unloading and stowage of cargo

MARD001 Manage business and administration on vessels limited by tonnage or near coastal operations

MARD002 Manage operations and maintenance on vessels limited by tonnage or near coastal operations

MARF003	Follow vessel security procedures
MARF006	Observe personal safety and social responsibility
MARF007	Operate survival craft and other lifesaving appliances
MARF008	Prevent and fight fires on board a vessel
MARF009	Survive at sea in the event of vessel abandonment
MARF010	Work safely in confined spaces on a vessel
MARF011	Manage firefighting and fire prevention activities on board a vessel
MARF012	Control safe access to and on vessel
MARF013	Provide medical first aid on board a vessel
MARF014	Respond to emergencies
MARF015	Manage provision of medical care on board a vessel
MARF022	Apply maritime resource management principles
MARG004	Provide leadership to crew
MARH007	Apply command navigation procedures on vessels limited by tonnage or near coastal operations
MARH008	Plan and conduct a passage
MARH009	Use an electronic chart display and information system to navigate safely
MARH010	Use bridge equipment to determine vessel position
MARJ003	Ensure compliance with environmental management legislation
MARJ004	Inspect and report defects and damage to vessel
MARK004	Perform basic vessel manoeuvres
MARN005	Maintain seaworthiness of a vessel
MARO002	Maintain a safe navigational watch
MARO003	Transmit and receive information by the global maritime distress and safety system
MARO004	Transmit and receive information by visual signalling

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR50413 Diploma of Maritime Operations (Master up to 500 GT or Master 80 metres).

## **MAR50613 Diploma of Maritime Operations (Marine Engineering Class 3 Near Coastal)**

### **Modification History**

Release 1. New qualification.

### **Qualification Description**

This qualification is suitable for people who work in the maritime industry as a Chief Engineer on vessels with propulsion power up to 3000 kW in the exclusive economic zone (EEZ).

### **Licensing/Regulatory Information**

This level of qualification is currently cited as meeting some of the requirements for certification as an Engineer Class 3 Near Coastal as defined by the National Standard for Commercial Vessels (NSCV) Part D.

Certification will require achievement of the MAR50613 Diploma of Maritime Operations (Marine Engineering Class 3 Near Coastal), qualifying sea service and completed Australian Maritime Safety Authority (AMSA) approved task book or qualifying sea service or qualifying sea service and a workshop skill equivalent qualification, AMSA final assessment and an AMSA approved first aid certificate; people seeking certification should check with AMSA.

Certification will also require either MAR40513 Certificate IV in Maritime Operations (Marine Engine Driver Grade 1 Near Coastal) or a trade (as specified in NSCV Part D).

### **Entry Requirements**

Not applicable.

### **Packaging Rules**

**Total number of units = 15 units**

15 core units

MARE001            Communicate effectively when performing engineering duties

MARF003            Follow vessel security procedures

MARF006	Observe personal safety and social responsibility
MARF008	Prevent and fight fires on board a vessel
MARF009	Survive at sea in the event of vessel abandonment
MARF010	Work safely in confined spaces on a vessel
MARJ003	Ensure compliance with environmental management legislation
MARL002	Apply basic principles of naval architecture
MARL003	Demonstrate basic knowledge of marine auxiliary boilers
MARL004	Demonstrate basic knowledge of marine auxiliary machinery and equipment
MARL005	Demonstrate basic knowledge of marine control systems and automation
MARL006	Demonstrate basic knowledge of marine diesel engines and systems
MARL007	Demonstrate basic knowledge of marine electrical systems
MARL008	Demonstrate basic knowledge of ships and ship routines
MARL009	Perform basic marine engineering calculations

## Qualification Mapping Information

This qualification is equivalent to MAR50113 Diploma of Maritime Operations (Marine Engineering Class 3).

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

## **MAR50713 Diploma of Maritime Operations (Master up to 80 metres Near Coastal)**

### **Modification History**

Release 1. New qualification.

### **Qualification Description**

This qualification is suitable for people who work in the maritime industry as a Master on vessels up to 80 metres operating in near coastal waters within the exclusive economic zone (EEZ).

### **Licensing/Regulatory Information**

This level of qualification is currently cited as meeting some of the requirements for certification as a Master up to 80 metres Near Coastal as defined by the National Standard for Commercial Vessels (NSCV) Part D.

Certification will require achievement of the MAR50713 Diploma of Maritime Operations (Master up to 80 metres Near Coastal), certification as a Master less than 35 metres Near Coastal, qualifying sea service and completed Australian Maritime Safety Authority (AMSA) approved task book or qualifying sea service, AMSA final assessment, an appropriate radio certificate of proficiency and an AMSA approved first aid certificate; people seeking certification should check with AMSA.

### **Entry Requirements**

MAR40613 Certificate IV in Maritime Operations (Master up to 35 metres Near Coastal)

### **Packaging Rules**

**Total number of units = 25 units**

25 core units

MARA001	Contribute to safe cargo operations on liquefied gas tankers
MARA002	Contribute to safe cargo operations on oil and chemical tankers
MARA005	Maintain vessel stability
MARA006	Monitor loading, unloading and stowage of cargo

MARD001	Manage business and administration on vessels limited by tonnage or near coastal operations
MARD002	Manage operations and maintenance on vessels limited by tonnage or near coastal operations
MARF003	Follow vessel security procedures
MARF006	Observe personal safety and social responsibility
MARF008	Prevent and fight fires on board a vessel
MARF009	Survive at sea in the event of vessel abandonment
MARF010	Work safely in confined spaces on a vessel
MARF011	Manage firefighting and fire prevention activities on board a vessel
MARF012	Control safe access to and on vessel
MARF014	Respond to emergencies
MARG004	Provide leadership to crew
MARH007	Apply command navigation procedures on vessels limited by tonnage or near coastal operations
MARH008	Plan and conduct a passage
MARH009	Use an electronic chart display and information system to navigate safely
MARH010	Use bridge equipment to determine vessel position
MARJ003	Ensure compliance with environmental management legislation
MARJ004	Inspect and report defects and damage to vessel
MARK004	Perform basic vessel manoeuvres
MARN005	Maintain seaworthiness of a vessel
MARO002	Maintain a safe navigational watch
MARO004	Transmit and receive information by visual signalling

## Qualification Mapping Information

No equivalent qualification.

## **MAR60115 Advanced Diploma of Maritime Operations (Marine Engineering Class 2)**

### **Modification History**

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

### **Qualification Description**

This qualification is suitable for people who work as an Engineer Class 2 in the maritime industry on ships powered by main propulsion machinery of any propulsion power in any operating area.

This qualification forms some of the requirements for certification by the Australian Maritime Safety Authority (AMSA) as an Engineer Class 2 as described in Marine Orders 70-73 (2014) under the Navigation Act 2012.

People seeking certification should check requirements with AMSA.

### **Entry Requirements**

There are no entry requirements for this qualification.

### **Packaging Rules**

**Total number of units = 18 units**

13 core units, plus

5 elective units from the elective units list below:

at least 1 unit must be from Group A

the remaining units must be from Group A or Group B.

#### **Core units**

MARF010	Work safely in confined spaces on a vessel
MARF022	Apply maritime resource management principles
MARG004	Provide leadership to crew

MARL014	Apply intermediate principles of marine electrotechnology
MARL015	Apply intermediate principles of marine engineering thermodynamics
MARL016	Apply intermediate principles of marine mechanics
MARL017	Apply intermediate principles of naval architecture
MARL022	Demonstrate basic knowledge of ship construction
MARL023	Demonstrate basic knowledge of ship operation and maintenance
MARL024	Demonstrate intermediate knowledge of marine auxiliary boilers
MARL025	Demonstrate intermediate knowledge of marine auxiliary machinery and systems
MARL026	Demonstrate intermediate knowledge of marine control systems and automation
MARL028	Demonstrate intermediate knowledge of marine electrical systems

#### **Elective units: Group A**

MARL027	Demonstrate intermediate knowledge of marine diesel engines and systems
MARL029	Demonstrate intermediate knowledge of marine steam turbines and main boilers

#### **Elective units: Group B**

MARA001	Contribute to safe cargo operations on liquefied gas tankers
MARA002	Contribute to safe cargo operations on oil and chemical tankers
MARF003	Follow vessel security procedures
MARF006	Observe personal safety and social responsibility

MARF007	Operate survival craft and other lifesaving appliances
MARF008	Prevent and fight fires on board a vessel
MARF009	Survive at sea in the event of vessel abandonment
MARF011	Manage firefighting and fire prevention activities on board a vessel
MARF013	Provide medical first aid on board a vessel
HLTAID003	Provide first aid

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR60113 Advanced Diploma of Maritime Operations (Marine Engineering Class 2).

MAR60113 replaces and is equivalent to TDM60307 Advanced Diploma of Transport & Distribution (Marine Engineering - Class 2)

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# MAR60120 Advanced Diploma of Marine Engineering (Class 1)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for people working in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certification in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited)

on ships powered by main propulsion machinery of any propulsion power in any operating area.

*Please note: RTO to insert on the testamur the job role and specialisation, if applicable, selected from the group choice below*

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this qualification:

- This qualification is currently cited as meeting some of the requirements for certification by AMSA as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) as defined in Marine Orders and the International Convention on Standards of Training Certification and Watchkeeping for Seafarers (STCW).

This qualification is required to obtain an AMSA certificate of competency as an Engineer Class 1 (STCW Chief Engineer Unlimited) as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulations STCW A-III/1 and A-III/2 (MAR60120 Advanced Diploma of Marine Engineering Class 1)
- holding or have held certificates of competency as defined in Marine Order 72
- qualifying sea service as defined in Marine Order 72
- completing STCW short courses as defined in Marine Order 72
- holding a valid AMSA certificate of medical fitness
- having passed a final AMSA assessment
- meeting any other regulatory requirements as defined in Marine Order 72.

This qualification is required to obtain an AMSA certificate of competency as an Engineer Class 2 (STCW Second Engineer Unlimited) as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulations STCW A-III/1 and A-III/2 (MAR60120 Advanced Diploma of Marine Engineering Class 1)
- holding or have held certificates of competency as defined in Marine Order 72
- qualifying sea service as defined in Marine Order 72
- completing STCW short courses as defined in Marine Order 72
- holding a valid AMSA certificate of medical fitness
- having passed a final AMSA assessment
- meeting any other regulatory requirements as defined in Marine Order 72.

Seafarers seeking certification should check requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

### Total number of units

- **Engineer Class 1 (Motor)** = 14 units: 13 core units, plus one unit from Group A
- **Engineer Class 1 (Steam)** = 14 units: 13 core units, plus one unit from Group B
- **Engineer Class 1 (Motor and Steam)** = 15 units: 13 core units, plus all units from Group C

### AMSA specification

- **Engineer Class 1 (Motor) Specialist** = 17 units: 13 core units, plus unit from Group A, plus 3 units from Group D
- **Engineer Class 1 (Steam) Specialist** = 17 units: 13 core units, plus unit from Group B, plus 3 units from Group D
- **Engineer Class 1 (Steam and Motor) Specialist** = 18 units: 13 core units, plus all units from Group C, plus 3 units from Group D

### Core units

#### Controlling the operation of the ship and care for persons on board at the management level

MARD006      Monitor and control compliance with legislative requirements

MARF039 Manage safety and security of vessel, crew and passengers

MARF045 Provide leadership and managerial capability

**Electrical, electronic and control engineering at the management level**

MARB044 Operate and maintain ship power systems exceeding 1,000 volts

MARL038 Apply advanced principles of marine electrotechnology

MARL049 Demonstrate advanced knowledge of marine control systems and automation

MARL051 Demonstrate advanced knowledge of marine electrical systems

**Marine engineering at the management level (mathematics)**

MARL039 Apply advanced principles of marine engineering thermodynamics

MARL040 Apply advanced principles of marine mechanics

**Marine engineering at the management level (Part A)**

MARL047 Demonstrate advanced knowledge of marine auxiliary boilers

MARL048 Demonstrate advanced knowledge of marine auxiliary machinery and systems

**Maintenance and repair at the management level**

MARL041 Apply advanced principles of trim, stability and stress

MARL053 Demonstrate advanced knowledge of ship operations and maintenance

**GROUP A: Motor**

**Marine engineering at the management level (Part B)**

MARL050 Demonstrate advanced knowledge of marine diesel engines and systems

**GROUP B: Steam**

**Marine engineering at the management level (Part C)**

MARL052 Demonstrate advanced knowledge of marine steam turbines and main boilers

**GROUP C: Motor and Steam**

**Marine engineering at the management level (Part D)**

MARL050 Demonstrate advanced knowledge of marine diesel engines and systems

MARL052 Demonstrate advanced knowledge of marine steam turbines and main boilers

### **GROUP D: Specialist Electives**

MARA011	Contribute to basic operations of ships in polar waters
MARA014	Contribute to basic operations of a ship subject to IGF Code
MARA018	Manage advanced chemical tanker cargo operations
MARA019	Manage advanced liquefied gas tanker cargo operations
MARA020	Manage advanced oil tanker cargo operations
MARA021	Manage advanced operations of a ship subject to IGF Code
MARB037	Maintain and repair bridge navigation equipment and ship communication systems
MARB040	Maintain control and safety systems of hotel equipment
MARB049	Use internal communication systems, operate computers and computer networks on ships
MARC056	Operate roll-on and roll-off machinery and equipment on board a vessel
MARF032	Apply medical first aid on board ship
MARF034	Carry out fast rescue craft operations
MARF038	Manage provision of medical care on board a vessel
MARF040	Manage ship security (Ship Security Officer)
MARN012	Manage advanced operations of ships in polar waters

## **Qualification Mapping Information**

This qualification replaces and is equivalent to MAR60115 Advanced Diploma of Maritime Operations (Marine Engineering Class 2) and MAR60215 Advanced Diploma of Maritime Operations (Marine Engineering Class 1).

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **MAR60215 Advanced Diploma of Maritime Operations (Marine Engineering Class 1)**

## **Modification History**

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## **Qualification Description**

This qualification is suitable for people who work as an Engineer Class 1 in the maritime industry on ships powered by main propulsion machinery of any propulsion power in any operating area.

This qualification forms some of the requirements for certification by the Australian Maritime Safety Authority (AMSA) as an Engineer Class 1 as described in Marine Orders 70-73 (2014) under the Navigation Act 2012.

People seeking certification should check requirements with AMSA.

## **Entry Requirements**

There are no entry requirements for this qualification.

## **Packaging Rules**

**Total number of units = 17 units**

12 core units, plus

5 elective units from the elective units list below:

- at least 1 unit must be from Group A
- the remaining units must be from Group A or Group B.

### **Core units**

MARF010	Work safely in confined spaces on a vessel
MARF022	Apply maritime resource management principles
MARG004	Provide leadership to crew
MARL018	Apply advanced principles of marine electrotechnology

MARL019	Apply advanced principles of marine engineering thermodynamics
MARL020	Apply advanced principles of marine mechanics
MARL021	Apply advanced principles of naval architecture
MARL030	Demonstrate advanced knowledge of marine auxiliary boilers
MARL031	Demonstrate advanced knowledge of marine auxiliary machinery and systems
MARL032	Demonstrate advanced knowledge of marine control systems and automation
MARL034	Demonstrate advanced knowledge of marine electrical systems
MARL036	Demonstrate advanced knowledge of ship operation and maintenance

**Elective units: Group A**

MARL033	Demonstrate advanced knowledge of marine diesel engines and systems
MARL035	Demonstrate advanced knowledge of marine steam turbines and main boilers

**Elective units: Group B**

MARA001	Contribute to safe cargo operations on liquefied gas tankers
MARA002	Contribute to safe cargo operations on oil and chemical tankers
MARF003	Follow vessel security procedures
MARF006	Observe personal safety and social responsibility
MARF007	Operate survival craft and other lifesaving appliances
MARF008	Prevent and fight fires on board a vessel
MARF009	Survive at sea in the event of vessel abandonment
MARF011	Manage firefighting and fire prevention activities on board a vessel
MARF013	Provide medical first aid on board a vessel
HLTAID003	Provide first aid

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR60313 Advanced Diploma of Maritime Operations (Marine Engineering Class 1).

MAR60313 replaces and is equivalent to TDM60207 Advanced Diploma of Transport & Distribution (Marine Engineering - Class 1).

# MAR60220 Advanced Diploma of Maritime Operations (Master Unlimited)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package.

## Qualification Description

This qualification is suitable for people working in the maritime industry seeking an Australian Maritime Safety Authority (AMSA) certification in the capacity of:

- Master in the maritime industry on ships of any gross tonnage (GT) in any operating area
- Master less than 3000 gross tonnage (GT)
- Chief Mate less than 3000 gross tonnage (GT).

*Please note: RTO to insert on the testamur the job role and specialisation, if applicable, selected from the group choice below*

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this qualification:

- This qualification is currently cited as meeting some of the requirements for certification by AMSA as a Master Unlimited as defined in Marine Orders and the International Convention on Standards of Training Certification and Watchkeeping for Seafarers (STCW).

This qualification is required to obtain an AMSA certificate of competency as a Master Unlimited as defined in Marine Orders and STCW.

AMSA certification of competency will require:

- completing an approved program of study that meets regulations STCW A-II/1 and A-II/2 (MAR60220 Advanced Diploma of Maritime Operations (Master Unlimited))
- holding or have held certificates of competency as defined in Marine Order 71
- qualifying sea service as defined in Marine Order 71
- completing STCW short courses as defined in Marine Order 71
- holding a valid AMSA certificate of medical fitness
- having passed a final AMSA assessment
- meeting any other regulatory requirements as defined in Marine Order 71.

Seafarers seeking certification should check requirements with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

### Total number of units

- **Master Unlimited** = 26 core units

### AMSA specialisation

- **Master Unlimited Specialist** = 29 units: 26 core units, plus 3 specialist units.

### Core units

#### Navigation at the management level

MARC055	Operate remote controls of propulsion plant, engineering systems and services
MARF036	Coordinate search and rescue operations
MARF039	Manage safety and security of vessel, crew and passengers
MARH020	Forecast weather and oceanographic conditions to plan a safe passage
MARH021	Manage the navigation of a vessel
MARH023	Use of electronic chart display and information system to maintain the safety of navigation (ECDIS)
MARH024	Use of radar and other bridge equipment to maintain safety of navigation
MARK010	Manoeuvre and handle a ship in all conditions
MARO009	Maintain a safe navigational watch

#### Cargo handling and stowage at the management level

MARB042	Manage reported defects, damage, repairs and maintenance of a vessel
MARN014	Plan and manage safe loading, unloading, securing and stowage of cargo

#### Controlling the operation of the ship and care for persons on board at the management level

HLTAID011	Provide first aid
-----------	-------------------

MARA023	Manage trim, stability and stress of a vessel
MARD006	Monitor and control compliance with legislative requirements
MARF032	Apply medical first aid on board ship
MARF035	Contribute to fire prevention and firefighting (basic firefighting)
MARF037	Follow vessel security procedures (security awareness training)
MARF038	Manage provision of medical care on board a vessel
MARF041	Observe personal safety and social responsibility (PSSR)
MARF043	Operate survival craft, rescue boats and life-saving appliances (proficiency in survival craft)
MARF044	Prevent, control and fight fires on board a vessel (advanced firefighting)
MARF046	Survive at sea in the event of vessel abandonment and personal survival techniques (PST)
MARG008	Manage a vessel and its crew
MARO011	Transmit and receive information by the Global Maritime Distress and Safety System (GMDSS)
MARO012	Transmit and receive information by visual signalling
RIIWHS202E	Enter and work in a confined space

### **Specialist Electives**

MARA011	Contribute to basic operations of ships in polar waters
MARA014	Contribute to basic operations of a ship subject to IGF Code
MARA018	Manage advanced chemical tanker cargo operations
MARA019	Manage advanced liquefied gas tanker cargo operations
MARA020	Manage advanced oil tanker cargo operations
MARA021	Manage advanced operations of a ship subject to IGF Code
MARC056	Operate roll on and roll off machinery and equipment on board a vessel
MARF034	Carry out fast rescue craft operations
MARF040	Manage ship security (Ship Security Officer)

MARN012      Manage advanced operations of ships in polar waters

## **Qualification Mapping Information**

This qualification replaces and is equivalent to MAR60315 Advanced Diploma of Maritime Operations (Master Unlimited).

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# MAR60315 Advanced Diploma of Maritime Operations (Master Unlimited)

## Modification History

Release 1. This is the first release of this qualification in the MAR Maritime Training Package Release 3.0.

## Qualification Description

This qualification is suitable for people who work as a Master in the maritime industry on ships of any gross tonnage in any operating area.

This qualification is currently cited as meeting some of the requirements for certification as a Master (Unlimited) as described in Marine Orders 70 and 71(2014) under the Navigation Act 2012 by the Australian Maritime Safety Authority (AMSA).

People seeking certification should check with AMSA.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

**Total number of units = 28**

28 core units

### Core units

HLTAID003	Provide first aid
MARA009	Manage stability of a vessel 500 gross tonnage or more
MARB020	Manage repairs and maintenance of a vessel 500 gross tonnage or more
MARC026	Operate remote controls of propulsion plant and engineering systems
MARD003	Manage legal requirements of a vessel

MARF003	Follow vessel security procedures
MARF006	Observe personal safety and social responsibility
MARF007	Operate survival craft and other lifesaving appliances
MARF008	Prevent and fight fires on board a vessel
MARF009	Survive at sea in the event of vessel abandonment
MARF010	Work safely in confined spaces on a vessel
MARF011	Manage firefighting and fire prevention activities on board a vessel
MARF013	Provide medical first aid on board a vessel
MARF015	Manage provision of medical care on board a vessel
MARF020	Coordinate search and rescue operations
MARF021	Manage safety and security of vessel crew and passengers
MARF022	Apply maritime resource management principles
MARG006	Manage a vessel and its crew
MARH009	Use an electronic chart display and information system to navigate safely
MARH010	Use bridge equipment to determine vessel position
MARH011	Forecast weather and oceanographic conditions to plan a safe passage
MARH012	Manage the navigation of a vessel 500 gross tonnage or more
MARJ005	Manage compliance with environmental management legislation
MARK006	Manoeuvre a vessel 500 gross tonnage or more

MARN006	Manage cargo operations
MARO002	Maintain a safe navigational watch
MARO003	Transmit and receive information by the global maritime distress and safety system
MARO004	Transmit and receive information by visual signalling

## Qualification Mapping Information

This qualification replaces and is equivalent to MAR60213 Advanced Diploma of Maritime Operations (Master Unlimited).

MAR60213 replaces TDM60407 Advanced Diploma of Transport & Distribution (Maritime Operations – Master Unlimited).

## Links

# **MARA011 Contribute to basic operations of ships in polar waters**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to contribute to basic operations of ships in polar waters.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Mate
- Deck Officers
- Engineering Officers
- Engineers
- Masters
- Ratings.

## **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg V/4 (1 and 2) and Code Section A-V/4 (1), Table A-V/4-1.

Legislative and regulatory requirements are applicable to this unit:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as Chief Mate, Deck Officers, Engineering Officers, Engineers, Masters or Ratings for basic operations of ships in polar waters and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## Competency Field

A - Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Contribute to safe operation of vessels in polar waters**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Ice properties and their characteristics and relevance to safe ship operations are correctly identified
- 1.2** Ice information and publications are used and interpreted correctly and applied appropriately
- 1.3** Visible and infrared satellite images and egg charts are used to identify ice conditions
- 1.4** Meteorological and oceanographic data is coordinated with ice data
- 1.5** Measurements and observations of weather and ice conditions are accurate and used appropriately when planning a passage
- 1.6** Ship characteristics are identified and their limitations under different ice conditions and impact of operating in a cold environment
- 1.7** Procedures for assessing risk are made before entering ice
- 1.8** Ship and crew are prepared for operations in ice and low air temperatures in accordance with workplace procedure and principles
- 1.9** Communication with personnel is clear, concise and accurate and information is understood and acted upon
- 1.10** Procedures for loading and unloading cargo and embarking and disembarking passengers in low

temperatures where appropriate, are correctly identified using Polar Code and Polar Water Operations Manual

- 1.11 Procedures for monitoring ballast water for icing, engine temperatures and anchor watch concerns in ice and transit near ice are correctly identified using Polar Code and Polar Waters Operations Manual
  - 1.12 Information from radar is interpreted and analysed in accordance with lookout procedures with special caution, regarding identification of dangerous ice features
  - 1.13 Information obtained from navigational charts, electronic charts and publications is relevant, assessed, interpreted and applied correctly
  - 1.14 Primary method of position fixing is frequent and appropriate for the prevailing conditions and routing through ice
  - 1.15 Performance checks and tests of navigation and communication systems comply with recommendations for operations in high latitude and low air temperature
- 2 **Monitor compliance with legislative requirements**
  - 2.1 Relevant sections of Polar Water Operations Manual are identified and applied to operations
  - 2.2 Communication is conducted in accordance with local, regional and international standard procedures
  - 2.3 Legislative requirements relevant to regulations, codes and practices are identified and applied correctly to operations
- 3 **Apply safe work practices when responding to emergencies**
  - 3.1 Hazardous situations are identified and appropriate actions are taken for hazardous situations for ship and individual crew members
  - 3.2 Actions taken are in accordance with Polar Water Operations Manual, accepted principles and procedures to ensure safety of operations and avoidance of pollution of the marine environment
  - 3.3 Personal protective equipment (PPE) is used correctly and safe working practices are observed at all times
  - 3.4 Actions taken are in accordance with emergency procedures and plans and are appropriate to the situation

		and nature of the emergency
	<b>3.5</b>	Legislative requirements relevant to regulations, codes and practices are identified and applied correctly to operations
	<b>3.6</b>	PPE is used correctly and defects and damages are detected and promptly reported
<b>4</b>	<b>Ensure compliance with pollution prevention and prevent environmental hazards</b>	
	<b>4.1</b>	Legislative requirements relevant to regulations, codes and practices are identified and applied correctly to operations
	<b>4.2</b>	Limitations on vessel discharges are identified and selected correctly in accordance with the Polar Code
	<b>4.3</b>	Limitations on vessel discharges and plans for storing are correctly applied in accordance with Polar Water Operations Manual and Waste Management Plan
	<b>4.4</b>	References that provide details of areas to be avoided are identified
	<b>4.5</b>	Factors that must be considered when managing waste stream during polar voyages are identified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA011 Contribute to basic operations of ships in polar waters**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying environmental factors and regulations in accordance with legislative and environmental requirements
- applying hazard identification and risk control measures
- applying relevant international regulations, codes, industry guidelines and industry standards relevant to operations in polar waters
- applying safe work practices and risk assessments for crew and shipboard safety
- communicating clearly and effectively
- correctly identifying and using safety data sheets (SDS)/material safety data sheets (MSDS) relevant to hazards
- following safe work practices, workplace procedures and emergency response procedures
- identifying and acting on hazardous situations
- selecting and using personal protective equipment (PPE) and devices appropriate to an emergency situation.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- fundamentals of operating and manoeuvring a vessel in ice, including:
  - engine loads and cooling problems
  - ballast tank monitoring
  - cargo operations in polar waters
  - safe speed in the presence of ice and icebergs
  - safety procedures during ice transit
- fundamentals of environmental factors, including:
  - areas where shipping is prohibited
  - areas where shipping should be avoided

- limitations of oil spill equipment
- sensitive sea areas regarding discharge
- ship plans for coping with increased volumes of waste, including:
  - garbage, bilge water and sewage
- lack of infrastructure
- fundamental knowledge of ice characteristics and areas where different types of ice can be expected in operational areas, including:
  - differential movement of icebergs and ice packs
  - effect of wind and current on ice
  - friction from snow covered ice
  - ice concentrations
  - ice blink
  - ice imagery
  - ice physics, terms, formation, growth, ageing and stage of melt
  - ice pressure and distribution
  - ice regimes in different regions, including:
    - ice types
    - first year
    - land ice
    - multiyear ice
    - sea ice
    - significant differences between the Arctic and Antarctic
  - implications of spray icing, including:
    - danger of icing up
    - options during icing up
    - precautions to avoid icing up
  - tides and currents in ice
  - water sky
- fundamental knowledge of vessel performance in ice and low air temperature, including:
  - engineering requirements for operating in ice
  - equipment and machinery limitation in ice condition and low air temperature
  - hull designs
  - ice strengthening requirements
  - limitations of ice-classes
  - low-temperature system performance
  - monitoring of ice pressure on hull
  - sea suction
  - superstructure insulation and special systems
  - vessel characteristics
  - vessel types

- water intake
- winterisation and preparedness of vessel, including engine and deck
- fundamental understanding of regulatory requirements, including:
  - Antarctic Treaty
  - Polar Code
  - accident reports for vessels in polar waters
  - International Maritime Organization (IMO) standards for operation in remote areas
  - International Convention for the Prevention of Pollution from Ships (MARPOL)
- fundamental knowledge of crew preparation, working conditions and safety, including:
  - contingency planning
  - most common hull and equipment damages and how to avoid these
  - how to establish and implement safe working procedures for specific polar events:
    - ice covered surfaces
    - low temperatures
    - PPE
    - use of buddy system
    - working time limitations
  - human factors, including:
    - cold fatigue
    - crew welfare
    - medical first aid aspects
  - need for extra resources, including:
    - bunker
    - extra clothing
    - food
  - prevention and removal of ice, including the factors of accretion
  - dangers when crews are exposed to low temperatures
  - fatigue problems due to noise and vibrations
  - search and rescue (SAR) readiness and responsibilities, including:
    - sea area
    - SAR communication facility limitation
  - survival requirements, including:
    - group survival equipment
    - personal survival equipment
  - superstructure deck icing, including effect on trim and stability
- oil spill and pollution in ice, including regulatory and environmental consequences.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARAO12 Contribute to basic cargo operations on liquefied gas tankers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to recognise hazards associated with liquefied gas tankers (basic gas) and to apply appropriate hazard control measures to contribute to safe cargo operation.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Mate
- Deck Officers
- Engineering Officers
- Engineers
- Masters
- Ratings.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as Chief Mate, Deck Officers, Engineering Officers, Engineers, Masters and Ratings for basic operations on liquefied gas tankers and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## Competency Field

A – Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

- 1 Determine characteristics of tanker cargo and tankers to ensure safe transfer and transport of cargo**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Features of various types of liquefied gas tankers are outlined
- 1.2** Cargo operations of tankers are identified
- 1.3** Properties of cargo being transported are identified and their impact on safety, the environment and vessel operations are outlined
- 1.4** Hazards associated with the transport of cargo are clarified according to emergency response documentation
- 1.5** Hazard controls associated with tanker cargo are employed according to organisational procedures
- 2 Comply with legislative and organisational requirements for safe transfer and transport of tanker cargo**
  - 2.1** Safety data sheets (SDS)/material safety data sheets (MSDS) relevant to cargo are accessed and procedures for tanker safety and safety management are identified
  - 2.2** SDS/MSDS are interpreted to identify relevant cargo-related hazards to the vessel and to personnel
  - 2.3** Legislative and organisational requirements are interpreted to identify appropriate actions for safe transfer and transport of cargo

- |   |  |
|---|--|
| <b>3 Take precautions to prevent hazards</b>  | <b>3.1</b> Organisational policies and procedures to minimise hazards are identified   |
|   | <b>3.2</b> Type and severity of the hazard posed by cargo is recognised  |
|   | <b>3.3</b> Transfer and transport of cargo is monitored to prevent hazards   |
|   | <b>3.4</b> Gas monitoring equipment is regularly inspected and used according to organisational procedures   |
| <b>4 Recognise hazardous situation</b>  | <b>4.1</b> Source of hazard is identified according to organisational procedures   |
|   | <b>4.2</b> Risk is assessed considering severity and likelihood of consequences  |
|   | <b>4.3</b> Control measures to minimise risk are implemented to level of responsibility or referred to appropriate person for further action   |
|   | <b>4.4</b> Containment procedures are applied where appropriate  |
|   | <b>4.5</b> Appropriate safety procedures are followed and personal protective equipment (PPE) is used according to organisational procedures   |
|   | <b>4.6</b> Risk is eliminated, where possible, and if not practical, actions are taken to control risk   |
| <b>5 Take precautions to prevent pollution of the environment from release of liquefied gases</b> | <b>5.1</b> Procedures to prevent pollution are identified and observed at all times  |
|   | <b>5.2</b> Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and organisational procedures                                       |
|   | <b>5.3</b> All relevant information is immediately reported to appropriate persons when a vapour leak or cloud is detected or a malfunction has occurred that poses a risk of a vapour leak or cloud |
|   | <b>5.4</b> Shore-based response personnel are promptly notified when a vapour leak or cloud occurs   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARA001 Contribute to safe cargo operations on liquefied gas tankers.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA012 Contribute to basic cargo operations on liquefied gas tankers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assisting in implementing shipboard spill containment procedures
- communicating clearly and effectively
- contributing to cargo operations in accordance with principles and procedures
- identifying hazards, assessing risks and applying control measures in accordance with safety management systems (SMS)
- measuring for gas using monitoring instruments
- reading and interpreting safety data sheets (SDS)/material safety data sheets (MSDS), relevant cargo-related hazards to vessel and to personnel, and taking appropriate action according to organisational procedures
- recognising problems and hazards that can arise when managing safety on a liquefied gas tanker in accordance with SMS
- reporting relevant information to the responsible person.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cargo handling equipment, including cargo compressors
- cargo types, characteristics and their properties
- chemical symbols
- effects of brittle fracture and prevention
- effects of pollution on human and marine life
- electrical safety
- emergency response procedures, including emergency organisation and alarms
- emergency shutdown (ESD) system
- fire hazards associated with cargo handling and transportation of liquefied gases in bulk
- firefighting agents and systems used to extinguish gas fires
- gas testing and monitoring instruments
- general arrangement and construction of liquefied gas tankers

- hazards and hazard control measures associated with tanker operations, including:
  - anti-static measures
  - atmospheric control
  - cargo inhibition
  - corrosion
  - cryogenic effects on the hull
  - electrical
  - electrostatic
  - enclosed space
  - environmental
  - explosion and flammability
  - extremely low temperatures
  - fire
  - gas testing
  - health hazards
  - hot and cold work
  - importance of cargo compatibility
  - inerting, drying and monitoring techniques
  - loss of containment
  - pollution
  - pressure
  - reactivity
  - repair and maintenance work
  - segregation
  - sources of ignition
  - toxicity
  - transport of cargo
  - vapour leaks and clouds
  - ventilation
- importance of cargo compatibility
- information on SDS/MSDS
- interpreting liquefied gas tanker layouts, tanker cargo features, characteristics and hazards
- loading, unloading and care in transit
- piping systems and valves
- precautions to be taken:
  - before and during repair and maintenance work
  - when entering enclosed spaces
- liquefied gas tanker cleaning, purging, gas-freeing and inerting
- liquefied gas tanker safety culture and safety management
- pressure and temperature, including vapour pressure/temperature relationship

- relevant firefighting operations and the use of firefighting installations
- reliquefaction systems and control of boil-off
- ship/shore safety checklist
- tank evacuation (rescue and escape) equipment
- types of electrostatic charge generation
- types of liquefied gas tankers
- using SDS/MSDS information when applying first aid
- using types of personal protective equipment (PPE), including:
  - breathing apparatus
  - resuscitators
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry, including gas monitoring instruments and oxygen indicators.

## **MARA013 Contribute to basic cargo operations on oil and chemical tankers (basic oil and chemical)**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to recognise hazards associated with oil and chemical tankers and apply appropriate hazard control measures to ensure safe cargo operation. It applies to Seafarers required to assist in the basic cargo operations on oil and chemical tankers (basic oil and chemical).

This unit applies to people working in the maritime industry in the capacity of:

- Chief Mate
- Deck Officers
- Engineering Officers
- Engineers
- Masters
- Ratings.

### **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg V/1-1 and Code Section A-V/1-1 (1 & 2), Table A-V/1-1-1.

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as Chief Mate, Deck Officers, Engineering Officers, Engineers, Masters and Ratings for basic operations on oil and chemical tankers and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

A – Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Recognise characteristics of tanker cargo and tankers to ensure the safe transfer and transport of cargo**

**1.1** Features of various types of oil and chemical tankers are outlined

**1.2** Cargo operations of tankers are identified

**1.3** Properties of cargo being transported are identified and their impact on safety, the environment and vessel operations is recognised

**1.4** Hazards associated with the transport of cargo are clarified according to emergency response documentation

**1.5** Hazard controls associated with tanker cargo are employed according to organisational procedures

**2 Comply with legislative and organisational requirements for safe transfer and transport of tanker cargo**

**2.1** Safety data sheets (SDS)/material safety data sheets (MSDS) relevant to cargo are accessed and procedures for tanker safety and safety management are identified

**2.2** SDS/MSDS are interpreted to identify relevant cargo-related hazards to the vessel and to personnel

- |  |            |   |
|--|------------|---|
|  | <b>2.3</b> | Legislative and organisational requirements are interpreted to identify appropriate actions for safe transfer and transport of cargo                |
| <b>3 Take precautions to prevent hazards</b>   | <b>3.1</b> | Organisational policies and procedures to minimise hazards are identified   |
|  | <b>3.2</b> | Type and severity of hazard posed by cargo is recognised  |
|  | <b>3.3</b> | Transfer and transport of cargo is monitored to prevent hazards   |
|  | <b>3.4</b> | Monitoring equipment, where installed, is regularly inspected and used according to organisational procedures                                       |
| <b>4 Recognise hazardous situation</b>   | <b>4.1</b> | Source of hazard is identified according to organisational procedures   |
|  | <b>4.2</b> | Risk is assessed considering severity and likelihood of consequences  |
|  | <b>4.3</b> | Control measures to minimise risk are implemented to level of responsibility or referred to appropriate person for permission or further action     |
|  | <b>4.4</b> | Containment procedures are applied, where appropriate   |
|  | <b>4.5</b> | Appropriate safety procedures are followed and personal protective equipment (PPE) is used according to organisational procedures                   |
|  | <b>4.6</b> | Risk is eliminated where possible, and if not practical, actions are taken to control risk  |
|  | <b>4.7</b> | Appropriate firefighting equipment is identified to carry out firefighting operations   |
| <b>5 Take precautions to prevent pollution of the environment from the release of oil or chemicals</b> | <b>5.1</b> | Procedures to prevent pollution are identified and observed at all times  |
|  | <b>5.2</b> | Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and organisational procedures |

- 5.3 All relevant information is immediately reported to appropriate persons when a spill is detected or a malfunction has occurred that poses a risk of a spill
- 5.4 All required spill containment procedures are correctly implemented according to regulatory requirements and organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARA002 Contribute to safe cargo operations on oil and chemical tankers.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA013 Contribute to basic cargo operations on oil and chemical tankers (basic oil and chemical)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assisting in implementing shipboard spill containment procedures
- applying cargo operations, including:
  - cargo handling equipment
  - loading, unloading and care in transit
  - piping systems and valves
  - tank cleaning, purging, gas-freeing and inerting
- communicating clearly and effectively
- correctly identifying safety data sheets (SDS)/material safety data sheets (MSDS), relevant cargo-related hazards to vessel and to personnel, and taking appropriate actions
- ensuring cargo operations are carried out according to accepted principles and procedures to ensure safety of operations
- identifying and acting on hazardous situations
- interpreting and applying knowledge of tanker layouts, tanker cargo features, characteristics and hazards, and related hazard prevention strategies to duties on various types of tankers and gas carriers
- reading and interpreting SDS/MSDS
- recognising problems and hazards that can arise when managing safety on a tanker, taking appropriate remedial action and initiating appropriate solutions
- reporting relevant information to the responsible person.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actions to be taken in the event of spillage
- alarms
- ballast voyage
- cargo and pumps
- cargo heating systems
- cargo measurement systems
- crude oil washing
- effects of oil and chemical pollution on human and marine life
- electrical safety precautions
- emergency procedures and emergency shutdown (ESD)
- features and characteristics of oil and chemical tankers
- features and characteristics of various types of tanker cargo
- firefighting agents used to extinguish oil and chemical fires
- firefighting systems on tankers, including:
  - firefighting agents
  - fixed dry chemical systems
  - fixed foam systems
  - portable foam systems
- fire hazards associated with cargo handling and transportation of hazardous and noxious liquids in bulk
- functions and processes for the calibration of various types of measuring instruments and devices used to test environments on tankers and gas carriers
- general arrangement and construction of tankers
- hazard control procedures on oil and chemical tankers
- hazards and control measures associated with tanker cargo operations
- hazards associated with:
  - carriage of bulk liquids and chemicals
  - tanker operations
- hazards to the environment
- inert gas systems
- information on SDS/MSDS
- loading and unloading
- measures to be taken in the event of spillage
- oil and chemical tanker fire response organisation and actions to be taken, including in the event of spillage
- physical properties of oil and chemicals, including:
  - chemical symbols
  - pressure and temperature, including vapour
  - pressure/temperature relationship

- types of electrostatic charge generation
- piping systems and valves
- precautions to be taken before and during repair and maintenance work
- precautions to be taken when entering into enclosed spaces
- principles of chemistry as they relate to tanker operations
- procedures for the safe use of personal protective equipment (PPE), including:
  - breathing apparatus
  - resuscitators
- procedures to prevent air and water pollution
- safety measures for hot and cold work
- ship to shore safety checklists
- shipboard pollution prevention plans, including:
  - shipboard procedures to prevent pollution and spill-containment procedures
  - Shipboard Oil Pollution Emergency Plan (SOPEP)
  - Shipboard Marine Pollution Emergency Plan (SMPEP) for noxious liquid substances (NLS)
- slops and slops disposal
- tanker cleaning, purging, gas-freeing and inerting
- tanker safety culture and safety management
- types of hazards and hazard controls, including:
  - anti-static measures
  - atmospheric control
  - cargo inhibition
  - corrosion
  - electrostatic
  - environmental
  - explosions and flammability
  - gas testing
  - health hazards
  - importance of cargo compatibility
  - inerting, drying and monitoring techniques
  - oxygen deficiency
  - reactivity
  - segregation
  - sources of ignition
  - toxicity
  - vapour leaks and clouds
  - ventilation
- tank evacuating (rescue and escape) equipment
- terminology relating to the structure capacities and operations of various types of tankers and gas carriers

- types of oil and chemical tankers
- use of SDS/MSDS to provide first aid
- work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry, including:
  - firefighting agents
  - fixed dry chemical systems
  - fixed foam systems
  - portable foam systems.

# **MARAO14 Contribute to basic operations of a ship subject to IGF Code**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to contribute to safe operations of a ship subject to International Code of Safety for Ships Using Gases or Other Low-Flashpoint Fuels (IGF Code).

This unit applies to people working in the maritime industry in the capacity of:

- Chief Mate
- Deck Officers
- Engineering Officers
- Engineers
- Masters
- Ratings.

## **Licensing/Regulatory Information**

This unit is equivalent and delivers the objectives of the following STCW provisions:

- STCW Reg V/3 (4 and 5), Code Section A-V/3 (1), Table A-V/3-1.

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Chief Mate, Deck Officers, Engineering Officers, Engineers, Masters and Ratings for basic operations on ships subject to IGF Code and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

A – Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Contribute to safe operation of ship

1.1 Communication with personnel is clear, concise and accurate and information is understood and acted upon

1.2 Cargo operations are planned, risk is managed and work carried out in accordance with accepted principles and procedures to ensure safety of operations and avoid pollution of the marine environment

#### 2 Take precautions to prevent hazardous situation

2.1 Hazards to ship and personnel are correctly identified using safety data sheets (SDS)/material safety data sheets (MSDS) and appropriate actions are taken in accordance with workplace procedures

2.2 Hazardous situations are identified and appropriate actions are taken in accordance with workplace procedures

#### 3 Apply work health and safety (WHS)/occupational health and safety (OHS) measures

3.1 Procedures designed to safeguard personnel and the ship are observed at all times

3.2 Appropriate safety procedures are followed and personal protective equipment (PPE) is used correctly

3.3 First aid requirements are identified and followed in

		accordance with SDS/MSDS, as required
<b>4</b>	<b>Carry out firefighting operations</b>	<p><b>4.1</b> Emergency procedures are followed in the event of an emergency</p> <p><b>4.2</b> Mustering signals are identified correctly and actions are taken in accordance with workplace procedures</p> <p><b>4.3</b> PPE and devices are selected and are appropriate to firefighting operations</p> <p><b>4.4</b> Timing and sequence of individual actions are appropriate to the prevailing circumstances and conditions</p> <p><b>4.5</b> Fire is extinguished using appropriate procedures, techniques and firefighting agents</p>
<b>5</b>	<b>Respond to emergency</b>	<p><b>5.1</b> Type and urgency of emergency is identified correctly and in accordance with emergency procedures</p> <p><b>5.2</b> Actions taken are in accordance with emergency procedures and contingency plans</p>
<b>6</b>	<b>Take precautions to prevent environmental pollution</b>	<p><b>6.1</b> Procedures to prevent pollution are identified and observed at all times</p> <p><b>6.2</b> All required spillage, leakage and venting procedures are correctly implemented according to regulatory requirements and workplace procedures</p>

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA014 Contribute to basic operations of a ship subject to IGF Code**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying basic knowledge of hazard controls protection against cryogenic damages
- applying fuel storage system operations
- applying hazard identification and risk control measures
- applying physical properties of fuels
- applying relevant international regulations, codes, industry guidelines and industry standards relevant to the safe operations on ships subject to International Code of Safety for Ships Using Gases or Other Low-Flashpoint Fuels (IGF Code)
- applying safety requirements and safety management systems
- correctly identifying and applying safety data sheets (SDS)/material safety data sheets (MSDS) to identify fuel characteristics on IGF ships
- following safe work practices, workplace procedures and emergency response procedures
- identifying and acting on hazardous situations
- identifying and using correct firefighting agents and methods to control and extinguish fires relevant to fuels onboard IGF ships
- identifying hazards that can arise when working with fuel systems and handling fuel
- identifying hazards and treating basic first aid incidents, as appropriate
- interpreting and applying knowledge of tanker layouts, tanker cargo features, characteristics and hazards to inform decision making
- selecting and using safety equipment and protective devices
- using gas-measuring instruments and equipment to test gas
- using personal protective equipment (PPE) and devices appropriate to an emergency situation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- awareness of function of gas measuring instruments and gas-measuring instruments, including gas testing
- basic knowledge of emergency procedures, including emergency shutdown (ESD) procedures
- emergency response procedures, including:
  - leakage
  - spillage
  - venting
- firefighting operations, including:
  - fire organisation and actions to be taken in the event of a fire
  - firefighting methods and agents to control and extinguish fires in conjunction with the different fuels
  - firefighting system operations
  - special hazards associated with fuel systems and handling
- fundamental knowledge of fuel systems and fuel storage systems subject to IGF Code, including:
  - fuels addressed in the IGF Code
  - general arrangement of fuel storage systems
  - hazard zones and areas
  - monitoring, control and safety systems onboard IGF ship
  - standard fire safety plan
  - storage of fuels onboard IGF ships, including:
    - atmospheric
    - compressed storage of fuels
    - cryogenic
  - types of fuel systems
- fundamentals of fuels and fuel storage systems operations, including:
  - atmospheric, compressed and cryogenic storage
  - basic bunkering operations
  - basic bunkering systems
  - fuel leak monitoring and detection
  - piping systems and valves
  - protection against cryogenic accidents
  - relief systems and protection screens
- fundamental knowledge of measures to be taken in the event of fuel leakage, spillage and venting of fuels, including reporting relevant information to responsible persons
- fundamental knowledge of physical properties of fuels onboard IGF ships, including:
  - properties and characteristics
  - pressure and temperature

- vapour pressure/temperature relationship
- fuel storage systems and storage systems, including:
  - atmospheric, cryogenic and compressed fuel storage
  - fire safety plan
  - general arrangement of fuel storage systems
  - hazard zones and areas
  - monitoring, control and safety systems
  - using IGF Code to identify fuels and fuel systems relevant to the IGF ship
- hazards, including:
  - corrosion
  - electrostatic
  - environmental
  - explosion
  - extremely low temperatures
  - flammability
  - fuel batch differences
  - health hazards
  - ignition
  - pressure
  - reactivity
  - sources of ignition
  - toxicity
  - vapour clouds
  - vapour leaks
- hazard risk controls, including:
  - anti-static measures
  - atmospheric control
  - emptying, inerting, drying and monitoring techniques
  - gas testing
  - inhibition
  - measures to prevent:
    - explosion
    - fire
    - ignition
- safety requirements and safety management systems
- selection and use of specialised safety equipment and protective devices, including:
  - breathing apparatus
  - protection against cryogenic damages (LNG)
  - protective clothing
  - rescue and escape equipment

- resuscitators
- segregation
- ventilation
- safe working practices and procedures in accordance with legislation and industry guidelines and personal shipboard safety, including:
  - precautions to be taken before and during repair and maintenance work
  - precautions to be taken before entering hazardous spaces and zones
  - safety measures for hot and cold work
- selection of personal protective equipment (PPE) when responding to a spillage and leakage of fuels
- using SDS/MSDS to understand fuel characteristics on IGF ships and basic first aid treatments.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARAO15 Contribute to safe anchor handling and towing operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to undertake a range of offshore anchor handling and towing activities on board an Anchor Handling Tug Supply (AHTS) vessel within the limits of responsibility of an Integrated Rating and under the direction of the officer in charge or Master.

This unit applies to people working in the maritime industry in the capacity of:

- Integrated Rating working offshore, assigned to specific anchor handling and towing duties and responsibilities.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Integrated Ratings working offshore and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers. (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C - Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Recognise types of anchor handling and towing equipment, vessels and towed objects**

- 1.1** Required safety precautions, including fatigue management, are identified
- 1.2** Features of various AHTS are outlined
- 1.3** Types of anchor handling and towing operations are identified
- 1.4** Properties of towed objects are identified and their impact on safety, the environment and vessel operations is recognised
- 1.5** Properties of anchor handling and towing equipment and tools are identified and their impact on safety and vessel operations is recognised
- 1.6** Hazards associated with anchor handling and towing are identified
- 1.7** Hazard controls associated with anchor handling and towing are employed according to organisational procedures

#### **2 Prepare anchor handling and towing deck equipment, tools and machinery for use**

- 2.1** Appropriate personal protective equipment (PPE) and machinery are selected, used and stored according to work health and safety (WHS)/occupational health and safety (OHS) requirements
- 2.2** Routine pre-operational checks are carried out on anchor handling and towing deck equipment, tools and machinery according to manufacturer specifications, regulatory and organisational requirements
- 2.3** Deviations from normal operations are promptly identified and rectified

- |   |            |  |
|---|------------|--|
|   | <b>2.4</b> | Adjustments are made to achieve a safe and efficient operation   |
|   | <b>2.5</b> | Inability to start machinery is reported promptly and accurately to appropriate personnel  |
| <b>3 Operate anchor handling and towing deck tools and equipment</b>                                  | <b>3.1</b> | Deck equipment, tools and machinery are operated in a safe and controlled manner within defined operating limits when running to achieve optimum safety and efficiency |
|   | <b>3.2</b> | Deviations from normal operations are promptly identified  |
|   | <b>3.3</b> | Action is taken to rectify basic operational faults to maintain optimum safety and efficiency  |
|   | <b>3.4</b> | Appropriate action is taken in a malfunction or emergency  |
| <b>4 Check and complete anchor handling and towing deck equipment, tools and machinery operations</b> | <b>4.1</b> | Equipment and machinery shutdown procedures are carried out according to manufacturer specifications and organisational procedures                                     |
|   | <b>4.2</b> | Equipment and machinery damage, malfunctions or irregular performance are recorded and reported according to organisational procedures                                 |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARA008 Contribute to safe anchor handling and towing operations

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

## **Assessment Requirements for MARA015 Contribute to safe anchor handling and towing operations**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- following manufacturer recommendations, regulations and vessel operating procedures
- identifying and taking appropriate action to rectify an operational fault
- implementing and working in a safe and controlled manner
- maintaining safe workloads within ships specifications
- selecting and using appropriate machinery and equipment
- undertaking pre-operational checks
- using anchor handling, towing and deck equipment
- using deck machinery
- using deck tools
- using operational techniques for specific location, operation and weather conditions
- using verbal and non-verbal means of communication in a clear and appropriate manner to effectively communicate with other crew members.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- anchor handling and towing equipment, including:
  - capstan winches
  - towing pins
  - towing winches
  - tugger winches
  - wire stoppers/shark jaws
  - working winches
- anchor handling and towing tools, including:
  - anchors
  - buoys (surface and subsea)
  - capstan winches and wires
  - capstans
  - chains
  - connecting links (kenter, baldt, hinge and pear)
  - fibre rope
  - gob arrangements
  - grapnels
  - J hooks
  - oil rig cranes
  - shackles
  - swivels
  - towed barges
  - towed rigs
  - towing pins
  - tugger winches and wires
  - wire stoppers/shark jaws
  - wires (towing and work)
- legislation and guidance affecting anchor handling and towing operations
- operational faults, including:
  - breakage of wire
  - failure of deck tools and equipment
  - machinery breakdowns
- pre-operational checks, including:
  - deck equipment
  - equipment operational readiness
  - inspecting safety guards
  - pre-start and safety checks, including:

- emergency stops
  - oils, greases and lubricants
- safe and controlled manner, including:
  - maintaining safe workloads within ships specifications, including:
    - safe working load (SWL)
    - working load limit (WLL)
  - selecting and using appropriate machinery and equipment
  - using operational techniques for specific location, operation and weather conditions
- safe working procedures
- terminology and abbreviations used in the maritime industry specific to anchor handling and towing operations
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Practical assessment must occur onboard an Anchor Handling Tug Supply (AHTS) vessel using workplace operational situations, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARAO16 Contribute to safe cargo operations on offshore support vessels**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to undertake a range of offshore activities on board an offshore support vessel (OSV).

It includes deck preparation, transfer of deck cargoes, bulk cargo operations and operations with deck equipment within the limits of responsibility of an Integrated Rating and under the direction of the officer in charge or Master.

This unit applies to people working in the maritime industry assigned to specific activities and responsibilities in the capacity of:

- Integrated Rating working offshore.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Integrated Rating working offshore and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## Competency Field

A – Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |   |   |
|---|---|
| <b>1 Recognise characteristics of OSV cargo and OSVs to ensure the safe transfer and transport of cargo</b>   | <b>1.1</b> Features of various offshore installation types, vessels rig types and operations are outlined<br><br><b>1.2</b> Cargo operations of OSVs are identified<br><br><b>1.3</b> Properties of cargo being transported are identified and their impact on safety, the environment and vessel operations is recognised<br><br><b>1.4</b> Hazards associated with the transport of cargo are clarified according to emergency response documentation<br><br><b>1.5</b> Hazard controls associated with OSV cargo are employed according to organisational procedures |
| <b>2 Comply with legislative and organisational requirements for safe transfer and transport of OSV cargo</b> | <b>2.1</b> Safety data sheets (SDS)/material safety data sheets (MSDS)/International Maritime Dangerous Goods (IMDG) Code relevant to cargo are accessed and safety management procedures are identified<br><br><b>2.2</b> SDS/MSDS/IMDG Code are interpreted to identify relevant cargo-related hazards to the vessel and to personnel<br><br><b>2.3</b> Legislative, organisational and company-specific requirements are interpreted to identify appropriate actions for safe transfer and transport of cargo  |

- |          |  |   |
|----------|--|---|
|          | <b>2.4</b>   | Transfer of cargo is undertaken under direction and within the limits of responsibility of an Integrated Rating   |
| <b>3</b> | <b>Take precautions to prevent hazards</b>   |   |
|          | <b>3.1</b>   | Organisational policies and procedures to minimise hazards are identified   |
|          | <b>3.2</b>   | Type and severity of hazards posed by OSV cargo is recognised   |
|          | <b>3.3</b>   | Transfer and transport of cargo is monitored to prevent hazards   |
|          | <b>3.4</b>   | Monitoring equipment, where installed, is regularly inspected and used according to organisational procedures   |
| <b>4</b> | <b>Respond to hazardous situation</b>  |   |
|          | <b>4.1</b>   | Source of hazard is identified according to organisational procedures   |
|          | <b>4.2</b>   | Risk is assessed considering severity and likelihood of consequences  |
|          | <b>4.3</b>   | Control measures to minimise risk are implemented to level of responsibility or referred to appropriate person for permission or further action             |
|          | <b>4.4</b>   | Containment procedures are applied where appropriate  |
|          | <b>4.5</b>   | Appropriate safety procedures are followed and personal protective equipment (PPE) is used according to organisational procedures                           |
|          | <b>4.6</b>   | Risk is eliminated where possible   |
| <b>5</b> | <b>Take precautions to prevent pollution of the environment from the release of liquid or dry bulk cargo</b> |   |
|          | <b>5.1</b>   | Procedures to prevent pollution are identified and observed at all times  |
|          | <b>5.2</b>   | Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and organisational procedures         |
|          | <b>5.3</b>   | All relevant information is immediately reported to appropriate persons when a spill is detected or a malfunction has occurred that poses a risk of a spill |

- 5.4** All required spill containment procedures are correctly implemented according to regulatory requirements and organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARA007 Contribute to safe cargo operations on offshore support vessels

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA016 Contribute to safe cargo operations on offshore support vessels**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assisting in implementing shipboard cargo securing arrangements
- carrying out cargo operations safely and according to accepted policies and procedures, including:
  - loading and unloading dry bulk cargo
  - loading and unloading of liquid cargo
  - loading, unloading and care in transit of deck cargo
  - piping systems and deck valve arrangements
  - tubular cargo securing arrangements
- ensuring safe stowage or lashing of deck cargo
- identifying and developing awareness of hazardous situations
- identifying safety data sheets (SDS)/material safety data sheets (MSDS) and/or International Maritime Dangerous Goods (IMDG) Code, relevant cargo-related hazards to vessel and to personnel, and taking appropriate action for safe transfer and stowage of cargo
- interpreting and applying offshore support vessel (OSV) layouts, OSV cargo features, characteristics and hazards, and related hazard prevention strategies to duties on various types of OSVs
- reading and interpreting SDS/MSDS and/or IMDG Code
- recognising hazards and other problems that can arise when managing safety on an OSV, taking appropriate remedial action and initiating appropriate solutions
- reporting relevant information to the responsible person
- using verbal and non-verbal means of communication in a clear and appropriate manner to effectively communicate with other crew members.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- actions and measures to be taken in the event of spillage
- cargo operation procedures, including loading and unloading cargo
- features and characteristics of various types of OSVs, including:
  - general arrangement and construction
  - types of offshore installations, rigs and platforms
  - types of OSVs
- general arrangement and construction of OSVs
- hazards including:
  - electrostatic hazards
  - environmental hazards, including the effects of oil and chemical pollution on human and marine life
  - explosion and flammability hazards
  - hazards associated with:
    - below deck cargo operations
    - OSV bulk and liquid
    - OSV deck cargo operations
  - health hazards
  - pressure hazards
  - sources of ignition
  - toxicity hazards
- hazard control procedures on OSVs
- hazard risk control measures, including:
  - atmospheric control
  - cargo securing arrangements, including ensuring safe stowage or lashing of deck cargo
  - cargo segregation
  - equipment colour coding
  - personal protective equipment (PPE)
- information on SDS/MSDS and/or IMDG Code
- OSV safety culture and safety management systems (SMS)
- piping systems, hoses and valves
- procedures for the safe use of PPE
- properties of cargo being transported, including:
  - deck cargo types and characteristics
  - hazards of noxious liquid substances (NLS) cargo
  - hazards of offshore cargo operations
  - hazards of oil cargoes
  - tubular cargo stability and securing

- shipboard procedures to reflect current International Convention for the Prevention of Pollution from Ships (MARPOL) regulations to prevent pollution
- terminology relating to the structure and operations of various types of OSVs
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur onboard an OSV workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- cargo, including:
  - containerised deck cargo
  - drilling brines
  - drilling muds
  - dry bulk cargo
  - heavy lifts and unusual lifts
  - NLS
  - oil
  - tubular deck cargo
- cargo securing equipment, including:
  - capstan winches and wires
  - cargo securing manual
  - cargo securing pins
  - chocks
  - dollies
  - tugger winches and wires
- range of relevant practical and written exercises, case studies and simulations that reflect typical conditions found in the workplace
- tools, equipment, machinery, materials and PPE currently used in industry

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

## **MARAO17 Maintain seaworthiness of the ship (ship stability)**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to determine the stability and trim of a ship to ensure that stability conditions of ship comply with intact stability criteria under all conditions of loading, discharge and transfer of cargo.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Watchkeeper Deck.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

#### **Near Coastal Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

#### **Blue Waters Qualifications:**

- This unit is one of the requirements to obtain AMSA certification as a Master of a commercial vessel less than 500 gross tonnage (GT) or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

A – Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Calculate stability

#### 2 Manage weight distribution

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Ship stability data book is accessed and checked for endorsement
- 1.2 Sample worked data is interpreted to determine ship safety parameters
- 1.3 Transverse and longitudinal stability is accurately calculated using data extracted from the body of ship stability data book
- 1.4 Stability calculations are checked to ensure they correlate with data set out in ship stability book
- 1.5 Spurious or incorrect information is recognised and recalculated
- 1.6 Trim, draughts and list are adjusted, as required
- 1.7 Stability calculations are conducted at a time, frequency and scope appropriate to voyage
- 2.1 Stability calculations are used to plan weight distribution to ensure assigned load line conditions are not exceeded
- 2.2 Weight distribution is controlled to maintain ship within acceptable stability and stress limits for loading

- operation and at all stages of voyage
- 2.3** Appropriate action is taken when weight distribution is compromising ship safety
- 3 Maintain records of stability management**
- 3.1** Data and information related to stability management is accurately recorded
- 3.2** Data and information related to stability management is filed and stored according to organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARA005 Maintain vessel stability.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

## Assessment Requirements for MARA017 Maintain seaworthiness of the ship (ship stability)

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying appropriate actions to correct weight distribution, including:
  - amending the ship loading plan
  - ballast management
  - reduction of free surface
- applying stability, trim and stress tables, diagrams and stress calculating equipment
- carrying out calculations required when determining ship stability, list and trim
- managing ship stability in a range of conditions
- managing the loading and weight distribution of a ship to ensure assigned load line conditions are not exceeded
- reading and interpreting ship specifications and design drawings
- recognising problems affecting ship stability and trim
- undertaking stability calculations, including:
  - calculation of areas under the curve
  - changes in draft and trim due to differing water densities
  - correction for free surface effect
  - dead weight
  - displacement
  - draft and trim
  - effect of slack tanks
  - metacentric height
  - moment of static stability at small angles of heel
  - movement of the centre of gravity
  - tonnes per centimetre (TPC)
  - transverse and longitudinal stability
  - values for righting levers and construction of the curve of stability.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- buoyancy, including:
  - fundamental actions to be taken in the event of partial loss of intact buoyancy
- calculation of ships stability using the inclining experiment
- data and information related to stability management, including:
  - cargo stowage and loading plan
  - records of stability calculations
  - safety management system (SMS)
  - stability and trim booklet
- effects of angle of loll
- effects of beam and form coefficient on the stability of a ship
- effects of density of sea water on the draught and freeboard of a ship, including freshwater allowance and dock water allowance
- effects of free surface on the stability of a ship
- features of the load-line and draught marks of a ship and methods for performing related calculations
- fundamentals of watertight integrity
- principal stresses that act on the structure of a ship
- principal structural members of a ship and the proper names for various parts
- problems related to the control of trim, stability and stresses of ships and appropriate actions and solutions
- sections of the International Maritime Organization (IMO), International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW) and Australian Maritime Safety Authority (AMSA) Marine Orders related to intact stability criteria
- stability, trim and stress tables, diagrams and stress calculating equipment
- theory and calculations of ship stability and dynamics, including movement of weights
- use of computer programs in calculating stability.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARA018 Manage advanced chemical tanker cargo operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to manage advanced chemical tanker cargo operations.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Mate
- Deck Officers
- Engineering Officers
- Engineers
- Masters
- Ratings.

## Licensing/Regulatory Information

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg V/1-1 (5 and 6) and Code Section A-V/1-1 (3), Table A-V/1-1-3.

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Chief Mate, Deck Officers, Engineering Officers, Engineers, Masters or Ratings for advanced operations on chemical tankers and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

A - Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Establish safe operating limits**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Communication with personnel is clear, concise and accurate and information is understood and acted upon
- 1.2** Cargo operations are planned, risk is managed and carried out in accordance with accepted principles and procedures to ensure safety of operations and avoid pollution of the marine environment
- 1.3** Potential non-compliance with cargo operation-related procedures are identified and rectified promptly
- 1.4** Cargo operations are carried out in a safe manner, taking into account chemical tanker designs, systems and equipment
- 1.5** Proper loading, stowage and unloading of cargo is undertaken to ensure that stability and stress conditions remain within safe limits at all times
- 1.6** Actions are taken and procedures followed and correctly applied, and the appropriate shipboard cargo-related equipment used
- 1.7** Calibration and use of monitoring and gas detection equipment are in compliance with operational practices and procedures
- 1.8** Procedures for monitoring and safety systems ensure that all alarms are detected promptly and acted upon in accordance with workplace emergency procedures
- 1.9** Personnel are allocated duties and informed of procedures and standards of work to be followed in a

- manner appropriate to the individuals concerned and in accordance with safe operational practices
- |  |            |  |
|--|------------|--|
| <b>2 Recognise physical and chemical properties of chemical cargoes</b>                      | <b>2.1</b> | Information resources are used effectively to identify properties and characteristics of noxious liquid substances (NLS) and related gases and their impact on safety and environmental protection |
|  | <b>2.2</b> | Information resources are used effectively to identify properties and characteristics of NLS and related gases and their impact on vessel operation  |
| <b>3 Take precautions to prevent hazards</b>   | <b>3.1</b> | Cargo-related hazards to the vessel are identified, risk assessed, and control measures are implemented  |
|  | <b>3.2</b> | Cargo-related hazards to personnel are correctly identified and proper control measures are taken  |
| <b>4 Apply work health and safety (WHS)/occupational health and safety (OHS) precautions</b> | <b>4.1</b> | Procedures designed to safeguard personnel and the ship are observed at all times  |
|  | <b>4.2</b> | Safe working practices are observed, and appropriate safety and protective equipment is correctly used   |
|  | <b>4.3</b> | Working practices are in accordance with legislative requirements, codes of practice, permits to work and environmental concerns   |
|  | <b>4.4</b> | Breathing apparatus is used correctly by personnel   |
|  | <b>4.5</b> | Entry into enclosed spaces is undertaken in accordance with workplace procedures   |
| <b>5 Respond to emergencies</b>  | <b>5.1</b> | Type and impact of the emergency is promptly identified, and the response actions conform with workplace emergency procedures and contingency plans  |
|  | <b>5.2</b> | Order of priority, the levels and timescales of making reports and informing personnel, are undertaken relevant to the nature of the emergency and accurately reflect the urgency of the problem   |
|  | <b>5.3</b> | Evacuation, emergency shutdown (ESD) and isolation procedures are undertaken appropriate to the nature of the emergency and are implemented promptly   |

	<b>5.4</b>	Medical emergency procedures are identified and required actions taken in a medical emergency conform to current recognised first aid practices and international guidelines
<b>6 Take precautions to prevent pollution of the environment</b>	<b>6.1</b>	Operations are conducted in accordance with accepted principles and workplace procedures to prevent pollution of the atmosphere
	<b>6.2</b>	Operations are conducted in accordance with accepted principles and workplace procedures to prevent pollution of the environment
<b>7 Monitor and control compliance with legislative requirements</b>	<b>7.1</b>	Cargo handling is in compliance with relevant IMO instruments
	<b>7.2</b>	Cargo handling procedures are in compliance with industrial standards and codes of safe working practices
	<b>7.3</b>	Workplace documentation is completed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARA018 Manage advanced chemical tanker cargo operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying pump theory, characteristics and types of cargo pumps
- applying relevant international regulations, codes, industry guidelines, industry standards and port regulations
- applying safe work practices and risk assessments for personal and shipboard safety
- applying safe work practices following a collision, grounding and spillage
- applying safe work practices when entering enclosed spaces, hot and cold work, conducting electrical work, before and during repair work and maintenance work
- applying safety management system (SMS) and requirements
- calibrating and using monitoring and gas-detection systems, instruments and equipment
- communicating effectively with personnel and reporting authorities
- conducting cargo operations within acceptable safety limits, including stress limits at all times
- evaluating tanker design, systems and equipment and cargo to inform decision making during cargo operations
- identifying and evaluating design, characteristics of chemical tanker systems and equipment to inform decision making during cargo operations
- managing and supervising personnel with cargo-related responsibilities
- monitoring enclosed space rescue, medical emergency, fire, system failure or failure of services essential to cargo, collision, grounding and spillage emergencies
- monitoring loading, unloading, care and handling of chemical cargo
- performing cargo measurements and calculations
- using all checklists when conducting cargo operations relevant to allocated job duties, certification and level of authority
- using basic chemistry, physics and correct definitions to identify and evaluate physical and chemical properties of cargo
- using loading and unloading plans
- using safety data sheets (SDS)/material safety data sheets (MSDS)
- using personal protective equipment (PPE) and devices.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alarms and trips, including:
  - high-level alarms
  - low-level alarms
- calibration of monitoring and gas-detection systems, instruments and equipment
- cargo area venting and accommodation ventilation
- cargo measurements and calculations
- chemical cargo operations, including:
  - ballasting and deballasting
  - cargo compatibility and segregation
  - cargo residue operations
  - gas-freeing
  - heating and cooling requirements, including consequences to adjacent cargo
  - high-viscosity cargo
  - inerting
  - inhibition and stabilisation requirements
  - loading and unloading plans
  - operational tank entry
  - ship-to-ship transfers
  - tank atmosphere control
  - tank cleaning operations
- compliance requirements, including:
  - codes of safe working practices
  - environmental procedures
  - industrial standards
  - industry guidelines
  - International Bulk Chemical (IBC) Code
  - International Convention for the Prevention of Pollution from Ships (MARPOL)
  - permits to work
  - port regulations
  - International Convention for the Safety of Life at Sea (SOLAS)
- consequences, including dangers of non-compliance with relevant legislation and regulations
- development and application of cargo operation plans, procedures and checklists
- effect of bulk liquid cargoes on trim, stability and structural integrity
- emergency procedures, including:
  - cargo operations emergency shutdown (ESD)

- cargo reactivity
- collision
- ESD
- enclosed space rescue
- failure of services essential to cargo
- firefighting on chemical tankers
- grounding
- isolation
- jettisoning cargo
- medical
- ship emergency response plans
- spillage
- system failure and failure of services essential to cargo
- firefighting systems, including:
  - fire protection and extinguishing systems
  - fire-extinguishing agents, advantages and disadvantages
- hazards and control measures, including:
  - corrosivity
  - electrostatic hazards
  - explosion
  - flammability
  - health hazards
  - high-density cargo
  - inert gas composition
  - low boiling point cargoes
  - oxygen deficiency
  - polymerising cargo
  - reactivity
  - solidifying cargo
  - toxicity
- international regulations, codes, industry guidelines, industry standards and port regulations, including:
  - codes of safe working practice
  - environmental procedures
  - IBC Code
  - MARPOL
  - SOLAS
  - International Medical Guide for Ships
  - SDS/MSDS
  - Medical First Aid Guide (MFAG)

- medical first aid procedures
- permits to work
- workplace procedures
- loading and unloading plans
- loading, unloading, care and handling of cargo
- SDS/MSDS
- medical first aid procedures, including:
  - International Medical Guide for Ships
  - MFAG
- monitoring and safety systems, including the ESD system
- physical and chemical properties of cargo of noxious liquid substances (NLS), including:
  - chemical cargo categories, including:
    - corrosive
    - explosive
    - flammable
    - toxic
  - chemical groups and industrial usage
  - reactivity of cargo
- pollution prevention procedures, including:
  - controlled operational pollution at sea
  - pollution prevention requirements of ships construction and equipment
  - pollution prevention of the atmosphere and environment
- pressure systems, including:
  - tank and cargo pipeline pressure
  - temperature control systems and alarms
- pump theory and characteristics, including:
  - safe operation of cargo pumps
  - types of cargo pumps
- rationale, practical application and implications of ship design, systems and equipment, including:
  - impact on decision making in typical and emergency situations
  - location, positioning and segregation
  - operational advantages, disadvantages and limitations
- risk assessments
- safe operation of systems and equipment
- safe working practices, including precautions, risk assessment and personnel shipboard safety, including:
  - before and during repair and maintenance work
  - electrical safety
  - entering enclosed spaces

- hot and cold work
- selection and correct use of PPE, including personal monitors
- ship design, systems and equipment, including:
  - general arrangement and construction
  - pipeline and drainage systems
  - pumping arrangement and equipment
  - slop management
  - systems, including:
    - ballast systems
    - cargo area venting and accommodation ventilation
    - cargo heating and cooling systems
    - cargo-related electrical and electronic control systems
    - cargo tank environmental control systems
    - firefighting systems
    - gas detecting systems
    - gauging control systems and alarms
    - pipeline
    - pumping
    - tank and cargo pipeline pressure and temperature control systems and alarms
    - tank cleaning systems
    - tank, pipeline and fittings, material and coatings
    - vapour return/recovery systems
- tank construction and arrangement
- ship emergency response plans
- strategies for managing personnel and reporting bodies, including:
  - communicating urgency and nature of emergencies
  - confirming communication is clearly understood
  - delegating job tasks
  - level of authority
  - order of priority
  - timescales for reporting
- tank temperatures, impact of cargo on temperatures and typical settings
- tanker safety culture and implementation of SMS
- types, selection and correct use of different breathing apparatus
- using SDS/MSDS during operations and first aid
- work health and safety (WHS)/occupational health and safety (OHS) legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE currently used in industry).

# MARAO19 Manage advanced liquefied gas tanker cargo operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to manage advanced liquefied gas tanker cargo operations.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Mate
- Deck Officers
- Engineering Officers
- Engineers
- Masters
- Ratings.

## Licensing/Regulatory Information

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg V/1-2 (3 and 4) and Code Section A-V/1-2 (2), Table A-V/1-2-2.

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as Chief Mate, Deck Officers, Engineering Officers, Engineers, Masters or Ratings for advanced operations on liquefied gas tankers and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

A - Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Perform work safely and monitor all cargo operations**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Communication with personnel is clear, concise and accurate and information is understood and acted upon
- 1.2** Cargo operations are carried out in a safe manner, taking into account liquefied gas tanker designs, systems and equipment
- 1.3** Cargo operations are planned, risk is managed and carried out in accordance with accepted principles and procedures to ensure safety of operations and avoid pollution of the marine environment
- 1.4** Potential non-compliance with cargo operation-related procedures are identified and rectified promptly
- 1.5** Pumping operations are carried out in accordance with accepted principles and procedures relevant to the type of cargo
- 1.6** Proper loading, stowage and unloading of cargo is undertaken to ensure that stability and stress conditions remain within safe limits at all times
- 1.7** Actions taken and procedures are followed and correctly applied, and the appropriate shipboard cargo-related equipment used
- 1.8** Calibration and use of monitoring and gas detection equipment are in compliance with operational practices

		and procedures
	<b>1.9</b>	Procedures for monitoring and safety systems ensure that all alarms are detected promptly and acted upon in accordance with workplace emergency procedures
	<b>1.10</b>	Personnel are allocated duties and informed of procedures and standards of work to be followed in a manner appropriate to the individuals concerned and in accordance with safe operational practices
<b>2</b>	<b>Recognise physical and chemical properties of liquefied gas cargoes</b>	
	<b>2.1</b>	Information resources are used effectively to identify properties and characteristics of liquefied gases and their impact on safety, the environment and vessel operation
	<b>2.2</b>	Information resources are used effectively to identify properties and characteristics of related gases and their impact on safety and vessel operation
<b>3</b>	<b>Take precautions to prevent hazards</b>	
	<b>3.1</b>	Cargo-related hazards to the vessel are identified, risk assessed, and control measures are implemented
	<b>3.2</b>	Cargo-related hazards to personnel are correctly identified and proper control measures are taken
	<b>3.3</b>	Gas-detection devices are used in accordance with manuals and workplace practices
<b>4</b>	<b>Apply work health and safety (WHS)/occupational health and safety (WHS) precautions</b>	
	<b>4.1</b>	Procedures designed to safeguard personnel and the ship are observed at all times
	<b>4.2</b>	Safe working practices are observed, and appropriate safety and protective equipment is correctly used
	<b>4.3</b>	Working practices are conducted in accordance with legislative requirements, codes of practice, permits to work and environmental concerns
	<b>4.4</b>	Breathing apparatus are used correctly by personnel
	<b>4.5</b>	Entry into enclosed spaces is undertaken in accordance with workplace procedures
<b>5</b>	<b>Respond to emergencies</b>	
	<b>5.1</b>	Type and impact of the emergency is promptly identified, and the response actions conform with workplace emergency procedures and contingency plans

- |          |   |   |
|----------|---|---|
|          | 5.2   | Order of priority, the levels and timescales of making reports and informing personnel are undertaken relevant to the nature of the emergency and accurately reflect the urgency of the problem |
|          | 5.3   | Evacuation, emergency shutdown (ESD) and isolation procedures are undertaken appropriate to the nature of the emergency and are implemented promptly  |
|          | 5.4   | Medical emergency procedures are identified and required actions taken in a medical emergency conform to current recognised first aid practices and international guidelines                    |
| <b>6</b> | <b>Take precautions to prevent pollution of the environment</b>     |   |
|          | 6.1   | Operations are conducted in accordance with accepted principles and workplace procedures to prevent pollution of the atmosphere   |
|          | 6.2   | Operations are conducted in accordance with accepted principles and workplace procedures to prevent pollution of the environment  |
| <b>7</b> | <b>Monitor and control compliance with legislative requirements</b> |   |
|          | 7.1   | Cargo handling is conducted in compliance with relevant IMO instruments   |
|          | 7.2   | Cargo handling is conducted in compliance with industrial standards and codes of safe working practices   |
|          | 7.3   | Workplace documentation is completed in accordance with workplace procedures  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARA019 Manage advanced liquefied gas tanker cargo operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying pump theory, characteristics and types of cargo pumps and their safe operation
- applying relevant international regulations, codes, industry guidelines, industry standards and port regulations concerning the safe loading, unloading, care and handling of cargo
- applying safe preparation, procedures and checklists during pre-docking preparation, post-docking and loading cargo operations, during sea passage, unloading and ship-to-ship transfer
- applying safe work practices and risk assessments for personal and shipboard safety
- applying safe work practices following a collision, grounding and spillage
- applying safety management system (SMS) and requirements
- calibrating and using monitoring and gas-detection systems, instruments and equipment
- communicating effectively with personnel and reporting authorities
- conducting cargo operations with acceptable safety limits, including stress limits at all times
- conducting risk assessments
- evaluating liquefied gas tanker design, systems, equipment and cargo to inform decision making during cargo operations
- evaluating the effect of bulk liquid cargo on trim, stability and structural integrity, including use of trim and stability manuals during cargo operations
- managing and supervising personnel with responsibility for cargo-related responsibilities
- monitoring enclosed space rescue, emergency cargo valve operations, medical emergency, envelopment of ship in toxic or flammable vapour, fire, system failure or failure of services essential to cargo, jettisoning of cargo, collision, grounding and spillage emergencies
- monitoring hazards and control measures to manage toxicity, flammability, explosion, reactivity, corrosivity, inert gas composition, electrostatic, polymerising cargo, oxygen deficiency and health hazards
- monitoring plans and procedures for loading, unloading, care and handling of cargo
- monitoring SMS and requirements
- performing cargo measurements and calculations relevant to cargo operations

- using all checklists, procedures and applying safe preparations for all cargo operations
- using and monitoring cargo handling equipment and instrumentation
- using fundamental chemistry, physics and correct and relevant definitions to ensure the safe carriage of liquefied gases in bulk on liquefied gas tanker ships
- using liquefied gas tanker design, systems and equipment to inform decision making during cargo operations
- using loading and unloading plans
- using safety data sheets (SDS)/material safety data sheets (MSDS), International Bulk Chemical (IBC) Code and International Code for the Construction and Equipment of Ships Carrying Liquefied Gases in Bulk (IGC Code)
- using personal protective equipment (PPE) and devices
- using SDS/MSDS during cargo operations and first aid incidents.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alarms and trips, including:
  - high-level alarms
  - low-level alarms
- calibration and use of monitoring and gas-detection systems, instruments and equipment
- cargo area venting and accommodation ventilation
- cargo measurements and calculations, including:
  - boil-off cargo calculations
  - gas phase
  - liquid phase
  - on board quantity (OBQ)
  - remain on board (ROB)
- cargo heating systems
- cargo-related electrical and electronic control systems, including automatic detection systems
- checklists, safe work procedures and safety preparations for all cargo operations, including:
  - pre-docking preparation, including:
    - gas-freeing
    - inerting
    - warm-up
  - post-docking and loading, including:
    - closed loop sampling
    - cooling down
    - deballasting

- gassing up
- inerting (oxygen and dew point reduction)
- loading
- sampling
- tank inspections
- sea passage, including:
  - boil-off
  - cooling down
  - inhibiting
  - pressure maintenance
- unloading, including:
  - ballasting
  - cleaning systems
  - stripping systems
  - systems to make the tank liquid-free
- ship-to-ship transfer
- compliance requirements, including:
  - environmental procedures
  - codes of safe working practices
  - industrial standards
  - industry guidelines
  - International Convention for the Prevention of Pollution from Ships (MARPOL)
  - International Convention for the Safety of Life at Sea (SOLAS)
  - permits to work
  - port regulations
- consequences, including dangers of non-compliance with relevant legislation and regulations
- design, systems and equipment of liquefied gas tankers, including:
  - ballast system
  - boil-off systems
  - cargo emergency shutdown (ESD) systems
  - cargo containment systems
  - cargo containment systems, materials of construction and insulation
  - cofferdam heating systems
  - cargo handling equipment and instrumentation, including:
    - cargo pumps and pumping arrangements, including:
      - cargo pipelines and valves
      - cargo tank level-gauging systems
      - expansion devices
      - flame screens

- tank pressure monitoring and control systems
- temperature monitoring systems
- cargo temperature maintenance system
- custody transfer system
- gas-detecting systems
- general arrangement and construction
- reliquefaction systems
- development of cargo operation plans, procedures and checklists for cargo operations
- effect of bulk liquid cargo on trim, stability and structural integrity
- emergency procedures, including actions to be taken in event of:
  - cargo operations ESD
  - collision
  - emergency cargo valve operations
  - enclosed space rescue
  - envelopment of ship in toxic or flammable vapour
  - failure of services essential to cargo
  - firefighting
  - grounding
  - jettisoning of cargo
  - ship emergency response plans
  - spillage
  - system failure
- firefighting systems, including:
  - fire-extinguishing agents, advantages and disadvantages
  - fire protection and extinguishing systems
- fundamental chemistry, physics and relevant definitions related to the safe carriage of liquefied gases in bulk ships, including:
  - the chemical structure of gases
  - the properties and characteristics of liquefied gases (including CO<sub>2</sub>) and their vapours, including:
    - basic thermodynamic laws and diagrams
    - bubble point
    - compatibility, reactivity and positive segregation of gases
    - compression of gases
    - critical temperature of gases and pressure
    - dewpoint
    - diffusion and mixing of gases
    - effect of low temperature-brittle fracture
  - flashpoint, including:
    - auto-ignition temperature

- upper and lower explosive limits
- gauging systems
- hydrate formation
- liquid and vapour densities
- lubrication of compressors
- nature and properties of solutions
- polymerisation
- properties of materials
- properties of single liquids
- refrigeration of gases
- reliquefaction of gases
- saturated vapour pressure/reference temperature
- simple gas laws
- states of matter
- thermodynamic units
- hazards and control measures, including:
  - corrosivity
  - electrostatic hazards
  - explosion
  - flammability
  - health hazards
  - inert gas composition
  - oxygen deficiency
  - polymerising cargo
  - reactivity
  - toxicity
- international regulations, codes, industry guidelines, industry standards and port regulations concerning the safe loading, unloading, care and handling of cargo, including:
  - code of safe working practices
  - IBC Code
  - IGC Code
  - MARPOL
  - SOLAS
  - International Medical Guide for Ships
  - SDS/MSDS
  - Medical First Aid Guide (MFAG)
- loading, unloading, care and handling of cargo
- loading and unloading plans
- maintenance work, before and during repairs, including work affecting:
  - electrical and control systems

- piping
- pumping
- medical first aid procedures, including antidotes onboard liquefied gas tankers
- pollution prevention procedures, including:
  - controlled operational pollution at sea
  - pollution prevention requirements of ships construction and equipment
- pressure control systems, pressure surge and typical settings
- pump theory and characteristics, including:
  - safe pump operation
  - types of cargo pumps
- rationale, practical application and implications of ship design, systems and equipment, including:
  - impact on decision making in typical and emergency situations
  - location, positioning and segregation
  - operational advantages, disadvantages and limitations
- risk assessments
- safe working practices, risk assessment, personal shipboard safety procedures and precautions, including:
  - before and during repairs and maintenance work, including work affecting:
    - electrical and control systems
    - piping
    - pumping
  - cold burn
  - electrical safety
  - entering enclosed spaces, including:
    - compressor rooms
    - correct use of different types of breathing apparatus
  - frostbite
  - hot and cold work precautions
  - proper use of personal toxicity monitoring equipment
- safe operation of systems and equipment
- selection and correct use of PPE, including personal toxicity monitoring equipment
- system capabilities
- tank atmosphere control systems, including:
  - inert gas
  - nitrogen
  - storage, generation and distribution systems
- tank temperatures, impact of cargo on temperatures and typical settings
- tanker safety culture and implementation of SMS
- types of cargo tank construction

- types of liquefied gas tankers
- types, selection and correct use of breathing apparatus
- use of SDS/MSDS, IBC and IGC Codes and related documents
- work health and safety (WHS)/occupational health and safety (OHS) legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARAO20 Manage advanced oil tanker cargo operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to manage advanced oil tanker cargo operations.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Mate
- Deck Officers
- Engineering Officers
- Engineers
- Masters
- Ratings.

## Licensing/Regulatory Information

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg V/1-1 (3 and 4) and Code Section A-V/1-1 (2), Table A-V/1-1-2.

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as Chief Mate, Deck Officers, Engineering Officers, Engineers, Masters or Ratings for advanced operations on oil tankers and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable

## Competency Field

A - Handling Cargo and Vessel Stability

## Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Perform work safely and monitor all cargo operations**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Communication with personnel is clear, concise and accurate and information is understood and acted upon
- 1.2** Cargo operations are planned, risk is managed and carried out in accordance with accepted principles and procedures to ensure safety of operations and avoid pollution of the marine environment
- 1.3** Potential non-compliance with cargo operation-related procedures are identified and rectified promptly
- 1.4** Cargo operations are carried out in a safe manner, taking into account oil tanker designs, systems and equipment
- 1.5** Proper loading, stowage and unloading of cargo is undertaken to ensure that stability and stress conditions remain within safe limits at all times
- 1.6** Actions taken and procedures are followed and correctly applied, and the appropriate shipboard cargo related equipment used
- 1.7** Calibration and use of monitoring and gas detection equipment are in compliance with operational practices and procedures
- 1.8** Procedures for monitoring and safety systems ensure that all alarms are detected promptly and acted upon in accordance with workplace emergency procedures
- 1.9** Personnel are allocated duties and informed of procedures and standards of work to be followed in a

- manner appropriate to the individuals concerned and in accordance with safe operational practices
- 2 Recognise physical and chemical properties of oil cargoes**
- 2.1** Information resources are used effectively to identify properties and characteristics of oil cargo and their impact on safety and environmental protection
- 2.2** Information resources are used effectively to identify properties and characteristics of related gases and their impact on safety and vessel operation
- 3 Take precautions to prevent hazards**
- 3.1** Cargo-related hazards to the vessel are identified, risk assessed, and control measures are implemented
- 3.2** Cargo-related hazards to personnel are correctly identified and proper control measures are taken
- 4 Apply work health and safety (WHS)/occupational health and safety (OHS) precautions**
- 4.1** Procedures designed to safeguard personnel and the ship are observed at all times
- 4.2** Safe working practices are observed, and appropriate safety and protective equipment is correctly used
- 4.3** Working practices are conducted in accordance with legislative requirements, codes of practice, permits to work and environmental concerns
- 4.4** Breathing apparatus is used correctly by personnel
- 4.5** Entry into enclosed spaces is undertaken in accordance with workplace procedures
- 5 Respond to emergencies**
- 5.1** Type and impact of the emergency is promptly identified, and the response actions conform with workplace emergency procedures and contingency plans
- 5.2** Order of priority, the levels and timescales of making reports and informing personnel are undertaken relevant to the nature of the emergency and accurately reflect the urgency of the problem
- 5.3** Evacuation, emergency shutdown (ESD) and isolation procedures are undertaken appropriate to the nature of the emergency and are implemented promptly
- 5.4** Medical emergency procedures are identified and required actions taken conform to current recognised

		first aid practices and international guidelines
<b>6</b>	<b>Take precautions to prevent pollution of the environment</b>	<p><b>6.1</b> Operations are conducted in accordance with accepted principles and workplace procedures to prevent pollution of the atmosphere</p> <p><b>6.2</b> Operations are conducted in accordance with accepted principles and workplace procedures to prevent pollution of the environment</p>
<b>7</b>	<b>Monitor and control compliance with legislative requirements</b>	<p><b>7.1</b> Cargo handling is conducted in compliance with relevant IMO instruments</p> <p><b>7.2</b> Cargo handling is conducted in compliance with industrial standards and codes of safe working practices</p> <p><b>7.3</b> Workplace documentation is completed in accordance with workplace procedures</p>

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

# **Assessment Requirements for MARA020 Manage advanced oil tanker cargo operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying pump theory, characteristics and types of cargo pumps and their safe operation
- applying relevant international regulations, codes, industry guidelines, industry standards and port regulations relevant to the safe loading, unloading, care and handling of cargo
- applying safe work practices and risk assessments for personal and shipboard safety
- applying safe work practices following a collision, grounding and spillage
- applying safety management system (SMS) and requirements
- calibrating and using monitoring and gas-detection systems, instruments and equipment
- communicating effectively with personnel and reporting authorities
- conducting cargo operations with acceptable safety limits, including stress limits at all times
- developing and applying cargo-related operation plans, procedures and checklists
- evaluating tanker design, systems, equipment and cargo to inform decision making during cargo operations
- evaluating the effect of cargo on trim, stability and structural integrity, including use of trim and stability manuals during cargo operations
- managing and supervising personnel with cargo-related responsibilities
- monitoring enclosed space rescue, medical emergency, fire, system failure or failure of services essential to cargo, collision, grounding and spillage emergencies
- performing cargo measurements and calculations relevant to cargo operations
- using loading and unloading plans
- using personal protective equipment (PPE) and devices
- using safety data sheet (SDS)/materials safety data sheets (MSDS) during cargo operations and first aid incidents.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alarms and trips, including:
  - high-level alarms
  - low-level alarms
  - tank pressure monitoring and alarm systems
- automatic detection systems
- calibration and use of monitoring and gas-detection systems, instruments and equipment
- cargo measurements and calculations
- cargo-related operations, including:
  - ballasting and deballasting
  - crude oil washing
  - gas-freeing
  - inerting
  - load on top
  - loading and unloading plans
  - ship-to-ship transfers
  - tank cleaning
- consequences, including dangers, of non-compliance with relevant legislation and regulations
- cargo operation plans, procedures and checklists
- effect of bulk liquid cargo on trim, stability and structural integrity
- emergency procedures, including actions to be taken in event of:
  - cargo operations emergency shutdown (ESD)
  - collision
  - enclosed space rescue
  - failure of services essential to cargo
  - firefighting
  - grounding
  - ship emergency response plan
  - spillage
  - system failure
- firefighting systems, including:
  - fire protection and extinguishing systems
  - fire-extinguishing agents, advantages and disadvantages
- gas freeing and inerting systems, including flue gas and independent generators
- hazards and control measures, including:
  - electrostatic hazards
  - explosion
  - flammability
  - health hazards
  - inert gas composition

- oxygen deficiency
- toxicity
- information contained in SDS/MSDS
- international regulations, codes, industry guidelines, industry standards and port regulations, including:
  - codes of safe working practices
  - environmental procedures
  - industrial standards
  - industry guidelines
  - International Convention for the Prevention of Pollution from Ships (MARPOL)
  - International Convention for the Safety of Life at Sea (SOLAS)
  - International Medical Guide for Ships
  - International Safety Guide for Tankers and Terminals (ISGOTT)
  - International Safety Management (ISM) Code for oil tankers
  - SDS/MSDS
  - Medical First Aid Guide (MFAG)
  - medical first aid procedures
  - trim and stability manual
  - workplace procedures
- monitoring and safety systems, including ESD
- oil tanker design, systems and equipment, including:
  - cargo area venting and accommodation ventilation
  - cargo heating systems
  - cargo-related electrical and electronic control system
  - environmental protection equipment, including oil discharge monitoring equipment (ODME)
  - firefighting systems
  - gauging systems and alarms
  - general arrangement and construction
  - pumping arrangement and equipment
  - slop arrangements
  - tank arrangement, pipeline system and tank venting arrangement
  - tank cleaning, gas freeing and inerting systems
  - tank coating
  - vapour recovery systems
- physical and chemical properties of oil cargo
- pollution prevention, including:
  - controlled operational pollution at sea
  - procedures
  - requirements of ships construction and equipment

- pressure control systems, pressure surge and typical settings
- pump theory and characteristics, including types of pumps and their safe operation
- rationale, practical application and implications of ship design, systems and equipment, including:
  - impact on decision making in typical and emergency situations
  - location, positioning and segregation
  - operational advantages, disadvantages and limitations, and risk assessments
- risk assessment methodology and risk analysis for oil tankers
- safe operation of systems and equipment, including tanker safety culture and implementation of safety-management system
- safe working practices, risk assessment, personal shipboard safety procedures and precautions, including:
  - before and during repairs and maintenance work
  - electrical safety
  - entering enclosed spaces including correct use of different types of breathing apparatus
  - hot and cold work
- selection and correct use of PPE, including personal monitors
- tanker safety culture and implementation of SMS
- types, selection and correct use of different types of breathing apparatus
- work health and safety (WHS)/occupational health and safety (OHS) legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals

- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARAO21 Manage advanced operations of a ship subject to IGF Code**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to manage operations onboard a ship that is subject to the International Code of Safety for Ships Using Gases or Other Low-Flashpoint Fuels (IGF Code).

This unit applies to people working in the maritime industry in the capacity of:

- Chief Mate
- Deck Officers
- Engineering Officers
- Engineers
- Masters
- Ratings

## **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg V/3 (7 and 8) and Code Section A-V/3 (2), Table A-V/3-2.

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as Chief Mate, Deck Officers, Engineering Officers, Engineers, Masters or Ratings for advanced operations on ships subject to IGF Code and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

A - Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Perform work safely and monitor all cargo operations**

- 1.1** Communication with personnel is clear, concise and accurate and information is understood and acted upon
- 1.2** Cargo operations are planned, risk is managed and work carried out in accordance with accepted principles and procedures to ensure safety of operations and avoid pollution of the marine environment
- 1.3** Pumping operations are carried out in accordance with acceptable principles, procedures and type of fuel
- 1.4** Ship operations are carried out safely and take into consideration ship design, systems and equipment

#### **2 Recognise physical and chemical properties of fuels**

- 2.1** Information resources are used effectively to identify properties and characteristics of oil cargo and their impact on safety and environmental protection
- 2.2** Information resources are used effectively to identify properties and characteristics of related gases and their impact on safety and vessel operation

#### **3 Operate fuel controls**

- 3.1** Plant, auxiliary machinery and equipment are operated in accordance with technical specifications
- 3.2** Plant, auxiliary machinery and equipment are operated in accordance with technical specifications and within

		safe operating limits at all time
<b>4</b>	<b>Plan and monitor safe bunkering, stowage and securing of fuel</b>	<p><b>4.1</b> Fuel quality and quantity are determined and take into account the current conditions and necessary corrective safe measures</p> <p><b>4.2</b> Operations are planned and carried out in accordance with fuel transfer manuals and procedures to ensure safety of operations and avoid spill damages and pollution of the environment</p> <p><b>4.3</b> Personnel are allocated duties and informed of procedures and standards of work to be followed in a manner appropriate to the individuals concerned and in accordance with safe operational practices</p>
<b>5</b>	<b>Take precautions to prevent pollution of the environment</b>	<p><b>5.1</b> Procedures to safeguard the environment are observed at all time</p> <p><b>5.2</b> Procedures to safeguard personnel are observed at all times</p>
<b>6</b>	<b>Monitor and control compliance with legislative requirements</b>	<p><b>6.1</b> Fuel handling is conducted in compliance with relevant IMO instruments, established industrial standards and codes of safe working practices</p> <p><b>6.2</b> Operations are planned and performed in accordance with approved procedures and legislative requirements</p>
<b>7</b>	<b>Take precautions to prevent hazards</b>	<p><b>7.1</b> Cargo-related hazards to the vessel are identified, risk assessed, and control measures are implemented</p> <p><b>7.2</b> Cargo-related hazards to personnel are correctly identified and proper control measures are taken</p> <p><b>7.3</b> Flammable and toxic gas detection devices are used in accordance with manuals and workplace practices</p>
<b>8</b>	<b>Apply work health and safety (WHS)/occupational health and safety (OHS) precautions</b>	<p><b>8.1</b> Appropriate safety and protective equipment are used correctly by personnel</p> <p><b>8.2</b> Procedures designed to safeguard personnel and the ship are observed at all times</p> <p><b>8.3</b> Working practices are followed in accordance with legislative requirements, codes of practice, permits to</p>

work and environmental concerns

- 8.4** Medical emergency procedures are identified and required actions taken conform to current recognised first aid practices and international guidelines

**9 Prevent and control fire**

- 9.1** Type and impact of the emergency is identified promptly, and response actions confirmed with emergency procedures
- 9.2** Evacuation, emergency shutdown (ESD) and isolation procedures are appropriate to the fuels addressed by the IGF Code

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

# **Assessment Requirements for MARA021 Manage advanced operations of a ship subject to IGF Code**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant international regulations, codes, industry guidelines, industry standards, and port regulations
- applying safe work practices and risk assessments for personal and shipboard safety
- calibrating and using monitoring and fuel detection systems, instruments and equipment
- communicating effectively with personnel and authorities
- conducting cargo operations with acceptable safety limits, including stress limits, at all times
- conducting risk assessments during cargo operations
- developing safety plans and safety instructions to manage risk
- evaluating ship design, arrangement and characteristics and cargo to inform decision making during cargo and fuel operations
- managing and supervising personnel with cargo-related responsibilities
- monitoring control measures to manage flammability, explosion, toxicity, reactivity, corrosivity, health hazards, inert gas composition, electrostatic hazards, pressurised gases and low temperatures
- operating controls of fuel related to propulsion plant, engineering systems, services and safety devices
- performing fuel system measurements and calculations
- using available data to ensure safe bunkering, storage and securing of fuels using operational plans, procedures and checklists to maintain safe operating limits
- using available data to ensure safe bunkering, storage and securing of fuels
- using fuel system theory and characteristics to inform decision making
- using fundamental chemistry, physics and correct and relevant definitions to ensure the safe bunkering and use of fuels onboard ships subject to International Code of Safety for Ships Using Gases or Other Low-Flashpoint Fuels (IGF Code)
- using personal protective equipment (PPE) and devices
- using risk assessment method analysis to conduct risk assessments
- using safety data sheets (SDS)/material safety data sheets (MSDS) during IGF operations and first aid.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- checklists and safe procedures for taking fuel tanks in and out of service, including:
  - cooling down
  - emptying systems
  - heating of fuel
  - inerting
  - initial loading
  - pressure control
  - ship to shore
- calibration use and monitoring of fuel detection systems, instruments and equipment
- consequences, including dangers, of non-compliance with relevant legislation and regulations
- data relating to bunkering, storage and securing of fuels available onboard ship
- effects of pollution on personnel, the public and environment
- fuel system theory and characteristics and types of fuel system pumps and their safe operation, including:
  - heaters
  - high pressure
  - low pressure
  - pressure build-up units
  - vaporisers
- fuel system measurements and calculations, including:
  - fuel consumption calculations
  - maximum fill quantity
  - minimum remain on board (ROB)
  - on board quantity (OBQ)
- fundamental chemistry, physics and definitions relating to safe bunkering and use of fuels onboard ships subject to IGF Code, including:
  - chemical structure of different fuels used onboard ships subject to IGF Code
  - effect of low temperature, including brittle fracture for liquid cryogenic fuels
  - fundamental chemical structure, properties and characteristics of fuels subject to IGF Code, including:
    - boil-off and weathering of cryogenic fuels
    - combustion properties and heating values
    - compression and gas expansion
    - critical pressure and temperature of gases
    - dewpoint and bubble point
    - flashpoint, upper and lower flammable limits and auto-ignition temperature

- hydrate formation
- liquid and vapour densities
- methane number/knocking
- pollutant characteristics of fuels addressed in IGF Code
- saturated vapour pressure/reference temperature
- simple physical laws
- states of matter
- nature and properties of solutions
- properties of materials
- properties of single liquids and materials
- thermodynamic laws and diagrams
- thermodynamic units
- hazards and control measures, including:
  - corrosivity
  - electrostatic hazards
  - explosion
  - flammability
  - health hazards
  - inert gas composition
  - low temperature
  - pressurised gases
  - reactivity
  - toxicity
- hot work, enclosed spaces and tank entry including permitting procedures
- information contained in SDS/MSDS relevant to fuels subject to IGF Code
- international regulations, codes, industry guidelines, industry standards and port regulations, including:
  - codes of safe working practice
  - environmental procedures
  - IGF Code
  - International Convention for the Prevention of Pollution from Ships (MARPOL)
  - International Convention for the Safety of Life at Sea (SOLAS)
  - International Medical Guide for Ships
  - SDS/MSDS
  - Medical First Aid Guide (MFAG)
  - medical first aid procedures
  - permits to work
  - workplace procedures
- measures to be taken in event of:
  - leakage

- spillage
- venting
- operating controls of fuel related to propulsion plant, engineering systems, services and safety devices, including:
  - marine engineering terms
  - operating principles of marine power plants
  - ships auxiliary machinery
- operating bunkering systems, including:
  - bunkering procedures
  - emergency procedures
  - prevention of rollover
  - ship to shore/ship to ship interface
- PPE and devices, including:
  - breathing apparatus
  - evacuating equipment
  - rescue and escape equipment
  - resuscitators
- prevention control and firefighting and extinguishing systems
- rationale, practical application and implications of ship design, systems and equipment, including:
  - impact on decision making in typical and emergency situations
  - location, positioning and segregation
  - operational advantages, disadvantages and limitations
- risk assessments
- risk assessment methodology and risk analysis for ships subject to IGF Code
- risks of non-compliance with relevant regulations and legislation
- safe operation of pumps
- safety and emergency procedures for operating machinery, fuel and control systems
- safe management of bunkering and other IGF-related operations concurrent with other onboard operations both in port and at sea
- safe working practices, procedures and precautions, including:
  - electrical safety
  - entering enclosed spaces, including correct use of different types of breathing apparatus
  - maintenance work before, during and after repairs
  - ship to shore safety checklists
- ship design, systems and equipment, including:
  - cryogenic fuel tanks temperature and pressure maintenance
  - fuel emergency shutdown (ESD) system
  - fuel handling equipment and instrumentation, including:

- expansion devices
- flame screens
- fuel pipelines
- fuel pumps and pumping arrangements
- fuel systems for different propulsion engines
- general arrangement and construction
- systems, including:
  - fuel tank level gauging systems
  - fuel storage systems, including materials of construction and insulation
  - fuel system atmosphere control systems (inert gas, nitrogen), including:
    - distribution
    - generation
    - storage
  - tank pressure monitoring and control systems
  - temperature monitoring systems
  - toxic and flammable gas-detecting systems
- SDS/MSDS for IGF operations and first aid
- selection and correct use of PPE, including personal monitors
- work health and safety (WHS)/occupational health and safety (OHS) legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARA022 Manage loading, discharging and stowing of cargo**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to manage the loading, discharging and stowage of cargo to prevent damage or deterioration of cargo and to deliver it, as far as is possible, in as good a condition and order as it was when received onboard.

It includes planning the stow, planning load/unload with stevedores, preparing for loading, controlling loading/unloading of cargo, managing ballast management operations and monitoring care of cargo during voyage.

This unit applies to people working in the maritime industry in the capacity of:

- Master on commercial vessels less than 35 metres in length within the exclusive economic zone (EEZ)
- Master on vessels less than 80 metres in length in inshore waters
- Chief Mate or Deck Watchkeeper on vessels less than 80 metres in length within the EEZ.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 35 metres Near Coastal and Mate less than 80 metres Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

A – Handling Cargo and Vessel Stability

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Plan the stow

- 1.1 Loading manual is interpreted to determine operational loading conditions
- 1.2 Still water shear forces and bending moments in any load or ballast condition are identified and not exceeded
- 1.3 Load is planned to ensure stresses in vessel are minimised by evenly distributing cargo
- 1.4 Load is planned to avoid incompatible cargo stowage
- 1.5 Regulations relating to hazardous materials/dangerous goods are observed, where appropriate
- 1.6 Load is planned for unloading sequence
- 1.7 Vessel cargo carrying capacity is not exceeded for appropriate load line
- 1.8 Vessel trim is calculated to allow for optimum vessel performance at sea

#### 2 Plan load/unload with stevedores

- 2.1 Available port/vessel cargo handling gear and equipment are determined
- 2.2 Handling capacity of cargo handling gear and equipment are established
- 2.3 Pumping capacity of cargo pumps is verified
- 2.4 Availability and status of human resources are resolved
- 2.5 Cargo manifest is made available
- 2.6 Cargo stowage plan is completed and agreed with stevedores
- 2.7 Stability calculation is made and checked against vessel stability information manual
- 2.8 Notice of readiness to load/unload is provided

#### 3 Prepare for loading

- 3.1 Holds are checked to ensure they are clean, dry and free

- of odour
- 3.2** Safety arrangements in holds are verified to ensure they are operational
  - 3.3** Supplies of dunnage and mats are reviewed to ensure there are sufficient available
  - 3.4** Bilges are covered with tarpaulins/wrappers before loading
  - 3.5** Checks are made to ensure cargo is correctly identified, inspected and confirmed against documentation
  - 3.6** Preparations for loading are monitored according to stowage plan and organisational procedures
- 4 Control loading/unloading of cargo**
- 4.1** Instructions are given to crew and stevedores involved in cargo loading/unloading according to cargo stowage plan
  - 4.2** Compliance with regulations, procedures and instructions pertaining to type of cargo being handled is managed during loading/unloading operations
  - 4.3** Loading/unloading is monitored to ensure loading rate is not exceeded in the case of bulk or liquid cargo
  - 4.4** Vessel stability is observed during loading/unloading operations
  - 4.5** Loading/unloading operations are checked against stowage plan
  - 4.6** Cargo is secured and lashed according to lashing plan
  - 4.7** All cargo handling documentation is completed according to organisational procedures and regulatory requirements
- 5 Manage ballast management operations**
- 5.1** Ballast discharge requirements of port authority are complied with
  - 5.2** Ballast management activities are monitored according to organisational procedures, ballast water management plan and port authority requirements
  - 5.3** Ballast management problems are identified and appropriate actions are taken to minimise risk to the environment

- 6 Monitor care of cargo during voyage**
- 6.1** Vessel plan for care of cargo during the voyage is implemented according to organisational and customer requirements, and relevant regulations
  - 6.2** Ventilation and humidity control systems are checked
  - 6.3** Action required to maintain the wellbeing of cargo during the voyage is initiated according to customer requirements and organisational procedures
  - 6.4** Compliance with safety and hazard minimisation procedures and regulations related to cargo care is managed at all times during the voyage to maintain safety of personnel, cargo and vessel
  - 6.5** Appropriate action is taken in the event of a cargo-related incident or emergency to rectify problem, secure cargo and maintain safety of vessel and personnel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARA003 Manage loading, discharging and stowing of cargo.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA022 Manage loading, discharging and stowing of cargo**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- developing effective cargo stowage plans, including:
  - cargo weight
  - correct description and stowage of hazardous and dangerous goods
  - description of cargo to be loaded
  - load/discharge port
  - segregation of non-compatible cargo
- monitoring use of cargo handling gear and equipment involved in loading, stowage, security and unloading of cargo
- using and applying instructions, regulations, procedures and information relevant to loading, stowage, security and unloading of cargo
- using stability manual and ensuring stability calculations are within appropriate parameters for proposed cargo operation.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actions to be taken in the event of cargo-related incidents or emergencies, including:
  - cargo handling gear failure
  - cargo shift
  - leakage
  - spontaneous combustion
- ballast management issues and procedures, including:
  - ballast water management plan
  - confirming that the stowage plan conforms to stability requirements at all stages of loading and discharging
  - contaminated ballast
  - failure of ballast pumps

- cargo handling documentation requirements
- design of vessel hold
- effects on cargo handling of sea conditions, wind and weather
- effects of different types of cargo operations on vessel trim and stability
- effects upon stability during loading and discharging operations, including heeling moments from gear and loads
- emergency procedures for incidents involving dangerous and hazardous cargo, including:
  - enhanced survey regime
  - safety data sheets (SDS)/material safety data sheets (MSDS)
  - monitoring of cargo stowage areas for damage, defects and corrosion, including causes and prevention
  - safe working loads
- hazardous materials/dangerous goods, including:
  - any cargo described in the International Maritime Dangerous Goods (IMDG) Code as hazardous or dangerous
  - relevant documentation
- homogeneous loading
- main stresses set up by cargo, hogging, sagging and shearing
- methods of handling various types of cargo
- methods of handling and problems related to loading, stowage, security and unloading of cargo, including:
  - bulk cargo
  - containerised cargo
  - deck cargo
  - liquid cargo
  - refrigerated cargo
  - any other material, equipment or machinery that may be safely handled and stowed on the vessel
- operational characteristics of different types of shipboard and terminal-based cargo handling equipment and facilities
- principles of cargo care for various types of cargo monitoring procedures and scheduling of inspections
- procedures for carrying out calculations involving weights, capacities, stowage factors and load densities
- regulations relating to hazardous materials/dangerous goods, including the IMDG Code
- relevant sections of applicable maritime regulations
- relevant work health and safety (WHS)/occupational health and safety (OHS) and cargo handling legislation, codes of practice, policies and procedures
- shipboard and terminal-based cargo handling equipment involved in loading, stowage, security and unloading of cargo, including:
  - cargo pumps
  - cranes

- derricks
- grabs
- hooks, wires and shackles
- slings
- standard stowage position numbering systems used on container vessels
- static and dynamic loads
- survey and inspection requirements for cargo handling equipment
- types of lashing and securing devices
- typical types and sizes of shipping containers
- use of cargo handling gear, including purchases and tackles
- usual methods of packing, loading and discharging, stowage and dunnage
- various types of cargo likely to be carried; their peculiar characteristics, liability to damage, decay or deterioration; their measurements; their hazards and problems, and appropriate preventative and remedial action and solutions
- ways of restricting vessel stress levels within permitted levels within permitted limits during loading/discharging cargo.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel greater than or equal to 12 metres in length
- applicable documentation, such as legislation, regulations, codes of practice, safety management system (SMS), workplace procedures and operational manuals, including:
  - IMDG Code
  - International Maritime Solid Bulk Cargoes Code (IMSBC)
  - stability books
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# **MARA023 Manage trim, stability and stress of a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to control trim, stability and stress within safe limits at all times on a vessel 500 gross tonnage (GT) or more.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel Unlimited.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

A – Handling cargo and vessel stability

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Manage vessel trim under normal operating conditions**

- 1.1** Stability analysis and weight distribution planning are conducted at a time frequency and scope appropriate to the proposed nature of the voyage and vessel operation
- 1.2** Weight distribution is arranged to maintain vessel within acceptable stability limits for the anticipated operational situations likely to be experienced during the voyage
- 1.3** Calculations are made to determine the draught and centre of gravity (CG) of vessel after adding, removing or shifting weight
- 1.4** Factors affecting the stability and trim of vessel are identified and allowances are made in calculations
- 1.5** Trim, draughts and list of vessel are controlled, as required, to ensure they are suitable to progress all anticipated vessel operations

#### **2 Control vessel stability when compartment is flooded**

- 2.1** Damage to vessel and nature of flooding of compartments is assessed
- 2.2** Effect upon vessel stability of flooded and flooding compartments is evaluated
- 2.3** Suitable strategy for maintaining or restoring trim and stability is devised
- 2.4** Where stress limits of the vessel are exceeded as a consequence of damage and/or flooding, appropriate action is initiated to ensure safety of personnel, including abandoning the vessel, as required

#### **3 Manage stress conditions of the vessel**

- 3.1** Stress levels of the vessel are assessed according to manufacturer specifications
- 3.2** Stability of the vessel is monitored at a frequency and scope relevant to vessel operations, sufficient to enable stress and stability to be maintained within acceptable limits at all times

- |          |   |   |
|----------|---|---|
|          | <b>3.3</b>                                      | Appropriate action is taken where weight distribution has or could exceed acceptable safety limits              |
| <b>4</b> | <b>Maintain records of stability management</b> |   |
|          | <b>4.1</b>                                      | Data and information related to stability management is accurately recorded                                     |
|          | <b>4.2</b>                                      | Data and information related to stability management is filed and stored according to organisational procedures |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARA009 Manage stability of a vessel 500 gross tonnage or more.

## Links

Companion Volume implementation guide can be found in VetNet -

# Assessment Requirements for MARA023 Manage trim, stability and stress of a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying International Maritime Organization (IMO) recommendations concerning vessel stability
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- attending to appropriate level of detail in recordkeeping
- determining stability and trim requirements for docking or slipping the vessel
- determining the effect on trim and stability of vessel in the event of damage to and consequent flooding of a compartment, and countermeasures to be taken
- identifying vessels trim and stability factors
- interpreting and applying information on the fundamental principles of vessel construction and the theories and factors affecting trim and stability, and measures necessary to preserve trim and stability
- maintaining stability and stress conditions within safe limits at all times
- producing accurate and reliable documentation
- undertaking stability calculations, including:
  - calculating required load distribution to achieve desired trim
  - calculations for change of draught, trim and heel when entering different water densities and to bilging of compartments
  - centre of gravity (CG) of a vessel using an inclining experiment and effect of suspended weights
  - changes to draught, trim and heel due to adding or removing fuel, ballast or cargo
  - determining required correction for height of CG for free surface effect
  - determining values of righting lever and construction of righting lever curves
  - displacement, wetted surface, form coefficients, tonne per centimetre (TPC) immersion, application of Simpson's Rules to first and second moments of area, centroids and centres of pressure
  - effect on stability of dry docking and grounding
  - hydrostatic stability of a vessel
  - moment of statistical stability at small angles of heel

- permeability
- shear force and bending moment calculations
- transverse and longitudinal stability using hydrostatic data
- vessel CG, centre of buoyancy and metacentre
- using automatic data-based equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and repercussions of a heeling vessel
- data and information related to stability management, including:
  - cargo handling equipment
  - instructions of relevant maritime authorities
  - manufacturer instructions and procedures
  - organisational cargo handling procedures
  - relevant Australian and international standards and regulatory requirements
  - relevant WHS/OHS legislation
  - vessel and shore safety checklists
  - vessel cargo securing manual
  - vessel log
  - vessel register of materials handling equipment
- effects of angle of loll, including centre of buoyancy, how a ship behaves at the angle of loll, inherent dangers, corrective action and the difference between a loll and a list
- effects of density of sea water on the draught and freeboard of a vessel
- effects of flooding on transverse stability and trim, including:
  - calculation of vessel after flooding
  - cargo vessels
  - passenger ships
- features of the load-line and draught marks of a vessel and procedures for carrying out related calculations
- fundamental theories and principles of ship construction and the theories and factors that impact on trim and stability, and measures necessary to preserve trim and stability
- IMO recommendations concerning vessel stability
- levelling arrangements for damaged side compartments
- nature of flooding, including:
  - flooding due to collision or grounding
  - ingress of sea water through hatch covers or ruptured pipes
- principle stresses that act on the structure of a vessel, including panting and pounding, shear force, bending moments and torsional stress
- principles of parametric rolling and control methods

- principles of synchronous rolling and methods for its control
- procedures for calculating the required load distribution to achieve the desired trim
- responsibilities under international conventions and codes, including:
  - IMO grain regulations and grain heeling moment information
  - minimum stability requirements required by Load Line Rules and Intact Stability Code
  - passenger ship stability after damage
  - use of weather criterion
- stability, including:
  - dynamical
  - intact, including grain
  - statical
- suitable strategies for stabilising vessels
- survey and dry dock requirements
- trim and list
- typical problems related to the control of trim and stability for vessels of 500 gross tonnage (GT) and more
- vessels trim and stability factors for:
  - dry docking
  - excessive trim
  - free surface of a liquid
  - grounding
  - handling of heavy weights
  - large swell conditions
  - shift of cargo
  - wind heel
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental

damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARA024 Manage vessel stability**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to manage the dynamic factors affecting the stability of a vessel less than 80 metres.

It includes calculating stability, controlling vessel stress and stability, and maintaining records of stability management.

This unit applies to people working in the maritime industry in the capacity of:

- Master on commercial vessels less than 35 metres in length within the exclusive economic zone (EEZ)
- Master on vessels less than 80 metres in length in inshore waters
- Chief Mate or Deck Watchkeeper on vessels less than 80 metres in length within the EEZ
- Chief Engineer on vessels with inboard engines less than 1500 kW within the EEZ
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- assistant under the direct supervision of the Chief Engineer
- worker in the engine room of a vessel less than 80 metres in length with propulsion power less than 3000 kW.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 35 metres Near Coastal, Mate less than 80 metres and Marine Engine Driver Grade 1 Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

A - Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

# Assessment Requirements for MARA024 Manage vessel stability

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- attending to appropriate level of detail in recordkeeping
- carrying out basic calculations associated with maintaining vessel stability which must include:
  - dock water and freshwater allowance
  - draft
  - final height of the centre of gravity (CG) above the keel of a vessel
  - trim
  - final position of the longitudinal centre of gravity (LCG)
  - free surface effect and vertical distance between keel and CG adjusted for free surface effect (CGf)
  - metacentric height (GM) and GM adjusted for free surface effect (GMf)
  - righting moments
- checking calculations to ensure correlation against stability book data
- managing loading and weight distribution of vessel to ensure assigned load line conditions are not exceeded.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- bilging and permeability
- centroids and CG
- change of draught and trim (MCT)
- conditions of stable, neutral and unstable equilibrium and effects of disturbing vessel from upright
- construction features and stress characteristics for vessels
- density and specific gravity
- dock water and freshwater allowance
- effects of free surface of liquids
- emergencies, including:

- adverse weather and water conditions
- any other emergency identified by risk assessment that may affect stability
- cargo shift
- damaged hull
- flooding of cargo spaces
- factors that affect the rolling period of vessel
- forces and moments
- information contained in stability data books
- loading and discharging weights
- loading limits, including:
  - not exceeding allowable passenger carrying capacity and distribution
  - not exceeding cargo carrying capacity of the vessel
  - the effect of fuel, freshwater and ballast on cargo carrying capacity
- maintenance of stability during firefighting operations
- principal stresses that act on the structure of a vessel
- principles of vessel stability
- problems affecting vessel stability
- procedures for carrying out basic calculations associated with vessel stability
- relationship between light displacement, loaded displacement and deadweight tonnage
- stability curves
- stability of vessel in a range of conditions
- stability terms and definitions
- steps involved in bringing an unstable vessel to a stable condition
- stress calculations
- tonnes per centimetre (TPC) immersion
- transverse and longitudinal dynamics
- trim and stress tables
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, safety management system (SMS), vessel stability books, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# **MARA025 Monitor, loading, unloading, securing and stowage of cargo**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to manage the loading, stowage, securing and care of cargo during the voyage and the unloading of cargo, according to the cargo plan, organisational procedures and vessel stowage limitations.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Watchkeeper Deck.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Near Coastal Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

### **Blue Waters Qualifications:**

- This unit is one of the requirements to obtain AMSA certification as a Master of a commercial vessel less than 500 gross tonnage (GT) or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

A – Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Develop cargo plan

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Cargo plan is developed to determine required cargo operations
- 1.2 Characteristics of cargo being transported are identified and the type, severity and impact of the hazard posed by cargo on safety, the environment, vessel operations and personnel are established
- 1.3 Cargo plan is evaluated to ensure regulations relating to hazardous materials/dangerous goods are observed
- 1.4 Cargo plan is assessed to ensure incompatible cargo stowage is avoided
- 1.5 Cargo plan is checked to ensure unloading sequence is effective

#### 2 Prepare for loading

- 2.1 Holds are checked to ensure they are clean, dry and free of odour
- 2.2 Safety arrangements are verified to ensure they are operational
- 2.3 Supplies of cargo protection and securing material are reviewed to ensure there are sufficient available
- 2.4 Bilge suction are protected before loading

- 2.5** Checks are made to ensure cargo is correctly identified, inspected and confirmed against documentation
    - 2.6** Preparations for loading are monitored according to stowage plan and organisational procedures
    - 2.7** Ballast discharge plan is identified and confirmed and appropriate actions to support this plan are undertaken
  - 3 Supervise loading/unloading of cargo**
    - 3.1** Instructions are given to crew and stevedores involved in cargo loading/unloading according to cargo stowage plan
    - 3.2** Compliance with regulations, procedures and instructions pertaining to type of cargo being handled is managed during loading/unloading operations
    - 3.3** Loading/unloading is monitored to ensure loading rate is not exceeded
    - 3.4** Vessel stability is observed during loading/unloading operations
    - 3.5** Loading/unloading operations are checked against cargo plan
    - 3.6** Cargo is secured according to cargo plan
    - 3.7** Cargo handling documentation is completed according to organisational procedures and regulatory requirements
    - 3.8** Transfer of cargo is monitored to prevent hazards
    - 3.9** Gas monitoring equipment is regularly inspected and used according to organisational procedures, as required
  - 4 Monitor care of cargo during voyage**
    - 4.1** Plan for care of cargo during voyage is implemented according to organisational and customer requirements, and relevant regulations
    - 4.2** Ventilation and humidity control systems are checked
    - 4.3** Actions required to maintain the safety and security of cargo during the voyage are initiated according to customer requirements and organisational procedures
    - 4.4** Compliance with safety and hazard minimisation procedures and regulations related to cargo care is managed at all times during the voyage to maintain the

- safety of personnel, cargo and vessel
- 4.5** Safety procedures are followed, and appropriate action is taken when defects or damage to cargo are detected
- 5 Take precautions to prevent pollution of the environment**
- 5.1** Procedures to prevent pollution are identified and observed at all times
- 5.2** Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and organisational procedures
- 5.3** All relevant information is immediately reported to appropriate persons when a vapour leak or cloud is detected or a malfunction has occurred that poses a risk of a vapour leak or cloud
- 5.4** Shore-based response personnel are promptly notified when a vapour leak or cloud occurs

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARA010 Manage loading, unloading and stowage of cargo

## Links

Companion Volume implementation guide can be found in VetNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA025 Monitor, loading, unloading, securing and stowage of cargo**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying actions required to maintain the wellbeing of cargo
- applying international regulations, codes and standards concerning the safe handling, stowage, securing and transport of bulk cargo and dangerous, hazardous and harmful cargo
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- carrying out cargo operations according to cargo plan or other documents and established safety rule/regulations, equipment operating instructions and shipboard stowage limitations, including identifying incompatible cargo stowage
- establishing and maintaining effective communications during loading, stowage, transportation and unloading
- identifying defects or damage to cargo and initiating timely action in response to defects or damage
- identifying relevant cargo handling documentation
- interpreting and applying knowledge of bulk ship, including bulk grain, chemical and oil tanker, and liquefied gas tanker layouts, cargo features, characteristics and hazards, and related hazard prevention strategies to duties on various types of vessel
- monitoring and anticipating problems and risks associated with loading, unloading, stowage and care of cargo
- monitoring use of equipment in loading, unloading, stowage and care of cargo
- reading and interpreting safety data sheets (SDS)/material safety data sheets (MSDS), relevant cargo-related hazards to vessel and to personnel, and taking appropriate action according to organisational procedures
- reading, interpreting and applying instructions, regulations, procedures and information associated with loading, unloading, stowage and care of cargo
- recognising problems and hazards that can arise when managing safety on a liquefied gas tanker, taking appropriate remedial action and initiating appropriate solutions.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- ballast management issues and procedures
- bulk ships, including bulk grain, chemical and oil tanker layouts, liquefied gas tanker layouts, cargo features and characteristics
- cargo calculations
- cargo care, including:
  - inspection and preparation of holds
  - refrigerated cargo
  - segregation and separation of cargo
  - ventilation and control
- cargo handling documentation
- cargo handling equipment and safety
- cargo lifting equipment and safe working loads
- cargo plans, including:
  - cargo weight
  - correct description and stowage of hazardous and dangerous goods
  - description of cargo to be loaded
  - load/discharge port
  - segregation of non-compatible cargo
  - stowage of refrigerated containers
- cargo hazards, including obstructing view from navigating bridge or overside at the bow defects or damage to cargo, including:
  - damage caused by cargo movement
  - deterioration of perishable cargo
  - water ingress
- effect of cargo, including heavy lifts and deck cargo on the seaworthiness, draught, trim and stability of the vessel
- effects of a concentrated load which can be spread over a wider area by the use of dunnage and deck shoring taking into consideration the position of girders, transverses and longitudinals under the tank top
- effects of different types of cargo operations on vessel trim and stability
- effects on cargo handling of sea conditions, wind and weather
- effects on stability and draught during loading and discharging operations, including heeling moments from gear and loads
- fundamental understanding of:
  - cargo operations for oil, chemical and liquefied gas tankers, including cargo preparation and carriage
  - physical properties of oil, chemical and liquefied gases
  - types of oil, chemical and liquefied gas tankers, general arrangement and construction
- hazardous materials/dangerous goods classification, signage, stowage and segregation requirements under the International Maritime Dangerous Goods (IMDG) Code and relevant Marine Orders

- hazards and control measures associated with bulk ships, including bulk grain, chemical and oil tanker cargo loading, and liquefied gas tanker cargo loading, stowage and unloading
- incompatible cargo stowage, including:
  - cargo liable to taint
  - hazardous material/dangerous goods
- inspection and preparation of holds
- methods of caring for various types of cargo, including:
  - blocking
  - chocking
  - lashing
  - shoring
  - tombing
- methods of stowage and securing of:
  - heavy lifts
  - heavy loads
  - vehicles and trailers
- oil tanker piping and pumping arrangements, including:
  - cargo piping systems
  - cargo pumping systems
  - cargo pumps
  - tanker arrangement
- operational characteristics of different types of shipboard and terminal-based cargo handling equipment and facilities
- precautions before entering enclosed and contaminated spaces
- precautions to prevent pollution of the environment from the release of oil, chemicals and liquefied gases
- procedures for carrying out calculations involving weights, capacities and stowage factors
- relevant firefighting operations and the use of firefighting equipment
- relevant sections of maritime regulations, codes and conventions related to chemical and oil tankers, and liquefied gas tankers
- relevant WHS/OHS and cargo handling legislation, codes of practice, policies and procedures
- safe handling, stowage and securing of cargo, including dangerous goods, hazardous material and harmful cargo, and their effect on the safety of life and the vessel
- standard stowage position numbering systems used on container vessels
- typical cargo handling problems and hazards, and appropriate preventative and remedial actions and solutions
- typical types and sizes of shipping containers
- usual methods of container packing, loading and discharging, stowage and dunnaging
- various types of cargo likely to be carried; their peculiar characteristics, liability to damage, decay or deterioration; their measurements, hazards and problems; and appropriate preventative and remedial action and solutions
- ways of restricting vessel stress levels within permitted levels within permitted limits during

loading/discharging cargo.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARB033 Assist with routine maintenance of a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to carry out routine maintenance on a vessel less than 80 metres.

It includes selecting and setting up equipment and materials for cleaning, cleaning work area, following instructions to carry out routine maintenance of vessel machinery, preparing and painting surfaces, and maintaining and storing tools, equipment and chemicals

This unit applies to people working in the maritime industry in the capacity of:

- assistant to the Master or Engineer of a vessel working under their direct supervision
- worker on deck or in the engine room of a vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- worker in the engine room only for a vessel with propulsion power less than 3000 kW.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a General Purpose Hand Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Select and set up equipment and materials for cleaning**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Equipment is selected according to type of cleaning to be undertaken
- 1.2** Equipment is checked to ensure it is clean and serviceable
- 1.3** Suitable dry and wet cleaning agents and chemicals are selected and prepared according to manufacturer instructions and work health and safety (WHS)/occupational health and safety (OHS) requirements
- 1.4** Suitable personal protective equipment (PPE) is selected and used, where necessary

**2 Clean work area**

- 2.1** Work area to be cleaned is prepared and hazards are identified
- 2.2** Work area is barricaded or warning signs are provided, as appropriate, to reduce risk to self and other crew members
- 2.3** Correct cleaning agents are selected and applied according to manufacturer instructions and WHS/OHS requirements
- 2.4** Equipment is used correctly and safely

**3 Follow instructions to carry out routine maintenance of vessel machinery**

- 3.1** Suitable PPE is selected and used according to WHS/OHS requirements
- 3.2** Greasing, lubrication and other routine servicing of vessel machinery and equipment is carried out according to supervisor and manufacturer instructions
- 3.3** Routine adjustments and repairs are made to vessel machinery and equipment according to supervisor and manufacturer instructions

- |  |            |   |
|--|------------|---|
|  | <b>3.4</b> | Faulty vessel machinery and equipment is identified and reported according to workplace procedures  |
| <b>4 Prepare and paint surfaces</b>                        | <b>4.1</b> | Suitable PPE is selected and used according to WHS/OHS requirements   |
|  | <b>4.2</b> | Surfaces are prepared using correct equipment   |
|  | <b>4.3</b> | Rust remover, rust converter and undercoats are applied according to manufacturer specifications  |
|  | <b>4.4</b> | Paints are mixed in correct proportions according to manufacturer specifications  |
|  | <b>4.5</b> | Finishing coat is applied using brush, roller or spray gun  |
| <b>5 Maintain and store tools, equipment and chemicals</b> | <b>5.1</b> | Equipment and tools are cleaned, returned to operating order and stored according to supervisor and manufacturer instructions   |
|  | <b>5.2</b> | Environmental procedures are followed and waste from cleaning and maintenance tasks is collected, treated and disposed of or recycled according to workplace procedures |
|  | <b>5.3</b> | Work area is cleaned and maintained according to workplace requirements   |
|  | <b>5.4</b> | Malfunctions, faults, wear or damage to tools are reported according to workplace procedures  |
|  | <b>5.5</b> | Chemicals are stored according to supervisor and manufacturer instructions  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB001 Assist with routine maintenance of a vessel.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARB033 Assist with routine maintenance of a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing maintenance records
- complying with manufacturer requirements, work health and safety (WHS)/occupational health and safety (OHS) requirements and safety data sheets (SDS)/material safety data sheets (MSDS)
- identifying faulty equipment
- implementing safe and environmentally responsible work practices
- making routine adjustments and repairs under supervision, including:
  - checking cooling system, fuel, grease and oil, and battery levels
  - inspecting fan belts, leads, lines, connections, air filters, hydraulics and lighting
  - greasing and oiling
- selecting and using correct tools and equipment for cleaning or maintenance tasks, including:
  - cleaning supplies
  - grease guns
  - handheld power tools
  - hand tools.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- component parts, operation and routine maintenance requirements of vessel machinery
- environmental and waste management procedures, including:
  - preventative measures with regard to damage to the environment caused by servicing, maintenance and cleaning activities
  - safely using and disposing of cleaning and maintenance debris, including oil containers, fuel, chemical residues and paint
- equipment cleaning and preservation techniques
- maintenance hazards and problems

- paint types and applications
- principles and procedures of machinery lubrication as they relate to vessel machinery
- procedures for using hand tools for routine maintenance operations
- relevant WHS/OHS and pollution control legislation
- rust treatment
- techniques for maintenance of surfaces, including timber, fibre glass, steel and aluminium
- workplace cleaning and maintenance procedures.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

# **MARB034 Carry out basic welding, brazing, cutting and machining operations on a coastal vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to carry out basic welding, brazing, cutting and machining tasks.

It includes carrying out basic welding, brazing, cutting and machining tasks and following safety and hazard control procedures.

This unit applies to persons working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- assistant under the direct supervision of the Chief Engineer
- worker in the engine room of a vessel less than 80 metres in length with propulsion power less than 3000 kW.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B - Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |   |
|--|---|
| <b>1 Carry out basic welding tasks</b> | <b>1.1</b> Requirements for welding tasks are correctly interpreted from work instructions  |
|  | <b>1.2</b> Parts are prepared for welding according to established practice   |
|  | <b>1.3</b> Parts are welded according to established practice and work requirements   |
|  | <b>1.4</b> Weld defects are identified and appropriate actions taken according to established practice and standard operating procedures (SOPs) |
|  | <b>1.5</b> Flame gouging methods are used to remove plate and weld material according to established practice and standard operating procedures |
|  | <b>1.6</b> Finished work is checked against work instructions for accuracy and quality  |
| <b>2 Carry out basic brazing tasks</b> | <b>2.1</b> Requirements for brazing tasks are correctly interpreted from work instructions  |
|  | <b>2.2</b> Parts are prepared for brazing according to established practice and work requirements   |
|  | <b>2.3</b> Brazing equipment is prepared for brazing operations according to established procedures   |
|  | <b>2.4</b> Parts are brazed using established procedures  |
|  | <b>2.5</b> Finished work is checked against work instructions for accuracy and quality  |
| <b>3 Carry out basic cutting tasks</b> | <b>3.1</b> Instructions are reviewed, and required size and shape of cut work is correctly identified and interpreted                           |
|  | <b>3.2</b> Work is correctly marked out in preparation for cutting  |

- according to established practice and SOPs
- 3.3 Thermal cutting plant and equipment is set up according to established procedures
  - 3.4 Steel plate and/or rolled sections are cut to shape and size according to established practice and SOPs
  - 3.5 Finished work is checked against work instructions for accuracy and quality according to SOPs
- 4 Carry out basic machining tasks**
- 4.1 Requirements for basic machining tasks are correctly interpreted from work instructions according to SOPs
  - 4.2 Work is correctly marked out in preparation for basic machining according to established practice and SOPs
  - 4.3 Machine is set up according to established procedures
  - 4.4 Machining is carried out according to established procedures
  - 4.5 Finished work is checked against work instructions for accuracy and quality according to SOPs
- 5 Follow safety and hazard control procedures**
- 5.1 Required safety precautions and regulations are followed when carrying out basic welding
  - 5.2 Operational hazards are identified and action is taken to eliminate or, where elimination is not possible, to minimise, risk to personnel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB008 Carry out basic welding, brazing, cutting and machining operations on a coastal vessel.

---

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB034 Carry out basic welding, brazing, cutting and machining operations on a coastal vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out basic welding, brazing, cutting and machining tasks while underway, in port and moored or at anchor
- cleaning, sharpening or adjusting tools according to standard operating procedures (SOPs)
- dressing and truing a grinding wheel
- following required work schedule according to company requirements
- identifying a glazed, loaded or untrue grinding wheel condition and taking appropriate action
- interpreting and applying instructions and SOPs relevant to basic welding, brazing, cutting and machining operations required on a coastal vessel
- interpreting work specifications and drawings
- marking out work to specifications, and measuring and checking the quality of finished work
- performing basic calculations required to carry out basic welding, brazing, cutting and machining operations
- recognising routine problems that may occur when performing basic welding, brazing, cutting and machining operations on a vessel and taking appropriate action
- selecting and safely using welding, brazing, cutting and machining tools and equipment according to operating procedures
- storing welding, brazing, cutting and machining tools and equipment after use according to standard procedures
- taking action promptly to report operational incidents and problems according to regulations and shipboard procedures
- using effective verbal and other communication skills required when carrying out basic welding, brazing, cutting and machining operations on a vessel
- working safely and collaboratively with others when carrying out basic welding, brazing, cutting and machining operations on a vessel.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable sections of relevant maritime regulations

- applicable legislation, regulations and codes of practice, including:
  - National Standard for Commercial Vessels (NSCV) and Uniform Shipping Laws (USL) Code
  - relevant Australian engineering standards
  - relevant state and territory marine regulations
  - relevant work health and safety (WHS)/occupational health and safety (WHS/OHS) and pollution control legislation and policies
- basic operations within area of own responsibility, including:
  - basic butt welds
  - basic fillet welds
  - basic machining operation
  - basic pad welds
  - manual metal arc welding
  - oxygen acetylene welding
- characteristics and identifying features of common engineering drill bits
- documentation and records, including:
  - maintenance records
  - manufacturer instructions for tools and equipment
  - relevant safety data sheets (SDS)/material safety data sheets (MSDS)
  - safety management system (SMS) plans, procedures, checklists and instructions
  - work instructions
  - vessel and company procedures
- environmental protection measures when carrying out basic engineering tasks
- hazards and related safety precautions when carrying out basic welding, brazing, cutting and machining tasks
- operational hazards, including:
  - moving and rotating machinery
  - moving heavy loads using unsafe procedures
  - non-compliance with safe working procedures
  - poor housekeeping procedures
  - power tools
  - sharp tools and implements
  - unsecured machinery, components or equipment
  - using equipment beyond safe working limits
  - using welding equipment near explosive/flammable liquids and gases
- operating procedures for basic welding, brazing, cutting and machining tasks required of a Marine Engine Driver Grade 1
- procedures for:
  - identifying a glazed, loaded or untrue grinding wheel condition
  - dressing and/or truing a grinding wheel
- procedures for marking out work to specifications and measuring and checking the quality of

finished work, including the correct use of:

- adjustable gauge
- callipers
- centre punch hammers
- dividers
- rules and tapes
- scribes
- squares
- trammels
- vernier callipers and micrometer
- SMS and procedures
- techniques for identifying defective welds within limits of responsibility
- types, names and identifying features of drilling machines used on coastal maritime vessels
- typical work specifications and drawings used on a coastal vessel.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel with inboard diesel propulsion power of greater than or equal to 375 kW or workshop ashore
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals.

# **MARB035 Contribute to routine engine maintenance on a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to contribute to servicing engines and engine components on a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer - Engine or Integrated Rating who assists under the direction of the officer in charge of the engineering watch in performing a range of engine maintenance activities on a range of vessels
- Navigational Watch - Deck/Engine.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Engine, Integrated Rating or Navigational Watch - Deck/Engine and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan engine maintenance tasks**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Planned maintenance system is accessed to establish engine maintenance requirements for vessel

**1.2** Maintenance tasks are proposed and prioritised in conjunction with others involved in or affected by the maintenance work

**1.3** Resource requirements are identified and accessed to ensure efficient completion of tasks

**1.4** Maintenance tasks are recorded in the maintenance schedule according to workplace procedures

#### **2 Prepare for engine service**

**2.1** Nature and scope of work requirements are confirmed according to workplace procedures

**2.2** Service procedures, workshop manuals and manufacturer specifications are accessed and interpreted

**2.3** Tools, equipment and materials required for servicing are identified and prepared

**2.4** Engine and components are visually inspected for external signs of defects according to maintenance documentation

**2.5** Electrical components are identified and electrical equipment used safely

**2.6** Engine is started, ran up to operating temperature and checked for leaks, abnormal noises and pressures

**2.7** Test results are compared with manufacturer/component supplier specifications to determine compliance or non-compliance

**2.8** Results are documented with supporting information and recommendations are made about serviceability and

repair

### **3 Service engines and engine components**

- 3.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements are identified and observed
- 3.2** Service operations are performed according to workplace procedures and manufacturer/component supplier specifications
- 3.3** Fluid level checks and replenishments are carried out according to manufacturer/component supplier specifications
- 3.4** Appropriate lubricants are applied to engine
- 3.5** Equipment/components requiring replacement are changed according to manufacturer/component supplier specifications
- 3.6** Adjustments are made according to manufacturer/component supplier specifications

### **4 Complete work**

- 4.1** Engine is inspected to ensure protective guards, cowlings and safety features are in place
- 4.2** Engine is cleaned according to workplace procedures
- 4.3** Materials to be reused are collected and stored according to manufacturer specifications and workplace procedures
- 4.4** Tools and equipment are cleaned, maintained and stored according to manufacturer specifications and workplace procedures
- 4.5** Waste and scrap are removed according to legislative requirements and workplace procedures
- 4.6** Unserviceable equipment is tagged and faults are identified and reported according to workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB016 Contribute to routine engine maintenance on a vessel.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARB035 Contribute to routine engine maintenance on a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- appropriately using and selecting personal protective equipment (PPE)
- assisting in maintaining and servicing marine systems/components, including:
  - batteries
  - cooling systems/components
  - engine mounting systems/components
  - exhaust systems/components
  - fuel systems/components
  - intake systems/components
  - lubrication systems/components
- communicating with other personnel using effective:
  - listening techniques
  - questioning to confirm understanding
  - verbal and non-verbal language
- confirming maintenance to be undertaken and identifying resource requirements with the officer in charge of the engineering watch
- ensuring behaviour reflects relevant current legislative and regulatory requirements
- ensuring currency of relevant WHS/OHS skills and knowledge
- identifying hazards and safety issues and reporting these to the engineering officer of the watch
- identifying tools, equipment and materials required to undertake maintenance tasks
- using electrical equipment safely and applying:
  - correct emergency procedures
  - different voltages in use onboard vessel
  - isolation procedures
  - precautions to prevent electric shock
  - safety precautions before commencing work

- using painting, lubrication and cleaning materials and equipment safely.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes of electric shock and precautions to be observed to prevent shock
- electrical principles covering voltage, current, resistance, power, magnetic and inductance
- engine room cleaning procedures and relevant cleaning agents
- engine room hazards and safety, including:
  - electrical safety
  - gas testing
  - head of water/fluid
  - heat stress
  - high pressures
  - hot fluids
  - mechanical safety
  - noise
  - pollution
  - steam
  - toxic gases
  - ventilation
  - vibration
- engine room machinery and equipment, including:
  - air compressors
  - air start systems
  - bilge system, bilge pumps, bilge pick-ups, bilge valves and bilge piping
  - engine protection devices (crankcase mist detectors)
  - hydraulic systems, power packs, rams and motors, and directional control valves (DCVs)
  - oily water separators
  - osmosis plant
  - pumps – positive displacement, centrifugal and axial flow
  - purifiers and clarifiers
  - refrigeration and air conditioning plant
  - sewage treatment plant
  - slow speed, medium speed and high-speed diesels
  - steering systems
  - valves – globe and full flow, screw down non-return, screw lift, butterfly, ball, relief, non-return and gate

- water making (both freshwater generators and reverse)
- maintenance and servicing tasks, including:
  - economiser cleaning
  - engine room rounds (daily/weekly/monthly maintenance checks)
  - greasing and oiling of machinery
- inspection and maintenance of:
  - hatches, watertight doors and deadlights
  - hoists and lifting equipment
- manufacturer safety guidelines and shipboard instructions
- mechanical principles covering the concepts of mechanical, hydraulic and pneumatic systems
- purpose of isolation procedures and application of lock out tags
- relevant WHS/OHS requirements, work practices and pollution control regulations and policies
- rights and responsibilities of individuals about lock out and tagging of plant and equipment
- routine inspection of hand and power tools, measuring instruments and machinery tools
- routine maintenance and repair procedures
- safe disposal of waste materials
- scavenge space cleaning
- soot blowing
- surface preparation and painting
- surface preparation techniques, including:
  - abrasive blast cleaning
  - hand and power tool cleaning
- types, functions and limitations of marine equipment/components, including:
  - cooling systems/components
  - engine mounting systems/components
  - engines
  - exhaust systems/components
  - fuel systems/components
  - intake systems/components
  - lubrication systems/components.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARB036 Implement vessel planned maintenance system

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to establish, organise and implement preventative and reactive maintenance programs to optimise vessel operational performance.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Integrated Rating.

## Licensing/Regulatory Information

There are no legislative and regulatory requirements applicable to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Develop maintenance plan**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Vessel and equipment specifications, service requirements and workplace procedures are checked for recommended maintenance intervals and processes according to the safety management system (SMS)

- 1.2 Special requirements for maintenance are separated from routine maintenance tasks
  - 1.3 Maintenance plan and a related work schedule are developed
  - 1.4 Procedures for safety checks of equipment are developed and documented according to workplace procedures
  - 1.5 Recordkeeping system is developed for maintenance work completed and equipment replaced according to workplace procedures
- 2 **Establish maintenance systems**
  - 2.1 Resource requirements are identified and supplied
  - 2.2 Roles and responsibilities of crew are clarified and built into position descriptions and work instructions
  - 2.3 Mentoring and training is provided to support the maintenance strategy
  - 2.4 Maintenance procedures and schedules are prepared to minimise negative impacts on vessel operations, costs, waste and the environment
  - 2.5 Potential risks are analysed and management strategies are recommended
  - 2.6 Contingency plans are prepared
  - 2.7 Maintenance schedules and procedures are effectively communicated to crew
- 3 **Implement maintenance plan**
  - 3.1 Consumables and equipment are coordinated to meet maintenance work schedule
  - 3.2 Maintenance work schedule is completed according to maintenance plan
  - 3.3 Technical assistance is provided to crew in completing maintenance activities, as required
  - 3.4 Appropriate readings, measurements and recordings are made and compared to equipment and other relevant specifications
  - 3.5 Areas of vessel and equipment requiring further testing are identified and appropriate procedures for testing are

implemented

- 3.6** Appropriate adjustments are made to maintenance plan based on experience and required documentation is completed
  - 3.7** Maintenance records are completed and forwarded to appropriate personnel
  - 3.8** Areas where changes to equipment operation or routine maintenance are required to maintain optimum work output and equipment life, are noted
- 4 Monitor and review maintenance management system**
  - 4.1** Continuous improvement strategies are developed
  - 4.2** Performance criteria for maintenance goals are determined and data collection strategies are established
  - 4.3** Performance information and outcomes are analysed and implications are reported to appropriate personnel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB018 Implement vessel planned maintenance system.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB036 Implement vessel planned maintenance system**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- determining and recommending the need for capital expenditure to replace plant and equipment
- developing effective planning documents
- developing maintenance strategies, including establishing criteria for determining maintenance priorities, and planning and scheduling routine equipment and overhead maintenance to meet quality system requirements
- discussing maintenance costs with relevant personnel to ensure costs meet budget requirements
- ensuring currency of relevant legislative and regulatory knowledge
- establishing and monitoring performance targets for maintenance teams within performance planning and appraisal processes
- evaluating and recommending alternative maintenance policies and strategies, including changes in work roles and responsive/preventative models for maintenance
- identifying and applying relevant WHS/OHS, regulatory and workplace requirements
- managing maintenance costs
- monitoring system performance
- using appropriate information technology and software when preparing reports and plans
- using recordkeeping procedures to document maintenance costs, problems, priorities, solutions, schedules and completions.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- cleaning materials, and methods of storage and handling of such materials

- computer applications and software suitable for developing a range of reports, plans and schedules
- cost elements in maintenance system costing and budgeting
- costs resulting from poor maintenance and the benefits of a preventative maintenance system
- health hazards associated with maintenance procedures
- impacts of poor maintenance on vessel, and on occupational and environmental safety
- maintenance goals, including:
  - changes in attitudes
  - costs
  - frequency of breakdowns
  - length of time out of action
  - time of repairs
- maintenance issues related to vessel
- maintenance strategy, including:
  - cleaning
  - electrical
  - emergency lighting
  - evacuation
  - housekeeping
  - painting
  - pests
  - plumbing
- plant and equipment falling under scope of maintenance program
- potential risks, including:
  - dealing with hazardous material
  - hot work
  - working at heights
  - working in confined spaces
  - working overside
- relevant legislation, regulations and industrial agreements
- routine maintenance tasks, including:
  - back-ups
  - checks of cooling system, fuel, grease and oil, and battery levels
  - confirmation of operational effectiveness
  - dismantling and assembling
  - identification and replacement of worn parts
  - inspections of fan belts, leads, lines, connections, air filters, hydraulics and lighting
  - minor adjustments
  - testing
- special requirements for maintenance, including:

- damage repair
- hatch cover watertight arrangements
- main engine or auxiliary machinery breakdowns
- replacing defective cargo-lifting equipment
- types of lubrication, and lubricant storage and handling
- use and care of personal safety equipment.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARB037 Maintain and repair bridge navigation equipment and ship communication systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to maintain and repair bridge navigation equipment and ship external communication systems.

It includes reviewing, maintaining and managing bridge navigation and communication equipment systems.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

Bridge navigation equipment includes:

- automatic identification system (AIS)
- echosounder systems
- electronic chart display and information system (ECDIS)
- global navigation satellite systems (GNSS)
- inertial navigation system
- marine autopilots
- navigation lights and search lights
- radar
- ship compass equipment
- ship horn and sound signal system
- speed logs
- voyage data recorders
- wind trackers.

## **Licensing/Regulatory Information:**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention

on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Electrotechnology

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1. Review ship bridge navigation equipment and communication systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Bridge navigation equipment and ship communication systems are interpreted from ships technical drawings and/or specifications
- 1.2** Bridge navigation equipment and communication systems are identified, visually inspected and tested in accordance with shipboard procedures
- 1.3** Hazards are identified, risks assessed and control measures implemented
- 1.4** Measuring and calibrating instruments are used in accordance with manufacturer specifications
- 1.5** Operations are carried out in accordance with operational manuals, rules and procedures to ensure safety of operations

**2. Maintain bridge navigation equipment**

- 2.1** Bridge navigation equipment is visually inspected and tested in accordance with maintenance specification and plan
- 2.2** Bridge navigation equipment and associated plant and safety systems are isolated and electrical hazards identified in accordance with safe working practices
- 2.3** Bridge navigation equipment malfunctions detected during equipment maintenance are documented in service records and effect on associated plant and safety systems specified accurately
- 2.4** Bridge navigation equipment faults are rectified by competent person in accordance with shipboard procedures and legislative requirements
- 2.5** Bridge navigation equipment is dismantled and re-assembled in accordance with manufacturer safety guidelines and shipboard instructions
- 2.6** Bridge navigation equipment rectification plans are justified in service/maintenance records
- 2.7** Maintenance work is checked to verify that it conforms with technical specifications
- 2.8** Bridge navigation equipment restoration actions are taken in a timely manner by the method most suitable and appropriate to the ship prevailing circumstances and conditions

**3. Maintain ship communication systems**

- 3.1** Ship communication system is visually inspected and tested in accordance with maintenance specification and plan
- 3.2** Working in flammable areas hazards are identified, risks assessed and control measures implemented in accordance with shipboard procedures
- 3.3** Communication systems restoration actions are undertaken by the method most suitable and appropriate to the ship prevailing circumstances and conditions
- 3.4** Faults are rectified in accordance with shipboard procedures and legislative requirements
- 3.5** Clear and concise communication is used when testing internal communication systems

- 4. Clean up and complete documentation**
- 4.1** Work area is cleared and cleaned
  - 4.2** Work area is made safe and all equipment and plant returned to service in accordance with shipboard procedures and legislative requirements
  - 4.3** Materials are disposed of or recycled in accordance with legislative and workplace requirements
  - 4.4** Tools and equipment are cleaned, checked and stored in accordance with workplace procedures
  - 4.5** Maintenance reports are completed in accordance with procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB037 Maintain and repair bridge navigation equipment and ship communication systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- carrying out fault finding and procedural maintenance on hardware and software of the following bridge navigation equipment, on at least two separate occasions:
  - automatic identification system (AIS)
  - echosounder systems
  - electronic chart display and information system (ECDIS)
  - global navigation satellite systems (GNSS)
  - inertial navigation system
  - marine autopilots
  - navigation lights and search lights
  - ship compass equipment
  - ship horn and sound signal system
  - speed logs
  - voyage data recorders
  - wind trackers
- detecting machinery malfunction, location of faults and actions to prevent damage
- dismantling and identifying component parts of the following typical ship's bridge navigation equipment on at least one occasion:
  - radar
  - ship gyrocompass
- using electrical measuring and testing instruments.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- bridge navigation equipment, including:
  - construction, operation, maintenance and fault finding of:
    - AIS
    - echosounder systems
    - ECDIS
    - GNSS
    - inertial navigation system
    - marine autopilots
    - navigation lights and search lights
    - radar
    - ship compass equipment
    - ship horn and sound signal system
    - speed logs
    - voyage data recorders
    - wind trackers
- electrical and electronic systems operating in flammable areas
- principles and maintenance procedures of:
  - bridge navigation equipment
  - internal and external communication systems
- relevant industry standards and manufacturer specifications
- safety precautions and procedures, including electrical risk mitigation control measures
- WHS/OHS requirements, including safe working practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or

may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, safety management system (SMS), workplace procedures and operational manuals
- radar and ship gyrocompass equipment
- tools, bridge navigation equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# **MARB038 Maintain and repair marine electrical and electronic equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to maintain and repair marine electrical and electronic equipment on a vessel. This includes carrying out routine maintenance of marine generators, switchboards, electric motors, motor starters, direct current (DC) electrical systems and electrical distribution systems; and identifying faults in automated control systems.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Maintain marine generators**

- 1.1** Safety requirements associated with working on marine electrical generation systems are complied with
- 1.2** Marine generators are inspected using appropriate manuals and drawings according to regulatory, organisational and manufacturer requirements
- 1.3** Routine maintenance and testing of marine generators is performed according to regulatory, organisational and manufacturer requirements
- 1.4** Alternators are synchronised according to organisational and manufacturer requirements
- 1.5** Testing and maintenance records are maintained according to regulatory, organisational and manufacturer requirements

#### **2 Maintain marine switchboards**

- 2.1** Safety requirements associated with handling circuit breakers are complied with
- 2.2** Routine maintenance is performed on main circuit breaker according to with regulatory, organisational and manufacturer requirements
- 2.3** Faults in circuit breakers are detected and corrected according to regulatory, organisational and manufacturer requirements
- 2.4** Testing and maintenance records are maintained according to regulatory, organisational and manufacturer requirements

#### **3 Maintain marine electrical motors**

- 3.1** Safety requirements associated with working on marine electrical motors are complied with
- 3.2** Equipment required for maintenance of electrical motors

- is selected and checked for serviceability
- 3.3** Routine maintenance procedures are applied on marine electrical motors according to regulatory, organisational and manufacturer requirements
- 4 Test marine electrical motor starters**
- 4.1** Safety requirements associated with working on marine electrical motor starters are complied with
- 4.2** Faults in electrical motor starters are detected and rectified according to regulatory, organisational and manufacturer requirements
- 4.3** Starting and running current load testing is performed on electrical motors according to regulatory, organisational and manufacturer requirements
- 4.4** Procedures for finding start and finish of electrical motor windings are applied according to regulatory, organisational and manufacturer requirements
- 4.5** Testing, repairs and maintenance records are maintained according to regulatory, organisational and manufacturer requirements
- 5 Maintain marine electrical distribution systems**
- 5.1** Safety requirements associated with working on marine electrical distribution systems are complied with
- 5.2** Causes and potential dangers associated with earth faults in multiple earthed neutral (MEN) and floating neutral systems are identified
- 5.3** Earth faults are detected and repaired using correct equipment according to regulatory, organisational and manufacturer requirements
- 5.4** Hazards associated with working on fluorescent lamp circuits are identified
- 5.5** Fluorescent lamp circuit is constructed using appropriate manuals and drawings according to regulatory, organisational and manufacturer requirements
- 5.6** Components, function and operation of watertight and flame proof fittings are identified
- 5.7** Reasons for earthing high voltage (HV) systems via a resistor are outlined

- 5.8 Routine maintenance, inspection and testing of marine electrical distribution systems is performed according to regulatory, organisational and manufacturer requirements
      - 5.9 Temporary repairs to insulation are performed according to regulatory, organisational and manufacturer requirements
      - 5.10 Limitation of temporary repairs to insulation in terms of survey requirements are identified
- 6 Maintain DC electrical systems**
  - 6.1 Safety requirements associated with working on marine DC electrical systems are complied with
  - 6.2 Operation of a rectifier is identified
  - 6.3 Single-phase full wave rectifier fitted with filters is built and operated
  - 6.4 Routine battery maintenance is carried out according to organisational and manufacturer requirements
  - 6.5 Correct procedures for checking specific gravity of electrolyte in lead acid and alkaline batteries are applied according to manufacturer requirements
  - 6.6 Methods for supplying back-up power for remote/automatic control equipment are identified
  - 6.7 Procedure for testing back-up power is identified and applied
- 7 Identify faults in automated control systems**
  - 7.1 Pneumatic, hydraulic, electronic/electrical control systems are compared and contrasted
  - 7.2 Function and operation of main components of automated control systems are outlined
  - 7.3 Faults in automated control systems are detected and rectified using standard fault-finding procedures
  - 7.4 Testing procedures for identifying function and performance of automatic control systems in vessel operating systems are identified and applied
- 8 Operate electrical testing and measuring**
  - 8.1 Insulation tester is operated safely according to manufacturer procedures

## equipment

- |          |                                       |  |
|----------|---------------------------------------|--|
|          | <b>8.2</b>                            | Continuity testing on electrical circuits is performed according to organisational and manufacturer procedures |
|          | <b>8.3</b>                            | Clamp meter is operated safely according to manufacturer procedures  |
|          | <b>8.4</b>                            | Multimeter is operated safely according to manufacturer procedures   |
| <b>9</b> | <b>Test automatic control devices</b> |  |
|          | <b>9.1</b>                            | Operational functions are performed on a monitor   |
|          | <b>9.2</b>                            | Different types and operation of control valves are identified   |
|          | <b>9.3</b>                            | Control system control functions are applied using different control devices                                   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB013 Maintain and repair marine electrical and electronic equipment.

## Links

Companion Volume implementation guide can be found in VetNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB038 Maintain and repair marine electrical and electronic equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant procedures
- communicating procedures associated with maintaining and repairing marine electrical and electronic equipment verbally and in writing
- conducting risk assessment on task to be performed
- extracting information from basic electrical and electronic diagrams required to build electrical and electronic circuits
- identifying and interpreting numerical and graphical information in vessel electrical diagrams and specifications
- identifying and suggesting ways of rectifying faults and malfunctions in marine electrical and electronic systems
- identifying methods, procedures and materials needed for operating, maintaining and repairing marine electrical and electronic systems
- initiating timely action in response to defects or damage
- reading and interpreting written information related to operating and maintaining marine electrical and electronic systems, including specifications, drawings, technical manuals, and electrical and electronic circuit diagrams
- using testing equipment to gather information on function and performance of marine electrical and electronic systems.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alternating current (AC)/direct current (DC) voltage
- batteries
- circuit breakers and interlocks fitted to circuit breakers
- circuits
- current protection relays, including:
  - operate on fault and request

- operate on fault and request and demand
- operate on fault and request and under voltage
- earthing
- electrical measuring and testing instruments
- electrical symbols, basic electrical and electronic diagrams and circuits
- faults in circuit breakers, including:
  - alignment of contactors
  - condition of:
    - closing and opening mechanisms
    - insulation barriers
  - wear and tear on linkages
- faults in electrical motor starters, including:
  - earthing
  - open circuit
- faults in automated control systems
- fault protection equipment, including:
  - differential protection device
  - fuses
  - over current devices
  - over voltage devices
  - reverse power devices
  - thermal overload devices
  - thermistor protection devices
  - under voltage devices
- function and performance testing of system monitoring devices, including:
  - alarm printer
  - data logger
- current codes, standards, regulations and industry practices
- main components of automated control systems, including:
  - actuator
  - control valve
  - controller
  - positioner
  - regulator
  - relay
  - sensor
  - servomotor
  - transducer
- marine generator testing, including:
  - testing an alternator

- nature and causes of typical start-up and shutdown malfunctions of main and auxiliary electrical and associated systems and available methods for their detection and rectification
- operation of:
  - boiler, purifier and generator shutdown systems
  - main engine shutdown protective devices
  - protective devices found onboard vessels
- operational characteristics and performance specifications for different types of electrical and electronic systems found on vessels
- principles and procedures of electrical maintenance
- purpose and content of safety data sheets (SDS)/material safety data sheets (MSDS)
- relevant procedures such as those relating to:
  - adjusting, testing and maintaining fault protection devices on switchboards
  - carrying out start-up and shutdown of electrical machinery and associated systems to ensure compliance with company and survey requirements and regulations
  - changing alarm-setting values in monitoring systems
  - confirming the accuracy of measuring monitoring
  - detecting electrical malfunctions and preventing damage
  - electrical safety and isolation
  - fault finding
  - marine maintenance, including difference between breakdown repair, planned maintenance and condition monitoring, purpose of maintenance recording and reporting procedures
  - routine maintenance on marine electrical motors (cleaning, inspection, deterioration of insulation, removal of dust and oil, and renewal of bearings)
  - safety and emergency
  - testing function and performance of protection devices as part of vessel statutory survey
- risks and safety procedures associated with working in high voltage (HV) environments
- safety, environmental and hazard control precautions and procedures relevant to start-up and shutdown of marine electrical machinery and associated systems
- safety requirements associated with working on marine electrical systems, including:
  - dangers associated with the spaces in the vicinity of busbars
  - potential dangers associated with instrument voltage/current transformer circuits
  - protection normally provided on doors of switchboard cubicles
- types of electrical and electronic equipment and components
- vessel operating systems
- vessel safety management systems (SMS)
- work health and safety (WHS)/occupational health and safety (OHS) legislation and policies
- working safely with electricity, including:
  - appropriate method of removing an electric shock victim from a live electrical situation
  - common causes of electrical accidents
  - effects of electric shock on the human body

- electrical safe working practices
- need for ensuring safe isolation of an electrical supply
- precautions that can minimise chance of electric shock.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARB039 Maintain and repair shipboard machinery and equipment

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to maintain and repair shipboard machinery and equipment on a vessel. This includes maintaining marine pumps, valves, air compressors, heat exchangers, diesel engines, turbochargers, marine lubricating systems and deck machinery as well as conducting inspections of marine boilers and marine refrigeration units.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.
- This unit is one of the requirements to obtain AMSA certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Follow safe work practices**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (WHS/OHS) procedures relevant to maintaining shipboard machinery and equipment are complied with
- 1.2** Safety hazards are identified and reported according to safety and vessel procedures
- 1.3** Tools, equipment and testing devices needed to carry out maintenance activities are checked for correct operation and safety prior to use according to safety and vessel procedures
- 1.4** Isolation precautions are implemented prior to commencing maintenance activities according to safety and vessel procedures

#### **2 Maintain marine pumps**

- 2.1** Maintenance requirements for pump are determined according to safety, manufacturer and vessel procedures and documentation
- 2.2** Appropriate procedures, materials, tools and equipment for maintaining pump are selected according to safety, manufacturer and vessel procedures
- 2.3** Relevant information is extracted from drawings and technical specifications required to perform maintenance activities
- 2.4** Pump is disassembled, inspected and serviced according to safety, manufacturer and vessel procedures
- 2.5** Pump is reassembled and tested according to safety,

manufacturer and vessel procedures

- 2.6** Performance of pump is confirmed against recommended performance specifications according to safety, manufacturer and vessel procedures

### **3 Maintain valves**

- 3.1** Maintenance requirements for valves are determined according to safety, manufacturer and vessel procedures and documentation
- 3.2** Appropriate procedures, materials, tools and equipment for maintaining valves are selected according to safety, manufacturer and vessel procedures
- 3.3** Relevant information is extracted from drawings and technical specifications required to perform maintenance activities
- 3.4** Valves are removed for maintenance according to safety, manufacturer and vessel procedures and documentation
- 3.5** Valves are disassembled and valve maintenance is performed according to safety, manufacturer and vessel procedures and documentation
- 3.6** Valves are reassembled and tested according to safety, manufacturer and vessel procedures and documentation

### **4 Maintain air compressors**

- 4.1** Maintenance requirements for air compressor are determined according to safety, manufacturer and vessel procedures and documentation
- 4.2** Appropriate procedures, materials, tools and equipment for maintaining air compressor are selected according to safety, manufacturer and vessel procedures
- 4.3** Relevant information is extracted from drawings and technical specifications required to perform maintenance activities
- 4.4** Air compressor is disassembled and inspected according to safety, manufacturer and vessel procedures
- 4.5** Air compressor is reassembled, tested and adjusted according to safety, manufacturer and vessel procedures
- 4.6** Performance of air compressor is confirmed against recommended performance specifications according to

- safety, manufacturer and vessel procedures
- 5 Maintain heat exchangers**
- 5.1** Maintenance requirements for heat exchanger are determined according to safety, manufacturer and vessel procedures and documentation
- 5.2** Appropriate procedures, materials, tools and equipment for maintaining heat exchanger are selected according to safety, manufacturer and vessel procedures
- 5.3** Relevant information is extracted from drawings and technical specifications required to perform maintenance activities
- 5.4** Heat exchanger is disassembled and inspected according to safety, manufacturer and vessel procedures
- 5.5** Heat exchanger is reassembled, tested and adjusted according to safety, manufacturer and vessel procedures
- 5.6** Performance of heat exchanger is confirmed against recommended performance specifications according to safety, manufacturer and vessel procedures
- 6 Maintain diesel engines**
- 6.1** Maintenance requirements for diesel engine are determined according to safety, manufacturer and vessel procedures and documentation
- 6.2** Appropriate procedures, materials, tools, measuring instruments and equipment for maintaining diesel engine are selected according to safety, manufacturer and vessel procedures
- 6.3** Relevant information is extracted from drawings and technical specifications required to perform maintenance activities
- 6.4** Diesel engine components are disassembled and inspected for wear and deterioration according to safety, manufacturer and vessel procedures
- 6.5** Routine maintenance on diesel engines is performed according to manufacturer and vessel procedures
- 6.6** Diesel engine components are refurbished, as required, according to manufacturer and vessel procedures
- 6.7** Specialised tools and measuring instruments are used to maintain and refurbish diesel engines/components

- according to safety, manufacturer and vessel procedures
- 6.8** Diesel engine is reassembled, tested and adjusted according to safety, manufacturer and vessel procedures
- 6.9** Performance of diesel engine is confirmed against recommended performance specifications according to safety, manufacturer and vessel procedures
- 7 Maintain turbochargers**
- 7.1** Maintenance requirements for turbocharger are determined according to safety, manufacturer and vessel procedures and documentation
- 7.2** Appropriate procedures, materials, tools and equipment for maintaining turbocharger are selected according to safety, manufacturer and vessel procedures
- 7.3** Relevant information is extracted from drawings and technical specifications required to perform maintenance activities
- 7.4** All components of turbocharger are disassembled and inspected for wear and deterioration according to safety, manufacturer and vessel procedures
- 7.5** Turbocharger is reassembled, tested and adjusted according to safety, manufacturer and vessel procedures
- 7.6** Performance of turbocharger is confirmed against recommended performance specifications according to safety, manufacturer and vessel procedures
- 8 Inspect marine boilers**
- 8.1** Inspection requirements for marine boiler are determined according to safety, manufacturer and vessel procedures and documentation
- 8.2** Appropriate procedures for inspecting marine boiler are selected according to safety, manufacturer and vessel procedures
- 8.3** Relevant information is extracted from drawings and technical specifications required to perform inspection activities
- 8.4** Marine boiler is inspected for repair or general maintenance according to safety, manufacturer and vessel procedures
- 8.5** Performance of marine boiler is confirmed against recommended performance specifications according to

- safety, manufacturer and vessel procedures
- 9 Inspect marine refrigeration units**
- 9.1** Inspection requirements for marine refrigeration unit are determined according to safety, manufacturer and vessel procedures and documentation
- 9.2** Appropriate procedures for inspecting marine refrigeration unit are selected according to safety, manufacturer and vessel procedures
- 9.3** Relevant information is extracted from drawings and technical specifications required to perform inspection activities
- 9.4** Marine refrigeration unit is inspected for repair or general maintenance according to safety, manufacturer and vessel procedures
- 9.5** Performance of marine refrigeration unit is confirmed against recommended performance specifications according to safety, manufacturer and vessel procedures
- 10 Maintain marine lubricating systems**
- 10.1** Inspection and maintenance requirements for lubricating systems are determined according to safety, manufacturer and vessel procedures and documentation
- 10.2** Relevant information is extracted from drawings and technical specifications required to perform inspection and maintenance activities
- 10.3** Purifier maintenance procedures are applied according to safety, manufacturer and vessel procedures
- 10.4** Components of lubricating system are inspected according to safety, manufacturer and vessel procedures
- 11 Maintain and repair deck machinery**
- 11.1** Maintenance and/or repair requirements for deck machinery are determined according to safety, manufacturer and vessel procedures and documentation
- 11.2** Appropriate procedures, materials, tools and equipment for maintaining and/or repairing deck machinery are selected according to safety, manufacturer and vessel procedures
- 11.3** Relevant information is extracted from drawings and technical specifications required to perform maintenance activities

- 11.4** Deck machinery maintenance and/or repair procedures are implemented according to safety, manufacturer and vessel procedures
- 11.5** Deck machinery is tested and adjusted according to safety, manufacturer and vessel procedures
- 11.6** Performance of deck machinery is confirmed against recommended performance specifications according to safety, manufacturer and vessel procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit is equivalent to MARB014 Maintain and repair shipboard machinery and equipment.

## Links

# **Assessment Requirements for MARB039 Maintain and repair shipboard machinery and equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- explaining principles of shipboard machinery and equipment and imparting knowledge and ideas verbally and in writing
- initiating timely action in response to defects or damage
- performing calculations and interpreting graphical information used in maintaining shipboard machinery and equipment
- reading and interpreting written information related to the operation, performance and maintenance of shipboard machinery and equipment, including machinery specifications and operational manuals
- scheduling maintenance of shipboard machinery and equipment
- using testing equipment and explaining test and performance results relevant to shipboard machinery and equipment.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of diesel engine operation, including:
  - causes of crankcase and air-line explosions, and scavenge and uptake fires
  - common faults and appropriate action to be taken with cooling of diesel engines
  - crankshafts
  - cylinder liners and heads
  - different methods of cooling marine diesel engines, including common requirements of cooling
  - exhaust valves
  - materials used to construct diesel engine major parts
  - means of pressure charging diesel engines, including common service faults, appropriate actions to rectify these faults, and emergency operation and isolation procedures
  - operating principles and adjustments of diesel engine fuel injection equipment, including common service faults, symptoms and causes of diesel fuel injection problems, and

- appropriate actions to be taken
- typical diesel engine lubrication systems, including:
- typical starting air and manoeuvring systems of diesel engines, including all components normally found therein
- basic principles of electrotechnology, marine electrical practice and marine automation and control relevant to detection, fault finding and repair of faults in electrical and electronic equipment, including:
  - alternating current (AC) and direct current (DC) theory and plant and equipment
  - basic cabling, distribution and lighting systems
  - basic control and switchgear
  - basic electrical circuit theory
  - basic theory of electromagnetism and electrostatics
  - electrolytic action and cells
  - instruments, calibration and testing
- basic principles of mechanics as they relate to forces, pressures, stress and strains in shipboard dynamic machinery
- basic principles of operating and maintaining:
  - fluid power control systems
  - machinery lubrication systems
  - marine boilers and materials used to construct boiler major parts
  - refrigeration systems:
    - furnace
    - steam and water drum
    - superheaters
    - water tubes
- basic thermodynamics, including:
  - advantages of multi-staging and inter-cooling
  - air/fuel ratio and significance of excess air on combustion
  - basic steam plant cycles and function of each component
  - basic thermodynamic properties of common working fluids
  - clearance volume, its effect on volumetric efficiency and methods of calculating volumetric efficiency
  - combustion process and calorific value of fuels
  - elementary principles of steam plants
  - meaning of gauge and absolute pressure
  - methods of heat transfer and related problems
  - operating cycle of single stage reciprocating air conditioners, including methods for the mass of air delivered
  - principles of heat transfer by conduction, convection and radiation and their application to marine systems
  - International System of Units (SI) and common thermodynamic terms and principles

- temperature and temperature scales
- deck machinery, including:
  - cranes
  - lifeboat davits and gear
  - mooring winch
  - winch
  - windlass
- diesel engine routine maintenance, including:
  - air intake system:
    - inspecting and changing air filters
    - inspecting turbocharger to make sure there is no fouling of compressor blades from crankcase gases
  - cooling system:
    - coolant sampling for trending analysis
    - draining, flushing and refilling system when required
    - fluid level checks
  - emissions systems:
    - inspecting crankcase ventilation systems, selective catalytic reduction (SCR) systems and diesel particulate filters (if so equipped)
  - exhaust system:
    - inspecting for leaks, corrosion and wet stacking
  - fuel system:
    - changing fuel filters and fuel injectors
    - checking water separators
  - lubrication:
    - changing oil and oil filters
    - checking levels
    - taking oil samples for trending analysis to optimise oil change intervals and to detect engine wear
  - mechanical systems:
    - generally inspecting for leaks, wear or deterioration
    - inspecting resilient engine mounts and torsional couplings
  - operating systems:
    - downloading data from digital engine management system to note and review alarm conditions
  - valves and heads:
    - inspecting and recording cylinder head wear for trending analysis
    - inspecting, adjusting and recording valve train wear for trending analysis
- inspection and disassembling, including:
  - air compressors:

- coolers and cooling passages
- lubricating systems
- piston and rings
- suction and delivery valves and seats
- diesel engine components:
  - bearings
  - cooling system
  - crankshaft alignment
  - liners
  - lubrication system
  - pistons
  - rings
  - valves
- heat exchangers:
  - corrosion
  - erosion
  - fouling
  - leakage
  - provision for tube expansion
- inspection requirements for:
  - marine refrigeration:
    - compressors
    - condensers
    - evaporators
    - expansion valves
    - oil separators
  - marine boiler:
    - fire side
    - water side
- lubricating system components, including:
  - settling tank
  - system bearings
  - system filters
- maintenance and repair hazards and problems, and appropriate preventative and remedial action and solutions during maintaining and repairing shipboard plant and equipment
- maritime communication techniques needed during maintenance and repair operations
- materials used to construct the following gas turbine major parts:
  - compressors
  - gas generators
  - rotors

- turbine casing
- materials used to construct the following steam turbine major parts:
  - blades
  - nozzles
  - reduction gears
  - rotors
  - turbine casings
- national and international regulations, International Maritime Organization (IMO) conventions and codes, including Australian Maritime Safety Authority (AMSA) Marine Orders applicable to managing shipboard plant and equipment maintenance and repair operations
- nature and causes of typical shipboard plant and equipment malfunctions and available methods for their detection and repair, including established fault-finding techniques
- operating principles and performance specifications for different types of shipboard plant and equipment usually found on a vessel of unlimited propulsion power
- operating principles of unmanned machinery spaces (UMS) and automated monitoring and control of machinery
- planned maintenance systems and procedures for condition monitoring of plant and equipment, including responsibilities and requirements covered by various forms of vessel survey
- plant and equipment typically found onboard a vessel of unlimited propulsion power
- procedures for:
  - carrying out shipboard plant and equipment fault finding and repair as part of routine maintenance procedures to ensure compliance with company and survey requirements, and established safety rules and regulations
  - completing temporary and permanent repair and/or replacement procedures for plant and equipment on board vessels at sea, alongside and in dry dock
  - reading and interpreting plant and equipment performance readings and instrumentation
- pumps, including:
  - axial
  - centrifugal
  - gear
  - reciprocating
  - screw
- purpose and content of safety data sheets (SDS)/material safety data sheets (MSDS)
- refurbished diesel engine components, including:
  - air start valves
  - cylinder heads
  - exhaust valves
  - fuel injectors
  - relief valves
- safety procedures for:

- handling heavy plant, equipment and component parts during maintenance and repair of shipboard plant and equipment
- using hand and power tools and maintenance equipment
- safety, environmental and hazard control precautions and procedures relevant to shipboard plant and equipment inspection and maintenance operations
- servicing, including:
  - dismantling rod and gears, seals, bearings and relief valve
  - gland packing
  - identifying wear and deterioration
  - measuring wear in cylinders, neck rings and rods
  - protecting finished surfaces
  - replacing and adjusting seals
  - removing studs: intact and broken
- turbocharger components, including:
  - air casing
  - air filters
  - bearings
  - diffuser
  - gas inlet grid
  - impeller
  - inducer
  - nozzle ring
  - rotor
  - volute
- types of vessel maintenance and repair records to be maintained to meet requirements of company, survey and regulatory authorities
- typical vessel and plant and equipment specifications, equipment drawings, operational manuals, and electrical and control circuit diagrams
- valves, including:
  - ball
  - butterfly
  - check
  - diaphragm
  - gate
  - globe:
  - screw down non return
  - screw lift
- valve maintenance, including:
  - examining seats, valves, spindles and glands
  - gland packing

- lapping valves and seats
- machining valves and seats
- removal
- repacking
- selection
- work health and safety (WHS)/occupational health and safety (WHS/OHS) legislation, policies and procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARB040 Maintain control and safety systems of hotel equipment

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to maintain and repair control and safety systems of ship hotel equipment.

It includes knowledge of construction and function of various hotel equipment useful for its maintenance and repair:

- alarm and safety systems, including fire detection and control systems, hospital call system and cold rooms trap alarm
- elevators
- galley equipment
- hotel lighting systems
- laundry equipment.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Electrotechnology

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1. Maintain control and safety systems of hotel equipment

#### 2. Rectify control and safety systems of hotel equipment

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |   |
|------------|---|
| <b>1.1</b> | Hotel equipment control and safety systems are identified, visually inspected and tested in accordance with shipboard procedures  |
| <b>1.2</b> | Ship hotel equipment technical drawings are obtained and interpreted  |
| <b>1.3</b> | Measuring and calibrating instruments are used in accordance with manufacturer specifications   |
| <b>1.4</b> | Hotel equipment malfunctions detected during equipment maintenance are documented in service records and effect on associated plant and safety systems specified accurately |
| <b>1.5</b> | Equipment rectification plans are justified in service/maintenance records  |
| <b>2.1</b> | Hotel equipment and associated plant and safety systems are isolated and electrical hazards identified in accordance with safe electrical working practices                 |
| <b>2.2</b> | Working in flammable areas hazards are identified, risks assessed and control measures implemented in   |

accordance with shipboard procedures

- 2.3** Hotel equipment along with associated plant and safety system faults are rectified by competent person in accordance with shipboard procedures and legislative requirements
  - 2.4** Plant, equipment, control and safety systems are dismantled and re-assembled in accordance with manufacturer safety guidelines and shipboard instructions
  - 2.5** Hotel equipment control and safety systems restoration actions are undertaken by the method most suitable and appropriate to the prevailing circumstances and conditions
  - 2.6** Work area is made safe and all equipment and plant returned to service in accordance with shipboard procedures and legislative requirements
  - 2.7** Work area is cleared and cleaned
- 3. Complete documentation**
- 3.1** Work area is made safe in accordance with safe working practices
  - 3.2** Hotel equipment maintenance records are completed in accordance with shipboard procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARB040 Maintain control and safety systems of hotel equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying work health and safety (WHS)/occupational health and safety (OHS) requirements and safe work practices
- carrying out safe maintenance and repair procedures
- detecting machinery malfunction, location of faults and actions to prevent damage.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical systems, including:
  - layout systems
  - measuring and testing instruments
- electrical and electronic systems operating in flammable areas
- hotel equipment technical drawings, including elevator technical specifications
- relevant industry standards and legislative requirements
- safety precautions and procedures, including electrical risk mitigation control measures
- shipboard hotel equipment, including equipment fitted to:
  - alarm and safety systems including fire detection and control systems, hospital call system and cold rooms trap alarm
  - cabins
  - communal spaces
  - elevators
  - galley equipment
  - hotel lighting systems
  - laundry equipment
  - provision stores
- symbols, electrical diagrams/circuits
- WHS/OHS requirements including safe electrical working practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of ship workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, safety management system (SMS), workplace procedures and operational manuals
- tools, hotel equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

## MARB041 Manage refuelling

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to manage refuelling and fuel transfer operations.

This includes planning refuelling or fuel transfer operations, preparing vessel for refuelling or fuel transfer operations, completing refuelling operations and managing an emergency.

This unit of competency applies to people working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- an assistant under the direct supervision of the Chief Engineer
- worker in the engine room of a vessel less than 80 metres long with propulsion power less than 3000 kW.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

### Pre-requisite Unit

Not applicable.

### Competency Field

B - Equipment Checking and Maintenance

### Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Plan refuelling or fuel transfer operations

- 1.1 Fuel tanks are dipped to establish current level of fuel
- 1.2 Fuel is ordered according to organisational procedures
- 1.3 Amount and positioning of fuel onboard vessel is calculated with reference to tank tables
- 1.4 Impact of refuelling on safety and operation of vessel is determined and appropriate strategies are implemented
- 1.5 Local port authorities are informed of vessel location for bunkering operations and duration of bunkering

#### 2 Prepare vessel for refuelling or fuel transfer operations

- 2.1 Vessel is positioned and secured for refuelling
- 2.2 All personal protective equipment (PPE) is accessed and used
- 2.3 Bunkering equipment is correctly deployed according to organisational procedures
- 2.4 Safety zone for refuelling process is established and maintained for full duration of operation
- 2.5 Procedures for refuelling are established with bunker operator and completed lists are checked according to organisation and safety management system (SMS) requirements
- 2.6 Bunker hose is securely connected to vessel fuel manifold
- 2.7 Tank valves are opened, as necessary, and refuelling operations are performed safely according to SMS and regulatory requirements
- 2.8 Tanks are dipped to ensure correct amount of fuel has been received
- 2.9 Fuel samples are taken to check quality of fuel received

- and appropriate action is taken if fuel sample is not to specification
- |   |  |
|---|--|
| <b>3 Complete refuelling operations</b> | <b>3.1</b> Shutdown procedures are conducted according to organisational procedures  |
|   | <b>3.2</b> Malfunctions, faults, irregular performance or damage to refuelling equipment are recorded and repairs are organised according to organisational procedures |
|   | <b>3.3</b> Refuelling equipment is maintained and secured according to organisational procedures   |
|   | <b>3.4</b> Refuelling records are completed according to organisational procedures and regulatory requirements   |
| <b>4 Manage an emergency</b>            | <b>4.1</b> Appropriate response is made to an emergency situation according to organisational procedures   |
|   | <b>4.2</b> Safety zone is closed off and isolated according to organisational procedures   |
|   | <b>4.3</b> All persons in the safety zone are correctly notified and their activities are managed to ensure safety according to organisational procedures              |
|   | <b>4.4</b> Appropriate authorities are notified and actions are taken as directed according to emergency procedures and regulatory requirements                        |
|   | <b>4.5</b> Documentation of emergency is completed according to organisational procedures and relevant maritime authority  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB009 Manage refuelling.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARB041 Manage refuelling

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing refuelling records, including:
  - bunker receipt
  - logbook entry
  - oil record book
- implementing procedures for refuelling, including:
  - emergency disconnection procedures
  - flow rates
  - system of communication with supplier in relation to starting and shutdown procedures
- implementing shutdown procedures, including:
  - blowing through of bunker hoses
  - disconnecting bunker hose
  - isolating fuel valves
  - stowing equipment
- measuring tank levels
- recognising faulty equipment and taking appropriate action
- recognising problems and hazards during refuelling and fuel transfer operations, and taking appropriate action
- selecting and using relevant equipment required for refuelling and fuel transfer operations
- taking appropriate action in an accidental spillage, fire or safety incident during refuelling and fuel transfer operations.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental protection measures to be applied during refuelling or transfer operations
- functions and responsibilities of crew during refuelling or transfer operations
- hazards and safety precautions to be observed during refuelling or transfer operations
- impact of refuelling on safety and operation of vessel, including:

- hot work
- increase in the potential for fire
- loading and discharging operations
- stability, including the free surface effect
- toxic fumes
- work being conducted by others
- emergency situations whilst refuelling
- refuelling and fuel transfer procedures applying to commercial vessels, including:
  - bunding
  - bunker flag
  - fire-extinguishers
  - measuring tank levels
  - no smoking signs
  - radios
  - sample containers
  - scupper plugs
  - sounding tape
  - spill kit
  - tank tables
  - tank tables and fuel line diagrams
- requirements for reporting incidents
- safety zones, including:
  - area where no smoking or hot work is permitted
  - systems that can contain a spill
- work health and safety (WHS)/occupational health and safety (OHS) and pollution control legislation and policies.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or

may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel with inboard diesel propulsion power of greater than or equal to 375 kW or appropriate engine, propulsion plant and auxiliary systems ashore
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- relevant personal protective equipment (PPE)
- relevant equipment required for bunkering
- tools, equipment, machinery and materials currently used in industry.

## **Links**

# **MARB042 Manage reported defects, damage, repairs and maintenance of a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to implement a planned maintenance system to ensure effective maintenance of a vessel, including assessing reported defects, damages and repairs of a vessel to ensure its seaworthiness.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel Unlimited.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Define maintenance targets**

- 1.1** Compliance documentation relevant to maintaining the vessel is interpreted
- 1.2** Vessel planned maintenance system is interpreted to establish maintenance activities and priorities, according to regulatory and organisational requirements
- 1.3** Current maintenance practices are reviewed to evaluate efficiency, reliability and comparative cost-effectiveness
- 1.4** Maintenance targets are set to ensure compliance and cost-effectiveness

#### **2 Optimise maintenance management**

- 2.1** Objectives of maintenance are clearly defined and appropriate maintenance mechanisms are determined
- 2.2** Preventative maintenance activities are forecast, scheduled and matched to resources to ensure work is completed on time and within budget
- 2.3** Optimal cost balance between preventative and corrective maintenance activities is determined
- 2.4** Priority system for preventative and corrective maintenance is developed based on critical analysis to maximise quality outcomes
- 2.5** Maintenance plan is negotiated and agreed in consultation with relevant stakeholders
- 2.6** Monitoring and reporting arrangements for maintenance activities are established and documented according to organisational procedures
- 2.7** Risk management plan to identify, assess and control risks is incorporated into maintenance plan according to regulatory and organisational requirements

#### **3 Organise support processes**

- 3.1** Resource requirements are determined and organised according to the maintenance plan
- 3.2** Targets and milestones are identified and linked to the achievement of outcomes according to the maintenance

plan

- 3.3** Documentation and checklists associated with the implementation of the maintenance plan are prepared in established formats and distributed to relevant people
  - 3.4** Information related to the implementation of the maintenance plan is distributed according to organisational procedures
  - 3.5** Contingency arrangements for the implementation of the maintenance plan are identified
- 4 Monitor implementation of maintenance plan**
  - 4.1** Progress is systematically monitored and variations to implementation of the maintenance plan are verified as required with relevant people
  - 4.2** Expenditure and resource usage are monitored and controlled to ensure objectives are achieved within specified parameters
  - 4.3** Coaching and mentoring assistance is provided to crew members as required to overcome difficulties in implementing the plan
  - 4.4** Systems, records and reporting procedures are maintained according to regulatory and organisational requirements
- 5 Evaluate implementation of maintenance plan**
  - 5.1** Regular reports on progress and outcomes are provided orally or in writing to relevant stakeholders to ensure completion of activities is in line with maintenance plan
  - 5.2** Systematic review processes and established evaluation methods are used to evaluate implementation processes and outcomes
  - 5.3** Evaluation results are prepared in required format and presented to relevant people within agreed timeframes
  - 5.4** Recommendations for improving implementation processes are presented to relevant people according to organisational procedures
  - 5.5** Relevant documentation is completed and processed according to regulatory and organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB020 Manage repairs and maintenance of a vessel 500 gross tonnage or more.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB042 Manage reported defects, damage, repairs and maintenance of a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing current work practices
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- attending to detail when completing documentation
- documenting information, including completing compliance documentation
- ensuring currency of relevant legislative and regulatory knowledge
- estimating resource and time requirements
- identifying potential barriers to implementing maintenance plan, analysing risks and establishing contingencies
- making decisions
- operating vessel planned maintenance system
- preparing a detailed vessel maintenance plan that incorporates strategies addressing risk management, resource needs, monitoring and reporting arrangements, and quality assurance controls
- preparing appropriate reports on the outcomes of inspection and maintenance activities to ensure the seaworthiness of a vessel
- preparing docking requirements, including repair lists and survey requirements
- providing high quality reports
- sequencing maintenance activities logically, planning and documenting strategies to implement maintenance plans, setting goals and meeting time constraints
- monitoring one or more of the following preventative maintenance activities:
  - applying lubricants to moving parts
  - hull cleaning and painting
  - identifying deterioration of vessel structure and fittings, including cargo spaces, freshwater and ballast tanks
  - inspecting and repairing or replacing cargo handling equipment, including wires, blocks, shackles, chains and hooks
  - prescribed tank inspections
  - restoring weathered, rusted surfaces and corrosion

- routine maintenance inspections.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria include knowledge of:

- beam theory and stress calculations
- compliance documentation, including as a minimum:
  - cargo gear and equipment register
  - maintenance schedules and records according to the planned maintenance system
  - port state/territory control inspection records
  - statutory survey certificates
  - statutory survey periodic inspection records
  - vessel general arrangement plans, docking plan and manuals relevant to maintenance requirements
- construction of double bottoms, ship's hull, bulkheads, fore and aft ends, construction of tankers, bulk carriers and container vessels and their limitations
- construction, materials, layout and subdivision requirements of a typical vessel, including the freeboard and bulkhead deck, watertight compartments, weather tight compartments, including doors, the bulkhead of the vessel and the collision bulkhead
- contingency plans for maintenance and repairs
- corrosion control measures, including surface preparation, painting and antifouling
- fire protection on ships
- limitations on strength of the vital constructional parts of a standard bulk carrier and interpretation of given figures for bending moments and shear forces
- maintenance plans - corrective and preventative
- methods to avoid the detrimental effects on bulk carriers of corrosion, fatigue and inadequate cargo handling
- preservatives and finishes used in marine maintenance, and the related procedures and precautions to be taken for preparation, application and storage
- principal features of the structure of a vessel
- properties and application of materials used in vessel construction
- relevant national and international legislation related to maintaining vessels
- stresses imposed on vessels at sea
- vessel and machinery specifications, vessel design machinery design drawings, operational manuals, specifications, and electrical and control circuit diagrams.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## MARB043 Manage stores for planned maintenance system

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release.

### Application

This unit involves the skills and knowledge required to plan and control inventory levels of materials required for vessel maintenance.

This unit applies to people working in the maritime industry in the capacity of a:

- Chief Integrated Rating.

### Licensing/Regulatory Information

There are no legislative and regulatory requirements applicable to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

B – Equipment Checking and Maintenance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify materials requirements**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Drawings and specifications for vessel and equipment are read and interpreted to determine materials requirements**

- 1.2** Sources of product supply are identified and recorded
  - 1.3** Normal quantity supply and matching storage facilities and equipment are identified
  - 1.4** Safety data sheets (SDS)/material safety data sheets (MSDS) or other supplier information are read, relevant engineering controls or personal protective equipment (PPE) are identified, and additional resources required for handling and storing materials are documented
  - 1.5** Procedures to deal with fire or explosion risk, spills or injury are identified and recorded
- 2 Plan inventory levels**
  - 2.1** Estimates are calculated according to specification requirements and workplace procedures
  - 2.2** Cost reports are prepared
  - 2.3** Estimates that meet initial requirements are documented
  - 2.4** Estimates are authorised for implementation by appropriate personnel
- 3 Monitor receipt and dispatch of goods**
  - 3.1** Workplace procedures are implemented in the receipt, dispatch and secure storage of materials
  - 3.2** Materials are inspected for quality and quantity on receipt
  - 3.3** Variation to quantity and quality of delivered materials is acted on according to workplace procedures
  - 3.4** Safe handling and storage of materials is supervised according to workplace procedures
  - 3.5** Information is formatted and entered into inventory system according to workplace procedures and system requirements
- 4 Manage stock control**
  - 4.1** Workplace procedures are implemented for stock control and inventories
  - 4.2** Procedures are established and implemented to monitor and control stock levels
  - 4.3** Stock levels are monitored and maintained at required levels

- 4.4** Stock reorder cycles are maintained and adjusted, as required
- 4.5** Stocktaking procedures are established and implemented
- 4.6** Contingency plans for stock delivery times are established and implemented
- 4.7** Accurate reports on stock inventories are prepared
- 4.8** Stock discrepancies are identified and recorded

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB019 Manage stores for planned maintenance system.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARB043 Manage stores for planned maintenance system

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- anticipating interruptions to supply
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- calculating correct inventory requirements taking into account lead times, re-order triggers, impacts of turnover and supply margins
- calculating cost of materials and other resources to meet inventory requirements
- costing and documenting requirements
- forecasting accurate inventory demand
- identifying appropriate materials and consumables to match maintenance standards
- identifying commercially viable sources of consumables and materials
- identifying the impact of decisions in terms of commercial, environmental and safety risks
- planning and organising activities to avoid any backtracking, workflow interruptions or wastage
- planning for inventory required to meet special events or contingencies
- researching information related to inventory, including relevant technical, regulatory, environmental and safety requirements
- using appropriate information technology and software when preparing inventory.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- authorised maintenance processes and plans, and related materials and consumables
- commercial supply systems, including standard documentation support processes
- computer applications and software suitable for managing an inventory
- cost-benefit analysis or equivalent techniques
- inventory and operations management approaches, including:

- cyclical counts
- minimisation of out-of-date stock
- monitoring stock levels
- quality control
- stocktaking
- inventory control systems used on a vessel
- materials, process characteristics and special requirements, including:
  - appropriate oils and grease
  - cleaning material
  - machinery spare parts
  - mooring ropes and wires
  - paint
  - shackles and other lifting equipment
  - tools - hand and power
- systems and equipment for inventory recording and control
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARB044 Operate and maintain ship power systems exceeding 1,000 volts

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package

## Application

This unit involves the skills and knowledge required to operate and maintain ship high voltage (HV) power systems exceeding 1,000 volts (V).

It includes reviewing and managing electrical propulsions of the ship, electrical motors and control systems as part of the ship power system. It also includes HV technology and required documentation.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited)
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

A person competent in this unit will hold either an Unrestricted Electrical Licence issued in an Australian state or territory, a Marine Engineering Certificate of Competency issued under Marine Order 72 or be undertaking an Australian Maritime Safety Authority (AMSA) approved course of study under Marine Order 72, and be able to operate and maintain ship power systems exceeding 1,000 V in accordance to relevant industry standards and regulations.

This unit is subject to the following requirements:

- Legislation, regulations, relevant industry standards and codes of practice for electrical work, including specific work health and safety (WHS)/occupational health and safety (OHS) legislation and regulatory requirements.
- This unit is one of the requirements to obtain AMSA certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Class 1 (STCW Chief Engineer Unlimited), Engineer Class 2 (STCW Second Engineer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together

with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

- Electrical licence requirements – unrestricted electrical work or relevant industry experience approved by maritime regulator.
- Legislation, regulations, relevant industry standards and codes of practice for ship power systems exceeding 1,000 V.

There may be variations in these requirements across jurisdictions.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Electrotechnology

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1. Review ship power systems operations

#### 2. Manage ship power systems

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Ship power systems are identified and analysed from electrical drawings and specifications

**1.2** Hazards are identified, risks assessed and control measures implemented

**2.1** Operations are carried out in accordance with operational manuals, rules and procedures to ensure safety of operations

**2.2** Electrical permit system to work on HV systems are identified and applied

**2.3** HV isolation and verification are carried out in accordance with procedures

- 2.4 Ship power systems are visually inspected and tested in accordance with maintenance specification and electrical operation plan
  - 2.5 Maintenance work is checked to verify that it conforms with technical specifications
  - 2.6 Electrical system is verified prior to re-energising system
  - 2.7 HV system is re-energised in accordance with procedures
- 3. **Clean up and complete documentation**
  - 3.1 Work area is cleared and cleaned
  - 3.2 Work area is made safe in accordance with safe electrical working practices
  - 3.3 Materials are disposed of or recycled in accordance with legislative and workplace requirements
  - 3.4 Tools and equipment are cleaned, checked and stored in accordance with procedures
  - 3.5 Maintenance reports are completed in accordance with procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARB044 Operate and maintain ship power systems exceeding 1,000 volts**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- applying safe operations and maintenance of high voltage (HV) systems procedures, including:
  - de-energising
  - earthing down
  - isolating and switching procedures
  - testing HV electrical systems
- identifying and interpreting complex numerical and graphical information in electrical diagrams
- identifying and suggesting ways of rectifying electrical hazards and emergency situations on a ship
- reading and interpreting written information related to electrical circuitry and components on a ship
- using electrical measuring and testing instruments.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical propulsions of the ships, electrical motors and control systems
- electrical:
  - layout systems
  - measuring and testing instruments
  - shipboard equipment
  - symbols, electrical diagrams/circuits

- HV electrical permit system, including:
  - earthing down
  - isolation and verification methods
  - HV switching
- HV technology
- relevant industry standards
- safety precautions and procedures, including electrical risk mitigation control measures
- special technical types of HV systems and the danger resulting from operational voltage of more than 1,000 volts (V)
- WHS/OHS requirements, including safe electrical working practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of ship workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, safety management system, workplace procedures and operational manuals
- HV electrical system
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# MARB045 Perform routine maintenance and repairs on a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to perform routine remedial, preventative and survey deck maintenance and repairs. It includes basic deck maintenance, cleaning tasks, marine painting, and servicing deck machinery and systems on a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer - Deck/Engine or Integrated Rating engaged in a range of maintenance activities required on a range of vessels, under the direction of the officer in charge of the Deck Watch
- Navigational Watch - Deck/Engine.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Deck/Engine, Integrated Rating or Navigational Watch - Deck/Engine and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan and prepare for work**

- 1.1** Maintenance and repair activities are identified from work orders and are clarified with the officer in charge of the deck watch
- 1.2** Relevant plans, drawings and texts are interpreted to determine job specifications requirements in accordance with workplace procedures
- 1.3** Resources required to complete tasks are identified, obtained and inspected for compliance in accordance with workplace procedures
- 1.4** Appropriate fall arrest and restraint devices are selected and used according to work health and safety (WHS)/occupational health and safety (OHS) requirements when working at heights or overside
- 1.5** Tasks are sequenced and prioritised in accordance with workplace procedures
- 1.6** Coordination requirements are resolved with the officer in charge of the deck watch, work planning committee and others involved or affected by the work
- 1.7** Potential hazards are identified and prevention and/or control measures are selected according to work plan in accordance with workplace procedures

#### **2 Perform basic deck maintenance**

- 2.1** Suitable personal protective equipment (PPE) is selected and used according to WHS/OHS requirements
- 2.2** Deck surfaces are checked according to planned maintenance system
- 2.3** Deterioration or corrosion of deck surfaces is identified and appropriate maintenance action is carried out according to manufacturer instructions and workplace

procedures

- 2.4** Minor faults and imperfections in paint surfaces are repaired according to manufacturer instructions and workplace procedures
  - 2.5** Weathered surfaces are restored using cleaners and liquid abrasives according to manufacturer instructions and workplace procedures
  - 2.6** Tools and equipment are used correctly and safely in accordance with workplace procedures
  - 2.7** Maintenance materials are obtained, prepared and applied according to manufacturer instructions and workplace procedures
- 3 Carry out cleaning tasks**
  - 3.1** Suitable PPE is selected and used according to WHS/OHS requirements
  - 3.2** Area to be cleaned is prepared and hazards are identified
  - 3.3** Work area is isolated or warning signs are provided, as required, to reduce risk to other crew members in accordance with workplace procedures
  - 3.4** Correct chemicals and cleaning agents are selected and applied according to manufacturer instructions, safety data sheets (SDS)/material safety data sheets (MSDS) and WHS/OHS requirements and in accordance with workplace procedures
  - 3.5** Equipment is used correctly and safely in accordance with workplace procedures
  - 3.6** Cleaning tasks are completed according to manufacturer instructions and workplace procedures
- 4 Prepare and paint surfaces**
  - 4.1** Suitable PPE is selected and used according to WHS/OHS requirements in accordance with workplace procedures
  - 4.2** Surfaces are prepared using correct equipment in accordance with workplace procedures
  - 4.3** Rust remover, rust converter and undercoats are applied according to manufacturer instructions and workplace procedures
  - 4.4** Paints are mixed in correct proportions according to

- manufacturer instructions and workplace procedures
- 4.5** Paint is applied using appropriate application equipment in accordance with workplace procedures
- 5 Carry out routine maintenance of deck fittings, equipment and systems**
- 5.1** Fittings and equipment are inspected and inspection results are compared with manufacturer specifications in accordance with workplace procedures
- 5.2** Maintenance tasks are carried out to specification in accordance with workplace procedures
- 5.3** Mechanical equipment and system components are checked with appropriate instruments in accordance with workplace procedures
- 5.4** Faulty items or components are identified, reported and appropriate maintenance procedure is selected in accordance with workplace procedures
- 5.5** Unserviceable equipment is tagged in accordance with workplace procedures
- 6 Repair/replace faulty fittings and equipment**
- 6.1** Fittings and equipment are safely isolated according to regulations and WHS/OHS requirements
- 6.2** Faulty fittings or equipment are removed using appropriate tools and equipment in accordance with workplace procedures
- 6.3** Consumable items are selected or serviceable items are repaired according to manufacturer specifications
- 6.4** Adjustments are made to fittings or equipment to comply with specifications in accordance with workplace procedures
- 6.5** Operational checks are carried out to ensure compliance with manufacturer specifications and in accordance with workplace procedures
- 6.6** Maintenance report is completed in accordance with workplace procedures
- 7 Clean up**
- 7.1** Work area is cleared and cleaned in accordance with workplace procedures
- 7.2** Materials are disposed of or recycled according to regulatory requirements and workplace procedures

- 7.3** Tools and equipment are checked, maintained and stored in accordance with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARB017 Perform routine maintenance and repairs on a vessel.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB045 Perform routine maintenance and repairs on a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying corrosion control and preventive measures/maintenance
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- applying safe and environmentally responsible work practices when performing routine remedial, preventative and survey deck maintenance on a vessel
- applying surface preparation techniques
- communicating with other personnel using effective:
  - listening techniques
  - questioning to confirm understanding
  - verbal and non-verbal language
- completing required records when performing routine remedial, preventative and survey deck maintenance on a vessel
- following required work and maintenance schedules according to workplace requirements
- reading and interpreting instructions for performing routine remedial, preventative and survey deck maintenance on a vessel
- reading and interpreting manufacturer specifications and safety data sheets (SDS)/material safety data sheets (MSDS)
- recognising routine problems when performing routine remedial, preventative and survey deck maintenance on a vessel
- selecting and using relevant tools, equipment and materials
- selecting, using and maintaining suitable lifting gear
- undertaking regular testing with repairs
- using fall arrest and restraint devices, as required.
- using paint, lubrication and cleaning materials and equipment correctly.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application, use, type and maintenance of lifting gear used on a vessel
- appropriate selection and use of personal protective equipment (PPE)
- component parts, operation and routine maintenance requirements of vessel machinery
- corrosion control and preventive measures/maintenance, paint systems and surface preparation techniques
- job safety analyses (JSA)/safe work method statements (SWMS), including safety and toolbox meetings
- maintenance and repair activities, including:
  - fire and bilge pumps - greasing and oiling
  - lifebuoys and lifejackets, regular inspection and maintenance of lifeboats, life rafts and equipment, including:
    - expired food
    - general cleaning and painting
    - replacing lashings
    - wires
- maintenance records for a vessel
- manufacturer safety guidelines and shipboard instruction
- nature and causes of corrosion of marine surfaces and structures, and available methods of control, including prevention
- paint types suitable for interior and exterior application on a vessel
- planned maintenance systems
- principal parts of a vessel and basic design methods
- principles and procedures of machinery lubrication as they relate to vessel machinery
- procedures for:
  - checking deck areas, machinery and fittings of a vessel as part of the planned routine maintenance on a vessel
  - inspecting ropes and wires for damage
  - repairing damaged areas (splicing) and replacing where necessary:
    - cargo wires
    - lashings
    - lifeboat falls
    - mooring lines
  - using hand tools for routine maintenance operations
- relevant WHS/OHS requirements, work practices and pollution control regulations and policies
- safe disposal of waste materials according to the International Convention for the Prevention of Pollution from Ships (MARPOL)

- safety management system (SMS) as it relates to planned vessel maintenance systems
- storage requirements for equipment, paints, chemicals and cleaning agents used in planned maintenance operations
- suitable equipment cleaning and preservation techniques used onboard a vessel
- surface preparation techniques, including:
  - abrasive blast cleaning
  - hand and power tool cleaning
- type, characteristics and functions of:
  - equipment/tools used in cleaning and maintenance
  - vessel machinery and equipment
- use of various vessel construction material and regulations governing structure of vessels.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARB046 Plan and supervise routine maintenance on a vessel up to 80 metres

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to implement a maintenance program for a vessel less than 80 metres.

This unit applies to people working in the maritime industry in the capacity of:

- Master of commercial vessels less than 35 metres in length within the exclusive economic zone (EEZ)
- Master of vessels less than 80 metres in length in inshore waters
- Chief Mate or Deck Watchkeeper on vessels less than 80 metres in length within the EEZ.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 35 metres Near Coastal and Mate less than 80 metres Near Coastal, as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Develop maintenance program**

- 1.1** Planned maintenance system is accessed to establish maintenance requirements for vessel
- 1.2** Maintenance program for vessel is developed to meet requirements of planned maintenance system
- 1.3** Maintenance schedules and budgets are identified
- 1.4** Suggestions that support effective implementation of maintenance program are offered according to organisational procedures
- 1.5** Strategies to minimise impact of maintenance activities on vessel operations are identified

**2 Implement maintenance program**

- 2.1** Routine maintenance activities are proposed and prioritised in conjunction with others involved in or affected by maintenance work
- 2.2** Routine maintenance activities are allocated within scheduled timeframes and budgets according to organisational procedures
- 2.3** Vessel operations are maintained, where possible, without interruption
- 2.4** Safety of crew is maintained at all times according to relevant legislation and organisational procedures
- 2.5** Requests for assistance from crew to complete maintenance activities are responded to promptly

**3 Identify failed or unsafe machinery and equipment**

- 3.1** Faulty machinery and equipment are identified and clear and noticeable warning signs are erected according to organisational procedures
- 3.2** Failed or unsafe machinery and equipment are assessed according to organisational procedures
- 3.3** Repairs are allocated to appropriate crew members according to organisational procedures
- 3.4** Unsafe machinery and equipment which cannot be repaired are promptly tagged and isolated according to organisational procedures
- 3.5** Unsafe machinery and equipment are promptly reported according to organisational procedures

- 3.6** Reports on all repair work undertaken are completed according to organisational procedures
- 4 Monitor supplies**
  - 4.1** Supply and stock levels are maintained to ensure ongoing availability
  - 4.2** Management of supplies is undertaken according to organisational procedures
  - 4.3** Supply and stock levels are reconciled and any discrepancies are rectified or reported
  - 4.4** Supply records are maintained according to organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB010 Plan and supervise routine maintenance on a vessel up to 80 metres.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB046 Plan and supervise routine maintenance on a vessel up to 80 metres**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- actioning planned maintenance system, including:
  - liaising with internal and external suppliers, authorities and agencies
  - preparing reports on outcomes of inspection and maintenance activities
  - taking appropriate precautions to prevent pollution of the marine environment
  - using and interpreting vessel, equipment and machinery specifications, drawings, operational manuals and diagrams
- developing a maintenance program having regard to:
  - owner's requirements
  - periodic survey requirements
  - programmed maintenance requirements of hull and machinery
  - relevant safety data sheets (SDS)/material safety data sheets (MSDS)
  - routine maintenance as contained in manufacturer instruction manuals and drawings
  - safety and environmental policy and requirements
- initiating timely action in response to defects or damage.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- elements of ship structure crucial to the safety of the ship
- fundamental principles of vessel construction
- maintenance records that must be maintained on vessel to meet organisational and regulatory requirements
- managing maintenance of the vessel
- means for control of corrosion of marine surfaces and structures
- monitoring, selection and use of supplies involved in maintenance of vessel
- planned maintenance system, including:
  - continuous improvement and review procedures

- document control procedures
- provision of safe practices in vessel operation and a safe working environment
- reference to applicable codes, guidelines and standards
- systems for recording completed maintenance schedules, including identification of defective equipment and rectification of defects
- principal structural components
- procedures for initiation and coordination of repair and/or replacement procedures onboard vessel
- relevant laws and regulations, including work health and safety (WHS)/occupational health and safety (OHS) and pollution control legislation
- routine maintenance activities
- slipping and docking procedures suitable for various types of hull forms
- typical problems related to maintenance of vessels and appropriate actions and solutions.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel greater than or equal to 12 metres in length
- applicable documentation, such as legislation, regulations, codes of practice, safety management system (SMS), workplace procedures and operational manuals.

## Links

Companion Volume implementation guide can be found in VetNet -

## **MARB047 Undertake maintenance of 240 to 440 voltage alternating current electrical systems**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to establish, organise and implement a preventative and reactive maintenance program and capabilities on 240 to 440 volt (V) alternating current (AC) electrical systems on a vessel.

It includes verifying maintenance requirements, establishing maintenance systems, organising maintenance activities, supervising maintenance tasks, performing planned maintenance activities, performing breakdown maintenance and monitoring, and adjusting and reporting on implementation of maintenance plan.

This unit of competency applies to people working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- an assistant under the direct supervision of the Chief Engineer
- a worker in the engine room of a vessel less than 80 metres long with propulsion power less than 3000 kW.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

Note: Relevant state/territory qualification requirements apply to persons carrying out installation, maintenance and/or repair of electrical circuits or systems that are 50 V AC or above, or 120 V direct current (DC) or above.

### **Pre-requisite Unit**

Not applicable.

## Competency Field

B - Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Verify maintenance requirements**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Regulatory and organisational requirements for electrical system maintenance program are identified and followed
- 1.2** Specifications, diagrams and organisational procedures for electrical systems are checked for recommended maintenance
- 1.3** Special requirements for electrical system maintenance are separated from adjustment and day-to-day maintenance schedules
- 1.4** Maintenance system goals for electrical systems are outlined
- 1.5** Maintenance plan and related work schedule for electrical systems are developed according to regulatory requirements and safety management system (SMS)
- 2 Establish maintenance systems**
  - 2.1** Maintenance costs are identified and quantified
  - 2.2** Interruptions, processes and procedures are documented
  - 2.3** Internal and external maintenance providers are specified
  - 2.4** Maintenance plan is prepared to minimise negative impacts on production, costs, waste and the environment
  - 2.5** Approvals for maintenance plan are negotiated and confirmed

- |   |            |  |
|---|------------|--|
|   | <b>2.6</b> | Recordkeeping systems are developed and maintained   |
| <b>3 Organise maintenance activities</b>        | <b>3.1</b> | Schedules and rosters are checked to verify time when maintenance process may be scheduled, including optimal timing for shutdown      |
|   | <b>3.2</b> | Agreement from Master is obtained for timing of maintenance tasks to optimise maintenance process and minimise operational disruptions |
|   | <b>3.3</b> | Detailed work plans are developed in line with schedules, availability of expertise and scheduling of resource availability            |
|   | <b>3.4</b> | Team members with required competencies are allocated to maintenance activities  |
|   | <b>3.5</b> | Consumables and equipment are secured to meet work plan requirements   |
|   | <b>3.6</b> | Externally sourced equipment, consumables and expertise are located and procured   |
|   | <b>3.7</b> | Contingency plans are prepared   |
|   | <b>3.8</b> | Maintenance schedules and procedures are effectively communicated to team  |
| <b>4 Supervise maintenance tasks</b>            | <b>4.1</b> | Job specifications and maintenance tasks are communicated effectively to team members  |
|   | <b>4.2</b> | Maintenance and repair tasks are monitored to ensure they satisfy system specifications  |
|   | <b>4.3</b> | Work health and safety (WHS)/occupational health and safety (OHS)) requirements are monitored and observed at all times                |
|   | <b>4.4</b> | Emergency equipment is made available and working order of equipment is ensured  |
|   | <b>4.5</b> | Contingencies are managed to ensure quality of work is maintained and work is completed within agreed timeframe                        |
| <b>5 Perform planned maintenance activities</b> | <b>5.1</b> | WHS/OHS risk control measures and procedures for carrying out work are followed  |
|   | <b>5.2</b> | Maintenance schedule and process compliance requirements are confirmed and work is appropriately                                       |

sequenced according to job specification

- 5.3** Appropriate person/s is consulted to ensure work is coordinated effectively with others
- 5.4** Resources needed to conduct maintenance are obtained according to organisational procedures and are checked against job requirements
- 5.5** Tools, equipment and testing devices needed to conduct maintenance are obtained according to organisational procedures and checked for correct operation and safety
- 5.6** Live and operating system is tested or measured strictly according to WHS/OHS requirements and within established safety procedures
- 5.7** Electrical equipment is checked as being isolated, where necessary, strictly according to WHS/OHS requirements and within established safety procedures
- 5.8** Electrical equipment to be maintained is inspected and evaluated for compliance with system specifications
- 5.9** Non-compliant electrical equipment components are rectified or repaired according to system specifications

## **6 Perform breakdown maintenance**

- 6.1** Nature of breakdown is confirmed with appropriate personnel
- 6.2** Extent of breakdown is evaluated and confirmed using diagnostic and troubleshooting techniques
- 6.3** Restrictions are applied to operations, as necessary, and agreed to with the Master
- 6.4** Electrical equipment is checked as being isolated, where necessary, strictly according to WHS/OHS requirements and within established safety procedures
- 6.5** Repair work is carried out according to system specifications
- 6.6** Master is notified of completion of repair work and details are documented

## **7 Monitor, adjust and report on implementation of maintenance plan**

- 7.1** Maintenance tasks are monitored to ensure they are completed according to maintenance plan and statutory survey requirements

- 7.2** Electrical systems are monitored to ensure achievement of planned outcomes
- 7.3** Costs are monitored and controlled
- 7.4** Adjustments are made to maintenance plan to take into account failure to achieve planned outcomes
- 7.5** Reports are completed according to maintenance plan requirements and organisational procedures
- 7.6** Recommendations to improve maintenance plan safety, efficiency and effectiveness are implemented under regular review of SMS
- 7.7** Maintenance tasks are monitored to ensure they are completed according to maintenance plan and statutory survey requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARB011 Undertake maintenance of 240 to 440 voltage alternating current electrical systems.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB047 Undertake maintenance of 240 to 440 voltage alternating current electrical systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying safety requirements throughout work sequence, including the use of personal protective equipment (PPE)
- completing all work to specification
- completing records, including:
  - incident reports
  - maintenance logs
  - reports required under planned maintenance system
- developing effective planning documents
- ensuring correct requirements and details of maintenance of electrical systems and equipment
- implementing safe and environmentally responsible work practices in testing and maintenance activities
- locating, interpreting and applying manufacturer specifications for electrical systems and equipment
- operating alternating current (AC) systems and conducting operator preventive maintenance according to manufacturer recommendations, regulations and vessel operating procedures to ensure safe operation
- operating electrical systems and equipment according to manufacturer recommendations, regulations and vessel operating procedures to ensure safe operation providing high quality reports
- performing maintenance tasks, including:
  - battery maintenance
  - testing:
    - alarm systems
    - emergency alternator
    - power and lighting systems
- recognising electrical system faults and, where necessary, taking steps to make them immediately safe and initiate repair
- selecting and using appropriate processes, tools and equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- AC systems not exceeding 440 volts (V) AC
- batteries, including types, care and maintenance, and hazards
- care of electrical systems and equipment in general including fault recognition
- charging systems, including:
  - alarms/indicators
  - regulators
- connecting batteries
- electric systems, including above 240 V AC and up to 440 V AC
- fault identification, location and safety implications
- operation and maintenance of starter motors, alternators and associated equipment
- personal safety
- protective devices on switchboards
- shore power connection
- special requirements for electrical system breakdown/s, including:
  - isolation procedures
  - stopping alternator/s
  - stopping main engine/s
  - switching to emergency power
- use of fuses and circuit breakers, including selection of correct capacity.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel with inboard diesel propulsion power of greater than or equal to 375 kW

or appropriate engine and auxiliary system ashore

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry
- electrical systems, including:
  - AC alternator (above 240 V AC and up to 440 V AC)
  - batteries
  - electrical motor starting circuits
  - emergency electrical supply
  - power and lighting
  - shore supply
  - switchboards.

## **MARB048 Undertake maintenance of machinery, machinery systems and structural components**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to establish, organise and implement a preventative and reactive maintenance program and capabilities for machinery, machinery systems and structural components to optimise vessel operational performance.

It includes verifying maintenance requirements; establishing maintenance systems; organising maintenance activities; supervising maintenance tasks; performing planned and breakdown maintenance activities; monitoring, adjusting and reporting on implementation of the maintenance plan; and carrying out damage control procedures.

This unit of competency applies to people working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- an assistant under the direct supervision of the Chief Engineer
- a worker in the engine room of a vessel less than 80 metres long with propulsion power less than 3000 kW.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

Note: Relevant state/territory training and qualification requirements must be fulfilled by any persons carrying out installation, maintenance and/or repair of refrigeration equipment, especially with regard to preventing the escape of refrigerants into the atmosphere and to electrical work.

### **Pre-requisite Unit**

Not applicable.

## Competency Field

B - Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Verify maintenance requirements**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Maintenance program regulatory and organisational requirements for machinery, machinery systems and structural components are identified and followed

**1.2** Technical specifications, service requirements and organisational procedures for machinery, machinery systems and structural components are checked for recommended maintenance requirements

**1.3** Special requirements for maintenance of machinery, machinery systems and structural components are separated from normal lubrication, adjustment and day-to-day maintenance schedules

**1.4** Maintenance system goals for machinery, machinery systems and structural components are outlined

**1.5** Maintenance plan and related work schedule for machinery, machinery systems and structural components are developed

#### **2 Establish maintenance systems**

**2.1** Maintenance costs are identified and quantified

**2.2** Processes, procedures and delays are documented

**2.3** Internal and external maintenance providers are specified

**2.4** Maintenance plan is prepared to minimise ship operation costs, waste and harm to the environment

- |  |            |   |
|--|------------|---|
|  | <b>2.5</b> | Approvals for maintenance plan are negotiated and confirmed   |
|  | <b>2.6</b> | Recordkeeping systems are developed and maintained  |
| <b>3 Organise maintenance activities</b> | <b>3.1</b> | Schedules and rosters are checked to verify time when maintenance process may be scheduled, including optimal timing for shutdown                       |
|  | <b>3.2</b> | Agreement with the Master is obtained for timing of maintenance tasks to optimise maintenance process and minimise operational disruptions              |
|  | <b>3.3</b> | Detailed work plans are developed in line with schedules, availability of expertise, scheduling of resource availability and environmental requirements |
|  | <b>3.4</b> | Team members with required competencies are allocated to maintenance activities   |
|  | <b>3.5</b> | Consumables and equipment are secured to meet work plan requirements  |
|  | <b>3.6</b> | Externally sourced equipment, consumables and expertise are located and procured  |
|  | <b>3.7</b> | Contingency plans are prepared  |
|  | <b>3.8</b> | Maintenance schedules and procedures are effectively communicated to the team   |
| <b>4 Supervise maintenance tasks</b>     | <b>4.1</b> | Job specifications and maintenance tasks are communicated effectively to team members   |
|  | <b>4.2</b> | Maintenance and repair tasks are monitored to ensure they satisfy technical specifications  |
|  | <b>4.3</b> | Work health and safety (WHS)/occupational health and safety (OHS) requirements are monitored and observed at all times                                  |
|  | <b>4.4</b> | Emergency equipment is made available and working order of equipment is ensured   |
|  | <b>4.5</b> | Contingencies are managed to ensure quality of work is maintained and work is completed within agreed timeframe   |
| <b>5 Perform planned</b>                 | <b>5.1</b> | WHS/OHS risk control measures and procedures for  |

<b>maintenance activities</b>	carrying out work are followed
	<b>5.2</b> Preventative maintenance is carried out in compliance with technical specifications
	<b>5.3</b> Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
	<b>5.4</b> Ongoing quality checks of maintenance work are undertaken according to technical specifications
	<b>5.5</b> Work is carried out efficiently without waste of materials and damage to equipment, machinery or other services
	<b>5.6</b> Worksite is made safe according to organisational safety procedures
	<b>5.7</b> Maintenance work is checked to verify that it conforms with technical specifications
<b>6 Perform breakdown maintenance</b>	<b>6.1</b> Nature of breakdown is ascertained and reported to appropriate personnel or authorities
	<b>6.2</b> Maintenance records of machinery, machinery systems and structural components related to reported breakdown are reviewed for possible causes
	<b>6.3</b> Extent of breakdown is evaluated and confirmed using diagnostic and troubleshooting techniques
	<b>6.4</b> Restrictions are applied to operations, where necessary, and agreed to with the Master
	<b>6.5</b> Extent of repair work is ascertained from available evidence
	<b>6.6</b> Limits of repair work that can be carried out are established
	<b>6.7</b> Machinery and equipment are isolated
	<b>6.8</b> Repair work is carried out according to technical specifications
	<b>6.9</b> Master is notified of completed repair work and details are documented
<b>7 Monitor, adjust and</b>	<b>7.1</b> Execution of maintenance tasks is monitored to ensure

<b>report on implementing the maintenance plan</b>	they are completed according to maintenance plan and statutory survey requirements
	<b>7.2</b> Machinery, machinery systems and structural components are monitored to ensure achievement of planned outcomes
	<b>7.3</b> Costs are monitored and controlled
	<b>7.4</b> Adjustments are made to maintenance plan to take into account failure to achieve planned outcomes
	<b>7.5</b> Reports are completed according to maintenance plan requirements and organisational procedures
	<b>7.6</b> Recommendations to improve maintenance plan safety, efficiency and effectiveness are implemented under regular review of safety management system (SMS)
	<b>7.7</b> Machinery, machinery systems and structural components are maintained in a clean and safe operational condition
<b>8 Carry out damage control procedures</b>	<b>8.1</b> Damage to vessel hull and watertight integrity is ascertained and monitored according to established procedures and safety regulations
	<b>8.2</b> Appropriate damage control measures are implemented to maintain watertight integrity and to control flooding of vessel according to vessel emergency and safety management plans

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARB012 Undertake maintenance of machinery, machinery systems and structural components.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB048 Undertake maintenance of machinery, machinery systems and structural components**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing maintenance records
- developing effective planning documents
- implementing safe and environmentally responsible work practices
- interpreting and applying documentation and instructions, including:
  - lubricating oil and cooling water reports
  - manufacturer instructions, including:
    - safety data sheets (SDS)/material safety data sheets (MSDS)
    - work health and safety (WHS)/occupational health and safety (OHS) requirements
- managing legislative compliance and compliance records
- recognising and rectifying operating faults in accordance with manufacturer specifications and fault-finding procedures
- overhauling and maintaining pumps, bilge and seawater systems
- performing maintenance tasks, including:
  - changing filters and oil
  - cleaning coolers and strainers
  - lubrication and topping up oils
- planning and organising application of control techniques for hull damage
- planning and preparing for maintenance, including isolating equipment
- recognising damage to hull of small vessel and taking appropriate action according to operating instructions
- repairing pipe work
- scheduled survey inspections
- selecting and using correct tools and equipment for maintenance task
- servicing valves.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks
- breakdowns, including:
  - cooling water system failure
  - engine failure
  - exhaust systems
  - fuel system failure
  - gearbox failure
  - loss of control systems
  - lubricating systems failure
  - power plant failure
  - propeller and shafting arrangements systems
  - pumping systems failure
  - refrigeration plant and its operation
  - steering gear failure
- causes of vibrations and undue wear in power transmission system
- construction, layout and subdivision requirements of a typical vessel, including freeboard and bulkhead deck, watertight compartments, weather tight compartments and bulkheads of vessel
- costs of material, consumables and labour
- dangers associated with back flooding and methods to prevent back flooding
- environmental risks and hazards; safe disposal of waste material; safe use and storage of flammable/explosive liquids, gases, solids and other materials normally carried on board, including spare fuel, lubricants, liquified petroleum gas (LPG) cooking gas and flares
- function of lubricating oil and grease
- inspections to be undertaken on vessel hull during slipping or dry docking
- maintenance procedures and methodologies for:
  - batteries
  - cooling water systems, including treatment
  - fuel systems, including contamination
  - heat exchangers
  - hull maintenance, including use of sacrificial anodes
  - hydraulic systems
  - lubricating oil systems, including contamination
  - power transmission systems
  - oily water separator
  - steering systems
  - starter motors, alternators and associated equipment
- material and stress characteristics in constructing a vessel
- methods of corrosion and how to prevent corrosion

- organisational requirements, policies and procedures for organising maintenance programs
- principal features and structure of a vessel
- procedures for recording and reporting workplace information
- special requirements for maintenance, including:
  - asbestos awareness
  - awareness of confined and restricted space operations
  - dry docking
  - handling refrigerant gas within regulatory requirements
- types of tools and equipment, and procedures for their safe use and maintenance
- valve types and construction.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel with inboard diesel propulsion power of greater than and equal to 375 kW or appropriate engine, propulsion plant and auxiliary system ashore
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry, including:
  - hydraulic systems
  - pumps and pumping systems
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals.

## **MARB049 Use internal communication systems, operate computers and computer networks on ships**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package

### **Application**

This unit involves the skills and knowledge required to use internal communication systems, operate computers and computer networks on the ship.

It includes reviewing internal communication systems and computer networks, installing and maintaining the networks and systems on board a ship.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Pre-requisite Unit**

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Electrotechnology

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Review ship information technology devices**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Current network requirements are determined from ship requirements and specifications
- 1.2** Ensure network is compatible with current shipboard work practices
- 1.3** Shipboard information technology devices are checked and handled in accordance with manufacturer specifications
- 1.4** Network data processing is evaluated in accordance with ship requirements and network capability

#### **2. Manage maintenance of the computer network and internal communication systems**

- 2.1** Computer network hardware and software control and security records are maintained in accordance with procedures
- 2.2** Network and internal communication faults are responded to and rectified in accordance with ship requirements
- 2.3** Major problems are reported in accordance with procedures
- 2.4** Software is filed and stored in accordance with procedures
- 2.5** Measured and testing devices are used to verify correct operation of network and systems

#### **3. Maintain computer**

- 3.1** Information technology equipment is obtained and installed in accordance with ship requirements and

<b>networks on the ship</b>	manufacturer specifications
	<b>3.2</b> Proportional-integral-derivative (PID) controller, personal computer (PC)-based control systems and programmable logic controller (PLC) are adjusted in accordance manufacturer specifications
	<b>3.3</b> New and updated software is installed in accordance with network requirements
	<b>3.4</b> User network access is established effectively and efficiently
	<b>3.5</b> Bridge and engine room information technology devices are maintained in accordance with industrial standards and manufacturer specifications
<b>4. Transmit and receive messages</b>	<b>4.1</b> Transmission of messages are consistently undertaken in accordance with required internal communication protocols
	<b>4.2</b> Reception of internal messages are acknowledged and actioned in accordance with internal communication protocols
	<b>4.3</b> Clear and concise communication is used when using internal communication systems
<b>5. Complete records</b>	<b>5.1</b> User and security records are maintained in accordance with shipboard confidentiality requirements
	<b>5.2</b> Documentation and drawings are updated and processed in accordance with ship requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARB049 Use internal communication systems, operate computers and computer networks on ships**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least four separate occasions and include:

- adjusting proportional-integral-derivative (PID) controller systems
- applying fault-finding methods to rectify faults in the following systems:
  - computer network systems
  - internal communication
- applying work health and safety (WHS)/occupational health and safety (OHS) requirements and electronic safe work practices
- checking and handling shipboard information technology devices in accordance with manufacturer specifications
- operating internal communication systems onboard a ship in accordance with required protocols.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- bridge-based, engine-room-based and commercial computer use, including:
  - construction and function of integrated navigation systems
  - purpose, construction and operation of ship fuel consumption optimising systems
  - purpose, structure and function of computer systems for critical equipment condition monitoring
  - purpose, structure and function of electronic alarm recorder
  - purpose, structure and function of programmable logic controller (PLC) or PLC-based power management systems
  - purpose, structure and function of PLC or PLC-based refrigeration systems
  - purpose, structure and function of PLC or PLC-based systems for fuel storage, transport and preparation

- purpose, structure and function of voyage data recorder (VDR) system
- purpose, structure and functions of dynamic positioning system
- construction and use of computer networks on a ship, including:
  - internet and ethernet protocols
  - medium access methods, including master-slave, master-slave with cyclical polling, token ring, token ring with master-slave polling, carrier-sense multiple access/collision detection (CSMA/CD), carrier-sense multiple access/collision avoidance (CSMA/CA)
  - Profibus decentralised peripherals (DP) network, characterises nodes, structures, objects of configuration, programming of data exchange
- software licensing rights and responsibilities
- fault-finding methods and techniques
- features of computer networking
- hardware and software of digital enhanced cordless telecommunications (DECT) cordless phone system used on ships with advanced private automatic branch exchange (PABX)
- hardware, software and functions of pager system
- internal communication systems, including:
  - alarm systems
  - public address (PA) systems
  - talkback and intercom system
  - telephones:
    - automatic telephone system
    - sound powered telephone system
- main features of data processing
- metering and measuring equipment suitable for internal communication and computer networks systems
- operation of internal communication systems on board a ship
- personal computer (PC)-based control systems
- PID controller
- relevant industry standards and legislative requirements
- shipboard information technology, including:
  - computer networks
  - computers
  - electronic device capable of receiving information
- typical sound powered telephone network on ship
- typical talkback network on ship and its components for various environmental conditions
- WHS/OHS requirements, including electronic safe work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, safety management system (SMS), workplace procedures and operational manuals
- computer network with PID and PLC controllers
- tools, technology equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

## **MARC045 Contribute to the operation of engine equipment and associated propulsion plant**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to contribute to the operation, monitoring and evaluation of engine performance and associated propulsion plant on a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer - Engine
- Integrated Rating

who assist under the direction of the officer in charge of the engineering watch, with the operation of engine equipment and associated propulsion plant, as required, on a range of vessels.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Engine or Integrated Rating and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Pre-requisite Unit**

Not applicable.

## Competency Field

C – Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan and prepare work**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Safety issues are identified, and safe operational practices are applied to minimise risk and to control hazards
  - 1.2** Work requirements of engine and plant are identified from the officer in charge of the engineering watch and relevant documentation
  - 1.3** Localised engine and plant inspections are carried out according to manufacturer specifications and workplace procedures
  - 1.4** Engine and plant operational prerequisites are established according to manufacturer specifications and workplace procedures
  - 1.5** Sequence of recommissioning of plant is determined to suit existing circumstances according to manufacturer specifications and workplace procedures
- 
- 2.1** Engines and plant are operated according to manufacturer specifications and workplace procedures
  - 2.2** Performance of engines and plant is monitored to detect deviations from normal operating conditions
  - 2.3** Faulty and worn engine equipment and components are identified and reported to the officer in charge of the engineering watch
  - 2.4** Action is taken when an engine fails or emergencies occur to secure the engine or machinery and to maintain

#### **2 Operate engines and associated propulsion plant**

- the safety of vessel and persons involved according to workplace procedures
- |   |  |
|---|--|
| <b>3 Test engines and associated propulsion plant</b>           | <b>3.1</b> Tests are performed according to manufacturer specifications and workplace procedures   |
|   | <b>3.2</b> Engines and associated propulsion equipment are observed for correct operational response   |
|   | <b>3.3</b> Corrective actions are taken to rectify abnormalities according to manufacturer specifications and workplace procedures   |
| <b>4 Analyse engines and associated propulsion plant faults</b> | <b>4.1</b> Causes of abnormal operating conditions are identified by analysing technical and operational information in a logical and sequential manner                                      |
|   | <b>4.2</b> Corrective actions are taken to rectify abnormalities according to manufacturer specifications and workplace procedures   |
|   | <b>4.3</b> Plant integrity is maintained according to manufacturer specifications and workplace procedures   |
| <b>5 Complete documentation</b>                                 | <b>5.1</b> Correct records are logged relating to the operation and performance of engines and associated propulsion equipment according to regulatory requirements and workplace procedures |
|   | <b>5.2</b> Documentation is updated and engine and plant problems, abnormalities and status are reported according to regulatory requirements and workplace procedures                       |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC027 Contribute to the operation of engine equipment and associated propulsion plant.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARC045 Contribute to the operation of engine equipment and associated propulsion plant**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices, including:
  - awareness of hazards involved in engines, propulsion plant and auxiliary equipment operation
  - pollution control practices
  - safe entry into pump room, fuel tanks and other confined spaces on a vessel
- attending to appropriate level of detail in recordkeeping
- avoiding polluting the environment
- identifying problems that occur during the operation of engines on vessels
- interpreting and following procedures for the operation, monitoring and evaluation of the performance of engines on vessels
- operating bilge and ballast systems, under the supervision of the officer in charge of the engineering watch, according to manufacturer instructions and workplace procedures
- producing reliable documentation
- reading and interpreting:
  - equipment performance readings and instrumentation
  - lock out and tagging procedures
  - safety data sheets (SDS)/material safety data sheets (MSDS)
- recognising and reporting electrical hazards and unsafe equipment
- selecting and using tools required for operating, monitoring and evaluating the performance of engines on vessels
- testing machinery, under the supervision of the officer in charge of the engineering watch, according to manufacturer instructions and workplace procedures.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- accessing and understanding typical SDS/MSDS, vessel and machinery specifications, machine drawings, operation manuals, electrical and control circuit diagrams
- appropriate use and selection of personal protective equipment (PPE)
- causes of electric shock and precautions to be observed to prevent shock
- emergencies, including:
  - crankcase and gearbox explosions
  - gearbox failure
  - scavenge and uptake fires
  - starting air line
- hazards and problems that can occur during the operation and performance of engines, propulsion plant and auxiliary machinery and appropriate preventative and remedial actions and solutions
- methods of providing air for combustion in the vessel engine room
- national and international regulations, International Maritime Organization (IMO) conventions and codes, and class rules applicable to the operation and performance evaluation of engines, propulsion plant and auxiliary machinery on vessels
- nature and causes of typical malfunctions and/or poor performance of engines, propulsion plant and auxiliary machinery, and the available methods for their detection and rectification
- principles and functions of machinery space monitoring and alarm systems principles and operational characteristics of:
  - auxiliary boilers and associated equipment
  - controllable pitch propellers (CPP)
  - direct drive propulsion systems
  - internal combustion engines
  - jet propulsion
  - marine gas engines
  - reduction boxes
  - steam turbines, gearing and associated equipment as they apply to auxiliary systems
  - thrusters (Z pellers, azimuth, tunnel)
  - Voith Schneider Units
- principles of:
  - detection, identification and repair of faults
  - engine cooling and lubrication
  - fuel systems, including heavy fuel oil (HFO) and diesel
  - marine control systems
  - operation of hydraulic and electronic governors and overspeed trips
- procedures for:
  - carrying out performance evaluation of engines, propulsion plant and auxiliary machinery
  - testing and treating auxiliary boiler water, machinery cooling water and lubricating oil
- preventative strategies for scavenge and uptake fires, and starting air lines, crankcase and

gearbox explosions

- relevant WHS/OHS requirements, work practices and pollution control regulations and policies
- rights and responsibilities of individuals regarding lock out and tagging of plant and equipment
- safe function, operation and maintenance of bilge and ballast systems
- safe operation of equipment, including valves and pumps
- safe use and operation of electrical equipment, including safety precautions before commencing work or repair, isolation procedures, emergency procedures and different voltages on board
- safety, environmental and hazard control precautions and procedures relevant to the operation and performance of engines, propulsion plant and auxiliary machinery
- shafting systems, oil fill stern tube, pedestal bearings and thrust bearings
- the use of safe isolation systems and the application of lock out tags.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARC046 Employ tools, equipment and materials in a shipboard context**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to employ tools, equipment and materials to perform maintenance activities on a vessel. It includes the use of hand, power and machine tools, welding equipment, heat treatment processes, soldering operations, adhesives and bonding materials in performing routine and non-routine maintenance activities.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.
- This unit is one of the requirements to obtain certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Follow safe work practices**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (WHS/OHS) procedures relevant to using tools and equipment are complied with
- 1.2** Safety hazards are identified and reported according to safety and vessel procedures
- 1.3** Prior to use, tools and equipment needed to carry out maintenance activities are checked for correct operation and safety according to safety and vessel procedures
- 1.4** Before commencing maintenance activities, isolation precautions are implemented according to safety and vessel procedures

#### **2 Carry out heat treatment**

- 2.1** Requirements of job are determined from engineering drawings, job sheet or supervisor
- 2.2** Heat treatment equipment is selected for required heat treatment according to safety, workplace and manufacturer requirements
- 2.3** Equipment is set up and used according to standard operating procedures (SOPs) and manufacturer instructions
- 2.4** Personal protective equipment (PPE) is used according

- to SOPs
- 2.5** Emergency procedures are complied with according to approved safety instructions
  - 2.6** Safety signs and symbols are identified and complied with according to approved safety instructions
  - 2.7** Heat treatment process is applied according to job, safety and workplace requirements
  - 2.8** Hazardous conditions are identified, and risk control measures are implemented to maintain a safe work environment
- 3 Use hand tools**
- 3.1** Hand tools are used according to workplace procedures, WHS/OHS requirements and manufacturer instructions
  - 3.2** Faults with hand tools and equipment are identified and reported to appropriate personnel
- 4 Use hand power tools**
- 4.1** Hand power tools are used according to workplace procedures, WHS/OHS requirements and manufacturer instructions
  - 4.2** Faults with hand power tools and equipment are identified and reported to appropriate personnel
- 5 Perform pipe work**
- 5.1** Job requirements are determined from engineering drawings, job sheet or supervisor
  - 5.2** Sequence of operations is determined according to workplace, WHS/OHS and job requirements
  - 5.3** Pipe work is fabricated and joined according to relevant standards and job, safety and workplace requirements
  - 5.4** Pipe work is inspected for defects according to workplace procedures
  - 5.5** Pipe work is installed in specified location without damage or distortion to pipe work, surrounding environment or other services
  - 5.6** Type of filters and strainers in piping systems are identified using relevant engineering drawings and specifications
  - 5.7** Pipe work is tested for compliance with job specification and workplace requirements

- |   |   |
|---|---|
| <b>6 Use machine tools</b>                              | <p><b>6.1</b> Job requirements are determined from engineering drawings, job sheet or supervisor</p> <p><b>6.2</b> Sequence of operations is determined according to workplace, WHS/OHS and job requirements</p> <p><b>6.3</b> Machine tools are selected according to workplace procedures, WHS/OHS requirements and manufacturer instructions</p> <p><b>6.4</b> Machining operations are performed according to workplace, WHS/OHS and job requirements</p> <p><b>6.5</b> Components are measured in line with workplace, WHS/OHS and job requirements</p> <p><b>6.6</b> Machine is adjusted and maintained according to workplace, safety, manufacturer and job requirements</p>   |
| <b>7 Perform welding and thermal cutting operations</b> | <p><b>7.1</b> Job requirements are determined from engineering drawings, job sheet or supervisor</p> <p><b>7.2</b> Materials are prepared for welding using correct tools, equipment, materials and procedures</p> <p><b>7.3</b> Materials are welded using appropriate welding process according to relevant standards and job, safety and workplace requirements</p> <p><b>7.4</b> Joints are welded according to relevant standards and job, safety and workplace requirements</p> <p><b>7.5</b> Oxygen fuel gas cutting torch is used to cut straight lines and curves in mild steel plate up to 10 mm thick according to relevant standards and job, safety and workplace requirements</p> <p><b>7.6</b> Weld is inspected according to relevant standards, and job and workplace requirements</p> |
| <b>8 Perform soldering operations</b>                   | <p><b>8.1</b> Job requirements are determined from engineering drawings, job sheet or supervisor</p> <p><b>8.2</b> Materials are prepared for soldering using correct tools, equipment, materials and procedures</p> <p><b>8.3</b> Materials are soldered according to relevant standards and job, safety and workplace requirements</p>  |

- |          |   |  |

|          | <b>8.4</b>  | Soldered joints are performed according to relevant standards and job, safety and workplace requirements                                     |
|          | <b>8.5</b>  | Soldered joints are inspected according to relevant standards and job, and workplace requirements  |
|          | <b>8.6</b>  | Materials are desoldered using correct procedure and minimising damage to materials/components   |
| <b>9</b> | <b>Select and use sealants, adhesives, bonding agents, gaskets and packings</b> |  |
|          | <b>9.1</b>  | Job requirements are determined from engineering drawings, job sheet or supervisor   |
|          | <b>9.2</b>  | Gaskets and packings are selected and used according to job requirements and manufacturer/component supplier instructions                    |
|          | <b>9.3</b>  | Sealants and adhesives are selected and used according to job requirements and manufacturer/component supplier instructions                  |
|          | <b>9.4</b>  | Plastic bonding is performed according to job requirements and manufacturer/component supplier instructions                                  |
|          | <b>9.5</b>  | Sealants, adhesives, bonding agents, gaskets and packings are stored according to workplace and manufacturer/component supplier instructions |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC018 Employ tools, equipment and materials in a shipboard context.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARC046 Employ tools, equipment and materials in a shipboard context**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- communicating procedures associated with using hand and machine tools and equipment verbally and in writing
- identifying methods, procedures and materials needed for operating hand and power tools on vessels
- initiating timely action in response to defects or damage
- reading and interpreting written information related to operating tools and equipment used for maintenance operations onboard vessels, including technical manuals and specifications
- safely using hand and machine tools.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics, limitations and use of metals and non-metallic materials used in ship construction and repair
- hand and power tools and components, including:
  - maintenance
  - operational characteristics and performance specifications
  - types
- hand tools, including:
  - anvil
  - benders
  - brushes
  - chisels
  - chucks

- cutters
- drills
- drivers
- files
- gear pullers
- hacksaws
- hammers
- nippers
- pliers
- punchers
- reamers
- scissors
- scrapers
- spanners
- swage block
- taps and dies
- vices
- wrenches
- hand power tools, including:
  - drills
  - grinders
  - hand shear and nibbler
  - impact wrenches
  - portable jigsaw
  - sanders
- heat treatment, including:
  - applications, equipment and processes
  - batch and/or piece loading of furnaces
  - emergency procedures
  - hazards and control measures associated with heat treatment, including housekeeping
  - material characteristics
  - material condition during heat treating process
  - material preparation, quenching, and preheating requirements
  - safe loading of furnaces
  - safe work practices and procedures
  - use and application of personal protective equipment (PPE)
- heat treatment process, including:
  - annealing
  - hardening

- normalising
- tempering
- joints, including:
  - butt
  - corner joints
  - fillet joints
  - lap joints
  - tee joint plate edge preparations
  - throat length with concave and convex reinforcement
- machine tools, including:
  - basic marking out techniques, including datum points/lines
  - benefits of using correctly sharpened cutting tools
  - correct methods of mounting a variety of cutting tools
  - geometry of cutting tools for a range of materials and applications
  - hazards and control measures associated with general machining
  - machine operation
  - methods of work holding
  - reasons for selecting chosen sequence of operations
  - safe work practices and procedures
  - safety issues with regard to correct clamping, guards and shields
  - selection of feeds and speeds to suit a range of materials and operations within the scope of this unit
  - situations indicating need for machine adjustment, lubrication and cleaning
  - techniques, tools and equipment to measure materials and machined components
  - tolerances and limits of size
  - use and application of PPE
- machine tools, including:
  - drills
  - grinder
  - lathes
  - milling machines
- materials used in ship construction and repair, including:
  - limitations of materials
  - metallurgy principles
  - properties of materials
  - types of materials
- national and international regulations, International Maritime Organization (IMO) conventions and codes, including Australian Maritime Safety Authority (AMSA) Marine Orders applicable to managing plant and equipment maintenance and repair operations on vessels

- own ability and limits to rectify irregularities and faults
- pipe work, including:
  - capping/sealing pipe work and assembly methods
  - defects:
    - ovality
    - thinning
  - identifying location/layout of pipe work and assemblies, and application and characteristics of enclosure/hanging/supporting systems
  - installation techniques
  - leak testing, applications and uses
  - pipe work, ancillary installation and joining procedures
  - purging techniques, applications and precautions
- procedures for completing temporary and permanent repair and/or replacement procedures for plant and equipment onboard vessels at sea, alongside and in dry dock
- properties and parameters of engineering materials
- safety data sheets (SDS)/material safety data sheets (MSDS)
- sealants, gaskets, bonding agents, adhesives and packing, including:
  - dangers of working with sealants and adhesives
  - gasket installation procedures
  - operating principles of gaskets and their relationship to other components
  - sealant and adhesives application techniques
  - types, characteristics, uses and limitations of sealants and adhesives
- soldering, including:
  - cleaning solutions and properties, and cleaning procedures
  - heat and damage protection procedures
  - methods of joint preparation
  - procedures for preventing electrostatic discharge damage
  - properties of fluxes and their uses
  - reworking procedures and precautions
  - soldered joint testing and inspection procedures
  - use and application of PPE for manual soldering/desoldering
- soldered joints, including:
  - hard
  - soft
- testing procedures for materials under load, including:
  - compressive load testing procedures
  - shear load testing procedures
  - tensile load testing procedures
- welding, including:
  - characteristics and properties of common metals and welding materials

- effect of gas and electrical welding operations on metals
- effect of various treatments on a range of commonly used metals
- hazards and control measures associated with gas and electrical welding, including housekeeping
- use and application of PPE
- welding safety practices and procedures
- welding processes:
  - gas metal arc welding
  - gas tungsten arc welding
  - oxy-acetylene welding
  - shielded metal arc welding
- work health and safety (WHS)/occupational health and safety (WHS/OHS) legislation, policies and procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARC047 Manage a propulsion unit using appropriate engine systems and support services**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to operate a propulsion unit using appropriate engine systems and support services according to technical specifications and safe operating limits.

It includes preparing for operation; operating propulsion unit, engine systems and support services; completing operations and checking propulsion unit, engine systems and support services.

This unit applies to people working in the maritime industry in the capacity of:

- Master on commercial vessels less than 35 metres in length within the exclusive economic zone (EEZ)
- Master on vessels less than 80 metres in length in inshore waters
- Chief Mate or Deck Watchkeeper on vessels less than 80 metres in length within the EEZ.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 35 metres Near Coastal and Mate less than 80 metres Near Coastal, as defined in the National Standard for Commercial Vessels (NSCV) Part D.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C – Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for operation**

- 1.1** Routine pre-operational checks of propulsion unit, engine systems and support services are completed prior to use according to manufacturer specifications and organisational procedures
- 1.2** Propulsion unit, engine systems and support services are calibrated or set up correctly
- 1.3** Faults or malfunctions are identified and reported according to organisational procedures
- 1.4** Work health and safety (WHS)/occupational health and safety (OHS) hazards in the work area are identified and risk is assessed and reported according to organisational procedures

#### **2 Operate propulsion unit, engine systems and support services**

- 2.1** Risks to self, others and the environment are identified according to organisational procedures
- 2.2** Suitable personal protective equipment (PPE) is selected and used according to organisational procedures
- 2.3** Controls of propulsion unit, engine systems and support services are operated in a safe and controlled manner
- 2.4** Performance and efficiency of propulsion unit, engine systems and support services operations are monitored
- 2.5** Safe operational practices are used to anticipate and control hazards
- 2.6** Adverse sea and weather conditions that may impact on operation of propulsion unit, engine systems and support services are identified and operational practices are adjusted to maintain safety of vessel and personnel

- |   |            |   |
|---|------------|---|
|   | <b>2.7</b> | Procedures to be undertaken in the event of emergencies are recognised and implemented  |
| <b>3 Complete operations and check propulsion unit, engine systems and support services</b> | <b>3.1</b> | Shutdown procedures are conducted according to manufacturer instructions and organisational procedures  |
|   | <b>3.2</b> | Malfunctions, faults, irregular performance or damage to propulsion unit, engine systems and support services are reported according to organisational procedures |
|   | <b>3.3</b> | Propulsion unit, engine systems and support services are cleaned and secured according to organisational procedures   |
|   | <b>3.4</b> | Operational records are completed according to organisational procedures  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC011 Manage a propulsion unit using appropriate engine systems and support services.

## Links

Companion Volume implementation guide can be found in VetNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARC047 Manage a propulsion unit using appropriate engine systems and support services

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out necessary calculations associated with managing propulsion unit
- communicating effectively with other personnel
- completing routine pre-operational wheelhouse checks of propulsion unit, engine systems and support services, including:
  - ancillary systems and controls
  - engine systems and controls
  - gearing systems
  - hydraulic systems and controls
  - performance indicators
  - power generating units and controls
  - pumps and pumping systems:
    - bilge systems
    - cooling water systems
    - water pumping systems
  - safety alarm systems
  - speed and fuel consumption indicators
  - steering gear
- conducting wheelhouse shutdown and securing procedures for propulsion unit, engine systems and support services, including:
  - ancillary systems and controls
  - cooling water systems
  - engine systems and controls
  - hydraulic systems and controls
  - power generating units and controls
  - pumps and pumping systems:
    - bilge systems
    - water pumping systems
  - safety alarm systems
  - speed indicators

- steering gear
- keeping records of monitoring and operation of safety and fire detection/suppression equipment, and any required remedial action
- maintaining records of operation and maintenance of propulsion unit, ancillary power units, equipment and any related safety incidents
- monitoring and evaluating performance of propulsion unit, ancillary power units and equipment
- reading and interpreting:
  - manufacturer instructions and recommended procedures for operation of propulsion systems and auxiliary systems
  - maritime regulations, rules and instructions
  - operational orders from the organisation's safety management system (SMS)
- recognising when performance of propulsion unit or ancillary power units and equipment is unsatisfactory or outside specified limits and taking appropriate action
- safely operating and monitoring propulsion unit, engine systems and support services, including:
  - ancillary systems and controls
  - engine systems and controls
  - gearing systems
  - hydraulic systems and controls
  - performance indicators
  - power generating units and controls
  - pumps and pumping systems:
    - bilge systems
    - cooling water systems
    - water pumping systems
  - safety alarm systems
  - speed and fuel consumption indicators
  - steering gear
- working collaboratively with other shipboard personnel and passengers during vessel operations.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of propulsion units, ancillary power units and equipment, including operational limits, vessel stopping distances and turning circles at various draughts, speeds and conditions of loading
- dangers associated with operation of shipboard ancillary power units and related hazard

prevention strategies

- marine engineering terms
- methods for controlling and managing operation of shipboard propulsion units, ancillary power units and equipment
- operation of fire detection and suppression systems
- pre-start checks, operation, monitoring, shutdown and post-operational checks of:
  - bow and stern thruster units
  - controllable pitch propellers (CPP)
- principles of operation and control of various shipboard emergency systems
- procedures to be undertaken in the event of emergencies must include:
  - fire or explosion
  - flooding
  - loss of:
    - propulsion
    - electrical power
    - steering
- problems associated with remote control of propulsion unit, ancillary power units and equipment and appropriate preventative and remedial action and solutions
- procedures for monitoring and evaluating performance of propulsion unit, ancillary power units and equipment
- relationship between vessel speed and fuel consumption, including meaning of economical revolutions per minute (r.p.m.) and its application
- relevant sections of state and territory maritime regulations, National Standard for Commercial Vessels (NSCV) and Uniform Shipping Laws (USL) Code related to operation of propulsion plants and ancillary equipment
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation and policies
- requirements for waste management and control systems under the International Convention for the Prevention of Pollution from Ships (MARPOL)
- sequence of required action when power unit becomes overloaded
- support services.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the

normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel greater than or equal to 12 metres in length
- applicable documentation, such as legislation, regulations, codes of practice, safety management system (SMS), equipment manufacturer's instructions, workplace procedures and operational manuals
- tools, equipment, materials and personal protective equipment (PPE) currently used in industry
- plant and equipment manufacturer instructions and recommended procedures
- relevant sections of state and territory maritime regulations, NCSV and USL Code related to operation of propulsion plants and ancillary equipment
- propulsion unit and engine systems must include:
  - ancillary systems and controls
  - diesel engines
  - engine systems and controls
  - gearing systems
  - hydraulic systems and controls
  - performance indicators
  - power generating units and controls
  - propeller shafting arrangements
  - pumps and pumping systems
  - safety alarm systems
  - speed and fuel consumption indicators
  - steering gear.

# MARC048 Monitor and manage vessel operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to plan and oversee activities associated with the regulatory and operational requirements for the continued performance and safety of a coastal vessel.

It includes developing operational strategies and procedures, supervising crew compliance with regulatory requirements, planning resources for vessel operations, planning vessel operations logistics and evaluating operational processes.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 35 metres in length within the exclusive economic zone (EEZ)
- Master of a vessel less than 80 metres in length in inshore waters
- Chief Mate or Deck Watchkeeper on a vessel less than 80 metres in length within the EEZ.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 80 metres in length as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Develop operational strategies and procedures**

**1.1** Action plan is developed to provide a clear and coherent direction according to organisational goals and objectives

**1.2** Work health and safety (WHS)/occupational health and safety (OHS) and environmental issues are identified, and strategies are implemented to minimise risk factors

**1.3** Quality system is developed for vessel in line with industry standards, compliance and organisational requirements

**1.4** Performance measures and operational targets are developed to conform with business plan

**1.5** Procedures are established and implemented according to organisational and legislative requirements

**1.6** Procedures are communicated to crew members

#### **2 Supervise crew compliance with regulatory requirements**

**2.1** Regulatory body requirements are correctly interpreted and applied

**2.2** Instructions for crew members are developed and implemented

**2.3** Crew members are briefed

**2.4** Liaison with regulatory body officials is undertaken

#### **3 Plan resources for vessel operations**

**3.1** Vessel resource and equipment requirements are investigated and documented

**3.2** Resource needs are prioritised and matched to vessel budget, and priorities are confirmed after consultation with crew members

**3.3** Procurement plan with prioritised purchasing is devised and resources are procured accordingly

#### **4 Plan vessel operations logistics**

**4.1** Operational work plans are developed

- 4.2 Operations are checked to ensure optimum use of human and physical resources
  - 4.3 Tasks are implemented according to plans and specifications
  - 4.4 Operational plans are implemented and crew members are briefed as to roles and responsibilities
  - 4.5 Operational plans are documented and amended according to procedures and crew expectations
  - 4.6 Proposed variations are investigated and negotiated in consultation with crew members
- 5 **Evaluate operational processes**
  - 5.1 Operational progress is closely monitored against required quality of work and adherence to both budget and time schedule
  - 5.2 Opportunities for preventative or corrective changes are identified using outcomes of monitoring activities and feedback from crew members
  - 5.3 Preventative and/or corrective action is recommended and implemented
  - 5.4 Changes are communicated to appropriate persons in a logical and easily understood manner
  - 5.5 Changes are monitored to confirm improvement in crew efficiency

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC012 Monitor and manage vessel operations.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARC048 Monitor and manage vessel operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- collecting, organising and understanding information related to vessel resource and logistic requirements
- communicating ideas and information to enable input from crew and understanding by crew of plans developed
- completing a review of, and updating the process for, vessel operations
- developing effective action plan that have regard to:
  - cargo plan
  - dry-docking and slipping operations
  - planned maintenance system
  - safety management plan
  - voyage planning
- developing operational targets, including:
  - completion of survey and docking operations and routine maintenance
  - key performance indicators (KPIs)
  - optimal fuel usage
  - passage planning to achieve safe and efficient routing
- liaising with other crew members on a range of operational issues and challenges
- monitoring and responding to compliance issues and measuring progress against agreed objectives
- planning and organising activities, including consulting with crew to determine resource and logistics requirements, and developing, implementing and reviewing operational plans
- undertaking a job safety analysis (JSA) for working in areas of high risk
- using information gathering techniques to determine crew requirements and developing strategies to address these.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- analytical tools
- decision-making models and techniques
- budgets and estimation of material requirements
- information gathering strategies
- logistics and procurement management techniques
- operational plan development, including:
  - docking and repair plans
  - managing confined space entry
  - passage planning
  - periodic survey requirements
- resource availability
- work health and safety (WHS)/occupational health and safety (OHS) and environmental issues.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, materials, personnel and personal protective equipment (PPE) that replicate and are currently used in industry.

# **MARC049 Operate 240 to 440 voltage alternating current electrical systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate a 240 to 440 volt (V) alternating current (AC) electrical system according to technical specifications and safe operating limits.

It includes preparing for operation, operating electrical systems, and checking and completing operations of electrical systems.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- assistant under the direct supervision of the Chief Engineer
- worker in the engine room of a vessel less than 80 metres in length with propulsion power less than 3000 kW.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal, as defined in the National Standard for Commercial Vessels (NSCV) Part D.

Note: Relevant state/territory training and qualification requirements must be fulfilled by any persons carrying out installation, maintenance and/or repair of electrical circuits or systems that are 50 V AC or above, or 120 V direct current (DC) or above.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C - Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

<b>1 Prepare for operation</b>	<p><b>1.1</b> Risks to self, others and the environment are identified according to organisational procedures</p> <p><b>1.2</b> Routine pre-operational checks of electrical systems are completed prior to use according to manufacturer specifications and organisational procedures</p>

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC017 Operate 240 to 440 voltage alternating current electrical systems.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARC049 Operate 240 to 440 voltage alternating current electrical systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out necessary calculations associated with managing electrical systems, including:
  - adding resistors in series and parallel, and calculating current
  - battery ampere-hours and efficiency
  - series and parallel configuration of battery supply
- connecting to shore power
- isolating and locking out of electrical circuits
- maintaining records of operation of electrical systems, and any related safety incidents
- monitoring and evaluating performance of electrical systems
- performing switchboard operations, including the monitoring of electrical supply and procedures for paralleling generators
- starting emergency alternator and supply switchboard where available
- using hydrometer
- using multimeter to test for voltage and continuity.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- batteries, including:
  - charging circuits and hazards associated with charging batteries
  - operation
  - types, care and hazards
- characteristics of electrical systems
- dangers associated with operation of shipboard electrical systems and related hazard prevention strategies
- earth detection devices
- electrical distribution systems, including emergency arrangements
- electrical systems must include:

- alternators
- batteries and associated circuits
- control circuits
- motors
- starter circuits
- switchboards
- faults associated with electrical systems and appropriate preventative and remedial action, and solutions
- manufacturer instructions for the operation of electrical systems
- methods for managing operation of shipboard electrical systems
- motor and alternator construction
- motor starter circuits
- own ability and limits to rectify irregularities and faults
- principles of operation of various shipboard emergency systems, including fire detection system, internal communications system and emergency generator
- procedures for monitoring and evaluating performance of electrical systems
- relevant performance of electrical systems when unsatisfactory or outside of specified limits and appropriate actions to be taken
- relevant problems that may occur with electrical systems and appropriate preventative and remedial actions to be taken
- relevant sections of state and territory maritime regulations, National Standard for Commercial Vessels (NSCV) and Uniform Shipping Laws (USL) Code
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation and policies
- safety devices fitted to switchboard and other electrical systems, including fuses and circuit breakers
- sequence of required action when power unit becomes overloaded
- shore power arrangements
- single and three phase alternating current (AC) power generation.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or

may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel with inboard diesel propulsion power of greater than or equal to 375 kW or appropriate engine and auxiliary system ashore
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# MARC050 Operate auxiliary machinery systems up to 1500 kW

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to operate auxiliary machinery systems up to 1500 kW according to technical specifications and safe operating limit.

It includes preparing for operation, operating auxiliary machinery systems, completing operations and checking auxiliary machinery systems.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- assistant under the direct supervision of the Chief Engineer
- worker in the engine room of a vessel less than 80 metres in length with propulsion power less than 3000 kW.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

Note: Relevant state/territory training and qualification requirements need to be fulfilled by any persons carrying out installation, maintenance and/or repair of refrigeration equipment, especially with regard to preventing the escape of refrigerants into the atmosphere and to conduct electrical work.

## Pre-requisite Unit

Not applicable.

## Competency Field

C - Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare for operation

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Risks to self, others and the environment are identified according to organisational procedures

**1.2** Routine pre-operational checks of auxiliary machinery systems are completed prior to use according to manufacturer specifications and organisational procedures

#### 2 Operate auxiliary machinery systems

**2.1** Suitable personal protective equipment (PPE) is selected and used according to organisational procedures

**2.2** Auxiliary machinery systems are operated in a safe and controlled manner

**2.3** Performance of auxiliary machinery system operations is monitored

**2.4** Adverse sea and weather conditions that may impact on operation of auxiliary machinery systems are identified and operational practices are adjusted to maintain safety of vessel and personnel

**2.5** Faults or malfunctions are identified and recorded according to organisational procedures

**2.6** Faults or malfunctions are rectified and corrective actions are taken and recorded according to organisational procedures

**2.7** Procedures to be undertaken in emergencies are recognised and implemented

- 3 Complete operations and check auxiliary machinery systems**
- 3.1** Shutdown procedures are conducted according to manufacturer instructions and organisational procedures
- 3.2** Operational records are completed, as required, according to organisational procedures and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC013 Operate auxiliary machinery systems up to 1500 kW.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARC050 Operate auxiliary machinery systems up to 1500 kW**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- interpreting:
  - manufacturer instructions for the operation of auxiliary machinery systems
  - maritime regulations, rules and instructions
- maintaining records of the operation and maintenance of auxiliary machinery systems and any related safety incidents, including:
  - logbooks
  - maintenance records
- monitoring and evaluating performance of auxiliary machinery systems
- operating auxiliary equipment, including:
  - bilge, ballast and seawater systems
  - electrical system
  - fuel and lubricating oil system
  - propulsion and steering system
  - refrigeration system.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alarm panels
- auxiliary machinery systems, including:
  - cargo discharging or loading systems
  - commercial refrigeration and freezer plants
  - compressed air
  - control air systems
  - deck machinery
  - fire, bilge and ballast pumping systems

- freshwater generation
- sewage treatment
- auxiliary systems, identified components, materials and construction
- awareness of one's surroundings and changes to these surroundings
- causes of deck machinery faults
- characteristics of auxiliary machinery systems
- closing devices and remote shut-offs
- dangers associated with operating shipboard auxiliary machinery systems and related hazard prevention strategies
- drive systems, belts, clutches and motors
- electro-hydraulic steering gear
- emergency operation in electrical or hydraulic failure
- emergency procedures, including:
  - loss of:
    - control air pressure
    - electrical power
    - steering system
    - hydraulic system
- emergency shut-offs and closures
- fire detection and fire alarm systems
- fixed firefighting installations, including CO<sub>2</sub>, foam, water mist and pyrogen
- function and importance of:
  - grease
  - lubricating oil
- hydraulic systems, including steering gear and deck machinery
- identification and operation of rudder and stock support bearings, glands, packing and seals
- identification of:
  - faults in refrigeration systems
  - plant and its operation
  - refrigeration cycle
  - refrigeration system components
- methods for controlling and managing operation of shipboard auxiliary machinery systems
- operation of deck machinery
- problems associated with auxiliary machinery systems, and appropriate preventative and remedial action and solutions
- relevant sections of Commonwealth, state and territory maritime regulations, and National Standard for Commercial Vessels (NSCV)
- relevant unsatisfactory performance of auxiliary machinery systems outside specified limits and appropriate action requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation and policies
- requirements for waste management and pollution control from auxiliary machinery systems

under the International Convention for the Prevention of Pollution from Ships (MARPOL)

- rudder construction and rudder types
- safe operational practices and working procedure of auxiliary machinery
- safeguards and protective devices for deck machinery
- simple hydraulic circuits
- strainers, mud-boxes and foot valves
- terminology of materials technology
- types of:
  - fixed firefighting systems, including gas and foam flooding systems
  - pumps and associated safety devices
  - refrigerant
  - winches and windlass.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel with inboard diesel propulsion power of greater than or equal to 375 kW or appropriate engine, propulsion plant and auxiliary system ashore
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals.

# **MARC051 Operate deck machinery and steering gear on a vessel up to 80 metres**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate steering gear and deck machinery on a vessel less than 80 metres.

It includes preparing for operation, operating steering gear and deck machinery, and completing operations.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 35 metres in length within the exclusive economic zone (EEZ)
- Master of a vessel less than 80 metres in length in inshore waters
- Chief Mate or Deck Watchkeeper on a vessel less than 80 metres in length within the EEZ.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 80 metres in length as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Equipment Operations

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for operation**

- 1.1** Routine pre-operational checks of steering gear or deck machinery are completed prior to use according to manufacturer specifications and organisational procedures
- 1.2** Equipment is set up in accordance with organisational procedures
- 1.3** Tools and equipment appropriate to work requirements are selected, checked for safety and set up for operation
- 1.4** Equipment faults or malfunctions are identified and reported according to organisational procedures
- 1.5** Work health and safety (WHS)/occupational health and safety (OHS) hazards in the work area are identified, and risks are assessed and reported according to organisational procedures

#### **2 Operate steering gear and deck machinery**

- 2.1** Suitable personal protective equipment (PPE) is selected and used according to organisational procedures
- 2.2** Steering gear and deck machinery are operated in a safe and controlled manner
- 2.3** Performance and efficiency of steering gear and deck machinery operations is monitored
- 2.4** Safe operational practices are used to anticipate and control hazards
- 2.5** Adverse sea and weather conditions which may impact on the operation of steering gear and deck machinery are identified and operational practices are adjusted to maintain safety of vessel and personnel

#### **3 Complete operations**

- 3.1** Shutdown procedures are conducted according to manufacturer instructions and organisational procedures
- 3.2** Malfunctions, faults, irregular performance or damage to steering gear and deck machinery are reported according to organisational procedures

- 3.3** Steering gear and deck machinery are cleaned and secured according to organisational procedures
- 3.4** Operational records are completed according to organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARC014 Operate deck machinery and steering gear on a vessel up to 80 metres.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARC051 Operate deck machinery and steering gear on a vessel up to 80 metres**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying instructions on the operation of steering gear and deck machinery
- communicating effectively with others
- completing required records relating to the operation of steering gear and deck machinery
- following work schedules in accordance with organisational instructions and safety management system (SMS)
- initiating and operating emergency steering systems
- recognising faulty equipment and taking appropriate action
- recognising routine hazards and problems while operating steering gear and deck machinery
- selecting and using relevant tools and equipment
- working safely and collaboratively with others when operating and maintaining deck machinery and steering gear.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of hydraulics
- communication techniques and signals needed during the operation of steering gear and deck machinery on vessels less than 80 metres
- principal features and operating characteristics of steering gear and deck machinery used on vessels less than 80 metres
- problems related to the operation of steering gear and deck machinery and appropriate actions and solutions
- procedures for checking and inspecting steering gear and deck machinery used on vessels less than 80 metres
- procedures for the safe operation of steering gear and deck machinery
- procedures for, and operation of, emergency steering systems
- records that must be maintained on a vessel less than 80 metres
- relevant state and territory maritime work health and safety (WHS)/occupational health and safety (OHS) and pollution control regulations and policies

- safety, environmental and hazard control precautions and procedures relevant to the operation of steering gear and deck machinery.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel greater than or equal to 12 metres in length or realistic simulated workplace
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery and materials currently used in industry, including:
  - basic hydraulic systems
  - emergency steering gear
  - personal protective equipment (PPE)
  - winch or windlass or capstan.

# **MARC052 Operate deck machinery, cargo handling gear and equipment on a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate deck machinery and cargo handling gear and equipment on a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer - Deck
- Integrated Rating

on a range of vessels.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Deck or Integrated Rating and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Prepare for operations

- 1.1 Routine pre-operational checks of deck machinery or cargo handling gear and equipment are completed prior to use according to manufacturer specifications and workplace procedures
- 1.2 Properties of cargo being transported are identified and their impact on safety, the environment and vessel operations is established
- 1.3 Preparations for operations are made and lifting equipment is set up according to workplace procedures
- 1.4 Tools and equipment appropriate to work requirements are selected, checked for safety and set up for operation
- 1.5 Safety equipment appropriate to work requirements are made ready and confirmed to be in good condition
- 1.6 Methods of communication are established and agreed to
- 1.7 Equipment faults or malfunctions are identified and reported according to workplace procedures
- 1.8 Work health and safety (WHS)/occupational health and safety (OHS) hazards in work area are identified, and risks are assessed and reported according to workplace procedures

#### 2 Undertake deck machinery, cargo handling gear and equipment operations

- 2.1 Suitable personal protective equipment (PPE) is selected and used according to workplace procedures
- 2.2 Hazard control procedures are identified and applied to ensure safe operation of deck machinery and cargo handling equipment

- 2.3 Deck machinery and cargo handling gear and equipment are operated in a safe and controlled manner
- 2.4 Performance and efficiency of deck machinery and cargo handling gear and equipment operations is monitored
- 2.5 Safe operational practices are used to anticipate and control hazards
- 2.6 Adverse sea and weather conditions that impact on operation of deck machinery, cargo handling gear and equipment are identified, and operational practices are adjusted to maintain safety of vessel and personnel
- 2.7 Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and workplace procedures
- 2.8 Spill containment procedures are correctly implemented according to regulatory requirements and workplace procedures
- 3 Complete operations
  - 3.1 Shutdown procedures are conducted according to manufacturer instructions and workplace procedures
  - 3.2 Malfunctions, faults, irregular performance or damage to deck machinery and cargo handling gear and equipment are reported according to workplace procedures
  - 3.3 Deck machinery and cargo handling gear and equipment are maintained and secured according to workplace procedures
  - 3.4 Operational records are completed according to workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC028 Operate deck machinery, cargo handling gear and equipment on a vessel.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARC052 Operate deck machinery, cargo handling gear and equipment on a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- applying risk assessment and hazard control strategies
- communicating with other workplace personnel using effective:
  - handheld radios
  - hand signals
  - listening techniques
  - questioning to confirm understanding and appropriate worksite protocol
  - signage
  - written instructions
- completing required records related to the operation of deck machinery and cargo handling gear and equipment
- exercising safety, environmental and hazard control precautions and procedures during the operation of deck machinery, cargo handling gear and equipment on a vessel
- following work schedules in accordance with workplace instructions and safety management system (SMS)
- operating anchoring equipment under various conditions, such as anchoring, weighing anchor, securing for sea and in emergencies
- reading, interpreting and applying instructions on the operation of deck machinery and cargo handling gear and equipment
- recognising cargo handling gear hazards and problems while operating deck machinery and cargo handling gear and equipment
- recognising faulty equipment and taking appropriate actions
- recognising routine hazards that can arise on a chemical and oil and liquefied gas tanker
- selecting and using relevant tools and equipment
- setting up, shutting down and storing welding, brazing and cutting equipment
- using and handling deck and cargo handling gear and equipment
- using signals to direct the operation of equipment, including winches, cranes, windlasses and hoists

- working safely and collaboratively with others
- working safely at heights, and correctly applying and using safety equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- access arrangements, including:
  - freight elevators
  - hatch covers
  - hatches
  - ramps
  - side, bow and stern doors
- appropriate selection and use of personal protective equipment (PPE)
- boom/jib movements and the safe positioning of the operator for any lift
- cargo, including:
  - chemicals and oils
  - explosives
  - general cargo, break bulk, unitised or in containerised
  - hazardous or dangerous goods, both break bulk and containerised
  - heavy lifts
  - liquefied gas
  - liquids in portable containers
  - livestock
  - mineral concentrates
  - refrigerated cargo
  - scrap, pig iron ingots, steel coils and sheets
  - solid bulk materials
  - timber
- cargo handling gear and equipment
- characteristics and features of bulk carriers, chemical and oil tankers and liquefied gas tanker layouts and cargo
- function and uses of:
  - cranes, pumps, hoists, booms, derricks and related equipment
  - hatches, watertight doors, port hole, port cover and related equipment
  - winches, windlasses, capstans and related equipment
- fundamental properties of liquid and liquefied cargo and their impact on safety, the environment and vessel operations
- hazards and control measures associated with bulk carriers, chemical and oil tankers, and liquefied gas tanker cargo operations, including:
  - electrostatic hazards

- environmental hazards
- explosion and flammability
- extremely low temperatures
- insufficient lighting
- low temperatures
- other personnel in area of operation
- overhead obstructions
- pressure hazards
- reactivity and corrosion
- source of ignition
- toxicity
- vapour leaks and clouds
- weather conditions
- hazard and risk control procedures, including:
  - anti-static measures
  - atmospheric control
  - cargo inhibition
  - checking compatibility
  - confined space entry precautions
  - correct use of safety data sheets (SDS)/material safety data sheets (MSDS) information
  - ensuring operation is visible to operator at all times or a watchperson is utilised to ensure a lift is monitored at all times
  - gas testing
  - identifying hazards and assessing risks of the operation
  - inerting, drying and monitoring techniques
  - inspecting equipment and record books before commencing operations
  - providing adequate lighting
  - segregation of cargo
  - ship/shore checklist
  - ventilation
  - wearing appropriate PPE
- hazards and related safety precautions relevant to basic welding, brazing and cutting
- hoisting and dipping of flags and main single-flag signals
- hydraulic and pneumatically operated mechanical tools and equipment
- identifying faulty and damaged wire and/or rope
- identifying fibre and wire ropes, cables and chains, including their construction, use, markings, maintenance and proper stowage
- pipeline systems – bilge and ballast suctions and wells
- piping systems, valves, loading and unloading, care in transit and emergency shutdown (ESD) procedures
- principal features and operating characteristics of steering gear and deck machinery used on a

range of vessel types

- problems related to operating deck machinery and cargo handling gear and equipment, and appropriate actions and solutions
- procedures for:
  - checking and inspecting deck machinery and cargo handling gear and equipment used on vessels
  - marlin spike seamanship, including proper use of knots, splices and stoppers
  - rigging and unrigging pilot ladders, hoists, rat-guards and gangways
  - safe operation of deck machinery and cargo handling gear and equipment
- records that must be maintained on a vessel relevant to cargo handling and stowage
- relevant sections of maritime regulations, codes and conventions related to tankers and gas carriers
- relevant WHS/OHS requirements, work practices and pollution control regulations and policies
- safe working loads of ropes, wires, blocks, chains and lifting gear
- safety, environmental and hazard control precautions and procedures relevant to the operation of deck machinery and cargo handling gear and equipment
- signals for the operation of equipment, including winches, cranes, windlasses and hoists
- standard communication techniques and signals used during the operation of deck machinery and cargo handling gear and equipment
- terminology relating to the structure, capacities and operations of various types of tankers and gas carriers
- the correct method of replacing winch wire and/or rope and attaching new wire and/or rope to winch drum
- use and general maintenance of lifting equipment and basic slinging techniques.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry

## **MARC053 Operate marine internal combustion engines and associated systems up to 1500 kW**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to operate a marine internal combustion engine and associated systems less than 1500 kW according to technical specifications and safe operating limits.

It includes operating marine internal combustion engines and associated systems and completing operations.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- assistant under the direct supervision of the Chief Engineer
- worker in the engine room of a vessel less than 80 metres in length with propulsion power less than 3000 kW.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal, as defined in the National Standard for Commercial Vessels (NSCV) Part D.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C - Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for operation**

**1.1** Risks to self, others and the environment are identified according to organisational procedures

**1.2** Routine pre-operational checks of marine internal combustion engines and associated systems are completed prior to use according to manufacturer specifications and organisational procedures

#### **2 Operate marine internal combustion engines and associated systems**

**2.1** Suitable personal protective equipment (PPE) is selected and used according to organisational procedures

**2.2** Marine internal combustion engines and associated systems are operated in a safe and controlled manner

**2.3** Performance of marine internal combustion engines and associated systems operations is monitored

**2.4** Adverse sea and weather conditions that may impact on operating marine internal combustion engines and associated systems are identified and operational practices are adjusted to maintain safety of vessel and personnel

**2.5** Faults or malfunctions are identified and recorded according to organisational procedures

**2.6** Faults or malfunctions are rectified, where possible, and corrective actions are taken and recorded according to organisational procedures

**2.7** Restrictions are applied to operations, as necessary, and are agreed to with the Master

**2.8** Procedures to be undertaken in the event of an emergency are recognised and implemented

### **3 Complete operations**

- 3.1** Shutdown procedures are conducted according to manufacturer instructions and organisational procedures
- 3.2** Operational records are completed according to organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARC015 Operate marine internal combustion engines and associated systems up to 1500 kW.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARC053 Operate marine internal combustion engines and associated systems up to 1500 kW**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out necessary calculations associated with managing marine internal combustion engines and associated systems, including calculating:
  - areas and volumes of various shapes and circumference of circles
  - calibration tables
  - lubricating oil and fuel/oil consumption, rate of fuel consumption (RFC), specific fuel consumption (SFC), effects on RFC and fuel requirements due to change in vessel speed or voyage deviations
  - relationship between vessel speed and fuel consumption, including the meaning of economical revolutions per minute (r.p.m.) and its application
  - tank capacities and pumping capacities for filling and emptying
- maintaining records of operating and maintaining marine internal combustion engines and associated systems, and any related safety incidents, including:
  - logbooks
  - maintenance records
  - operational orders
- monitoring various gauges and instruments to evaluate the performance of marine internal combustion engines and associated systems
- operating marine internal combustion engines and associated systems in accordance with manufacturer instructions, maritime regulations, rules and instructions
- recognising problems that may occur with marine internal combustion engines and associated systems, responding to alarms and taking appropriate preventative and remedial action
- recognising when performance of marine internal combustion engines and associated systems is unsatisfactory or outside of specified limits and taking appropriate action.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- associated systems, including:

- air start
- control systems
- cooling system
- cooling water system and components
- dual fuel systems
- exhaust systems
- fuel system, including pumps and injectors
- lubricating oil systems and components
- lubrication systems
- characteristics of marine internal combustion engines and associated systems, including operational limits
- control systems
- crankcase explosions and appropriate preventative and remedial action and solutions
- dangers associated with operating shipboard marine internal combustion engines and associated systems, and related hazard prevention strategies
- emergency procedures, including:
  - explosion
  - failure or major fault in propulsion engines and associated control systems
  - fire
  - loss of:
    - bridge control
    - electrical supply
    - major breakdowns
    - propulsion power
    - steering
- engine protection arrangements
- methods for controlling and managing the operation of shipboard marine internal combustion engines and associated systems
- pollution control measures under relevant local, state, territory and commonwealth legislation
- problems associated with marine internal combustion engines and associated systems, and appropriate preventative and remedial actions and solutions
- procedures for monitoring and evaluating performance of marine internal combustion engines and associated systems
- relevant sections of state and territory maritime regulations and the National Standard for Commercial Vessels (NSCV)
- relevant work health and safety (WHS)/occupational health and safety (OHS)/occupational safety and health (OSH) legislation and policies
- requirements for emission control from internal combustion engines under the International Convention for the Prevention of Pollution from Ships (MARPOL)
- sequence of required action when there is a major fault on main propulsion engine
- surroundings and changes to these surroundings
- technological changes in engine and control system designs

- turbocharging systems.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel with inboard diesel propulsion power of greater than or equal to 375 kW or appropriate engine, propulsion plant and auxiliary system ashore
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# **MARC054 Operate propulsion transmission systems up to 1500 kW**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate propulsion transmission systems up to 1500 kW according to technical specifications and safe operating limits.

It includes preparing for operations, operating propulsion transmission systems and completing operations.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- assistant under the direct supervision of the Chief Engineer
- worker in the engine room of a vessel less than 80 meters in length with propulsion power up to 3000 kW.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal, as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C - Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

# **Assessment Requirements for MARC054 Operate propulsion transmission systems up to 1500 kW**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out necessary calculations associated with managing propulsion transmission systems, including:
  - calculating gearbox ratios
  - propeller slip
  - theoretical distance
- maintaining records of operating and maintaining propulsion transmission systems and any related safety incidents
- monitoring various gauges and evaluating performance of propulsion transmission systems
- operating propulsion transmission system in a safe and controlled manner to manufacturer technical specifications.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic reverse/reduction propulsion transmission systems operation
- bearings
- characteristics of propulsion transmission systems, including operational limits
- construction and materials of propulsion transmission systems
- fault identification on propulsion transmission systems
- lubricating and cooling systems for propulsion transmission systems
- manufacturer instructions for operating propulsion transmission systems
- maritime regulations, rules and instructions
- methods for controlling and managing the operation of shipboard propulsion transmission systems
- problems associated with propulsion transmission systems and appropriate preventative and remedial actions and solutions
- procedures for monitoring and evaluating performance of propulsion transmission systems
- propeller and intermediate shaft systems

- propeller shape, design and materials
- propeller types and arrangements, including fixed pitch and controllable pitch propellers
- propulsion transmission systems, including:
  - control system
  - gearbox and reduction gear arrangements
  - intermediate bearings
  - propeller types and arrangements
  - shafting arrangements
  - stern tube and their systems
  - transmission system
- recognising operational faults and problems that may occur with propulsion transmission systems and taking appropriate preventative and remedial actions
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation and policies
- seals and glands
- shafting materials
- steerable/rudder propellers
- stern and jet water drive
- stern tube bearing systems, including lubrication, materials and components
- types of gear trains.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel with inboard diesel propulsion power of greater than or equal to 375 kW or appropriate engine, propulsion plant and auxiliary system ashore
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently

used in industry.

# **MARC055 Operate remote controls of propulsion plant, engineering systems and services**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to remotely operate shipboard plant, propulsion systems, auxiliary machinery and equipment according to technical specifications and within safe operating limits at all times.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel Unlimited.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Equipment operation

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |   |
|--|---|
| <b>1 Operate remote controls</b>                                 | <p><b>1.1</b> Remote controls of propulsion plant, other engineering systems and auxiliary machinery are operated according to company procedures and manufacturer instructions</p> <p><b>1.2</b> Clear and concise communication is used with engine room and communication is acknowledged according to established procedures</p> <p><b>1.3</b> Performance of propulsion plant, other engineering systems and auxiliary machinery and equipment is monitored and evaluated using remote performance indicators</p> <p><b>1.4</b> Appropriate corrective action is taken in conjunction with the Chief Engineer when performance of propulsion plant or other engineering systems is found to be unsatisfactory or outside of specified limits</p> <p><b>1.5</b> Relationship between speed and fuel consumption is monitored and action is taken, as required, according to operational instructions</p> <p><b>1.6</b> Safety and hazard minimisation procedures and regulations are followed to maintain the safety of personnel, propulsion and engineering systems, cargo and vessel</p> |
| <b>2 Coordinate deck, bridge and engine room resources</b>       | <p><b>2.1</b> Coordination of deck, bridge and engine room operations and resources is maintained during daily vessel operation</p> <p><b>2.2</b> Responses are coordinated, and appropriate action is taken in a breakdown in the remote control systems for propulsion plant, other engineering systems and auxiliary machinery</p> <p><b>2.3</b> Correct logbook entries are made relating to equipment operations and incidents during a voyage</p>   |
| <b>3 Manage emergencies involving the use of remote controls</b> | <p><b>3.1</b> Remote controls of relevant emergency systems and auxiliary machinery and equipment are correctly operated in a shipboard emergency</p>   |

- 3.2** Clear and concise communication is used and communication is acknowledged at all times during emergency situations

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARC026 Operate remote controls of propulsion plant and engineering systems.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARC055 Operate remote controls of propulsion plant, engineering systems and services**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in vessels, propulsion plant, remote controls, engineering systems and related standard operating procedures (SOPs)
- applying required safety and hazard control procedures when operating vessel remote controls
- assessing operational capability and performance of propulsion and other engineering plant and auxiliary equipment
- communicating effectively and working collaboratively with other personnel when operating propulsion plant and engineering system remote controls
- identifying and evaluating problems that can occur when operating propulsion plant and engineering system remote controls
- identifying and implementing improvements to engineering control procedures
- interpreting and following SOPs for operating propulsion plant and engineering system remote controls
- interpreting equipment performance readings and instrumentation
- interpreting vessel and machinery specifications, machinery design drawings, machine drawings, operational manuals, specifications, and electrical and control circuit diagrams
- monitoring and evaluating performance of vessel propulsion plant, other engineering systems, and auxiliary machinery and equipment using remote performance indicators
- selecting and using equipment required for operating propulsion plant and engineering system remote controls safely, including:
  - in berthing and unberthing operations
  - in normal and adverse weather conditions
  - in normal and emergency situations
  - when anchoring or mooring.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- auxiliary systems and controls, including:
  - air starting
  - ballast water
  - bilge
  - cooling water
  - fuel
  - lubrication
  - waste management and pollution control systems
- bridge communications techniques, including issuing of engine room orders
- dangers associated with shipboard electrical plants and related hazard prevention strategies
- documentation and records, including:
  - Australian Maritime Safety Authority (AMSA) Marine Orders
  - company procedures for the remote control of propulsion plant and other engineering systems
  - instructions of relevant maritime authorities
  - International Maritime Organization (IMO) and International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW) conventions and codes
  - International Safety Management (ISM) Code, safety management system (SMS) plans, procedures, checklists and instructions
  - operational orders
  - plant and equipment manufacturer instructions and recommended procedures
  - relevant Australian and international standards
  - vessel log
- emergencies situations, including
  - fire or explosion in engine room
  - flooding of engine room
  - loss of electrical power
  - loss of propulsion
  - loss of steering
- methods for remotely controlling the operation of shipboard propulsion plant and other engineering systems, including auxiliary machinery and equipment
- operating principles of marine power plants, including:
  - diesel engines
  - gas turbine systems
  - propeller
  - propeller shaft
  - steam turbine systems
- principles of operation and functions of various systems and controls, including:
  - bridge located engine controls
  - hydraulic systems and controls

- pumps and pumping systems
- various auxiliary systems and controls, such as cooling water, fuel system, air starting, lubrication system, ballast water and bilge system
- various shipboard emergency systems
- procedures and precautions for bunkering operations
- procedures and arrangements for establishing appropriate and effective engineering watches, including:
  - cargo operations
  - normal safety conditions
  - unmanned machinery space (UMS) operations
- procedures for coordinating deck and engineering resources
- procedures for monitoring and evaluating the performance of propulsion plant, other engineering systems and auxiliary machinery and equipment
- propulsion plant configurations, including:
  - controllable pitch propellers (CPP)
  - direct drive shaft
  - electric diesel
  - reduction gear
  - steam
- relationship between vessel speed and fuel consumption, including the meaning of economical revolutions per minute (r.p.m.) and its application
- relevant sections of applicable maritime regulations
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, policies and procedures
- requirements for waste management and control systems under the International Convention for the Prevention of Pollution from Ships (MARPOL)
- ships auxiliary machinery, including:
  - air conditioning
  - alternators
  - deck machinery
  - distillation
  - electrical distribution
  - freshwater systems
  - generators
  - oily water separators
  - refrigeration
  - sewage treatment plants
  - stabilisers
  - ventilation
- typical characteristics of propulsion machinery and control systems for vessels of 500 gross tonnage (GT) or more, including operational limits, fuel consumption/speed relationships,

- stopping distances and turning circles at various draughts, speeds and loading
- typical problems with the remote control of propulsion plant, other engineering systems and auxiliary machinery and equipment, and appropriate preventative and remedial actions and solutions
- vessel SMS and procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARC056 Operate roll-on and roll-off machinery and equipment on board a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to operate equipment and machinery used to open, close and secure hull openings and maintain a safe ventilation of roll-on and roll-off (ro-ro) ventilation systems during voyages.

This unit applies to people working in the maritime industry in the capacity of:

- operating ro-ro machinery and equipment.

## Licensing/Regulatory Information

There are currently no legislative and licensing requirements applicable to this unit.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare for ro-ro operations

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Routine pre-operational checks of ro-ro equipment and machinery are completed according to workplace procedures and manufacturer instructions

- 1.2 Methods of communication are established and agreed to
  - 1.3 Faults or malfunctions are identified and reported according to workplace procedures
  - 1.4 Work health and safety (WHS)/occupational health and safety (OHS) hazards in work area are identified, and risks are assessed and reported according to workplace procedures
- 2 Undertake ro-ro operations
  - 2.1 Suitable personal protective equipment (PPE) is selected and used according to workplace procedures
  - 2.2 Hazard control procedures are identified and applied to ensure safe operation of deck machinery and cargo handling equipment
  - 2.3 Ro-ro equipment, machinery and cargo handling gear are operated in a safe and controlled manner
  - 2.4 Bow, stern and side doors are opened, closed and secured in accordance with workplace procedures
  - 2.5 Ramps are operated in accordance with workplace procedures
  - 2.6 Surveys are conducted to ensure proper sealing in accordance with workplace procedures
  - 2.7 Atmosphere in ro-ro spaces is monitored in accordance with workplace procedures
  - 2.8 Ventilation of ro-ro spaces are maintained at recommended safe limits, throughout the voyage in accordance with workplace procedures
  - 2.9 Performance and efficiency of ro-ro machinery, equipment and operations are monitored
  - 2.10 Safe operational practices are used to anticipate and control hazards
  - 2.11 Adverse sea and weather conditions that impact on operation of ro-ro machinery and equipment are monitored and safe work practices are implemented to maintain safety of vessel and personnel
  - 2.12 Measures to prevent pollution during normal and emergency situations are applied according to regulatory

requirements and workplace procedures

### **3 Complete operations**

- 3.1** Shutdown of machinery and equipment is conducted according to manufacturer instructions and workplace procedures
- 3.2** Malfunctions, faults, irregular performance or damage to ro-ro machinery and cargo handling gear and equipment are reported according to workplace procedures
- 3.3** Ro-ro equipment, machinery and cargo handling gear and equipment are maintained and secured according to workplace procedures
- 3.4** Operational records are completed according to workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This is a new unit. No equivalent unit

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARC056 Operate roll-on and roll-off machinery and equipment on board a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures
- applying risk assessment and hazard control measures
- communicating with others effectively
- completing required records related to roll-on and roll-off (ro-ro) machinery and equipment
- recognising routine hazards and problems while operating ro-ro machinery and cargo handling gear and equipment
- reporting faulty equipment and taking appropriate action
- using ro-ro machinery and equipment.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communication techniques needed during vessel operation
- hazard and risk control procedures, including:
  - ventilation
  - wearing appropriate personal protective equipment (PPE)
- problems related to operating ro-ro machinery and equipment and appropriate actions and solutions
- procedures for checking and inspecting ro-ro machinery and equipment used on vessels
- records relevant to ro-ro machinery and equipment
- relevant WHS/OHS requirements, work procedures and pollution control regulations and policies
- ro-ro machinery and equipment operating characteristics and principal features.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARC057 Perform dogging on board a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to apply slinging techniques select and inspect lifting gear and/or direct crane/operator in moving a load.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer - Engine/Deck or Integrated Rating who apply safe work practices when undertaking basic dogging on a range of vessels
- Navigational Watch - Deck/Engine.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Engine/Deck, Integrated Rating or Navigational Watch - Deck/Engine and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## **1 Plan job**

- 1.1** Relevant site information is obtained for related task in accordance with workplace procedures
- 1.2** Sea conditions and use of tag lines are assessed in accordance with workplace procedures
- 1.3** Hazards and potential hazards associated with slinging and directing loads are identified in accordance with workplace procedures
- 1.4** Hazard control measures consistent with appropriate standards are identified to ensure safety of personnel and equipment in accordance with workplace procedures
- 1.5** Weight, dimensions and load centre of gravity (CG) are identified and assessed
- 1.6** Suitable lifting/slinging points on load are established
- 1.7** Appropriate lifting equipment needs are assessed, including rig/vessel crane limitations, in accordance with workplace procedures
- 1.8** Appropriate communication methods are established in consultation with crane/operators and other appropriate personnel
- 1.9** Manufacturer specifications/information is obtained for special loads, as required

## **2 Select and inspect equipment**

- 2.1** Lifting equipment appropriate to task is selected and inspected for serviceability in accordance with workplace procedures
- 2.2** Damaged or excessively worn lifting equipment is identified, labelled and isolated in accordance with workplace procedures
- 2.3** Appropriate communication equipment is selected and serviceability checked
- 2.4** Appropriate personal protective equipment (PPE) is selected and checked

## **3 Prepare site and equipment**

- 3.1** Hazard prevention/control measures are applied consistent with appropriate standards to ensure safety of personnel and equipment in accordance with workplace

procedures

**3.2** Clear communications and roles of deck crew are established when working cargo with a rig crane or another vessel in accordance with workplace procedures

**3.3** Appropriate slinging method is selected

**3.4** Lifting equipment is prepared and assembled, as required

**3.5** Load landing destination is prepared

#### **4 Perform tasks**

**4.1** Knots, hitches and bends using fibre and synthetic ropes are correctly made and used in course of deck operations

**4.2** Lifting equipment is attached and secured to lifting hook using appropriate techniques

**4.3** Lifting hook is positioned over load CG

**4.4** Lifting equipment is attached and secured to load in an appropriate manner

**4.5** Tag line is attached and secured, as required

**4.6** Test lift is conducted to ensure load security

**4.7** Load is moved, and stability and control are maintained at all times

**4.8** Appropriate communication methods and communication signals are applied to safely coordinate load movement within sight and out-of-sight of ship's crane operator

**4.9** Loads are correctly rigged using appropriate ropes and rigging gear in accordance with workplace procedures

**4.10** Load is landed to ensure it is stable and secure from movement, is in position to be lashed with appropriate consideration given to effects of vessel's motion on stowed cargo when lashing cargo

#### **5 Shut down job, clean up and maintain equipment**

**5.1** Lifting equipment is removed or disconnected from load and prepared for next task or storage

**5.2** Defective equipment is isolated and tagged in accordance with workplace procedures

- 5.3 Lifting equipment is stored in accordance with workplace procedures
- 5.4 Hazard prevention/control measures are removed, as required, in accordance with workplace procedures
- 5.5 Excess materials from work area are removed, as required, in accordance with workplace procedures
- 5.6 Defects are reported and recorded in accordance with workplace procedures, and appropriate action is taken
- 5.7 Rope, wire and cables are stowed and maintained in accordance with workplace procedures and manufacturer instructions

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC032 Perform dogging on board a vessel

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARC057 Perform dogging on board a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in vessels, equipment and standard operating procedures (SOPs)
- applying different methods for making temporary connections to loads using fibre and synthetic ropes
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- applying risk assessment and hazard control strategies, including hierarchy of control
- appropriately using and selecting personal protective equipment (PPE)
- calculating rated capacity of lifting equipment
- communicating with other personnel through:
  - adopting appropriate worksite protocol
  - fixed channel two-way radio
  - hand signals
  - listening
  - questioning to confirm understanding
  - signage
  - written instructions
- directing crane operators to move loads in a safe manner, using a slewing crane
- inspecting and caring for a wide range of lifting equipment to appropriate Australian Standards and/or manufacturer specifications
- interpreting rated capacity and working load limit tags
- selecting and inspecting lifting equipment, ropes and chains
- splicing natural fibre and synthetic ropes
- taking actions to promptly report and/or rectify accidents, safety incidents and operational problems according to regulations and procedures
- using and maintaining ropes, wires and chains
- using communications signals for directing crane operators to move loads in a safe manner, using a slewing crane, including:
  - hoist down – hand
  - hoist down – whistle

- hoist up – hand
- hoist up – whistle
- luff boom down – hand
- luff boom down – whistle
- luff boom up – hand
- luff boom up – whistle
- slew left – hand
- slew left – whistle
- slew right – hand
- slew right – whistle
- stop – hand
- stop – whistle
- telescope in – hand
- telescope in – whistle
- telescope out – hand
- telescope out – whistle
- working safely and collaboratively with others during lifting operations on a vessel.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate mathematical procedures for estimating and measuring loads
- appropriate standards relevant to the full range of techniques for undertaking dogging activities, including:
  - International Safety Management (ISM) Code, safety management system (SMS) plans, procedures, checklists and instructions
  - manufacturer specifications
  - relevant Australian and international standards and regulations
  - relevant WHS/OHS requirements and work practices
  - vessel and company procedures
- appropriate selection and use of personal protective equipment (PPE)
- defective equipment, including:
  - broken or stretched wires
  - cut/damaged fibres
  - damaged lifting and associated equipment
  - excessive wear
- work hazards, including:
  - equipment in load path
  - heights

- insufficient lighting
- pedestrian and plant traffic
- radio interference
- sea conditions and weather, including wind, lightning and storms
- trip hazards
- hierarchy of hazard identification and control, including:
  - administrative controls
  - elimination
  - engineering controls
  - isolation
  - substitution
- lifting equipment, including:
  - beam clamps
  - blocks
  - chains
  - eyebolts
  - fibre ropes
  - grabs
  - hoists
  - hooks
  - lifting beams
  - pallet forks and cages
  - personnel boxes
  - plate clamps
  - shackles
  - spreaders
  - tackles
  - trolleys wire ropes
  - winches
- load destination, including:
  - ground
  - loading platforms
  - suspended floors
  - vehicles
  - other vessels and barges
- stability and safety factors of load to be lifted are in line with manufacturer specifications
- site information, including:
  - deck conditions (even, uneven, steel and wood)
  - local conditions, such as access and egress
  - sea conditions

- work method statements
- types of cranes and their functions
- types of knots, bends and hitches in common use, their characteristics, applications and limitations, and methods of tying them using synthetic and fibre rope of varying construction and size
- types of lifting equipment and slinging techniques, and their limitations and performance in a wide range of conditions, including slings (wire and synthetic), beams, accessories, clamps, work boxes, bins and pallets
- use of dunnage
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARC058 Perform rigging on board a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to perform basic rigging operations and to use associated equipment in the maritime industry.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer – Deck or Integrated Rating who apply safe work practices when undertaking basic rigging on a range of vessels.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer- Deck or Integrated Rating and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |   |  |
|---|--|
| <b>1 Rig and maintain personnel and pilot access ways</b> | <b>1.1</b> Personnel access equipment is checked and correctly rigged according to workplace procedures and applicable standards   |
|   | <b>1.2</b> Requirements and recommendations for safe access by alternative means are identified and organised according to workplace procedures and recognised standards |
| <b>2 Perform tasks aloft and over vessel's side</b>       | <b>2.1</b> Site and equipment for working aloft and over the side are prepared according to workplace procedures and recognised standards                                |
|   | <b>2.2</b> Required precautions are taken when working aloft or over the side  |
|   | <b>2.3</b> Chairs, stages, safety harnesses and appropriate safety equipment are used according to workplace procedures and applicable standards                         |
|   | <b>2.4</b> Portable ladders are correctly used and maintained  |
|   | <b>2.5</b> Equipment used when working aloft and over the side is correctly maintained and stored  |
| <b>3 Lash and secure cargo</b>                            | <b>3.1</b> Lashing equipment is inspected and maintained according to workplace procedures and applicable standards  |
|   | <b>3.2</b> Faulty lashing equipment is identified and isolated, reported and maintained according to workplace procedures and applicable standards                       |
|   | <b>3.3</b> Cargo is lashed and secured according to workplace procedures and applicable standards  |
|   | <b>3.4</b> Appropriate consideration is given to effects of vessel's motion on stowed cargo when lashing cargo   |
|   | <b>3.5</b> Lashing equipment is correctly stored after use   |
|   | <b>3.6</b> Loads are correctly rigged using appropriate ropes and rigging gear according to workplace procedures and safety requirements                                 |
|   | <b>3.7</b> Effective communication is maintained with crew to ensure the safety and integrity of the vessel and crew   |

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARC029 Perform rigging on board a vessel.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARC058 Perform rigging on board a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in vessels, equipment and standard operating procedures (SOPs)
- applying rigging operations and using associated equipment in accordance with safe working practices, including:
  - checking and using rigging gear when rigging loads
  - lashing cargo in a range of situations
  - rigging a sea anchor to control a specified rate and direction of drift and/or angle to sea
  - rigging accommodation ladders, gangways and man baskets
  - rigging and unrigging pilot ladders and hoists
  - splicing natural fibre and synthetic ropes
  - using and maintaining ropes, wires and chains
- applying rigging operations under normal and adverse conditions of sea and weather, including:
  - during berthing and unberthing operations
  - when berthed, anchored or moored
  - while anchoring or mooring
  - while underway
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- communicating with other personnel using effective:
  - listening techniques
  - questioning to confirm understanding
  - verbal and non-verbal language
- completing work systematically with required attention to detail
- complying with relevant maritime regulations
- following required work schedule in accordance with company requirements
- reading and applying instructions, safety and SOPs and precautions, including:
  - housekeeping processes
  - International Safety Management (ISM) Code and safety management system (SMS)

- procedures
  - manufacturer guidelines
  - shipboard rigging procedures
  - WHS/OHS regulations and hazard prevention policies and procedures
- recognising routine problems during rigging operations on a vessel
- selecting and using rigging and lifting slings and equipment according to operating instructions
- taking actions to promptly report and/or rectify accidents, safety incidents and operational problems according to regulations and procedures
- tying required knots and demonstrating rope handling skills, including:
  - back splice
  - becket/buntline hitch
  - bowline
  - clove hitch
  - common seizing
  - common whipping
  - double sheet bend
  - eye splice
  - figure of eight
  - marlin spike hitch
  - racking seizing
  - reef knot
  - rolling hitch
  - sail maker's whipping
  - sheep shank
  - sheet bend
  - short splice
  - timber hitch
  - truckie hitch
  - west country whipping
- working safely and collaboratively with others during rigging operations on a vessel.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable sections of relevant maritime regulations
- appropriate use and selection of personal protective equipment (PPE)
- breaking strain and safe working load for slings and equipment
- cargo to be lashed, including:

- containers
- general cargo
- roll-on and roll-off (ro-ro) vehicles
- timber deck cargo
- legal requirements for constructing a pilot ladder
- maintenance and storage procedures for equipment used when working aloft or over the side
- maritime communication techniques
- personnel access equipment, including:
  - accommodation ladders
  - brows
  - combined pilot accommodation ladders and pilot hoists
  - gangways
  - personnel baskets
  - pilot ladders
- precautions and procedures for working aloft and over the side
- principles and procedures for lashing and securing cargo, including inspection and maintenance requirements for lashing equipment
- principles of rigging equipment, deterioration and care, and maintenance requirements for different types of rope and wire
- procedures for rigging and preparing personnel access ways
- procedures for rigging and unrigging pilot ladders, hoists, rat-guards and gangways
- procedures for splicing natural fibre and synthetic ropes
- relevant WHS/OHS requirements and work practices
- type and function of rigging, safety and associated equipment, and their limitations
- types of knots, bends and hitches in common use, their characteristics, applications and limitations, and methods of tying them using synthetic and fibre rope of varying construction and size.

## Assessment Conditions

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental

damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARC059 Transmit and receive information by marine VHF radio within Australian Territorial Waters**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to transmit and receive information by marine very high frequency (VHF) radio on a vessel according to regulations and includes operating an emergency position indicating radio beacon (EPIRB).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as defined in the National Standard for Commercial Vessels (NSCV) Part D.
- This unit applies to all boaters using marine VHF radio equipment to transmit and receive information to and from shore and vessel-based operators within Australian Territorial Waters – defined as all waters within 12 nautical miles from the coastal baseline.
- This unit is consistent with the requirements of the Radiocommunications (Maritime Ship Station – 27 MHz and VHF) Class Licence 2001.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Equipment Operations

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

### **ELEMENTS**

### **PERFORMANCE CRITERIA**

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Operate VHF radio equipment to transmit and receive messages**

- 1.1** VHF radio equipment is selected for operation within limits of specifications
- 1.2** VHF radio equipment is operated to transmit and receive various types of signal according to manufacturer instructions, established radio operation procedures and regulatory requirements
- 1.3** Regulations and procedures applicable to vessel stations equipped with radio and digital selective calling (DSC) facilities are applied during radio communication
- 1.4** Work health and safety (WHS)/occupational health and safety (OHS) procedures and hazard control strategies are applied when operating radio equipment

**2 Access search and rescue (SAR) VHF radio facilities**

- 2.1** Information that may be required is identified and documented
- 2.2** Request is made to the appropriate organisation for the provision of the information in the required format and on the correct channel
- 2.3** Information is provided and received in the required format and on the correct channel

**3 Operate an EPIRB in a distress situation**

- 3.1** Routine checks and maintenance are carried out on EPIRBs, including float free EPIRBs, to confirm their operational capability according to manufacturer instructions and specifications
- 3.2** EPIRB is operated according to manufacturer instructions and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC019 Transmit and receive information by marine VHF radio within Australian Territorial Waters

## Links

Companion Volume implementation guide can be found in VetNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARC059 Transmit and receive information by marine VHF radio within Australian Territorial Waters**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accurately and consistently using very high frequency (VHF) equipment to send and receive messages and signals under normal and emergency situations according to international and national VHF radio regulations/standards
- applying the principles of marine radio and digital selective calling (DSC) to accurately transmit and receive messages, including distress calls
- cancelling an inadvertent distress alert or call
- carrying out radio communications in compliance with the relevant sections of the maritime provisions of the Radio Regulations adopted by the World Radiocommunication Conference (as amended), including Chapters VII and IX
- communicating effectively with other stations by using standard voice procedures, the phonetic alphabet, push to talk (PTT) switch and common radio terminology
- deploying an emergency position indicating radio beacon (EPIRB)
- documenting communication problems
- proper housing, securing and automatic release of float-free EPIRB
- reading and interpreting regulations and procedures
- sending and receiving distress alerts, and urgency and safety announcements by DSC
- sending, acknowledging and relaying distress, urgency and safety communications by voice using recognised format
- setting up VHF equipment for use, including selecting the channel, adjusting transmitter power level, adjusting squelch and using dual watch facility
- using correct procedures for transmitting and receiving signals using VHF equipment.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian maritime search and rescue (SAR) system, including satellite distress beacons
- available radio services, including:

- automated weather stations
- DSC
- public communications
- scheduled broadcasts (skeds)
- SAR
- EPIRB frequencies:
  - 406 MHz
  - 121.5/MHz (homing)
- marine VHF repeater stations
- methods of communicating vessel position
- organisations with which radio communication may be conducted, including:
  - coast stations
  - fishing organisations and co-operatives
  - limited coast stations
  - private shore stations, including boating clubs
  - state/territory police forces
- principles of, and procedures for, marine VHF radio communications
- procedures for transmitting and decoding the phonetic alphabet
- purpose of monitoring the VHF Channel 70 used for DSC, including an awareness of the procedures used in making a DSC distress alert, urgency and safety announcement
- radio communication, including:
  - distress, urgency and safety communications
  - normal vessel-to-shore service (ship-to-shore)
  - normal vessel-to-vessel service (ship-to-ship)
- sections of relevant regulations related to marine VHF radio communications
- VHF radio calling, replying and relaying procedures.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or assessment must occur via an online radio simulator or simulated VHF radio communications activities and exercises covering a range of normal and emergency communication situations that are typically experienced on a vessel.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse

weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals, including:
  - Marine Radio Operators VHF Handbook
  - Radiocommunications (Maritime Ship Station – 27 MHz and VHF) Class Licence 2001
  - Radiocommunications Act 1992
  - relevant state/territory legislation – for carriage requirements
- VHF transceiver equipment – either fixed or handheld, or approved personal computer (PC)-based simulator, which includes a DSC facility.

# MARC060 Use and care for hand and power tools

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to use and care for hand tools and air, battery and electric power tools, onboard a range of vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer – Engine/Deck
- Integrated Rating.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Engine/Deck or Integrated Rating and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |            |   |
|--|------------|---|
| <b>1 Select appropriate tools for work</b>           | <b>1.1</b> | Work requirements are interpreted in accordance with workplace procedures and manufacturer instructions   |
|  | <b>1.2</b> | Appropriate hand and power tools are selected for required tasks  |
|  | <b>1.3</b> | Selected hand and power tools are checked for serviceability in accordance with workplace procedures  |
|  | <b>1.4</b> | Defective tools are identified, reported and appropriate repair or replacement action is taken in accordance with workplace procedures  |
|  | <b>1.5</b> | Blunt or worn tools are identified and appropriate action is taken to replace, sharpen or rectify in accordance with workplace procedures and manufacturer instructions       |
|  | <b>1.6</b> | Instructions for the use of tools are accessed and interpreted, as required, in accordance with workplace procedures  |
| <b>2 Use hand and power tools</b>                    | <b>2.1</b> | Work area, work pieces and tools are prepared for required tasks in accordance with workplace procedures  |
|  | <b>2.2</b> | Other personnel in work area are made aware of work being carried out as required by safety management procedures   |
|  | <b>2.3</b> | Work is marked out using appropriate marking out tools in accordance with workplace procedures  |
|  | <b>2.4</b> | Hand and power tools are used as directed in accordance with workplace procedures and manufacturer instructions   |
|  | <b>2.5</b> | Desired work outcomes are achieved to job specifications in accordance with workplace procedures  |
| <b>3 Follow safety and hazard control procedures</b> | <b>3.1</b> | Required safety precautions are followed when using hand and power tools in accordance with workplace procedures and regulations  |
|  | <b>3.2</b> | Operational hazards are identified when using hand and power tools and action is taken to minimise or eliminate risk to self, other personnel, the vessel and the environment |
| <b>4 Care for hand and power tools</b>               | <b>4.1</b> | Tools are used for intended purpose according to manufacturer instructions in accordance with workplace   |

procedures

- 4.2 Tools are cleaned and stored after use according to manufacturer instructions and in accordance with workplace procedures
- 4.3 Tools are sharpened according to manufacturer instructions and in accordance with workplace procedures
- 4.4 Tools are adjusted, tightened and/or lubricated according to manufacturer instructions in accordance with workplace procedures
- 4.5 Grinding wheels are dressed and made true according to manufacturer instructions and in accordance with workplace procedures
- 4.6 Defective or worn tools and tool components are identified, marked as required and reported, and appropriate repair or replacement action is taken in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARC030 Use and care for hand and power tools.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARC060 Use and care for hand and power tools

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in vessels, equipment and standard operating procedures (SOPs)
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- caring for air-operated tools, their supply hoses and hose connections, safely and correctly
- caring for hand and power tools safely and correctly, including cleaning, sharpening or adjusting tools according to SOPs
- communicating with other workplace personnel using effective:
  - listening techniques
  - questioning to confirm understanding
  - verbal and non-verbal language
- completing work systematically with required attention to detail
- complying with relevant maritime and safety regulatory requirements
- dressing and truing a grinding wheel
- following required work schedule according to company requirements
- following the orders and instructions of the officer of the watch or designated supervisor
- marking out work to specifications, measuring and checking the quality of finished work, including the correct use of:
  - adjustable gauge
  - callipers
  - centre punch hammers
  - dividers
  - rules and tapes
  - scribes
  - squares
  - trammels
  - vernier callipers and micrometer
- reading, interpreting and applying documentation that includes technical specificity, including:

- basic instructions and SOPs
- work specifications and drawings
- recognising routine problems that may occur when using and caring for hand and power tools, including identifying:
  - glazed, loaded or untrue grinding wheel condition
  - hand and power tools that are found to be defective or worn
  - incidents and problems involving the use of hand and power tools
- selecting appropriate hand and power tools to complete assigned tasks
- storing tools and equipment after use according to SOPs
- taking appropriate action to promptly report incidents, problems and hazards, including equipment faults
- using personal protective equipment (PPE), including:
  - boots
  - eye and ear protection
  - masks
- using tools and equipment safely according to:
  - International Safety Management (ISM) Code and associated vessel safety management system (SMS) and procedures
  - tool manufacturer instructions
  - WHS/OHS regulations and hazard prevention policies and procedures
  - workplace procedures and housekeeping processes
- working safely and collaboratively with others when using and caring for hand and power tools.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate selection of PPE
- characteristics and identifying features of common engineering drill bits
- environmental protection measures when carrying out basic engineering tasks
- established procedures for the use and care of hand or power tools required for work tasks
- hazards and related safety precautions when using hand or power tools onboard a vessel, including:
  - electric shock
  - moving and rotating blades and attachments
  - non-compliance with safe working procedures
  - poor housekeeping procedures
  - sharp blades
  - sparks in areas where flammable and explosive substances are stored
  - unsecured machinery, components or equipment

- using tools beyond safe working limits or faulty equipment
- ISM Code and safety management procedures as they relate to the use of hand and power tools onboard a vessel
- procedures for dressing and/or truing a grinding wheel
- procedures for identifying a glazed, loaded or untrue grinding wheel condition
- relevant WHS/OHS and pollution control legislation and policies, including the International Convention for the Prevention of Pollution from Ships (MARPOL)
- standard procedures for marking out work to specifications and measuring and checking the quality of finished work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARD004 Manage business and administration on vessels limited by tonnage or near coastal operations**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to manage the business and administration of a commercial ocean-going vessel and its personnel in compliance with Australian and international regulations and guidelines, and to ensure the protection of the marine environment and the safety of the vessel and people on board.

Managing vessel business operations and resources includes legal and commercial responsibilities, the safety management system (SMS), procedures to obtain a safety management certificate and subsequent audits, managing work health and safety (WHS)/occupational health and safety (OHS) procedures and practices, monitoring and controlling expenditure, and analysing and preparing reports.

It also involves organising and managing crew, and includes allocating duties, conducting required training, and assessing and maintaining expected standards of work and behaviour.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ).

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

D – Administration and Human Resources

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Develop plans for general and specific vessel operations**

- 1.1** Vessel operation goals and objectives are identified according to company procedures, operational orders, regulatory requirements and established marine management practices
- 1.2** General and specific vessel operations plans are drawn up according to company procedures
- 1.3** Correct procedures for emergency response onboard a vessel are developed according to company procedures, operational orders, regulatory requirements and established marine management practices
- 1.4** Appropriate validation measures and standards are devised to monitor progress of operations against plans, and appropriate contingency plans are developed for any discrepancies or variations that may occur during operations
- 1.5** Service procedures and systems improvement opportunities are identified and appropriate measures are taken to act on these opportunities according to company procedures and established marine management practices
- 1.6** Plans, goals, objectives and instructions for general and specific vessel operations and emergency and contingency procedures are distributed to relevant personnel according to company procedures and established marine management practices

#### **2 Ensure legal requirements are fulfilled**

- 2.1** Legal basis under which a commercial vessel operates is interpreted and followed, and ship Master safety, legal and commercial obligations are identified and carried out in a relevant range of operational circumstances
- 2.2** National and international conventions, laws and

- regulations pertaining to vessel operations and contingencies are implemented
- 2.3** Entries are made into vessel logbooks, as required, and carriage of all required vessel certification is confirmed and ensured
- 2.4** Appropriate arrangements are made for preparing vessel for statutory survey and certification
- 2.5** Relevant code of conduct and industrial agreements are applied to vessel operations and management, and ship Master responsibilities as they relate to crew health and safety are implemented
- 2.6** Vessel security procedures are consistent with International Maritime Organization (IMO) International Ship and Port Facility Security (ISPS) Code
- 2.7** Procedures and requirements relating to state/territory port control are implemented
- 2.8** Procedures and requirements relating to customs, quarantine and immigration clearances are implemented
- 3 Ensure commercial and business requirements are fulfilled**
  - 3.1** Contracts of carriage and bills of lading under which vessel owners and cargo owners operate are interpreted and adhered to according to company procedures, legal requirements and established marine management practices
  - 3.2** Commercial and legal aspects of general average, salvage and towage are identified, interpreted and implemented according to company procedures, legal requirements and established marine management practices
  - 3.3** Commercial and legal aspects of marine hull and cargo insurance are identified, interpreted and implemented according to company procedures, legal requirements and established marine management practices
  - 3.4** Accident and incident investigation processes are identified and implemented according to company procedures, legal requirements and established marine management practices
- 4 Monitor and control vessel expenditure**
  - 4.1** Accrual accounting procedures are correctly used to monitor and control vessel expenditure and, where relevant, vessel budget is prepared according to

		established vessel financial procedures and established accounting practices, with relevance to commercial market in which a vessel operates
	<b>4.2</b>	Plans and appropriate contingency procedures are developed to correct any variation from vessel budget and identified expenditure, and records are maintained according to established vessel financial procedures and established accounting practices
	<b>4.3</b>	Appropriate action is taken when expenditure varies from vessel budget according to contingency plans, company procedures and established accounting practices
<b>5</b>	<b>Develop and implement vessel SMS</b>	
	<b>5.1</b>	Vessel SMS is developed according to relevant maritime regulations and company procedures
	<b>5.2</b>	SMS safety procedures and related documentation are developed in collaboration with relevant vessel personnel
	<b>5.3</b>	SMS documentation structure and content are maintained according to requirements, and appropriate action is taken to ensure correct procedures are followed to obtain a safety management certificate according to maritime regulatory requirements
	<b>5.4</b>	Appropriate measures are taken to ensure all personnel onboard vessel are familiar with SMS documentation, that familiarisation arrangements for new crew members are carried out, and that all personnel apply SMS procedures relevant to their functions
<b>6</b>	<b>Monitor and control vessel physical resources</b>	
	<b>6.1</b>	Vessel inventory of plant, equipment and other physical resources is maintained according to company procedures, vessel survey requirements and established marine management practices
	<b>6.2</b>	Reports on status of vessel physical resources are prepared and submitted to relevant personnel within company and regulatory authority requirements according to company procedures, vessel survey requirements and established practices
<b>7</b>	<b>Analyse and compile operational and voyage data</b>	
	<b>7.1</b>	Operational and voyage data is collected and compiled according to company practices, regulatory requirements and established marine management practices

- |  |            |   |
|--|------------|---|
|  | <b>7.2</b> | Voyage report is prepared and validated according to company procedures, vessel survey requirements and established marine management practices         |
|  | <b>7.3</b> | Voyage report is submitted to designated personnel according to company procedures, vessel survey requirements and established practices                |
| <b>8 Provide leadership to officers and crew</b>                           | <b>8.1</b> | Feedback and support are provided to crew on achievements and performance in their day-to-day work  |
|  | <b>8.2</b> | Crew are treated fairly, equitably, effectively and honestly in matters related to their day-to-day work  |
|  | <b>8.3</b> | Appropriate action is taken to prevent harassment and, where it has occurred, harassment is dealt with promptly, effectively and fairly                 |
|  | <b>8.4</b> | Crew suggestions for work improvements are listened to, acted upon and credit for achievements is shared with crew                                      |
|  | <b>8.5</b> | Good example is provided of a responsible, fair, sympathetic, equitable and diligent member of shipboard team   |
| <b>9 Allocate duties and maintain set standards of work onboard vessel</b> | <b>9.1</b> | Work requirements and crew competencies required for work duties are identified and clarified   |
|  | <b>9.2</b> | Crew member competencies are assessed and confirmed, and duties are assigned to crew according to crew competencies and capabilities                    |
|  | <b>9.3</b> | Competency deficiencies in personnel are identified and remedial action is initiated through counselling and training                                   |
|  | <b>9.4</b> | Crew members are advised of rostered duties and required performance standards are set in conjunction with crew members according to company procedures |
|  | <b>9.5</b> | Crew members are motivated to achieve set standards of work performance using appropriate methods   |
|  | <b>9.6</b> | Performance of crew members is monitored, as required, using appropriate methods according to company procedures  |

- 9.7** Performance assessments are discussed with relevant crew members and agreement is reached on appropriate action to be taken where performance is below set standards
- 10 Resolve conflict**
  - 10.1** Conflict situations are recognised and issues are clarified with personnel involved
  - 10.2** Solutions to conflict are negotiated using appropriate mediation and conflict resolution techniques
- 11 Plan, organise, promote and evaluate shipboard training and assessment**
  - 11.1** Workplace trainer and assessor requirements are identified and appropriate staff are trained and assigned, as required
  - 11.2** Work-related training opportunities are planned and organised for crew according to identified needs and company policy
  - 11.3** Shipboard drills are organised according to regulations and company procedures
  - 11.4** Assessment of crew members during and after training activities and shipboard drills is carried out to confirm required competencies and related knowledge have been acquired
  - 11.5** Crew members are debriefed after training, drill and assessment activities using appropriate methods and efficacy of training, drill and assessment activities is evaluated based on feedback from participating crew members and other relevant evidence
  - 11.6** Outcomes of evaluations of training and assessment are discussed with trainers and assessors, and appropriate action is taken to make required improvements
  - 11.7** Reports on training and assessment are evaluated and resultant action is maintained and/or entered into vessel log, as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARD001 Manage business and administration on vessels limited by tonnage or near coastal operations.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARD004 Manage business and administration on vessels limited by tonnage or near coastal operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and compiling operational and voyage data, and preparing reports
- communicating effectively verbally and in writing
- complying with mandatory rules and regulations and International Maritime Organization (IMO) conventions and codes, including the relevant sections of Australian Maritime Safety Authority (AMSA) Marine Orders and ensuring applicable codes, guidelines and standards recommended by IMO, classification societies and maritime industry organisations are taken into account
- conducting management meetings
- coordinating an audit to maintain a safety management certificate
- developing effective planning documents
- establishing and developing dynamic groups and teams onboard a vessel
- following correct procedures for obtaining a safety management certificate
- implementing human resource management responsibilities
- interpreting and applying information on contracts of carriage, marine insurance, salvage and towage, including:
  - labour-related regulations
  - national administrative procedures for accident investigation, and vessel and port security
  - procedures relating to customs, quarantine and immigration clearance
- investigating and arbitrating shipboard conflict
- investigating, analysing and compiling casualty data and preparing related reports
- leading officers and crew
- maintaining vessel security
- motivating shipboard personnel
- organising training evaluation processes
- planning, implementing and monitoring goals and performance requirements for vessel operations and emergencies
- planning, implementing and monitoring requirements related to:
  - Master duties, obligations, commercial and legal responsibilities under national and

international laws and conventions

- port state control (PSC)
- vessel documentation, certification and survey
- planning, implementing and monitoring work health and safety (WHS)/occupational health and safety (OHS) procedures and practices
- promoting correct safety management onboard vessels
- providing high-quality reports
- recognising and interpreting non-verbal communication
- taking actions promptly to report and/or rectify management problems according to established procedures
- using management skills effectively.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- competency requirements for typical shipboard operations
- conflict resolution and mediation strategies and techniques
- contracts of carriage, marine insurance, salvage and towage
- equal employment policies and regulations
- established marine resource management procedures and practices
- general principles of integrated vessel and bridge management
- human resource management problems, and appropriate action and solutions
- laws and regulations pertaining to vessel operations and contingencies, including:
  - agency
  - customs and quarantine
  - deaths and disappearances
  - drugs
  - immigration
  - marine pollution (Australian laws and IMO conventions)
  - operational safety (Australian regulations and IMO conventions)
  - security and anti-terrorism
  - smuggling and piracy
  - stowaways and refugees
  - wrecks, salvage and towage
- legal issues relevant to Master responsibilities, including:
  - characteristics of a contract of carriage
  - functions and responsibilities of Master, vessel owner and charterer in various types of charters and contracts of carriage
  - functions of a bill of lading
  - insurance arrangements

- international conventions relating to liability of a sea carrier
- investigations and courts of marine inquiry
- lay time, demurrage and dispatch
- legal principles of pilotage
- salvage and towage contracts
- tort liability
- vessel owner obligation of reasonable dispatch
- vessel registration requirements
- maritime communication techniques, including barriers to effective communication and how to overcome them
- methods for:
  - evaluating efficacy of shipboard training, drills and competency assessment
  - identifying problems in services to other departments or in procedures and systems
  - motivating shipboard personnel
- national administrative procedures for accident investigation, and vessel and port security
- national Training Packages and competency standards relevant to shipboard personnel
- principles of effective leadership and teamwork
- procedures for:
  - collecting, compiling, analysing and reporting on safety incidents and casualties onboard a vessel, including format and characteristics of a good safety incident report
  - obtaining a safety management certificate and undergoing subsequent audits to maintain it
  - planning, implementing and monitoring goals and performance requirements for vessel operations and emergencies
  - customs, quarantine and immigration clearance
- regulatory requirements for shipboard drills
- relevant:
  - industrial award requirements as they relate to shipboard personnel responsibilities, obligations and entitlements
  - maritime regulations
  - WHS/OHS and marine pollution control legislation, codes of practice, policies and procedures
- requirements related to:
  - PSC
  - vessel documentation, certification and survey
- role of vessel Master, including duties, obligations, and commercial and legal responsibilities under national and international laws and conventions
- techniques for:
  - evaluating and seeking alternatives for improvement of shipboard operational and emergency procedures and systems
  - setting of performance standards and evaluating performance of shipboard personnel
- training and competency assessment techniques and options suitable for shipboard personnel

- vessel operation, including:
  - berthing and unberthing
  - bridge operations
  - cargo handling and care
  - catering operations
  - deck operations and maintenance
  - emergency and damage control operations
  - engine room operations and maintenance
  - mooring operations
  - navigation
  - passenger service operations
  - personnel training
  - pollution control operations
  - radio operations
  - safety/emergency drills
  - slipping operations
- vessels physical resources, including:
  - accommodation equipment and facilities
  - bridge equipment and resources
  - catering equipment and facilities
  - documents and certification
  - engine room propulsion plant and equipment and related auxiliary systems
  - navigation charts, marine publications, manufacturer manuals and other reference documentation
  - radio equipment and facilities
  - tools and maintenance equipment
  - vessel deck equipment, fittings and related systems
  - vessel structures and fittings
- vessel safety management system (SMS), including:
  - general provisions for developing and monitoring vessel SMS
  - aims, objectives, advantages and disadvantages of SMS
  - requirements of relevant maritime authorities for SMS.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARD005 Manage operations and maintenance on vessels limited by tonnage or near coastal operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to manage the operations of a commercial vessel limited by tonnage or near coastal operations. It includes administration of vessel stability, cargo operations and planned maintenance system in compliance with Australian and international regulations and guidelines, protection of the marine environment and the safety of the vessel and people on board.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

D – Administration and Human Resources

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

# **Assessment Requirements for MARD005 Manage operations and maintenance on vessels limited by tonnage or near coastal operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out operational management of vessel while underway, when berthed or moored, when slipped or in dry dock, during routine or unplanned events
- communicating effectively with other personnel when managing operations and maintenance of vessel limited by tonnage or near coastal operations
- communicating with multilingual crew using established techniques
- complying with relevant maritime regulations
- identifying problems that can occur when managing operations and maintenance of vessel and initiating appropriate action
- interpreting and following all safety management procedures and precautions when managing operations and maintenance of vessel limited by tonnage or near coastal operations
- interpreting and monitoring application procedures for managing operations and maintenance of vessel limited by tonnage or near coastal operations
- monitoring selection and use of publications, materials, tools and other equipment involved in managing operations and maintenance of vessel limited by tonnage or near coastal operations
- preparing appropriate reports on outcomes of inspection and maintenance activities
- providing leadership to other shipboard personnel when managing operations and maintenance of vessel limited by tonnage or near coastal operations
- reading and interpreting:
  - safety data sheets (SDS)/material safety data sheets (MSDS)
  - vessel and machinery specifications, gross and net tonnage, machinery design drawings, machine drawings, operational manuals, specifications, and electrical and control circuit diagrams
- recognising and adapting appropriately to cultural differences in the workplace, including modes of behaviour and interactions among crew and others
- taking appropriate precautions to prevent pollution of marine environment
- taking prompt action to report and/or rectify operational and maintenance problems.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislation, regulations and codes of practice
- documents and records, including:
  - company maintenance procedures
  - maintenance schedules and records
  - relevant maritime authorities and regulations related to operations and maintenance of vessels, including Marine Orders
  - stability and cargo documents pertaining to the vessel
  - vessel and equipment manufacturer instructions, specifications and recommended procedures
- maintenance records that must be kept on vessel to meet requirements of company and regulatory authorities
- nature and causes of corrosion of marine surfaces and structures, and available methods for its control
- operational management and maintenance:
  - administering repairs of minor faults and imperfections in painted surfaces and managing preparation of marine surfaces prior to application of prescribed marine coating
  - identifying deterioration of vessel structure and fittings
  - identifying faulty equipment or fittings and arranging for repair or replacement
  - managing application of lubricants to moving parts of vessel equipment
  - managing vessel cargo operation procedures
  - managing vessel stability both normal and adverse operational conditions
  - routine maintenance inspections
- principal features of structure of vessel, with a basic understanding of properties and application of materials used in vessel construction
- procedures for:
  - checking and inspecting vessel stability during a range of operational conditions, including loading and discharging of cargo, as part of routine procedures to ensure compliance with company requirements and established safety rules and regulations
  - initiating and coordinating repair and/or replacement procedures onboard vessels
- the use of publications, tools and equipment required for operational management and maintenance:
  - cargo and stability calculators and publications
  - safe use of electric and pneumatic power tools, such as grinders, sanders, drills and hand tools, including chipping hammers and scrapers
  - marine preservative finish application equipment, such as brushes, spray guns, rollers and greasing and lubrication tools
  - the correct selection and use of personal protective equipment (PPE), including:
    - eye and ear protection

- safety boots
- dust and fume masks
- rinsing and storing equipment
- relevant sections of applicable maritime regulations
- relevant work health and safety (WHS)/occupational health and safety (OHS) and pollution control legislation and policies
- safety, environmental and hazard control precautions and procedures relevant to inspection and maintenance operations
- slipping and docking procedures suitable for various types of hull forms, including communication techniques used
- typical problems relating to slipping and maintaining vessels and appropriate actions and solutions.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARD006 Monitor and control compliance with legislative requirements**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to monitor and control compliance with legislative requirements and measures to ensure safety of life at sea, security and the protection of the marine environment.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited), Engineer Class 2 (STCW Second Engineer Unlimited), Master of a commercial vessel less than 500 gross tonnage (GT) or Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

D – Administration and Human Resources

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Determine legislative obligations and requirements**

- 1.1** Legal obligations in relation to vessel operations are ascertained
- 1.2** Legislative requirements relating to vessel operations are recognised
- 1.3** Obligations and legislative requirements are clarified with relevant government and licensing agencies

#### **2 Develop strategies for compliance with legislative obligations and requirements**

- 2.1** Obligations and legislative requirements are analysed to develop compliance strategies
- 2.2** Strategies are reviewed with relevant stakeholders to determine suitability
- 2.3** Strategies are used to develop regular, cyclical compliance checks
- 2.4** Strategies and compliance requirements are communicated to crew members
- 2.5** Relevant training is conducted to facilitate compliance

#### **3 Undertake scheduled compliance checks**

- 3.1** Compliance checks are delegated to relevant crew members
- 3.2** Problems that may lead to potential non-compliance are identified and reported
- 3.3** Timing and outcomes of compliance checks are recorded according to regulatory and organisational requirements
- 3.4** Information from compliance checks is analysed to identify non-compliance or potential non-compliance

		instances
<b>4 Rectify non-compliance with legislative obligations and requirements</b>	<b>4.1</b>	Course of action to take to address non-compliance instances is determined
	<b>4.2</b>	Timely remedial action is undertaken and legislative obligations and requirements are complied with
	<b>4.3</b>	Training and instruction are conducted to ensure compliance with regulations
	<b>4.4</b>	Checks are made to ensure non-compliance has been addressed
	<b>4.5</b>	Specific area is monitored to ensure continuing compliance
	<b>4.6</b>	Reason for non-compliance is analysed to guide future compliance
<b>5 Maintain required certification of shipboard items and equipment</b>	<b>5.1</b>	Documentation held by the vessel is completed against authorised inventory
	<b>5.2</b>	Continuous validity of certification extensions and requirements for renewals is ensured through timely attention
	<b>5.3</b>	Continuing effectiveness of tests, checks and maintenance programs is reflected in certificate conditions of surveyed items and equipment
	<b>5.4</b>	Organisational and issuing authority requirements are complied with through timely survey arrangements
<b>6 Maintain documentation related to legislative requirements</b>	<b>6.1</b>	Certificates and documentation are stored in a manner that optimises their use and accessibility for vessel operations
	<b>6.2</b>	Clear, concise and accurate records are kept
	<b>6.3</b>	Regulatory and organisational requirements, and format for records are complied with
	<b>6.4</b>	Validity of records is maintained when required corrections to records are made
	<b>6.5</b>	Documentation is secured and confidentiality is

maintained according to organisational procedures

- 6.6** Organisational procedures are followed to back-up computer
- 6.7** Records and reports are distributed to required authorities at appropriate times

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARD003 Manage legal requirements of a vessel and MARJ005 Manage compliance with environmental legislation.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARD006 Monitor and control compliance with legislative requirements**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- attending to appropriate level of detail in recordkeeping
- developing effective planning documents
- ensuring currency of relevant legislative and regulatory knowledge
- ensuring currency of relevant reference material
- ensuring procedures for monitoring operations and maintenance comply with legislative requirements
- identifying potential non-compliance promptly and fully
- interpreting information relevant to legislative requirements to ensure the security and safety of life of crew, passengers and others at sea
- planning renewal and extension of certificates to ensure continued validity of surveyed items and equipment.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- assistance and salvage, including:
  - Convention on Limitation of Liability for Maritime Claims
  - International Convention on Salvage
  - Lloyds Standard Form of Salvage Agreement
  - Special Compensation P and I Club (SCOPIC)
- classification societies
- general average and marine insurance, including:
  - the York-Antwerp Rules
- international maritime law embodied in international agreements and conventions that impact on the role of management level deck officers, including:
  - Convention on Facilitation of the International Maritime Traffic

- International Convention for the Unification of Certain Rules of Law with Respect to Collision Between Vessels
- Maritime Labour Convention (MLC)
- United Nations Convention on the Law of the Sea (UNCLOS)
- international maritime law embodied in international agreements and conventions in relation to:
  - certificates and other documents to be carried onboard ships by international conventions, how they may be obtained and their period of validity
  - responsibilities under the relevant requirements of the International Convention on Load Lines, 1966, as amended
  - responsibilities under the relevant requirements of the International Convention for the Safety of Life at Sea (SOLAS), 1974, as amended
  - responsibilities under the International Convention for Prevention of Pollution from Ships (MARPOL), as amended
  - responsibilities under international instruments affecting the safety of the ship, passengers, cargo and crew, including:
    - Casualty Investigation Code
    - charter parties
    - Hamburg Rules maritime legislation
    - International Convention for the Unification of Certain Rules of Law Relating to Bills of Lading
- maritime declarations of health and the requirements of International Health Regulations
- methods and aids to prevent pollution of the maritime environment by ships, including:
  - convention of the prevention of marine pollution by dumping of wastes and other matter
  - International Convention on Civil Liability for Oil Pollution Damage
  - International Convention Relating to Intervention on the High Seas in Cases of Oil Pollution Casualties
  - Protocol Relating to Intervention in the High Seas in Cases of Pollution by Substances other than Oil
- marine insurance and liability, including:
  - letter of protest
  - noting and extending protests
- Master and pilot relationship
- national legislation for implementing international agreements and conventions
- port of refuge procedures
- procedures for maintaining security and confidentiality of information
- relevant regulations, codes and conventions related to business and legal requirements, security and safety of life of crew, passengers and others on a vessel, including:
  - Ballast Water Convention
  - port state control (PSC)
- ships agent and agency
- sources of reference and information on detailed survey and certification requirements

- stowaways
- strategies for compliance, including:
  - conducting drills required under SOLAS and relevant Marine Orders applicable to firefighting and lifesaving appliances
  - ensuring survey items are subject to required checks, inspections and maintenance programs
  - maintaining correct documentation and records
  - maintaining valid certification dates
  - using relevant safety management system checklists
- systems and methods for recording, retrieving and storing information
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace operational situations or an industry-approved marine operations site, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## MARF031 Apply leadership and team working capability

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to apply leadership and team working capability in accordance with Australian and international regulations and guidelines.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Master of a commercial ship less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Watchkeeper Deck.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

#### Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal or Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

#### Blue Waters Qualifications:

- This unit is one of the requirements to obtain AMSA certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Master on a commercial vessel less than 500 gross tonnage (GT) or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Establish working systems and procedures**

- 1.1** Principles of resource management are interpreted to establish the functions and responsibilities of the crew
- 1.2** Principles of resource management are interpreted to establish arrangements and procedures
- 1.3** Operations are planned, and arrangements and procedures applied and evaluated according to regulatory requirements and company procedures
- 1.4** Working systems are documented, as required, and communicated to relevant personnel
- 1.5** Schedules are developed with due consideration to crew's experience

#### **2 Assign resources and allocate duties**

- 2.1** Current competency of crew is evaluated and appropriate measures are taken to ensure all personnel have the required level of competency
- 2.2** Clear and unambiguous roles and responsibilities of crew are determined
- 2.3** Crew are allocated duties and informed of expected standards of work and behaviour in a manner appropriate to the individuals concerned

- 2.4** Resources are allocated and assigned as needed in correct priority to perform necessary tasks to obtain and maintain situational awareness
- 3 Manage personnel**
- 3.1** Crew are informed of current and predicted vessel and operational status and external environment
- 3.2** Operations are undertaken in accordance with established functions and responsibilities
- 3.3** Effective communication is maintained with crew on matters relevant to safety and integrity of vessel
- 3.4** Questionable decisions and/or actions are dealt with using an appropriate challenge and response
- 3.5** Fatigue management strategies are applied
- 3.6** Operations are monitored and appropriate action is taken if found to be in breach of established arrangements, regulations and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF022 Apply maritime resource management principles

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARF031 Apply leadership and team working capability**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying principles of resource management
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing competency and experience of vessel officers and crew, and their suitability for specific roles
- assisting team members to develop and maintain the required level of competency
- communicating effectively with others on issues, arrangements and requirements
- demonstrating effective leadership and management skills
- developing, implementing and overseeing operating procedures
- establishing and maintaining appropriate internal and external communication systems
- establishing and managing operations on an operational commercial vessel in an appropriate range of contexts
- identifying and evaluating problems using risk assessment techniques, determining appropriate courses of action and evaluating outcome of effectiveness
- investigating and arbitrating shipboard conflicts
- monitoring arrangements and taking appropriate action where there is an identified breach of established arrangements, regulations or procedures
- planning and coordinating timelines, tasks, prioritisation and workload
- reading, interpreting and applying instructions, procedures and information relevant to procedures and responsibilities
- recognising and interpreting signs of fatigue among crew and initiating appropriate action.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cultural differences and how to deal with them
- documentation and procedures, including:
  - Australian Maritime Safety Authority (AMSA) Marine Orders

- company procedures
- International Chamber of Shipping (ICS) Bridge Procedures Guide
- International Maritime Organization (IMO) International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW), including the Manila Amendments
- International Safety Management (ISM) Code, safety management system (SMS) plans, procedures, checklists and instructions
- navigational charts
- operational orders
- vessel log
- effective decision-making techniques
- factors to take into account when establishing watchkeeping arrangements, including:
  - attention necessary when navigating in or near traffic separation schemes or other routing measures
  - bridge or engine room must never be left unattended
  - operational status of bridge/engine room instrumentation, controls and alarms
  - professional competency and experience of vessel officers and crew and their familiarity with the vessel's equipment, procedures and manoeuvring capability
  - provision of unmanned machinery space (UMS) controls, alarms and indicators
  - proximity of navigational hazards
  - size of the vessel and the field of vision available from the conning position
  - traffic density and other activities occurring in the area in which the vessel is navigating
  - unusual demands on the watch arising from operational conditions
  - use and operational condition of navigational aids
  - weather and sea conditions, visibility and whether there is daylight or darkness
  - whether the vessel is fitted with an automatic steering system
  - whether there are radio duties to be performed
- fatigue management principles, strategies and techniques, including:
  - appropriate dietary habits
  - arranging to take a break when symptoms of fatigue are identified
  - avoiding excessive consumption of alcohol prior to watchkeeping duties
  - maintaining personal fitness and health
  - recognition of symptoms of fatigue
- functions and responsibilities of shipboard personnel management and training
- importance of situation awareness to decision making
- related international maritime conventions, recommendations, and national legislation, including Maritime Labour Convention (MLC)
- resource management principles, including:
  - allocation, assignment and prioritisation of resources
  - assertiveness and leadership, including motivation
  - consideration of team experience, including decisions that reflect team experiences

- effective communication onboard and ashore
- obtaining and maintaining situational awareness
- watchkeeping principles as described in AMSA Marine Orders, including:
  - assistance must be available to be summoned to the bridge or engine room if required by a change in the vessel's situation
  - duties of lookout and/or helmsman must be kept separate
  - lookout must give full attention to keeping a proper lookout and must not be given other duties which could interfere with the task
  - necessary precautions must be taken to avoid polluting the marine environment
  - proper lookout must be maintained at all times
- ways of assessing the current competency of vessel officers and crew, and their familiarity with the vessel's equipment, procedures and manoeuvring capability
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## MARF032 Apply medical first aid on board ship

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to provide immediate first aid in the event of accident or illness onboard a ship.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Master on a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Master on a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### Pre-requisite Unit

Not applicable.

### Competency Field

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |   |
|--|---|
| <b>1 Prepare to respond to emergency onboard vessel</b>                  | <b>1.1</b> Casualty condition is assessed and appropriate response is determined in order to minimise hazards and determine the need for emergency medical assistance<br><br><b>1.2</b> Options for transporting casualty or waiting for medical assistance are evaluated in relation to environmental issues, transport availability and casualty condition<br><br><b>1.3</b> Casualty is sheltered from elements according to environmental conditions, as required   |
| <b>2 Provide first aid onboard vessel</b>                                | <b>2.1</b> Nature of casualty injury/condition and relevant first aid procedures are determined and explained to the casualty<br><br><b>2.2</b> Consent is sought from the casualty prior to applying first aid<br><br><b>2.3</b> First aid is provided to address casualty condition and according to effective first aid principles<br><br><b>2.4</b> Casualty condition is monitored and ongoing first aid is provided as required<br><br><b>2.5</b> Casualty is calmly reassured according to effective first aid principles<br><br><b>2.6</b> Condition of casualty is documented over time to assist in providing ongoing first aid |

# Assessment Requirements for MARF032 Apply medical first aid on board ship

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- administering medication under direct instruction from an authorised health worker
- completing identification of probable cause, nature and extent of injuries according to current first aid practice to minimise immediate threat to life promptly
- conducting an initial casualty assessment
- demonstrating adequate infection control procedures
- evaluating available options for transporting or maintaining condition of casualty
- examining casualty or patient
- identifying and preparing an area for safe evacuation
- improvising treatment and associated resources
- listening to, clarifying and applying medical instructions accurately
- minimising the risk of harm to self and others at all times
- planning an appropriate first aid response in line with established first aid principles, policies and procedures
- preparing incident reports, including description of injury
- using available communication methods and equipment to access medical assistance.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- body structure and function
- burns, scalds and the effects of heat and cold
- cardiac arrest, drowning and asphyxia
- first aid kit
- fractures, dislocations and muscular injuries
- incident documentation
- medical care of rescued persons
- pharmacology

- radio medical advice
- sterilisation
- toxicological hazards onboard a vessel, including use of the Medical First Aid Guide (MFAG) for Use in Accidents Involving Dangerous Goods or its national equivalent
- transporting casualty or waiting for medical assistance options
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and current relevant personal protective equipment (PPE) currently used in industry.

## Links

## MARF033 Assist in an emergency response

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to assist in responding to an emergency or incident and to apply control procedures on a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer – Engine/Deck
- Integrated Rating.

It involves responding to an emergency individually, or as a member of an emergency response team.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Engine/Deck or Integrated Rating and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### Pre-requisite Unit

Not applicable.

### Competency Field

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Raise alarms

- 1.1 Emergency or incident is correctly identified in accordance with workplace procedures
- 1.2 Emergency response plan is accessed, reviewed and clarified with appropriate personnel and/or emergency response team members
- 1.3 Duties allocated to minimise risk are carried out in accordance with workplace procedures
- 1.4 Distress signals are activated according to manufacturer instructions and in accordance with workplace procedures

#### 2 Act in an emergency

- 2.1 Immediate action required is identified and taken according to emergency procedures
- 2.2 Safety and security procedures are complied with in all actions in accordance with workplace procedures
- 2.3 Personal protective equipment (PPE) is selected and used according to requirements of the situation, work health and safety (WHS)/occupational health and safety (WHS/OHS), and emergency procedures
- 2.4 Emergency equipment is selected and used appropriate to the emergency or incident in accordance with emergency procedures
- 2.5 Orders are acknowledged and followed
- 2.6 Allocated duties for emergency situations are performed in accordance with workplace procedures
- 2.7 Communications are maintained with others to facilitate emergency response process

#### 3 Assist others in distress

- 3.1 Distress signals from others are recognised and

- acknowledged
- 3.2** Nature of assistance required is established
  - 3.3** Capability to safely assist or relay emergency is determined taking into account own safety and physical proximity to emergency or incident
  - 3.4** Appropriate response to emergency or incident is prepared for and implemented
  - 3.5** Communications are maintained with others to facilitate emergency response process
- 4 Monitor environment and incident**
- 4.1** Factors that may create or increase risk of injury or damage are constantly assessed and reported to the Master
  - 4.2** Measures taken to relieve an emergency situation are monitored to ensure continued effectiveness
  - 4.3** Changes in conditions and behaviour are identified and reported
- 5 Assist with recovery from emergency or incident**
- 5.1** Evidence relating to cause of emergency or incident is preserved and recorded
  - 5.2** Appropriate assistance is provided according to emergency procedures
  - 5.3** Emergency equipment is returned to a state of readiness as soon as is reasonably possible
  - 5.4** Debriefings are attended and participated in as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF018 Assist in an emergency response.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARF033 Assist in an emergency response

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- communicating clearly and concisely in an emergency or incident
- identifying, isolating and reporting faulty or non-operational emergency equipment and distress signals
- reading and following emergency procedures
- reading and interpreting basic instructions and standard operating procedures (SOPs) for emergencies
- recognising routine problems that may occur when operating emergency equipment and distress signals
- selecting and using appropriate emergency equipment and distress signals
- working effectively with team members when responding to an emergency or incident.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable sections of relevant maritime regulations dealing with emergency equipment and procedures
- distress signals, including:
  - dye markers
  - flags
  - hand signals
  - internal public address (PA) system
  - light signals
  - mobile phone
  - radio
  - reflective mirror
  - ship's whistle

- sound signal, including voice
- V-sheet
- duties and responsibilities of shipboard personnel during emergencies
- emergency duties and alarm signals applied and used on the vessel
- emergencies and incidents, including:
  - anchoring
  - capsize
  - contaminated fuel
  - engine breakdown or malfunction
  - fire
  - flooding
  - fouled propeller
  - fuel supply system failure
  - grounding
  - hypothermia
  - injuries/illness
  - person overboard
  - person retrieval from water
  - sinking
  - swamping
- functions and purpose of pyrotechnic distress signals, satellite emergency position indicating radio beacons (EPIRBs) and search and rescue transponders (SARTs)
- International Convention for the Safety of Life at Sea (SOLAS) and related regulations
- location and purpose of pyrotechnic expiry dates
- location of escape routes on the vessel
- location of firefighting equipment on the vessel
- procedures for:
  - activation of maritime emergency alarms
  - emergency response onboard a vessel
  - testing EPIRBs and SARTs
- range of emergency/safety equipment available on the vessel
- relevant WHS/OHS requirements, work practices and pollution control regulation and policies
- role and responsibility of self and other crew members
- measures to relieve an emergency situation, including:
  - enhanced lookout activities
  - fire watch
  - measurement of water ingress
  - monitoring distress frequencies
  - monitoring patient recovery

- techniques for avoiding false distress alerts and actions to be taken in an accidental activation
- types of emergency incidents and measures taken to address them.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## MARF034 Carry out fast rescue craft operations

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release.

### Application

This unit involves the skills and knowledge required to carry out fast rescue craft operations and includes maintaining fast rescue craft; preparing fast rescue craft and crew for operations; taking charge of a fast rescue craft during and after launch; responding to craft, equipment and crew emergencies or malfunctions; locating and retrieving casualties; and recovering and securing fast rescue craft after operations.

Work is performed relatively independently under broad operational requirements and requires the ability to take charge of the rescue boat and its crew, and to take responsibility for self and others in achieving the required outcomes.

Work involves applying established maritime survival principles and practices for launching and operating fast rescue craft and using related survival equipment. Implementing established survival strategies and procedures is also involved.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification in fast rescue craft operations and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### Pre-requisite Unit

Not applicable.

## Competency Field

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Maintain fast rescue craft for operations**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Fast rescue craft design characteristics and fittings are identified

**1.2** Fast rescue craft capabilities are outlined

**1.3** Fast rescue craft and items of equipment are maintained in accordance with manufacturer specifications and operational requirements

#### **2 Prepare fast rescue craft and crew for operations**

**2.1** Fast rescue craft launching equipment design and operation are outlined

**2.2** Motion compensation system operation and associated fail safe devices are outlined

**2.3** Motion compensation system operation and associated fail safe devices are maintained in accordance with manufacturer instructions

**2.4** Pre-launch checks are conducted in accordance with manufacturer specifications and operational requirements

**2.5** Appropriate specialised emergency equipment is stowed onboard fast rescue craft

**2.6** Operational responsibilities and lines of communication are confirmed with relevant personnel

**2.7** Appropriate personal protective equipment (PPE) and foul weather gear is worn, as required

**2.8** Readiness of fast rescue craft, crew and equipment for

- launch is confirmed with relevant personnel
- 3 Take charge of fast rescue craft during and after launch**
- 3.1** Fast rescue craft is launched in a controlled and safe manner according to craft and launch system manufacturer specifications and instructions
  - 3.2** Hook release system is operated according to manufacturer specifications, and launch vessel and launch equipment are cleared safely
  - 3.3** Engine power is managed within manufacturer torque range in a way that ensures smooth and efficient movement
  - 3.4** Damage to engine and accessories is minimised
  - 3.5** Fast rescue craft is operated within safe operational limits of craft for the prevailing conditions
  - 3.6** Manoeuvres are performed with due regard to drive system manoeuvring characteristics
  - 3.7** Manoeuvres are performed in a way that ensures the safety of personnel onboard and in the water
  - 3.8** Navigational equipment is used according to manufacturer specifications
  - 3.9** Communication and signalling equipment is used according to manufacturer specifications and operational requirements
  - 3.10** Communications are established and maintained between craft, other vessels, rig and helicopters, as required
  - 3.11** Emergency equipment is used according to manufacturer specifications, supervisor instructions and emergency conditions
- 4 Respond to emergencies or malfunctions involving craft, equipment and crew**
- 4.1** Capsized fast rescue craft is righted using craft righting system, with due concern for crew safety and possible damage to craft and equipment
  - 4.2** Swimming is performed as required in standard PPE, foul weather gear or other specialised protective equipment
  - 4.3** Appropriate procedures for reboarding fast rescue craft

- and for wearing operational clothing and equipment are implemented
- 4.4** Emergency repairs and maintenance to fast rescue craft and equipment are performed according to manufacturer specifications and emergency conditions
- 5 Locate and retrieve casualties**
- 5.1** Appropriate search patterns are followed according to search coordinator instructions
- 5.2** Search patterns and rescue procedures are coordinated with other fast rescue craft where appropriate
- 5.3** Casualties are approached in a way that ensures casualty and crew safety
- 5.4** Fast rescue craft is positioned to ensure safe and quick retrieval of casualties
- 5.5** Casualty condition is determined and appropriate recovery procedures are implemented
- 5.6** Appropriate lifting procedures are adopted to ensure safe retrieval of casualty
- 5.7** Emergency first aid procedures are applied as appropriate
- 5.8** Master or medical officer is notified of casualty condition and medical instructions are followed as appropriate
- 5.9** Casualty is transferred to vessel, rig, helicopter or other place of safety with concern for types of injuries sustained
- 6 Recover fast rescue craft**
- 6.1** Stand-down procedures are followed
- 6.2** Fast rescue craft is recovered in a controlled and safe manner according to craft, hook release systems and recovery system manufacturer specifications and instructions
- 6.3** Fast rescue craft and equipment are secured onboard and prepared for future operations

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARF016 Carry out fast rescue craft operations.

## **Links**

Companion Volume implementation guide can be found in VetNet -

# Assessment Requirements for MARF034 Carry out fast rescue craft operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- calculating equipment to conduct pre-launch checks
- conducting pre-launch and ongoing craft and equipment checks in relation to:
  - ancillary equipment required onboard
  - batteries
  - bowsing line operability
  - communications equipment
  - compass
  - crane operability
  - drive units, including oil levels, clearance from obstruction, tilt levels and nozzle operation where applicable
  - electrical equipment
  - engine levels, including oil, water and v-belts
  - engine operability
  - fuel lines and pumps
  - hull integrity
  - launch capability
  - lifting sling or hook
  - lines of communication
  - operational procedures and requirements
  - personal protective equipment (PPE) availability and operability
  - search light
  - specialised emergency equipment
  - steering
  - switches
  - tow ropes
- effectively using PPE and foul weather gear, including:
  - eye protection, sunscreen, protective footwear, safety helmet and gloves

- immersion suits, inflatable life jacket, overalls and wet weather gear
- implementing appropriate casualty recovery procedures
- implementing emergency first aid procedures, including:
  - cardiopulmonary resuscitation (CPR)
  - care following fuel ingestion
  - care of burns, breaks and fractures
  - control of hypothermia, control of internal or external bleeding and shock
  - determining the extent of head and spine injury and appropriate care
  - expired air resuscitation
  - monitoring of vital signs
- implementing personal survival techniques required of seafarers as referenced in Section A VI/1 of the International Maritime Organization (IMO) International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW)
- launching and operating fast rescue craft and equipment by day or night in both normal and emergency situations under normal and adverse conditions of sea and weather while:
  - anchored or moored
  - hove to
  - under way
- maintaining and undertaking emergency repair of craft and auxiliary equipment
- operating fast rescue craft in prevailing sea and weather conditions, including:
  - broken or rough water
  - cross-winds, swell and/or tide
  - wind, swell and/or tide running against the craft
  - wind, swell and/or tide running with the craft
- reading and interpreting IMO safety symbols by night and day
- reading, interpreting and completing vessel logbooks
- swimming in PPE, foul weather gear or specialised protective equipment
- undertaking appropriate search patterns, including:
  - creeping line
  - expanding square
  - parallel track search using one, two or three craft
  - sector search
  - ship/aircraft coordinated pattern
- using launch and recovery equipment, including:
  - buoyant bailer, ladles, rescue buoyant quoits with 30 metre line, 15 metre painter, 50 metre buoyant towing line
  - compass, whistle, waterproof electric torch and waterproof search light
  - first aid kit
  - sea anchor
  - tool kit
- using signals and communications equipment, including:

- flair pack containing handheld orange smoke flairs, handheld red flairs and handheld rocket flairs
- radar reflector
- using specialised emergency equipment, including:
  - buoyant safety line
  - fire-extinguisher
  - foot pump
  - safety boat hook
  - safety buoyant clasp knife
  - thermal protective aids.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- craft righting systems, including:
  - inflatable bag supported by stern mounted roll bar that is accessible from outside the craft
  - rope mounted on the outside of the craft
- drive systems and manoeuvres, including:
  - inboard/outboard
  - jet
  - jet drives
  - rudder
  - single propeller
  - twin propeller
- effects of sea and weather conditions on fast rescue craft operations
- emergencies, including:
  - capsize
  - collision
  - crew or equipment overboard
  - electrical or mechanical failure
  - injury to crew
  - leaks or flooding
- equipment maintenance and emergency repair procedures
- fast rescue craft, including:
  - hull construction, including inflatable hulls, rigid hulls and semi-rigid hulls
  - hull flotation systems, including foam filled collar, inflatable collar, inflatable pontoons and sealed floor
- International Safety Management (ISM) Code for the Safe Operation of Ships and for Pollution Prevention, safety management system (SMS) plans, procedures, checklists and

instructions

- launch and recovery equipment, procedures and safety precautions
- launch systems and recovery systems, including:
  - deck crane or davit
  - four-point sling with fixed eye
  - rig crane
  - solid mounted frame using fixed hook assembly
- manoeuvring and engine characteristics for fast rescue craft, including handling strategies to overcome hazards caused by a head sea, a following sea and a beam sea
- manoeuvres, including:
  - approaching a casualty in the water
  - coming alongside and leaving a moving vessel
  - coming alongside or leaving a pontoon, jetty or other fixed object
  - following search patterns
  - high-speed approaches
  - pacing a vessel or helicopter
  - positioning craft for casualty pick-up
  - towing or being towed by other craft
  - transferring personnel or equipment to or from a stationary or moving point
  - turning through 180 degrees in a narrow channel requiring forward and reverse movement
- operational features and correct use of the motion compensation system in use
- outfitting of fast rescue craft, such as auxiliary equipment, specialised emergency equipment and communications equipment
- personal survival techniques required of all seafarers
- procedures and sequences of action for correctly operating and using fast rescue craft
- relevant sections of:
  - IMO STCW Code and Australian Maritime Safety Authority (AMSA) Marine Orders
  - International Aeronautical and Maritime Search and Rescue (IAMSAR) Manual
  - relevant AMSA publications, such as Survival at Sea: Training and Instruction Manual
  - relevant international and Australian Standards
  - relevant international, Australian and state/territory work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes of practice, policies and procedures, such as the International Convention for the Safety of Life at Sea (SOLAS)
- search patterns and environmental factors affecting their execution
- signals and communications protocols
- symptoms of hypothermia, its prevention and treatment and the related use of protective covers and garments, such as immersion suits and thermal protective aids
- types of fast rescue craft and relevant ancillary equipment, including construction, features and starting and operating characteristics.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, rescue/survival equipment, fast rescue craft, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARF035 Contribute to fire prevention and firefighting (basic firefighting)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to prevent and control fires and to respond effectively to any fire emergency onboard a vessel.

It applies to deck and engine workers working in the maritime industry requiring a Certificate of Safety Training.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Integrated Rating
- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Integrated Rating
- Master of a commercial ship less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

## **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg VI/1 and Code Section A-VI/1 (2), Table A-VI/1-2.

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal or Master less than 80 metres Near Coastal

as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

#### Blue Waters Qualifications:

- This unit is one of the requirements to obtain AMSA certification as a Chief Integrated Rating, Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Integrated Rating, Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

F - Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Actively prevent fire**

**1.1** Fire hazards (pre-conditions for fire) onboard a vessel are identified and rectified according to workplace procedures

**1.2** Onboard procedures for preventing fire are accessed and implemented

#### **2 Prepare response to fire**

**2.1** Location and class of fire is identified

**2.2** Alarm is raised

**2.3** Condition of firefighting equipment and systems in work area is monitored according to planned maintenance schedules

- 2.4 Realistic drills and musters are practised to ensure pre-incident readiness of response personnel
  - 2.5 Appropriate protective equipment (PPE), including self-contained breathing apparatus (SCBA) is made ready
  - 2.6 All available means to limit the spread of fire and smoke are employed
  - 2.7 Appropriate pumps and ancillary equipment are readied to support firefighting operations
  - 2.8 Extinguishing media/agent is selected according to the class/classes of fire
- 3 **Combat fire**
  - 3.1 Threats to life or health are identified within the emergency area
  - 3.2 Activities and tactics to combat the fire are selected so that the safety of the vessel and all onboard is not compromised
  - 3.3 Fire is located and access is gained in the safest and most timely manner
  - 3.4 Fire is attacked using the extinguishing media/agent and application techniques appropriate to the class and size of fire
  - 3.5 SCBA is donned and used correctly while undertaking fire extinguishment and rescue
  - 3.6 Effectiveness of combat activities and tactics is evaluated and altered, as required
  - 3.7 Communication is maintained to ensure safety and efficiency of firefighting operation
- 4 **Complete post-fire activities**
  - 4.1 Fire watch is maintained to prevent further outbreak
  - 4.2 Fire scene is preserved prior to investigation, as appropriate
  - 4.3 Information relating to the incident is provided as part of fire debriefing session

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF008 Prevent and fight fires on board a vessel.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARF035 Contribute to fire prevention and firefighting (basic firefighting)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying extinguishing media to fire
- applying safe working practices at all times
- assisting in the setting up and use of foam making equipment
- correctly donning and using self-contained breathing apparatus (SCBA) while undertaking fire extinguishment and rescue in a heated smoke-filled compartment
- correctly donning and using SCBA while undertaking a drill in a smoke-filled compartment
- correctly using fireman's outfit
- entering and moving through a compartment filled with high expansion foam with the aid of a lifeline and without breathing apparatus
- extinguishing a fire with a fire blanket
- logging SCBA wearers correctly on a control board
- operating charged hose-lines and nozzles
- operating portable firefighting extinguishers
- performing after-use maintenance on SCBA
- working effectively with team members when responding to a fire.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actions to be taken:
  - in an emergency
  - onboard ship
- alarms and signals during onboard emergencies
- firefighting activities, including:
  - boundary control
  - containing the spread of fire
  - evacuation of casualties from heated smoke-filled environments

- extinguishment
- overhaul/fire watch
- chemistry of fire, including the fire tetrahedron and its relationship to materials typically found on vessels
- classification of fire and applicable extinguishing agents
- correct use of lifesaving appliances and firefighting appliances
- different classes of fire, their characteristics and strategies and equipment needed for their extinguishment
- elements of fire and explosion (the fire triangle)
- extinguishing media, including firefighting foams
- fire and smoke detection and automatic alarm systems
- fire hazards types and sources of ignition
- firefighting tactics, techniques and procedures
- flammable materials, fire hazards and spread of fire
- hazards and threats to life or health during onboard firefighting operations
- lifeline signals
- location of firefighting appliances and emergency escape routes
- need for constant vigilance
- onboard Emergency Response Organisation and procedures
- portable fire-extinguishers
- precautions for and use of fixed installations
- principles and methods of fire extinguishment
- principles underlying the spread of fire
- purpose, function and location of fixed installations/systems
- role and responsibility of self and team members
- safe working practices
- shipboard firefighting organisation
- statutory requirements pertaining to lifesaving appliances and firefighting appliances
- types of fire detection, firefighting equipment and systems used on vessels, their features, principles of operation, procedures for their use and problems that can occur
- ventilation procedures
- vessel construction as it relates to fire prevention/protection
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARF036 Coordinate search and rescue operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to assist in planning and coordinating search and rescue (SAR) operations at sea.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel Unlimited.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Activate SAR support plan**

- 1.1** Distress and emergency signals, and communications are recognised and evaluated
- 1.2** Type of emergency, and level and nature of assistance required is assessed and its practicability is considered
- 1.3** Communications are established, where possible, with the parties in distress, other vessels and relevant authorities/agencies
- 1.4** SAR parameters are identified based on available information
- 1.5** SAR strategy is developed based on all available information and after consultation with others in the established chain of command
- 1.6** Required resources are identified according to the strategy
- 1.7** Strategy is evaluated and reviewed as determined by the input of all information and review of available resources
- 1.8** Organisation and command chain with other stations involved in the SAR is established in collaboration with SAR authorities

#### **2 Coordinate crew in SAR operations**

- 2.1** Crew members are informed of the scenario and strategy
- 2.2** Crew members are briefed on their roles and responsibilities and the way the crew will operate, and are deployed to the required stations
- 2.3** Tasks are allocated to crew members according to their roles in the crew and level of competence
- 2.4** Confirmation is gained from crew members of their understanding of the scenario, their role and the roles of other crew members
- 2.5** Performance of crew members is monitored and

- reviewed as the scenario unfolds, to determine ongoing requirements
- 2.6** Directions are given to others involved in the SAR operation according to agreed plan and established chain of command
  - 2.7** Manoeuvres of vessel are made according to agreed plan and with due regard to limits of the vessel and the environment
  - 2.8** Feedback from crew members and others involved in the SAR operation is received and relayed to others according to agreed plan and established chain of command
- 3 Liaise with internal and external authorities/agencies**
- 3.1** Radio communication is established and maintained with all parties involved in the SAR operations
  - 3.2** Briefings are provided to appropriate people according to operational procedures
  - 3.3** SAR progress is monitored and information is provided to internal and external authorities/agencies
  - 3.4** Issues are negotiated with internal and external authorities/agencies
  - 3.5** Resources are monitored and reviewed to meet changing requirements according to operational procedures
  - 3.6** SAR problems/potential problems are identified and solutions are developed in liaison with internal and external authorities/agencies
  - 3.7** Guidance and support are provided and sought from internal and external authorities/agencies according to requirements
- 4 Manage communications systems**
- 4.1** Communications systems are identified as appropriate to the situation and the strategy
  - 4.2** Communications systems are selected according to agreed plan and established chain of command
  - 4.3** Communications systems are managed to provide optimum capability
- 5 Conclude SAR support**
- 5.1** Duration of the SAR operation is determined by the

level of emergency

- 5.2** Instructions from internal and external authorities/agencies about the duration of the SAR are complied with
  - 5.3** All information is collected and preserved
  - 5.4** Debrief is conducted with relevant people involved
  - 5.5** Items for improvement are identified and action is taken to have improvements built into support plans
- 6 Manage SAR records**
- 6.1** Records of the SAR are made in the vessel log
  - 6.2** Other documentation is completed as required by regulatory requirements
  - 6.3** Reports are completed and disseminated according to organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF020 Coordinate search and rescue operations.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARF036 Coordinate search and rescue operations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying procedures from the International Aeronautical and Maritime Search and Rescue (IAMSAR) Manual
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- attending to appropriate level of detail in recordkeeping
- establishing radio communications and following correct communications procedures at all stages of search and rescue (SAR) operations
- identifying and solving problems that may arise during SAR operations, reporting problems and issues, and taking appropriate action based on available information
- liaising effectively with internal and external authorities/agencies
- modifying activities according to vessel contingencies, risk situations and environments
- monitoring and anticipating hazards and risks that may arise during SAR operations and taking appropriate action
- planning to coordinate SAR operations according to international guidelines and standards
- providing one of the following high-quality reports:
  - briefings to authorities
  - initial advice forms
  - management reports and briefings
  - messaging systems
- taking appropriate initiative for SAR operations
- using relevant publications, charts, meteorological data, particulars of vessels involved, radio communications equipment and other available facilities.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- chain of command and organisational requirements used in SAR operations
- external authorities/agencies

- IAMSAR Manual
- limits of the vessel and the environment, including:
  - fuel range
  - prevailing weather
  - propulsion
  - sea conditions
  - steering
  - vessel stability
- maritime communications techniques applicable to SAR operations
- principles involved in determining the duration and scope of a SAR
- responsibilities when participating in SAR operations
- SAR techniques and procedures
- sequence of actions to be taken after sighting or receiving a distress signal or call for assistance
- types of emergency signals
- types of distress and emergency, and response required in each case, including:
  - ditched aircraft
  - person/s in distress in sea
  - person/s in distress in survival craft
  - vessel/s in distress
- types of search patterns and their application
- typical SAR problems and appropriate actions and solutions
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace

procedures and operational manuals

- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry, including one or more of the following resources:
  - communications systems
  - electronic aids
  - equipment
  - facilities
  - fuel
  - instructions
  - maps/charts
  - people
  - vessels.

# **MARF037 Follow vessel security procedures (security awareness training)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to recognise and report security threats.

It applies to deck and engine workers working in the maritime industry requiring a Certificate of Safety Training.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Integrated Rating
- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Integrated Rating
- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel unlimited
- Watchkeeper Deck.

## **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions

- STCW Reg VI/6 (1) and Code Section A-VI/6 (4), Table A-VI/6-1.

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Near Coastal or Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

**Blue Waters Qualifications:**

- This unit is one of the requirements to obtain AMSA certification as a Chief Integrated Rating, Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Integrated Rating, Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

**Pre-requisite Unit**

Not applicable.

**Competency Field**

F - Operational Quality and Safety

**Unit Sector**

Not applicable.

**Elements and Performance Criteria****ELEMENTS****PERFORMANCE CRITERIA**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Contribute to enhancing security through heightened awareness**

- |            |   |
|------------|---|
| <b>1.1</b> | Legislative and organisational requirements related to maintaining security of a vessel are identified and followed |
| <b>1.2</b> | Organisational security procedures are identified and followed  |
| <b>1.3</b> | Duty of care requirements are ascertained and complied with   |
| <b>1.4</b> | Need for, and methods of, maintaining security awareness and vigilance are identified                               |
| <b>1.5</b> | Own role and responsibilities are recognised  |
| <b>1.6</b> | Role of designated personnel for security response is ascertained   |

	<b>1.7</b>	Work health and safety (WHS)/occupational health and safety (OHS) requirements are recognised and complied with
<b>2</b>	<b>Recognise potential security threats</b>	
	<b>2.1</b>	Potential security threats relating to a vessel are identified in accordance with ships security plan
	<b>2.2</b>	Procedures for monitoring security of a vessel are recognised
	<b>2.3</b>	Factors with increased security risk are identified
	<b>2.4</b>	Types and purpose of security equipment are explained
	<b>2.5</b>	Emergency and evacuation procedures are identified and implemented
	<b>2.6</b>	Appropriate actions for maintaining security and safety of self, others and the vessel are identified and followed
<b>3</b>	<b>Comply with reporting processes</b>	
	<b>3.1</b>	Organisational procedures for reporting security risks and incidents are accessed and followed
	<b>3.2</b>	Chain of command of designated personnel is ascertained

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF003 Follow vessel security procedures.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARF037 Follow vessel security procedures (security awareness training)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying basic security legislative requirements applicable to a vessel
- applying procedures for monitoring security in a marine environment
- being aware of one's surroundings and changes to these surroundings (ship and port operations)
- identifying a range of security threats and risks relevant to a vessel
- observing chain of command and communication channels
- operating security equipment
- recognising potential security threats
- reporting identified security threats and risks in a marine environment and providing appropriate level of detail in these reports.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable work health and safety (WHS)/occupational health and safety (OHS) requirements
- appropriate actions for maintaining security and safety, including:
  - access control to the vessel
  - monitoring restricted areas
- chain of command communication
- duty of care requirements of self and others
- emergency preparedness, drills and exercises, including:
  - awareness of contingency plans, including plans for:
    - bomb threat
    - damage to and destruction of facility
    - hijacking
    - persons posing as a potential security threat
    - piracy and armed robbery

- security threat levels
- stowaways
- unidentified objects and explosives on ship
- security drills and exercises, including:
  - training, drill and exercise requirements under relevant conventions, codes and International Maritime Organization (IMO) circulars, including those relevant for anti-piracy and anti-armed robbery
- potential security threats, including elements related to piracy and armed robbery
- weapons, dangerous substances and devices and awareness of the damage they can cause
- general procedures for emergency, evacuation and first aid response
- maritime security policy, including:
  - applicable relevant government legislation and regulations
  - definitions
  - handling sensitive security-related information and communications
  - international conventions, codes and recommendations relevant to the marine environment and own work role, including the International Convention for the Safety of Life at Sea (SOLAS) Chapter X1-2 of SOLAS 74 as amended
- maritime security terms and definitions, including elements relating to piracy and armed robbery
- need for, and methods of, maintaining security awareness and vigilance
- reporting security risks to designated personnel in accordance with ship security procedures, including:
  - company security officer
  - port facility security officer
  - seafarers with designed security duties
  - ship security officer
- requirements when handling security-related information and security-related communications
- security levels and their impact on security measures, including procedures aboard ship and in port facilities
- security responsibilities, including:
  - company security officer
  - contracting governments
  - other personnel
  - port facility personnel with designated security duties
  - port facility security officer
  - seafarers with designated security duties
  - ship security officer
  - the company
  - the port facility
  - the ship

- security threats and patterns, including:
  - cargo theft
  - collateral damage
  - contraband smuggling
  - piracy and armed robbery
  - stowaways and refugees
  - terrorism
- ship and port operations and conditions, including:
  - characteristics of the intermodal nature of transportation and the interfaces between ships and other modes
- situation awareness
- ship security actions, including:
  - actions required by different security levels
  - security drills and exercises
- techniques used to circumvent security measures
- threat identification, recognition and response, including:
  - recognition and detection of weapons, dangerous substances and devices
  - recognition, on a non-discriminatory basis, of persons posing potential security risks
  - techniques used to circumvent security measures
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARF038 Manage provision of medical care on board a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to provide medical care to people who are sick and/or injured while they remain onboard a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited)
- Master of a commercial vessel Unlimited
- Master of a commercial vessel less than 500 gross tonnage (GT)

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited), Engineer Class 2 (STCW Second Engineer Unlimited) or Master of a commercial vessel less than 500 gross tonnage (GT) or Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Manage vessel medical care**

- 1.1** Availability of adequate resources is monitored and maintained to support medical responses
- 1.2** Regular inspections of stock and equipment are conducted to ensure currency and operational readiness according to organisational requirements
- 1.3** Equipment and resources are stored and maintained according to regulatory requirements and manufacturer/supplier instructions
- 1.4** Risks on the vessel are reviewed and organisational policies and procedures related to the provision of medical care are validated
- 1.5** Planning is conducted for responses to major incidents onboard the vessel

#### **2 Take charge of a casualty onboard vessel**

- 2.1** Safety of injured or ill person, bystanders and self in an accident situation is assessed according to first aid procedures
- 2.2** Safety requirements associated with providing medical care and vessel environmental requirements are adhered to
- 2.3** Condition of injured or ill person is assessed according to first aid procedures
- 2.4** Position of injured or ill person is adjusted to optimise personal comfort for the medical condition or injury
- 2.5** Injured or ill person is reassured and supported during the wait for medical assistance
- 2.6** Nature of the illness/injury is explained to injured or ill person

- 2.7 Significance of changes in person's condition is promptly recognised and appropriate action is taken if there are signs of deterioration in injured or ill person
      - 2.8 Calm, confident and reassuring personal attitude is conveyed
- 3 Provide medical care**
  - 3.1 Medical emergencies and injuries are identified and assessed correctly, and appropriate action is taken to prevent further injury
  - 3.2 Symptoms and appropriate treatment are identified based on the concepts of clinical examination and medical history
  - 3.3 Medical emergencies and injuries are diagnosed and managed according to accepted medical practice, and relevant national and international guides
  - 3.4 Manufacturer recommendations and accepted medical practice with regard to dosage and application of drugs and medication are complied with
  - 3.5 Complete and effective methods to protect against infection and spread of diseases are used
  - 3.6 Resuscitation techniques are performed following safety procedures, if required
  - 3.7 Appropriate techniques for moving injured or ill person are used
  - 3.8 Resources and equipment are recovered and reprocessed, and waste is disposed of safely
- 4 Seek external assistance**
  - 4.1 Condition of injured or ill person is documented over time to assist with ongoing management
  - 4.2 Communication links are established with external medical services to ensure prompt control action is taken
  - 4.3 Clinical examination procedures are completed and instructions received are complied with
  - 4.4 Assessment of person's condition is relayed to external medical advisors
  - 4.5 Medical procedures are carried out under medical instruction using relevant communication equipment

and instructions received are complied with

- 4.6 Condition of injured or ill person is evaluated to determine transport requirements for additional medical care
- 4.7 Preparation for the evacuation of injured or ill person by emergency services is provided, if required, according to organisational procedures and welfare of person is maximised
- 4.8 Resources and equipment are recovered and reprocessed, and waste is disposed of safely

## 5 Manage first aid records

- 5.1 Documentation is completed in accordance with regulatory and organisational requirements and records maintained
- 5.2 Relevant documents are sent to appropriate bodies in accordance with regulatory and organisational requirements
- 5.3 Confidentiality of records and information is maintained in accordance with privacy principles and regulatory and organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF015 Manage provision of medical care on board a vessel.

## Links

Companion Volume implementation guide can be found in VetNet -

# Assessment Requirements for MARF038 Manage provision of medical care on board a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- caring of casualty involving:
  - burns, scalds and frostbite
  - external and internal bleeding
  - fractures, dislocations and muscular injuries
  - head and spinal injuries
  - injuries of ear, nose, throat and eyes
  - wounds, wound healing and infection
- completing documents, including:
  - casualty history forms
  - first aid risk assessment
  - incident/injury reports
  - infection control records
  - management records
  - medical histories
  - medication registers
- dealing with a death at sea
- dressing and bandaging
- giving vaccinations or other injections
- managing acute abdominal conditions
- preparing for evacuation, including:
  - communicating with helicopter, vessel or ambulance conducting the evacuation
  - relevant medical and first aid supplies and resources
  - selecting relevant communication equipment
- providing:
  - dental care
  - gynaecological, pregnancy and childbirth support
  - medical care of rescued persons

- minor surgical treatment
- pain relief
- treating:
  - alcohol and drug abuse
  - sexually transmitted diseases
  - tropical and infectious diseases
- using disease prevention techniques, including disinfection, de-infestation and de-ratting
- using suturing and clamping techniques
- using company policies.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alcohol and drug abuse
- care of:
  - burns, scalds and frostbite
  - external and internal bleeding
  - fractures, dislocations and muscular injuries
  - head and spinal injuries
  - injuries of ear, nose, throat and eyes
  - wounds, wound healing and infection
- death at sea
- dental care
- disease prevention, including disinfection, de-infestation and de-ratting
- dressing and bandaging
- general principles of nursing
- gynaecology, pregnancy and childbirth
- hygiene
- international and national maritime medical regulations and publications, including:
  - International Medical Guide for Ships
  - International Code of Signals
  - Medical First Aid Guide (IMFAG)
- management of acute abdominal conditions
- medical care of rescued persons
- medical care of sick seafarers involving cooperation with port health authorities or out-patient wards in port
- medical conditions and emergencies
- minor surgical treatment
- nursing care
- pain relief

- quarantine regulations and required advices such as pratique, notification of disease on board
- radio medical advice
- sexually transmitted diseases
- techniques of suturing and clamping
- transportation of injured or ill persons including helicopter evacuation
- tropical and infectious diseases
- vaccinations
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARF039 Manage safety and security of vessel, crew and passengers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to develop emergency and damage control plans, and to respond and manage navigational and emergency situations to maintain the safety and security of vessel crew and passengers.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited)
- Master of a commercial vessel Unlimited.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited), Engineer Class 2 (STCW Second Engineer Unlimited) or Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Develop emergency and damage control plans**

- 1.1** Potential emergencies and damage scenarios are identified
- 1.2** Plans of action are developed for responding to potential emergencies and damage scenarios according to regulatory and organisational requirements
- 1.3** Procedures, checklists and instructions for dealing with emergencies and damage scenarios are documented according to regulatory and organisational requirements
- 1.4** Resources are organised in readiness for potential implementation of emergency and damage control plans
- 1.5** Information on emergency and damage control plans is distributed and made available to crew
- 1.6** Appropriate instruction is organised for crew about their roles and responsibilities during various emergencies and damage control scenarios

#### **2 Develop security risk management plans**

- 2.1** Security risk management plans are prepared according to regulatory and organisational requirements
- 2.2** Explanatory information on the importance of security and the organisation's security objectives is contained in plans
- 2.3** Threat assessments undertaken, current exposure and current protective security arrangements are summarised in plans
- 2.4** Security strategies for implementing, monitoring and evaluating countermeasures are outlined in plans
- 2.5** Appropriate instruction is organised for crew about their roles and responsibilities in a security threat

- |          |  |            |   |
|----------|--|------------|---|
| <b>3</b> | <b>Maintain the operational condition of firefighting, lifesaving and safety systems</b> | <b>3.1</b> | Safety management system (SMS) processes and outcomes for maintaining the operational condition of firefighting, lifesaving and safety systems are identified |
|          |  | <b>3.2</b> | Procedures and supporting documentation for the routine maintenance of firefighting, lifesaving and safety systems are developed                              |
|          |  | <b>3.3</b> | Personnel roles and responsibilities are allocated and communicated   |
|          |  | <b>3.4</b> | Checks are conducted according to SMS requirements  |
|          |  | <b>3.5</b> | Non-compliances are identified and analysed   |
|          |  | <b>3.6</b> | Appropriate responses to non-compliances are initiated according to SMS requirements  |
|          |  | <b>3.7</b> | Outcomes are recorded and reported according to regulatory and organisational requirements  |
| <b>4</b> | <b>Organise fire and abandon vessel drills</b>   | <b>4.1</b> | Fire and abandon vessel drills are planned and conducted according to regulatory requirements and organisational procedures                                   |
|          |  | <b>4.2</b> | Instruction is provided to others on organisational procedures and the correct use of firefighting and lifesaving equipment                                   |
|          |  | <b>4.3</b> | Musters and drills are reviewed against objectives  |
|          |  | <b>4.4</b> | Records are completed according to regulatory requirements and organisational procedures  |
| <b>5</b> | <b>Manage navigational and other emergencies</b>   | <b>5.1</b> | Initial actions for an emergency are undertaken according to contingency plans, urgency of the situation and nature of the emergency                          |
|          |  | <b>5.2</b> | Onboard personnel are given information and instructions clearly and accurately   |
|          |  | <b>5.3</b> | Procedures are implemented to combat navigational and other emergencies to protect persons onboard vessel   |
|          |  | <b>5.4</b> | Communications are established with others to facilitate the emergency response process   |
|          |  | <b>5.5</b> | Assistance is coordinated and provided by appropriate   |

- personnel
- 5.6** Contact is maintained with others at all times to keep them briefed on the emergency response process
  - 5.7** Preparation for abandoning vessel is undertaken, as required
  - 5.8** Cessation of emergency is communicated to appropriate personnel
- 6 Maintain operational safety**
- 6.1** Environmental factors are continually monitored, assessed and reviewed to identify distinctive features and any change in characteristics that might indicate unusual or suspicious behaviour
  - 6.2** Personal safety checks are made on a systematic and routine basis according to organisational procedures
  - 6.3** Resources and equipment are organised in readiness for potential security risk situations
- 7 Respond to security risks**
- 7.1** Security risk situations are accurately identified and assessed for degree of risk to self, others and vessel
  - 7.2** Response to security risk is formulated and carried out according to security risk management plan
  - 7.3** Safety and security of self, others and vessel is maximised through response initiative
  - 7.4** Changing circumstances are monitored and responses are adjusted, as required, to maintain security
  - 7.5** Relevant documentation is completed and securely maintained according to confidentiality requirements and organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF021 Manage safety and security of vessel crew and passengers.

## Links

Companion Volume implementation guide can be found in VetNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARF039 Manage safety and security of vessel, crew and passengers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying procedures for monitoring fire detection and safety systems to ensure all alarms are detected promptly and acted upon according to established emergency procedures
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- communicating using appropriate channels and communication codes and signals
- completing documentation and reporting requirements on matters related to the development of emergency and damage control plans
- determining response appropriate to security risk situations
- developing effective planning documents
- developing emergency procedures according to established plans for emergency situations to maximise of safety of persons onboard
- identifying and complying with security incident response procedures
- identifying security risk factors and conducting risk assessments
- instructing personnel on procedures to be taken during emergency situations onboard a vessel
- interpreting and applying security and safety practices and regulations
- maintaining the operational condition of lifesaving, firefighting and other safety systems
- managing the handling of emergency situations onboard a vessel
- minimising hazards and risks to the safety of self and others
- preparing contingency plans for response to emergencies
- providing the required amount of detail in reports
- reporting emergency situations onboard a vessel.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actions to be taken when:
  - collision is imminent and after collision
  - emergencies arise in port

- grounding is imminent and after grounding
- impairment of the watertight integrity of the hull by any cause
- bomb threat and counter-terrorism procedures
- concept of reserve buoyancy and its relevance to damage control in vessels
- cybersecurity
- damage control assessment
- emergency steering, including auxiliary steering gear
- emergency towing arrangements and procedures
- environmental and exposure factors
- faults that can occur with fire detection, firefighting, lifesaving and safety equipment, and systems and appropriate remedial action and solutions
- fire and abandon vessel drills, including planning, scheduling and conducting drills according to regulatory requirements and organisational procedures
- functions and use of lifesaving appliances
- general principles of damage control and the manner in which the watertight integrity of the hull is maintained on a vessel
- importance of maintaining fire detection, firefighting, lifesaving and safety equipment and systems, and potential consequences if the equipment or systems are not operational during an emergency
- lifesaving appliance regulations (International Convention for the Safety of Life at Sea (SOLAS))
- methods and aids for fire prevention, detection and extinction
- methods for checking and replacing consumable materials in fire detection, firefighting, lifesaving and safety equipment and systems
- minimisation effects of malfunction of the ship's systems
- precautions when breaching a ship
- procedure for person overboard
- procedures to be followed and actions to be taken to protect and safeguard all persons onboard in emergencies and to limit further damage to the vessel
- procedures to be followed and actions to be taken when re-floating a grounded ship with or without assistance
- regulations related to security risk management
- regulatory requirements for emergency response plans
- regulatory requirements related to maintaining fire detection, firefighting, lifesaving and safety equipment and systems
- relevant Australian Maritime Safety Authority (AMSA) Marine Orders and Notices, International Ship and Port Facility Security Code (ISPS Code), and other relevant International Maritime Organization (IMO) conventions and codes
- procedures for rescue of persons from a vessel in distress or from a wreck
- routine maintenance of firefighting, lifesaving and safety systems are developed
- safety management system (SMS) plans, procedures, checklists and instructions
- ship construction, including damage control measures
- statutory requirements pertaining to damage control in vessels
- types of fire detection, firefighting, lifesaving and safety equipment and systems onboard

- vessels and the procedures for their use
- ways of controlling damage during a flooding emergency
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARF040 Manage ship security (Ship Security Officer)**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to manage ship security.

This unit applies to people working in the maritime industry in the capacity of:

- Ship Security Officer.

### **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg VI/5 and Code Section A-VI/5 (1-4), Table A-VI/5.

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Ship Security Officer and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Pre-requisite Unit**

Not applicable

### **Competency Field**

F – Operational Quality and Safety

### **Unit Sector**

Not applicable

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Supervise and maintain the implementation of ship security plan**

- 1.1** Ship security plan is implemented and modified in accordance with the International Ship and Port Facility Security (ISPS) Code and the International Convention for the Safety of Life at Sea (SOLAS), as amended
- 1.2** Legislative requirements for security are identified correctly
- 1.3** State of readiness is established and maintained in accordance with procedures to ensure changes in maritime security levels are responded to
- 1.4** Communication in the Ship Security Officer's area of responsibility for supervising and implementing ship security plan is clear, concise and understood
- 1.5** Implementation of ship security plan is coordinated with Company Security Officer and relevant Port Facility Security Officer

**2 Assess security risk, threat and vulnerability**

- 2.1** Risk assessment procedures and actions are implemented in accordance with the ISPS Code and SOLAS, as amended principles
- 2.2** State of readiness is established and maintained in accordance with procedures to ensure changes in maritime security levels are responded to
- 2.3** Communication in the Ship Security Officer's area of responsibility for assessing and maintaining threat and vulnerability is clear, concise and understood
- 2.4** Security incidents are reported to Company Security Officer in accordance with workplace procedures

**3 Undertake regular ship inspection**

- 3.1** Ship inspection procedures and actions are implemented in accordance with the ISPS Code and SOLAS, as amended
- 3.2** State of readiness is established and maintained in accordance with procedures to ensure changes in maritime security levels are responded to

- |          |            |  |
|----------|------------|--|
|          | <b>3.3</b> | Security inspections are conducted to ensure that appropriate security measures are maintained   |
|          | <b>3.4</b> | Communication in the Ship Security Officer's area of responsibility when undertaking inspections is clear, concise and understood  |
|          | <b>3.5</b> | Deficiencies and non-conformities are identified during inspections conducted as part of internal audits, periodic reviews and verifications of compliance and reported to the Company Security Officer and corrective actions are implemented |
| <b>4</b> |            | <b>Establish security equipment and systems are properly operated, tested and calibrated</b>   |
|          | <b>4.1</b> | Ship inspection procedures and actions are implemented in accordance with the ISPS Code and SOLAS, as amended  |
|          | <b>4.2</b> | Security equipment is operated, tested, calibrated and maintained in accordance with security ship procedures  |
| <b>5</b> |            | <b>Maintain security awareness and vigilance</b>   |
|          | <b>5.1</b> | Ship inspection procedures and actions are implemented in accordance with the ISPS Code and SOLAS, as amended  |
|          | <b>5.2</b> | Communication in the Ship Security Officer's area of responsibility when maintaining vigilance is clear, concise and understood  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit

## Links

## **Assessment Requirements for MARF040 Manage ship security (Ship Security Officer)**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying International Ship and Port Facility Security Code (ISPS) Code and International Convention for the Safety of Life at Sea (SOLAS)
- assessing security risk, threat and vulnerability
- communicating clearly and concisely within scope of responsibility
- conducting ship inspection
- establishing state of readiness using correct procedures
- identifying legislative requirements relevant to ship security plan
- implementing ship security plan
- implementing state of readiness using correct procedures
- operating, testing and calibrating security equipment and systems in accordance with relevant procedures
- reporting deficiencies and non-conformities to Company Security Officer.

### **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- controlling access to ship and restricted areas onboard a ship
- crowd management and control techniques
- enabling recognition, including:
  - non-discriminatory basis of persons posing potential security risks
  - weapons, dangerous substances, devices and awareness of the damage they can cause
- handling sensitive security-related information and security-related communications
- implementing and coordinating searches
- international maritime security policy and responsibilities of governments, companies and designated persons, including elements that relate to piracy and armed robbery
- maritime security levels and the consequential security measures and procedures aboard ship and in the port facility environment
- maritime security terms and definitions, including elements that relate to piracy and armed

robbery

- methods and effective monitoring of deck areas and areas surrounding the ship
- methods and procedures used to modify the ship security plan
- methods for physical searches and non-intrusive inspections
- methods for assessing the effectiveness of drills and exercise
- methods for controlling the embarkation, disembarkation and access while onboard of persons and their effects
- methods for enhancing security awareness and vigilance onboard a vessel
- methods for testing, calibrating and maintaining security systems and equipment, particularly whilst at sea
- procedures to be employed in implementing a ship security plan and reporting of security incidents, purpose of and the elements that make up a ship security plan, related procedures and maintenance of records, including piracy and armed robbery
- procedures, instructions and guidance on the use of ship security alert systems
- requirements and procedures for conducting internal audits, on-scene inspections, control and monitoring of security activities specified in ship security plan
- requirements and procedures for reporting to the Company Security Officer any deficiencies and non-conformities identified during internal audits, periodic reviews and security inspections
- requirements for designating and monitoring restricted areas
- risk assessment and assessment tools
- security aspects relating to the handling of cargo and ship's stores with other shipboard personnel and relevant port facility Security Officers
- security assessment documentation and Declaration of Security
- security-related contingency plans and the procedures for responding to security threats and breaches of security, including:
  - elements that relate to piracy and armed robbery
  - provisions for maintaining critical operations of the ship/port interface
- security training and requirements
- techniques used to circumvent security measures, including those used by pirates and armed robbers
- training, drill and exercise requirements under relevant conventions, codes and International Maritime Organization (IMO) circulars, including those relevant to anti-piracy and anti-armed robbery
- various types of security equipment and systems and their limitations, including those that could be used in case of attacks by pirates and armed robbers.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARF041 Observe personal safety and social responsibility (PSSR)**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release 6.0.

### **Application**

This unit involves the skills and knowledge required to contribute to the safety management system (SMS) processes where there is responsibility for own work outputs.

It applies to deck and engine workers working in the maritime industry requiring a Certificate of Safety Training.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Integrated Rating
- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Integrated Rating
- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

### **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions

- STCW Reg VI/1 and Code Section A-VI/1 (2), Table A-VI/1-4.

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA)

certification as an Engineer Class 3 Near Coastal or Master less than 80 metres Near Coastal as defined in Marine Order 505 (Certificates of competency – National law) 2013.

#### Blue Waters Qualifications:

- This unit is one of the requirements to obtain AMSA certification as a Chief Integrated Rating, Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Integrated Rating, Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

### Pre-requisite Unit

Not applicable.

### Competency Field

F - Operational Quality and Safety

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan and conduct work safely**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Individual rights and responsibilities onboard a vessel are interpreted and fulfilled
- 1.2** Work is planned in accordance with work health and safety (WHS)/occupational health and safety (OHS) legislation and SMS requirements
- 1.3** Work is carried out according to established performance standards
- 1.4** Hazards are identified as part of work planning and work processes

- |          |   |  |
|----------|---|--|
|          | <b>1.5</b>  | Identified hazards are addressed prior to starting work  |
|          | <b>1.6</b>  | Inadequacies in control measures are reported according to the SMS   |
|          | <b>1.7</b>  | Incidents and injuries are reported according to organisational procedures   |
|          | <b>1.8</b>  | WHS/OHS housekeeping is undertaken in own work area  |
| <b>2</b> | <b>Contribute to WHS/OHS participation processes</b>                                    |  |
|          | <b>2.1</b>  | WHS/OHS representatives and committees are supported to undertake their roles and responsibilities   |
|          | <b>2.2</b>  | WHS/OHS issues are raised according to organisational procedures   |
|          | <b>2.3</b>  | Contributions to WHS/OHS meetings, vessel inspections or other consultative activities are provided in a constructive manner to improve safety |
| <b>3</b> | <b>Contribute to hazard identification, risk assessment and risk control activities</b> |  |
|          | <b>3.1</b>  | Vessel is checked for hazards using itemised checklists according to the SMS   |
|          | <b>3.2</b>  | Identified hazards and inadequacies in risk controls are reported according to the SMS   |
|          | <b>3.3</b>  | Contributions to risk assessments are made   |
|          | <b>3.4</b>  | Input is provided to development and implementation of control measures, with reference to the hierarchy of control                            |
|          | <b>3.5</b>  | Where relevant, procedures and precautions for entry into pump room, fuel tanks or other confined spaces on a vessel are correctly followed    |
|          | <b>3.6</b>  | Fatigue management methods are used to ensure fitness for duties   |
| <b>4</b> | <b>Contribute to effective communication and human relationships onboard ship</b>       |  |
|          | <b>4.1</b>  | Communication with individuals onboard vessel is clear and effective at all times  |
|          | <b>4.2</b>  | Standards of work and behaviour are observed at all times in accordance with workplace procedures  |

- |  |            |  |
|--|------------|--|
| <b>5 Participate in controlling WHS/OHS emergency situations</b> | <b>5.1</b> | Scale of the emergency situation is correctly recognised   |
|  | <b>5.2</b> | Prompt, accurate and clear information is given on raising alarm   |
|  | <b>5.3</b> | Initial action is taken to control/confine emergency according to organisational procedures, taking account of the nature and scope of the emergency |
|  | <b>5.4</b> | Emergency response procedures are implemented  |
| <b>6 Complete WHS/OHS records</b>                                | <b>6.1</b> | WHS/OHS records for vessel are correctly completed   |
|  | <b>6.2</b> | Legal requirements for the maintenance of records of occupational injury and disease are followed  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF006 Observe personal safety and social responsibility.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARF041 Observe personal safety and social responsibility (PSSR)

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying the hierarchy of risk control, including the preferred order of risk control measures from most to least preferred
- communicating with crew and others, as appropriate, about work health and safety (WHS)/occupational health and safety (OHS) matters
- conforming to established emergency response procedures for initial and follow-up action
- identifying and checking hazards relating to personal safety
- identifying WHS/OHS training needs of crew
- interpreting and following information on WHS/OHS legislation, safety management system (SMS), organisational procedures, written job instructions, specifications, standard operating procedures (SOPs), charts, lists, and other applicable reference documents
- investigating incidents according to organisational procedures
- keeping accurate records/minutes of discussions with consultation forums on WHS/OHS matters
- keeping records for monitoring the effectiveness of practices and procedures with respect to the safety of the vessel
- maintaining incident records according to standard workplace procedures
- obtaining results of safety audits according to organisational procedures
- participating in consultation forums
- participating in safety drills
- reporting and documenting the processes and outcomes of WHS/OHS requirements
- scheduling meetings with the relevant consultation forums to discuss WHS/OHS matters.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable Commonwealth, state or territory WHS/OHS legislation, regulations, codes of practice and standards
- basic awareness of the impact of mental health on crew health and wellbeing
- dangers of drug and alcohol abuse

- difference between hazards (something or a source or situation with the potential to harm life or health) and risks (chance of something occurring that will result in injury or damage)
- emergency situations, contingency plans and procedures for responding to emergencies situations, including:
  - collision
  - fire
  - foundering
  - ingress of water into the ship, oil or chemical spill
  - person overboard
- fatigue management and the importance of adequate rest, including the effects of:
  - changes to schedules
  - environmental stressors in and outside of the ship
  - physical stressors
  - schedules and the circadian rhythm on fatigue
  - sleep
- fundamental teamworking principles and practices, including conflict resolution
- handling and stowage of dangerous, hazardous and harmful substances and liquids
- hazard identification procedures, including vessel inspections and review of WHS/OHS data
- hierarchy of risk control measures and its application
- importance of maintaining good human and working relationships aboard ships
- international measures for accident prevention at sea, including the International Labour Organization (ILO) conventions
- location and use of firefighting equipment
- location of escape routes
- legal rights and responsibilities of management, crew and others, as appropriate
- nature of common hazards, including chemicals, bodily fluids, noise, manual handling, work postures, underfoot hazards and moving parts of machinery
- organisation-specific information, including:
  - designated person for raising WHS/OHS issues, including health and wellbeing
  - hazards of the particular work environment
  - organisation and work procedures particularly those related to performance of own work
  - specific hazards and risk control, including:
    - reporting of hazards
    - incidents and injuries
    - WHS/OHS issue resolution and consultation
    - use of personal protective equipment (PPE) and emergency response
- PPE requirements, including correct use, storage and maintenance
- potential emergency situations, alarms and signals, and required response
- principles of basic risk assessment
- principles of, and barriers to, effective communications between individuals and teams onboard a ship

- purpose of safety data sheets (SDS)/material safety data sheets (MSDS)
- roles and responsibilities of:
  - employees, supervisors and managers in the organisation
  - safety representatives and committees
- safety signs and their meanings, including signs for:
  - dangerous goods class signs
  - emergency equipment
  - PPE
- social responsibilities, employment conditions, individual rights and individual responsibilities
- sources of WHS/OHS information
- specific hazards, such as sharps and radiation
- standard emergency signals, alarms and required responses, including:
  - drills
  - muster lists
  - muster stations
- precautions to prevent pollution of the marine environment, including fundamental knowledge of:
  - complexity and diversity of marine environment
  - effects of operational and accidental pollution
  - environmental protection procedures
  - impact of shipping on the marine environment
- value of training and drills
- WHS/OHS records, including:
  - accident reports
  - hazard reports
  - incident reports
  - injury reports.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or

may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARF042 Operate emergency equipment and apply emergency procedures**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to participate in monitoring emergency prevention and applying control procedures in an emergency onboard a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer – Engine/Deck on a range of vessels
- Integrated Rating.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Engine/Deck or Integrated Rating on a range of vessels and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Apply emergency procedures**

- 1.1** Emergencies are correctly identified in accordance with workplace procedures
- 1.2** In the event of an emergency or abnormal situation, workplace procedures for initial action are confirmed with the officer of the watch
- 1.3** Emergency and distress alerting systems are activated according to manufacturer instructions and workplace procedures
- 1.4** False distress alerts are avoided and appropriate action is taken in an accidental activation of a distress alert according to workplace procedures
- 1.5** Orders are acknowledged and followed
- 1.6** Allocated duties for emergency situations are performed according to workplace procedures
- 1.7** Communications are maintained with others to facilitate the emergency response process

#### **2 Maintain integrity of emergency and distress alerting systems**

- 2.1** Emergency and distress alerting systems maintenance requirements are specified and managed
- 2.2** Systems maintenance is checked for compliance
- 2.3** Systems are assessed for useability and accessibility, and are reported according to workplace procedures
- 2.4** Procedures are followed to correct systems defects and deficiencies

#### **3 Report and record emergency and distress alerting systems faults**

- 3.1** Schedule for verifying and reporting faults is developed and implemented

- 3.2 Details and nature of faults are recorded and rectified according to manufacturer instructions and workplace procedures
- 3.3 Reports on faults are provided and recommendations are made for improvements according to workplace procedures
- 3.4 Frequency of occurrence of faults is monitored and reported according to workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF019 Operate emergency equipment and apply emergency procedures.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARF042 Operate emergency equipment and apply emergency procedures**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- communicating clearly and concisely in an emergency or abnormal situation
- identifying, isolating and reporting faulty or non-operational emergency and distress alerting systems
- reading and following emergency procedures
- reading and interpreting basic instructions and standard operating procedures (SOPs) for emergency and distress alerting systems
- recognising routine problems that may occur when operating emergency and distress alerting systems
- selecting and using emergency and distress alerting systems, including:
  - internal public address (PA) system
  - pyrotechnic distress signals
  - satellite emergency position indicating radio beacons (EPIRBs), including float-free EPIRB
  - search and rescue transponders (SARTs)
  - ship's whistle.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable sections of relevant maritime regulations dealing with emergency equipment and procedures
- duties and responsibilities of shipboard personnel during emergencies
- emergency duties and alarm signals commonly used on a vessel
- emergencies, including:
  - any situation leading to abandonment of a vessel
  - responding to distress alerts from other vessels

- escape routes from machinery spaces on a vessel
- functions and purpose of pyrotechnic distress signals, satellite EPIRBs and SARTs
- identification of pyrotechnic expiry dates
- International Convention for the Safety of Life at Sea (SOLAS) and related regulations
- procedures for:
  - activating maritime emergency alarms
  - emergency response onboard a vessel
  - testing EPIRBs and SARTs
- relevant WHS/OHS requirements and work practices
- systems defects and deficiencies, including:
  - EPIRB function test failure, improper housing and securing
  - out-of-date pyrotechnics distress signals
  - SART not operating
- techniques for avoiding false distress alerts and action to be taken in an accidental activation.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARF043 Operate survival craft, rescue boats and lifesaving appliances (proficiency in survival craft)**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to comply with accepted safety practices and standards in responding to abandon ship and survival situations.

This unit applies to crew members required to assist in the operation of survival craft and rescue boats other than fast rescue boats on a range of vessels.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Integrated Rating
- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Integrated Rating
- Master of a commercial vessel less than less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

### **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg VI/2 (1) and Code Section A-VI/2 (1-4), Table A-VI/2-1.

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organisation Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

### Blue Waters Qualifications:

- This unit is one of the requirements to obtain AMSA certification as a Chief Integrated Rating, Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Integrated Rating, Master of a commercial vessel of less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck. and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Launch survival craft and rescue boats**

- 1.1** Preparations for the launch of the survival craft or rescue boat are made according to manufacturer instructions and organisational procedures
- 1.2** Launch strategy is adopted appropriate to the prevailing circumstances and conditions
- 1.3** Launching equipment is operated according to manufacturer instructions and organisational procedures
- 1.4** Survival craft or rescue boat is launched smoothly according to accepted safety practices and standards

#### **2 Operate survival craft and rescue boats**

- 2.1** Pre-start checks are conducted on the engine
- 2.2** Engine is started according to manufacturer instructions

- and organisational procedures
- 2.3 Orders are given for survivors to board the survival craft
- 2.4 Survival craft is cleared of the vessel and operated according to manufacturer instructions and organisational procedures
- 2.5 Survival craft is manoeuvred appropriately for the prevailing circumstances and conditions
- 3 **Operate lifesaving and survival equipment**
  - 3.1 Location and accessibility of all lifesaving and survival equipment is established
  - 3.2 Survival equipment is checked and operated according to manufacturer instructions and organisational procedures
  - 3.3 Lifesaving clothing is correctly donned and used according to manufacturer instructions and organisational procedures
  - 3.4 Strategies are implemented to counter threats to survival according to accepted survival practice
- 4 **Recover survival craft**
  - 4.1 Persons are disembarked from the survival craft according to organisational procedures
  - 4.2 Survival craft is recovered according to manufacturer instructions and organisational procedures
  - 4.3 Survival craft and equipment are checked for signs of damage and faulty equipment
  - 4.4 Identified faulty equipment or damage is reported according to organisational procedures
- 5 **Organise abandon vessel musters and drills**
  - 5.1 Abandon vessel musters and drills are arranged according to regulatory requirements and organisational procedures
  - 5.2 Instruction is provided to others on organisational procedures and the correct use of lifesaving equipment
  - 5.3 Musters and drills are reviewed against objectives
  - 5.4 Reporting obligations are completed according to regulatory requirements and organisational procedures
  - 5.5 Risk control processes are implemented

- 6 Assume responsibility for survival of crew and passengers**
- 6.1** Survivors are checked for signs of hypothermia or other injuries and first aid is applied, where necessary
  - 6.2** Water and food are rationed
  - 6.3** Lookout for vessels and aircraft in the vicinity is maintained and distress signals are released on sighting
  - 6.4** Instructions given by rescue personnel are followed to safely access rescue craft
  - 6.5** Persons are disembarked from survival craft or rescue boat according to organisational procedures
  - 6.6** Survival craft or rescue boat is recovered and checked for signs of damage

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF007 Operate survival craft and other lifesaving appliances.

## Links

Companion Volume implementation guide can be found in VetNet -

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- acting appropriately in the prevailing circumstances and conditions in response to abandon ship and survival situations according to accepted safety practices and standards
- communicating effectively with others, as required, when operating survival craft and ancillary survival equipment
- conducting inspections of other survival equipment at intervals determined by the safety management system (SMS)
- conducting tests and pre-start checks of equipment at intervals determined by the SMS
- giving correct commands for launching and boarding survival craft and clearing the ship
- interpreting and applying International Convention for the Safety of Life at Sea (SOLAS) practices and regulations
- launching and operating various types of survival craft
- operating off-load and on-load release devices safely
- organising abandon vessel drills
- reading and interpreting instructions relevant to the safe operation of lifesaving appliances onboard a vessel
- recognising and interpreting muster signals, and taking action that is appropriate to emergency and complies with established procedures
- recovering survival craft and rescue boats and resetting release devices
- rowing and steering a survival craft and rescue boat
- selecting and using appropriate lifesaving appliances and communications equipment
- using a compass
- using portable radio equipment, pyrotechnics and other signalling equipment
- using survival craft equipment, including rigging devices to aid location.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actions to be taken when aboard a survival craft, including:
  - apportionment of food and water
  - initial actions
  - routines for survival
  - use of equipment
- actions to be taken to maximise detectability and location of survival craft
- construction and outfit of survival craft and rescue boats
- dangers associated with the use of on-load release devices
- drills in launching and recovering rescue boats
- drills in launching life rafts, including:
  - boarding a life raft from the water
  - davit-launched life rafts
  - throw-overboard life rafts
- emergency muster abandon vessel signals and public address (PA) system
- evacuation and recovery of survival craft and rescue boats, including:
  - clearing the ships side and actions to be taken
  - launching
  - launching survival craft and rescue boats in rough sea
  - marshalling life rafts and rescuing survivors from the sea
  - recovery of rescue boats in rough sea
  - recovery of survival craft and rescue boats
- first aid and management of injured persons, including:
  - first aid kit
  - resuscitation
- handling of survival craft and rescue boats in rough weather, including beaching
- helicopter assistance and pick-up, including:
  - communicating with helicopter
  - evacuating from ship and survival craft
- International Code of Signals (ICS), purpose and meaning of signals
- International Maritime Organization (IMO) safety symbols
- International Safety Management (ISM) Code, SMS plans, procedures, checklists and instructions
- launching arrangements, including:
  - boat davits
  - float-free arrangements
  - free-fall
  - life raft davits
  - marine evacuation systems
  - rescue boat davits
- lifeboat engine and accessories

- maintenance procedures for survival craft and rescue boats
- manoeuvring characteristics of survival craft and rescue boats
- Maritime Labour Convention (MLC) amendments 2014
- muster list
- operation of survival craft and rescue boats, their launching appliances and arrangements and their equipment
- principles concerning survival, including:
  - actions to be taken when aboard a survival craft
  - actions to be taken when called to survival craft stations
  - actions to be taken when in the water
  - actions to be taken when required to abandon ship
  - main dangers to survivors
  - training, drills and operational readiness
- procedures and sequences for launching, carrying out pre-start engine checks and operating survival craft and rescue boats in a variety of sea and weather conditions
- procedures for correctly operating and using lifesaving appliances and personal safety equipment on vessels and survival craft
- relevant sections of applicable maritime regulations
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation
- rescue boat outboard engine
- SOLAS regulations
- strategies, including:
  - beaching survival craft
  - deploying exposure cover on an open lifeboat
  - handling survival craft in rough weather
  - maximising detectability of survival craft
  - rationing food and water
  - using rescue boat to marshal life rafts
  - using rescue boat to retrieve survivors in the sea
- symptoms of hypothermia, its prevention and treatment
- threats to survival on abandonment of a vessel and appropriate strategies for countering these threats
- typical manoeuvring and engine characteristics for survival craft
- types of emergency situations which may occur and precautions, including:
  - adverse reaction of dangerous goods and hazardous bulk materials
  - collision
  - explosion
  - fire
  - foundering
  - shifting of cargo
  - stranding

- types of emergencies that require launching and operation of rescue boats, including:
  - abandon ship
  - man overboard
  - marshalling of survival craft
  - towing and rescue of survival craft from a shipwreck
- types of survival craft, including:
  - lifeboats
  - life rafts
  - rescue boats
- ways of maximising detectability and location of survival craft using radio lifesaving appliances, pyrotechnic distress signals, satellite emergency position indicating radio beacons (EPIRBs) and search and rescue transponders (SARTs).

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARF044 Prevent, control and fight fires on board a vessel (advanced firefighting)**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to manage firefighting and fire prevention activities onboard a vessel (advanced firefighting).

It applies to deck and engine officers who are required to manage firefighting activities onboard a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Integrated Rating
- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

### **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg VI/3 and Code Section A-VI/3 (1-4), Table A-VI/3.

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organisation Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal or Master less than 80 metres Near Coastal

as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

#### Blue Waters Qualifications:

- This unit is one of the requirements to obtain AMSA certification as a Chief Integrated Rating, Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Manage fire prevention activities**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Hazards, including dangerous goods onboard a vessel, are identified and appropriate action is implemented as determined by industry standard documentation
- 1.2** Legislative and company requirements and current industry standards relating to the maintenance and operation of fire detection, firefighting equipment and systems onboard a vessel are met and complied with
- 1.3** Inductions or other educational activities are organised to ensure awareness of causal factors of onboard fires, prevention methods and standard operating procedures (SOPs) when fire alarms are activated

- 2 Plan for fire emergencies**
- 2.1** Vessel fire control plan is consulted to review and develop appropriate response to any fire
  - 2.2** Contingencies are anticipated, planned for and practised
  - 2.3** Evacuations are prepared for and practised according to regulatory requirements
  - 2.4** Roles/functions of command and firefighting team members, as related to fire prevention and suppression, are established and reviewed according to regulatory and organisational requirements
  - 2.5** Firefighting training exercises are developed and implemented according to regulatory and organisational requirements
  - 2.6** Training exercises are prepared, practised and debriefed according to regulatory and organisational requirements, to ensure readiness for any fire emergency
- 3 Coordinate tactical firefighting activities in response to a fire emergency**
- 3.1** Gathering of full and accurate information on the nature and extent of the fire by the command team is overseen
  - 3.2** Order of priority and sequence of actions appropriate to the requirements of the incident is determined and communicated to the responding crew clearly and accurately
  - 3.3** Evacuation of personnel, if appropriate, is conducted according to regulatory requirements
  - 3.4** Search and rescue (SAR) operations are conducted using established marine firefighting best practice
  - 3.5** Controlled ventilation techniques are correctly applied during fire suppression and rescue operations
  - 3.6** Treatment of injured personnel is conducted in a timely manner and according to current best casualty management practice
  - 3.7** Operational tactics are monitored for their effectiveness and adjusted, as required, to ensure best outcomes
  - 3.8** Operational tactics are monitored to ensure vessel stability and dewatering integrity is maintained

- |          |                                    |  |
|----------|------------------------------------|--|
|          | <b>3.9</b>                         | All actions of shore-side firefighters involved in an onboard fire emergency while in port is coordinated and monitored effectively in accordance with ship and port regulations |
| <b>4</b> | <b>Manage post-fire activities</b> |  |
|          | <b>4.1</b>                         | Fire watch is coordinated to prevent re-ignition   |
|          | <b>4.2</b>                         | Fire affected area is secured prior to investigation according to regulatory and organisational requirements   |
|          | <b>4.3</b>                         | Equipment is maintained to operational condition, as applicable  |
|          | <b>4.4</b>                         | Cause of the fire is investigated and determined according to regulatory and organisational requirements   |
|          | <b>4.5</b>                         | Incident reports are completed according to regulatory and organisational requirements   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF011 Manage firefighting and fire prevention activities on board a vessel.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARF044 Prevent, control and fight fires on board a vessel (advanced firefighting)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying equipment restoration techniques, including:
  - maintaining self-contained breathing apparatus (SCBA) to industry standards
  - cleaning
  - recharging extinguishers according to Australian Standards
  - re-stowing
  - servicing
- communicating effectively with crew and passengers during fire emergencies
- determining the type and extent of the fire and initiating appropriate and timely actions
- ensuring order of priority, timing and sequence of actions are appropriate to the overall requirements of the incident and minimising damage and potential damage to the vessel, injuries to personnel, and impairment of the operational effectiveness of the vessel
- evaluating effectiveness of firefighting activities and tactics during fire emergencies
- initiating appropriate action and providing solutions to problems with firefighting equipment and operations during fire emergencies
- liaising with shore-based emergency organisations during fire emergencies
- managing fire prevention and suppression activities on a vessel
- managing onboard firefighting training for shipboard firefighting teams
- managing shipboard firefighting teams and their tactical activities during fire emergencies
- managing the maintenance of firefighting equipment and systems
- providing leadership to shipboard personnel and passengers during fire emergencies
- recognising and interpreting fire alarms and initiating appropriate response
- safeguarding personal safety during fire control activities at all times
- taking actions to control fires based on a full and accurate assessment of the incident, using all available sources of information
- transmitting information promptly, accurately, completely and clearly.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- assessment of cause of incidents involving fire
- chemistry of fire and its relationship to combustible materials typically found on vessels
- composition and allocation of personnel to fire parties
- control of fuel and electrical systems
- different classes of fire and the most appropriate extinguishing agents, application equipment and methods of extinguishment for each
- dewatering
- emergency sound signals
- fire control plan, including:
  - applications of the Code of Safe Practice for Solid Bulk Cargo (BC) Code
  - applications of the International Maritime Dangerous Goods (IMDG) Code
  - communication strategy
  - contingency plans for fires involving hazardous materials
  - evacuation plan
  - handling and treatment of injured personnel
  - hazard control strategies
  - liaison with shore-based agencies (such as environmental protection agencies, fire services, medical teams, port authorities) in port and at sea
  - maritime communication techniques applicable to the management of fire prevention and firefighting activities onboard a vessel
  - preparation of contingency plans
  - search and rescue (SAR) operations
  - strategies for shipboard firefighting management, including:
    - control of fires in various parts of the ship
    - oil, chemical and gas tankers
    - ships carrying dangerous goods
    - tactical methods for fighting fires involving hazardous materials
    - tactical plan of action
- fire precautions and hazards associated with the storage and handling of materials (paints etc.)
- fire-detection systems, including:
  - fixed fire-extinguishing systems
  - portable and mobile fire-extinguishing systems, including:
    - appliances
    - pumps
    - rescue, salvage, life-support, personal protective and communication equipment
- firefighting involving dangerous goods
- firefighting procedures at sea and in port, with particular emphasis on organisation, tactics and command
- firefighting process hazards, including dry distillation, chemical reactions, boiler uptake fires

- and exhaust fires
- hazards, including:
  - contents of adjacent spaces
  - dangerous goods
  - electricity and wiring systems
  - fires in water-tube boilers
  - flammable or explosive atmospheres
  - oxygen deficiency or enrichment
  - physical obstructions
  - poor visibility
  - restricted access
  - toxic liquids, solids, gases, vapours and dusts
- importance of communication and coordination during firefighting operations
- implications of shipboard firefighting management in port and the procedures that must be followed to comply with port and state/territory regulations
- importance of maintenance of fire detection and firefighting equipment onboard vessels, including:
  - communication equipment
  - complying with statutory and classification survey requirements
  - fire and smoke alarms
  - fire and smoke detection equipment
  - fire main, hydrants, hoses, nozzles and pumps, including emergency fire pump
  - firefighter's outfits and other personal protective equipment (PPE)
  - fixed fire-extinguishing equipment
  - portable and mobile fire-extinguishing equipment, including appliances
  - rescue and life support equipment
  - salvage equipment
- life and health risks associated with fires on vessels
- management and control of injured persons
- methods for checking and replacing consumable materials in fire detection, firefighting equipment and systems onboard vessels
- muster list contents and location
- principle of operation of fixed fire suppression systems
- principles underlying the spread of fire and its extinguishment
- problems likely to be encountered during the management of a shipboard fire and related tactics and solutions that can be applied, including:
  - change in fire behaviour or extent
  - equipment failure or unavailability
  - unexpected personnel involvement
- procedure for safe activation of fixed firefighting systems
- procedures for coordination of shore-based firefighters

- relevant regulations, codes of practice, policies and procedures relating to the maintenance of fire detection, firefighting equipment and systems onboard vessels
- requirements for onboard firefighting training
- requirements for statutory and classification surveys
- safety data sheets (SDS)/material safety data sheets (MSDS) relevant to the various products and substances carried on vessels
- ship general arrangement plan
- ship stability data
- strategies and tactics for control of fires in various parts of the vessel
- strategies for rapid briefing of shore-based emergency organisations using the vessel fire control plan
- the fire control plan contents and location
- types of fire detection, firefighting equipment and systems used on vessels, their features, principles of operation, the procedures for their use and remediating problems that can occur during use
- typical actions of passengers in a shipboard fire
- use of water for fire-extinguishing, the effect on ship stability, precautions and corrective procedures
- ventilation control, including smoke extraction
- work health and safety (WHS)/occupational health and safety (OHS) requirements and safe work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials, personal protective equipment (PPE), fire detection equipment, firefighting equipment and systems used in industry, including:
  - fire protective clothing
  - hoses and nozzles

- portable firefighting equipment
- pumps
- SCBA.

# **MARF045 Provide leadership and managerial capability**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to maintain effective maritime resource management procedures in accordance with Australian and international regulations and guidelines.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Establish effective working systems and procedures**

- 1.1** Principles of resource management are interpreted to establish the functions and responsibilities of the crew
- 1.2** Principles of effective resource management are interpreted to establish arrangements and procedures
- 1.3** Operations are planned, and arrangements and procedures applied effectively in accordance with regulatory requirements and company procedures
- 1.4** Working systems are documented and communicated to relevant personnel
- 1.5** Schedules are developed with due consideration to crew's experience

#### **2 Assign resources and allocate duties**

- 2.1** Current competency of crew is evaluated and effective measures are taken to ensure personnel have the required level of competency
- 2.2** Clear and unambiguous roles and responsibilities of crew are determined
- 2.3** Crew are allocated duties and informed of expected standards of work and behaviour in a manner appropriate to the individuals concerned
- 2.4** Resources are allocated effectively and assigned as needed in correct priority to perform necessary tasks to obtain and maintain situational awareness

#### **3 Manage personnel effectively**

- 3.1** Crew are informed of current and predicted vessel and operational status and external environment
- 3.2** Operations are undertaken in accordance with established functions and responsibilities

- 3.3 Effective communication is maintained with crew on matters relevant to safety and integrity of vessel
- 3.4 Questionable decisions and/or actions are dealt with using an appropriate challenge and response
- 3.5 Fatigue management strategies are applied
- 3.6 Operations are monitored and effective actions are taken if found to be in breach of established arrangements, regulations and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARF045 Provide leadership and managerial capability**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying principles of resource management
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing competency and experience of vessel officers and crew, and their suitability for specific roles
- assisting team members to develop and maintain the required level of competency
- communicating effectively with others on issues, arrangements and requirements
- demonstrating effective leadership and management skills
- developing and implementing operating procedures
- establishing and maintaining effective internal and external communication systems
- establishing and managing operations on an operational commercial vessel in an appropriate range of contexts
- identifying and evaluating problems and determining appropriate courses of action
- investigating and arbitrating shipboard conflicts
- monitoring arrangements and taking appropriate action where there is an identified breach of established arrangements, regulations or procedures
- planning and effectively coordinating timelines, tasks, prioritisation and workload
- reading, interpreting and applying instructions, procedures and information relevant to procedures and responsibilities
- recognising and interpreting signs of fatigue among crew and initiating effective action.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cultural differences and how to deal with them
- documentation and procedures, including:
  - Australian Maritime Safety Authority (AMSA) Marine Orders
  - company procedures

- International Chamber of Shipping (ICS) Bridge Procedures Guide
- International Maritime Organization (IMO) International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW), including the Manila Amendments
- International Safety Management (ISM) Code, safety management system (SMS) plans, procedures, checklists and instructions
- navigational charts
- operational orders
- vessel log
- effective decision-making techniques
- factors taken into account when establishing watchkeeping arrangements, including:
  - attention necessary when navigating in or near traffic separation schemes or other routing measures
  - operational status of bridge/engine room instrumentation, controls and alarms
  - professional competency and experience of vessel officers and crew and their familiarity with the vessel's equipment, procedures and manoeuvring capability
  - provision of unmanned machinery space (UMS) controls, alarms and indicators
  - proximity of navigational hazards
  - size of the vessel and the field of vision available from the conning position
  - traffic density and other activities occurring in the area in which the vessel is navigating
  - unusual demands on the watch arising from operational conditions
  - use and operational condition of navigational aids
  - weather and sea conditions, visibility and whether there is daylight or darkness
  - whether the vessel is fitted with an automatic steering system
  - whether there are radio duties to be performed
- fatigue management principles, strategies and techniques, including:
  - appropriate dietary habits
  - arranging to take a break when symptoms of fatigue are identified
  - avoiding excessive consumption of alcohol prior to watchkeeping duties
  - maintaining personal fitness and health
  - recognition of symptoms of fatigue
- functions and responsibilities of shipboard personnel management and training
- importance of situation awareness to decision making
- related international maritime conventions, recommendations and national legislation
- resource management principles, including:
  - allocation, assignment and prioritisation of resources
  - assertiveness and leadership, including motivation
  - consideration of team experience, including decisions that reflect team experiences
  - effective communication onboard and ashore
  - obtaining and maintaining situational awareness
- watchkeeping principles as described in AMSA Marine Orders, including:

- assistance must be available to be summoned to the bridge or engine room if required by a change in the vessel's situation
- duties of lookout and/or helmsman must be kept separate
- lookout must give full attention to keeping a proper lookout and must not be given other duties which could interfere with the task
- necessary precautions must be taken to avoid polluting the marine environment
- proper lookout must be maintained at all times
- ways of assessing the current competency of vessel officers and crew, and their familiarity with the vessel's equipment, procedures and manoeuvring capability
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARF046 Survive at sea in the event of vessel abandonment and personal survival techniques (PST)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to survive at sea using personal survival techniques (PST) in the event of vessel abandonment.

It applies to deck and engine workers working in the maritime industry requiring a Certificate of Safety Training.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Integrated Rating
- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Integrated Rating
- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

## **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg VI/1 and Code Section A-VI/1 (2), Table A-VI/1-1.

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal or Master less than 80 metres Near Coastal

as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

Blue Waters Qualifications:

- This unit is one of the requirements to obtain AMSA certification as a Chief Integrated Rating, Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Integrated Rating, Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

F - Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Respond to emergency**

- 1.1** Emergency situation is correctly recognised
- 1.2** Muster and abandon vessel signals are activated according to organisational procedures
- 1.3** Prompt, accurate and clear information is given on raising alarm
- 1.4** Instructions are provided to crew and passengers to maximise chances of survival
- 1.5** Emergency position indicating radio beacon (EPIRB) and search and rescue transponders (SARTs) are operated to transmit distress signal

- |  |            |   |
|--|------------|---|
|  | <b>1.6</b> | Distress calls are made using radio equipment on distress call frequency to communicate nature of emergency   |
| <b>2 Operate survival craft and rescue boats</b>   | <b>2.1</b> | Orders are given to survivors to board the survival craft or rescue boat using appropriate means  |
|  | <b>2.2</b> | Survival craft or rescue boat is cleared of the vessel and operated according to organisational procedures and manufacturer instructions                              |
|  | <b>2.3</b> | Sea anchors and drogues are used to assist in remaining within the vicinity of the abandoned vessel and to minimise the effects of adverse weather and sea conditions |
|  | <b>2.4</b> | Exposure cover is deployed on an open lifeboat according to manufacturer instructions   |
| <b>3 Operate lifesaving and survival equipment onboard survival craft and rescue boats</b> | <b>3.1</b> | Location and accessibility of all lifesaving and survival equipment is established  |
|  | <b>3.2</b> | Survival equipment is checked and operated according to manufacturer instructions   |
|  | <b>3.3</b> | Lifesaving equipment is correctly donned and used according to manufacturer instructions  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARF009 Survive at sea in the event of vessel abandonment.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARF046 Survive at sea in the event of vessel abandonment and personal survival techniques (PST)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- boarding a survival craft from the ship and water while wearing a life jacket
- determining the type and extent of the emergency
- donning a life jacket
- donning and using an immersion suit
- ensuring initial actions after leaving ship, and procedures and actions in the water minimise threats to survival
- freeing a survival craft of obstructions
- identifying hypothermia and providing appropriate treatment
- keeping afloat without a life jacket
- launching survival craft
- operating location devices, including radio equipment
- operating personal lifesaving appliances
- operating radio equipment
- operating survival craft equipment
- recognising and interpreting muster signals, and taking action that is appropriate to emergency and complies with established procedures
- righting an inverted life raft
- righting an inverted life raft while wearing a life jacket
- safely jumping from a height into water
- streaming a drogue or sea anchor
- swimming while wearing a life jacket
- taking initial actions on boarding survival craft to enhance chance of survival
- timing and sequencing individual actions so they are appropriate to prevailing circumstance and conditions, and minimise potential dangers and threats to survival
- using appropriate method to board survival craft that avoids dangers to other survivors.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- action to be taken in an emergency
- characteristics of survival craft
- dangers to survivors at sea and precautions, including:
  - dehydration
  - drinking seawater
  - exposure to the elements
  - fire
  - oil on water
  - sea sickness
  - sharks
- emergency muster and abandon vessel signals, including muster list
- equipment found in survival craft, its function and the procedures for correct operation
- first aid techniques
- helicopter assistance and pick-up, including:
  - communicating with helicopter
  - evacuating from ship and survival craft
  - helicopter harness
- location of personal lifesaving appliances
- location of survival equipment on vessel
- principles concerning survival, including:
  - actions to be taken when aboard a survival craft
  - actions to be taken when called to survival craft stations
  - actions to be taken when in the water
  - actions to be taken when required to abandon ship
  - main dangers to survivors
  - need to be ready for any emergency
  - personal protective equipment (PPE)
  - value of training and drills
- procedures for abandoning vessel
- relevant maritime regulations related to required survival equipment on a vessel
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation and policies
- standard safety symbols
- steps to be taken after collision, grounding or other marine casualty and resulting hull damage
- survival at sea techniques
- techniques for using survival equipment

- techniques for maintain morale of survivors
- time required to make distress calls safely
- types of emergency situations which may occur and precautions, including:
  - adverse reaction of dangerous goods and hazardous bulk materials
  - collision
  - engine room explosion
  - fire
  - foundering
  - hull failure
  - shifting of cargo
  - stranding
- types of lifesaving appliances normally carried on ships
- types of survival craft and appliances, including:
  - float-free launching
  - free-fall launching
  - immersion suit
  - inflatable appliance
  - launching appliance
  - rescue boat
  - survival craft
  - thermal protective aid and anti-exposure suits
- use of distress signals and penalty for misuse.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace

procedures and operational manuals

- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## Links

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# MARF047 Monitor compliance with legislative requirements

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to monitor and ensure compliance with legislative requirements and measures to ensure safety of life at sea, security and protection of marine environment.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Watchkeeper Deck.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal or Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Master of a commercial vessel less than 500 gross tonnage (GT) or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Operational Quality and Safety

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Confirm legislative management responsibilities**

- 1.1** Legislative and regulatory requirements and approvals that apply to the ship are interpreted
- 1.2** Own scope of authority/responsibility for achieving specific compliance outcomes for the ship and the roles of other key personnel are clarified
- 1.3** Resources available to implement management policies and procedures for the ship are identified

**2 Develop a positive compliance reputation**

- 2.1** Stakeholders, their relationship to the ship and perceived attitudes about the ship are identified
- 2.2** Appropriate strategies are used to foster the trust and confidence of stakeholders
- 2.3** Requests for information are responded to in the appropriate format and a timely manner
- 2.4** Operations and maintenance are monitored to comply with legislative requirements
- 2.5** Requirements for renewal and extension of certifications are identified to ensure continued validity of survey items and equipment

- |          |   |  |
|----------|---|--|
|          | <b>2.6</b>  | Difficult situations are identified and solutions negotiated using a collaborative approach  |
|          | <b>2.7</b>  | Regular feedback is obtained and used to enhance positive relations  |
| <b>3</b> | <b>Provide management information and training</b>            |  |
|          | <b>3.1</b>  | Organisational management plans and recent incident reports are used to identify training needs of crew members  |
|          | <b>3.2</b>  | Information and training are developed and provided to ensure crew members are aware of their legislative obligations and responsibilities                       |
|          | <b>3.3</b>  | Crew member compliance obligations and responsibilities for work areas and activities is confirmed   |
|          | <b>3.4</b>  | Effectiveness of the information and training is monitored and additional information/training provided, as required   |
| <b>4</b> | <b>Assess compliance impacts and risks</b>                    |  |
|          | <b>4.1</b>  | Activities are reviewed to identify implications for compliance management   |
|          | <b>4.2</b>  | Potential non-compliance is identified and promptly reported in accordance with organisational procedures  |
|          | <b>4.3</b>  | Potential risks and incidents that may cause harm to persons or the ship are identified, assessed and control measures implemented                               |
|          | <b>4.4</b>  | Inspections and in situ measurements are conducted to quantify risks and impacts   |
|          | <b>4.5</b>  | Assessment of risks and impacts are reported in accordance with organisational procedures  |
| <b>5</b> | <b>Ensure monitoring and management plans are implemented</b> |  |
|          | <b>5.1</b>  | Compliance monitoring instruments are checked to ensure they are fully functioning   |
|          | <b>5.2</b>  | Specified compliance monitoring and inspections are conducted to check performance against ship operational management requirements                              |
|          | <b>5.3</b>  | Additional monitoring/inspections are conducted after atypical events or requests from authorities to assess whether organisational management plan is operating |

- |   |            |  |
|---|------------|--|
|   | <b>5.4</b> | Results for monitoring/inspections are analysed to identify significant trends, non-conformance and/or incidents                           |
| <b>6 Respond to non-conformance and incidents</b> | <b>6.1</b> | Unusual situations, unexpected risks/hazards and potential/actual compliance incidents are recognised                                      |
|   | <b>6.2</b> | Organisational procedures for responding to non-compliance and incidents are implemented to ensure prompt control and remediation          |
|   | <b>6.3</b> | Causes of non-compliance and incidents are investigated in accordance with organisational procedures                                       |
|   | <b>6.4</b> | Findings are analysed to identify opportunities to improve work practices, compliance controls, crew training and/or management procedures |
|   | <b>6.5</b> | Corrective/preventative actions are implemented to prevent recurrence of non-compliance and incidents, and to reduce risks                 |
|   | <b>6.6</b> | Reports are completed in accordance with organisational procedures   |
| <b>7 Maintain compliance records</b>              | <b>7.1</b> | Required records are prepared and maintained in accordance with regulatory and organisational requirements                                 |
|   | <b>7.2</b> | Regular reports about operational performance are provided   |
|   | <b>7.3</b> | Opportunities and recommendations for improvements are reported  |
|   | <b>7.4</b> | Advice is sought when challenges are beyond own scope of technical competence or when input from specialist may be required                |
|   | <b>7.5</b> | Records are stored to enable easy access and review by authorised personnel in accordance with regulatory and organisational requirements  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARF047 Monitor compliance with legislative requirements

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

- accessing, interpreting and applying regulatory requirements
- applying organisational procedures for monitoring ship operations and ensuring compliance with legislative requirements
- completing reports, including:
  - hazard near miss report form
  - monthly compliance report
  - non-conformance report form
  - regulatory agency reports
  - ship incident investigation report
  - waste disposal logbooks
  - weekly compliance report
- explaining management concepts, principles and procedures clearly
- maintaining accurate compliance records
- maintaining actions to ensure a positive compliance reputation
- monitoring the implementation of organisational management plans, policies and procedures, and specified work methods
- preparing records, including:
  - compliance monitoring data
  - contractor and supplier information
  - digital photographs
  - records of monitoring equipment purchase, calibration, inspection, maintenance and service
  - records of non-conformance, incidents or significant impacts
  - records of training
  - records required by permit, approval or licence conditions
- regularly inspecting ship for compliance risks and impacts
- responding to complaints and requests for information from authorities and authorised personnel.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- certificates and other documents required to be carried onboard ships by international conventions, including:
  - how they may be obtained
  - the period of their legal validity
- compliance protection/management terminology, concepts and principles
- importance of proactive measures to protect the marine environment
- introduction to maritime law
- Law of the Sea
- legislative/regulatory requirements, approvals and responsibilities relevant to the ship requirements, including:
  - Athens Convention relating to the Carriage of Passengers and their Luggage by Sea
  - guidelines on the Enhanced Programme of inspections during surveys of the bulk carriers and oil tankers
  - Code of Safe Working Practices for Merchant Seamen
  - industry standards
  - International Convention for the Prevention of Pollution from Ships (MARPOL) and International Maritime Organisation (IMO) circulars
  - International Convention for the Safety of Life at Sea (SOLAS), including:
    - carriage of grain
    - carriage of dangerous goods
    - fire protection, fire detection and fire extinction
    - general provisions
    - lifesaving appliances and arrangements
    - radio communications
    - subdivision and stability, machinery and electrical installation
  - International Convention on Load Lines
  - International Safety Management (ISM) Code
  - International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW)
  - International Convention on Tonnage Measurement of Ships
  - International Convention for the Control and Management of Ships Ballast Water and Sediments
  - International Convention on the Control of Harmful Anti-Fouling Systems on Ships
  - International Ship and Port Facility Security (ISPS) Code
  - legislation and regulations, including implementing international agreements and conventions
  - Marine Orders
  - maritime declarations of health and the requirements of the International Health

### Regulations

- methods and aids to prevent pollution of the environment by ships
- responsibilities under international instruments affecting the safety of ships, passengers, crew or cargo
- Special Trade Passenger Ships Agreement
- management and training information, including:
  - due diligence and duty to notify
  - incident management and reporting
  - introduction to ship, environmental considerations and sources of compliance information
  - legislative requirements
  - licensing/compliance requirements
  - management actions and checklists, and methods/procedures for specific activities
  - organisational compliance management policy
- organisational management plans, procedures, control measures and management actions for ship
- organisational procedures for:
  - identifying and assessing compliance risks and impacts
  - managing stakeholder relations
  - monitoring operations and maintenance to comply with legislative requirements
  - responding to complaints and other incidents
  - record management and reporting
- potential risks and incidents, including:
  - ballast water discharge
  - disposal of waste material, including sewage and garbage
  - over-side maintenance work
  - spill or release of hazardous chemicals/materials
- precautions to be taken to prevent pollution of the marine environment
- renewal and extension of certifications requirements, including continued validity of survey items and equipment
- stakeholders, including:
  - cargo owners
  - government officials
  - port authorities
- ship characteristics and compliance issues, risks and impacts
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## MARG007 Manage a small crew

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to lead and develop small crews.

It includes inducting and training crew, allocating crew workload, monitoring crew performance, addressing performance related issues, addressing issues and problems of crew and individual crew members, and building support and commitment within crew.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 35 metres in length within the exclusive economic zone (EEZ)
- Master of a vessel less than 80 meters in length in inshore waters
- Chief Mate or Deck Watchkeeper on a vessel less than 80 meters in length within the EEZ.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 35 meters Near Coastal and a Mate less than 80 metres Near Coastal, as defined in the National Standard for Commercial Vessels (NSCV) Part D.

### Pre-requisite Unit

Not applicable.

### Competency Field

G – Teamwork

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## **1 Induct and train crew**

- 1.1** Crew member is introduced to key personnel and areas on vessel
- 1.2** Performance requirements and responsibilities of the position are explained
- 1.3** Legislative requirements and organisational policies and procedures are explained
- 1.4** Initial training in relevant safety management systems (SMS), equipment and work practices is arranged and conducted
- 1.5** Training opportunities for development of the individual's job role are identified
- 1.6** Relevant documentation is completed and submitted to appropriate personnel

## **2 Allocate crew workload**

- 2.1** Current workload of crew is assessed
- 2.2** Workload is scheduled effectively to facilitate operational efficiency of vessel
- 2.3** Duties, rosters and responsibilities are assessed against and matched to crew capabilities according to legislative and organisational requirements
- 2.4** Crew are allocated a workload priority
- 2.5** Workload of crew is continuously assessed according to agreed objectives and timelines

## **3 Monitor crew performance**

- 3.1** Performance expectations are communicated clearly to crew and individual crew members
- 3.2** Performance of crew and individuals is systemically monitored against defined measurable performance criteria to ensure satisfactory completion of assigned workloads
- 3.3** Performance expectations are assessed objectively against workloads and crew and individual capabilities
- 3.4** Strategies are developed to ensure crew and individuals are actively encouraged and supported in assessing their

		own competence and identifying their learning needs
<b>4</b>	<b>Address performance-related issues</b>	<p><b>4.1</b> Systems are established to ensure efforts of crew are monitored, and formal and informal feedback is provided in a constructive manner</p> <p><b>4.2</b> Performance above expectations is identified and reinforced through recognition and continuous feedback</p> <p><b>4.3</b> Performance below expectations is identified and development plan for improved performance is negotiated, agreed on and documented according to organisational requirements</p> <p><b>4.4</b> Action plans for improving performance are established and monitored according to organisational requirements</p>
<b>5</b>	<b>Address issues and problems of crew and individual crew members</b>	<p><b>5.1</b> Potential and current issues and problems arising within crew and/or individuals are identified and acted on according to organisational and legislative requirements</p> <p><b>5.2</b> Advice, support and expertise is sought from appropriate personnel, as required, to resolve issues and problems</p> <p><b>5.3</b> Issues and problems that impact on individual crew members are followed through and resolved with concerned individuals</p>
<b>6</b>	<b>Build support and commitment within crew</b>	<p><b>6.1</b> Organisational requirements are met through personal performance, behaviour and leadership, which serves as a positive role model for other crew members</p> <p><b>6.2</b> Own performance is monitored and adjusted to ensure it aligns with key performance indicators (KPIs) and organisational goals</p> <p><b>6.3</b> Crew members are treated in a fair and equal manner and individual differences are identified and accommodated</p> <p><b>6.4</b> Effective communication is developed and maintained with crew and management</p>

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARG002 Manage a small crew.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARG007 Manage a small crew

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- building and motivating teams
- coaching and mentoring others
- communicating and negotiating effectively
- communicating effectively with other appropriate personnel, including:
  - human resources manager and personnel
  - management
  - other crew members
  - other Masters in the organisation
  - union/employee representatives or groups
- counselling others and providing feedback, as required
- developing and maintaining crew performance to enhance business operations
- developing effective planning documents
- developing individual development plans
- developing strategies, including:
  - coaching
  - counselling
  - disciplinary procedures
  - discussions and meetings to resolve performance issues
  - adjusting key performance indicators (KPIs)
  - mentoring
  - referral to more senior management/human resources support services
  - shadowing
  - training
- leading others
- managing personnel effectively
- monitoring and reviewing activities, processes, performance and plans
- planning and organising work and activities
- producing accurate and reliable documentation, including:
  - employee records

- job/position descriptions
- records of taxation and superannuation payments
- work health and safety (WHS)/occupational health and safety (OHS) records
- relating to people from a range of social, cultural and ethnic backgrounds
- resolving conflict
- setting performance expectations, including:
  - documented KPIs for:
    - individuals
    - individuals and crew
  - informal KPIs developed by Master for:
    - individuals
    - individuals and crew
- training others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- anti-discrimination
- complaint and grievance procedures
- consultation and communication techniques and strategies
- culturally appropriate entitlements
- employment conditions
- equal opportunity
- induction and training
- key result areas of crew and organisation
- organisational policies and procedures
- performance measures
- principles and techniques involved in:
  - leadership and mentoring
  - performance management systems
- processes for monitoring team and own performance
- professional development
- recruitment and selection
- relevant industry awards and enterprise agreements
- relevant international maritime conventions
- relevant legislation especially in relation WHS/OHS, environmental issues, equal opportunity, industrial relations, unfair dismissal and anti-discrimination
- safety management systems (SMS)
- staff counselling, grievance and disciplinary procedures, including:
  - appeals against formal decisions such as assessments

- bullying
- discrimination and harassment
- disputes between individuals or parties
- grievances
- injury rehabilitation
- perceived or actual responsibilities relating to:
  - work roles, job design and allocation of duties
  - work performance of self and others
- potential and current, issues and problems, including:
  - prejudice or racial vilification
  - promotions
  - stress or personal problems
- WHS/OHS requirements.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel greater than or equal to 12 metres in length
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals.

## **MARG008 Manage a vessel and its crew**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to lead and manage the operations of a vessel and its crew.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 500 gross tonnage (GT) or Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

G – Teamwork

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Take command

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Command is exercised according to organisational authority and guidelines
- 1.2 Command structure is established appropriate to vessel
- 1.3 Command structure is communicated to crew and external authorities who have a regulatory interest in vessel
- 1.4 Command information management system is implemented
- 1.5 Communication mechanisms and procedures are implemented between levels of command according to organisational procedures
- 1.6 Liaison is established and maintained to meet control and command requirements

#### 2 Manage operations

- 2.1 Operational plan is developed in consultation with relevant personnel
- 2.2 Key performance indicators (KPIs) are developed, detailed and included in operational plan
- 2.3 Contingency plans are developed and implemented at appropriate stages of operational planning
- 2.4 Both human and physical resource acquisition is planned and managed according to organisational procedures
- 2.5 Standard operating procedures (SOPs) are developed in an appropriate format
- 2.6 Performance systems and processes to assess progress in achieving profit and productivity plans and targets are developed, monitored and reviewed

- |          |  |  |
|----------|--|--|
|          | <b>2.7</b>   | Areas of under-performance are identified and prompt action taken to rectify the situation   |
|          | <b>2.8</b>   | Recommendations for variations to operational plans are negotiated according to organisational procedures  |
|          | <b>2.9</b>   | Systems to ensure procedures and records associated with documenting performance are managed according to organisational procedures  |
| <b>3</b> | <b>Apply task and workload management</b>                |  |
|          | <b>3.1</b>   | Workload of crew members is planned taking into account time and resource constraints and hours of work and rest requirements  |
|          | <b>3.2</b>   | Crew are assigned workload priority and performance expectations are communicated clearly  |
|          | <b>3.3</b>   | Workload of crew is coordinated according to agreed objectives and timelines   |
|          | <b>3.4</b>   | Performance of crew and individuals is systemically monitored against defined measurable performance criteria to ensure satisfactory completion of assigned tasks and workloads    |
|          | <b>3.5</b>   | Potential and current issues and problems arising in relation to task and workload management are identified and acted on according to organisational and legislative requirements |
| <b>4</b> | <b>Support and participate in development activities</b> |  |
|          | <b>4.1</b>   | Training needs of crew and individuals are identified and assessed on a regular basis according to organisational procedures   |
|          | <b>4.2</b>   | Action plan to meet crew and individual training and development needs is developed, agreed and implemented  |
|          | <b>4.3</b>   | On-the-job training is provided to meet crew needs according to the required organisational standard   |
|          | <b>4.4</b>   | Crew members are encouraged and supported to attend training and to undertake development opportunities  |
|          | <b>4.5</b>   | Coaching and mentoring are utilised as developmental tools   |
| <b>5</b> | <b>Communicate objectives and required standards</b>     |  |
|          | <b>5.1</b>   | Crew members are provided with up-to-date information concerning organisational objectives and standards   |

- |   |            |   |
|---|------------|---|
|   | <b>5.2</b> | Crew member understanding of objectives and standards is checked  |
|   | <b>5.3</b> | Organisational standards and values are modelled and promoted to crew members   |
| <b>6 Provide leadership to crew and individuals</b> | <b>6.1</b> | Link between function of crew and organisational goals is articulated and communicated to crew  |
|   | <b>6.2</b> | Participative decision making is used to develop, implement and review work of crew and to allocate responsibilities                    |
|   | <b>6.3</b> | Opportunities are given to crew and individuals to develop new and innovative work practices and strategies                             |
|   | <b>6.4</b> | Appropriate delegation to crew and individuals is made according to crew objectives and goals, and organisational policy and procedures |
|   | <b>6.5</b> | Tasks are allocated within the competence of crew members and supported with appropriate authority, autonomy and training               |
|   | <b>6.6</b> | Procedures for emergency responses are developed and communicated to crew members   |
| <b>7 Make effective decisions</b>                   | <b>7.1</b> | Team-building strategies are applied to achieve strengthened crew and individual commitment to organisational vision and goals          |
|   | <b>7.2</b> | Range of consultative methods are used to involve crew in decisions and vessel risk assessment  |
|   | <b>7.3</b> | Use of problem-solving strategies and techniques to identify and generate options is promoted   |
|   | <b>7.4</b> | Decisions and actions are evaluated for their effectiveness and positive outcomes   |
|   | <b>7.5</b> | Decisions and actions are documented and reported according to organisational procedures  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARG006 Manage a vessel and its crew.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARG008 Manage a vessel and its crew

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying decision-making techniques, including situation and risk assessment, identifying and generating options, selecting a course of action and evaluating outcome effectiveness
- applying effective resource management, including:
  - allocation, assignment and prioritisation of resources
  - applying assertiveness and leadership
  - obtaining and maintaining situational awareness
  - making decisions reflecting consideration of team experiences
  - using effective communication on board and ashore
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- applying task and workload management, including planning and coordination, personnel assignment, time and resource constraints, and prioritisation
- applying team-building strategies, including:
  - clarifying ground rules and behavioural expectations
  - defining and clarifying objectives and work area plans
  - encouraging input into the review of the safety management system (SMS)
  - fostering creativity
  - offering constructive feedback
  - recognising achievements
  - strengthening communications processes
- assessing current competence, capabilities and operational requirements to determine training objectives and activities
- developing, implementing and overseeing standard operating procedures (SOPs)
- giving and receiving feedback clearly and unambiguously
- informing crew of expected standards of work and behaviour in a manner appropriate to the individual concerned.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- consultative methods, including:
  - email/intranet communications, newsletters or other processes and devices that ensure all employees have the opportunity to contribute to team and individual operational plans
  - mechanisms used to provide feedback to work team in relation to outcomes of consultation
  - meetings, interviews and brainstorming sessions
- contingency plans, including:
  - allocating functions or tasks
  - recycling and re-using materials
  - risk identification, assessment and management processes
  - strategies for reducing costs, wastage, stock or consumables
- decision-making techniques
- development opportunities, including:
  - career pathways
  - coaching
  - external study
  - formal course participation
  - induction
  - in-house training programs
  - job rotation
  - mentoring
  - on-the-job training
- information management system, including:
  - data receipt
  - procedures and protocols
  - recording
  - recording and documenting incidents
  - security and authority assignment
  - storage and dispatch modes
  - types of technology – electronic data exchange devices
- key performance indicators (KPIs) as measures for monitoring or evaluating the efficiency or effectiveness of a system, which may be used to demonstrate accountability and to identify areas for improvements
- organisational SMS requirements
- performance expectations, including:
  - documented KPIs developed by Master for:
    - individuals

- individuals and crew
  - informal KPIs developed by Master for:
    - individuals
    - individuals and crew
- potential and current issues and problems, including:
  - appeals against formal decisions such as assessments
  - bullying
  - discrimination and harassment
  - disputes between individuals or parties
  - grievances
  - injury rehabilitation
  - perceived or actual issues relating to work:
    - performance of self and others
    - roles, job design and allocation of duties
  - prejudice or racial vilification
  - promotions
  - stress or personal problems
- relevant international maritime conventions and recommendations, and national legislation including:
  - International Safety Management (ISM) Code
  - Maritime Labour Convention (MLC)
  - International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW)
- relevant personnel, including:
  - crew supervisors
  - Masters of other vessels
  - senior crew members
  - senior management
  - union or employee representatives
  - WHS/OHS committee/s and other people with specialist responsibilities
- resource acquisition, including:
  - current and projected human, physical and financial resources
  - goods and services to be purchased and ordered
  - stock requirements and requisitions
- shipboard personnel management and training
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARG009 Manage an engine room and small engineering team in emergencies**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to lead and develop a small engineering team.

It includes organising the engine room for departure, managing the daily engine room routine, managing an engineering team, managing engineering procedures in port and managing engineering emergencies.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- assistant under the direct supervision of the Chief Engineer
- worker in the engine room of a vessel less than 80 metres in length with propulsion power less than 3000 kW.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

G – Teamwork

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Organise engine room for departure**

- 1.1** Fuels, lubricating oil, liquefied petroleum gas (LPG) and refrigeration gas required for proposed voyage are obtained
- 1.2** Flammable and explosive materials are stowed and managed according to regulatory and organisational requirements
- 1.3** Planned maintenance tasks to be completed during proposed voyage are verified
- 1.4** Spares and consumables required for proposed voyage are acquired
- 1.5** Work health and safety (WHS)/occupational health and safety (OHS) hazards in engine room are identified, risks are assessed and corrective actions are taken and recorded according to organisational practices

#### **2 Manage daily engine room routine**

- 2.1** Engine room routine is organised and duties for engineering team are defined
- 2.2** WHS/OHS roles and responsibilities of engineering team are defined
- 2.3** WHS/OHS procedures are communicated to engine room crew
- 2.4** WHS/OHS issues raised are acknowledged and resolved promptly
- 2.5** Permits for hot work, confined space entry and other high-risk activities are completed according to organisational and regulatory requirements
- 2.6** Engineering team members are allocated daily maintenance tasks according to planned maintenance

		system or breakdown maintenance
	<b>2.7</b>	Procedures for collecting and sorting engine room waste from cleaning and maintenance tasks are defined and communicated to engineering team
<b>3</b>	<b>Manage engineering team in an emergency</b>	
	<b>3.1</b>	Performance expectations in an emergency are communicated clearly to engineering team
	<b>3.2</b>	Effective communication in an emergency is developed and maintained with team and management
<b>4</b>	<b>Manage engineering procedures in port</b>	
	<b>4.1</b>	Planned and breakdown maintenance activities to be conducted in port are arranged to facilitate operational efficiency of vessel
	<b>4.2</b>	Permits for hot work, confined space entry and other high-risk activities are completed according to organisational and regulatory requirements
	<b>4.3</b>	Sound business relationships with contractors are established and maintained to ensure effective communication and early identification of potential service delivery problems
	<b>4.4</b>	Contractual disputes with contractors that arise are managed according to contractual requirements using established mediation mechanisms
	<b>4.5</b>	Removal of sludge, sewage and engine room waste is arranged
	<b>4.6</b>	Procedures for removal of sludge, sewage and engine room waste are followed according to regulatory requirements and organisational procedures
<b>5</b>	<b>Manage engineering emergencies</b>	
	<b>5.1</b>	Information is received regarding scope and severity of emergency
	<b>5.2</b>	Information is analysed to determine appropriate response
	<b>5.3</b>	WHS/OHS risks are identified and actions are taken according to organisational procedures
	<b>5.4</b>	Actions are taken to reduce effect of incident according to organisational procedures
	<b>5.5</b>	Incident is monitored for any changes and appropriate responses are taken according to organisational

procedures

- 5.6** Communications are established with support services and relevant stakeholders, where appropriate
- 5.7** Reports and debriefings are completed according to organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARG003 Manage an engine room and small engineering team.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARG009 Manage an engine room and small engineering team in emergencies**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing routine engine room tasks, including:
  - logbook entries
  - monitoring of equipment in engine room
  - regular inspection of engine room
  - responding to alarms
  - watchkeeping arrangements
- developing effective planning documents
- displaying sound personnel management
- leading team members in an emergency
- planning, organising and monitoring team member activity
- writing reports.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- consultation and communication techniques and strategies
- hazards associated with flammable/explosive materials
- hazards of gases, including accidental release in a confined space
- managing emergencies
- manufacturer instructions, including all work health and safety (WHS)/occupational health and safety (OHS) requirements and safety data sheets (SDS)/material safety data sheets (MSDS)
- maritime regulations, rules and instructions
- organisational policies and procedures
- principles and techniques involved in:
  - leadership and mentoring
  - performance management systems

- regulations for stowing and managing flammable/explosive materials, including:
  - chemicals
  - diesel
  - gases
  - liquefied petroleum gas (LPG)
  - lubricants
  - petrol
- relevant legislation especially in regard to WHS/OHS and environmental issues
- requirements for confined space entry and hot work permits
- safety management systems (SMS)
- testing of gas detectors.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

## MARG010 Supervise a crew

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to provide leadership and guidance to a vessel crew to optimise vessel performance.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Integrated Rating.

### Licensing/Regulatory Information

Legislative and regulatory requirements are not applicable to this unit.

### Pre-requisite Unit

Not applicable.

### Competency Field

G – Teamwork

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan and implement work schedules**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Tasks and/or jobs are identified and prioritised according to work and hours of rest schedules
- 1.2** Timelines, personnel and equipment are identified for each job and task

- 1.3** Work schedules are clearly communicated to crew and individuals
    - 1.4** Changes to work schedules are implemented through reorganisation of priorities, and reasons are clearly conveyed to crew and individuals
    - 1.5** Priority of tasks is communicated to crew and individuals
    - 1.6** Tasks and/or jobs are discussed with crew and individuals, and work schedules are adjusted, as required
    - 1.7** Risks are identified and analysed according to workplace policies and procedures
    - 1.8** Risks are monitored and reviewed and appropriate treatments are applied to eliminate or minimise risk
- 2 Monitor performance of tasks**
  - 2.1** Required standard is effectively communicated to crew and individuals to ensure understanding of allotted task
  - 2.2** Instruction or technical support to achieve required standard is provided, as required
  - 2.3** Standard of performance is monitored to ensure achievement of outcomes
  - 2.4** Feedback on performance is discussed with crew and individuals
  - 2.5** Completion times of tasks/jobs are monitored, and scheduling is adjusted as appropriate
- 3 Support development of crew or individuals**
  - 3.1** Workload is monitored and discussed with crew and individuals on a regular basis
  - 3.2** Support mechanisms are explored and implemented to address issues
  - 3.3** Crew and individuals are supported to identify and resolve work-related issues
  - 3.4** Crew and individuals are supported to establish and maintain effective relationships with colleagues according to the requirements of their work role
  - 3.5** Areas of tension or conflict in relationships are identified and steps are taken to address contributing

- factors and issues
- 3.6** Mentoring, training and assessment are provided, as required, to develop and enhance crew and individual skills and knowledge according to work role requirements
  - 3.7** Trainee crew are supported to complete relevant training record books
- 4 Assess performance of tasks**
- 4.1** Briefing is conducted to discuss and agree on the details of planned assessment against required performance standards
  - 4.2** Resources required for performance assessment are identified and arranged
  - 4.3** Required performance standard, purpose of assessment, and roles and responsibilities in the assessment process are effectively communicated to the individual
  - 4.4** Work health and safety (WHS)/occupational health and safety (OHS) risks to the individual or equipment are addressed prior to commencement of performance assessment
  - 4.5** Evidence is collected using agreed performance assessment methods and assessment instruments
  - 4.6** Performance assessment decision is made in line with agreed expected level of performance, assessment methods and available evidence
  - 4.7** Assessment outcomes are recorded promptly and accurately
  - 4.8** Feedback on their performance is provided to the individual and in a clear and constructive manner
- 5 Provide leadership to crew**
- 5.1** Crew is assisted to identify and work towards goals and objectives according to organisational values and directions
  - 5.2** Support and encouragement are provided to crew and steps are taken to maintain or improve cooperation and cohesiveness
  - 5.3** Barriers to crew effectiveness are identified and potential causes or factors contributing to these barriers

- are investigated
- 5.4** Strategies are put in place to enhance team effectiveness by addressing identified barriers
- 6 Monitor application of WHS/OHS**
- 6.1** Implementation of WHS/OHS standards is monitored to ensure safety requirements are met
- 6.2** Strategies for prevention or correction of problems are determined from monitoring process
- 6.3** Recommendations for prevention or correction of problems are made to achieve established standards
- 7 Communicate with management, crew and individuals**
- 7.1** Information affecting work is explained logically and clearly to crew and individuals verbally and/or in writing, as required
- 7.2** Effective and appropriate information provision is carried out with management
- 7.3** Concise reports are written that conform to workplace procedures
- 8 Control entry to confined spaces**
- 8.1** Requirement for confined space entry is identified
- 8.2** Confined space entry permit and any limitations are identified according to workplace procedures
- 8.3** Roles and responsibilities of crew members are confirmed according to workplace procedures
- 8.4** WHS/OHS requirements are applied throughout control of the operation
- 8.5** Entry and egress of confined space are monitored and recorded according to work permit conditions and workplace procedures
- 8.6** Communication and consultation with confined space entry team is maintained according to work permit conditions and workplace procedures
- 8.7** Documentation and reports are completed according to workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARG005 Supervise a crew.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARG010 Supervise a crew

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing information about tasks and abilities of crew to effectively schedule tasks
- addressing legal, legislative and industrial requirements
- adjusting scheduling to meet contingencies
- analysing relevant workplace data to identify hazards, assess risks, and design and implement appropriate work health and safety (WHS)/occupational health and safety (OHS) control measures, including lock out and tag out procedures
- applying relevant WHS/OHS requirements and work practices
- assessing resources needed to maintain systematic approach to required tasks
- attending planning meetings
- calculating job times and manipulating scheduling to make the most efficient use of personnel and equipment
- communicating ideas and information effectively to crew
- determining job priorities
- establishing procedures that enable feedback from crew and encourage suggestions that might enhance performance
- identifying, interpreting and analysing risks relevant to work being performed
- monitoring performance of crew members
- monitoring performance of tasks and adjusting scheduling
- operating any equipment pertinent to controlling confined space entry
- planning, monitoring and reviewing individual performance
- providing instruction to achieve the required standard
- providing detailed reports
- supporting effective team processes and work functions
- using appropriate information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- emergency response procedures
- confined spaces, including:
  - any compartment or area with limited opening for access, no escape route, and with limited natural ventilation and the capability of accumulating a toxic, flammable or explosive atmosphere, or of being flooded, such as:
    - ballast, freshwater and other tanks
    - cargo holds
    - pump rooms
  - confined space entry, including:
    - entry permits
    - entry permit procedures
- effective communication techniques required to communicate with a crew onboard a vessel
- incident and accident investigation
- legislation, workplace policies and procedures relevant to confined spaces
- organisational human resource management procedures
- workplace diversity, key principles of team dynamics, team leadership and management
- organisational values and directions, including:
  - duty of care
  - first aid
  - grievance management
  - harassment
  - person-centred approach
  - service delivery standards
  - specific values, standards and approaches relevant to work role
  - WHS/OHS
  - workplace behaviours
- relevant WHS/OHS requirements and work practices, including:
  - appropriate signage, symbols, labels and barriers
  - reporting procedures
  - risk management principles and appropriate treatments
- techniques for supporting a team to develop mutual concern and camaraderie
- techniques used to resolve conflict within a team
- techniques/methods used to identify and/or analyse risk
- work schedules, including:
  - organisational standards relating to service delivery or outcomes specific to work role
  - resources required
  - specific plans for implementing identified work arrangements
  - timeframe for achieving outcomes
  - training plans to develop required skills and knowledge

- work scheduling procedures
- workforce development, the importance of determining the skill level of workers and ways of improving these skills
- workplace employment awards or agreements and work conditions.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARG011 Work effectively as part of a crew on a vessel up to 80 metres**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to work effectively as a general purpose hand on a vessel.

It includes performing routine workplace duties, following simple written and spoken instructions, communicating with other crew members, completing workplace forms and work tasks.

This unit applies to people working in the maritime industry in the capacity of:

- assistant to the Master or Engineer of a vessel working under their direct supervision
- worker on deck or in the engine room of a vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- worker in the engine room only for a vessel with propulsion power less than 3000 kW.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a General Purpose Hand Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

G – Teamwork

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Perform routine workplace duties following simple written instructions**

- 1.1** Routine work instructions and procedures are read and interpreted correctly
- 1.2** Appropriate lines of communication with supervisors and colleagues are identified and used
- 1.3** Routine work instructions and procedures are followed in sequence
- 1.4** Clarification is sought from workplace supervisor when any instruction or procedure is not understood

#### **2 Follow simple spoken instructions**

- 2.1** Spoken instructions are interpreted correctly
- 2.2** Instructions are responded to promptly
- 2.3** Clarification is sought from workplace supervisor when any instruction is not understood

#### **3 Communicate with other crew members**

- 3.1** Constructive feedback is encouraged and acted upon
- 3.2** All crew members are treated with respect, courtesy and sensitivity
- 3.3** Cultural differences are considered and appropriate language is used in all verbal and non-verbal communication
- 3.4** Communication is used to develop and maintain positive relationships, mutual trust and confidence

#### **4 Complete workplace forms**

- 4.1** Workplace forms are completed clearly and concisely within designated timeframes
- 4.2** Assistance is sought to complete workplace forms when necessary

#### **5 Complete work tasks**

- 5.1** Tasks are completed within designated timeframes according to instructions

- 5.2** Effective questioning is used to seek assistance from other crew members when difficulties arise in achieving allocated tasks
- 5.3** Factors affecting work requirements are identified and appropriate action is taken
- 5.4** Progress with task is communicated to supervisor, as required

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARG001 Work effectively as part of a crew on a vessel up to 80 metres.

## **Links**

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARG011 Work effectively as part of a crew on a vessel up to 80 metres**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively in the workplace relevant to own work responsibilities
- completing relevant workplace documentation, including hazard/incident/accident report forms
- completing work tasks as directed
- requesting advice, receiving feedback and working with others
- working as part of a team.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- being aware of own specific role and responsibilities
- communication procedures relevant to the organisation and own work responsibilities
- relating appropriately to people from diverse backgrounds using culturally appropriate language
- routine work instructions and procedures
- safety management system (SMS)
- standard marine communication phrases (SMCPs)
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- workplace forms, including hazard/incident/accident report forms.

## **Assessment Conditions**

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# **MARH018 Apply command navigation procedures on vessels limited by tonnage or near coastal operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to manage safe navigational watchkeeping on a commercial ocean-going vessel in compliance with Australian and international regulations and guidelines, protection of the marine environment and the safety of vessel and persons onboard.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

H – Navigation

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

### **ELEMENTS**

### **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Establish safe watchkeeping procedures on vessels, potentially with limited qualified personnel**

- 1.1** Set of Master standing orders is developed to supplement vessel safety management system (SMS) noting number of watchkeeping personnel
- 1.2** Accepted principles, vessel safety management procedures and Master standing orders are conformed with in conduct, handover and relief of watch
- 1.3** Appropriate bridge team is established according to vessel SMS and bridge personnel are confirmed as fit for duty
- 1.4** Duties are assigned to members of bridge team and their performance of those duties is monitored
- 1.5** Members of bridge team are correctly briefed on their duties
- 1.6** Action is taken to ensure vessel is navigated safely using appropriate position fixing techniques to check location the vessel and to maintain movement of vessel within planned limitations
- 1.7** Action is taken to ensure progress of vessel with respect to passage plan is analysed and vessel navigation is managed appropriately to maintain a required estimated time of arrival (ETA) at a point in the plan
- 1.8** Accepted principles and procedures are conformed with in relation to frequency and extent of monitoring of traffic, vessel and environment
- 1.9** Responsibility for safety of navigation is defined according to vessel SMS
- 1.10** Safe navigational practice is achieved by implementing accepted bridge resource management principles and procedures
- 1.11** Action is taken to ensure fatigue management strategies are correctly applied by bridge management team

**2 Respond to potential collision and emergency**

- 2.1** Leadership of bridge team is taken when called to bridge in response to navigational situation

## **situations**

- 2.2** Circumstances when assistance is required when Master is performing watchkeeping duties are identified
  - 2.3** Potential collision situations are analysed and appropriate actions taken to avoid collision in ample time and in compliance with international collision regulations, resulting in a safe passing distance and following practices of good seamanship
  - 2.4** SMS procedures and compliance with standard watchkeeping principles are correctly implemented when taking over bridge watch from officer of the watch
  - 2.5** Appropriate action is taken to initiate search and rescue (SAR) procedures on receipt of a distress signal
  - 2.6** Appropriate advice is given to watchkeepers and correct actions are implemented regarding a response to navigational or operational emergency situations
- 3 Maintain watchkeeping records**
  - 3.1** Relevant information is documented in required records
  - 3.2** Action is taken to ensure deck logbook and other required records are maintained in an appropriate manner
  - 3.3** Required records are filed and stored according to organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARH007 Apply command navigation procedures on vessels limited by tonnage or near coastal operations.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARH018 Apply command navigation procedures on vessels limited by tonnage or near coastal operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying fatigue management strategies
- assessing:
  - circumstances requiring Master to call for assistance from a second qualified watchkeeper
  - necessary actions to be taken when called to bridge by officer of watch
- briefing officers of watch on passage plan and their watchkeeping duties
- communicating effectively with other personnel when managing safe navigational watchkeeping activities
- complying with mandatory rules, regulations and International Maritime Organization (IMO) conventions and codes, including relevant sections of Australian Maritime Safety Authority (AMSA) Marine Orders and ensuring codes, guidelines and standards recommended by IMO, classification societies and maritime industry organisations are taken into account
- conducting emergency procedures
- determining:
  - actions to take with respect to executing passage plan
  - most important watchkeeping task at any given time
- ensuring established passage plan is correctly carried out
- exchanging information with pilot about pilotage plan and conduct of bridge team
- managing watchkeeping arrangements while underway, when berthed or moored, when slipped or in dry dock, and during routine or unplanned events
- performing pilotage duties, where permitted
- providing leadership to bridge team
- recognising and adapting appropriately to cultural differences in the workplace, including modes of behaviour, and interactions and communication with others
- recognising situations warranting alterations to bridge team, including situations where vessel is under pilotage
- solving problems that may arise when managing bridge team
- taking prompt action to report and/or rectify watchkeeping incidents according to established procedures

- using available technology when managing navigational watchkeeping activities.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislation, regulations and codes of practice
- bridge watch handover procedures
- causes of groundings, collisions and casualties when onboard vessel
- documentation and records, including:
  - company safety management system (SMS)
  - established passage plan
  - instructions of relevant maritime authorities
  - Master standing and night orders
  - navigational charts
  - operational orders
  - relevant maritime regulations as they relate to watchkeeping functions and operations during a coastal voyage
  - vessel log
- emergency situations
- fatigue management principles and techniques
- International Regulations for Preventing Collisions at Sea (COLREGs)
- navigational aids, including:
  - compass and azimuth mirror
  - electronic charts
  - electronic navigation systems
  - radar
- navigational hazards during voyage and implications for watchkeeping
- precautions necessary when navigating in or near traffic separation schemes or other routing measures
- principles for maintaining a safe navigational watch on vessels with potentially limited qualified personnel
- principles of bridge team management
- range of factors that can affect watchkeeping functions on vessels under 500 gross tonnage (GT) and their implications, including:
  - attention necessary when navigating in or near traffic separation schemes or other routing measures
  - maintaining proper lookout by all available means at all times
  - need to adhere to established passage plan
  - never leaving the bridge unattended
  - operational status of bridge instrumentation, controls and alarms and failure

- provision on bridge of unmanned machinery space (UMS) controls, alarms and indicators, including loss of:
  - main engines
  - mooring lines or winches when berthing
  - watertight integrity
- proximity of navigational hazards
- rudder and propeller control and vessel manoeuvring characteristics
- size of vessel and field of vision available from conning position
- traffic density and other activities occurring in area in which vessel is navigating
- unusual demands on navigational watch arising from operational conditions
- use and operational condition of navigational aids and failure of bridge equipment, steering equipment and navigational lights
- weather and sea conditions, visibility and whether there is daylight or darkness
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation and policies
- responsibility for safety of navigation, including:
  - periods under pilotage
  - periods when Master is on bridge.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARH019 Forecast weather and oceanographic conditions

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to forecast weather and oceanographic conditions during a near coastal voyage and to take appropriate actions based on predictions.

It includes interpreting weather and oceanographic information, using information to predict local weather and oceanographic conditions, and maintaining records of weather and oceanographic information.

This unit applies to people working in the maritime industry in the capacity of:

- Master on commercial vessels less than 35 metres in length within the exclusive economic zone (EEZ)
- Master on vessels less than 80 metres in length in inshore waters
- Chief Mate or Deck Watchkeeper on vessels less than 80 metres in length within the EEZ.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 35 metres Near Coastal and a Mate less than 80 metres Near Coastal, as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## Pre-requisite Unit

Not applicable.

## Competency Field

H – Navigation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Interpret weather and oceanographic information**

**1.1** Ocean and weather conditions are observed and interpreted

**1.2** Measurements of current local, meteorological and oceanographic parameters are made and recorded using appropriate shipboard instruments

**1.3** Weather charts and satellite images are acquired and interpreted

**1.4** Weather reports are obtained and interpreted

**2 Use information to predict local weather and oceanographic conditions**

**2.1** Forecasts of local weather and oceanographic conditions are correctly made using available information

**2.2** Wave height and swell forecast is made using available information

**2.3** Effects of local topographical features on wind flow and weather conditions are estimated using available information

**2.4** Potentially dangerous conditions are identified and appropriate actions taken to secure vessel

**3 Maintain records of weather and oceanographic information and forecasts**

**3.1** Weather and oceanographic information and forecasts are recorded and filed according to organisational procedures

**3.2** Action on vessel operations initiated as a result of weather and oceanographic forecasts is documented according to organisational procedures

**3.3** Meteorological charts, publications and related documentation are updated and stored according to organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARH006 Forecast weather and oceanographic conditions.

## **Links**

Companion Volume implementation guide can be found in VetNet -

# Assessment Requirements for MARH019 Forecast weather and oceanographic conditions

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

- ensuring currency of relevant reference material
- observing, interpreting and forecasting weather and oceanographic conditions
- reading, interpreting and applying weather and oceanographic information
- recognising problems that may occur when interpreting weather and oceanographic information
- selecting and using shipboard instruments to assist in forecasting weather and oceanographic conditions, including:
  - anemometers
  - barometers
  - equipment for receiving weather maps and forecasts
  - wet and dry bulb thermometers
- using tide tables to calculate height of tide.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actions to be taken in potentially dangerous conditions, including:
  - avoiding extreme adverse weather conditions
  - avoiding storm centres and dangerous quadrants by adjusting course and speed
  - properly securing all vessel equipment
- basic principles for making meteorological and oceanographic measurements
- effects on navigation and vessel handling of wind, currents and bottom topography
- heat exchange process
- ocean and weather conditions, including:
  - air masses and fronts
  - cloud classifications
  - cyclones, storms and gales
  - ocean currents

- pressure systems and cold fronts
- sea state
- synoptic chart analysis
- tide prediction
- tropical meteorology
- principles and procedures of weather forecasting using information obtained from observations, charts, satellite images, reports and instruments
- sources of weather and oceanographic information, and methods for their interpretation
- topographical effects on wind flow
- typical problems in forecasting weather and oceanographic conditions
- vertical division of the atmosphere
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals, Australian national tide tables, weather reports and safety management systems (SMS)
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry, including:
  - anemometers
  - barograph
  - barometers
  - equipment for receiving weather maps and forecasts
  - wet and dry bulb thermometers.

# **MARH020 Forecast weather and oceanographic conditions to plan a safe passage**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to forecast weather and oceanographic conditions to plan a safe passage.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel Unlimited.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

H – Navigation

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Forecast area weather**

- 1.1** Synoptic chart is interpreted and recorded
- 1.2** Information received by weather fax is interpreted and recorded
- 1.3** Weather reports are obtained, interpreted and recorded
- 1.4** Observations of weather and cloud formations are made, interpreted and recorded
- 1.5** Statistical data and observations are used to predict likely weather conditions for a determined period

#### **2 Use information to predict oceanographic conditions**

- 2.1** Information on ocean current systems is interpreted and recorded
- 2.2** Nautical publications on tides and currents are used to calculate tidal conditions
- 2.3** Wave height and swell forecast is made using available information
- 2.4** Potentially dangerous oceanographic conditions are identified and appropriate actions are taken to maintain safety of navigation and to minimise risk to safety of vessel

#### **3 Maintain records of weather and oceanographic information and forecasts**

- 3.1** Statistical data and observations are recorded and filed according to organisational procedures
- 3.2** Actions taken to maintain safety of navigation and to minimise risk to safety of vessel as a result of weather and oceanographic forecasts, are documented according to organisational procedures
- 3.3** Meteorological and nautical publications are updated and stored according to organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARH011 Forecast weather and oceanographic conditions to plan a safe passage.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARH020 Forecast weather and oceanographic conditions to plan a safe passage**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- calculating tidal conditions
- ensuring currency of relevant reference material
- observing, interpreting and forecasting weather and oceanographic conditions
- reading, interpreting and applying weather and oceanographic information
- selecting and using shipboard instruments to assist in forecasting weather and oceanographic conditions
- supporting reasons for intended action with statistical data and observations of actual conditions
- undertaking appropriate actions
- using appropriate nautical publications on tides and currents
- using tide tables to calculate height of tide.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- air masses and fronts
- appropriate actions, including:
  - avoiding storm centres and dangerous quadrants by adjusting course and speed
  - ensuring all crew and passengers are informed
  - ensuring all vessel equipment is properly secured
  - securing cargo and stores
  - taking action to avoid extreme adverse weather conditions
- basic principles for making meteorological and oceanographic measurements
- characteristics of various weather systems, including tropical revolving storms, and avoidance of storm centres and dangerous quadrants
- cloud classifications

- cyclones, storms and gales
- dangerous oceanographic conditions, including:
  - excessively high sea state and swells
  - ice formations on ship super structure and remedies
  - tornados, tropical revolving storms, hurricanes and gales
- effects on navigation and vessel handling of wind, currents and bottom topography
- formation of sea waves and swell waves
- heat exchange process
- ocean current systems, including surface water circulation of the ocean and principal adjoining seas
- pressure systems and cold fronts
- principles and procedures of weather forecasting using information obtained from observations, charts, satellite images, email, reports and instruments
- principles relating to the safety of navigation in ice
- procedures for filing and maintaining weather and oceanographic information
- procedures to be followed during gale or icy conditions and tropical revolving storms
- sea state
- sources of weather and oceanographic information, and methods for their interpretation
- synoptic and prognostic charts
- tide prediction
- tropical revolving storms
- types of floating ice, their origins and movements
- typical problems in forecasting weather and oceanographic conditions
- use of tide tables
- vertical division of the atmosphere
- voyage planning principles incorporating weather conditions, including:
  - air masses and fronts
  - cloud classifications
  - cyclones, storms and gales
  - heat exchange process
  - ocean currents and wave height
  - pressure systems and cold fronts
  - sea state
  - tide prediction
  - tropical revolving storms
  - use of tide tables
  - vertical division of the atmosphere
  - weather data provided by shipboard instruments
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## MARH021 Manage the navigation of a vessel

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to manage the planning of a voyage and the navigation of a vessel, determine position and accuracy of resultant of position fix by any means, determine and allow for compass errors, and establish watchkeeping arrangements and procedures.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel Unlimited.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### Pre-requisite Unit

Not applicable.

### Competency Field

H – Navigation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1   Oversee development of passage plan**

- 1.1**   Requirements of passage are established
- 1.2**   Reasons for planned route are supported by facts and statistical data obtained from relevant sources and publications
- 1.3**   Positions, courses, distances and time calculations are checked for correctness within accepted accuracy standards for navigational equipment
- 1.4**   Potential navigational hazards are accurately identified

#### **2   Develop and implement watchkeeping arrangements and procedures**

- 2.1**   Watchkeeping arrangements and procedures are developed according to bridge resource management principles, and organisational and regulatory requirements
- 2.2**   Bridge resource management principles are appropriately applied in establishing watchkeeping arrangements and procedures and in developing an effective bridge working system
- 2.3**   Communications strategies are developed to link watchkeeping procedures with all aspects of vessel operations
- 2.4**   Fatigue management strategies are developed according to organisational and regulatory requirements
- 2.5**   Corrective action procedures are developed and monitored
- 2.6**   Procedures for reporting, recording and responding to emergencies and non-compliance are established

#### **3   Monitor bridge team in implementing passage**

- 3.1**   Work schedule for bridge team is detailed according to

<b>plan</b>		bridge resource management principles
	<b>3.2</b>	Risk control measures are evaluated against passage plan
	<b>3.3</b>	Navigation requirements are communicated to bridge team
	<b>3.4</b>	Individuals are fully briefed and responsibilities are coordinated
	<b>3.5</b>	Navigation tasks are carried out according to passage plan
	<b>3.6</b>	Ongoing checks and position determination are conducted according to organisational procedures
	<b>3.7</b>	Non-routine problems related to navigation of vessel are solved
	<b>3.8</b>	Navigational data is signed off according to organisational procedures
	<b>3.9</b>	Work schedule for bridge team is detailed according to bridge resource management principles
<b>4 Interpret and evaluate information from electronic navigational system</b>	<b>4.1</b>	Data from radar plotting sheet is interpreted and analysed to anticipate potential collisions
	<b>4.2</b>	Data produced by other electronic navigational aids is interpreted and used to assist navigational command decisions, taking into account known limitations and errors associated with each type of aid
	<b>4.3</b>	Information obtained through a single vessel or multiple vessel analysis of radar plots or other electronic navigational data is used to make command decisions on action needed to avoid collisions
	<b>4.4</b>	Radar data is used to obtain position fix for vessel using electronic bearing lines and variable range markers
<b>5 Navigate in complex situations</b>	<b>5.1</b>	Measurements and observations of sea and weather conditions are used to determine vessel speed and direction in complex situations
	<b>5.2</b>	Information from bridge equipment is interpreted to identify navigational hazards and to fix vessel position

- |          |  |   |
|----------|--|---|
|          | <b>5.3</b>   | Nautical publications on tides and currents are used to calculate tidal conditions  |
|          | <b>5.4</b>   | Alterations to vessel course or speed are made to meet prevailing circumstances and changing conditions   |
|          | <b>5.5</b>   | Navigational manoeuvres are conducted within safe operational limits of vessel  |
|          | <b>5.6</b>   | Details of passage are recorded in vessel log according to regulations  |
|          | <b>5.7</b>   | Variations to planned route are documented prior to archiving, on completion of voyage  |
| <b>6</b> | <b>Manage emergencies</b>                                    |   |
|          | <b>6.1</b>   | Bridge team is taken charge of when called to bridge in response to an emergency  |
|          | <b>6.2</b>   | Safety management system (SMS) procedures are implemented when taking over bridge watch from officer of the watch   |
|          | <b>6.3</b>   | Appropriate action is taken to initiate search and rescue (SAR) procedures on receipt of distress signal  |
|          | <b>6.4</b>   | Advice is provided to watchkeeper regarding response to emergency situations  |
| <b>7</b> | <b>Maintain navigational equipment</b>                       |   |
|          | <b>7.1</b>   | Navigational charts, nautical publications and related documentation are stored and maintained according to organisational procedures   |
|          | <b>7.2</b>   | Inventory of navigational charts, nautical publications and related documentation is established and kept according to organisational procedures                                  |
|          | <b>7.3</b>   | Navigational charts, nautical publications and related documentation are ordered and updated from relevant sources to ensure available data needed for voyage planning is current |
|          | <b>7.4</b>   | Performance checks and tests of navigation position fixing instruments and systems are carried out according to organisational procedures and manufacturer instructions           |
| <b>8</b> | <b>Prepare reports and documentation relevant to passage</b> |   |
|          | <b>8.1</b>   | Passage information is recorded and reported in required format, style, structure and timeframe   |

- 8.2** All information is recorded and reported according to legislative requirements
- 8.3** Technology is used to store and retrieve information

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARH012 Manage the navigation of a vessel 500 gross tonnage or more.

## **Links**

Companion Volume implementation guide can be found in VetNet -

# Assessment Requirements for MARH021 Manage the navigation of a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing accuracy of fix properly
- calculating positions, courses, distances and time correctly within accepted accuracy standards for navigational equipment
- calculating tidal conditions to determine under keel clearances and air drafts
- choosing the most appropriate primary method for fixing vessel position given the prevailing circumstances and conditions
- conducting performance checks of navigation position fixing instruments and systems
- determining and allowing for errors of magnetic and gyrocompass
- determining position in all conditions by celestial observations and terrestrial observations, and using modern navigational aids within accepted accuracy levels
- ensuring currency of relevant legislative and regulatory knowledge
- ensuring currency of relevant reference material
- enumerating the equipment, charts and nautical publications required for the voyage and appropriate to the safe conduct of the voyage
- establishing and maintaining watchkeeping arrangements in compliance with international regulations and guidelines so as to ensure the safety of navigation, protection of the marine environment, and the safety of the vessel and persons onboard
- identifying all potential navigational hazards accurately
- planning, navigating and monitoring a voyage for all conditions, including:
  - areas of extensive tidal effects
  - ice
  - meteorological conditions
  - restricted visibility
  - restricted waters
  - traffic separation schemes
  - vessel traffic service (VTS) areas
- recognising faulty equipment and readings, and taking appropriate action

- recognising problems that may be experienced when planning and navigating a passage, and taking appropriate action
- reporting according to General Principles for Ship Reporting Systems and VTS procedures
- supporting reasons for planned route using facts and statistical data obtained from relevant sources and publications
- undertaking routeing according to the General Provisions on Ships' Routeing
- using chart catalogues, charts, nautical publications and vessel particulars to plan and navigate a passage.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian Maritime Safety Authority (AMSA) International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW) including the Manila Amendments
- bridge watchkeeping equipment and systems, including:
  - Bridge Navigational Watch Alarm Systems (BNWAS)
  - voyage data and simplified data recorder
- content, application and intent of bridge resource management principles to be observed in keeping a navigational watch
- content, application and intent of the International Regulations for Preventing Collisions at Sea (COLREGs)
- emergencies, including:
  - engine failure
  - failure of navigational equipment
  - potential close quarter situations
- General Principles for Ship Reporting Systems
- General Provisions on Ships' Routeing
- heightened risk situations, including:
  - adverse weather
  - areas of extensive tidal effects
  - ice
  - restricted visibility
  - restricted waters
  - traffic separation schemes
  - VTS areas
- integrated bridge systems
- logbooks and voyage records
- method and frequency of checks for errors of magnetic and gyrocompasses to ensure accuracy of information
- methods for fixing position of a vessel

- modern electronic navigational aids, their operating principles, limitations, sources of error, detection of misrepresentation of information and methods of correction to obtain accurate position fixing
- non-routine problems, including:
  - equipment failure
  - extreme weather conditions that would impact a vessels position
  - potential collision and emergency situations
  - steaming in company
- operation and care of the main types of gyrocompass
- position determination, including:
  - azimuth mirrors
  - chronometer
  - doppler and electronic logs
  - echo sounders
  - electronic chart system (ECS) and electronic chart display and information system (ECDIS)
  - integrated navigation systems
  - magnetic and gyrocompasses and repeaters
  - radar and other electronic navigation devices
- principles of magnetic and gyrocompasses
- problems experienced when fixing vessel position and appropriate action and solutions
- procedures for filing and maintaining navigational charts, nautical publications and related documentation in serviceable condition
- procedures for swinging a vessel to determine deviation
- relevant AMSA Marine Orders
- requirements for effective passage planning, including contingency planning
- systems under control of the master gyro
- vessel reporting systems and their use in planning and conducting a voyage
- voyage planning and navigation for all conditions by acceptable methods of plotting ocean tracks
- VTS procedures
- watchkeeping arrangements include:
  - clear instruction to watchkeeping officers in the Standing Orders from the Master
  - establishing a proper lookout separate from the helmsman
  - fatigue management strategies
  - watch handover procedures
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals, including:
  - annual and weekly notices to mariners
  - nautical almanac
  - radio signals, light lists, sailing directions, tide tables and chart catalogues
  - ship reporting systems and requirements
  - ship's routing information
  - SMS procedures
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARH022 Plan and conduct a passage and determine position**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release 6.0.

## **Application**

This unit involves the skills and knowledge required to plan and conduct a passage, determine position on a vessel using a range of bridge equipment, and evaluate meteorological information for passage planning.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Watchkeeper Deck.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency-National Law) 2013.

Blue Waters Qualifications:

- This unit is one of the requirements to obtain AMSA certification as a Master of a commercial vessel less than 500 gross tonnage (GT) or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

H – Navigation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Plan passage

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Navigational charts, nautical publications and related documentation are selected for the area of navigation and corrected according to the latest information available
- 1.2 Information from charts and publications is interpreted and applied to accurately identify potential navigational hazards relevant to the proposed voyage
- 1.3 State of the tide at specified locations is determined and findings are applied to the passage plan
- 1.4 Route for voyage is determined and critical points along the proposed route of voyage are identified and plotted
- 1.5 Accurate calculations and measurements of navigational information are made
- 1.6 Meteorological information is obtained and interpreted, and weather and sea condition hazards relevant to the proposed voyage are identified prior to departure
- 1.7 Route is modified, as required, to take into account weather and sea condition hazards
- 1.8 Planned route for voyage is recorded according to organisational and regulatory requirements

- |   |   |
|---|---|
| <b>2 Conduct passage</b>  | <ul style="list-style-type: none"><li><b>2.1</b> Mode of steering is selected appropriate for the prevailing weather, sea and traffic conditions and intended manoeuvres</li><li><b>2.2</b> Measurements and observations of sea and weather conditions are used to determine vessel speed and direction</li><li><b>2.3</b> Information from bridge equipment is interpreted to identify navigational hazards and fix vessel position</li><li><b>2.4</b> Alterations to vessel course or speed are made to meet prevailing circumstances and changing conditions</li><li><b>2.5</b> Navigational manoeuvres are conducted within safe operational limits of vessel</li><li><b>2.6</b> Details of passage are recorded in vessel log according to regulations</li><li><b>2.7</b> Variations to planned route are documented prior to archiving on completion of the voyage</li></ul>                               |
| <b>3 Fix vessel position</b>  | <ul style="list-style-type: none"><li><b>3.1</b> Primary position fixing method is selected according to prevailing circumstances and conditions</li><li><b>3.2</b> Position is fixed using selected method and information derived from relevant wheelhouse equipment</li><li><b>3.3</b> Position is determined within limits of acceptable instrument/system errors</li><li><b>3.4</b> Position is recorded on a navigational chart according to regulatory requirements</li><li><b>3.5</b> Fixes are taken at time intervals appropriate for prevailing navigational conditions</li><li><b>3.6</b> Reliability of information obtained from primary method of position fixing is checked at appropriate intervals</li><li><b>3.7</b> Performance checks of position fixing instruments and wheelhouse equipment are carried out according to organisational procedures and manufacturer instructions</li></ul> |
| <b>4 Determine appropriate action to take with respect to plotted</b> | <ul style="list-style-type: none"><li><b>4.1</b> Assessment of the set, drift and leeway being experienced by the vessel is made</li></ul>  |

## position

- |          |  |   |
|----------|--|---|
|          | <b>4.2</b>                                     | Course is adjusted to maintain or resume planned route where the position indicates a deviation has occurred  |
|          | <b>4.3</b>                                     | Dead reckoning (DR) and/or estimated position (EP) is projected along planned route according to the course made good between previously observed positions |
| <b>5</b> | <b>Analyse navigational system performance</b> |   |
|          | <b>5.1</b>                                     | Theoretical performance of navigational system is determined  |
|          | <b>5.2</b>                                     | Measurement equipment is selected, and checks and tests are conducted   |
|          | <b>5.3</b>                                     | Data is analysed and theoretical performance is checked with actual performance   |
|          | <b>5.4</b>                                     | Significance of variation between theoretical and actual performance is determined  |
|          | <b>5.5</b>                                     | Appropriate action is taken to bring performance to acceptable instrument/system errors   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARH008 Plan and conduct a passage.

## Links

Companion Volume implementation guide can be found in VetNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARH022 Plan and conduct a passage and determine position**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accurately measuring and observing weather conditions
- accurately preparing calculations and measurements of navigational information
- adjusting steering controls for optimum performance
- calculating courses using plane, Mercator and great circle sailing (GCS) methods
- changing over from manual to automatic control and vice versa
- checking reliability of information obtained from primary method of position fixing at appropriate intervals
- correctly interpreting and applying meteorological information
- determining errors in magnetic and gyrocompasses, and correctly applying to courses and bearings
- determining errors of magnetic and gyrocompasses using celestial and terrestrial means, and allowing for such errors
- determining vessel position by use of:
  - aids to navigation, including lighthouses, beacons and buoys
  - dead reckoning (DR), taking into account winds, tides, currents and estimated speed
  - electronic navigational aids
  - landmarks
  - rising and dipping distances of lights and the use of horizontal angles
- determining vessel position within the limits of acceptable instrument/system errors
- estimating position using DR
- interpreting nautical charts and publications, including symbols and other chart information
- maintaining charts and publications by applying up-to-date corrections to both paper and electronic charts and publications
- operating echo-sounders and applying the information correctly
- producing accurate and reliable information
- reading the aneroid barometer and interpreting the information obtained
- selecting and applying primary position fixing method, including:
  - celestial observations
  - radar ranges or bearings

- radio navigation aids
- running fix
- simultaneous bearings or transits of coastal features
- soundings to determine position
- terrestrial observations
- selecting mode of steering most suitable for prevailing weather, sea and traffic conditions and intended manoeuvres, including:
  - automatic pilot
  - electric systems
  - hydraulic systems
- using and interpreting information obtained from shipborne meteorological instruments
- using celestial bodies to determine vessel position
- using navigational charts, nautical publications and related documentation, including:
  - Nautical Almanac
  - nautical tables
  - Notices to Mariners
  - paper charts
  - radio navigational warnings
  - sailing directions
  - temporary warning notices
  - tide tables
  - vessel routing information
  - weather reports and warnings.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- celestial observations and calculations, including:
  - celestial sphere and equinoctial system of co-ordinates
  - compass error using azimuth and amplitude
  - daily motion and horizontal system of co-ordinates
  - hour angle
  - latitude by meridian altitude
  - pole star observations
  - sextant and altitude corrections
  - solar system
  - time and equation of time
- characteristics of the various weather systems, reporting procedures and recording systems
- charted information, including that in the title block, zones of confidence diagrams and

datums

- compass error from transit bearings or by bearings taken from a known position
- times and heights of high and low water from Australian or local tide tables for primary and secondary ports and the relevance of chart datum
- effects of current and leeway on the course and speed of the vessel (without calculations)
- finding the variation from the chart
- fixing vessel position by:
  - radar ranges and bearings
  - simultaneous bearings, transits of coastal features, and running fix
- hazards, including:
  - restricted visibility
  - shallow water
  - traffic
  - unlit beacons
- interpreting the set and drift of the current from information available on the chart
- maintaining information in a navigational log and voyage records
- measuring distance on a chart
- meteorological instruments and their use
- meteorological terms
- nautical charts and publications
- navigation systems, performance checks and tests to comply with manufacturers' recommendations and good navigation practice
- plane, Mercator and GCS concepts and calculations
- principles of magnetic and gyrocompasses and fluxgate compass
- relationship between compass, magnetic, true and gyro-courses and bearings
- relative bearings
- selection of suitable points for bearings
- sources of weather forecasts and the interpretation of that information
- steering control systems, including operating procedures
- theory of tides
- use and limitations on the use of electronic position fixing equipment, including:
  - augmented satellite systems
  - enhance loran-C system
  - global navigation satellite system (GNSS) and Galileo
  - global navigation system (GNS) and global positioning system (GPS)
  - loran-C system
- use of a deviation card
- using a single position line to assist in clearing dangers
- using modern electronic navigational aids to determine vessel position
- using meteorological information available, including:
  - atmospheric pressure

- cloud precipitation
- recording and reporting weather observations
- structure of depressions
- tropical revolving storms and other pressure systems
- visibility
- weather services for shipping
- wind and other pressure systems over the ocean
- using soundings in determining position
- using terrestrial observations to determine vessel position individually or in combination with other methods
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations, an Australian Maritime Safety Authority (AMSA)-approved simulator or scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARH023 Use of electronic chart display and information system (ECDIS) to maintain the safety of navigation**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to maintain safe navigation of a commercial vessel using an electronic chart display and information system (ECDIS).

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

## **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following Standards of Training, Certification and Watchkeeping (STCW) provisions:

- STCW Reg II/1 & II/2, Code Section A-II/1 and A-II/2, Tables A-II/1 and A-II/2.

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training

### **Near Coastal Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

### **Blue Waters Qualifications:**

- This unit is one of the requirements to obtain AMSA certification as a Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck. and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of

## Training, Certification and Watchkeeping for Seafarers (STCW).

### Pre-requisite Unit

Not applicable.

### Competency Field

H – Navigation

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Set up an ECDIS

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** ECDIS is initialised and programmed with own vessel data

**1.2** Operational performance and accuracy of ECDIS is confirmed

**1.3** Settings and values are adjusted to suit conditions for passage planning and navigation

**1.4** Means of providing additional information is correctly interfaced with ECDIS

#### 2 Use an ECDIS for passage planning and navigation

**2.1** ECDIS is used to assist in passage planning and the conduct of navigation

**2.2** Information on ECDIS is monitored to ensure safe navigation

**2.3** Information obtained from ECDIS is interpreted and analysed taking into account limitations of equipment, all connected sensors and prevailing circumstances and conditions

- 2.4**      Position of vessel is confirmed by alternative means
  - 2.5**      Safety of navigation is maintained through adjustments made to vessel course and speed
  - 2.6**      System and position alarms are responded to, to maintain safety of navigation
  - 2.7**      Situational awareness is maintained while using ECDIS and other bridge equipment
- 3      Maintain data**
  - 3.1**      Data produced by ECDIS that should be retained to conform with organisational procedures and regulatory requirements is identified
  - 3.2**      Data is stored electronically or in hard copy as required by organisational procedures and regulatory requirements
  - 3.3**      Security and access requirements for data are adhered to in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARH009 Use an electronic chart display and information system to navigate safely.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARH023 Use of electronic chart display and information system (ECDIS) to maintain the safety of navigation**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adjusting settings and values to suit present conditions, including:
  - alarm parameters for anti-grounding
  - back-up arrangements
  - chart update status
  - completeness of chart data
  - proximity to contacts and special areas
- applying relevant legislation, regulations and guidelines
- communicating in a clear concise manner and at all times
- conducting tests for malfunctions, including functional self-testing and interpreting the test results
- confirming vessel position by alternative means
- ensuring integrity of back-up systems
- ensuring integrity of data
- maintaining situational awareness while using electronic chart display and information system (ECDIS), including:
  - chart data and scale selection
  - contact detection and management
  - integrity of sensors
  - safe water and proximity of hazards
  - set and drift
  - suitability of route
- monitoring information on ECDIS, including:
  - chart data displayed
  - contacts
  - mode and orientation
  - own position
  - radar overlay functions

- radar tracking
- route monitoring
- sea area display
- user-created information layers
- operating ECDIS when interfaced with automatic identification system (AIS) and interpreting AIS data
- planning a passage on a display using ECDIS
- safely monitoring and adjusting information
- setting up initial display and maintaining display
- setting up, operating, interpreting and analysing information, including:
  - adequate and up-to-date electronic charts
  - back-up systems
  - electronic position fixing system
  - gyro and log
  - raster charts
  - uninterruptable power supply (UPS)
  - vector electronic chart systems
  - when radar overlay is in use
- storing data electronically, including:
  - chart correction information
  - electronic navigational chart (ENC) source, date and edition
  - vessel voyage details
- using functions that are integrated with other navigation systems in various installations
- using ECDIS targets, charts and systems
- using settings efficiently to ensure conformance to operational procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- AIS input
- dangers of over-reliance
- differences between ECDIS, electronic chart system (ECS) and raster chart display system (RCDS)
- differences between vector and raster charts
- elements of ECDIS, including:
  - basic navigation
  - chart data
  - chart organisation
  - chart quality and accuracy
  - correct and incorrect use

- heading and drift vectors
- position source
- purpose of ECDIS
- value to navigation
- vessel position
- workstation start, stop and layout
- ECDIS route planning and monitoring, including:
  - additional navigational information
  - checking plan for safety
  - route planning by table and chart
  - route schedule
  - track limits
  - user charts in route planning
  - vessel manoeuvring characteristics
- ECDIS targets, charts and systems, including:
  - AIS functions
  - archiving ECDIS data and data logging
  - automatic radar plotting aid (ARPA)/radar overlay
  - installing chart corrections
  - procuring and installing chart data
  - system reset and back-up
- ECDIS responsibility and assessment, including:
  - effective navigation with ECDIS
  - responsibilities under relevant legislation, regulations and guidelines
- functions of ECDIS required by performance standards in force
- principles, capability and limitations of ECDIS operations
- process used to correct and update charts by manual, semi-automatic and automatic systems
- radar/ ARPA input
- requirements for voyage recording
- significance of chart alarms and indicator warnings
- system and position alarms, including:
  - approach to waypoint, critical point, navigation danger and other ships
  - chart alarms
  - depth and contour alarms
  - mode losses
  - primary failure
- use of ECDIS in emergency situations
- watchkeeping with ECDIS, including:
  - changing the settings
  - chart information

- chart scaling
- information layers
- ports and data feeds
- sensors
- work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- simulator exercises for:
  - coastal waters
  - coastal and restricted waters
  - coastal waters and restricted waters
  - open sea
  - restricted waters
- simulator exercises for:
  - coastal waters and restricted waters (navigation alarms and route scheduling)
  - coastal waters (chart display settings)
  - coastal and restricted waters (underway ECDIS navigation assessment)
  - open sea (basic integrated navigation)
  - restricted waters (advanced integrated navigation with ECDIS)
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARH024 Use of radar and other bridge equipment to maintain safety of navigation**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to maintain safe navigation of a vessel through the use of radar, automatic radar plotting aids (ARPAs) and other bridge equipment to determine vessel position.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training

#### **Near Coastal Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

#### **Blue Waters Qualifications:**

- This unit is one of the requirements to obtain AMSA certification as a Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

H – Navigation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1. Use radar and ARPA to safely navigate**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Radar is operated according to manufacturer instructions to produce data on position of vessel, other vessels and fixed objects
- 1.2** Radar plot is constructed on radar plotting sheet and automatic plotting devices are initialised
- 1.3** Systematic radar and/or ARPA observations of vessels in the vicinity are made and risk of collision is determined
- 1.4** Radar data is used to obtain a position fix for vessel using electronic bearing lines and variable range markers
- 1.5** Radar bearings are corrected for vessel heading and compass error, as appropriate
- 1.6** Adjustments are made to vessel course and speed to maintain safety of navigation
- 1.7** Manoeuvring signals are made at appropriate time according to regulations
- 1.8** ARPA information is analysed and interpreted taking into account limitation of equipment and prevailing circumstances and conditions

- |  |   |
|--|---|
| <b>2 Set up bridge equipment</b>                 | <b>2.1</b> Bridge equipment is initialised and displays are set up and maintained   |
|  | <b>2.2</b> Operational performance and accuracy of bridge equipment is confirmed, and appropriate action is taken when performance is out of limits                   |
|  | <b>2.3</b> Bridge navigation watch alarm system (BNWAS) and voyage data recorder are activated according to manufacturer requirements and organisational procedures   |
|  | <b>2.4</b> Any false echoes and misrepresentations are detected, identified and rejected  |
| <b>3 Use bridge equipment to safely navigate</b> | <b>3.1</b> Bridge equipment is safely and efficiently used to conduct navigation of vessel  |
|  | <b>3.2</b> Position of vessel is monitored during voyage to ensure planned passage is followed  |
|  | <b>3.3</b> Movements of vessels in the vicinity are monitored to ensure collision situations do not occur   |
|  | <b>3.4</b> Adjustments are made to vessel course and speed to maintain safety of navigation   |
|  | <b>3.5</b> Manoeuvring signals are made at appropriate time according to regulations  |
|  | <b>3.6</b> Bridge equipment is used and maintained according to manufacturer requirements and organisational procedures   |
| <b>4 Maintain navigational records</b>           | <b>4.1</b> Navigational data produced by bridge equipment that should be retained to conform with organisational procedures and regulatory requirements is identified |
|  | <b>4.2</b> Navigational data is stored electronically or in hard copy as required by organisational procedures and regulatory requirements                            |
|  | <b>4.3</b> Security and access requirements for data are adhered to according to organisational procedures  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARH010 Use bridge equipment to determine vessel position.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARH024 Use of radar and other bridge equipment to maintain safety of navigation**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating clearly and concisely at all times
- correctly interpreting and analysing information obtained from radar and automatic radar plotting aids (ARPAs) taking into account the limitations of equipment and prevailing circumstances and conditions
- correctly interpreting information received from other bridge equipment and applying appropriate corrections
- determining latitude by meridian altitude
- making adjustments to vessel course and speed to maintain safety of navigation
- making decisions to amend course or speed in a timely manner according to accepted navigation practice
- making manoeuvring signals at the appropriate time according to International Regulations for Preventing Collisions at Sea (COLREGs)
- planning and conducting celestial observations using a sextant and plotting a position
- taking action to avoid close encounter or collision according to COLREGs
- using navigational information to aid in command decisions.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ARPA system performance and accuracy, tracking capabilities, limitations and processing delays
- blind pilotage planning
- bridge navigational watch alarm systems (BNWAS), including:
  - alarms
  - carriage requirements
  - design
  - operational sequences
  - purpose

- course and speed of other vessels
- critical echoes, exclusion areas and trial manoeuvres
- detecting course and speed changes of other vessels
- detection of misrepresentation of information, false echoes, sea and rain clutter, racons and search and rescue transponders (SARTs)
- effect of changes in own vessel course and speed or both
- errors of magnetic compass and their function
- factors affecting performance and accuracy of radar and other navigational equipment
- fundamentals of radar and ARPA's
- ground and sea stabilisation and their effects on ARPA data
- identification of critical echoes
- COLREGs
- magnetic and gyrocompasses, including rate of turn gyro
- meeting overtaking vessels
- methods of position fixing using celestial observations with a sextant
- methods of target acquisition and their limitations
- misrepresentation. including:
  - compass errors
  - false echoes
  - incorrect radar settings for heading marker and range marker
  - incorrect setting up of electronic chart system (ECS) or electronic chart display and information system (ECDIS)
  - incorrect setting up of satellite navigation systems
  - satellite and differential satellite navigation system errors
  - sea and rain clutter returns
- navigational data, including:
  - navigation safety warning
  - recording of courses steered
  - weather and oceanographic reports
- parallel indexing
- plotting techniques and relative and true-motion concepts
- principal types of ARPA's, their display characteristics, performance standards and the consequences of over reliance on ARPA's
- principles of the magnetic compass and their correction
- range and bearing by radar
- sea and ground stabilisation and their effect on ARPA data
- setting up and maintaining displays on radar
- time, distance and bearing of closest point of approach of a closing vessel
- true and relative vectors, graphic representation of target information and danger areas
- use of operational warnings and system tests
- voyage data recorder and simplified voyage data recorder, including:
  - authorised access to data by personnel for investigations

- carriage requirements
- data items recorded
- data output interface
- data security and software
- design and operation
- purpose
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARJ008 Ensure compliance with pollution prevention requirements

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to monitor and ensure compliance with the International Convention for the Prevention of Pollution from Ships (MARPOL) and environmental management legislation.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Watchkeeper Deck.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organisation Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal or Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

### Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited), Master on a commercial

vessel less than 500 gross tonnage (GT) or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

J - Environment

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Confirm environmental management responsibilities**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Legislative and regulatory requirements, and approvals that apply to the vessel are interpreted

**1.2** Own scope of authority/responsibility for achieving specific environmental outcomes for the vessel and the roles of other key personnel is clarified

**1.3** Resources available to implement environmental management policies for the vessel are identified

#### **2 Develop a positive environmental reputation**

**2.1** Stakeholders, their relationship to the vessel and perceived attitudes about the vessel are identified

**2.2** Appropriate strategies are used to foster the trust and confidence of stakeholders

**2.3** Requests for information are responded to in the appropriate format and a timely manner

- |          |   |   |
|----------|---|---|
|          | <b>2.4</b>  | Difficult situations are identified and solutions are negotiated using a collaborative approach   |
|          | <b>2.5</b>  | Regular feedback is obtained and used to enhance positive relationships   |
| <b>3</b> | <b>Provide environmental management information and training</b>            |   |
|          | <b>3.1</b>  | Environmental management plans and recent incident reports are used to identify training needs of crew members  |
|          | <b>3.2</b>  | Information and training are developed and provided to ensure all crew members understand their environmental obligations/responsibilities                      |
|          | <b>3.3</b>  | Crew member understanding of environmental obligations/responsibilities for work areas and activities is confirmed  |
|          | <b>3.4</b>  | Effectiveness of the information and training is monitored and additional information/training is provided, as required   |
| <b>4</b> | <b>Assess environmental impacts and risks</b>                               |   |
|          | <b>4.1</b>  | Activities are reviewed to identify implications for environmental management   |
|          | <b>4.2</b>  | Potential risks and incidents that may cause harm to the environment are identified   |
|          | <b>4.3</b>  | Inspections and in situ measurements are conducted to quantify risks and impacts  |
|          | <b>4.4</b>  | Assessment of risks and impacts are reported according to organisational procedures   |
| <b>5</b> | <b>Ensure environmental monitoring and management plans are implemented</b> |   |
|          | <b>5.1</b>  | Environmental monitoring instruments are checked to ensure they are fully functioning   |
|          | <b>5.2</b>  | Specified environmental monitoring and inspections are conducted to check performance against environmental management requirements                             |
|          | <b>5.3</b>  | Additional monitoring/inspections are conducted after atypical events or requests from authorities to assess whether environmental management plan is operating |
|          | <b>5.4</b>  | Results for monitoring/inspections are analysed to identify significant trends, non-conformance and/or  |

		incidents
<b>6 Respond to environmental non-conformance and incidents</b>	<b>6.1</b>	Unusual situations, unexpected risks/hazards and potential/actual environmental incidents are recognised
	<b>6.2</b>	Organisational procedures for responding to environmental non-compliance and incidents are implemented to ensure prompt control and remediation
	<b>6.3</b>	Causes of non-compliance and incidents are investigated according to organisational procedures
	<b>6.4</b>	Findings are analysed to identify opportunities to improve work practices, environmental controls, crew training and/or management procedures
	<b>6.5</b>	Corrective/preventative actions are implemented to prevent recurrence of non-compliance and incidents, and to reduce risks
	<b>6.6</b>	Reports are completed according to organisational procedures
<b>7 Keep the Master informed about environmental performance</b>	<b>7.1</b>	Regular reports about environmental performance are provided
	<b>7.2</b>	Opportunities and recommendations for improvements are reported
	<b>7.3</b>	Master's advice is sought when challenges are beyond own scope of technical competence or when input from environmental specialist may be required
<b>8 Maintain environmental records</b>	<b>8.1</b>	Required records are prepared and maintained according to regulatory and organisational requirements
	<b>8.2</b>	Records are stored to enable easy access and review by authorised personnel according to regulatory and organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARJ003 Ensure compliance with environmental management legislation.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARJ008 Ensure compliance with pollution prevention requirements

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing, interpreting and applying regulatory requirements
- applying procedures for monitoring vessel operations and ensuring compliance with International Convention for the Prevention of Pollution from Ships (MARPOL) requirements are fully observed
- clearly explaining environmental management concepts, principles and procedures to others
- completing reports, including:
  - hazard near miss report form
  - monthly environmental report
  - non-conformance report form
  - regulatory agency reports
  - vessel incident investigation report
  - waste disposal logbooks
  - weekly environmental report
- maintaining accurate environmental records
- maintaining actions to ensure a positive environmental reputation
- monitoring the implementation of environmental management plans, policies and procedures, and specified work methods
- preparing records, including:
  - contractor and supplier information
  - digital photographs
  - environmental monitoring data
  - records of environmental non-conformance, incidents or significant impacts
  - records of monitoring equipment purchase, calibration, inspection, maintenance and service
  - records of training
  - records required by permit, approval or licence conditions
- regularly inspecting vessel for environmental risks and impacts
- responding to complaints and requests for information from authorities and authorised

personnel.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- anti-fouling systems
- anti-pollution procedures and all associated equipment
- ballast water management and their discharge criteria
- controlled discharge of oil
- environmental legislative/regulatory requirements and responsibilities relevant to the vessel
- environmental management and training information, including:
  - due diligence and duty to notify
  - environmental management actions and checklists, and methods/procedures for specific activities
  - incident management and reporting
  - introduction to vessel, environmental considerations and sources of environmental information
  - legislative requirements
  - licensing/compliance requirements
  - organisational environmental management policy
- environmental protection/management terminology, concepts and principles
- garbage management systems and anti-fouling systems
- garbage record book
- importance of proactive measures to protect the marine environment, including:
  - conventions and legislation adopted by various countries
  - MARPOL, all relevant Annexes and International Maritime Organization (IMO) circulars
- organisational environmental management plans, procedures, control measures and management actions for vessel
- organisational procedures for:
  - identifying and assessing environmental risks and impacts
  - managing stakeholder relations
  - responding to complaints and other environmental incidents
  - record management and reporting, including oil record book
- anti-pollution equipment, sewage plant, incinerator, comminutor and ballast water treatment plan
- precautions to be taken to prevent pollution of the marine environment, including:
  - Annexure I - oil
  - Annexure II - noxious liquid substances (NLS) in bulk
  - Annexure III - harmful substances carried by sea in packaged forms or in freight containers, portable tanks or road and rail tank wagons

- Annexure IV - sewage
- Annexure V - garbage
- Annexure VI - air pollution
- potential risks and incidents, including:
  - ballast water discharge
  - disposal of waste material, including sewage and garbage
  - over-side maintenance work
  - spill or release of hazardous chemicals/materials
- shipboard oil pollution emergency plan (SOPEP)
- shipboard marine pollution emergency plan
- stakeholders, including:
  - cargo owners
  - government officials
  - port authorities
- vessel characteristics and environmental issues, risks and impacts
- vessel response plan
- volatile organic compound (VOC) management plan
- work health and safety (WHS)/occupational health and safety (WHS/OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARK009 Manoeuvre a vessel up to 80 metres**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to manoeuvre a vessel less than 80 metres.

This includes manoeuvring vessel in normal conditions, manoeuvring vessel in adverse weather conditions, manoeuvring vessel in emergencies, and towing and being towed.

This unit applies to people working in the maritime industry in the capacity of Master on a range of vessels less than 80 metres.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 35 metres in length within the exclusive economic zone (EEZ)
- Master of a vessel less than 80 metres in length in inshore waters
- Chief Mate or deck watchkeeper on a vessel less than 80 metres in length within the EEZ.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 80 metres in length as defined in the National Standard for Commercial Vessels (NSCV) Part D.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

K – Manoeuvring Vessels

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Manoeuvre vessel in normal conditions

- 1.1 Features of vessel that relate to its handling characteristics are recognised
- 1.2 Adequate resources are organised prior to and during operations
- 1.3 Details of manoeuvres are communicated to relevant personnel clearly and concisely using standard maritime vocabulary
- 1.4 Situational awareness is maintained to ensure safe manoeuvres
- 1.5 Manoeuvres are completed in relevant conditions of tide and wind to meet passage requirements
- 1.6 Propulsion equipment is used and monitored to assist in completing manoeuvres safely
- 1.7 Appropriate alterations to vessel heading and power are made in response to operational environment
- 1.8 Safe operating limits of propulsion and steering systems are not exceeded

#### 2 Manoeuvre vessel in adverse weather conditions

- 2.1 Nature of adverse weather conditions is identified and implications for vessel operations are evaluated
- 2.2 Preparations are made and required precautions are taken to minimise risk and damage to vessel, personnel and time loss on passage
- 2.3 Manoeuvres are adjusted to allow for weather and sea conditions, and to keep vessel in safe water
- 2.4 Propulsion equipment is used and monitored to assist in completing actions safely
- 2.5 Heading is maintained within acceptable limits
- 2.6 Appropriate allowance is made for effects of deadweight, draft, trim, speed and underwater keel

- clearances during turning circles and stopping distance
- 2.7** Safe operating limits of propulsion and steering equipment are not exceeded
- 2.8** Situational awareness is maintained at all times to review actions and ensure safety of vessel
- 3 Manoeuvre vessel in emergencies**
- 3.1** Nature of emergency is established and required action is determined
- 3.2** Risks to vessel and safety of persons onboard are assessed and safety of required action is confirmed
- 3.3** Details of action are communicated to relevant personnel clearly and concisely using standard maritime vocabulary
- 3.4** Appropriate manoeuvres are made during emergency to maintain safety of vessel and those onboard, and any other vessels or persons involved
- 3.5** Propulsion equipment is used and monitored to assist in completing actions safely
- 3.6** Safe operating limits of propulsion and steering equipment are not exceeded
- 3.7** Special handling techniques are correctly applied during launching of boats or life rafts and rescues of persons overboard
- 4 Tow and be towed**
- 4.1** Preparations for towing are safely made according to established nautical practice
- 4.2** Correct towing procedures and precautions are applied when towing and being towed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARK003 Manoeuvre a vessel up to 80 metres.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARK009 Manoeuvre a vessel up to 80 metres

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- anchoring a vessel
- determining required action for a range of emergency situations
- handling a disabled or partially disabled vessel
- issuing helm and engine orders
- maintaining situational awareness
- manoeuvring a vessel in normal and emergency situations
- manoeuvring a vessel through:
  - anchor work
  - astern movements
  - berthing and leaving a berth
  - coming to and leaving a mooring
  - person overboard
  - positioning vessel to safely launch boats or life rafts in bad weather
  - steering astern through an 's' configuration
  - turn short around
  - turning a vessel across the tide across the wind
- manoeuvring a vessel to embark or disembark a pilot
- manoeuvring in shallow water
- preparing for towing, including:
  - ensuring appropriate lights and shapes for the tow are available and in working order
  - ensuring means of communication between the two vessels is available
  - ensuring tow line is of sufficient length
  - ensuring tow ropes are in good condition and of adequate strength for proposed tow
  - making appropriate reports to authorities
  - making provision for rapid slipping of tow in emergency situations
  - making tow fast to towing vessel to ensure steerage is maintained
  - preparing messenger ropes for passing tow lines.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- effects of displacement and planning hulls
- effects of inboard propulsion units
- effects of rudders and propellers
- effects of deadweight, draught, trim, speed, under keel clearance, tide and current on vessel's stopping distance and rate of turn
- factors that could adversely affect vessel safety during operations
- features of a vessel that relate to its handling characteristics
- interaction with passing vessels, squat, shallow water and banks effect
- launching boats or life rafts
- lessening drift and use of oil
- manoeuvres assisting a vessel or aircraft in distress
- manoeuvres to:
  - beach and re-float the vessel
  - berth in a pen
  - crossing a bar
  - embarking and disembarking a pilot
  - means of keeping a vessel out of a trough
  - take on board survivors from lifeboats and life rafts
- nature of emergencies, including:
  - collision
  - damage to vessel
  - disabled or partially disabled vessel
  - fire
  - grounding
  - loss of steering gear
  - person overboard
- precautions in manoeuvring or launching boats or life rafts in bad weather
- procedures for towing and being towed
- radio communications
- requirements for entering, departing and crossing a traffic separation scheme
- use of a sea anchor
- vessel in adverse weather conditions, including:
  - bad weather
  - fog and restricted visibility
  - following and quartering seas
  - heavy swell and surf
  - wind and sea conditions that may affect safety of vessel

- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel greater than or equal to 12 metres in length
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# **MARK010 Manoeuvre and handle a ship in all conditions**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to issue orders to manoeuvre and handle and command navigation of a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- 

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as Master of a commercial vessel less than 500 gross tonnage (GT) or Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

K – Manoeuvring Vessels

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARK006 Manoeuvre a vessel 500 gross tonnage or more.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARK010 Manoeuvre and handle a ship in all conditions**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying constant-rate-of-turn techniques
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- basing all decisions concerning berthing and anchoring on a proper assessment of vessel manoeuvring and engine characteristics and the forces to be expected while berthed alongside or lying at anchor
- berthing and unberthing under various conditions of wind, tide and current with and without tugs
- determining the manoeuvring and propulsion characteristics of common types of vessels, with special references to stopping distances and turning circles at various draughts and speeds
- handling vessels in rivers, estuaries and restricted waters having due regard to the effects of current, wind and restricted water on helm response
- issuing helm and engine orders
- maintaining situation awareness
- making a full assessment of possible effects of shallow and restricted waters, ice, banks, tidal conditions, passing vessels and own vessel bow and stern wave while under way so that the vessel can be safely manoeuvred under various conditions of loading and weather
- managing and handling vessels in heavy weather, including assisting a vessel or aircraft in distress, towing operations, keeping unmanageable vessel out of trough of the sea, lessening drift and using oil
- manoeuvring in shallow water, including the reduction in under-keel clearance caused by squat, rolling and pitching
- using propulsion and manoeuvring systems
- using remote controls of propulsion plant and auxiliary machinery.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alterations, including:
  - alterations of course
  - reduction in speed
- effects of current, wind and restricted water on helm response
- features of a vessel that relate to its handling characteristics
- importance of navigating at reduced speed to avoid damage caused by own vessel bow wave and stern wave
- manoeuvres, including:
  - application of constant-rate-of-turn techniques
  - berthing and unberthing under various conditions of wind, tide and current with and without tugs
  - choice of anchorage: anchoring with one or two anchors in limited anchorages and factors involved in determining the length of anchor cable to be used
  - determining the manoeuvring and propulsion characteristics of common types of vessels, with special references to stopping distances and turning circles at various draughts and speeds
  - dragging anchor and clearing fouled anchors
  - dry-docking, both with and without damage
  - handling vessel in rivers, estuaries and restricted waters with due regard to the effects of current, wind and restricted water on helm response
  - importance of navigating at reduced speed to avoid damage caused by own vessel bow wave and stern wave
  - interaction between passing vessel and own vessel and nearby banks
  - managing and handling vessels in heavy weather, including assisting a vessel or aircraft in distress, towing operations, means of keeping unmanageable vessel out of trough of the sea, lessening drift and use of oil
  - manoeuvres when approaching pilot stations and embarking and disembarking pilots with due regard to weather, tide, head reach and stopping distances
  - manoeuvring in shallow water, including the reduction in under-keel clearance caused by squat, rolling and pitching
  - methods of taking on board survivors from rescue boats and survival craft
  - practical measures to be taken when navigating in or near ice or in conditions of ice accumulated on board
  - precautions in manoeuvring to launch rescue boats or survival craft in bad weather
  - procedures for and anchoring in deep and shallow water
  - turning a vessel on a reciprocal track to rescue a person overboard
  - using propulsion and manoeuvring systems, including various types of rudder
  - vessel and tug interaction
- manoeuvres when towing or under tow
- manoeuvring and propulsion characteristics of common types of vessels
- means of keeping an unmanageable vessel out of trough of the sea, lessening drift and use of oil

- nature of emergencies, including:
  - beaching
  - cargo shift
  - collision
  - damage to the vessel
  - disabled or partially disabled vessel
  - fire
  - grounding
  - loss of steering gear, including rudder
  - person overboard
- operational environment, including:
  - bank effect
  - conditions of loading
  - marine park areas
  - passing vessels
  - shallow and restricted waters
- orders, including:
  - communications with shore
  - embarking or disembarking a pilot
  - engine
  - helm
  - preparation for being towed or towing another vessel
  - preparation for taking tug lines
  - running mooring lines
- procedures for entering and leaving traffic separation zones
- reduction in under-keel clearance caused by squat, rolling and pitching
- situational awareness, including:
  - berthing and unberthing with tugs
  - choice of anchorage
  - dry-docking
  - effects of current, wind and restricted waters on helm response
  - head reach
  - in or near ice or ice accumulation on board
  - launching lifeboats or survival craft
  - load conditions
  - own vessel bow wave and stern wave
  - pilot boarding grounds
  - requirements of the manoeuvre
  - rivers, estuaries and restricted waters
  - safe water

- shallow water
- stopping distances and turning circles
- taking onboard survivors from lifeboats or survival craft
- tide
- traffic operation schemes
- weather conditions
- use of propulsion and manoeuvring systems
- use of, and manoeuvring in or near, traffic separation schemes (TSS) and in vessel traffic service (VTS) areas
- vessel and tug interaction
- vessel handling characteristics, including:
  - effects of single or twin screw
  - effects when moving astern
  - stopping ability
  - use of controllable pitch propeller (CPP)
- vessel resources, including:
  - bow and stern thrusters
  - communications equipment
  - engine control systems
  - helm and rate of turn indicators
  - personnel
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment include access to:

- relevant documentation, including workplace procedures, regulations, codes of practice and operation manuals

- tools, equipment and relevant personal protective equipment (PPE) currently used in industry.

# MARK011 Manoeuvre the ship

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to perform manoeuvres on a ship in all operating conditions and in emergencies.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial ship less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT) in any operating area
- Watchkeeper Deck.

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

### Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 500 gross tonnage (GT) or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

K – Manoeuvring Ships

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Manoeuvre ship in normal operations**

- 1.1** Ship heading is maintained within acceptable limits to meet the requirements of the operating situation
- 1.2** Alterations of heading and power are smooth and controlled
- 1.3** Suitable mode of steering is selected for the manoeuvre to meet the requirements of the operating situation
- 1.4** Constant rate of turn techniques are used to achieve constant radius turns during manoeuvres
- 1.5** Safe operating limits of ship propulsion, steering and power systems are not exceeded in normal manoeuvres

#### **2 Make adjustments to ship course and speed to maintain safe navigation**

- 2.1** Effects of operational environment on ship performance are evaluated at regular intervals
- 2.2** Implications of the changed operational environment on ship handling are assessed
- 2.3** Appropriate alterations to ship heading and power are made in response to the assessment of the operational environment

#### **3 Manoeuvre ship during adverse weather**

- 3.1** Impending adverse weather conditions are identified and implications for ship operations are evaluated
- 3.2** Preparations are made to minimise risk and damage to ship and personnel

- |          |                                      |   |
|----------|--------------------------------------|---|
|          | <b>3.3</b>                           | Communications are made with engine room to ensure main engines are readied for manoeuvring |
|          | <b>3.4</b>                           | Ship heading and power is maintained in response to adverse weather and sea conditions      |
| <b>4</b> | <b>Manoeuvre ship in emergencies</b> |   |
|          | <b>4.1</b>                           | Nature of emergency is established and initial action is taken                              |
|          | <b>4.2</b>                           | Risk to the ship and the safety of persons onboard is assessed                              |
|          | <b>4.3</b>                           | Appropriate manoeuvres are made during the emergency to maintain the safety of the ship     |
|          | <b>4.4</b>                           | Propulsion equipment is used and monitored to assist in completing actions safely           |
|          | <b>4.5</b>                           | Safe operating limits of propulsion and steering equipment are not exceeded                 |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARK004 Perform basic vessel manoeuvres.

## Links

Companion Volume implementation guide can be found in VetNet -

# Assessment Requirements for MARK011 Manoeuvre the ship

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- manoeuvring a ship:
  - in bad weather
  - in heavy swell
  - for the rescue of person overboard
  - in shallow water
  - recognising emergency situations
  - through coming to and leaving a mooring
  - to and from anchor
- operations, including the following:
  - handling a disabled or partially disabled ship
  - implementing anchoring and berthing procedures
  - issuing helm and engine orders
  - maintaining situational awareness
- selecting suitable mode of steering, including:
  - automatic pilot
  - emergency steering
  - manual steering.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communication techniques with the following:
  - bridge personnel and berthing stations
  - engine room
  - helmsman
  - tugs and pilot
  - vessel traffic services (VTS)

- effects of deadweight, draught, trim, speed and under-keel clearance on turning circles and stopping distances
- effects on ship handling of wind, currents and bottom topography
- features of a ship that relate to its handling characteristics
- manoeuvring and engine characteristics for various ships
- manoeuvring problems for ships and appropriate actions and solutions
- manoeuvring procedures in and near traffic separation schemes and ship traffic service areas
- methods for controlling ship speed and direction
- operational environment, including:
  - designated anchorages
  - designated shipping areas
  - head reach
  - heavy traffic areas
  - ice
  - marine park areas
  - safe water
  - shallow and restricted waters
  - stopping distances
  - tide
  - traffic separation zones
  - weather
- procedures and manoeuvres for the rescue of person overboard
- procedures for turning a ship in various situations
- proper procedures for anchoring and mooring
- safe operating limits of propulsion and power systems, and steering equipment
- squat, shallow water, interaction and similar effects on ship handling
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or

may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARK012 Steer a vessel under direction of the Master**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to steer a vessel under the direction of the Master, complying with helm orders.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer - Deck on a range of vessels
- Integrated Rating
- Navigational Watch - Deck/Engine.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Deck, Integrated Rating or Navigational Watch - Deck/Engine and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers. (STCW)
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

K – Manoeuvring Vessels

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Steer a steady course within acceptable limits in normal conditions under the direction of the Master**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Features of vessel that relate to its handling characteristics are recognised

**1.2** Navigational equipment is used to steer a steady course

**1.3** Situational awareness is maintained to ensure safety of vessel

**1.4** Propulsion equipment is used and monitored to assist in steering a steady course within acceptable limits, having regard to the area of navigation and prevailing state of sea

**1.5** Safe operating limits of propulsion and steering equipment are not exceeded

**1.6** Automatic pilot and hand steering are used to steer a steady course, and course is altered smoothly and in a controlled way

**1.7** Helm orders are followed and effective communication maintained with the Master on matters relevant to the safety and integrity of the vessel

#### **2 Steer a vessel in adverse weather conditions under the direction of the Master**

**2.1** Nature of adverse weather conditions is identified and potential impact on the manoeuvrability of the vessel is determined and confirmed with the Master

**2.2** Propulsion equipment is used and monitored to assist in steering a steady course within acceptable limits, having regard to the area of navigation and prevailing state of sea

**2.3** Safe operating limits of propulsion and steering equipment are not exceeded

**2.4** Situational awareness is maintained at all times to

- review actions and ensure the safety of the vessel
- 2.5 Automatic pilot and hand steering are used to steer a steady course, and course is altered smoothly and in a controlled way
  - 2.6 Helm orders are followed and effective communication maintained with the Master on matters relevant to the safety and integrity of the vessel
- 3 Steer a vessel in emergencies under the direction of the Master**
- 3.1 Nature of the emergency is established and required action is determined and confirmed with the Master
  - 3.2 Helm orders are followed and effective communication maintained with the Master on matters relevant to the safety and integrity of the vessel
  - 3.3 Vessel is steered during the emergency to maintain the safety of the vessel and those onboard, and any other vessels or persons involved in the emergency
  - 3.4 Propulsion equipment is used under the direction of the Master and is monitored to assist in completing steering safely
  - 3.5 Safe operating limits of propulsion and steering equipment are not exceeded
- 4 Steer a vessel while towing and being towed under the direction of the Master**
- 4.1 Correct towing procedures and precautions are applied when towing and being towed in relation to helm orders
  - 4.2 Helm orders are followed and effective communication maintained with the Master on matters relevant to the safety and integrity of the vessel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARK005 Steer a vessel under direction of the Master.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARK012 Steer a vessel under direction of the Master**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- changing from automatic pilot to hand steering and changing from hand steering to automatic pilot
- ensuring working behaviour reflects relevant current legislative and regulatory requirements
- maintaining situational awareness at all times
- steering a vessel:
  - coming to and leaving a mooring
  - in bad weather
  - in fog and restricted visibility
  - in heavy swell and surf
  - in the vicinity of large vessels
  - in wind and sea conditions that may affect the safety of the vessel
  - when approaching and departing in anchorage
  - while towing and being towed.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate use and selection of personal protective equipment (PPE)
- effects on the overall operation of the vessel and on the steering characteristics of a vessel, including:
  - displacement and planning hulls
  - outboard and inboard propulsion units
  - rudders and propellers
  - trim and displacement
- features of a vessel that relate to its handling and steering characteristics, including:

- affect manoeuvrability
- effects of single or twin screw
- effects when moving astern
- rate of turn
- stopping ability
- use of controllable pitch propeller
- use of helm and rudder indicators
- relevant WHS/OHS requirements, work practices and pollution control regulation and policies
- use of magnetic and gyrocompasses as applied to the steering of a vessel.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARL038 Apply advanced principles of marine electrotechnology**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to apply advanced marine electrotechnology principles and to perform advanced electrical calculations.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

## **Competency Field**

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

- 1 Analyse circuits incorporating resistance, inductance and capacitive elements in alternating current (AC) and direct current (DC) circuits**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Mathematical problems involving resistor inductor (RL) and resistor capacitor (RC) combinations in DC circuits are solved
- 1.2** Mathematical problems involving resistive, inductive and capacitive reactance and overall circuit impedance in AC circuits are solved
- 1.3** Reasons why large power factors are desirable in AC circuits are explained
- 1.4** Mathematical problems related to power factor correction mechanisms are solved
- 1.5** Conditions for resonance in series and parallel RLC circuit combinations are analysed
- 1.6** Mathematical problems involving resonance in series and parallel RLC circuit combinations are solved
- 1.7** Calculations are performed to solve problems related to solve resistance, voltage drop, current and power in series and parallel circuits
- 1.8** Calculations are performed to solve problems related to temperature coefficient of resistance and change of resistance of a conductor with a

		change of temperature
2	<b>Apply complex number theory to analyse AC circuit performance</b>	<ul style="list-style-type: none"><li>2.1 J operator is explained</li><li>2.2 Rectangular notation of j operator is related to comparable trigonometric and polar notations</li><li>2.3 J operator is used in the addition and subtraction of phasors, applying the most appropriate notation to the solution of phasor problems involving current, voltage and impedance</li><li>2.4 Conductance, admittance and susceptance are distinguished from each other in terms of resistance, impedance and the j operator</li><li>2.5 Problems involving RL and RC elements in different circuit combinations using j operator theory are solved</li><li>2.6 Power in AC circuit applications using j operator theory is calculated</li></ul>
3	<b>Analyse operating principles of electrical instrumentation</b>	<ul style="list-style-type: none"><li>3.1 Mathematical calculations are performed to demonstrate how moving coil and moving iron instruments may have their ranges changed</li><li>3.2 Mathematical calculations are performed to demonstrate how dynamometer type wattmeters may have their measuring ranges extended</li><li>3.3 Construction, operating principles and functions of electrical meters are outlined</li><li>3.4 Principal methods and instruments used in resistance measurement are detailed</li><li>3.5 Resistance measurements are conducted and verified using</li></ul>

- appropriate electrical instrumentation
- 4 Analyse operating principles of DC generators**
- 4.1** Electromotive force (EMF) equation is applied to solve problems related to DC generators
  - 4.2** Losses that may occur in DC generators are analysed
  - 4.3** Appropriate parametric relationships for DC generator losses, together with expressions for output power and efficiency, are derived and associated numerical problems are solved
  - 4.4** Basic principles of DC armature winding techniques are explained
  - 4.5** Generator armature reaction is explained
  - 4.6** Expression for armature EMF is derived and applied to solve problems related to DC generators
  - 4.7** Commutator arcing and how this might be minimised or eliminated is explained
  - 4.8** Open circuit and load characteristic curves for separately excited, shunt and compound wound DC generators are derived
  - 4.9** Faraday's and Lenz's Laws are applied to solve problems relating to the electromagnetic induction of EMF and current
  - 4.10** Generation of EMF is illustrated by a simple, single loop conductor rotating in a uniform magnetic field and how this EMF may be tapped to an external circuit as either AC or DC is explained
- 5 Analyse operating principles of DC motors**
- 5.1** DC torque equation is applied to solve problems related to DC motors
  - 5.2** Losses that may occur in DC motors

are analysed

- 5.3 Appropriate parametric relationships for DC motor losses, together with expressions for output power and efficiency. are derived and associated numerical problems are solved
- 5.4 Speed equation for a DC motor is derived and corresponding characteristics for different winding configurations are sketched
- 5.5 Speed equation and characteristics of different DC motor configurations are applied to explain how DC motor speed may be controlled
- 5.6 Reasons for armature reaction and methods of compensating for its effects are identified
- 5.7 Reasons why DC motors need variable starting resistors are explained
- 5.8 Schematic circuits are prepared for separately excited, series, shunt and compound connected generators and motors to illustrate wiring arrangements used with DC machines

## **6 Compare operation of synchronous motors and generators**

- 6.1 Marine applications of synchronous motors and generators are identified
- 6.2 Mathematical expression for the magnitude and rotational speed of the magnetic field produced by a three phase supply is derived
- 6.3 Operating principles of synchronous motors are explained
- 6.4 Operation of synchronous motors and generators are compared and contrasted
- 6.5 Problems using phasor diagrams and mathematical expressions involving the effects of loads and excitation on

synchronous motors are solved

- 6.6** Advantages and disadvantages of AC synchronous motors and generators are analysed
- 6.7** How alternating electrical quantities may be represented by rotating phasors is illustrated and explained
- 6.8** Relationships between instantaneous, maximum, average and root mean square (RMS) values of sinusoidally alternating electrical quantities is derived
- 6.9** Mathematical problems are solved by applying relationships between instantaneous, maximum, average and RMS values of sinusoidally alternating electrical quantities
- 6.10** Construction features of the AC induction motor are explained
- 6.11** Expression for slip of an induction motor rotor is derived and applied to frequency of its rotor EMF and current
- 6.12** Expression for magnitude of rotor EMF and current is derived, taking into account distribution and pitch factors
- 6.13** Relationships between rotor torque, rotor losses and slip indicating factors that affect torque are outlined
- 6.14** Significance of torque/slip curves for an induction motor is explained
- 6.15** Relationship between starting torque and applied voltage is established and consequences of this upon starting methods are outlined

## 7

### Analyse operation of single and three phase transformers

- 7.1** Basic transformation ratio and EMF equation for an ideal transformer is derived

		<p><b>7.2</b> No load and on load phasor diagrams for an ideal transformer are constructed, with negligible voltage drop through its windings</p> <p><b>7.3</b> Causes of actual transformer losses are explained and relationships associated with the transformer equivalent circuit are derived</p> <p><b>7.4</b> Open circuit and short circuit tests are applied to calculate transformer efficiency and voltage regulation</p> <p><b>7.5</b> Problems related to the operation of autotransformers are solved</p>
<b>8</b>	<b>Analyse requirements for parallel operation of AC and DC generators</b>	<p><b>8.1</b> Conditions required for shunt, series and compound wound DC generators to operate in parallel are identified</p> <p><b>8.2</b> Numerical problems related to parallel operation of shunt, series and compound wound DC generators are solved</p> <p><b>8.3</b> Conditions required for AC generators to operate in parallel are identified</p> <p><b>8.4</b> Numerical problems related to parallel operation of AC generators are solved</p> <p><b>8.5</b> EMF equation for an AC generator is derived, taking into account distribution and pitch factors</p> <p><b>8.6</b> Voltage regulation for synchronous generator is defined</p> <p><b>8.7</b> Effect of power factor on load characteristic of an AC generator is illustrated</p>
<b>9</b>	<b>Explain how principles of electrolytic action apply to electrical cells and batteries</b>	<p><b>9.1</b> Kirchhoff's circuit laws are explained</p> <p><b>9.2</b> Calculations to solve problems involving currents, voltage drop and</p>

terminal potential difference for cells connected to form batteries in series and in parallel are performed

**9.3** Calculations to solve secondary cell charging and discharging problems are performed

**9.4** Calculations to solve problems related to the efficiency of cells are performed

## **10 Analyse a magnetic circuit**

**10.1** Key parameters of magnetic circuits are identified

**10.2** Formula for calculating the amount of flux generated by a multi-turn solenoid coil carrying a current to give the B/H relationship is applied

**10.3** Significance of the varying slopes in the B/H curves for a solenoid coil with air, cast iron, cast steel and mild steel cores is explained

**10.4** How a magnetic circuit may be created by using a toroidal core within the solenoid coil is demonstrated

**10.5** Calculations to solve problems relating to magnetic circuits using different materials in different parts of their cores, including air gaps, are performed

**10.6** Effect on flux density of applying an alternating magnetising force to an iron core is shown diagrammatically

## **11 Analyse operation of polyphase AC circuits**

**11.1** How three phase AC may be developed out of simple single phase AC is explained

**11.2** Voltage and current relationships between line and phase in both Star and Delta three phase connections are derived

**11.3** Standard Star-to-Delta and Delta-to-Star conversion relationships

for current and voltage are derived

**11.4** Numeric problems involving both balanced and unbalanced circuit loads are solved

**11.5** Relationships between kilowatt (kW), kilovolt-ampere (kVA) and kilovolt-ampere reactive (kVAr) for three phase AC circuits are derived

**11.6** Calculations are performed using the relationship between kW, kVA and kVAr to solve problems in three phase AC circuits

**12**                    **Analyse circuits that incorporate combinations of resistive, inductive and capacitive elements**

**12.1** Time constant for different circuit combinations subjected to DC EMFs is defined

**12.2** Calculations are performed to solve problems involving time constants in DC circuits with changing rates of current in resistive/inductive elements and changing voltages through resistive/capacitive circuit elements

**12.3** Differentiation is made between inductive reactance, capacitive reactance and impedance as applied to AC circuits

**12.4** Effects of inductive and capacitive reactance upon phasor relationships between applied AC voltage and current are shown

**12.5** Concept of total impedance is applied to solution of problems involving single phase AC quantities in the presence of both resistive/inductive and resistive/capacitive circuit elements, arranged in either series or parallel

**12.6** Power factor is defined and concepts of real and reactive power usage are applied to solution of problems

		involving RL and RC elements
<b>13</b>	<b>Describe basic operating principles of shipboard DC machinery</b>	<p><b>13.1</b> EMF equation for a DC generator to solve shipboard problems is applied</p> <p><b>13.2</b> Torque equation for a DC motor to solve shipboard problems is applied</p> <p><b>13.3</b> Expression linking back EMF parameters for a DC motor is derived and used to solve shipboard problems</p> <p><b>13.4</b> Various losses that can occur in DC motors and generators are calculated</p>
<b>14</b>	<b>Explain operating principles of basic electrical instrumentation</b>	<p><b>14.1</b> Schematic circuit diagrams are prepared that illustrate the main features and applications of moving coil and moving iron voltmeters and ammeters</p> <p><b>14.2</b> Schematic circuit diagrams are prepared that illustrate the main features and applications of air and iron cored dynamometer type wattmeters</p> <p><b>14.3</b> Dangers associated with current and voltage transformers on high current and voltage systems are identified</p>

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit supersedes and is not equivalent to MARL014 Apply intermediate principles of marine electrotechnology.

This unit replaces and is equivalent to MARL018 Apply advanced principles of marine electrotechnology.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARL038 Apply advanced principles of marine electrotechnology**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release 6.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- identifying and applying relevant mathematical formulas and techniques to solve complex problems related to marine electrotechnology
- identifying and interpreting numerical and graphical information, and performing mathematical calculations to perform tasks, such as using phasor diagrams and mathematical expressions to explain the effects of loads and excitation on synchronous motors
- identifying, collating and processing information required to perform complex calculations related to marine electrotechnology
- imparting knowledge and ideas through verbal, written and visual means
- reading and interpreting written information needed to perform complex electrical calculations
- solving problems using appropriate laws and principles
- using calculators to perform complex mathematical calculations.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alternating current (AC) commutator motors
- AC induction motors
- AC principles
- AC single phase motors
- advanced principles of marine electrotechnology
- asynchronous machines
- batteries
- circuits:
  - capacitance
  - inductance

- resistance
- circuit diagrams
- circuit combinations, including:
  - resistive/capacitive
  - resistive/inductive
- complex number theory
- direct current (DC) generators and motors
- difference between AC and DC
- electrical:
  - circuits
  - current
  - power
  - safety
  - units of measurement
- electromagnetic:
  - force
  - induction
- electrical meters:
  - energy meters
  - frequency meters
  - induction disc watt meters
  - power factor meters
- Faraday's and Lenz's Laws of electromagnetic induction
- Flemings rule
- Fourier series for non-sinusoidal voltage and current representation
- intermediate electrical circuits
- intermediate principles of marine electrotechnology
- Kirchhoff's circuit laws
- losses, including:
  - copper losses
  - iron losses or magnetic losses
  - mechanical losses
- magnetic circuits and key parameters, including:
  - current
  - flux
  - flux density
  - magnetising force
  - magneto motive force
- national and international maritime regulations, International Maritime Organization (IMO) conventions and codes applicable to the operation of electrical and electronic control

- equipment on vessels of typically unlimited propulsion power
- Ohm's Law
- operating principles of:
  - DC generators
  - DC motors
  - electrical instrumentation
  - parallel circuits
- parallel operation of AC and DC generators
- polyphase AC circuits
- power factor
- power factor correction mechanisms
- principles and procedures for electrical and electronic measurement
- problems, including:
  - tapping point
  - turns
  - voltages
- principles of:
  - electrical safety
  - electrolytic action
  - electromagnetism
- reluctance and permanent magnet machines
- resistance
- series circuits
- shipboard DC machinery, including
  - electrical safety
  - electrolytic action
  - electromagnetism
- single and three phase transformers
- synchronous motors and generators
- Thevenin's theorem
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and

numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic industry approved marine operations site or simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- relevant documentation, including workplace procedures, regulations, codes of practice and operation manuals
- tools, equipment, materials, personnel and relevant personal protective equipment (PPE) currently used in industry.

# **MARL039 Apply advanced principles of marine engineering thermodynamics**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to apply advanced principles of engineering thermodynamics to perform calculations and to explain the operation of marine machinery, including internal combustion and gas turbine engines, air compressors, steam condensers and refrigeration units.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Calculate heat mixtures involving water equivalent, change of phase and feed heating**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Key terms associated with heat transmission are explained

**1.2** Heat transfer is calculated between liquids and solids using water equivalent

**1.3** Flow is differentiated from non-flow heating and cooling processes

**1.4** Effects of superheating and sub-cooling on steam plant efficiency are outlined

**1.5** Enthalpy is applied to heat mixture calculations with or without phase change

**1.6** Enthalpy is applied to calculate resultant conditions of hot wells involving multiple returns

**1.7** Steam conditions in a system when using throttling devices and separators are calculated

**1.8** Entropy is distinguished from enthalpy

**1.9** Entropy values are determined from standard tables

**1.10** Mass balance throughout a steam plant cycle is constructed and effects of pressure and temperature on cycle efficiency are analysed

#### **2 Determine fluid properties of steam**

**2.1** Relationship between saturated and superheated steam, including dryness fraction, is explained

		<b>2.2</b>	Tables and/or diagrams are used to find enthalpy and entropy values for liquid, part liquid-part vapour and vapour states
		<b>2.3</b>	Carnot cycle is outlined
		<b>2.4</b>	Rankine cycle is outlined
		<b>2.5</b>	Isentropic efficiency is explained
		<b>2.6</b>	Problems are solved involving the efficiency of steam turbines operating in the Rankine cycle
<b>3</b>	<b>Calculate boiler efficiency and boiler water density</b>	<b>3.1</b>	Concept of parts per million for density of boiler water is explained
		<b>3.2</b>	Changes in boiler water density due to contaminated feed are calculated
		<b>3.3</b>	How acceptable dissolved solids and water levels may be maintained in a boiler is shown
<b>4</b>	<b>Apply Dalton's Law of partial pressures to steam condensers</b>	<b>4.1</b>	Dalton's Law is applied to calculate air and condensate extraction from condensers
		<b>4.2</b>	Problems are solved involving cooling water mass flow and cooling water pump work
<b>5</b>	<b>Apply chemical equations for complete and incomplete combustion</b>	<b>5.1</b>	Atomic and molecular weights and kilogram-mole (kg-mol) are explained
		<b>5.2</b>	Elements and compounds present in fuel and the products of combustion are evaluated
		<b>5.3</b>	Calorific value of a fuel is calculated by chemical formula
		<b>5.4</b>	Mass of air required for stoichiometric combustion is calculated by gravimetric and volumetric analysis
		<b>5.5</b>	Chemical equations for combustion elements and compounds are developed and elements of combustion are analysed
		<b>5.6</b>	Air/fuel ratio, gravimetric and volumetric analysis are explained

- |   |            |  |
|---|------------|--|
|   | <b>5.7</b> | Air/fuel ratio is determined when supplied with composition of fuel and exhaust gas analysis                             |
|   | <b>5.8</b> | Bomb calorimeter is used to find calorific value of a fuel   |
| <b>6. Calculate thermal expansion</b>   | <b>6.1</b> | Coefficient of linear expansion and its significance to different materials is explained                                 |
|   | <b>6.2</b> | Clearances and shrunk fit allowances are calculated  |
|   | <b>6.3</b> | Stresses generated with restricted expansion are calculated  |
|   | <b>6.4</b> | Volumetric expansion of solid and liquids, and allowance required for fluid expansion in tanks and systems is calculated |
| <b>7 Calculate gas conditions, work and thermal efficiency of internal combustion engines</b> | <b>7.1</b> | Compression and pressure ratio is explained and related to combined gas law equation                                     |
|   | <b>7.2</b> | Combined gas law equation is applied to constant volume and constant pressure processes                                  |
|   | <b>7.3</b> | Specific gas constant of a gas or mixture of gases is calculated   |
|   | <b>7.4</b> | Universal gas constant from Avogadro's hypothesis is determined  |
|   | <b>7.5</b> | Differentiation is made between specific heat of gases, ratio of specific heats, work and change in internal energy      |
|   | <b>7.6</b> | Changes in internal energy associated with specific heat of gases, ratio of specific heats and work are calculated       |
|   | <b>7.7</b> | First law of thermodynamics is applied to thermodynamic processes in a closed system                                     |
|   | <b>7.8</b> | Second law of thermodynamics is applied to find thermal efficiency of Carnot cycle                                       |
|   | <b>7.9</b> | Mathematical formula is applied to solve problems related to ideal constant volume air standard cycle                    |

- |          |   |   |
|----------|---|---|
|          | <b>7.10</b>   | Mathematical formula is applied to solve problems related to diesel and dual cycles                                   |
| <b>8</b> | <b>Calculate performance of internal combustion and gas turbine engines</b> | <b>8.1</b> Processes associated with expansion and compression of gases are explained                                 |
|          | <b>8.2</b>  | Gas conditions and index of compression at end of each process are determined   |
|          | <b>8.3</b>  | Work formula is derived for each process and derived formula is applied to calculate work and power per cycle         |
|          | <b>8.4</b>  | Air standard cycle is applied to determine amount of fuel consumed and work produced by an internal combustion engine |
|          | <b>8.5</b>  | Differentiation is made between air standard efficiency and thermal efficiency  |
|          | <b>8.6</b>  | Pressure/volume (P/V) and out-of-phase engine indicator diagrams are analysed   |
|          | <b>8.7</b>  | Work, power, mean effective pressure and thermal efficiency of internal combustion engine cycles are calculated       |
|          | <b>8.8</b>  | Heat transfer to jacket cooling systems is calculated   |
|          | <b>8.9</b>  | Open and closed systems for gas turbines are outlined   |
|          | <b>8.10</b>   | Temperature/entropy diagrams are applied to illustrate gas turbine cycles   |
|          | <b>8.11</b>   | Power, isentropic efficiencies, thermal efficiency, work and fuel consumption for gas turbine cycles are calculated   |
|          | <b>8.12</b>   | Methods to increase efficiency of gas turbines are specified  |
|          | <b>8.13</b>   | Reheaters and intercoolers and how they improve efficiency is explained   |
| <b>9</b> | <b>Analyse air compressor performance</b>                                   | <b>9.1</b> Compressor types are classified  |

	<b>9.2</b>	P/V diagram is applied to describe operating cycle of reciprocating compressors
	<b>9.3</b>	Work done by constant pressure, isothermal processes and polytropic processes in reciprocating compressors is calculated
	<b>9.4</b>	Effect of clearance volume on efficiency of reciprocating compressors is explained
	<b>9.5</b>	Volumetric efficiency at free air conditions is explained
	<b>9.6</b>	Volume, mass flow and temperature are calculated at completion of each process in reciprocating compressors
	<b>9.7</b>	Intercooling and after-cooling effects on overall efficiency of reciprocating compressors is explained
	<b>9.8</b>	Heat transfer to air or cooling water from an air compressor is calculated
	<b>9.9</b>	Work is calculated for isothermal and adiabatic compression, and effect of clearance for reciprocating compressor
	<b>9.10</b>	Formula to calculate work and efficiency of centrifugal compressors is derived
	<b>9.11</b>	Pressure ratio for compressor types is analysed
	<b>10.1</b>	Design parameters for a vapour compression cycle are explained
<b>10</b>	<b>Analyse vapour compression refrigeration cycles</b>	
	<b>10.2</b>	Pressure/enthalpy diagram is prepared for a refrigeration cycle
	<b>10.3</b>	Heat rejected, work done and coefficient of performance (COP) for a basic cycle is calculated
	<b>10.4</b>	Effect of subcooling and superheating is shown on a temperature/entropy diagram
	<b>10.5</b>	COP is calculated with evaporators operating at two different pressures

<b>11</b>	<b>Apply psychrometric principles to solve air conditioning problems</b>	<b>10.6</b>	Properties and hazards of refrigerants used in refrigeration and air conditioning (RAC) systems are identified
		<b>10.7</b>	Basic air conditioning cycles are explained
		<b>11.1</b>	Comfort conditions for air conditioning systems are defined
		<b>11.2</b>	Key parameters used in defining air condition are illustrated on a psychrometric chart
		<b>11.3</b>	Cooling loads are calculated
<b>12</b>	<b>Analyse different methods of heat transfer</b>	<b>11.4</b>	Problems associated with air delivering and distribution methods are analysed
		<b>11.5</b>	Methods of controlling noise and vibration in air conditioning systems are analysed
		<b>12.1</b>	Different forms of heat transfer are identified
		<b>12.2</b>	Heat flow through composite divisions is calculated
		<b>12.3</b>	Insulation dimensions and interface temperatures are determined
		<b>12.4</b>	Problems relating to radiated energy are solved by applying Stefan-Boltzmann Law
		<b>12.5</b>	Relative efficiency of contra-flow heat exchange is determined
<b>13</b>	<b>Perform calculations related to engine power and heat balances</b>	<b>12.6</b>	Problems in heat exchangers are solved by applying log mean temperature difference
		<b>12.7</b>	Radial conduction of heat through a thin cylinder is calculated
		<b>13.1</b>	Formula is applied to solve problems related to indicated power of internal combustion engines
		<b>13.2</b>	Formula is applied to solve problems related to brake power of internal combustion engines

- 13.3 Morse test is applied to determine the indicated power of internal combustion engines
      - 13.4 Tabular and graphical heat balance diagrams are applied to calculate mechanical, thermal and overall efficiencies of internal combustion engines
- 14 Determine steam velocity
  - 14.1 Principles and differences between pressure and velocity changes in reaction and impulse steam turbines are explained
  - 14.2 Velocity diagrams to calculate steam velocity at exit of nozzles and blades are applied
  - 14.3 Graphical and mathematical methods to determine blade angle, steam velocity, thrust, power, and efficiency of single stage impulse and reaction steam turbines are applied
- 15 Use nozzles
  - 15.1 Convergent nozzles are compared to convergent-divergent nozzles
  - 15.2 Steady flow equation is used to determine nozzle exit speed in terms of enthalpy
  - 15.3 Conditions for maximum mass flow through a nozzle are established

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is not equivalent to MARL015 Apply intermediate principles of marine engineering thermodynamics.

This unit replaces and is equivalent to MARL019 Apply advanced principles of marine engineering thermodynamics.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARL039 Apply advanced principles of marine engineering thermodynamics**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- communicating knowledge and ideas through verbal, written and visual means
- explaining advanced principles of engineering thermodynamics
- identifying and applying relevant mathematical formulas and techniques to solve advanced problems related to engineering thermodynamics
- identifying and interpreting numerical and graphical information, and performing advanced mathematical calculations related to engineering thermodynamics, such as calculation of power, isentropic efficiencies, thermal efficiency, and work and fuel consumption for gas turbine cycles
- identifying, collating and processing information required to perform advanced calculations related to engineering thermodynamics
- reading and interpreting written information needed to perform complex calculations related to engineering thermodynamics
- solving problems using appropriate laws and principles
- using calculators to perform accurate, reliable and complex mathematical calculations.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- air compressors, including:
  - components
  - faults and hazards
  - first law of thermodynamics
  - operating cycle of reciprocating air compressors
  - performance characteristics
  - property diagrams
  - types

- uses
- working principles of reciprocating compressors
- atomic and molecular weights and the kilogram-mole (kg-mol)
- basic gas expansion and contraction, heat transfer
- basic principles of engineering thermodynamics
- Daltons Law of partial pressures
- enthalpy
- expansion and compression of gases
- fluid properties, including:
  - density
  - dryness fraction
  - enthalpy of water
  - pressure
  - saturated steam
  - specific volume
  - superheated steam
  - temperature
- gas laws
- gas turbines
- heat cycles, including:
  - marine diesel engine
  - marine steam boiler and steam turbine
  - marine gas turbine
- heat transfer, including:
  - forms:
    - conduction
    - convection
    - radiation
  - methods
  - principles
- internal combustion engines, including:
  - heat engine cycles
  - improvements
  - operating principles of two-stroke and four-stroke internal combustion engines
  - performance characteristics
  - second law of thermodynamics
- internal combustion engine cycles
- key terms, including:
  - enthalpy of fusion
  - evaporation

- sensible heat
- transfer of heat energy
- laws of thermodynamics
- methods, including:
  - duct attenuators
  - duct lining
  - lined duct splitters
  - lined plenums
  - natural attenuation
  - sound absorbing materials/placement
  - vibration isolators
  - white noise
- noise and vibration control, including:
  - fundamentals of sound
  - noise and vibration problems
  - methods of control
  - operating cycle of reciprocating air compressors
- operating principles of two-stroke and four-stroke internal combustion engines
- parameters, including:
  - adiabatic saturation or constant enthalpy
  - humidifying or dehumidifying
  - latent heat
  - sensible heat
- principles of refrigeration, including:
  - processes:
    - adiabatic
    - isothermal
    - polytropic
- Rankine cycle
- refrigeration and air conditioning (RAC) cycles and systems
- steam plants
- International System of Units (SI)
- tables and/or diagrams, including:
  - pressure-enthalpy
  - pressure-specific volume
  - specific enthalpy-specific entropy
  - temperature-pressure
  - temperature-specific enthalpy
  - temperature-specific entropy
- thermodynamic and heat transmission, including:

- air conditioning combustion
- gas cycles/engine analysis
- heat transfer
- properties and vapours
- refrigeration
- steam cycles
- thermodynamic principles
- thermodynamic processes, including:
  - adiabatic
  - isobaric
  - isochoric
  - isothermal
  - polytropic
- thermal efficiency calculations
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- relevant documentation, including workplace procedures, regulations, codes of practice and operation manuals
- tools, equipment, materials, and relevant personal protective equipment (PPE) currently used in industry.

# **MARL040 Apply advanced principles of marine mechanics**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to apply advanced principles of marine mechanics and to perform associated calculations needed to operate and maintain marine machinery.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organisation Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Engineering

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

<b>1 Apply principle of statics to determine forces in structures, connections, support systems, and trusses in two and three dimensions</b>	<b>1.1</b>	Bows notation is applied to solve problems related to trusses
	<b>1.2</b>	Individual loads are computed using method of sections
	<b>1.3</b>	Forces in three-dimensional structures are calculated
	<b>1.4</b>	Principle of moments is applied to solve moments of any quantity
	<b>1.5</b>	Resultant of a system of co-planer forces is calculated
	<b>1.6</b>	Twisting moment due to engine crank mechanisms is calculated
	<b>1.7</b>	Moments of areas and solids are calculated
	<b>1.8</b>	Equilibrium of solids is explained
<b>2 Calculate friction torque in plate and cone clutches</b>	<b>2.1</b>	Laws of friction are applied to develop formulae, using uniform wear, to find the torque in a plate, centrifugal and cone clutch
	<b>2.2</b>	Laws of friction are applied to develop formulae, using uniform pressure, to find the torque in plate and cone clutches
	<b>2.3</b>	Power to overcome friction in plate and cone clutches using uniform wear and uniform pressure formulae is computed
	<b>2.4</b>	Laws of friction are applied to solve problems involving friction in inclined planes, including angle of repose
	<b>2.5</b>	Friction theory is applied to solve problems involving screw threads

- |  |            |   |
|--|------------|---|
| <b>3 Calculate displacement, velocity and acceleration in cams, engine mechanisms and gear systems</b> | <b>3.1</b> | Output of epicyclic gears is calculated by applying relative velocity and acceleration theory   |
|  | <b>3.2</b> | Problems of linear and angular motion involving uniform acceleration and deceleration are solved  |
|  | <b>3.3</b> | Velocity and acceleration diagrams are applied to illustrate relative velocity and acceleration   |
|  | <b>3.4</b> | Inertia loads are calculated using piston velocity and acceleration equations   |
|  | <b>3.5</b> | Problems involving free falling bodies are solved   |
| <b>4 Analyse forces and couples to balance reciprocating machinery</b>                                 | <b>4.1</b> | How primary force balance is obtained is graphically illustrated  |
|  | <b>4.2</b> | Relationship between complete balance and dynamic balance is explained  |
|  | <b>4.3</b> | Reciprocating piston acceleration formula is applied to differentiate between primary and secondary forces                                      |
|  | <b>4.4</b> | Complete balance for a multicylinder reciprocating engine or machine is illustrated graphically using vector diagrams and computed analytically |
|  | <b>4.5</b> | Relationship between momentum and impulse is explained  |
|  | <b>4.6</b> | Conservation of energy theory is applied to problems involving collision of perfectly elastic bodies  |
| <b>5 Apply simple harmonic motion (SHM) principles to solve problems in free and forced vibration</b>  | <b>5.1</b> | Differences in the terms amplitude, frequency and period are explained  |

- |   |            |  |
|---|------------|--|
|   | <b>5.2</b> | SHM equations are derived from the scotch yoke mechanism   |
|   | <b>5.3</b> | Equations for displacement, velocity, acceleration and frequency in SHM are developed  |
|   | <b>5.4</b> | Displacement, velocity, acceleration and frequency in SHM in a vibrating spring-mass system are determined                       |
|   | <b>5.5</b> | Spring constant (k) for springs in series and parallel is calculated   |
|   | <b>5.6</b> | Forced vibration caused by an out-of-balance rotating mass is analysed to derive an expression for amplitude of forced vibration |
|   | <b>5.7</b> | Dangers of resonance are explained   |
| <b>6 Calculate stresses in components</b>   | <b>6.1</b> | How rotational stress is generated by centrifugal force is explained   |
|   | <b>6.2</b> | Formula for hoop stress in a rotating ring is applied to calculate hoop stress and/or limiting speed of rotation                 |
|   | <b>6.3</b> | Stresses in compound bars subject to axial loads and/or temperature change are determined  |
|   | <b>6.4</b> | Reduction in area and percentage elongation of tensile test specimens is calculated  |
|   | <b>6.5</b> | Stresses in composite bodies of dissimilar dimensions and dissimilar materials are calculated                                    |
|   | <b>6.6</b> | Problems involving thermal stress on components due to temperature change with free and restricted expansion are solved          |
| <b>7 Apply strain energy and resilience theory to determine stresses caused by impact or suddenly applied loads</b> | <b>7.1</b> | Equation is derived to calculate strain energy in a deformed material  |
|   | <b>7.2</b> | Stress in a material due to impact or dynamic loads is determined using energy equation  |

	<b>7.3</b>	Equation to calculate stress caused by suddenly applied loads is derived
<b>8 Apply beam theory to solve problems</b>	<b>8.1</b>	Reactions of a loaded beam are calculated
	<b>8.2</b>	Shear force and bending moment diagrams are constructed for simply supported and cantilever beams
	<b>8.3</b>	Shear force and bending moment diagrams for beams with concentrated and uniformly distributed loads are calculated
	<b>8.4</b>	Beam equation is applied to derive stresses in beams loaded with concentrated and uniformly distributed loads
	<b>8.5</b>	Beam equation is applied to calculate bending stresses
	<b>8.6</b>	Macaulay's method is applied to calculate beam deflection
	<b>8.7</b>	Deflection of cantilever and simply supported beams is calculated using standard deflection formulae for different loads
<b>9 Apply Euler's formula to find buckling load of a column</b>	<b>9.1</b>	Effective length of a column with various end restraints is determined
	<b>9.2</b>	Slenderness ratio is applied to determine the strength of columns
	<b>9.3</b>	Relationship between slenderness ratio and buckling is explained

	<b>9.4</b>	How buckling load for a slender column is applied, including a factor of safety
<b>10 Calculate stresses</b>	<b>10.1</b>	How to combine stress formula and calculate stress with combined loading is explained
	<b>10.2</b>	Superposition is used to describe stress due to combined axial and bending stress
	<b>10.3</b>	Mohr's Circle is employed to illustrate normal and shear stress
	<b>10.4</b>	Principal stress formulae are applied to explain how maximum combined normal and shear stress can be obtained
<b>11 Apply thick and thin shell formulae</b>	<b>11.1</b>	Tangential stress distribution caused by internal and external pressure is analysed
	<b>11.2</b>	Lame's theorem is applied to describe stress in thick cylinders due to internal and external pressure
	<b>11.3</b>	Stress on thin-shelled pressure vessels due to internal pressure is calculated
	<b>11.4</b>	Formula for calculating stress on thin-shelled pressure vessels to incorporate special conditions is modified
<b>12 Apply continuity equation to determine changes in fluid velocity</b>	<b>12.1</b>	Conservation of energy theory is applied to calculate pressure, head and velocity of fluids flowing through orifices
	<b>12.2</b>	Volumetric and mass flow through a venturi meter is calculated

	<b>12.3</b>	Forces exerted by flowing fluids either free (jet) or contained are determined, including coefficients of velocity, contraction of area and discharge
<b>13 Determine changes in fluid flows through pipe systems and centrifugal pumps</b>	<b>13.1</b>	Variation of fluid pressure with depth is calculated
	<b>13.2</b>	Bernoulli's Theorem is used to solve problems of velocity, pressure and head in pipes and ducted systems
	<b>13.3</b>	Archimedes' Principle is used to solve problems related to floating vessels using real and apparent weight
	<b>13.4</b>	Difference between steady and unsteady flow is clarified
	<b>13.5</b>	Viscosity of fluids is analysed and difference between dynamic and kinematic viscosity is explained
	<b>13.6</b>	Significance of Reynolds number in fluid mechanics is explained
	<b>13.7</b>	Importance of critical Reynolds number is explained
	<b>13.8</b>	Flow losses in pipes and fittings are calculated
	<b>13.9</b>	Changes of velocity of liquids in a centrifugal pump are analysed and entry and exit vane angles are determined
<b>14 Apply torsion theory to calculate stress</b>	<b>14.1</b>	Twisting moment due to engine crank mechanisms is calculated

- |   |             |   |
|---|-------------|---|
|   | <b>14.2</b> | Torsion equation is applied to solve problems involving solid and hollow shafts                           |
|   | <b>14.3</b> | Power transmitted in shafts and coupling bolts is calculated  |
|   | <b>14.4</b> | Torsion equation is applied to calculate stress and deflection in a close-coiled helical spring           |
|   | <b>14.5</b> | Power transmitted by shafts and couplings is calculated   |
| <b>15 Solve problems using principles of dynamics</b> | <b>15.1</b> | Centripetal force is distinguished from centrifugal force   |
|   | <b>15.2</b> | Relationship between centripetal and centrifugal force and mass, angular velocity and radius is clarified |
|   | <b>15.3</b> | Problems are solved involving centripetal and centrifugal forces  |
|   | <b>15.4</b> | Centripetal acceleration is distinguished from centrifugal force  |
|   | <b>15.5</b> | Out-of-balance forces on co-planer systems are calculated   |
|   | <b>15.6</b> | Bearing reactions in rotating shafts are determined   |
|   | <b>15.7</b> | Radius of gyration and moment of inertia when applied to rotating bodies is explained                     |

**15.8** Centrifugal forces in governors are calculated

**15.9** Principles of dynamics are applied to solve problems involving rotating bodies, accelerating shafts, motors and flywheels

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is not equivalent to MARL016 Apply intermediate principles of marine mechanics.

This unit replaces and is equivalent to MARL020 Apply advanced principles of marine mechanics.

## **Links**

Companion Volume implementation guide can be found in VetNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL040 Apply advanced principles of marine mechanics**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- identifying and applying relevant mathematical formulas and techniques to solve advanced problems related to marine mechanics
- identifying and interpreting numerical and graphical information, performing complex mathematical calculations, such as determining hoop stresses in rotating rings and stresses in compound bars and solving problems related to fluids
- identifying, collating and processing information required to perform complex calculations related to marine mechanics
- imparting knowledge and ideas through verbal, written and visual means
- reading and interpreting written information needed to perform complex calculations in marine mechanics
- solving problems using appropriate laws and principles
- using calculators to perform accurate, reliable and complex mathematical calculations.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- advanced principles of marine mechanics
- angular and linear motion
- beam theory
- Bows notation
- centre of gravity (CG)
- centrifugal governors
- conservation of energy theorem
- machine dangers, including:
  - catastrophic failure due to physical limitations of machines being exceeded as determined by their susceptibility and resistance to vibrations

- violent swaying motions
- different loads, including:
  - combined
  - concentrated
  - distributed
- factor of safety
- fluids
- force and forces, including:
  - balanced and unbalanced forces
  - conditions for equilibrium
  - definitions of matter, mass, weight, force, density and relative density
  - moments of couples
  - parallelogram and triangle of forces
- inertia force
- joint efficiency factor
- laws of motion
- mechanics and hydromechanics, including:
  - balancing
  - combined stress
  - fluid mechanics
  - simple harmonic motion
  - stress and strain
  - torsion
- momentum
- motion, including:
  - action and reaction
  - force, velocity and acceleration
  - linear and angular motion
  - Newton's laws of motion
- nature and laws of friction
- physical and chemical properties of fuel and lubricants, including:
  - shore side and shipboard sampling and testing
  - interpretation of test results
  - contaminants, including microbiological infection
  - treatment of fuel and lubricants, including storage, centrifuging, blending, pre-treatment and handling
- polygon of forces
- pressure vessels
- principle of moments
- principles of dynamics

- reactions
- relationship between torque and power
- simple harmonic motion (SHM)
- stress and strain, including:
  - direct stress and strain
  - Hooke's Law
  - load extension graphs
  - modulus of elasticity
  - shear stress and strain
- technology of material, including:
  - destructive and non-destructive testing of material
  - engineering processes used in construction and repair
- thin cylinder theory
- turning moment
- vector diagrams
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- relevant documentation, including workplace procedures, regulations, codes of practice and operation manuals
- tools, equipment, materials, and personal protective equipment (PPE) currently used in industry.

# **MARL041 Apply advanced principles of trim, stability and stress**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to perform complex naval architectural calculations related to the seaworthiness of commercial vessels, including those dealing with vessel stability, trim, fuel consumption, buoyancy, power and symmetrical flooding vessel strength and vibration.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Engineering

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |          |  |   |
|----------|--|---|
| <b>1</b> | <b>Apply Simpson's First and Second Rules to calculate areas, volumes and displacement of ship shapes using tonnes per centimetre (TPC) values</b> | <b>1.1</b> Simpson's (Mid-Ordinate) First Rule and Second Rule, with typical applications, using half and full ordinates is explained and applied to find typical and non-conforming shipboard areas<br><br><b>1.2</b> Areas of water planes, transverse sectional areas to determine underwater volumes, bulkheads and elemental areas are calculated<br><br><b>1.3</b> Problems of immersed hull volume, appendage volumes and non-standard tank volumes are solved<br><br><b>1.4</b> Archimedes principles of buoyancy are explained<br><br><b>1.5</b> TPC with application of Simpson's Rules to find displacement is explained<br><br><b>1.6</b> Change in draught with mass addition and removal using TPC to give parallel sinkage or rise is explained<br><br><b>1.7</b> Problems of vessel displacement given water plane areas or TPC values are solved<br><br><b>1.8</b> TPC curves and displacement curves for given values are constructed |
| <b>2</b> | <b>Apply ship form coefficients and changes in draught associated with fluid density</b>   | <b>2.1</b> Ship form coefficients and their uses are defined  |

- |          |  |            |   |
|----------|--|------------|---|
|          |  | <b>2.2</b> | Coefficients are calculated given underwater form particulars   |
|          |  | <b>2.3</b> | Problems of ship form coefficients following change in length and draught are solved                                    |
| <b>3</b> | <b>Calculate changes in draft due to fluid density</b> | <b>3.1</b> | Load line freeboard measurement and markings required for change in fluid density are explained                         |
|          |  | <b>3.2</b> | Formula for change in mean draft due to change in density is derived  |
|          |  | <b>3.3</b> | Change in draft between fluids of two densities are calculated  |
|          |  | <b>3.4</b> | Formula to derive freshwater allowance is applied   |
|          |  | <b>3.5</b> | Changes in mean draft due to changes in density and loading are calculated  |
|          |  | <b>3.6</b> | Density correction formula is defined   |
| <b>4</b> | <b>Solve stability problems</b>                        | <b>4.1</b> | Calculations are performed to solve problems associated with adding, removing and transferring masses on ships          |
|          |  | <b>4.2</b> | Centre of gravity of a suspended mass is explained  |
|          |  | <b>4.3</b> | Calculations are performed to solve problems associated with suspended masses   |
|          |  | <b>4.4</b> | How centre of gravity (CG) and linear congruent generator (LCG) can be obtained from stability information is explained |

- 4.5 Creation of overturning moments by mass addition, removal or transfer transversely, including cargo shift or loss, is explained
  - 4.6 Calculations are performed to solve problems of small angle transverse stability
  - 4.7 Purpose of inclining experiments, weighing tests and roll period tests to determine stability characteristics are explained
  - 4.8 Calculations are performed to solve problems associated with inclining experiments and roll period tests
- 5 **Calculate loss of transverse stability due to fluid free surface**
  - 5.1 Principles of free surface loss of metacentric height (GM) are explained
  - 5.2 Principles of metacentric data height are explained
  - 5.3 Application of the second moment of area using parallel axis theorem to obtain free surface moment of inertia and use of density correction between vessel and free surface fluids is explained
  - 5.4 Calculations are performed to solve problems of liquid free surface for simple compartments, including correction for free surface on GM and fluid mass on CG
  - 5.5 CG solid is differentiated from CG fluid
  - 5.6 Second moment of area is applied to obtain free surface moment of inertia and is related to stability criteria for standard conditions

- |   |  |  |
|---|--|--|
|   |  | <ul style="list-style-type: none"><li>5.7 Problems of liquid free surface for simple and complex geometry compartments, including variation in filling rates, are solved</li><li>5.8 Wall-sided formula and factors that lead to negative GM creating an angle of loll are explained</li><li>5.9 Problems involving correction of loll angle are solved</li></ul>  |
| 6 | <b>Calculate large angle transverse static and dynamical stability</b> | <ul style="list-style-type: none"><li>6.1 How GZ and KN righting levers are obtained from cross curves of stability is explained</li><li>6.2 KN values are converted to GZ</li><li>6.3 Dynamical stability is explained</li><li>6.4 IMO requirements for intact and damaged stability cases as well as different vessel types, using typical values from stability files are applied</li><li>6.5 Problems of large angle transverse stability, including changes due to redistribution of mass onboard, are solved and results against IMO requirements are evaluated</li><li>6.6 Graphical solutions to large angle transverse stability problems identifying key points are prepared</li></ul> |
| 7 | <b>Solve problems of hydrostatics</b>                                  | <ul style="list-style-type: none"><li>7.1 Importance of area and volume centroids is explained</li><li>7.2 Methods of determining centre of buoyancy (CB), longitudinal centre of buoyancy (LCB), longitudinal centre of flotation (LCF) and bulkhead area centroids are explained</li></ul>   |

- 7.3 Calculations are performed to determine centroids of shipboard areas and volumes
  - 7.4 Impact of hydrostatic pressure and load on vertical and horizontal surfaces is explained
  - 7.5 Methods of calculating pressure, load, shear force and bending moment diagrams for typical tank structures are applied
  - 7.6 Problems are solved in hydrostatics relating to pressure and loads on ship structures, including graphical solution of shear force diagrams of rectangular bulkheads and their elemental stiffeners
  - 7.7 Effective weld area of bulkhead attachment is calculated
- 8 **Perform trim and draft calculations**
  - 8.1 Meaning of trim and how trim occurs is explained
  - 8.2 Standard trimming moments resulting from mass addition, removal, transfer, flooding or combinations of these factors are explained
  - 8.3 Change of trim is calculated using moment to change trim 1 cm (MCT1cm), longitudinal metacentre height (GML) and longitudinal metacentre radius (BML)
  - 8.4 Problems of applied trimming moments to determine final vessel draughts are solved
  - 8.5 True mean draft is differentiated from apparent mean draft by applying correction for layer

- |           |   |  |
|-----------|---|--|
|           |   | <b>8.6</b> Calculations are performed to solve problems associated with true mean draft  |
|           |   | <b>8.7</b> Problems of combined trim and transverse stability from typical fluid transfer in both a longitudinal and transverse direction are solved   |
| <b>9</b>  | <b>Calculate voyage and daily fuel consumption</b>  | <b>9.1</b> Problems of fuel consumption are solved using the admiralty coefficient for various speed indexes   |
|           |   | <b>9.2</b> Optimum vessel speed for combined propulsive and auxiliary fuel consumptions is determined  |
|           |   | <b>9.3</b> Calculations are performed to show relationships between fuel consumption and displacement  |
|           |   | <b>9.4</b> Calculations are performed to show relationships between daily fuel consumption and speed   |
|           |   | <b>9.5</b> Calculations are performed to show relationships between voyage consumption, speed and distance travelled   |
| <b>10</b> | <b>Apply principles of loading to ship structures to determine strength characteristics</b> | <b>10.1</b> Distribution of concentrated and point masses, buoyancy, load, shear force and bending moments are explained using simple loaded beam principles   |
|           |   | <b>10.2</b> Calculations and diagrams are used to solve problems involving loaded conditions of simple box-shaped vessels, identifying location and value of maximum shear force and bending moments |
|           |   | <b>10.3</b> Empirical formula is applied to solve problems involving bending and direct stress in beams  |

- |           |   |  |
|-----------|---|--|
| <b>11</b> | <b>Apply empirical formula to solve vibration problems</b>                  | <b>11.1</b> Causes and adverse effects of ship vibration are explained   |
|           |   | <b>11.2</b> Natural hull vibration is explained  |
|           |   | <b>11.3</b> Schlick formula is applied to determine natural frequency of ship hull vibrations  |
|           |   | <b>11.4</b> Ways of preventing or reducing local vibration are identified  |
| <b>12</b> | <b>Solve buoyancy problems and problems related to symmetrical flooding</b> | <b>12.1</b> Calculations are performed to solve problems of lost buoyancy and sinkage into homogeneous mud due to tide fall with insufficient under keel clearance                           |
|           |   | <b>12.2</b> Calculations are performed to solve problems of simple box-shaped and standard hull forms involving change in trim due to flooding end compartments                              |
|           |   | <b>12.3</b> Volume lost-volume gained relationship for flooded compartments is explained   |
|           |   | <b>12.4</b> Modified volume lost by compartment subdivision is explained using horizontal flat   |
|           |   | <b>12.5</b> Modified volume lost by compartment permeability is explained, including consideration of cargo stowage factor and relative density details                                      |
|           |   | <b>12.6</b> Problems of symmetrical flooding of simple box-shaped and standard hull forms involving flooding above and below horizontal subdivisions and different permeabilities are solved |

- |           |   |   |
|-----------|---|---|
| <b>13</b> | <b>Perform rudder structural calculations</b>           | <p><b>13.1</b> Types of rudders in use on ships are outlined</p> <p><b>13.2</b> Reasons for using balanced rudders are identified</p> <p><b>13.3</b> Application of force acting normal to a rudder surface (<math>F_n</math>), its components and the influence of propeller race effect is explained</p> <p><b>13.4</b> Rudder centre of effort for ahead and astern conditions is obtained to determine torque on rudder stock for conventional rudders or equivalent twisting moment (ETM) for spade rudders</p> <p><b>13.5</b> Calculations are performed involving simple and complex rudder shapes to calculate speed limitations ahead and astern for stated safety factor and material properties</p> <p><b>13.6</b> Calculations are performed involving simple and complex rudder shapes to determine rudder stock and coupling bolt diameters</p> |
| <b>14</b> | <b>Perform rudder resistance and power calculations</b> | <p><b>14.1</b> Frictional resistance to motion of a vessel given the empirical formulae for frictional coefficient 'f' of the form is determined</p> <p><b>14.2</b> Froudes laws of comparison are explained</p> <p><b>14.3</b> Meaning of the term 'corresponding speed' is explained</p> <p><b>14.4</b> Law of comparison is applied to determine residuary resistance of a ship if residuary resistance of a scale model of vessel is known or can be determined</p>   |

- |           |  |  |
|-----------|--|--|
|           |  | <p><b>14.5</b> Differentiation is made between effective power (naked), effective power and ship correlation factor</p> <p><b>14.6</b> Effective power requirements of a full-sized ship given total resistance to motion measured on a scale model of vessel towed at corresponding speed are calculated</p> <p><b>14.7</b> Problems of resistance and powering for full size vessels and models are solved</p>   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

## Unit Mapping Information

This unit replaces and is not equivalent to MARL017 Apply intermediate principles of naval architecture.

This unit replaces and is equivalent to MARL021 Apply advanced principles of naval architecture.

# **Assessment Requirements for MARL041 Apply advanced principles of trim, stability and stress**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- identifying and applying relevant mathematical formulas and techniques to solve complex problems related to speed, fuel consumption and stability of commercial vessels
- identifying and interpreting numerical and graphical information, and performing mathematical calculations related to shipboard areas and volumes, vessel displacement, ship dimensions, centre of gravity (CG), vessel speed, fuel consumption and hydrostatic pressure
- identifying, collating and processing information required to perform calculations related to speed, fuel consumption and stability of commercial vessels
- imparting knowledge and ideas through verbal, written and visual means
- reading and interpreting written information needed to perform calculations related to seaworthiness of commercial vessels
- solving problems using appropriate laws and principles
- using calculators to perform accurate, reliable and complex mathematical calculations.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- admiralty and fuel coefficients
- advanced principles of naval architecture
- adverse effects, including:
  - discomfort to passengers and crew
  - failure of equipment
  - structural failure
- buoyancy
- causes of ship vibration, including:

- action of the sea
- fluctuating forces on propeller
- operation of deck machinery
- out-of-balance forces in main or auxiliary machinery
- propeller-hull interaction
- CG, vertical centre of gravity (VCG) and linear congruent generator (LCG)
- CG calculations
- density correction formula
- displacement
- draught alterations
- dynamical stability
- fuel consumption calculations
- hydrostatic pressure
- hull resistance:
  - frictional
  - residuary
  - total
- key points, including:
  - maximum GZ value and angle of occurrence
  - points of vanishing stability
  - range of positive stability
- metacentre
- principle of displacement
- principle structural members of a ship and the proper names of the various parts
- propellers and powering
- propulsive characteristics, including:
  - propeller and load diagrams
  - propulsive characteristics diesel
  - propulsive characteristics gas turbines
  - propulsive characteristics steam plant
  - propulsive characteristics steam plant
  - resistance and fuel consumption
- rudders
- ship:
  - displacement
  - measurements
  - resistance
  - stability
  - stability calculations
- shipboard:

- areas, including bulkheads, elemental areas and water plans
- volumes
- ship form coefficients, including:
  - block coefficient
  - midship section area coefficient
  - prismatic coefficient
  - waterplane area coefficient
- Simpson's Rules
- speed of advance, including:
  - apparent and true slips
  - Taylor wake fraction
  - theoretical, apparent and true speeds
  - wake speed
- stability, including:
  - approximate calculation of area and volume
  - approximate metacentric height (GM) by means of rolling period test
  - dry-docking and grounding
  - dynamical stability
  - intact stability code
  - rolling of ship
  - shear force, bending moments and torsional stress
  - simplified stability data
  - stability at moderate and large angles of heel
  - trim and list
- structural members of a ship and proper names of various parts
- tonnes per centimetre immersion (TPC)
- traverse stability
- trim and stress tables, diagrams and stress calculating equipment
- vessel speed calculations
- vibration
- watertight integrity
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic industry approved marine operations site or simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry
- vessel diagrams, specifications and other information required for mathematical calculations.

# MARL042 Apply basic principles of marine electrotechnology

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to explain basic marine electrotechnology principles and to perform basic electrical calculations.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## Licensing/Regulatory Information

- Legislative and regulatory requirements are applicable to this unit.
- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organisation Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Explain how material properties affect resistance of electrical conductors**

- 1.1** Terms and symbols used in the formula for resistivity are used correctly
- 1.2** How resistance varies with changes in conductor length and cross-sectional area is outlined
- 1.3** How resistance varies with temperature is outlined
- 1.4** Calculations are performed that illustrate how material properties affect resistance of electrical conductors

**2 Apply Ohm's Law to electrical circuits**

- 2.1** Main sources of electromagnetic field (EMF) are identified
- 2.2** Terms and symbols used in Ohm's Law are used correctly
- 2.3** Calculations are performed using Ohm's Law to solve problems involving internal, external and variable resistances in both series and parallel circuits
- 2.4** Calculations are performed to determine power required and/or energy expended by electrical devices
- 2.5** Circuits for a Wheatstone bridge and a slide wire bridge are sketched and their application on a ship is outlined
- 2.6** Calculations are performed dealing with resistances, currents and voltage drops in bridge circuits under null or balanced conditions

**3 Apply principles of electrolytic action to electrical cells**

- 3.1** How the theory of electrolytic disassociation when applied to common electrolytic solutions and electrode materials explains the generation of EMF from chemical sources, is outlined
- 3.2** Primary cells are distinguished from secondary cells
- 3.3** Calculations are performed to solve problems involving currents, voltage drops and terminal potential difference of cells connected to form batteries in series and in

- parallel
- 3.4** How capacity of a battery is measured is explained
- 3.5** Construction of typical batteries used in marine environments is outlined
- 4 Apply principles of electromagnetism to EMF generation**
- 4.1** Form and properties of the magnetic fields surrounding single conductor and multi-turn solenoid coils when carrying an electrical current are compared and contrasted
- 4.2** Terms and symbols used in Faraday's and Lenz's laws of electromagnetic induction are used correctly
- 4.3** Calculations are performed using Faraday's and Lenz's laws of electromagnetic induction to solve problems related to electromagnetism and EMF generation
- 4.4** Fleming's Right Hand Rule is outlined
- 5 Explain operation of direct current (DC) rotating machinery**
- 5.1** Construction and methods of maintaining and repairing typical DC machines are illustrated
- 5.2** Principle wiring arrangements used with DC machines are outlined
- 5.3** Action of the commutator in DC generators is outlined
- 5.4** Significance of Back EMF ( $E_b$ ) in the operation of DC motors is outlined
- 5.5** Mathematical formulae are applied to show relationships between operational parameters of DC motors
- 5.6** Calculations are performed to solve simple problems relating to power output and efficiency in DC. motors
- 6 Explain operation of alternating current (AC) rotating machinery**
- 6.1** How three phase AC may be developed out of simple single phase AC is explained
- 6.2** Difference between Star and Delta connections is outlined
- 6.3** How a three phase supply can generate a rotating magnetic field is explained
- 6.4** Construction of an AC synchronous generator is

	outlined
	<b>6.5</b> Construction of an AC induction motor is outlined
	<b>6.6</b> Calculations are performed to show how driving torque is produced in an induction motor
<b>7 Explain parallel operation and load sharing of generator</b>	<b>7.1</b> Load/voltage curves of AC and DC generators are compared
	<b>7.2</b> Main requirements for satisfactory power sharing between both AC and DC generators are outlined
	<b>7.3</b> Sequences that occur when load changes on two DC generators working in parallel without an equaliser connection are outlined
	<b>7.4</b> Effect of varying power factors on the load/voltage curve of an AC generator is outlined
<b>8 Explain coupling and breaking connections between switchboard and distribution panels</b>	<b>8.1</b> Construction, equipment and service of main switchboard and emergency switchboard and distribution panel are outlined
	<b>8.2</b> Construction and operation principle of measuring instruments in main and emergency switchboards and distribution panels are outlined
	<b>8.3</b> Construction and operation principle of circuit breakers and their tripping devices are outlined
	<b>8.4</b> Procedures for restarting ship equipment after power supply failure are outlined
	<b>8.5</b> Connection between main and emergency switchboards and necessary safeguards are outlined
	<b>8.6</b> Procedures for changeover to shore-connection supply are outlined

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARL010 Apply basic principles of marine electrotechnology.

## Links

Companion Volume implementation guide can be found in VetNet -

# Assessment Requirements for MARL042 Apply basic principles of marine electrotechnology

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- identifying and applying relevant mathematical formulas and techniques to solve basic problems related to marine electrotechnology
- identifying and interpreting numerical and graphical information, and performing mathematical calculations, such as resistance of electrical conductors, power output and efficiency in direct current (DC) motors, and driving torque in induction motors
- identifying, collating and processing information required to perform basic calculations related to marine electrotechnology
- performing accurate and reliable calculations
- reading and interpreting written information needed to perform basic electrical calculations
- solving problems using appropriate laws and principles.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of marine electrotechnology
- batteries
- cables
- circuit breakers
- coupling, load sharing and changing over generators, including:
  - conditions for automatic start of emergency generator and starting methods
  - control systems for distribution for active and reactive power
  - excitation systems of generators
  - methods of synchronisation
  - power factor
  - principles of power management, including:
    - control of start-release of big consumers directly supplied from main switchboard

- automatic three-step disconnection of non-essential power consumers
- load depending start and stop of generator and automatic load sharing
- protections for generators and diesel engines, including:
  - asymmetrical voltage and current
  - frequency and voltage stabilisation of shaft generators
  - open circuit, wire fault and earth-fault monitoring
  - overload
  - reverse power
  - short circuit
  - under and overvoltage
  - under and over frequency
- safety systems of generators
- voltage and frequency control systems
- DC motors and rotating machinery
- difference between alternating current (AC) and DC
- distribution panels
- electrical:
  - current
  - power
  - safety
  - units of measurement
- electromagnetic:
  - force
  - induction
- effective verbal, written and visual communication techniques
- electrical theory, including:
  - electrical circuits
  - impedance and inductance
  - Kirchhoff's Law
  - Ohm's Law
- electrical motors including:
  - AC motor
  - DC motor
- electrical motor starting methodologies
- emergency switchboard
- fundamentals of AC, including:
  - principles
  - rotating machinery
- high voltage (HV)
- lighting

- main switchboard
- measuring instruments for switchboards
- operational parameters of DC motors, including:
  - current
  - flux density
  - torque
  - voltage
- parallel circuits
- power distribution systems, including:
  - distribution
  - insulation
  - transformers
- principles of electromagnetism and electrolytic action
- resistance
- series circuits
- shore connection
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic industry approved marine operations site or simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARL043 Apply basic principles of marine engineering thermodynamics**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to apply basic principles of engineering thermodynamics to perform calculations and to explain the operation of marine machinery, including engines, compressors, steam plants, and refrigeration and air conditioning (RAC) units.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Explain common thermodynamic principles

1.1 Desired International System of Units (SI) applicable to thermodynamic calculations are developed

1.2 Basic properties of fluids are outlined

1.3 Gauge pressure is distinguished from absolute pressure

1.4 Temperature is defined and temperature scales are outlined

1.5 Calculations are performed by applying formulae for work, power and efficiency

#### 2 Calculate properties of gas during expansion and compression

2.1 Calculations are performed by applying Boyle's, Charles's and combined gas laws

2.2 Gas equation is derived and applied to gas process calculations

2.3 Specific heat of gases and the relationship between constant pressure ( $C_p$ ), constant volume ( $C_v$ ), gas constant ( $R$ ) and Gamma ( $\gamma$ ) are defined

2.4 Heat transfer is calculated for  $C_p$  and  $C_v$  processes

2.5 Isothermal, adiabatic and polytropic processes are outlined and properties of gases after expansion and compression, including the effects of turbocharging, are calculated

2.6 Work required to compress gases is illustrated and calculated

#### 3 Explain methods of heat transfer

3.1 Different forms of heat transfer and their application to marine systems are explained

- |   |            |  |
|---|------------|--|
|   | <b>3.2</b> | Heat transfer through flat layers is calculated  |
|   | <b>3.3</b> | Purpose of insulation is explained   |
| <b>4 Explain enthalpy and apply to mixture calculations</b>     | <b>4.1</b> | Heat energy is defined   |
|   | <b>4.2</b> | Fundamental formula for heat energy transfer is developed  |
|   | <b>4.3</b> | Specific heat and its application are identified   |
|   | <b>4.4</b> | Enthalpy and change of phase are outlined  |
|   | <b>4.5</b> | Heat mixture problems involving water equivalent, ice, water and steam are solved                                |
|   | <b>4.6</b> | Specific heat of materials are calculated  |
|   | <b>4.7</b> | Latent heat and dryness fraction are identified  |
|   | <b>4.8</b> | Steam tables are used to find values of enthalpy for water, saturated and superheated steam and dryness fraction |
|   | <b>4.9</b> | Temperature/enthalpy diagram is constructed from steam table data  |
| <b>5 Explain steam plants and calculate thermal efficiency</b>  | <b>5.1</b> | Basic steam plant cycles are sketched and function of each component is outlined                                 |
|   | <b>5.2</b> | Steam cycles on a temperature/enthalpy diagram are illustrated   |
|   | <b>5.3</b> | Effects of superheating and under-cooling are clarified  |
|   | <b>5.4</b> | Calculations are performed for heat supplied, rejected, work and thermal efficiency of a steam plant             |
|   | <b>5.5</b> | Methods of improving cycle efficiency are outlined   |
| <b>6 Explain operation of internal combustion engine cycles</b> | <b>6.1</b> | Operating principles of two-stroke and four-stroke internal combustion engines are outlined                      |
|   | <b>6.2</b> | Differentiation is made, by use of a pressure/volume diagram, between Otto, diesel and dual combustion cycles    |

- |          |  |   |
|----------|--|---|
|          | <b>6.3</b>   | Mean effective pressure is calculated from an indicator diagram   |
|          | <b>6.4</b>   | Indicated power formula is developed and related calculations are solved                                      |
|          | <b>6.5</b>   | Specific fuel consumption is defined and calculated   |
|          | <b>6.6</b>   | Ideal cycle and air standard efficiency is defined  |
| <b>7</b> | <b>Explain operating cycle of reciprocating air compressors</b>  |   |
|          | <b>7.1</b>   | Pressure/volume diagram is used to describe operating cycle of single stage reciprocating air compressors     |
|          | <b>7.2</b>   | Mass of air delivered by single stage reciprocating air compressors is calculated                             |
|          | <b>7.3</b>   | Clearance volume and its effect on volumetric efficiency is outlined, and volumetric efficiency is calculated |
|          | <b>7.4</b>   | Work per cycle for isothermal and polytropic processes is calculated  |
| <b>8</b> | <b>Explain operating cycle of RAC plant</b>  |   |
|          | <b>8.1</b>   | Principle of refrigeration is outlined  |
|          | <b>8.2</b>   | Temperature/enthalpy and pressure/enthalpy diagrams are compared  |
|          | <b>8.3</b>   | Refrigerants used in RAC machines are identified  |
|          | <b>8.4</b>   | Refrigeration effect and plant capacity are defined   |
|          | <b>8.5</b>   | Refrigeration tables are used to calculate refrigeration effect and condition of vapour after expansion       |
|          | <b>8.6</b>   | Operating cycle of self-contained and centralised air conditioning systems are outlined and compared          |
|          | <b>8.7</b>   | Relative humidity is defined and key features of a psychrometric chart are outlined                           |
| <b>9</b> | <b>Apply linear, superficial and volumetric expansion equations to calculate expansion of liquids and metals</b> |   |
|          | <b>9.1</b>   | Expansion processes for metals is defined   |
|          | <b>9.2</b>   | Coefficient of linear expansion is outlined   |

- 9.3** Linear expansion is applied to calculate machinery clearances and to shrink fit allowances
- 9.4** Superficial and volumetric expansion of solids is calculated and recorded
- 9.5** Apparent expansion of liquids in tanks is calculated and recorded

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARL011 Apply basic principles of marine engineering thermodynamics.

## **Links**

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARL043 Apply basic principles of marine engineering thermodynamics**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying and applying relevant mathematical formulas and techniques to solve basic problems related to engineering thermodynamics
- identifying and interpreting numerical and graphical information, and performing basic mathematical calculations related to engineering thermodynamics, such as gas expansion and contraction, heat transfer, thermal efficiency, and the expansion of liquids and solids
- identifying, collating and processing information required to perform basic calculations related to engineering thermodynamics
- maintaining knowledge of current codes, standards, regulations and industry practices
- performing accurate and reliable mathematical calculations using a calculator
- reading and interpreting written information needed to perform basic calculations related to engineering thermodynamics
- solving problems using appropriate laws and principles.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of engineering thermodynamics
- enthalpy
- expansion processes for metals (conduction, convection and radiation)
- forms of heat transfer (conduction, convection and radiation)
- gas laws
- heat, including relationship between temperature, heat energy and heat transfer
- internal combustion engine cycles
- methods of heat transfer
- operating cycle of reciprocating air compressors
- operating principles of two-stroke and four-stroke internal combustion engines
- principles of refrigeration
- properties of fluids (density, mass, pressure, specific volume, temperature)

- relationships between forms of energy, work and power
- International System of Units (SI)
- steam plants
- thermodynamics, including:
  - energy change
  - heat transfer
  - ideal gases
  - thermodynamic energy
  - thermodynamic principles
  - thermodynamic processes
  - thermodynamic properties
  - thermodynamic systems
  - vapours
  - work transfer
- thermal efficiency calculations.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- diagrams, specifications and other information required for performing basic calculations related to engineering thermodynamics
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARL044 Apply basic principles of marine mechanics

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to apply the basic principles of marine mechanics and to perform associated calculations needed to operate and maintain marine machinery.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Use vector diagrams to calculate the resultant and equilibrant of up to four coplanar forces**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Meaning of force as a vector, moment of a force, resultant and equilibrant are explained

**1.2** Forces using the triangle and polygon of forces are determined

**1.3** Moments and couples applied to beams and levers are explained

**1.4** Centroid of an area is calculated

**1.5** Centre of gravity (CG) of regular geometrical shapes is calculated

**1.6** Resultant and equilibrant of a system of concurrent coplanar-planer forces are calculated

#### **2 Solve problems involving friction**

**2.1** Nature of friction and the laws of dry sliding friction are explained

**2.2** Influence of lubrication on bearings and plain surfaces is outlined

**2.3** Coefficient of friction is derived

**2.4** Laws of friction are applied to movement in a horizontal plane and the force to overcome friction on horizontal surfaces

**2.5** Effect of lubricating two surfaces in contact with each other is outlined

#### **3 Apply laws of motion**

**3.1** Laws of motion are explained

**3.2** Velocity/time and acceleration/displacement graphs are sketched and adapted to derive the standard velocity formula for both linear and angular motion

- |          |  |   |
|----------|--|---|
|          | <b>3.3</b>   | Formula and/or graphs are applied to solve problems of linear and angular velocity  |
|          | <b>3.4</b>   | Linear motion is converted to angular motion and revolutions to radians   |
| <b>4</b> | <b>Solve problems in dynamics related to marine machinery</b>                |   |
|          | <b>4.1</b>   | Relationship between torque, work, energy and power in marine engines and compressors is explained                            |
|          | <b>4.2</b>   | Conservation of energy theorem is used to calculate energy and power during linear and angular motion                         |
|          | <b>4.3</b>   | Meaning of momentum is explained  |
|          | <b>4.4</b>   | Calculations are performed associated with the collision of rigid bodies  |
|          | <b>4.5</b>   | Centrifugal force is distinguished from centripetal force   |
|          | <b>4.6</b>   | Centrifugal and centripetal force in relation to marine machinery is calculated   |
| <b>5</b> | <b>Determine efficiency of lifting and geared marine machinery</b>           |   |
|          | <b>5.1</b>   | Velocity ratio, mechanical advantage and efficiency of simple machines is calculated  |
|          | <b>5.2</b>   | Calculations are performed to solve problems related to the operation of simple machines                                      |
| <b>6</b> | <b>Calculate stress and strain due to axial loads</b>                        |   |
|          | <b>6.1</b>   | Normal stress is distinguished from strain  |
|          | <b>6.2</b>   | Hooke's Law for stress and strain is explained  |
|          | <b>6.3</b>   | Meaning of elastic limit, ultimate tensile strength, yield stress, limit of proportionality and factor of safety is explained |
|          | <b>6.4</b>   | Normal stress and strain caused by axial loads is calculated  |
| <b>7</b> | <b>Determine shear stress and strain in coupling bolts and simple bolted</b> |   |
|          | <b>7.1</b>   | Shear stress in simple bolted connections is determined   |

## connections

- |   |            |   |
|---|------------|---|
|   | <b>7.2</b> | Torque theory is applied to calculate shear stress in coupling bolts            |
| <b>8 Determine stresses in thin walled pressure vessels</b> | <b>8.1</b> | Factor of safety and joint efficiency factor for pressure vessels is calculated |
|   | <b>8.2</b> | Hoop and longitudinal stress in thin walled pressure vessels is calculated      |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARL012 Apply basic principles of marine mechanics

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL044 Apply basic principles of marine mechanics**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- identifying and applying relevant mathematical formulas and techniques to solve basic problems related to marine mechanics
- identifying and interpreting numerical and graphical information, and performing mathematical calculations to determine resultant and equilibrant of coplanar forces, linear and angular velocity, and hoop and longitudinal stress in thin walled pressure vessels
- identifying, collating and processing information required to perform basic calculations related to marine mechanics
- performing accurate and reliable mathematical calculations using a calculator
- reading and interpreting written information needed to perform basic calculations in marine mechanics
- solving problems using appropriate laws and principles.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- centre of gravity (CG)
- conservation of energy theorem
- dynamics, including:
  - relationship between speed, acceleration, mass, force and resistance
  - velocity and the effect of change of direction
- effective verbal, written and visual communication strategies
- factor of safety
- fluids, including effects of pressure and its relationship to depth of liquid and force
- force
- hydraulics
- hydrostatics

- joint efficiency factor
- laws of motion
- mass and volume
- momentum
- nature and laws of friction
- pressure vessels, including:
  - deformation of flat surfaces
  - strengths of dished or spherical end-plates in comparison to flat end-plates
- principles of marine mechanics
- reasons for:
  - using dished or spherical end-plates to give a higher strength than flat end-plates of similar thickness
  - using stays on flat surfaces
- simple machines, including:
  - hydraulic jack
  - pulley blocks
  - reduction gears
  - screw jack
  - single and double purchase crab winches
  - warwick screw
  - wheel and axle
  - worm driven chain blocks
- statics
- stress and strain
- thin cylinder theory
- types and uses of simple machines
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic industry approved marine operations site or simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or

may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- diagrams, specifications and other information required for performing basic calculations related to marine mechanics
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARL045 Apply basic principles of naval architecture

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to perform basic calculations related to the seaworthiness of commercial vessels, including those dealing with watertight integrity and vessel stability.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

L - Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Calculate shipboard areas and volumes**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Basic principal structural members of ship and proper names of various parts are detailed
- 1.2** Simpson's Rules are applied to calculate shipboard areas
- 1.3** Simpson's Rules are applied to calculate shipboard volumes
- 2 Calculate vessel displacement**
  - 2.1** Tonnes per centimetre (TPC) values and Simpson's Rules are applied to calculate vessel displacement
  - 2.2** Calculations are performed using TPC values and Simpson's Rules to solve problems related to vessel displacement
- 3 Calculate ship dimensions**
  - 3.1** Ship form dimensions are calculated using coefficients for areas
  - 3.2** Ship form coefficients for underwater volumes are calculated
  - 3.3** Influence of common hull modifications on hull form coefficients is explained
  - 3.4** Calculations are performed to solve problems of ship form coefficients following change to vessel length resulting from mid-body insertion or removal

- |  |            |   |
|--|------------|---|
| <b>4 Explain position of centre of gravity (CG) of vessel in relation to its keel and midships</b> | <b>4.1</b> | CG calculations for a vessel are performed  |
|  | <b>4.2</b> | How CG changes with redistribution, addition and/or removal of mass is explained  |
|  | <b>4.3</b> | How addition, removal or transfer of mass may cause overturning moments is identified   |
|  | <b>4.4</b> | Problems are solved involving addition, removal and vertical movement of mass by performing CG calculations for typical vessel loaded conditions                              |
|  | <b>4.5</b> | Calculations are performed using results from inclining experiments to obtain initial stability characteristics   |
| <b>5 Explain effects of water density and flooding of mid-length compartment on vessel draft</b>   | <b>5.1</b> | Relationship between changes in underwater volume and changes in water density is outlined  |
|  | <b>5.2</b> | Freshwater allowance of a vessel is determined  |
|  | <b>5.3</b> | Change in mean draft for vessel movement between waters of different densities is calculated  |
|  | <b>5.4</b> | Volume lost-volume gained relationship for flooded compartments is explained  |
|  | <b>5.5</b> | Calculations are performed to solve problems of mid-length compartment flooding in simple box-shaped hull forms   |
|  | <b>5.6</b> | Fundamental actions to be taken in the event of partial loss of intact buoyancy are identified  |
| <b>6 Perform calculations related to propellers and vessel speed</b>                               | <b>6.1</b> | Relationship between propellers and vessel speed is explained   |
|  | <b>6.2</b> | Problems related to vessel speed and propellers are solved by calculating theoretical, apparent and true speeds, apparent and true slips, wake speed and Taylor wake fraction |
|  | <b>6.3</b> | Impact of fouling on vessel hull and propeller is outlined  |

- |  |   |
|--|---|
| <b>7 Calculate voyage and daily fuel consumptions</b>                  | <b>7.1</b> Fuel consumption is determined by applying admiralty coefficient for fuel consumption taking account of ship speed, shaft power and displacement |
|  | <b>7.2</b> Calculations are performed to solve problems of vessel fuel consumption taking account of ship speed, shaft power and displacement               |
|  | <b>7.3</b> Impact of fouling on vessel fuel consumption is explained  |
| <b>8 Calculate pressures and loads on surfaces due to hydrostatics</b> | <b>8.1</b> Standard formula for hydrostatic pressure is defined   |
|  | <b>8.2</b> Hydrostatic load on vertical and horizontal surfaces is calculated   |
|  | <b>8.3</b> Method of calculating loads on typical tank structures for different filling rates is explained  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARL002 Apply basic principles of naval architecture.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARL045 Apply basic principles of naval architecture**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- drawing load line mark and the load lines for a ship of a given summer moulded draught, displacement and tonnes per centimetre (TPC) immersion in saltwater
- explaining basic principles of naval architecture
- identifying actions to be taken in the event of partial loss of intake buoyancy
- identifying and applying relevant mathematical formulas and techniques to solve basic problems related to speed, fuel consumption and stability of commercial vessels
- identifying and interpreting numerical and graphical information, and performing mathematical calculations related to shipboard areas and volumes, vessel displacement, angle of loll, ship dimensions, centre of gravity (CG), vessel speed, fuel consumption and hydrostatic pressure
- identifying, collating and processing information required to perform calculations related to speed, fuel consumption and stability of commercial vessels
- imparting knowledge and ideas through verbal, written and visual means
- performing accurate and reliable calculations
- reading and interpreting written information needed to perform calculations related to the seaworthiness of commercial vessels
- solving problems using appropriate laws and principles
- using calculators to perform mathematical calculations.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic structural members of a ship and the proper names of the various parts
- buoyancy
- calculations
- CG, longitudinal centre of gravity (LCG) and vertical centre of gravity (VCG)
- coefficients for areas, including:

- midships (CM)
- waterplane (CW)
- coefficients for underwater volumes, including:
  - block (Cb)
  - prismatic (Cp)
- curves of statistical stability
- density correction formula
- effects of slack tanks
- filling rates, including:
  - accidental flooding
  - tank testing
- fuel consumption calculations
- hydrostatic pressure
- movement of CG
- principle of displacement
- problems related to vessel displacement, including:
  - addition of mass
  - removal of mass
- ship:
  - displacement
  - measurements
  - stability calculations
  - stability including statistical and initial
  - types, including:
    - bulk carriers
    - combination carriers
    - container
    - general cargo
    - oil, chemical and gas tankers
    - passenger
    - roll-on and roll-off (ro-ro)
- ship construction, including:
  - bow and stern regions
  - fitting
  - hull structure
  - load line and draught marks, including:
    - chart of zones, areas and seasonal periods used to find the applicable load line
    - definition of 'freeboard'
    - definition of 'assigned summer freeboard'
    - freeboard, measured from the upper edge of the deck line to the water on each side,

- including checks that the ship is within its permitted limits of loading
- height of sill varies between different types of ships based on load line rules
- how to read draughts
- items in the conditions of assignment of freeboard
- load line mark and the load lines for a ship of a given summer moulded draught, displacement and TPC immersion in saltwater
- where the deck line is marked
- rudders and propellers
- ship dimensions and form
- ship stresses, including:
  - calculations for pressure at any depth below the liquid surface, given the density of the liquid
  - causes of corrosion onboard
  - 'hogging' and 'sagging' and distinguishing between them
  - hogging and sagging stresses caused by sea state
  - hogging and sagging stresses resulting in tensile or compressive forces in the deck and bottom structure
  - liquid pressure loading on the ship's hull
  - loading conditions which give rise to hogging and sagging stresses
  - methods that are being used to minimise the effects of corrosion
  - 'pounding' or 'slamming' and which part of the ship is affected
  - stress set up by liquid sloshing in a partly filled tank
  - racking stress and it causes
  - shear force and bending moments
  - stresses caused by localised loading
  - water pressure loads on ship's hull
- shipboard:
  - areas, including:
    - bulkheads/elemental areas
    - water planes
  - mass, including:
    - ballast
    - cargo
    - fuel
    - passengers
  - volumes, including:
    - transverse sectional areas
    - water plane areas
- Simpson's Rules
- TPC immersion

- trim and stress tables, diagrams and stress calculating equipment
- vessel speed calculations
- watertight integrity.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## MARL046 Carry out engineering calculations

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to carry out calculations related to fuel consumption, fuel storage and engine performance that conform to accepted engineering tolerances.

It includes calculating fuel consumption and storage and completing calculations related to engine performance.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Engineer on vessels with inboard engines less than 1500 kW within the exclusive economic zone (EEZ)
- Second Engineer on vessels with inboard engines less than 3000 kW within the EEZ
- Chief or Second Engineer on vessels with outboard engines with unlimited propulsion power within the EEZ
- assistant under the direct supervision of the chief engineer
- worker in the engine room of a vessel less than 80 metres in length with propulsion power less than 3000 kW.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Marine Engine Driver Grade 1 Near Coastal, as defined in the National Standard for Commercial Vessels (NSCV) Part D.

### Pre-requisite Unit

Not applicable.

### Competency Field

L - Marine Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Calculate fuel consumption and storage

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Information required for calculations related to fuel consumption and storage is obtained from relevant sources

**1.2** Calculations are completed to accepted working tolerances

**1.3** Results of calculations are verified

**1.4** Results of calculations are applied to managing fuel, as required

#### 2 Complete calculations related to engine performance

**2.1** Information required for calculations related to engine performance is obtained from relevant sources

**2.2** Calculations are completed to accepted working tolerances

**2.3** Results of calculations are verified

**2.4** Results of calculations are applied to managing engine performance, as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARL001 Carry out engineering calculations.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARL046 Carry out engineering calculations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- calculating:
  - area and circumference of a circle
  - consumption of fuel and lubricating oil for a particular voyage, using quantity in litres and mass in tonnes and specified regular shaped tanks
  - distances covered
  - hourly fuel and lubricating oil consumption
  - mechanical advantage, load, force and moments
  - remaining steaming times and engine performance
  - specific fuel consumption, power, speed and range
  - stress, strain and safe working load (SWL)
  - tank capacities and pumping capacities for tank filling and emptying
  - velocity ratio and efficiency of simple machines
  - volume and capacity of regular shaped tanks
- calculations fuel consumption and storage:
  - using calibration tables to measure quantities in tanks
  - using relative density/specific gravity to convert quantity in litres and volume to mass
- converting:
  - fractions to decimals
  - units to multiples of base units.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- area and circumference of a circle
- calibration tables
- common International System of Units (SI), such as kilogram, tonne, Newton, Newton metre, Pascal, joule, watt and metre

- relationship between theoretical vessel speed, propeller pitch and revolutions per minute (r.p.m.)
- terminology of:
  - material technology
  - simple levers
- volumes of regular shaped tanks
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# **MARL047 Demonstrate advanced knowledge of marine auxiliary boilers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate and maintain marine auxiliary boilers on a commercial vessel. It includes evaluating steam plant efficiency, interpreting steam plant cycles, evaluating repairs required for boilers and steam plants, outlining survey procedures, and explaining operating steam plant under different conditions.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |   |
|--|---|
| <b>1 Outline responsibilities of an Engineer Class 2 in relation to auxiliary boiler and steam plant of a vessel</b> | <b>1.1</b> Commonwealth, state/territory and local legislation and regulations that relate to marine boilers and steam plant in terms of safety, repairs and pollution, including implementation, is identified |
|  | <b>1.2</b> Safe operating practices for all steam plant are examined and standing orders as to their operation are prepared or modified   |
|  | <b>1.3</b> Procedures for establishing engine room staff who are fully conversant with safe practices for boiler operation are outlined   |
| <b>2 Evaluate design and construction of marine auxiliary boilers</b>  | <b>2.1</b> Typical boiler types illustrating cross-section, attachments and location of all fittings, mountings, scantlings and method of achieving circulation are examined                                    |
|  | <b>2.2</b> Material requirements for boiler components are identified   |
|  | <b>2.3</b> Construction of different types of boilers is analysed and difference recorded   |
| <b>3 Evaluate boiler and steam plant repairs</b>   | <b>3.1</b> Types and properties of materials used in boilers and steam plant are identified   |
|  | <b>3.2</b> Common component failures in boilers and steam plant are explained and reported  |
|  | <b>3.3</b> Appropriate repairs for failed components in boilers and steam plant are determined  |
|  | <b>3.4</b> Constraints on engineering staff engaged in repairing boilers and steam plant are explained  |

	<b>3.5</b>	Requirements to report defects in pressurised components of boilers are identified
<b>4 Evaluate design and operation of thermal fluid heating plants</b>	<b>4.1</b>	Different gauge glass types are compared
	<b>4.2</b>	Typical thermal fluid heating plant is explained and advantages and limitations of the system are identified
	<b>4.3</b>	Locations and functions of all fittings and safety devices in a typical thermal fluid system are explained
	<b>4.4</b>	Properties of thermal fluid, effects of contamination and methods of testing fluid are analysed
	<b>4.5</b>	Hazards associated with heat transfer oil systems are analysed
	<b>4.6</b>	Routine maintenance procedures associated with heat transfer oil systems are outlined
<b>5 Evaluate layout and design of marine steam systems and components</b>	<b>5.1</b>	Thermal fluid heating is compared to conventional steam plant
	<b>5.2</b>	Typical steam system layout showing location of all components on feed and heating side is detailed
	<b>5.3</b>	Material requirements for steam system components are identified
	<b>5.4</b>	Reasons for operating plant and systems at nominated temperatures and pressures, and effects of departing from these parameters, are explained
<b>6 Interpret complex steam plant cycles</b>	<b>6.1</b>	Operation, function and efficiency of dual pressure cycles and steam/steam generators are compared and contrasted
	<b>6.2</b>	Operation of dual pressure and pass in/out turbines is explained
<b>7 Evaluate steam plant efficiency</b>	<b>7.1</b>	Combustion efficiency from flue gas constituents is assessed
	<b>7.2</b>	Steam and fuel consumption to obtain heating efficiency is analysed

- |   |             |  |
|---|-------------|--|
|   | <b>7.3</b>  | Causes of loss of steam plant efficiency are evaluated and recorded  |
|   | <b>7.4</b>  | Requirements of inert gas generation of boiler plant are determined  |
| <b>8 Explain methods of auxiliary steam plant operation and control under variable conditions</b> | <b>8.1</b>  | Methods of steam pressure control while manoeuvring and possible adverse impacts are analysed  |
|   | <b>8.2</b>  | How dew point can be reached when operating at reduced power is examined   |
|   | <b>8.3</b>  | How low powers can limit steam production by exceeding pinch point is explained  |
| <b>9 Outline procedures for inspecting marine auxiliary boilers and associated plant</b>          | <b>9.1</b>  | Symptoms of faults in steam traps, hot wells, de-aerators, condensers, evaporators and requirements for contamination prevention between systems, are analysed |
|   | <b>9.2</b>  | Procedures for shutting down, isolating and opening up a boiler for inspection or during an emergency are clarified  |
|   | <b>9.3</b>  | Possible defects that may occur in a boiler, fire and water side, their location and effects are analysed  |
|   | <b>9.4</b>  | Repair procedures commonly employed for damaged boilers are examined and limitations of such repairs are explained   |
|   | <b>9.5</b>  | Procedures for leak detecting in boilers and steam equipment are clarified and remedial actions are explained  |
|   | <b>9.6</b>  | Mechanism of economiser fires are analysed   |
| <b>10 Outline procedures for surveying boilers</b>  | <b>10.1</b> | Procedures for preparing a boiler for survey are documented and explained  |
|   | <b>10.2</b> | Boiler inspection procedures that would cover all possible problem areas are planned   |
|   | <b>10.3</b> | Purpose and procedures for carrying out hydrostatic/hydraulic pressure tests and non-destructive tests on auxiliary boilers are explained                      |

- |  |   |
|--|---|
| <b>11 Analyse procedures for protecting steam plant during off-load conditions</b> | <b>11.1</b> Procedures for decommissioning and laying up a boiler for short and long intervals are compared   |
|  | <b>11.2</b> Processes for cleaning boilers are evaluated  |
|  | <b>11.3</b> Procedures for re-commissioning steam plant are explained   |
|  | <b>11.4</b> Chief Engineer responsibilities for setting lifting pressure of safety valves are outlined  |
| <b>12 Differentiate between safety valves types</b>                                | <b>12.1</b> Common types of boiler safety valves are analysed and sketched, and how they are classified in terms of valve lift is explained                     |
|  | <b>12.2</b> Materials used in safety valves are identified and operational problems that can occur are analysed   |
|  | <b>12.3</b> Defects that may be found when dismantling a safety valve for survey are analysed   |
|  | <b>12.4</b> Procedures for setting valve lift pressure are established and precautions necessary when testing valve on fired and non-fired boilers are examined |
|  | <b>12.5</b> Chief Engineer responsibilities for setting lifting pressure of safety valves are outlined  |
| <b>13 Evaluate problems associated with feed and boiler water</b>                  | <b>13.1</b> Causes of scaling and corrosion of water side of a boiler and how these can be minimised are analysed   |
|  | <b>13.2</b> Acceptable operational range and effects of contamination on boiler chemical reserves are identified  |
|  | <b>13.3</b> Reliability of boiler water test results are analysed in relation to sampling procedure, testing equipment and shelving of test chemicals           |
|  | <b>13.4</b> Different tests carried out on boiler water are explained and implications of out-of-range results are interpreted                                  |
|  | <b>13.5</b> Use of different chemicals to treat and condition boiler water is assessed  |
| <b>14 Assess hazards of operating steam plant under adverse or faulty</b>          | <b>14.1</b> Potential hazards of boiler operation with contaminated feed water are assessed   |

## operating conditions

- |           |             |   |
|-----------|-------------|---|
|           | <b>14.2</b> | Procedure for continuing boiler operation when contamination has exceeded acceptable limits is explained                                      |
|           | <b>14.3</b> | Effects of operating boiler with insufficient water level are explained and actions to be taken under loss of water conditions are identified |
|           | <b>14.4</b> | Causes, consequences and relevant preventative measures associated with furnace explosions are analysed                                       |
|           | <b>14.5</b> | Operating conditions that can lead to an economiser fire and actions that can be taken to prevent and control such fires are evaluated        |
|           | <b>14.6</b> | Alternative methods for maintaining heating if a boiler or economiser has to be shut down are determined                                      |
| <b>15</b> |             | <b>Evaluate marine fuel systems</b>   |
|           | <b>15.1</b> | Procedure to be adopted when boiler is severely contaminated from different sources is outlined   |
|           | <b>15.2</b> | Boiler fuel system, its components and maintenance procedure are detailed   |
|           | <b>15.3</b> | Combustion process, its monitoring system and requirements for good combustion are analysed   |
|           | <b>15.4</b> | Different types of burners are compared and contrasted and how atomisation is achieved is explained   |
|           | <b>15.5</b> | Operation of a burner management system that incorporates pressure and level control is explained   |
| <b>16</b> |             | <b>Evaluate marine boiler auxiliaries</b>   |
|           | <b>16.1</b> | Construction, operating principles and maintenance requirements of a regenerative condenser are explained                                     |
|           | <b>16.2</b> | Causes of loss of vacuum are identified and test procedure to identify leaks in a condenser is created  |
|           | <b>16.3</b> | Construction and operation of air ejectors, drain coolers, vacuum pumps and extraction pumps are explained                                    |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is not equivalent to MARL024 Demonstrate intermediate knowledge of marine auxiliary boilers.

This unit replaces and is equivalent to MARL030 Demonstrate advanced knowledge of marine auxiliary boilers.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL047 Demonstrate advanced knowledge of marine auxiliary boilers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance on at least one occasion and include:

- accessing information related to marine auxiliary boilers
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- identifying and applying relevant solutions for addressing complex problems associated with marine auxiliary boilers, such as maintaining the operation of marine auxiliary boilers under adverse conditions
- identifying and interpreting diagnostic information and performing complex mathematical calculations related to operating, repairing and maintaining marine auxiliary boilers
- identifying methods, procedures and materials needed for operating, maintaining and repairing marine auxiliary boilers
- imparting knowledge and ideas through verbal, written and visual means
- reading and interpreting manuals, technical specifications, safety data sheets (SDS)/material safety data sheets (MSDS) and manufacturer guides related to operating, repairing and maintaining marine auxiliary boilers.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of operation of boilers and steam systems
- boilers and steam plant, including:
  - condensers
  - economiser
  - feed pumps
  - fired
  - high pressure
  - low pressure

- medium pressure
- steam generators
- unfired
- boiler and steam plant repairs/defects
- boiler water levels
- boiler water testing
- boiler water treatment
- combustion efficiency
- combustion in boilers and related safety procedures, including importance of purging a boiler and other safety precautions taken when firing a boiler
- common boiler defects and repair procedures
- constraints, including:
  - class requirements
  - location
  - reliability
  - time
  - type of materials
- design features and operative mechanism of marine steam boiler and associated auxiliary, including:
  - material selection and design features of marine steam boiler
  - material selection and design features of marine steam boiler feed water systems
- failures, including:
  - acid dew point corrosion
  - caustic gouging
  - corrosion cracking
  - corrosion fatigue
  - distortion
  - erosion
  - fatigue
  - hydrogen damage
  - maintenance damage
  - material flaws
  - over temperature
  - pitting
  - rupture
  - stress:
    - thermal fatigue
    - vibration
- fittings mounted on boilers
- fuel oil system for an auxiliary boiler

- hazards:
  - associated with running boilers and steam plant
  - of operating steam plant under adverse or faulty operating conditions
- heat transfer oil systems
- intermediate operation of marine auxiliary boilers
- marine boilers and steam, including:
  - condensers
  - economiser
  - fired feed pumps
  - high pressure
  - low pressure
  - medium pressure
  - steam – steam generators
  - unfired
- marine boiler inspection procedures
- methods of auxiliary steam plant operation and control under variable conditions
- operating principles relating to steam generation in fired and unfired boilers
- operation of marine auxiliary boilers
- principles of boiler operation in normal and emergency situations
- procedures for:
  - maintaining water level in boilers
  - protecting steam plant during off-load conditions
  - surveying boilers
- purpose of alarms and shutdowns in marine boilers
- safety valves, including:
  - boiler drum
  - economiser
  - superheater
  - WHU
- steam plant:
  - cycles
  - efficiency and causes of loss of steam, including:
    - combustion
    - conduction-heat loss (such as fouled tubes)
    - controls/instrumentation
    - high flue-gas temperature
    - low combustion air supply temperature
    - low feed water supply temperature
    - low quality fuel
    - operation at low or cyclic loads

- poor radiant-heat loss
- too much excess air (i.e. high oxygen [O<sub>2</sub>])
- water treatment
- treatment, sampling and testing of feed and boiler water
- types of auxiliary boilers and typical operating pressures and temperatures
- typical feed systems for marine boilers
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- diagrams, specifications and other information required for performing advanced calculations related to marine auxiliary boilers
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARL048 Demonstrate advanced knowledge of marine auxiliary machinery and systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate and maintain auxiliary machinery and associated systems onboard a commercial vessel. This includes evaluating ship systems, assessing lubricants and lubricant contamination, and analysing the operation of major items of marine auxiliary machinery.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |          |                                 |  |
|----------|---------------------------------|--|
| <b>1</b> | <b>Evaluate ship systems</b>    | <b>1.1</b> Conventional systems are analysed from ship layout drawings and performance data<br><br><b>1.2</b> Viability and potential problems of new systems and advanced specialist vessels are evaluated<br><br><b>1.3</b> Performance of different pumps and heat exchangers is assessed, and their applications are compared for different purposes<br><br><b>1.4</b> Performance of shipboard pollution control equipment is evaluated   |
| <b>2</b> | <b>Assess materials failure</b> | <b>2.1</b> Type of materials failure that impact on marine auxiliary components is analysed, including metallic and non-metallic<br><br><b>2.2</b> Ideal properties of materials required for components of auxiliary machinery are analysed<br><br><b>2.3</b> Repair methods used for auxiliary machines and constraints on engineering staff engaged in repairing auxiliary machinery are analysed<br><br><b>2.4</b> Type and purpose of destructive and non-destructive testing of materials are compared |
| <b>3</b> | <b>Analyse lubrication</b>      | <b>3.1</b> Mechanism of lubrication between two surfaces is explained<br><br><b>3.2</b> Factors influencing good lubrication are identified and evaluated  |

		<p><b>3.3</b> Different types of lubrication applied to marine machinery are compared and contrasted</p> <p><b>3.4</b> Relative advantages of synthetic lubricants and mineral oils are assessed</p> <p><b>3.5</b> Methods of assuring quality of lubrication are identified</p> <p><b>3.6</b> Procedures for onboard testing for fuels and lubricants are clarified</p> <p><b>3.7</b> Laboratory tests that may be conducted on fuels and lubricants and how results can be interpreted and utilised as part of a maintenance program are detailed</p>
<b>4</b>	<b>Analyse fuel and lubricating oil contaminants</b>	<p><b>4.1</b> Symptoms, effects and possible remedial actions for different types of contaminants in fuel are evaluated</p> <p><b>4.2</b> Types of contaminants that affect lubricants and remedial actions required for different forms of contamination are identified, including bacterial infections</p> <p><b>4.3</b> Methods used to counter poor quality fuels and to improve properties of lubricating oils are assessed</p> <p><b>4.4</b> Safety measures to be applied when fuels are found to be outside class requirements are identified</p> <p><b>4.5</b> Operation of centrifugal separators is outlined and factors that affect optimum separation are analysed</p> <p><b>4.6</b> Procedures for dealing with contamination of oils by water, fuel or solid debris, including recognition of dangerous levels and possible consequences, are determined</p>
<b>5</b>	<b>Analyse shafting systems, bearings, couplings, clutches and shaft seals that form transmission system</b>	<p><b>5.1</b> Different types and methods of checking alignment and wear of shafting, shaft bearings and thrust blocks are identified</p>

- |          |  |  |
|----------|--|--|
|          |  | <p><b>5.2</b> Assembly and dismantling procedures for muff and flange type couplings are compared and contrasted</p> <p><b>5.3</b> Different types, methods of operation and maintenance requirements of clutches are compared</p> <p><b>5.4</b> Different types, maintenance requirements and operation of stern tubes, tail shaft seals and stern bearing lubrication systems under adverse conditions are evaluated</p> <p><b>5.5</b> Mounting and unmounting propeller to tail shaft is clarified</p>  |
| <b>6</b> | <b>Analyse steering gears and controllable pitch propeller (CPP) systems</b> | <p><b>6.1</b> Regulatory requirements for steering gears of different types of vessels are identified</p> <p><b>6.2</b> Operation of various types of steering gear arrangements are analysed</p> <p><b>6.3</b> Operation and performance of CPP and fixed pitch systems are compared and contrasted</p> <p><b>6.4</b> Modes of operation of CPP systems are explained</p> <p><b>6.5</b> Effects and countermeasures, in the event of failure in the control system or seals of a CPP system, are identified</p> <p><b>6.6</b> Construction, installation and operation of hydraulic gear, stabilisers and bow thrusters are identified</p> <p><b>6.7</b> Normal alarms and safety devices fitted to steering gears for all classes of vessels are identified, including analysis of auto and manual changeover procedures</p> <p><b>6.8</b> Construction, installation and operation of hydraulic steering gear is explained</p> <p><b>6.9</b> Construction and operation of stabilisers is explained</p> |

		<b>6.10</b>	Construction and operation of bow thrusters is explained
<b>7</b>	<b>Analyse marine transmission systems</b>	<b>7.1</b>	Operation and performance of different marine transmission systems are compared and contrasted
		<b>7.2</b>	Procedure for inspecting a set of reduction gears from a propulsion system is analysed
		<b>7.3</b>	Types and locations of faults that may occur in gearing systems and repair options available are analysed
<b>8</b>	<b>Analyse marine air compressors</b>	<b>8.1</b>	Procedures for assessing performance of reciprocating and rotary compressors by output and condition monitoring techniques are explained
		<b>8.2</b>	Effects of multi-staging, inter-cooling and clearance volume are explained
		<b>8.3</b>	Importance of all fittings and safety devices in compressed air system is explained
		<b>8.4</b>	Full automatic operation of starting air compressors is explained
		<b>8.5</b>	Air receivers are inspected and maintained
<b>9</b>	<b>Evaluate shipboard refrigeration and air conditioning (RAC) systems</b>	<b>9.1</b>	Principle of air conditioning systems is explained and how ideal conditions are achieved in air conditioned space is analysed
		<b>9.2</b>	Automatic operation of a typical marine provision fridge plant capable of maintaining different temperatures in different cold rooms is analysed
		<b>9.3</b>	Hazards associated with chlorofluorocarbons (CFCs) and hydrochlorofluorocarbons (HCFCs), and regulations controlling their production and usage are analysed

		<p><b>9.4</b> Procedures for evacuation and recovery of refrigerants from the system are outlined</p> <p><b>9.5</b> Symptoms, effects and remedial action for common faults in RAC systems are assessed</p>
<b>10</b>	<b>Evaluate operation of inert gas systems on crude oil tankers</b>	<p><b>10.1</b> Location and functions of all components, fittings and safety devices in an inert gas system are identified</p> <p><b>10.2</b> Operation of a typical inert gas system found on crude oil tankers is analysed</p> <p><b>10.3</b> Operation and maintenance requirements of inert gas systems are explained</p>
<b>11</b>	<b>Evaluate plant efficiency and relate problems in a turbo alternator</b>	<p><b>11.1</b> Operating parameters and associated protections for turbo alternator systems are analysed</p> <p><b>11.2</b> Procedure for assessing efficiency of auxiliary steam turbines is explained by analysing measured parameters</p> <p><b>11.3</b> Methods of steam and air leak detection in turbo alternator systems are compared</p> <p><b>11.4</b> Effects of fouling of condenser and changes in sea water temperature in turbo alternator systems are analysed</p> <p><b>11.5</b> Process of warming-through and shutting down turbine plant is explained</p> <p><b>11.6</b> Maintenance requirements for achieving optimum performance of an auxiliary steam turbine plant are outlined</p>
<b>12</b>	<b>Assess operational problems with pumps and pumping systems handling sea water</b>	<p><b>12.1</b> Procedure for evaluating pump or pumping system, including heat exchangers and methods of locating cause of problems that affect output and performance, is clarified</p> <p><b>12.2</b> Operation of a self-priming system used on bilge, ballast or cargo pumping</p>

- arrangements is explained
- 12.3** Different types of distillation plants used on ships are compared and contrasted taking into account operation, performance, problems and applications
- 12.4** Main reasons for corrosion in seawater systems and regions most affected are explained
- 12.5** Operation of corrosion prevention systems fitted to pumping systems is assessed
- 13** **Outline pollution prevention regulations and operation of equipment**
- 13.1** International Convention for the Prevention of Pollution from Ships (MARPOL) regulations are identified and their implications for Engineers and ship operators are explained
- 13.2** Operation of modern oily water separators, oil content monitors and how they comply with MARPOL regulations are explained
- 13.3** Operation of typical sewage plants and regulations controlling their usage are explained
- 13.4** Operation of incinerators, material that may legally be burned and monitoring devices is explained
- 14** **Explain basic operation of marine gas turbines**
- 14.1** Basic flow of air and gas through a simple cycle marine gas turbine is outlined
- 14.2** Materials and construction of compressor, combustion system and turbine in a single and two-shaft design turbine are outlined
- 14.3** Basic controls required for control and protection of plant are outlined
- 14.4** Accessories necessary for safe operation are identified

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is not equivalent to MARL025 Demonstrate intermediate knowledge of marine auxiliary machinery and systems.

This unit replaces and is equivalent to MARL031 Demonstrate advanced knowledge of marine auxiliary machinery and systems.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL048 Demonstrate advanced knowledge of marine auxiliary machinery and systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing information and sketch diagrams to interpret and explain testing requirements related to the operation of marine auxiliary machines
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- explaining principles of marine auxiliary machines
- identifying and interpreting complex numerical and graphical information related to operating, maintaining and repairing marine auxiliary machines on commercial vessels
- identifying and rectifying faults and malfunctions in marine auxiliary machines on commercial vessels
- identifying methods, procedures and materials needed for operating, maintaining and repairing marine auxiliary machines on commercial vessels
- imparting knowledge and ideas through verbal, written and visual means
- reading and interpreting complex written information related to the operation, performance and maintenance of marine auxiliary machines, including machinery specifications, machinery design drawings, machine drawings, operational manuals, specifications, and electrical and control circuit diagrams.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- auxiliary machinery, including:
  - boiler
  - compressors
  - deck machinery
  - diesel generator
  - evaporators

- pumps
- refrigerating installation
- separators
- turbo alternators
- components of refrigeration and air conditioning (RAC), including:
  - all fittings
  - safety devices
- constraints, including:
  - class requirements
  - location
  - reliability
  - time
- corrosion prevention systems, including:
  - anodes
  - chemical injection
  - impressed current
  - marine growth inhibiting systems
  - special coatings
- design features and operative mechanism of marine gas turbine and associated auxiliaries, including:
  - material selection and design features of gas turbines
- factors influencing good lubrication, including:
  - alignment
  - condition of bearing surfaces
  - flow rate
  - load
  - purity of lubricant
  - running clearances
  - speed
  - temperature
  - viscosity
- fuel testing, including:
  - density
  - fuel in lubricating oil
  - pour point
  - viscosity
  - water contamination
- fuel and lubricating oil contaminants, including:
  - air entrainment
  - incompatible fluids

- moisture
- particulate
- fuels and principles of fuel systems
- inert gas systems
- International Convention for the Prevention of Pollution from Ships (MARPOL)
- lube oil, including:
  - coolers
  - filter
  - pump
- marine air compressors and compressed air systems
- marine transmission systems
- materials failure, including non-destructive testing procedures and standards
- nature and causes of typical start-up and shutdown malfunctions of main and auxiliary machinery and associated systems, and available methods for their detection and rectification
- operational characteristics and performance specifications for the different types of auxiliary machinery and associated systems usually found on a commercial vessel, including pumps, air compressors, steering gears, heat exchangers and evaporators
- plant efficiency
- principles and procedures of machinery lubrication
- procedures for carrying out start-up and shutdown of main and auxiliary machinery and associated systems to ensure compliance with company and survey requirements and regulations
- properties of metallic and non-metallic materials
- protections, including:
  - axial displacement
  - condenser condition
  - electrical
  - expansion
  - high air temperature
  - high oil temperature
  - loss of vacuum
  - low oil pressure
  - mechanical
  - overspeed:
    - pressure
    - steam
    - steam condition
    - temperature
    - vibration
- purpose and content of safety data sheets (SDS)/material safety data sheets (MSDS)
- safety, environmental and hazard control precautions and procedures relevant to start-up and

- shutdown of marine auxiliary machinery and associated systems
- shafting systems, bearings, couplings, clutches and shaft seals and stern tubes that form the transmission system
- ship systems
- shipboard RAC systems
- steering gears and controllable pitch propeller (CPP) systems
- turbo alternators
- types of auxiliary machinery and components
- WHS/OHS legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standard for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- relevant documentation, including workplace procedures, regulations, codes of practice and operation manuals
- tools, equipment, materials, personnel and personal protective equipment (PPE) that replicate and are currently used in industry.

# **MARL049 Demonstrate advanced knowledge of marine control systems and automation**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate control systems onboard a commercial vessel. It includes advanced knowledge of control theory and knowledge required to analyse the operation and performance of signal transmissions systems, electronic transmitters, final control element arrangements, electronic temperature sensors and transmitters, governors, proportional-integral-derivative (PID) electronic controllers, machinery space monitoring alarm and control systems.

It also includes knowledge of fault-finding techniques for control systems, measurement and test equipment used for fault finding electronic apparatus, operational applications of analogue and digital programmable logic controllers (PLCs), and procedures for programming, operating, and maintaining PLC controlled systems.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

## Competency Field

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Explain control theory**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Open loop systems are distinguished from closed loop systems

**1.2** Time lag is distinguished from time constant

**1.3** Closed loop manual, time-based automatic open loop and feed forward open loop are explained

**1.4** Effect resistance and capacitance has on process system response is demonstrated

**1.5** Transfer function is established and defined

**1.6** Effect of variations in undamped natural frequency on control systems is illustrated

#### **2 Analyse signal transmissions systems used for monitoring, controlling and shutting down machinery**

**2.1** Methods and limitations of different signal transmissions systems are compared

**2.2** Standard pneumatic system and standard analogue 4-20 Milliampere (mA) system of signal transmission are compared and contrasted

- 2.3 Operation of a nozzle flapper and pneumatic amplifier unit is analysed and applied to transmitters, basic controllers and valve positioners
  - 2.4 Control air supply system is defined
  - 2.5 Principle of operation of direct and reverse acting pneumatic relays and application is clarified
  - 2.6 System of a communications bus using digital signal transmission with optical and electronic systems is explained
  - 2.7 Limitations and advantages of a communications bus system are analysed
- 3 **Analyse electronic and pneumatic transmitters**
  - 3.1 Principles of operation of a typical 4-20 mA transmitter are explained
  - 3.2 Application of strain gauges and changes in capacitance as sensors for pressure and differential pressure transmitters are outlined
  - 3.3 Methods of testing transmitter outputs are explained
  - 3.4 Application of differential pressure transmitters to liquid level sensing in both open and closed tanks is analysed
  - 3.5 Pneumatic temperature transmitter is defined
  - 3.6 Effect of changes in ambient temperature on thermocouples and resistance temperature detectors (RTD) is explained
  - 3.7 Testing procedures and methods of simulation for both RTDs and thermocouples are explained
  - 3.8 Characteristics and application of thermistors are outlined
  - 3.9 Use of a differential pressure transmitter to measure flow is analysed and compared with non-restrictive electronic systems
- 4 **Evaluate final control element arrangements**
  - 4.1 Pneumatic, electric and hydraulic actuation are compared and contrasted
  - 4.2 Arrangements for locking pneumatic control valves in

their last position on air failure are outlined

**4.3** Operating principle of pneumatic valve positioners is explained

**4.4** Control valve trim characteristics are explained

**4.5** Control valve selection for machinery space duties are analysed

**4.6** Arrangements to provide fail safe requirements are outlined

**5 Evaluate electronic temperature sensors and transmitters**

**5.1** Colour coding of tails and compensating cables for thermo couple types are identified

**5.2** Temperature/millivolt (mV) outputs and application of common thermo couple types are illustrated

**5.3** Relationship between resistance and temperature for PT100 resistance temperature device and method of testing three wire arrangements is explained

**5.4** Arrangements of interfacing thermo couples and RTDs with 4-20 mA systems and 1-5 volt (V) interface cards are analysed

**5.5** Effect of changes in ambient temperature on thermocouples and RTD is explained

**6 Analyse PID electronic controllers**

**6.1** Common controller actions and applications are outlined

**6.2** Principle of operation of an electronic analogue 3-term controller and how adjustments are made is explained

**6.3** Typical controller settings for a PID controller are detailed

**6.4** Open loop response and PID controller testing and calibration are demonstrated

**6.5** Application of modern single loop digital controller is explained

**6.6** Programming requirements for manual and auto-tuning when adjusting digital controllers are demonstrated

<b>7 Explain procedure for transmitter calibration</b>	<b>7.1</b>	Procedure for transmitter calibration for both pneumatic and electronic transmitters is applied
	<b>7.2</b>	Test equipment is used for transmitter calibration
	<b>7.3</b>	Relationship between process variables and output signals is demonstrated in a graph
	<b>7.4</b>	Effects of transmitter dead band are defined
<b>8 Explain operation of pneumatic 3-term controller and controller adjustment procedures</b>	<b>8.1</b>	Operating principle of pneumatic 3-term controllers is outlined
	<b>8.2</b>	Procedure for adjusting 3-term pneumatic controllers is applied and effects if incorrectly adjustment are explained
	<b>8.3</b>	Integrated hand/auto station and 3-term controller are outlined and bumpless transfer is demonstrated
<b>9 Explain engine room monitoring systems</b>	<b>9.1</b>	Application of different speed sensing systems is analysed
	<b>9.2</b>	Operating principles of torque monitoring systems applied to propeller shafting are explained
	<b>9.3</b>	Arrangements of shaft power and indicated power monitoring are compared
	<b>9.4</b>	Capacitance sensing and float level monitoring systems are compared
	<b>9.5</b>	Operating principle of oil-water interface sensor is explained
	<b>9.6</b>	Methods of bearing temperature monitoring applied to diesel engine rotating parts are outlined
	<b>9.7</b>	Machinery space monitoring and alarm system from a central control room are outlined
<b>10 Evaluate performance of machinery space monitoring alarm and control systems</b>	<b>10.1</b>	Single, two and three element boiler water level control systems involving feedwater and cascade systems are analysed

- 10.2 Requirements and systems to provide advanced combustion control systems and sequential control for burner management are outlined
- 10.3 Concepts and arrangements for central cooling and load dependent cooling control systems are explained
- 10.4 Main engine control arrangements for fixed pitch propeller and controllable pitch propeller (CPP) systems requiring sequential control are analysed
- 10.5 Tests and procedures to meet unmanned machinery spaces (UMS) requirements are explained, and alarm and monitoring systems involving data loggers, alarm print outs, and trend analysis are evaluated
- 11 **Analyse governors**
  - 11.1 Operating principle of proportional action hydraulic governors is explained
  - 11.2 Importance of spring stiffness in relation to response is clarified
  - 11.3 Purpose of an isochronous governor is outlined
  - 11.4 Principle of operation of an isochronous hydraulic governor is outlined
  - 11.5 Governor adjustments to allow operation of propulsion and power generation diesels in both shared load and standalone applications are specified
  - 11.6 Governor faults are diagnosed and interpreted, identifying and evaluating appropriate adjustments and maintenance to be made
  - 11.7 Specific governor applications requiring torque limitation, critical speed range avoidance are outlined
  - 11.8 Typical electronic governors are explained using labelled diagrams to indicate major components and features
  - 11.9 Response of a diesel engine governor on change in engine load using both feed-back and feed forward control is explained using labelled diagrams to indicate major components and adjustments
- 12 **Explain fault-finding techniques for control systems**
  - 12.1 Governor adjustments are demonstrated, and effect of incorrect adjustments is explained

- 12.2** Common defects in mechanical and electronic governors are itemised
  - 12.3** Indication of faults and procedures of fault finding in 4-20 mA loops are explained
  - 12.4** Fault-finding techniques in pneumatic control systems and their respective components are analysed
  - 12.5** Fault finding flow diagram is illustrated
  - 12.6** Off-limit performance, fault detection and principles of rectifications for common engine room control systems are evaluated
- 13 Explain operational applications of analogue and digital PLCs**
  - 13.1** Principles and operation of integrated circuit gates are explained
  - 13.2** Operational function of input/output devices connected to a digital PLC is detailed
  - 13.3** Methods of operation of flip flops, adders, counters, multiplexers and decoders are outlined
  - 13.4** Methods employed when changing set point values in a digital PLC are outlined
  - 13.5** Methods of programming PLCs are assessed
  - 13.6** Methods used for storing binary data and operating registers are explained
  - 13.7** Fibre optic data transmission systems are explained
  - 13.8** Procedure for connecting PLC to system control elements is outlined
  - 13.9** System operating procedure is outlined
  - 13.10** Procedure for modifying system and program as necessary to provide adequate and appropriate safety requirements is outlined
  - 13.11** Required documentation is prepared and accuracy is verified
  - 13.12** Maintenance and fault-finding procedures are outlined

- |  |  |
|--|--|
| <b>14 Explain typical machinery space control loops and UMS requirements</b> | <b>14.1</b> Fuel oil heating, lube oil (LO) cooling and jacket water (JW) cooling loop showing cascade and split range systems are outlined                |
|  | <b>14.2</b> Fuel oil viscosity control loop is outlined  |
|  | <b>14.3</b> Common methods of boiler water control and simple combustion control with burner management for an auxiliary boiler are outlined               |
|  | <b>14.4</b> Requirements and system arrangements for bridge control of main propulsion machinery, including changeover from local to bridge, are explained |
|  | <b>14.5</b> Common pressure control loops found in a ship's engine room are identified   |
|  | <b>14.6</b> UMS requirements are outlined  |
|  | <b>14.7</b> Troubleshooting procedures associated with control systems are outlined  |
|  | <b>14.8</b> Procedures for software version control are outlined   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is not equivalent to MARL026 Demonstrate intermediate knowledge of marine control systems and automation.

This unit replaces and is equivalent to MARL032 Demonstrate advanced knowledge of marine control systems and automation.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL049 Demonstrate advanced knowledge of marine control systems and automation**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing information and sketching diagrams, and interpreting and explaining testing requirements related to control systems on commercial vessels
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- explaining advanced principles of marine automation and process control, and imparting knowledge and ideas verbally, in writing and visually
- identifying and interpreting numerical and graphical information, including schematic diagrams, relevant to control systems on commercial vessels
- identifying and suggesting ways of rectifying faults and malfunctions in control systems on commercial vessels
- identifying methods, procedures and materials needed to operate and maintain control systems on commercial vessels
- reading and interpreting written information related to operating control systems on commercial vessels.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actuators and control valves, including:
  - electric
  - hydraulic
  - pneumatic
- analogue and digital programmable logic controllers (PLCs)
- Australian Standards for drawing symbols/layouts for schematic diagrams
- automatic control engineering and safety devices
- bridge control systems

- characteristics and functions of temperature, pressure and viscosity of fuel
- concept of 'fail safe' philosophy
- concepts of unmanned machinery spaces (UMS), and automated monitoring and control of machinery
- control and monitoring of ship machinery
- control:
  - loops
  - theory
- design features and system configuration of automatic control equipment and safety devices, including:
  - general requirements
  - generator and distribution system
  - main engine
  - steam boiler
- design features and system configuration of operational control equipment for electrical motors, including:
  - distribution
  - effects of varying frequency and voltage of alternating current (AC) motors
  - emergency power
  - insulated gate bipolar transistor (IGBT) motor speed control
  - motor control and protection
  - motor speed control by thyristors
  - three phase AC motors
  - three phase generators
  - three phase synchronous motors
  - three phase transformers
- design features of high voltage (HV) installations
- differential pressure transmitters
- electronic:
  - electronic systems circuit diagrams
  - temperature sensors and transmitters
  - transmitters
- electronic, power electronics
- faults, including:
  - earths
  - electronic component failure
  - high resistance joints
  - open circuits
  - power supply faults
  - short circuits

- fault-finding techniques for control systems
- features of hydraulic and pneumatic control equipment
- final control element arrangements
- governors and governor adjustments, including mismatching between prime mover types and responses
- industry standards for drawing symbols/layouts for schematic diagrams
- instrument process and control terms
- machinery space monitoring alarm and control systems
- marine electrotechnology
- measurement and test equipment used for fault finding electronic apparatus
- mechanical and electrical sensors
- meters, including:
  - rotometer
  - target meter
- methods of testing transmitter outputs, including:
  - MA test point
  - MV test point
  - no test points
- open and closed loop systems
- operation of hydraulic governors
- operation of pneumatic 3-term controller and controller adjustment procedures
- operation of PLCs
- operational safety of HV installation
- proportional-integral-derivative (PID) electronic controllers
- pneumatic and electrical instrumentation transmitters
- principles and operation of pneumatic control element and systems
- principles of:
  - basic electronic circuits
  - basic pneumatic systems and action of pneumatic instruments
  - process control
- safety devices, alarms and monitoring systems
- sensing and transmitting elements
- signal transmissions systems used for monitoring, controlling and shutting down machinery
- tests and procedures required to meet UMS requirements
- WHS/OHS legislation, policies and procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- relevant documentation, including workplace procedures, regulations, codes of practice and operation manuals
- tools, equipment, materials and relevant personal protective equipment (PPE) that replicate and are currently used in industry.

# **MARL050 Demonstrate advanced knowledge of marine diesel engines and systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to analyse the operation and maintenance of marine diesel engines and systems on a commercial vessel. This includes evaluating fuel, cooling and lubrication systems; analysing starting, manoeuvring and reversing systems; analysing causes of vibration, scavenge fires and explosions; and interpreting combustion diagnostic equipment faults.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Evaluate diesel fuel systems**

- 1.1** Optimum combustion parameters, means of adjustment and legislation requirements limiting exhaust emissions are determined and analysed
- 1.2** Design modifications of pumps, camshafts and injectors for standard fuel types are evaluated
- 1.3** Variable injection timing and fuel quality adjustments in service are justified, specifying common methods of adjustment
- 1.4** Injection requirements for common diesel engine types, including combustion modifications for changes in engine service rating, are compared
- 1.5** Faults and symptoms of common diesel fuel injection problems are analysed and appropriate adjustments are explained
- 1.6** Work health and safety (WHS)/occupational health and safety (OHS) aspects of testing and handling fuel injection systems are explained
- 1.7** Operation and normal operating pressures and temperatures of fuel systems are analysed, including uni-fuel and dual fuel systems of varying viscosity fuel types

#### **2 Analyse cooling systems for main and auxiliary diesel engines**

- 2.1** Thermal efficiency optimisation of diesel engines and causes of thermal loads on engine components are explained
- 2.2** Cooling media selection is justified, and advantages and disadvantages of various diesel cooling methods are evaluated
- 2.3** Requirements of a coolant are identified and recorded
- 2.4** Corrosion principles and combustion side corrosion problems are explained

- 2.5 Appropriate action to be taken with common cooling system faults is established and evaluated
- 2.6 How cooling systems are commissioned, monitored and stored during idle periods is explained
- 2.7 Reasons for load-dependant cooling of diesel alternators on heavy fuels is explained
- 2.8 Use of additives in cooling water is explained, including water treatment
- 2.9 Normal operating temperatures, pressures and flow paths of typical methods of cooling medium and slow speed diesel engine pistons, exhaust valves, cylinders, turbochargers and cylinder heads are specified
- 3 **Evaluate diesel engine lubrication requirements**
  - 3.1 Principles of engine lubrication are explained
  - 3.2 Different lubrication systems and different lubricant properties are explained and assessed
  - 3.3 Methods for lubricating marine diesel engine components are specified and common faults are interpreted
  - 3.4 Conventional and synthetic lubricant properties and applications are identified
  - 3.5 Sources of contamination and deterioration of lubricants are analysed; treatment, monitoring and testing methods are explained; results are evaluated and appropriate actions to be taken are outlined
  - 3.6 Diagrams showing direction of flow, typical clearances and stating normal operating temperatures and pressures are used to explain how lubricating oil is distributed to the guides, top-end, bottom-end and main bearings of diesel engines
  - 3.7 Methods of crosshead lubrication are outlined and compared
  - 3.8 Methods of medium and slow-speed cylinder lubrication are evaluated
  - 3.9 Bearing materials and faults are evaluated and remedies to prevent them from occurring are determined
- 4 **Analyse diesel engine starting and**
  - 4.1 Starting procedures for diesel engines for power generation, propulsion and emergency use are specified

- manoeuvring**
- 4.2** Starting and manoeuvring sequences/requirements for direct-coupled reversible and geared propulsion diesels, including controllable pitch propeller (CPP) applications, are determined
  - 4.3** Common faults are analysed and appropriate actions to be taken with diesel starting and manoeuvring systems are determined
  - 4.4** Major components of a propulsion diesel engine typical manoeuvring and reversing system are outlined using labelled diagrams, explaining how remote, local and emergency manoeuvring is achieved
  - 4.5** Methods of achieving reversing capability with direct-coupled propulsion diesels are evaluated
  - 4.6** Layout of a diesel-electric drive is compared and contrasted with the layout of a turbo-electric drive
- 5 Analyse causes of vibration**
- 5.1** Common materials used in diesel engine construction are identified, justifying selection and specifying typical compositions and physical properties of components
  - 5.2** Dynamic loads and stresses are summarised, identifying service limitations, and different methods of component fabrication and reclamation are evaluated
  - 5.3** Two- and four-stroke operating cycle forces, couples and moments, relating to design principles of crankshafts, bedplates, foundations and crossheads are analysed
  - 5.4** Out-of-balance gas and inertia forces, couples and moments, and their relationship with flywheels, balance weights, first/second order balancing and hull vibration are explained
  - 5.5** Factors contributing to torsional vibration are specified and methods of minimising or eliminating harmful effects of critical speeds are outlined
  - 5.6** Torsional vibration dampers/detuners are explained using labelled diagrams, indicating construction features and operating principles
  - 5.7** Calibration is applied to identify wear patterns, limits and means of restoring working clearances and limits of pistons, liners, piston rings, bearings and crankshafts, sliding surfaces and interference fits of typical diesel engines
  - 5.8** Alignment and adjustment criteria of crankshafts, chain-drives,

- integral thrust bearings and crossheads are specified
- 5.9** Crankshaft deflection measurements are prepared and evaluated, alignment diagrams are constructed, and realignment procedures, including restoration of crankshaft shrink-fit slippage, are proposed
- 6 Analyse scavenge and uptake fires, air line, crankcase and gearbox explosions**
- 6.1** Operational and design factors contributing to waste heat unit fires are assessed
- 6.2** Appropriate strategies for extinguishing/containing soot and hydrogen fires are selected
- 6.3** Hazard reduction, inspection and isolation of waste heat units in service procedures are established
- 6.4** Operational factors that may contribute to scavenge fires are identified and methods of extinguishing and hazard reduction are determined
- 6.5** Factors contributing to explosive mixtures are analysed and hazard reduction procedures for starting air systems are proposed and evaluated
- 6.7** Causes of gearbox and crankcase explosions in propulsion and auxiliary drives are revised
- 6.9** Procedures to be implemented for hazardous atmosphere warning in oil and dual-fuel engines are evaluated
- 6.10** Relevant diagrams are used to identify operating principles of oil-mist detectors, crankcase breathers and explosion relief doors
- 6.11** Maintenance strategies are developed and criteria for piston rod scraper box inspection and maintenance intervals are specified
- 7 Plan safe working practices associated with diesel engine maintenance, operation and repair**
- 7.1** Safe working practices for isolating main and propulsion diesels under all operational contingencies are planned, including use of protective devices, interlocks and evaluation of their status
- 7.2** Safe working practices for machinery in enclosed spaces are planned
- 7.3** Hazard reduction procedures for safe working with flammable liquids under pressure, chemicals, acids and hydrocarbons associated with engine overhaul and maintenance are planned
- 7.4** Safe working strategies for diesel engine maintenance are planned according to manufacturer instruction manuals and

		product safety data sheets (SDS)/material safety data sheets (MSDS)
	<b>7.5</b>	Safe working practices associated with safe handling of hydraulic tools and dangers of lifting/isolating heavy components both unaided and with lifting gear are explained
<b>8 Interpret combustion diagnostic equipment faults and relate to fuel injection and pressure charging systems</b>	<b>8.1</b>	Two and four-stroke theoretical cycle diagrams are produced and discrepancies with results recorded by diagnostic tools are accounted for
	<b>8.2</b>	Combustion faults related to fuel injection and pressure charging systems are diagnosed, corrective action is specified and service values with trials or test bed figures are analysed
	<b>8.3</b>	Methods of pressure charging diesel engines are evaluated, efficiencies are determined from records, efficiency losses are accounted for and means of correction are identified
	<b>8.4</b>	Maintenance and emergency procedures for turbochargers and charge air coolers are planned
	<b>8.5</b>	Design features of turbochargers and charge air coolers are evaluated
	<b>8.6</b>	Relevant diagrams are applied to evaluate diesel scavenging systems, under normal and emergency operation modes
<b>9. Analyse construction and operation of marine gas turbines</b>	<b>9.1</b>	Flow of air and gas through a simple cycle marine gas turbine is analysed
	<b>9.2</b>	Materials and construction of compressor, combustion system and turbine in single and two-shaft designs are outlined
	<b>9.3</b>	Controls required for control and protection of marine gas turbines are detailed
	<b>9.4</b>	Functions of accessories necessary for safe operation of marine gas turbines are explained

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

## Unit Mapping Information

This unit replaces and is not equivalent to MARL027 Demonstrate intermediate knowledge of marine diesel engines and systems.

This unit replaces and is equivalent to MARL033 Demonstrate advanced knowledge of marine diesel engines and systems.

# **Assessment Requirements for MARL050 Demonstrate advanced knowledge of marine diesel engines and systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing diagnostic information related to marine diesel engines and systems
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- explaining operation of marine diesel engines and systems, and imparting complex information and ideas verbally, in writing and visually
- identifying and applying relevant solutions for addressing problems associated with marine diesel engines and systems
- identifying and interpreting complex diagnostic information and performing mathematical calculations related to operating, repairing and maintaining marine diesel engines and systems
- identifying methods, procedures and materials needed for operating, maintaining and repairing marine diesel engines and systems
- reading and interpreting manuals, technical specifications, safety data sheets (SDS)/material safety data sheets (MSDS) and manufacturer guides related to operating, repairing and maintaining marine diesel engines and systems.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate actions to be taken with common cooling, including:
  - contamination
  - different cooling water treatments
- causes of vibration
- combustion diagnostic equipment faults
- common service faults, actions to rectify faults, emergency operation and isolation procedures
- cooling systems for main and auxiliary diesel engines

- crankcase and air-line explosions, scavenge and uptake fires
- design features and operating mechanism of marine diesel engine and associated auxiliaries, including:
  - combustion chamber components of diesel engine
  - fuel injection equipment of diesel engine
  - operative mechanism of diesel engine systems
  - piston rings, compatibility to cylinder liner and cylinder lubrication employed in a diesel engine
  - running gear of diesel engine
  - structure of diesel engine
- design features of turbochargers and charge air coolers, including:
  - bearing types
  - materials
- design features and operative mechanism of marine diesel engine and associated auxiliaries, including:
  - material selection and design features of the:
    - combustion chamber components of diesel engine
    - diesel engine system
    - fuel injection equipment of diesel engine
    - piston rings, compatibility to cylinder liner and cylinder lubrication employed in a diesel engine
    - running gear of diesel engine
    - structure of diesel engines
- diesel engines, including:
  - components
  - condition monitoring
  - engine system diagnostics
  - lubrication requirements
  - lubrication systems
  - propulsion and power generation
  - starting and manoeuvring
- diesel fuel systems
- fuel injection and pressure charging systems
- fuel systems, including:
  - conventional, low-inertia and dual-fuel (oil fuel/gas) injectors
  - fuel line pulsation damping devices
  - leakage protection
  - uni-fuel and dual-fuel systems (high/medium viscosity fuel types)
- hazards, including:
  - acids

- chemicals
- defective or bypassed machinery protective devices
- defective or inappropriately adjusted exhaust systems
- enclosed spaces
- flammable liquids under pressure
- hydrocarbons
- leaking oil and fuel
- lifting heavy components both unaided and with lifting gear
- manoeuvring systems of diesel engines
- methods of:
  - component fabrication and reclamation, including:
    - ceramics
    - composite
    - forged
    - laser-hardening
    - plasma-spraying
    - welded
  - medium and slow cylinder lubrication, including:
    - optimisation
    - running-in requirements
    - speed and load-dependant lubrication
- normal operating temperatures, pressures and flow paths, including:
  - bore cooling techniques
  - honeycomb techniques
  - strong-back techniques
- multi-engine propulsion arrangement
- pressure charging diesel engines
- principles of diesel engine operation, including precautions and procedures
- relevant diagrams, including light spring diagrams
- scavenge and uptake fires, air line, crankcase and gearbox explosions
- sources of contamination, including bacterial infection
- starting and reversing methods of diesel engine
- turbocharger operation
- WHS/OHS requirements and safe work practices, including:
  - diesel engine control and safety
  - diesel engine emergency operation
  - isolating main and propulsion diesels, including:
    - identifying hazards
    - minimising hazards
  - machinery in enclosed spaces, including:

- handling heavy components
- using hydraulic tools
- safe working practices associated with diesel engine maintenance, operation and repair.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- relevant documentation, including workplace procedures, regulations, codes of practice and operation manuals
- tools, equipment, materials, relevant personnel and personal protective equipment (PPE) currently used in industry.

# MARL051 Demonstrate advanced knowledge of marine electrical systems

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release 6.0.

## Application

This unit involves the skills and knowledge required to supply shipboard electrical power onboard a commercial vessel. It includes analysing electrical layout systems, alternators, marine motors, lighting systems, power management and uninterruptable power systems (UPS), shipboard electrical equipment and high voltage (HV) power systems.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited), Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Evaluate advanced electrical layout systems**

- 1.1** Effects of power factor changes on prime mover, alternator and electrical system are analysed
- 1.2** Methods of altering load power factor by means of capacitors or synchronous machines are explained
- 1.3** Methods of obtaining constant frequency from a variable frequency output, such as a main engine driven alternator and/or variable speed drives for a self-discharging equipment, are explained
- 1.4** Protecting systems available for shaft driven alternators are evaluated

#### **2 Analyse common faults in shipboard electrical machinery**

- 2.1** Effects and ways of detecting earth on 3-wire insulated and 4-wire earthed neutral systems are explained
- 2.2** Effects of short circuits and operation of discrimination protection are explained
- 2.3** Symptoms and effects of 'light' and 'heavy' short circuits on components and circuits are compared
- 2.4** Effects of open circuits on systems and components transformers are analysed
- 2.5** Causes and effects of 'hot spots' in circuits are identified
- 2.6** Cause and effects of static electricity on shafting and when cleaning tanks are identified

#### **3 Analyse construction and**

- 3.1** Construction and operating parameters of different types of

<b>principles of operation of different types of marine alternators</b>	marine alternators are compared and contrasted
	<ul style="list-style-type: none"><li>3.2 Cooling systems, leak detection, monitoring and protection systems in different types of marine alternators are compared and contrasted</li><li>3.3 Procedures for drying out an alternator with a low insulation resistance are explained</li><li>3.4 Excitation systems and methods of flashing alternator after loss of excitation are appraised</li><li>3.5 Systems used for protecting against high winding temperatures, circulating currents, loss of excitation and internal short circuit are evaluated</li></ul>
<b>4 Perform fault finding on electrical circuits</b>	<ul style="list-style-type: none"><li>4.1 Safe procedure for determining insulation resistance of a three phase motor or alternator, including protection of solid-state components and selection of suitable minimum insulation for the component, is applied</li><li>4.2 Procedure for safely drying out an electrical machine with a low insulated resistance (IR) is outlined</li><li>4.3 Open circuit in a three phase motor is safely tested</li><li>4.4 Procedure for testing internal short circuit in a three phase motor is clarified</li></ul>
<b>5 Analyse different types of direct current (DC) and alternating current (AC) marine motors</b>	<ul style="list-style-type: none"><li>5.1 Different types and applications of marine motors are compared and contrasted</li><li>5.2 Difference between types of encapsulation is explained and where they should be used is justified</li><li>5.3 Motor ratings and effect of overloading on different types of motor are assessed</li><li>5.4 Possible operational problems associated with marine motors are analysed and appropriate remedial action is devised</li></ul>

- |          |  |  |
|----------|--|--|
|          | <b>5.5</b>   | Procedure for drying out a motor that has become unserviceable due to either long-term storage or immersion in seawater is formulated  |
|          | <b>5.6</b>   | Effects of operating star connected motors compared with delta connected motors are distinguished and when this may be required is suggested   |
|          | <b>5.7</b>   | Different types and applications of special motors for deck and cargo operation are analysed   |
| <b>6</b> | <b>Analyse complex shipboard switchboard layouts</b>                                 | <p><b>6.1</b> Switchboard layouts are interpreted</p> <p><b>6.2</b> The effects and indications of earths on the system, including intermittent and multiple earths, are explained</p> <p><b>6.3</b> Safe procedure for locating earths on main and low voltage (LV) circuits, including 24 volt (V) system, is outlined</p> <p><b>6.4</b> Operation of preferential tripping arrangements for overload protection is explained</p> <p><b>6.5</b> Different methods of start-up after black outs are outlined</p>  |
| <b>7</b> | <b>Analyse requirements of motor starters for three phase and synchronous motors</b> | <p><b>7.1</b> Differentiation is established between different types of motor starters</p> <p><b>7.2</b> Different types of starters are evaluated in terms of starting torque and current, and are compared to particular motor applications</p> <p><b>7.3</b> Simple starter circuit diagrams are evaluated, and operating principles of motor starters are explained</p> <p><b>7.4</b> Documentation and circuit and wiring diagrams are used for fault finding in motor starters</p> <p><b>7.5</b> Routine maintenance program for monitoring vibration and insulation resistance levels of motors is designed</p> |
| <b>8</b> | <b>Explain electrical safety procedures</b>  | <b>8.1</b> Potential problems associated with shore maintenance personnel working on ship electrical equipment are identified  |

<b>for ship and shore personnel</b>	
	<p><b>8.2</b> Safe procedure of isolating electrical machinery for repair or maintenance is applied</p> <p><b>8.3</b> Safe method of working on live electrical circuitry for purpose of repair or maintenance is explained</p> <p><b>8.4</b> Problems associated with shipboard electrical fires are explained</p> <p><b>8.5</b> Safe procedures for fighting shipboard electrical fires, including fires in switchboards, are clarified</p>
<b>9 Analyse lighting systems used onboard ships</b>	<p><b>9.1</b> Common types and applications of lighting systems are evaluated</p> <p><b>9.2</b> Distribution layout systems are explained</p> <p><b>9.3</b> Fault-finding method for lights and starter systems, including lighting in hazardous areas, is planned using circuit diagrams</p>
<b>10 Synchronise, parallel and load share alternators on manual and auto modes</b>	<p><b>10.1</b> Process of manually synchronising alternator and sharing kilowatt (kW) and kilovolt-amperes reactive (kVAR) loading under all loading conditions is explained</p> <p><b>10.2</b> Process of starting, testing and, where applicable, of transferring emergency generator power onto main board, is explained</p> <p><b>10.3</b> Operation of synchronising lights, synchroscope and all meters associated with synchronising is outlined</p> <p><b>10.4</b> Operation of automatic voltage regulator (AVR) and prime mover governor with respect to synchronising is outlined and how these can be adjusted at set points is explained</p>
<b>11 Evaluate alternator excitation system design</b>	<p><b>11.1</b> Different types of excitation systems and impact of load changes are compared</p> <p><b>11.2</b> Type, location and function of components involved in excitation are examined</p> <p><b>11.3</b> Function, cooling, failure mode and procedures for testing and</p>

- changing diodes are explained
- 11.4** Functions of an AVR and how it may be incorporated into an excitation system are explained
  - 11.5** Process of fault finding in an AVR and types, causes and remedies of common problems are explained
  - 11.6** The impact excitation systems have on output in normal and adverse circumstances is assessed
- 12 Examine operation, construction and maintenance of circuit breakers**
- 12.1** Features and applications of different types of circuit breakers are differentiated
  - 12.2** Closing and opening systems of circuit breakers are explained
  - 12.3** Arc extinguishing systems are explained
  - 12.4** Method for accessing an air circuit breaker for inspection is analysed
  - 12.5** Function and operation of protection devices associated with air circuit breaker and molded case circuit breaker are examined
- 13 Analyse power management and UPS fitted to vessels**
- 13.1** Operational functions of power management systems during high load, overload and short circuit conditions are analysed
  - 13.2** Functions and components of UPS systems are evaluated
  - 13.3** Limitations of power management and UPS fitted to vessels are analysed
  - 13.4** System response under possible fault conditions of vessel power management and UPS are determined
- 14 Analyse function of emergency battery systems**
- 14.1** Different types and characteristics of batteries used for emergency supplies are identified
  - 14.2** Methods of battery charging and ways in which charge condition of the battery can be determined are explained
  - 14.3** Requirements of emergency supply and how transfer can occur without adversely affecting solid state components are explained

- 14.4** Safety hazards associated with batteries, and procedures to be adopted to minimise explosion and short circuits are appraised
- 15 Analyse vessel cathodic protection system**
- 15.1** Cathodic protection systems and how they interact are analysed
- 15.2** Components of cathodic protection systems are identified and life cycle maintenance program is prepared
- 15.3** Modifications required for operating parameters of cathodic protection systems when operating alongside an active wharf or another vessel are determined
- 15.4** Likely causes of corrosion in relation to size, location or distribution of anodes or current densities are assessed
- 15.5** Other corrosion problems in shipboard environment that may be the cause of electrical problems are appraised
- 16 Assess requirements and components associated with electrical systems for hazardous spaces onboard vessels**
- 16.1** Different types, limitations and nameplate identification of 'E' equipment are compared
- 16.2** Requirements of classification societies are distinguished from administrations regarding electrical installations onboard vessels
- 16.3** Lighting and power supply requirements of pump rooms are identified
- 16.4** Safety requirements for electrical equipment and safety practices onboard vessels and how these are extended when alongside a berth are analysed
- 17 Assess existing electrical shipboard equipment**
- 17.1** Existing and new shipboard electrical equipment and systems are compared to assess future requirements as well as potential problems and preventative measures
- 17.2** Performance of existing shipboard electrical equipment and systems is analysed and cost-effectiveness studies for modifications or improvements are prepared

- 17.3** Factors involved in commissioning new electrical plant are evaluated
- 17.4** Procedures involved in organising survey of existing plant are outlined
- 17.5** Procedures involved in making recommendations for new systems consistent with modified new ship building requirements are outlined

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is not equivalent to MARL028 Demonstrate intermediate knowledge of marine electrical systems.

This unit replaces and is equivalent to MARL034 Demonstrate advanced knowledge of marine electrical systems.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL051 Demonstrate advanced knowledge of marine electrical systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- explaining advanced principles of electrical circuits, switchboards, alternators and circuit breakers
- explaining advanced principles of lighting, cathodic protection and high voltage (HV) systems
- identifying and interpreting complex numerical and graphical information in electrical diagrams and specifications for a commercial vessel
- identifying and suggesting ways of rectifying electrical hazards and emergency situations on a vessel
- identifying methods, procedures and materials needed for operating, maintaining, testing and repairing complex marine electrical systems
- imparting knowledge and ideas through verbal, written and visual means
- reading and interpreting written information related to electrical circuitry and components on commercial vessels
- using electrical measuring and testing instruments.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alternating current (AC)/direct current (DC) voltage
- AC and DC marine motors
- alternators, including:
  - alternator excitation system design
  - characteristics
  - construction

- synchronised operation
- types
- batteries
- cables, including:
  - calculation of voltage drop
  - classification and identification of cables and wires
  - cross section of cables
  - identifying types of cables
  - rules and purpose of cable shielding
  - sizing of cable for current tolerance and acceptable voltage drop
- cathodic protection system
- circuit breakers
- circuits
- distribution layout systems, including:
  - emergency lights
  - safety lights
- earthing
- electrical safe working practices
- electrical:
  - layout systems
  - measuring and testing instruments
  - shipboard equipment
  - symbols, basic electrical diagrams/circuits
- emergency battery systems
- encapsulation, including:
  - drip proof
  - submersible
  - totally enclosed fan cooled (TEFC)
- fault-finding procedures
- HV electrical motor propulsion systems
- how excitation systems impact on output normal and adverse circumstances, including:
  - loss of excitation
  - short circuit
- isolation procedures
- lighting systems used onboard ships, including:
  - fluorescent
  - halogen
  - incandescent
  - light-emitting diode (LED)
  - mercury

- sodium vapour
- marine motors, including:
  - polyphase
  - reduced starting current motors
  - single
  - speed changing
  - synchronous
  - variable speed
- motor ratings, including:
  - continuous
  - short time
- motor starters for three phase and synchronous motors
- motor starters, including:
  - direct on line (DOL)
  - primary and secondary resistance
  - soft or electronic starters
  - star-delta
  - transformer starter
- operating parameters, including:
  - excitation current
  - insulation grade
  - operating temperature
  - speed
- operational problems, including:
  - loss of insulation resistance
  - open circuit
  - overheating
  - short circuit
  - wrong connections
- phase angle, power factor, and current flow
- power management and uninterruptable power supply (UPS) fitted to vessels
- problems, including:
  - electric shock
  - enclosed space work
  - non-compliance with safe working procedures
  - unfamiliar with marine electrical systems
  - using equipment beyond safe working limits
  - working at heights
- procedures for dealing with hazards and emergencies
- regulations of relevant state/territory maritime and electrical licensing authorities

- resistance, inductance and capacitance
- requirements and components associated with electrical systems for hazardous spaces onboard vessels
- risks and safety procedures associated with working in HV environments
- safe electrical working practices
- safety requirements, including:
  - company requirements
  - manufacturer requirements
  - statutory requirements
- safety, environmental and hazard control precautions and procedures relevant to marine electrical systems
- switchboard layouts, including:
  - DC systems
  - dedicated power supplies
  - dual supply for steering gear
  - feed-back and feed forward arrangements
  - interconnection with low voltage (LV)
- systems and components, including:
  - motors
  - transformers
- switchboards and protection, including:
  - purpose
  - testing and maintenance
  - equipment removal
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personnel and personal protective equipment (PPE) currently used in industry.

# **MARL052 Demonstrate advanced knowledge of marine steam turbines and main boilers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate and maintain main steam propulsion plant and associated control systems on a commercial vessel. It includes analysing: methods of improving plant efficiency; changes in feed system that occur during fluctuating loads; design and construction of high-pressure water tube boilers and ancillary equipment; operation, maintenance and performance of high-pressure water tube boilers and ancillary equipment; turbine operation, maintenance and performance; and turbine-gearing performance.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Analyse methods of improving plant efficiency**

- 1.1** Heat losses in a turbine and turbine system are analysed
- 1.2** An enthalpy/entropy diagram is used to show how steam properties change through a turbine
- 1.3** The effect air heaters and economisers have on turbine plant efficiency is explained
- 1.4** Increase in Rankine efficiency of plant by increasing the pressure and temperature is analysed
- 1.5** How regenerative feed heating and steam reheating increases overall plant efficiency is shown on an enthalpy/entropy diagram
- 1.6** Practical methods of verifying energy losses are detailed

#### **2 Explain construction and operation of feed system**

- 2.1** Operation and components of the complete feed system are outlined
- 2.2** Construction, operating principles and maintenance requirements of a regenerative condenser are explained
- 2.3** Causes of loss of vacuum are identified and test procedure to identify leaks in a condenser is created
- 2.4** Construction and operation of air ejectors, vacuums and extraction pumps are explained
- 2.5** Construction and operation of gland condensers, low-pressure heaters, drain coolers and high-pressure heaters are explained
- 2.6** General arrangement and construction of turbo feed pumps is outlined

- |          |   |  |
|----------|---|--|
|          | <b>2.7</b>  | Operating principles and construction details of de-aerators are explained   |
| <b>3</b> | <b>Analyse changes in feed system that occur during fluctuating loads</b>                                     | <b>3.1</b> Changes that occur during fluctuating loads are identified, detailing how make up to the system and dump from the system are performed                                    |
|          | <b>3.2</b>  | Condenser level control methods, how condenser is supported and how expansion stresses are avoided are explained   |
|          | <b>3.3</b>  | Loss of efficiency when heat transfer rate is interrupted is explained   |
|          | <b>3.4</b>  | Types, features, common defects and maintenance requirements of two-stage and super cavitating extraction pumps are compared and contrasted  |
|          | <b>3.5</b>  | Operation of a vacuum pump for air removal from a condenser is explained   |
|          | <b>3.6</b>  | Operation of a turbo feed pump differential pressure governor taking into account constant pressure, increasing pressure and decreasing pressure differential governing is explained |
|          | <b>3.7</b>  | Alarms, shutdowns, automatic cut-in arrangements and testing of over speed trips for a boiler feed pump are outlined   |
| <b>4</b> | <b>Analyse design and construction and repair of high-pressure water tube boilers and ancillary equipment</b> | <b>4.1</b> Various propulsion boiler designs are compared  |
|          | <b>4.2</b>  | Operating principles and construction methods of integral and external superheaters are explained  |
|          | <b>4.3</b>  | Drum, internal fittings and support and expansion arrangements are outlined  |
|          | <b>4.4</b>  | Procedures for repairing a membrane wall furnace are clarified   |
|          | <b>4.5</b>  | Operating principles of high-pressure boilers, including water and gas flow circulation, are explained   |

- 4.6 Temperature load relationships and temperature control of superheater are analysed
  - 4.7 Operation of superheater with parallel, contra and cross flow of gas/steam flow is predicted
  - 4.8 Correct material for high temperature operation of superheater tubes and headers is identified
  - 4.9 Construction and operation of economisers and air heaters is explained
  - 4.10 Chemistry of combustion is explained
  - 4.11 Burner tip design and operation for steam atomising oil burners are compared
  - 4.12 Typical burner register arrangements are outlined
  - 4.13 Construction, operation and maintenance of boiler gauge glasses and safety valves is explained
  - 4.14 Operation of boiler control and soot blowing system is detailed
  - 4.15 Features of a three-element water level control system and relationship with burner management system are outlined
  - 4.16 Operation of a combustion control system fitted with cross limits on air and fuel is explained
  - 4.17 Blow-down procedure for a high-pressure boiler is prepared
- 5 **Analyse operation, maintenance and performance of high-pressure water tube boilers and ancillary equipment**
  - 5.1 Warm-through procedure and checks to be carried out before connecting boiler to range are explained
  - 5.2 How boiler is laid up for short and/or long periods is explained
  - 5.3 Actions required after oil or saltwater contamination are detailed
  - 5.4 Chemical cleaning procedure to remove scale and oil

deposits from internal surfaces of a boiler is explained

**5.5** Tube failures are identified, and suitable methods of repair are selected

**5.6** Defects that can occur in economisers and how they can be repaired are listed

**5.7** Maintenance inspection procedures to prevent superheater and economise fires are produced

**5.8** Procedure to combat soot and steam/iron fires in generating banks, superheaters and economisers is outlined

**5.9** Coordinate and congruent feed water treatment is illustrated on a caustic/phosphate graph

**5.10** Different feed water tests, procedures for each test and appropriate chemical treatments are explained

**5.11** Program for an internal and external survey of a water tube boiler is compiled, defects that may be found and repair methods that will enable boiler to be returned to service are listed

**5.12** Procedures for setting lift, adjusting blow-down of safety valves and carrying out an accumulation test on a boiler are outlined

**6 Explain requirements for feed water treatment for high-pressure water tube boilers**

**6.1** How salts are precipitated and how metal is corroded in the boiler and feed system is explained and method of prevention is outlined

**6.2** How oxygen is eliminated in high-pressure boilers is shown

**6.3** How pH is measured and controlled is explained

**6.4** Normal and maximum operating limits for boiler feed water treatment are identified and procedure to follow if these limits are exceeded is clarified

**6.5** Different feed water tests, procedure for each test and appropriate chemical treatments are explained

**6.6** Coordinate and congruent feed water treatment is illustrated on a caustic/phosphate graph

<b>Explain construction and operation of high-pressure turbines</b>	<b>7.1</b>	Flow of steam through nozzles is analysed, and pressure and velocity compounding are illustrated
	<b>2.2</b>	Construction of blades, bearings, glands, rotors and casings is explained
	<b>7.3</b>	Warming-through procedure prior to start-up is explained
	<b>7.4</b>	Routine checks during operation are detailed
	<b>7.5</b>	Emergency operation of plant with one turbine inoperative is outlined
	<b>7.6</b>	Turbine shutdown procedure is clarified
	<b>7.7</b>	Procedures for opening up turbine for survey, routine checks of blades, casings, rotors, bearings, glands, drains and the reassembly of turbine are explained
	<b>7.8</b>	Precautions necessary when turbine and gearing casings are open are explained and any repairs or adjustments that may be required are identified
<b>8 Analyse turbine operation, maintenance and performance</b>	<b>8.1</b>	Relationship between sequential nozzle operation and bar lift in steam turbines is explained
	<b>8.2</b>	Principle of operation of different trips and cut-outs is explained
	<b>8.3</b>	Differentiation is made between resonance and critical speed, and their effect on the turbine operation is explained
	<b>8.4</b>	Types of turbine vibration and where each type is found in a turbine is analysed
	<b>8.5</b>	System torsional vibration and effect of operating at critical speeds and in-built design elements required to avoid critical speeds are explained
	<b>8.6</b>	Back pressure and self-condensing turbo alternators are compared
	<b>8.7</b>	Governor system is explained

- |           |  |   |
|-----------|--|---|
|           | <b>8.8</b>   | Turbine control systems are explained   |
|           | <b>8.9</b>   | Procedure for straightening a bowed turbine rotor is outlined   |
|           | <b>8.10</b>  | Effect of hull fouling, sea state and propeller design on turbine performance is discussed                      |
|           | <b>8.11</b>  | Limits for extended operation and overload operation are discussed  |
| <b>9</b>  | <b>Analyse turbine gearing arrangements and performance</b>                  |   |
|           | <b>9.1</b>   | Single and double reduction gearing systems are compared and contrasted   |
|           | <b>9.2</b>   | Features and applications of double helical involute gear teeth are outlined                                    |
|           | <b>9.3</b>   | Advantages and disadvantages of single and double locked train gearboxes are analysed                           |
|           | <b>9.4</b>   | Construction and reason for installing flexible couplings in gearing system is explained                        |
|           | <b>9.5</b>   | Purpose of fitting a nodal drive in gearing system is clarified   |
|           | <b>9.6</b>   | Features, functions and applications of star, planetary and solar epicyclic gearing are compared and contrasted |
|           | <b>9.7</b>   | Space savings resulting from use of epicyclic gearing are analysed  |
|           | <b>9.8</b>   | Layout of a turbo-electric drive is detailed  |
| <b>10</b> | <b>Analyse flow of air and gas through a simple cycle marine gas turbine</b> |   |
|           | <b>10.1</b>  | Construction of compressor, combustion system and single and two shaft turbines is explained                    |
|           | <b>10.2</b>  | Necessary controls required for control and protection of plant are confirmed                                   |
|           | <b>10.3</b>  | Accessories necessary for safe operation of simple cycle marine gas turbines are listed                         |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is not equivalent to MARL029 Demonstrate intermediate knowledge of marine steam turbines and main boilers.

This unit replaces and is equivalent to MARL035 Demonstrate advanced knowledge of marine steam turbines and main boilers.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL052 Demonstrate advanced knowledge of marine steam turbines and main boilers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing diagnostic information related to marine steam turbines
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- identifying and applying relevant solutions to complex problems that can occur during operating steam propulsion plant and associated systems on a steam vessel
- identifying and interpreting complex diagnostic information and performing complex mathematical calculations related to operating, repairing and maintaining marine steam turbines
- identifying methods, procedures and materials needed for operating, maintaining and repairing marine steam turbines
- imparting advanced knowledge and ideas verbally, in writing and visually
- performing accurate and reliable calculations and producing accurate and reliable information.
- reading and interpreting complex manuals, technical specifications, safety data sheets (SDS)/material safety data sheets (MSDS) and manufacturer guides related to operating, repairing and maintaining marine steam turbines.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- accessories, including:
  - accessory gear
  - lube oil:
    - coolers
    - filters
    - pumps

- starting devices
- basic principles of operation of main steam propulsion and auxiliary systems on a steam vessel, including:
  - construction and operation of main and auxiliary steam turbines
  - methods of turbine control, including safety devices
  - procedures for emergency operation of a steam turbine
  - symptoms, causes and effects of defects of auxiliary steam turbines and actions to be taken
- boiler operation, maintenance and performance, including:
  - boiler water level control methods
  - boiler water testing and treatment
- changes in feed system that occur during fluctuating loads
- construction and operation of feed system
- construction and operation of high-pressure turbines
- construction, operation and repair of high-pressure water tube boilers
- design features and operative mechanism of marine steam turbine and associated auxiliaries, including:
  - material selection and design features of steam turbine
  - material selection and design features of steam turbine gearbox
- energy balance for a steam turbine plant
- established engineering practice and procedures for operating shipboard steam propulsion plant and associated systems in warm-through, manoeuvring, start-up, normal running, emergency and shutdown situations
- fundamental principles of steam propulsion systems and boilers
- hazards and problems that can occur during operation of steam propulsion plant and associated systems, and appropriate preventative and remedial action
- high-pressure water tube boilers and ancillary equipment
- methods of lubricating principal components of a marine steam propulsion turbine and its associated gearing, and evaluating common faults, including common lubrication faults, symptoms, causes and actions to be taken with such faults
- operation of marine steam turbines
- operational characteristics and performance specifications for different types of steam propulsion plant and associated systems on a steam vessel of unlimited propulsion power
- principles of operation of main steam propulsion and auxiliary systems on a steam vessel, including:
  - construction and operation of main and auxiliary steam turbines
  - methods of turbine control, including safety devices
  - procedures for emergency operation of a steam turbine
  - symptoms, causes and effects of defects of auxiliary steam turbines and actions to be taken
- procedures for reading and interpreting readings and indications of performance of steam propulsion plant and associated systems

- requirements for feed water treatment for high-pressure water tube boilers
- simple cycle marine gas turbine
- trip and cut-outs, including:
  - axial displacement
  - bearing high temperature
  - high condenser level
  - loss of vacuum
  - over speed
  - vibration
- turbine control systems, including:
  - bridge control
  - emergency operation
  - hydraulic control
  - local control
- turbine operation, maintenance and performance
- turbine-gearing arrangements and performance
- turbine vibration, including:
  - axial
  - torsional
  - transverse
- types, properties, tests, applications and treatment of fuels, lubricants and solvents/chemicals used onboard a steam vessel, including working principles, construction, maintenance and safe operation of centrifuges, filters and other treatment devices
- typical operating precautions for steam propulsion plant and associated systems to ensure operational performance is in compliance with bridge orders, technical specifications, survey requirements, and established safety and anti-pollution rules and regulations
- units of measurement
- ways of improving plant efficiency
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARL053 Demonstrate advanced knowledge of ship operations and maintenance**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to ensure that vessels comply with regulatory and survey requirements, the principles of ship construction as well as implementing maintenance and repair procedures associated with satisfying maintenance of class.

It includes analysing regulatory framework impacting on commercial shipping operations; maintenance strategies relating to classification surveys; statutory survey requirements; and factors influencing vessel stability.

It also includes analysing repair and maintenance methods for hull work, pipe work and pumping systems, machinery, propellers and other items to satisfy maintenance of class position; International Maritime Dangerous Goods (IMDG) Code requirements; safe working practices in enclosed or confined spaces; dry docking procedures and responsibilities of engineering staff; and shipboard vibration.

This unit applies to people working in the maritime industry in the capacity of:

- Engineer Class 1 (STCW Chief Engineer Unlimited)
- Engineer Class 2 (STCW Second Engineer Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 1 (STCW Chief Engineer Unlimited) or Engineer Class 2 (STCW Second Engineer Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

- 1 Analyse regulatory framework impacting on commercial shipping operations and survey requirements**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Functions of IMO, its fields of influence, role of member states, adoption of recommendations through maritime legislation and exemptions are analysed
- 1.2** Role of International Labour Organization (ILO) Convention in relation to dockyard and shipboard practices is analysed
- 1.3** Key provisions of Australian maritime legislation are analysed
- 1.4** Role of AMSA in relation to maritime safety, protection of marine environment, and aviation and marine search and rescue (SAR) is explained
- 1.5** Role of Flag State Administrations; purpose of the Navigation Act, Marine Notices, Marine Orders, Port State Control and other methods of implementation and enforcement of international agreements and conventions are analysed
- 1.6** Role of insurance underwriters, protection and indemnity (P & I) clubs and

procedures for lodging claims following machinery failure and/or damage are analysed

- 1.7** Role of classification societies, International Association of Classification Societies (IACS) and Memorandum of Agreement with Flag States is analysed
- 1.8** Role of ship owners and ship management companies regarding International Safety Management (ISM) Code and ship management responsibilities regarding operation and maintenance is analysed
- 1.9** Role of independent inspection agencies and adoption of inspection and maintenance guidelines for different ship types is analysed
- 1.10** STCW crew training requirements and implications for emergency response, administration, operation and maintenance are analysed
- 1.11** Key provisions of the Code of Safe Working Practice for Australian Seafarers are analysed
- 1.12** Areas of vessel covered by statutory surveys are identified
- 1.13** Statutory requirements for change of flag, owner and term expiry during layup are identified
- 1.14** Records and documentation required for statutory surveys, legislation and measures are identified to ensure protection of the marine environment and safety of life at sea are identified
- 1.15** Load line measurements and conditions of freeboard assignment are analysed
- 1.16** Key areas of maintenance and testing of load line items and actions for addressing identified maintenance requirements and defects are identified

- 1.17 Areas covered by safety construction surveys and associated faults, maintenance and repairs are identified
  - 1.18 Procedures for planning safety equipment surveys and actions for addressing identified maintenance requirements and defects are analysed
  - 1.19 Requirements for survey preparation under the International Convention for the Prevention of Pollution from Ships (MARPOL) are analysed
  - 1.20 Survey requirements for cargo ship safety construction, safety equipment and safety radio certificates; passenger ship safety certificates; chemical tanker and gas carrier certificates of fitness are analysed
  - 1.21 Application of Port State Control surveys, Flag State jurisdiction and IMO guidelines in relation to vessel detention and identification of substandard ships are analysed
  - 1.22 Substandard ship and factors causing ship detention are identified
- 2 Analyse maintenance for classification surveys and maintain class certification**
- 2.1 Common areas covered by classification surveys are analysed, reasons for class withdrawal are clarified and condition of class are explained
  - 2.2 Survey methods are analysed
  - 2.3 Terms of periodical, annual, renewal, intermediate and occasional surveys are identified
  - 2.4 Common defects identified in classification surveys and appropriate remedial actions are analysed
  - 2.5 Methods for repair and maintenance are analysed
  - 2.6 Properties and repair techniques of ordinary and high tensile hull grades of

steel are analysed

- 2.7** Processes and materials used in underwater hull repairs are assessed
- 2.8** Methods of minimising and controlling internal and external hull corrosion, including bacterial corrosion of bilges and fuel tanks, are evaluated
- 2.9** Drainage arrangements and connections to other systems of spaces outside the engine room are explained
- 2.10** Ballast main connections to fore and after peak tanks are outlined and procedures for filling and emptying tanks are clarified
- 2.11** Examination and repair techniques for fixed pitch and controllable propellers are assessed
- 2.12** Dismantling, inspection, repair and re-assembly of thrusters and rudders are explained
- 2.13** Methods of performance testing shipboard pumping systems are evaluated
- 2.14** Causes of common faults and methods of assessment of shipboard pumping systems are identified
- 2.15** Condition monitoring of machinery is compared with planned maintenance systems
- 2.16** Causes of damage to and losses of bulk ships and tankers, and appropriate remedies are explained
- 2.17** Types and purpose of special and enhanced surveys are outlined
- 2.18** Hull life extension surveys and enhanced survey requirements for tankers and bulk ships are outlined
- 2.19** Different methods and applications of welding used in shipbuilding and repair are

- outlined
- 2.20** How materials are joined so that the strength of components is not impaired is confirmed
- 2.21** Different methods used to connect aluminium to steel are outlined
- 3**                      **Analyse factors influencing vessel stability**
- 3.1** Theories and factors affecting trim and stability as well as measures necessary to preserve trim and stability are explained
- 3.2** IMO recommendations concerning ship stability are identified
- 3.3** Risks associated with carrying thixotropic bulk cargo, deck cargo or grain and consequences of cargo movement or loss are outlined
- 3.4** Damage and intact stability requirements for merchant ships, countermeasures for roll-on and roll-off (ro-ro) vessels and damage control assessment following collision or grounding is assessed
- 3.5** Operational procedures to minimise and control flooding are prepared
- 3.6** Stability requirements for routine and emergency dry docking, including stability assessment for the docking duration, are specified
- 3.7** Factors causing ship squat and other influences on vessel manoeuvrability are assessed
- 3.8** Stability documentation required for different ship types to satisfy International Convention for the Safety of Life at Sea (SOLAS) is identified
- 3.9** Intact and damage stability criteria are explained
- 3.10** Use of stabilisers is explained

- |          |   |   |
|----------|---|---|
|          |   | <b>3.11</b> Bilge keels and fin type stabilisers are compared and contrasted  |
|          |   | <b>3.12</b> How stabilisers are attached to the hull is explained   |
|          |   | <b>3.13</b> Hull stiffening requirements for fin and bilge keel types is explained  |
| <b>4</b> | <b>Analyse IMDG Code requirements</b>   | <b>4.1</b> Key principles of IMDG Code are analysed   |
|          |   | <b>4.2</b> Action plans for managing emergency situations onboard a vessel involving dangerous goods are developed  |
|          |   | <b>4.3</b> Criteria for evaluating effectiveness of action plans for managing emergency situations onboard a vessel involving dangerous goods are established   |
|          |   | <b>4.4</b> Requirements of ordering and taking bunkers, as well as discharging to shore side reception facilities, are specified  |
| <b>5</b> | <b>Analyse safe working practices in enclosed spaces</b>                        | <b>5.1</b> Function, status and limitations of chemist certificate of compliance is explained   |
|          |   | <b>5.2</b> Dangers of using cleaning solvents and painting in enclosed spaces using product safety data sheets (SDS)/material safety data sheets (MSDS) and work health and safety (WHS)/occupational health and safety (OHS) guidelines are assessed |
| <b>6</b> | <b>Analyse dry docking procedures and responsibilities of engineering staff</b> | <b>6.1</b> Dockyard contract, docking specifications and survey requirements are used to plan preparation of vessel for docking, explaining variations required for emergency docking   |
|          |   | <b>6.2</b> Dock work schedules, responsibilities for engineering personnel and procedures for dock entry, duration and re-floating are prepared   |

- |          |  |  |
|----------|--|--|
|          |  | <p><b>6.3</b> Inspection and maintenance procedures for hull and machinery items in dock are explained</p> <p><b>6.4</b> In-water hull cleaning methods and preparation essential for in-water surveys are evaluated</p> <p><b>6.5</b> Types and application procedures of coatings used to protect ship hulls and tanks are identified</p> <p><b>6.6</b> Procedures for vessel layup to satisfy class, insurance, owner and statutory requirements are prepared</p> <p><b>6.7</b> Inspection and reactivation processes after prolonged layup are outlined</p>  |
| <b>7</b> | <b>Analyse shipboard vibration</b>           | <p><b>7.1</b> Appropriate terms are applied when describing vibration</p> <p><b>7.2</b> Influence of materials, construction, loading patterns and ship type on natural hull vibration patterns is assessed</p> <p><b>7.3</b> Significance of hull response to excitation by sea state, machinery and propulsion systems is explained</p> <p><b>7.4</b> Methods of prediction and in-service assessment of resonant vibration are evaluated</p> <p><b>7.5</b> Vibration-related structural and equipment damage and failure is identified</p> <p><b>7.6</b> Solutions to troublesome vibration are proposed</p> <p><b>7.7</b> Acceptable vibration limits using relevant standards are established</p> |
| <b>8</b> | <b>Analyse vessel bunkering requirements</b> | <p><b>8.1</b> Requirements for bunkering orders are analysed</p>   |

- 8.2 Procedures for taking bunkers are analysed
  - 8.3 Bunkering guidelines for spills and fire are analysed
  - 8.4 Methods and requirements for sampling fuels are analysed
  - 8.5 Procedures for assessing the quality and quantity of fuels are explained
  - 8.6 Communication requirements and procedures during bunkering operations are analysed
  - 8.7 Methods for monitoring levels and facilitating changeover of tanks are analysed
- 9      **Outline maintenance, repair and safe working practices associated with lifting and lifesaving equipment**
- 9.1 Safe working practices applicable to cranes, chain blocks, items of loose gear and other lifting equipment are identified
  - 9.2 Safety and protective devices used in conjunction with lifting gear are identified
  - 9.3 Means of testing and adjusting lifting gear are confirmed
  - 9.4 Legislative and regulatory requirements for inspection, storage and maintenance of lifting gear are outlined
  - 9.5 Purposes and procedures involved in annual and quadrennial surveys of cargo gear are clarified
  - 9.6 Procedures for safe working load (SWL) and proof load tests, including lifeboat launching gear, are clarified
  - 9.7 Safe working practices applicable to rigging and lifting heavy items during maintenance and repair are identified

- 9.8** Installation, operation and maintenance of lifesaving appliances and launching equipment are outlined
- 9.9** Safety and protective devices associated with lifesaving appliances and launching equipment are confirmed
- 10**                      **Outline operation of an inert gas system for a tanker**
- 10.1** Construction, operation and maintenance of individual components of inert gas system (IGS) are explained
- 10.2** Mandatory controls, alarms and cut-outs are identified
- 11**                      **Outline components of vessels, frame and deck**
- 11.1** Correct terms to describe size and shape of vessels are used
- 11.2** Correct terms to describe structural components of vessels are used
- 11.3** Correct terms to describe size or cargo carrying capacity of vessels are used
- 11.4** Online and other sources of information on size, shape and structural components of vessels are accessed
- 11.1** Longitudinal, transverse and combined framing are compared and contrasted in relation to ship strength
- 11.2** Position, purpose and construction of a deep frame are explained
- 11.3** Transition methods from one frame type to another are outlined
- 11.4** How the strength of frames is maintained when connecting to deck beams and other strength members is explained
- 11.5** How stress raisers are reduced around hatchways, door openings, forecastle, bridge structure, watertight doors and gastight doors is explained

**11.6** Bilge keels structure with particular reference to fitment to hull is outlined and purpose for this type of fitting is explained

**11.7** Classification requirements and restrictions of sheer strake, keel strake and garboard strake are examined

**11.8** Requirements for use of suction and discharge valves and fittings in the shell above and below the waterline are outlined

**11.9** Strength members required for deck machinery are outlined

**12**                    **Explain static and dynamic forces and moments exerted on hull of a vessel**

**12.1** Correct terms to describe effects of forces exerted on hull are used

**12.2** Various forces acting on the vessel are analysed

**12.3** Stresses on various components of the hull are compared as a result of these forces

**12.1** Differentiation is made between panting and pounding forces

**12.2** How forepeak sections are strengthened to resist panting and pounding forces is explained

**12.3** Anchor and cable arrangements in forepeak tank are explained

**12.4** Strength members in afterpeak sections are outlined

**12.5** Different rudder support arrangements are clarified

**13**                    **Explain how vessel structure is designed to resist distortion**

**13.1** Scantlings are defined

**13.2** Classification society rules for determining scantling sizes are identified

**13.3** Main strength members of vessel hull are identified

**13.4** Importance of maintaining integrity of principal strength members is explained

**14**                    **Explain bottom structure, forepeak and afterpeak of vessels**

**14.1** Differentiation is made between different types of keel construction

**14.2** Advantages and disadvantage of duct keel in relation to ship strength are explained

**14.3** How safe access to the duct keel is obtained, is outlined

**14.4** Longitudinally framed double bottom construction is distinguished from a transversely framed double bottom construction

**14.5** Differentiation is made between bracket floors and plate floors

**14.6** Structural requirements for supporting different types of main engines are outlined

**14.7** Classification society rules for construction of forepeak and afterpeak sections are explained

**15 Explain construction of watertight bulkheads**

**15.1** Purpose of bulkheads is stated

**15.2** Minimum number of bulkheads and their locations are determined

**15.3** Bulkhead is sketched showing construction and attachment to hull

**15.4** Purpose, construction and location of collision bulkheads is outlined

**15.5** Test procedures for bulkheads are clarified

**15.6** How strength is maintained in openings is explained

**15.7** Requirements for penetration of collision bulkhead are stated

**15.8** Situations in which non-watertight bulkheads are fitted are identified

**16**                      **Outline vessel ventilation systems**

**16.1** Different types of ventilation systems are clarified

**16.2** Why ventilator cowls are required is explained

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is not equivalent to MARL036 Demonstrate advanced knowledge of ship operation and maintenance.

This unit replaces and is not equivalent to MARL023 Demonstrate basic knowledge of ship operation and maintenance.

This unit replaces and is not equivalent to MARL022 Demonstrate basic knowledge of ship construction.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL053 Demonstrate advanced knowledge of ship operations and maintenance**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing information required in routine and emergency situations
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- detecting and identifying cause of machinery malfunctions and correct faults, including:
  - detecting machinery malfunctions, location of faults and actions to prevent damage
  - inspecting and adjusting equipment
  - non-destructive examination
- ensuring currency of relevant legislative and regulatory knowledge
- ensuring safe working practices in accordance with ship safety management system (SMS)
- explaining advanced concepts of ship operation and maintenance
- identifying hazards and risks, and determining appropriate ways of responding to hazards, malfunctions and emergency situations and daily operations
- identifying methods and procedures needed to perform duties, such as preparing for dry docking and statutory surveys and other duties, on commercial vessels
- identifying, interpreting and processing complex numerical and graphical information required to analyse engineering functions and shipboard engineering-related problems in routine and emergency situations
- imparting knowledge and ideas through verbal, written and visual means
- planning and organising the resources needed to establish and maintain SMS on a tanker or gas carrier
- reading and interpreting legislation and regulations related to maritime operations
- reading and interpreting written instructions, procedures and information relevant to duties of an Engineer Class 2.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- areas covered by classification and surveys, including:
  - automation
  - boilers/pressure vessels
  - cargo gear
  - hull
  - machinery
  - specific notations for cargo pumping arrangements for tankers
  - tail shaft
- areas of a vessel covered by statutory surveys, including links with classification society requirements for endorsement of class certificates
- Australian maritime legislation key provisions, including:
  - Australian Maritime Safety Authority (AMSA) legislation
  - levy legislation
  - marine pollution legislation
  - navigation legislation
  - other relevant legislation
  - shipping industry legislation
  - shipping registration legislation
- classification societies
- classification surveys, including:
  - dry dock and in water bottom surveys
  - hull work
  - machinery
  - pipe work
  - propellers
  - pumping systems
- Code of Safe Working Practice for Australian Seafarers key provisions, including:
  - anchoring, docking and mooring
  - carriage of dangerous goods
  - entering and working in enclosed or confined spaces
  - general duties and responsibilities
  - general provisions
  - manual lifting and carrying
  - painting
  - permit to work systems
  - reporting of accidents
  - safe access to ship
  - safe movement about the ship
  - safety in living accommodation

- shipboard:
  - emergencies and emergency equipment
  - health and safety
  - specific vessel types
  - tools and materials
  - upkeep of wire and fibre ropes
  - welding flame cutting and other hot work
- working:
  - aloft and over the side
  - in galleys, pantries and other food handling areas
  - in machinery spaces
  - with dangerous and irritating substances and radiations
  - with electricity and electrical equipment
- communication methods, including:
  - checklists
  - rate
  - safety
  - stock methods
  - two-way radio
- dry docking:
  - procedures
  - responsibilities of engineering staff
- enclosed spaces
- emergency situations, including:
  - dangerous goods
  - disposal of dangerous/toxic materials
  - firefighting
  - first aid
  - hazard reduction
  - reporting
- Flag State responsibilities
- heavy items, including:
  - hatches
  - large movable structures
  - stern doors
- hierarchy and organisational structure of shipboard personnel
- inert gas system for tankers
- international maritime law, conventions and regulations, including:
  - International Safety Management (ISM) Code
  - certificates and other documents to be carried onboard ships by international conventions

- International Convention for the Prevention of Pollution from Ships (MARPOL)
- International Convention for the Safety of Life at Sea (SOLAS)
- International Convention on Load Lines 1966
- international health regulations
- international instruments affecting safety of ships, passengers, crew or cargo
- International Convention on Standards of Training, Certification and Watchkeeping (STCW) for Seafarers
- Maritime Labour Convention (MLC) 2006
- inspection and maintenance procedures for hull and machinery items in dock, including:
  - hull coating systems
  - measurement and evaluation of clearances
- International Maritime Dangerous Goods (IMDG) Code requirements and principles, including:
  - dangerous goods packaging/tanks which are of appropriate strength and which will prevent goods escaping
  - grouping dangerous goods together based on hazards they present in transport (classification)
  - principles for ensuring dangerous goods that will react dangerously together are kept apart
  - principles for where to place dangerous goods onboard ship to ensure safe transport
  - emergency response advice for dangerous goods involved in a fire or spillage on board ship
  - standard documentation to be provided when dangerous goods are being transported
  - hazard warning labels and other identifying marks to identify dangerous goods in transport
- ISM Code related to safe work practices, operation and maintenance, including:
  - managing safe and effective maintenance and repair procedures
  - planning maintenance, including statutory and class verifications
  - planning repairs
- key international and Australian Standards relating to shipping
- key shipping authorities and organisations
- maintenance strategies relating to classification surveys
- maintenance and repairs, including:
  - lifting and lifesaving equipment
  - hull, pumping systems, propellers, machinery and other items satisfying maintenance of class
- maritime communication techniques
- methods of minimising and controlling internal and external hull corrosion, including:
  - bacterial corrosion of bilges and fuel tanks
  - cathodic protection
  - coating systems

- surface preparation techniques
- methods of performance testing shipboard pumping systems, including:
  - bilge and ballast systems
  - hydraulic deck machinery
- operational procedures to minimise and control flooding, including:
  - action to ensure watertight integrity of ship
  - rules relating to watertight doors
- other systems of spaces outside engine room, including:
  - holds
  - pump rooms
  - spaces forward of the collision bulkhead
- planned maintenance systems, including guidelines for classification society approval of substitution for continuous machinery surveys
- Port State Control (PSC)
- properties of hull grades of steel including:
  - repair techniques and limitations
  - weld ability
  - welder qualification tests
- regulatory framework impacting on commercial shipping operations
- relevant sections of maritime regulations, codes and conventions related to tankers and gas carriers
- repair and maintenance methods for hull work, pipe work and pumping systems, machinery, propellers and other items to satisfy maintenance of class position
- safe practices for working with lifting gear
- safe working practices in enclosed or confined spaces
- safe working practices associated with lifting and lifesaving equipment
- shipboard enclosed space hazards, including:
  - engulfment
  - explosion
  - fire
  - lack of oxygen
  - re-entry of compartments after a major fire
  - release of fixed firefighting medium
  - toxic gases
- shipboard pumping, including:
  - bilge and ballast systems, including predictive health monitoring
  - hydraulic deck machinery
  - prevention of pollution of the sea by oil
  - sewage and sludge
- shipboard vibration
- solutions, including:

- damping
- detuning
- modification of ship:
  - design
  - operation
- specific notations
- stability requirements for routine and emergency dry docking, including stability assessment for docking duration
- statutory survey requirements
- survey methods, including:
  - alternative
  - continuous
  - special surveys
- terminology relating to the structure, capacities and operations of various types of tankers and gas carriers
- terms, including:
  - amplitude
  - anti-node
  - frequency
  - mode
  - node
  - resonance
- types of ships and key features, including:
  - bulk carrier
  - container
  - general dry cargo
  - passenger
  - ro-ro
  - tanker or gas carrier
- vessel stability and loss of metacentric height (GM), including:
  - derrick hook loads
  - free surface effect
- watertight integrity
- WHS/OHS legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARL054 Demonstrate basic knowledge of marine auxiliary boilers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate and maintain marine auxiliary boilers on a commercial vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Near Coastal Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

### **Blue Waters Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

L - Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Distinguish between different types of auxiliary boilers**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Design and use of water tube and fire tube auxiliary boilers are compared and contrasted

**1.2** Movement of water and gas in an operating boiler is sketched

**1.3** How variations to operating pressure and saturation temperature in an auxiliary boiler can be used to get wet, dry or superheated steam is explained

**2 Recognise different functions of steam and different components of steam systems**

**2.1** Key features of steam and other heating systems are compared and contrasted

**2.2** Steam side requirements of an auxiliary steam turbo alternator are compared and contrasted with other steam-powered machinery

**2.3** Typical steam and condensate system are outlined

**3 Explain fuel oil system of auxiliary boilers**

**3.1** Combustion process is explained and factors that affect combustion in a boiler are outlined

**3.2** Differentiation is made between different burner types

- |          |  |  |
|----------|--|--|
|          | <b>3.3</b>   | Operation of a complete fuel oil system for an auxiliary boiler, including the functions of components for automatic combustion control, is outlined |
| <b>4</b> | <b>Explain procedures for operating fired and unfired boilers</b>          |  |
|          | <b>4.1</b>   | Locations of all mountings and fittings on auxiliary boilers are identified and their functions are outlined   |
|          | <b>4.2</b>   | Purpose of all alarms and shutdowns incorporated in auxiliary boilers is clarified   |
|          | <b>4.3</b>   | Types and operation of safety valves are outlined  |
|          | <b>4.4</b>   | Procedure for lighting off a boiler from cold is clarified   |
|          | <b>4.5</b>   | Procedure for laying up for short and long periods, including full blow down and shutdown procedures, is clarified                                   |
|          | <b>4.6</b>   | Procedure for isolating an auxiliary boiler after shutdown is clarified  |
| <b>5</b> | <b>Explain procedures for sampling and testing boiler water</b>            |  |
|          | <b>5.1</b>   | Effects of poor water treatment practices on safety and boiler function are identified   |
|          | <b>5.2</b>   | Correct procedure for taking boiler and feed water sample and possible errors that might occur are clarified   |
|          | <b>5.3</b>   | Common water tests carried out are outlined and typical results are stated   |
|          | <b>5.4</b>   | Chemicals used for treatment of boiler water are named and acceptable range of chemical reserves found in boiler waters are confirmed                |
| <b>6</b> | <b>Explain procedure for maintaining water level in the boiler</b>         |  |
|          | <b>6.1</b>   | Method of testing and changing a gauge glass is outlined   |
|          | <b>6.2</b>   | Effects of blockages in water, steam and drain cocks on levels in gauge glass are outlined   |
|          | <b>6.3</b>   | Procedure for when a gauge glass apparently shows no water is clarified  |
| <b>7</b> | <b>Explain common hazards and defects and relevant prevention/ control</b> |  |
|          | <b>7.1</b>   | Hazards and defects associated with auxiliary boilers are identified   |

## **procedures**

- 7.2** How water hammer can be prevented in auxiliary boilers is outlined
- 7.3** Symptoms, causes, effects and actions to be taken in the event of oil contamination of boiler water are determined
- 7.4** Difference between and measures taken to avoid fire and water side explosions are clarified
- 7.5** Causes, mechanism, prevention and control of economiser fires are detailed

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARL003 Demonstrate basic knowledge of marine auxiliary boilers.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL054 Demonstrate basic knowledge of marine auxiliary boilers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing information related to marine auxiliary boilers
- adjusting excess air proportional relating to combustion processes and fuel atomisation process
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- explaining basic operation of marine auxiliary boilers
- identifying and applying relevant solutions for addressing problems associated with marine auxiliary boilers
- identifying and interpreting diagnostic information and performing mathematical calculations related to operating, maintaining and repairing marine auxiliary boilers
- identifying methods, procedures and materials needed for operating, maintaining and repairing marine auxiliary boilers
- imparting knowledge and ideas through verbal, written and visual means
- monitoring exhausted gas
- providing accurate and reliable information
- providing appropriate level of detail in responses
- reading and interpreting manuals, technical specifications, safety data sheets (SDS)/material safety data sheets (MSDS) and manufacturer guides related to operating, maintaining and repairing marine auxiliary boilers.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of operation of boilers and steam systems
- combustion in boilers and related safety procedures, including importance of purging a boiler and other safety precautions taken when firing a boiler
- combustion processes, including carbon dioxide, oxygen, nitrogen, sulphur dioxide and water vapor
- common boiler defects and repair procedures

- construction and operation of boilers, including fire tube and water tube, including:
  - general construction details of a fire tube boiler
  - material used commonly for construction
- corrugated furnaces, including:
  - higher strength and flexibility in comparison to plain furnaces
- fittings mounted on boilers
- fuel atomisation process, including atomiser design, air register design and viscosity of fuel and burners
- fuel oil system for an auxiliary boiler
- hazards and defects, including:
  - chemical hazards
  - enclosed space
  - illumination of work area
  - machine guarding
  - manual handling
  - materials
  - rubbish and combustible
  - steam and fuel leaks
  - thermal hazards
  - trips
- hazards associated with running boiler plant
- operating principles relating to steam generation in fired and unfired boilers
- principles of boiler operation in normal and emergency situations
- procedures for maintaining water level in boilers
- purpose of alarms and shutdowns in marine boilers
- shells of cylindrical form, including:
  - higher strength and weight ratios
  - sited vertically or horizontally
- stays, including forms of solid bars, thick tubes or plate girders
- treatment, sampling and testing of boiler water
- types of auxiliary boilers and typical operating pressures and temperatures
- typical feed systems for marine boilers
- work health and safety (WHS)/occupational health and safety (OHS) legislation, policies and procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry, including:
  - mountings and fittings on auxiliary boilers, including:
    - air release cock
    - auxiliary steam stop valve
    - blow down valve
    - feed check or control valve
    - main steam stop valve
    - pressure gauge connection
    - safety valves
    - sampling connection
    - scum valve
    - water level gauge
    - whistle stop valve.

# **MARL055 Demonstrate basic knowledge of marine auxiliary machinery and equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate and maintain auxiliary machinery and associated systems onboard a commercial vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Near Coastal Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

### **Blue Waters Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

L - Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |          |  |  |
|----------|--|--|
| <b>1</b> | <b>Outline layout of engine room and functions of auxiliary machinery in engine room</b> | <b>1.1</b> Layout of a typical engine room is outlined   |
|          |  | <b>1.2</b> Types and functions of auxiliary machinery found in an engine room are explained  |
|          |  | <b>1.3</b> Location, function and operation of all safety devices found on main and auxiliary machinery and within engine room, including shutdowns and engine room escape routes are outlined |
|          |  | <b>1.4</b> Common operating pressures and temperatures of fluids within engine room are identified, and how to respond to abnormal parameters is clarified                                     |
| <b>2</b> | <b>Explain duties and responsibilities of an Engineer Watchkeeper during a watch</b>     | <b>2.1</b> Duties and responsibilities of an Engineer Watchkeeper with respect to safety of personnel and vessel during and taking over the watch are clarified                                |
|          |  | <b>2.2</b> Importance of ensuring all events   |

related to machinery are recorded in the log is explained

- 2.3 Duties and responsibilities of an Engineer Watchkeeper in prevention and extinction of fire in machinery spaces are clarified
- 2.4 Duties and responsibilities of an Engineer Watchkeeper in relation to prevention of flooding and avoidance of pollution are clarified
- 2.5 Routine duties and responsibilities of an Engineer Watchkeeper with respect to safe operation of propulsion and auxiliary machinery are clarified
- 2.6 Duties and responsibilities of an Engineer Watchkeeper on an unmanned machinery space (UMS) vessel are clarified
- 2.7 Procedure for familiarising oneself on joining a new vessel is clarified

### 3 **Recognise key features, applications and treatment of fuels, lubricants and chemicals used onboard vessels**

- 3.1 Types, properties, applications and treatments of various fuels used onboard vessels are outlined
- 3.2 Procedures to be followed before and during fuel bunkering are clarified
- 3.3 Types, properties, applications and treatments of various lubricants used onboard vessels are outlined
- 3.4 Uses and safe handling methods for various types of chemicals used onboard vessels are outlined
- 3.5 Fuel system layout, including fuel treatment method, is detailed
- 3.6 Working principles, construction and safe operation of purifiers and clarifiers are explained

- |          |  |  |
|----------|--|--|
| <b>4</b> | <b>Explain operation and maintenance of typical pumping systems used onboard vessels</b> | <p><b>4.1</b> Basic working principles, components and properties of different types of pumps are outlined</p> <p><b>4.2</b> Types of heat exchangers, their basic working principles and applications are outlined</p> <p><b>4.3</b> Correct operation and maintenance of pumps and heat exchangers are detailed</p> <p><b>4.4</b> Key features of bilge, cargo and ballast pumping systems are outlined</p> <p><b>4.5</b> Types, operating principles and requirements for oily-water separators or similar equipment are outlined</p> <p><b>4.6</b> Other approved methods of disposing of oily water are identified</p> <p><b>4.7</b> Procedure for completing oil record book is clarified</p>  |
| <b>5</b> | <b>Explain operation and maintenance of marine air compressors</b>                       | <p><b>5.1</b> Types, characteristics, components and applications of various compressors used onboard vessels are compared and contrasted</p> <p><b>5.2</b> Correct pre-operational checks, starting procedures, safe operation and basic maintenance required for air compressors are detailed</p> <p><b>5.3</b> Potential safety hazards associated with compressed air are identified</p> <p><b>5.4</b> Locations of all mountings, safety devices, alarms and shutdowns on compressors, air receivers and compressed air systems are identified, and their functions are outlined</p> <p><b>5.5</b> Different requirements and production methods for control air, method of production and special requirements for a breathing apparatus compressor, are</p> |

		clarified
<b>6</b>	<b>Explain different types, safe operation and testing of steering gear commonly used onboard vessels</b>	<p><b>6.1</b> Essential statutory regulations covering operation of steering gear are established</p> <p><b>6.2</b> Operation of different types of steering gear used onboard vessels is clarified</p> <p><b>6.3</b> Working principles of variable delivery pumps used in steering gear are explained</p> <p><b>6.4</b> Location of all alarms and safety devices associated with steering gear is identified and their functions are outlined</p> <p><b>6.5</b> Process for testing steering gear and monitoring its performance is explained</p>
<b>7</b>	<b>Explain operation of an evaporator</b>	<p><b>7.1</b> Why freshwater may have to be produced from seawater is explained</p> <p><b>7.2</b> Function, construction and operation of evaporators is explained</p> <p><b>7.3</b> Correct starting procedures, safe operation and basic maintenance required for an evaporator are clarified</p> <p><b>7.4</b> Process for testing the evaporator and monitoring performance is explained</p> <p><b>7.5</b> Treatment of distillate for domestic purposes is outlined</p> <p><b>7.6</b> Quality necessary if water being produced by a distiller is to be used for human consumption is outlined</p>
<b>8</b>	<b>Explain basic operation of marine refrigeration systems</b>	<p><b>8.1</b> Properties of an ideal refrigerant are listed</p> <p><b>8.2</b> Refrigerants commonly used onboard are listed and reasons for their use are</p>

		clarified
		8.3 Basic construction and operation of a marine refrigeration system is explained
		8.4 Preparation, operation, fault detection and necessary actions to prevent damage in marine refrigeration systems are confirmed
		8.5 Personal safety and environmental hazards associated with chlorofluorocarbons (CFCs) and ozone depleting substances are identified
9	<b>Explain basic operation of marine air conditioning and ventilation systems</b>	9.1 Basic construction and operation of marine air conditioning and ventilation systems in routine and emergency situations are explained
		9.2 Preparation, operation, fault detection and necessary actions to prevent damage in marine air conditioning and ventilation systems are confirmed
10	<b>Explain basic operation of marine gas turbines</b>	10.1 Basic flow of air and gas through a simple cycle marine gas turbine is outlined
		10.2 Materials and construction of compressor, combustion system and turbine in a single and two-shaft design turbine are detailed
		10.3 Basic controls required for the control and protection of the plant are outlined
		10.4 Types, basic construction and operation of deck machinery are outlined, and accessories necessary for safe operation are listed
11	<b>Explain types, safe operation and maintenance of deck machinery</b>	11.1 Types, basic construction and operation of deck machinery are outlined
		11.2 Preparation, operation, fault detection and necessary actions to prevent damage in deck machinery are

confirmed

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARL004 Demonstrate basic knowledge of marine auxiliary machinery and equipment.

## **Links**

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARL055 Demonstrate basic knowledge of marine auxiliary machinery and equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing information and sketching diagrams to interpret and explain testing requirements related to the operation of marine auxiliary machines
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- calculating to show air can be treated as an ideal gas
- identifying and interpreting numerical and graphical information related to starting up and shutting down marine auxiliary machines on commercial vessels
- identifying and suggesting ways of rectifying faults and malfunctions in marine auxiliary machines on commercial vessels
- identifying methods, procedures and materials needed for operating, maintaining and repairing marine auxiliary machines on commercial vessels
- imparting knowledge and ideas through verbal, written and visual means
- providing accurate and reliable information
- providing appropriate level of detail in responses
- reading and interpreting written information related to the operation, performance and maintenance of marine auxiliary machines, including machinery specifications, machinery design drawings, machine drawings, operational manuals, specifications and electrical and control circuit diagrams.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- accessories, including:
  - accessory gear
  - lube oil coolers
  - lube oil drive
  - lube oil filter
  - starting device

- basic principles of marine auxiliary machines, including:
  - applying main power of engines for propulsion and manoeuvring
  - keeping ship dry and trimmed
  - mooring ship and handling cargo
  - providing for safety
  - supplying domestic needs, such as freshwater
  - supplying needs of main engines and boilers
  - supplying ship with electric power and lighting
- compressors, including:
  - breathing apparatus compressor
  - lubricated reciprocating air compressors
  - non-lubricated reciprocating air compressors
  - oil-free air compressors
  - rotary screw compressors
- deck machinery, including:
  - accommodation ladders
  - anchor winch
  - cranes
  - davits
  - mooring winch
- features of bilge, cargo and ballast pumping systems, including:
  - safety fittings
  - sensing devices
  - types of valves
- fuels and basic principles of fuel systems
- nature and causes of typical start-up and shutdown malfunctions of main and auxiliary machinery and associated systems, and available methods for their detection and rectification
- operational characteristics and performance specifications for different types of auxiliary machinery and associated systems usually found on a commercial vessel, including:
  - air compressors
  - evaporators
  - heat exchangers
  - pumps
  - steering gears
- principles and procedures of machinery lubrication
- procedures for carrying out start-up and shutdown of main and auxiliary machinery and associated systems to ensure compliance with company and survey requirements and regulations
- purpose and content of safety data sheets (SDS)/material safety data sheets (MSDS)
- safety, environmental and hazard control precautions and procedures relevant to start-up and shutdown of marine auxiliary machinery and associated systems

- steering gear, including:
  - hunting gear
  - telemotor
- types of chemicals, including:
  - cleaning fluids
  - fuel additives
  - solvents
- types of heat exchangers, including:
  - plate
  - shell and tube
- types of steering gear, including:
  - electrical
  - ram
  - rotary vane
  - oscillating steering
- types of auxiliary machinery and components, including:
  - boiler
  - compressors
  - diesel generator
  - evaporators
  - pumps
  - purifiers and fuel oil treatment
  - refrigerating installation
  - thermal fluid heating systems
- types of pumps, including:
  - axial flow
  - centrifugal
  - gear
  - reciprocating
  - screw
  - vane
- work health and safety (WHS)/occupational health and safety (OHS) legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARL056 Demonstrate basic knowledge of marine control systems and automation**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge of marine automation and process control required by engineers to operate control systems on board a commercial vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Near Coastal Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

### **Blue Waters Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

L - Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

<b>1</b>	<b>Outline basic actions and functions of automation equipment in marine contexts</b>	<b>1.1</b> Basic concept of an automatic control system is explained using a simple block diagram, correct standard symbols and layout  <b>1.2</b> Components and operation of automatic control systems are outlined  <b>1.3</b> Relative advantages and disadvantages of different mediums used in shipboard automatic control systems are explained
<b>2</b>	<b>Explain action of nozzle/flapper mechanism in pneumatic instruments</b>	<b>2.1</b> Principle of operation of nozzle/flapper as a pneumatic control system component is outlined  <b>2.2</b> Modifications required to make the simple nozzle/flapper mechanism suitable for use in process control systems are explained
<b>3</b>	<b>Explain operating principles and application of sensing and transmitting elements</b>	<b>3.1</b> Different methods of measuring level in an unpressurised tank and in a closed pressurised vessel are

- sketched and outlined
- 3.2 Applications at sea, advantages and disadvantages and temperature ranges of filled system thermometers are outlined
  - 3.3 Operating principles of resistance temperature detector and thermocouple are outlined
  - 3.4 Different methods for measuring flow onboard ships that are suited to remote indication and automatic control are identified
  - 3.5 Different methods for measuring pressure onboard a ship that are suited to remote indication and automatic control are identified
- 4 Explain function of controller element and associated hand/auto changeover station in an analogue control loop**
- 4.1 Difference between ‘OFF-ON’ control action and fully modulating proportional control action is explained
  - 4.2 ‘Offset’ and how it may be removed is explained
  - 4.3 Basic principles of operation of a simple pneumatic controller are outlined
  - 4.4 Action and function of hand/auto changeover station in an automatic control loop is explained using suitable schematic diagrams
- 5 Explain basic operating principles of electronic circuits and components**
- 5.1 Components are identified and electronic circuit diagrams are interpreted
  - 5.2 Correct methods of testing electronic components are detailed
  - 5.3 Basic operation of operational amplifiers is outlined

- |          |  |  |
|----------|--|--|
| <b>6</b> | <b>Explain use of solid-state diodes and transistors to control monitoring and alarm systems</b>   | <b>6.1</b> Basic concept of logic and operation of logic gates is outlined   |
|          |  | <b>6.2</b> Operation of input/output devices and their application to sequential control systems are explained   |
| <b>7</b> | <b>Explain ‘fail safe’ philosophy and its implications for design and operation of main types of actuators available for operating final correcting elements</b> | <b>7.1</b> Purpose and function of a typical valve actuator and positioner are confirmed   |
|          |  | <b>7.2</b> Constructional differences between typical ‘air-to-open’ and ‘air-to-close’ actuators are confirmed   |
|          |  | <b>7.3</b> Why ‘fail safe’ may mean valves could either close, open, or remain where they are, upon failure of their associated automatic (or servo remote) operating system, is clarified |
|          |  | <b>7.4</b> Pneumatic piston actuator/positioner assembly used to move final correcting elements pneumatically is outlined  |
|          |  | <b>7.5</b> Operating principles of electrical actuators are outlined   |
|          |  | <b>7.6</b> Operation of a hydraulic steering gear actuator is compared and contrasted with valve actuator and positioner assemblies  |
| <b>8</b> | <b>Specify requirements for a pneumatic control system air supply</b>  | <b>8.1</b> Standard specifications for cleanliness, moisture and oil content of a typical control air system are outlined  |
|          |  | <b>8.2</b> Importance of ensuring that standards for cleanliness, moisture and oil content are maintained throughout operation of control air system is                                    |

		explained
		<b>8.3</b> Typical system that is able to supply compressed air that meets required standards for cleanliness, moisture and oil content is outlined
<b>9</b>	<b>Explain mechanisms for control of physical parameters in a ship's machinery space</b>	<p><b>9.1</b> Typical control loops associated with centralised cooling systems that serve the cooling water system are sketched</p> <p><b>9.2</b> Function of typical loops required for control of temperature, pressure and viscosity of fuel supplies to main and auxiliary engines are outlined and sketched</p> <p><b>9.3</b> Typical pressure and temperature control loops associated with main and auxiliary engine lubricating oil services are sketched</p> <p><b>9.4</b> Function of components of typical control loops for the automatic control of boilers are outlined and sketched</p> <p><b>9.5</b> Location and reasons for alarms associated with remote and/or automatic machinery operation to be separate from control function are explained</p> <p><b>9.6</b> Tests and procedures required to meet unmanned machinery space (UMS) requirements are specified and different types of associated alarm and monitoring systems are evaluated</p> <p><b>9.7</b> Power output and control of a main propulsion diesel engine (slow speed two-stroke) and an electrical generator prime mover (high or medium speed four-stroke) are compared and contrasted</p>
<b>10</b>	<b>Explain schematically total</b>	<b>10.1</b> Engine manufacturer schematic

## **bridge control of a commercial vessel**

diagram is interpreted and how total bridge control may be achieved to manoeuvre and control the engine is explained

**10.2** Safety interlocks in sequence of operation depicted in schematic diagram are identified and why they are required is explained

**10.3** Location of engine control positions, apart from the bridge, is identified from schematic diagram

**10.4** Why bridge control is preferred option for manoeuvring main engine in modern commercial vessels is explained

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARL005 Demonstrate basic knowledge of marine control systems and automation.

## **Links**

# **Assessment Requirements for MARL056 Demonstrate basic knowledge of marine control systems and automation**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing information and sketching diagrams to interpret and explain testing requirements related to control systems on commercial vessels
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- explaining basic principles of marine automation and process control
- identifying and interpreting numerical and graphical information, including schematic diagrams, relevant to control systems on commercial vessels
- identifying and suggesting ways of rectifying faults and malfunctions in control systems on commercial vessels
- identifying methods, procedures and materials needed to operate and maintain control systems on commercial vessels
- imparting knowledge and ideas through verbal, written and visual means
- providing accurate and reliable information
- providing appropriate level of detail in responses
- reading and interpreting written information related to the operation of control systems on commercial vessels.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic control engineering, including:
  - fundamentals of automatic control
  - ON-OFF control
  - proportional-integral-derivative (PID) control
  - sequential control
  - various automatic control
- basic electronics, including:
  - basic electronic circuit elements:

- diodes
- integrated circuit (IC) and large-scale integrated circuit (LSIC)
- semiconductor
- thyristor
- electron theory
- electronic control equipment
- flowchart for automatic and control systems
- characteristics and functions of temperature, pressure and viscosity of fuel
- components, including:
  - actuators
  - responders
  - sensors
- concept of 'fail safe' philosophy
- concepts of unmanned machinery space (UMS), and automated monitoring and control of machinery
- control and monitoring of ship machinery
- control loops
- electronics and power electronics, including:
  - amplifiers
  - analogue and DC power supplies
  - cyclo-converters
  - MSI onverters
  - power electronic converters
  - rectifiers
  - stabilisers
  - transistors
- fundamentals of automatic control
- instrument process and control terms
- measurement of process value, including:
  - flow
  - general measurement of processes
  - level, including direct methods and inferential methods
  - pressure
  - temperature, including mechanical and electrical
- mechanical and electrical sensors
- mediums, including:
  - compressed air
  - electric currents
  - electric voltages
  - hydraulic fluids

- ON-OFF control
- pneumatic and electrical instrumentation transmitters
- preparation, operation, fault detection and necessary measures to prevent damage for machinery items and control systems
- principles of:
  - basic electronic circuits
  - basic pneumatic systems and action of pneumatic instruments
  - process control
- relevant industry standards for drawing symbols/layouts for schematic diagrams
- safety and emergency procedures for operation of propulsion plant machinery, including control systems
- safety devices, alarms and monitoring systems
- sensing and transmitting elements
- sequential control
- tests and procedures required to meet UMS requirements
- total bridge control
- transmission of signals, including:
  - controlling elements, including pneumatic
  - transmitters
- various automatic controls
- work health and safety (WHS)/occupational health and safety (OHS) legislation, policies and procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE)

currently used in industry.

# **MARL057 Demonstrate basic knowledge of marine diesel engines and systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate and maintain marine diesel engines and systems on a commercial vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

L - Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Outline stages of combustion in two-stroke and four-stroke cycle diesel engines**

**1.1** Two-stroke and four-stroke cycle diesel engines are compared and contrasted

**1.2** Methods and diagnostic information used in determining engine combustion characteristics are specified

**1.3** Diagnostic information is used to identify and interpret common combustion faults and to produce typical diagrams for analysing faults

**2 Explain means of pressure-charging diesel engines**

**2.1** Pressure-charging principles and their influence on engine design and waste heat recovery are explained

**2.2** Different methods of pressure-charging diesel engines are clarified

**2.3** Emergency isolation procedures used when pressure-charging diesel engines are clarified

**3 Explain operation of diesel engine governors**

**3.1** Governing principles, common governor types and related controls are outlined

**3.2** Different requirements for governing diesel engines for propulsion and power generation are explained

	<b>3.3</b>	Problems of mismatched engine sizes/prime mover types when sharing common loads are outlined
<b>4 Explain properties of materials used in construction of engine components</b>	<b>4.1</b>	Properties of materials used in construction of engine components are specified
	<b>4.2</b>	Dynamic stresses and loads, materials and service limitations of engine components are outlined
	<b>4.3</b>	Construction and operating cycle forces of diesel engine components are outlined
	<b>4.4</b>	Relationship between critical speed, use of detuners/dampers and materials in engine components is clarified
<b>5 Explain safe working practices associated with diesel engines during maintenance, repair and operation</b>	<b>5.1</b>	Safe practices for isolating propulsion and power generation diesel engines prior to work commencement are confirmed
	<b>5.2</b>	Personal protective (PPE) to be used during all aspects of diesel maintenance is identified
	<b>5.3</b>	Hazards associated with working on diesel engines and systems, including working in enclosed spaces, are identified
	<b>5.4</b>	Correct procedures for using hydraulic tools and high-pressure fuel injection test equipment are clarified
	<b>5.5</b>	Purpose, operation and maintenance of safety interlocks and protective cut-outs of engine manoeuvring systems is determined
<b>6 Explain procedures for preventing and responding to crankcase and air-line explosions, and scavenge and uptake fires</b>	<b>6.1</b>	Causes, symptoms and means of preventing and extinguishing uptake and economiser fires are outlined
	<b>6.2</b>	Risks of continued service with an isolated waste heat unit are assessed
	<b>6.3</b>	Causes, symptoms, methods of extinguishing and

prevention of scavenge fires are evaluated

- 6.4** Causes and hazards associated with starting air-line explosions are identified
- 6.5** Protective devices fitted to air starting systems to minimise risk of explosion, and routine inspection and maintenance required are detailed
- 6.6** Causes and ways of preventing crankcase explosions in both diesel and dual-fuel engines are outlined
- 6.7** Procedure to be taken in the event of an early warning of a hazardous crankcase atmosphere and required procedure to be followed after engine has stopped are clarified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARL006 Demonstrate basic knowledge of marine diesel engines and systems.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL057 Demonstrate basic knowledge of marine diesel engines and systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing diagnostic information related to marine diesel engines and systems
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- explaining basic operation of marine diesel engines and systems
- identifying causes associated with starting air-line explosions, including:
  - airlock in feed water system
  - cleanliness of economiser tubes
  - failure of economiser feed pump
  - loss of feed water supply
- identifying and applying relevant solutions for addressing problems associated with marine diesel engines and systems
- identifying and interpreting diagnostic information, and performing mathematical calculations related to operating, maintaining and repairing marine diesel engines and systems
- identifying methods, procedures and materials needed for operating, maintaining and repairing marine diesel engines and systems
- imparting knowledge and ideas through verbal, written and visual means
- providing accurate and reliable information
- providing appropriate level of detail in responses
- reading and interpreting manuals, technical specifications, safety data sheets (SDS)/material safety data sheets (MSDS) and manufacturer guides related to operating, maintaining and repairing marine diesel engines and systems.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of diesel engine operation, including:
  - basic construction

- engine principles
- engine types
- fuel atomisation and combustion
- heat-engine cycle
- ideal gas cycle
- common combustion faults, including:
  - engine cylinder fuel supply
  - lack of total combustion
- components of diesel engines
- crankcase and air-line explosions, scavenge and uptake fires
- diesel engine, including:
  - medium speed and high-speed diesel engine
  - slow-speed diesel engine
- diesel engine:
  - lubrication systems
  - propulsion and power generation
- diagnostic information, including:
  - engine efficiency
  - fuel consumption
  - temperature
- hazards, including:
  - acids
  - chemicals
  - defective or bypassed machinery protective devices
  - defective or inappropriately adjusted exhaust systems
  - enclosed spaces
  - flammable liquids under pressure
  - hydrocarbons
  - leaking oil and fuel
  - lifting heavy components both unaided and with lifting gear
- manoeuvring systems of diesel engines
- methods of pressure-charging diesel engines, including:
  - exhaust gas turbocharging
  - positive displacement engine-driven blowers
  - under-piston assistance
- pressure-charging diesel engines, including common service faults, actions to rectify faults, emergency operation and isolation procedures
- properties and characteristics of fires
- safe working practices associated with diesel engines during operation, maintenance and repair

- starting methods of diesel engines
- work health and safety (WHS)/occupational health and safety (OHS) legislation, policies and procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry, including:
- diesel engine components:
  - camshafts
  - crankshafts
  - cross-heads
  - cylinder heads
  - exhaust valves
  - frames
  - fuel injectors
  - fuel pumps
  - liners
  - pistons
  - turbochargers
  - valves and rocker gear.

# **MARL058 Demonstrate basic knowledge of marine electrical systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to operate alternators, generators and control systems to supply shipboard electrical power onboard a commercial vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

L - Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Explain hazards and isolation procedures associated with live electrical components**

**2 Explain principles of power generation and transmission in alternating current (AC) and direct current (DC) circuits**

**3 Outline key features of basic electrical diagrams used on vessels**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Effects of electricity on the human body are outlined

**1.2** Procedures to be taken in the event of a person suffering an electric shock are clarified

**1.3** Correct procedure for isolating an electrical circuit is clarified

**1.4** Electrical hazards in a vessel at sea or port are identified

**2.1** Excitation methods used to produce AC and DC voltages are outlined

**2.2** Basic voltage control of generated AC voltages is outlined

**3.1** Types of diagrams used to depict electrical systems on ships are outlined

- |          |   |  |
|----------|---|--|
|          | <b>3.2</b>  | Electrical symbols used in basic electrical diagrams are identified  |
|          | <b>3.3</b>  | Electrical devices used in basic electrical circuits are clarified   |
| <b>4</b> | <b>Use common electrical measuring and testing instruments</b>                |  |
|          | <b>4.1</b>  | Different types of multimeters are used appropriately  |
|          | <b>4.2</b>  | Functions of insulation and 'tong' testers are explained   |
|          | <b>4.3</b>  | Safety requirements when using test equipment are applied  |
| <b>5</b> | <b>Rectify basic electrical faults</b>  |  |
|          | <b>5.1</b>  | Fault situation is determined by appropriate questioning of client or operator                             |
|          | <b>5.2</b>  | Safe working practices are demonstrated when carrying out fault-finding work                               |
|          | <b>5.3</b>  | Basic common faults of equipment and techniques used to find faults are outlined                           |
|          | <b>5.4</b>  | Knowledge of various types of basic common faults of circuits and techniques is used to find faults        |
|          | <b>5.5</b>  | Basic common faults in electrical equipment are identified and rectified                                   |
| <b>6</b> | <b>Outline basic components and layout of a marine electrical switchboard</b> |  |
|          | <b>6.1</b>  | Layout of a typical three-wire insulated electrical system is sketched                                     |
|          | <b>6.2</b>  | Interconnections between main switchboard, emergency switchboard and shore supply are explained            |
|          | <b>6.3</b>  | Procedure for changing over to emergency switchboard for testing or during loss of mains power is outlined |
|          | <b>6.4</b>  | Safety features on a typical marine switchboard are identified   |
| <b>7</b> | <b>Explain operation of shipboard alternators</b>                             |  |
|          | <b>7.1</b>  | Types and construction methods of alternators used on a marine vessel are outlined                         |
|          | <b>7.2</b>  | Principles of operation of a marine type alternator are outlined   |

- |  |            |   |
|--|------------|---|
|  | <b>7.3</b> | Relationship is shown between voltage and speed in regulation of alternator   |
|  | <b>7.4</b> | Operational characteristics of a marine alternator are outlined   |
|  | <b>7.5</b> | Excitation and automatic voltage regulation systems used with marine alternators are clarified  |
| <b>8 Explain procedures for paralleling of alternators</b> | <b>8.1</b> | Process of measuring voltage, frequency and phase angle is outlined   |
|  | <b>8.2</b> | Automatic and manual procedures for synchronising and paralleling marine alternators, including machines of different capacities, are clarified |
|  | <b>8.3</b> | How two machines can be adjusted to share kilovolt-ampere reactive (kVAR) and kilowatt (kW) loads is confirmed                                  |
|  | <b>8.4</b> | Process of removing an alternator from the bus is outlined  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARL007 Demonstrate basic knowledge of marine electrical systems.

## Links

Companion Volume implementation guide can be found in VetNet -

# **Assessment Requirements for MARL058 Demonstrate basic knowledge of marine electrical systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- explaining basic principles of alternators, generators and control systems
- identifying and interpreting numerical and graphical information in electrical diagrams and specifications for a commercial vessel
- identifying and suggesting ways of rectifying electrical hazards and emergency situations on a vessel
- identifying methods, procedures and materials needed for operating, maintaining and repairing basic marine electrical systems
- imparting knowledge and ideas through verbal, written and visual means
- providing accurate and reliable information
- providing appropriate level of detail in responses
- reading and interpreting written information related to electrical circuitry and components on commercial vessels
- using electrical measuring and testing instruments.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alternating current (AC)/direct current (DC) voltage
- alternators:
  - characteristics
  - construction
  - synchronised operation
- automatic control devices, including:
  - process control
  - system control
- electrical:

- measuring and testing instruments
- safe working practices
- symbols, basic electrical diagrams/circuits
- electrical hazards, including:
  - electric shock
  - electrical fire
  - moving and rotating electrical equipment
  - non-compliance with safe working procedures
  - over-speed of electrical machinery
  - poor housekeeping procedures
  - using equipment beyond safe working limits
- electrical motors
- high voltage (HV)
- marine electrical systems, including:
  - earthing
  - instrumentation
  - power distribution boards
  - switchboards
- monitoring systems
- phase angle, power factor and current flow
- procedures for dealing with hazards and emergencies
- protective devices
- resistance, inductance and capacitance
- switchboards and protection, including:
  - equipment removal
  - purpose
  - testing and maintenance
- work health and safety (WHS)/occupational health and safety (OHS) legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARL059 Demonstrate basic knowledge of marine steam turbines and main boilers**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to operate and maintain main steam propulsion plant and associated control systems on a commercial vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Engineering

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Interpret an energy balance diagram for a shipboard steam plant**

**1.1** Ideal theoretical thermodynamic cycle for the operation of a steam plant is outlined

**1.2** Why actual expansion of steam through a turbine differs from ideal cycle is explained

**1.3** Typical heat losses around a steam plant are identified

**1.4** Effect of air pre-heating, feed heating and economisation upon energy balance of steam plant's thermodynamic cycle are explained

**1.5** Typical heat (and/or mass) balance diagram for a ship's steam plant is interpreted

**2 Explain construction and operation of marine high-pressure water boilers**

**2.1** Advantages of water tube boiler over fire tube boiler for shipboard applications are outlined

**2.2** Construction and operation of a 'D' type membrane furnace boiler with superheater, economiser and air pre-heater is explained

**2.3** External fittings required by classification society rules on any large boiler are identified

**2.4** Internal fittings of a boiler's main steam drum are identified

**2.5** How automation is applied to boiler control is clarified

**2.6** Start-up, operation and shutdown of a main propulsion steam boiler are outlined

**3 Explain construction and operation of a main propulsion steam plant**

**3.1** How common forms of blading and rotor construction are manufactured is clarified

**3.2** How casings of common marine steam turbines are fitted out is clarified

- |          |            |   |
|----------|------------|---|
|          | <b>3.3</b> | Principles of thermodynamics are applied to explain expansion of steam in a typical marine turbine  |
|          | <b>3.4</b> | Importance of start-up and warming-through procedures for a steam turbine set is conveyed   |
|          | <b>3.5</b> | Checks required during routine turbine operation are explained  |
|          | <b>3.6</b> | Safety devices for a steam turbine set are identified and normal emergency shutdown (ESD) procedures are identified   |
|          | <b>3.7</b> | Operation of turbines under normal and emergency conditions is outlined   |
| <b>4</b> | <b>4.1</b> | <b>Explain auxiliary machinery required to support operation of main propulsion steam turbines and boilers</b><br>Construction and operation of different types of auxiliary machinery needed to support main propulsion steam turbines and boilers is outlined |
|          | <b>4.2</b> | Construction and operation of steam and electric motor prime movers required for driving auxiliary machinery are outlined   |
| <b>5</b> | <b>5.1</b> | <b>Explain configuration and operating principles of different steam distribution systems used in steam-powered vessels</b><br>Configuration and operating principles of different steam distribution systems is outlined                                       |
|          | <b>5.2</b> | Typical pressure reducing and pressure control valves suitable for steam service are outlined and illustrated   |
| <b>6</b> | <b>6.1</b> | <b>Explain operation principles of close feed systems used by boiler/turbine sets</b><br>Difference between an open and a closed feed system is clarified   |
|          | <b>6.2</b> | Closed feed system is outlined  |
|          | <b>6.3</b> | Pressure feed heaters are outlined  |
|          | <b>6.4</b> | Chemical injection equipment suitable for use on any ship's main feed system is explained   |
| <b>7</b> | <b>7.1</b> | <b>Explain feed and boiler water treatment</b><br>Recommended limits of characteristics for boiler water and recommended intervals at which tests are   |

- undertaken are clarified
- 7.2** Reasons for treating boiler water are outlined
- 7.3** Different types of hardness in water, consequences if left untreated, and ways of minimising their effect are explained
- 7.4** How corrosion within a boiler is minimised by treating boiler water is explained
- 7.5** Causes and ways of avoiding carry-over and caustic embrittlement are explained
- 7.6** Safety requirements for handling feed water and boiler water treatment chemicals are explained
- 8 Explain transmission of power from the steam turbine main engine to the propeller**
- 8.1** Why reduction gearing is required between steam turbines and propeller is clarified
- 8.2** Generation of tooth form is outlined
- 8.3** Double helical gearing and difference between single and double reduction gearing are explained
- 8.4** Applications of epicyclic gearing are explained
- 8.5** Function of flexible couplings in a turbine/gearing set is clarified
- 8.6** Components of a driveline from main wheel connection, aft, to propeller are listed
- 8.7** Methods and mechanisms for lubricating a driveline are detailed
- 9 Explain procedures for preventing and responding to fires and explosions specific to steam propulsion plant**
- 9.1** Causes, symptoms and means of preventing and extinguishing fires associated with steam propulsion plant are detailed
- 9.2** Protective devices associated with boilers to minimise risk of fires, explosions and water shortages are identified
- 9.3** Routine inspection and maintenance requirements to prevent fires, explosions and water shortages are

outlined

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARL013 Demonstrate basic knowledge of marine steam turbines and main boilers.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL059 Demonstrate basic knowledge of marine steam turbines and main boilers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing diagnostic information related to marine steam turbines
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- identifying and applying relevant solutions to problems that can occur when operating steam propulsion plant and associated systems on a steam vessel
- identifying and interpreting diagnostic information, and performing mathematical calculations related to operating, repairing and maintaining marine steam turbines
- identifying methods, procedures and materials needed for operating, maintaining and repairing marine steam turbines
- providing accurate and reliable information
- providing appropriate level of detail in responses
- reading and interpreting manuals, technical specifications, safety data sheets (SDS)/material safety data sheets (MSDS) and manufacturer guides related to operating, maintaining and repairing marine steam turbines.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- auxiliary machinery, including:
  - lube oil supply pump and system
  - main boiler forced draught fan
  - main condensate extraction pump and air ejector
  - main condenser
  - main cooling water circulating pump
  - main feed pump
  - main fuel oil supply pump and system

- basic principles of operation of main steam propulsion and auxiliary systems on a steam vessel, including:
  - construction and operation of main and auxiliary steam turbines
  - methods of turbine control, including safety devices
  - procedures for emergency operation of a steam turbine
  - Rankine cycle
  - symptoms, causes, effects, and actions to be taken with defects of auxiliary steam turbines
- effective verbal, written and visual communication strategies
- established engineering practice and procedures for operating shipboard steam propulsion plant and associated systems in warm-through, manoeuvring, start-up, normal running, and emergency shutdown (ESD) situations
- fires, including:
  - blow back
  - economiser
  - explosions
  - low water level
  - uptake
- fundamental principles of steam propulsion systems and boilers
- hazards and problems that can occur when operating steam propulsion plant and associated systems, and appropriate preventative and remedial action
- marine steam turbines, including:
  - impulse
  - reaction
- methods of lubricating the principal components of a marine steam propulsion turbine and its associated gearing, and evaluating common faults, including common lubrication faults, symptoms, causes, and actions to be taken with such faults
- operational characteristics and performance specifications for different types of steam propulsion plant and associated systems on a steam vessel of unlimited propulsion power
- procedures for reading, interpretation of readings and indications of the performance of steam propulsion plant and associated systems
- safety devices, including:
  - axial movement
  - gland temperature
  - lube oil pressure
  - lube oil temperature
  - remote stops
  - safety valves
  - vacuum condenser pressure
  - vibration
- steam distribution systems, including:
  - auxiliary exhaust steam range

- auxiliary superheated steam range
- bled steam systems
- superheated main steam range
- types, properties, tests, applications and treatment of fuels, lubricants, and solvents/chemicals used onboard a steam vessel, including a basic understanding of the working principles, construction, maintenance and safe operation of centrifuges, filters, and other treatment devices
- typical operating precautions for steam propulsion plant and associated systems to ensure operational performance is in compliance with bridge orders, technical specifications, survey requirements and established safety and anti-pollution rules and regulations
- units of measurement
- warming-through procedures, including:
  - ensuring air vent is open
  - minimising thermal shock
  - shutting down
  - warming up according to manufacturer instructions
- WHS/OHS legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic industry approved marine operations site or simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- diagrams, specifications and other information required for performing basic calculations related to marine steam turbines
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARL060 Demonstrate knowledge of ships and ship routines

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to maintain a safe engineering watch on a commercial vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

L - Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Outline key features of different types of commercial ships**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Annotated sketch of profile and midship section of a range of ship types is constructed
- 1.2** Terms used to quote size of a ship are used appropriately
- 1.3** Plate materials and joining methods used in ship construction are detailed
- 1.4** Basic principles of watertight integrity are identified and applied
- 1.5** Shipping terms are applied to describe characteristics of commercial vessels

#### **2 Explain need for standards and other monitoring requirements for ships**

- 2.1** International standards relating to construction, equipment and conditions of commercial vessels are outlined
- 2.2** National legislation and IMO conventions concerning safety of life at sea, security and protection of marine environment are outlined
- 2.3** Requirements of International Safety Management (ISM) Code for the Safe Operation of Ships and for Pollution Prevention and safety management system (SMS) are outlined
- 2.4** Qualifications and experience requirements for key personnel on a ship are outlined

- 2.5 Personal and ship certificates, and other documents required to be carried onboard ship by international conventions, how they are obtained, how they may be verified, and period of their legal validity are identified
    - 2.6 Roles and functions of key national and international shipping authorities and organisations are outlined
    - 2.7 Purpose of surveys and dry-docking of ships are explained
- 3 **Explain responsibilities of personnel onboard ship**
  - 3.1 Roles and responsibilities of personnel onboard ship are clarified
  - 3.2 Organisational structure, lines of responsibility and communication onboard ship are outlined
  - 3.3 International maritime conventions, recommendations and national legislation concerning shipboard personnel and training are clarified
  - 3.4 Daily work and shipboard routines relating to engineering watchkeeping are outlined
  - 3.5 Personal and social responsibilities of personnel onboard ship are confirmed
- 4 **Explain engineering watchkeeping procedures**
  - 4.1 Established engineering practice and regulatory requirements for conduct, handover and relief of an engineering watch are outlined
  - 4.2 Operational procedures and requirements for main propulsion, auxiliary systems and associated controls are outlined
  - 4.3 Operational procedures and requirements for monitoring the performance of main propulsion, auxiliary systems and associated controls are outlined
  - 4.4 Procedures for identifying, rectifying and reporting problems associated with performance of main propulsion, auxiliary systems and associated controls are outlined
  - 4.5 Basic operation, monitoring and maintenance of shafting installations and propeller systems is detailed
  - 4.6 Engine room resource management principles and

- procedures required for a safe engineering watch are outlined
- 4.7** Safety precautions to be observed during a watch and immediate actions to be taken in a fire or incident are clarified
- 4.8** Requirements for recording activities and incidents that occur during keeping an engineering watch are detailed
- 4.9** Fatigue management strategies for engine room management team are identified
- 4.10** Personal tasks and workload management techniques appropriate for an Engineer Watchkeeper are outlined
- 5. Communicate between bridge, engine control room and main engine room**
- 5.1** Available tools are correctly used to communicate between bridge, engine control room and main engine room
- 5.2** Appropriate records of engineering communications are completed according to organisational procedures and regulatory requirements
- 6. Communicate with officers, crew and others**
- 6.1** Clear and precise communication is used, and established communication practices are followed
- 6.2** Communication misunderstandings are avoided using appropriate confirmation techniques and established communication practices
- 6.3** Messages concerning vessel safety and operations are received, read, clarified as required, correctly interpreted and applied to engineering activities
- 6.4** Appropriate techniques are used when communicating with multilingual crew to ensure communication is effective and messages are clearly understood
- 6.5** Non-verbal communication is appropriately used when working and communicating with others
- 7 Outline procedures and responses to malfunctions and emergency situations**
- 7.1** Potential malfunctions and emergencies relating to main propulsion and auxiliary systems are identified
- 7.2** Correct response and required action relating to potential malfunctions and emergencies in main

		propulsion and auxiliary systems are detailed
	<b>7.3</b>	Regulatory requirements and reporting requirements for incidents and emergency situations outside Watchkeeper limits of responsibility are confirmed
<b>8</b>	<b>Recognise tanker types and cargo characteristic</b>	<b>8.1</b> Principal features and layout of various types of tankers and gas carriers are identified and differences between them determined  <b>8.2</b> Terminology relating to the structure, capacities and operations of tankers is correctly used when describing the features of various types of tankers and gas carriers and their differences  <b>8.3</b> Principal features and distinguishing characteristics of various types of tanker cargoes are correctly identified and applied during watchkeeping duties on a tanker or gas carrier

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARL037 Demonstrate knowledge of ships and ship routines.

## Links

Companion Volume implementation guide can be found in VetNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARL060 Demonstrate knowledge of ships and ship routines**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing information required to undertake watchkeeping duties in routine and emergency situations
- applying effective decision-making techniques
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- developing, implementing and overseeing standard operating procedures
- identifying and determining appropriate ways of responding to malfunctions and emergency situations in daily watchkeeping operations
- identifying methods and procedures needed to implement watchkeeping duties on commercial vessels
- identifying, interpreting and processing numerical and graphical information required to undertake watchkeeping duties in routine and emergency situations
- reading and interpreting written instructions, procedures and information relevant to watchkeeping duties.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- bridge instrumentation, controls and alarms
- bridge resource management systems
- causes of groundings, collisions and casualties
- composition of bridge/engine room management team
- enclosed spaces
- engine room resource management principles, including:
  - allocation, assignment and prioritisation of resources
  - assertiveness and leadership

- considering team experience
- effective communication
- obtaining and maintaining situational awareness
- engineering watchkeeping procedures and practices
- fatigue management principles and techniques
- functions of unmanned machinery space (UMS) controls, alarms and indicators
- general layout of tankers, including:
  - use of manufacturer's manuals
  - use of shipboard drawings
- hierarchy and organisational structure of shipboard personnel, including:
  - crew
  - Master
  - officers
- key international and Australian Standards relating to shipping
- key shipping authorities and organisations, including:
  - Australian Maritime Safety Authority (AMSA)
  - classification societies
  - International Maritime Organization (IMO)
  - National Maritime Safety Committee
  - state and territory marine authorities
- maritime communication techniques, including:
  - use of maritime terminology and technical terminology
- navigational hazards and implications for watchkeeping
- personal and social responsibilities onboard ship, including:
  - alcohol and drug abuse
  - discipline
  - finance
  - health and fitness
  - hygiene
  - relationships
  - safety
- personal task and workload management, including:
  - coordination
  - managing resource constraints
  - managing time constraints
  - personnel assignment
  - planning
- procedures for dealing with malfunctions and emergencies, including:
  - accidents
  - breakdowns

- collisions
- explosion fire
- flooding
- groundings
- relevant sections of maritime regulations, codes and conventions related to the Watchkeeper responsibilities on tankers and gas carriers
- rudder and propeller control and vessel manoeuvring characteristics
- sections of IMO, International Convention on Standards of Training Certification and Watchkeeping for Seafarers (STCW) conventions and codes and AMSA Marine Orders dealing with watchkeeping principles, arrangements, procedures, roles and responsibilities
- shipping terms, including:
  - hogging
  - panting
  - pounding
  - racking
  - sagging
- ship types, including:
  - bulk carrier
  - container
  - general dry cargo
  - passenger
  - roll-on and roll-off (ro-ro)
  - tanker
- signs of fatigue
- terminology relating to the structure, capacities and operations of various types of tankers and gas carriers
- types of ships and key features of ships
- watch handover procedures
- WHS/OHS legislation and policies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# MARL061 Perform basic marine engineering calculations

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Application

This unit involves the skills and knowledge required to perform basic engineering calculations required for the operation of marine machinery and equipment.

This unit applies to people working in the maritime industry in the capacity of:

- Electro-Technical Officer (STCW Electro-Technical Officer Unlimited)
- Engineer Class 3 Near Coastal
- Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited).

## Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Engineer Class 3 Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Electro-Technical Officer (STCW Electro-Technical Officer Unlimited) or Engineer Watchkeeper (STCW Engineer Watchkeeper Unlimited) and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

L - Engineering

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Apply mathematical formulae to solve engineering problems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Proportions, variation, percentages and averages are calculated, and method of unity is applied

**1.2** Problems involving the manipulation of indices are solved

**1.3** Written descriptions of actual or hypothetical engineering problems are expressed in mathematical terms

**1.4** Algebraic formulae and equations are manipulated to change subjects, as and when required

**1.5** Index problems are converted to logarithmic problems, and vice versa, according to the Law of Logarithms

**1.6** Calculator is used to resolve engineering problems

#### **2 Calculate areas, volumes and masses of regular and irregular figures**

**2.1** Problems related to areas and volumes of regular geometric figures are solved using standard formulae

**2.2** Problems relating to surface areas and volumes of circular figures are solved

**2.3** Centres of gravity (CG) and centroids of area are found for both line figures and areas

**2.4** Concept of density is applied to calculate masses

#### **3 Apply trigonometry to solve problems relating**

**3.1** Basic trigonometric ratios of sine, cosine and tangent, together with their reciprocals are explained with respect

**to angular measurement  
and the resolution of  
vectors**

to the sides of a right-angled triangle

- 3.2** Pythagoras' Theorem is proved
- 3.3** Problems associated with single angle trigonometric identities, including those derived from the application of Pythagoras' Theorem to the basic sin, cos and tan identities, are solved
- 3.4** Derivation of multiple, double and half angle trigonometric identities are shown and used to simplify complicated trigonometric expressions and identities
- 3.5** Sine rule and cosine rule for solution of triangles are proved and applied

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit is equivalent to MARL009 Perform basic Engineering calculations.

## Links

# **Assessment Requirements for MARL061 Perform basic marine engineering calculations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing own work outcomes and maintaining knowledge of current codes, standards, regulations and industry practices
- explaining basic mathematical concepts and techniques relevant to engineering
- identifying and determining appropriate mathematical techniques and formula to solve engineering problems
- identifying the methods and procedures needed to select mathematical techniques and formula to solve engineering problems
- imparting knowledge and ideas through verbal, written and visual means
- performing accurate and reliable calculations
- performing calculations relevant to engineering, including volumes and masses of regular and irregular areas
- reading and interpreting written information on engineering problems and expressing this information in mathematical terms
- solving problems using appropriate laws and principles
- using a calculator to resolve engineering problems.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- calculations, including:
  - algebra
  - calculations with positive and negative integers
  - graphs
  - indices
  - mensuration
  - simplifying expressions
  - trigonometry
- centre of gravity (CG), longitudinal centre of gravity (LCG) and vertical centre of gravity

(VCG)

- centroids of area
- formulae for areas, volumes and masses of regular and irregular shapes
- indices
- Law of Logarithms
- proportions, variation, percentages, averages and method of unity
- Pythagoras' Theorem.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery and materials currently used in industry.

# **MARN010 Apply general purpose hand skills aboard a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to perform general purpose hand duties aboard a vessel.

It includes using and maintaining ropes, operating deck machinery and emergency stops, assisting in securing vessel at anchor, assisting in securing and adjusting vessel position during mooring operations, assisting in securing vessel for sea, performing tasks aloft and over vessel side, and assisting with safe refuelling operations.

This unit applies to people working in the maritime industry in the capacity of:

- assistant to the Master or Engineer of a vessel working under their direct supervision
- worker on deck or in the engine room of a vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- worker in the engine room only for a vessel with propulsion power less than 3000 kW.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a General Purpose Hand Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

N – Seamanship

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

<b>1 Use and maintain ropes</b>	<p><b>1.1</b> Rope types and common areas of use are correctly identified</p> <p><b>1.2</b> Ropes are checked for wear and any damage is reported according to workplace procedures</p> <p><b>1.3</b> Ropes are coiled and stowed correctly</p> <p><b>1.4</b> Knots and hitches are tied neatly and securely, and are used according to their correct application</p> <p><b>1.5</b> Ropes are spliced neatly and securely according to their correct application and rope ends are whipped where instructed, to maintain good condition</p>
<b>2 Operate deck machinery and emergency stops</b>	<p><b>2.1</b> Deck machinery is checked, prior to use, and prepared for operation</p> <p><b>2.2</b> Operations are carried out safely according to instructions and operating procedures or organisational safety management system (SMS)</p> <p><b>2.3</b> Emergency stops on motor and machinery are operated in response to an emergency situation</p>
<b>3 Assist in securing vessel at anchor</b>	<p><b>3.1</b> Prior to letting go, anchor and equipment are prepared as instructed and organisational communications are followed</p> <p><b>3.2</b> Instructions provided are complied with in relation to quantity of anchor cable run out or recovered</p> <p><b>3.3</b> Control of anchor cable is maintained within safe operating limits during operation</p> <p><b>3.4</b> Anchor and equipment are secured on completion of anchoring operations according to instructions</p> <p><b>3.5</b> Anchoring area is kept free of loose ropes, wires and debris throughout all operations</p>
<b>4 Assist in securing and adjusting vessel position</b>	<p><b>4.1</b> Mooring lines and associated equipment are handled safely at all times</p>

**during mooring operations**

- 4.2** Mooring plan and organisational communications are followed
  - 4.3** Mooring area is kept free of loose ropes, wires and debris throughout mooring operations
  - 4.4** Tension on ropes is maintained at an appropriate level for the stage and nature of the operation
  - 4.5** Mooring lines are secured according to instructions provided
  - 4.6** Equipment malfunction or problems encountered during operations are promptly reported
- 5 Assist in securing vessel for sea**
  - 5.1** Cargo and cargo handling equipment are checked to ensure they are stowed securely
  - 5.2** Hatches and openings are checked to ensure they are secured as required
  - 5.3** Maintenance equipment is returned to storage location and secured
  - 5.4** Assistance is provided in testing equipment as instructed
  - 5.5** All mooring lines are stowed and secured
  - 5.6** Assistance is provided in stowing the gangway
- 6 Perform tasks aloft and over vessel side**
  - 6.1** Area and equipment for working aloft or over the side are prepared as instructed
  - 6.2** Required precautions are taken when working aloft or over the side
  - 6.3** Chairs, safety harnesses and appropriate safety equipment are used according to workplace procedures
  - 6.4** Tasks are completed safely according to instructions and organisational SMS
  - 6.5** Equipment is maintained and stored after use
- 7 Assist with safe refuelling operations**
  - 7.1** Personal protective equipment (PPE) is accessed and used

- 7.2** Safety boundary for the refuelling process is established
- 7.3** Instructions are followed to ensure spill prevention systems are correctly deployed
- 7.4** Instructions are followed in completing tasks related to the refuelling or fuel transfer process

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARN001 Apply general purpose hand skills aboard a vessel.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARN010 Apply general purpose hand skills aboard a vessel**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assisting in different types of mooring operations
- assisting in the performance of common operations, including:
  - berthing and unberthing
  - rigging and recovering means of access to the vessel
- assisting in preparation and anchoring the vessel
- following safe work practices during mooring operations
- handling ropes and wires
- performing an eye splice, back splice and a short splice
- performing common whipping on ropes
- tying common knots, bends and hitches, including:
  - bowline
  - clove hitch
  - reef knot
  - round turn and two half hitches
  - rolling hitch
- using different types of deck machinery
- using synthetic rope mooring lines.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- anchor cable markings
- anchoring the vessel in varying weather conditions
- characteristics, care and maintenance of different types of ropes
- correct application of common knots, bends and hitches, including:
  - bowline
  - clove hitch

- eye splice
- reef knot
- round turn and two half hitches
- rolling hitch
- short splice
- correct nautical terminology
- different configurations of mooring lines for various parts of a vessel, including:
  - back springs
  - bow and stern ropes
  - breast lines
  - fore and aft springs
- different types of anchors
- hazards and procedures associated with refuelling
- hazards associated with confined spaces
- hazards that could occur if the operation is not properly controlled
- procedures for:
  - lashing cargo
  - loading or discharging
  - making adjustments from both fore and aft mooring positions
  - making fast and letting go fore and aft to a wharf
  - making fast and letting go to a single-point mooring
- requirements and means of access to the vessel
- safe and environmentally responsible work practices
- safety management system (SMS)
- securing equipment and objects for sea passage, transit in port or ready for use
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse

weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

## **MARN011 Maintain seaworthiness of the ship (ship construction)**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to maintain the seaworthiness of the ship with regard to ship construction, inspection and reporting of defects and damage to ship cargo spaces, hatch covers and ballast tanks.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Watchkeeper Deck.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 500 gross tonnage (GT) or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

### **Pre-requisite Unit**

Not applicable.

## Competency Field

N – Seamanship

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Check weather tight and watertight integrity of ship

- 1.1 Inspections of ship are planned and carried out according to regulatory and organisational requirements
- 1.2 Elements of the vessel structure critical to the safety of the vessel are identified
- 1.3 Structural members of ship are inspected to establish weather tight and watertight requirements of ship
- 1.4 Checks are carried out to confirm weather tight and watertight integrity of ship at all times

#### 2 Take action to meet environmental changes

- 2.1 Anticipated sea and weather conditions are analysed to identify situations that may impact on ship weather tight and watertight integrity
- 2.2 Effect of severe wind and rolling in associated sea conditions on ship weather tight and watertight integrity is recognised
- 2.3 Effect of water on deck, on ship weather tight and watertight integrity is ascertained and taken into consideration
- 2.4 Appropriate action is taken to maintain ship weather tight and watertight integrity according to organisational procedures and damage control plans
- 2.5 Degree to which vessel is secured is appropriate to prevailing and forecast conditions

- 2.6** Location of defects and damage caused by vessel operations and the environment are ascertained
  - 2.7** Defects and damage to ship are identified, rectified and reported according to organisational procedures
  - 2.8** Irregularities beyond own ability to rectify are recognised in time to enable remedial action to be taken
- 3 Maintain records**
  - 3.1** Relevant documents and records are completed and maintained, as required, according to regulatory and organisational requirements
  - 3.2** Relevant documents are sent to appropriate bodies and copies are filed according to regulatory and organisational requirements
  - 3.3** Documents are stored according to regulatory and organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARN005 Maintain seaworthiness of a vessel.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARN011 Maintain seaworthiness of the ship (ship construction)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to procedures to distinguish between normal and defective and damaged parts of ship
- completing required records
- detecting defects to ballast water tank vents
- detecting defects and damage, including:
  - cargo operation damage
  - damage caused by corrosion
  - damage to structures through heavy weather
- developing damage control plans
- developing effective planning documentation
- identifying elements of the vessel structure that are critical to vessel safety
- inspecting and reporting defects and damage to cargo spaces, hatch covers and ballast tanks
- interpreting and following procedures for the coordination of planned maintenance processes
- preparing appropriate reports on inspection and maintenance outcomes
- reading and interpreting ship specifications and drawings
- taking actions to ensure and maintain the weather tight and watertight integrity of ship.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of appropriate safety, environment and hazard control procedures
- causes of corrosion to cargo spaces and ballast tanks, and how corrosion can be identified and prevented
- characteristics of stress and the principal stresses acting on a ship
- corrosion control methods
- coverage of tests, including areas requiring inspection under the planned maintenance schedule and survey requirements
- damage control measures that may be required to maintain the integrity of the hull in a range

of typical emergency situations, including damage control plans and safety management systems (SMS)

- defects and damage, including:
  - corrosion to operating or structural parts of the ship
  - damage to the ship through cargo shift, loading and unloading operations
  - hatch cover seals
  - structural damage through collision, grounding or fire
  - watertight door seals and closing arrangements
- fundamental actions to be taken in the event of partial loss of intact buoyancy
- fundamentals of watertight integrity, including:
  - appropriate equipment is in readiness for damage control
  - avoiding adverse weather
  - checking the watertight security of the ship
  - closing openings
  - free surface is minimised in ballast and fuel tanks
  - freeing ports allow water taken on deck to clear
  - passenger distribution does not exceed allowed limits
  - procedures for restoring or managing weather tight and watertight integrity during an emergency
  - stores, cargo and equipment are properly stowed and lashed
  - tanks and other watertight areas
- inspections of ship, including:
  - ballast tanks
  - cargo space
  - hatch covers
  - hull and fittings during dry-docking
  - inspections required after completion of maintenance work
  - inspections required after docking prior to re-floating
  - inspections to be made after any situation which may have caused damage to the ship
  - order of inspection
  - pre-sailing inspections
  - regulatory inspections
  - routine inspections
  - time periods
- maintenance procedures contained in the SMS
- one's surroundings and changes to these surroundings
- planned maintenance system for ships and associated maintenance inspection procedures
- principal materials, properties and application of materials used in the construction of a ship
- principal structured members and layout of a ship and the proper names for various parts
- principle features of vessel structure and construction

- principles and procedures to ensure the watertight integrity of ship hull in both normal and emergency situations
- principles of load lines and draught marks
- principles of rudder and propellers
- procedures for checking and inspecting ship seaworthiness, including reliable detection of defects and damages
- purpose of the enhanced survey program
- situations that may jeopardise ship weather tight and watertight integrity, including:
  - collision, grounding or fire
  - failure to conduct appropriate inspections
  - heavy weather damage
- structural members of ship, ship construction, layout and subdivision of a ship, including:
  - ballast tanks
  - bow and stern regions
  - bulkheads, including the collision bulkhead and bulkhead deck
  - cargo holds
  - cargo tanks
  - fittings
  - frames
  - freeboard deck
  - freshwater tanks
  - hatch and tank openings
  - hull structure
  - longitudinal and transverse girders
  - shell plating
  - tank tops
  - various types of keel arrangements
  - watertight and weather tight compartments
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the

normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals, including:
  - equipment manufacturer instructions
  - logbooks, including oil record and garbage logbooks as applicable
  - organisational operation orders under the International Safety Management (ISM) Code for the Safe Operation of Ships and for Pollution Prevention
  - plans and drawings
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARN012 Manage advanced operations of ships in polar waters**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to manage advanced operations of ships in polar waters.

This unit applies to people working in the maritime industry in the capacity of:

- Chief Mate
- Deck Officers
- Engineering Officers
- Engineers
- Masters
- Ratings.

## **Licensing/Regulatory Information**

This unit is equivalent to and delivers the objectives of the following STCW provisions:

- STCW Reg V/4 (3 and 4) and Code Section A-V/4, Table A-V/4-2.

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as Masters, Chief Mate, Deck Officers, Engineering Officers, Engineers or Ratings for advanced operations in polar waters and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable

## Competency Field

Navigation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |  |
|--|--|
| <p><b>1 Plan and conduct a polar passage</b></p>                             | <p><b>1.1</b> Navigational equipment, charts, ice information, ice publications and related documentation required for the voyage are enumerated and appropriate for the safe conduct of the voyage</p> <p><b>1.2</b> Route is planned using facts obtained from relevant sources, publications, statistical data, limitations of communication and navigational systems</p> <p><b>1.3</b> Voyage is planned using polar regulatory regimes, need for ice pilotage and icebreaker assistance, as required</p> <p><b>1.4</b> Potential navigational hazards are identified accurately at all times</p> <p><b>1.5</b> Positions, courses, distances and time calculations are accurate and correct within acceptable accuracy standards for navigational equipment</p> |
| <p><b>2 Manage operation of vessels operating in polar waters safely</b></p> | <p><b>2.1</b> Navigational decisions concerning ice are based on proper assessments of the ship's manoeuvring, engine characteristics and the forces to be expected while navigating polar waters, at all times</p> <p><b>2.2</b> Requests for ice routing, plot and commence voyage through ice is communicated clearly and accurately</p> <p><b>2.3</b> Decisions concerning berthing, anchoring, cargo and ballast operations are determined using an assessment of the ship's manoeuvring, engine characteristics, forces to be expected and in accordance with International Code for Ships Operating in Polar Waters (Polar Code)</p>  |

guidelines and applicable international agreements

- |          |  |
|----------|--|
| 2.4      | Ship is manoeuvred safely through moderate ice concentration in the range of 1/10 to 5/10  |
| 2.5      | Ship is manoeuvred safely through dense ice concentration in the range of 6/10 to 10/10  |
| 2.6      | Operations are planned and carried out in accordance with established rules and procedures to ensure safe operations and avoid pollution of the marine environment |
| 2.7      | Safe navigation is maintained using strategy, adjustment of ship's speed and heading through different types of ice  |
| 2.8      | Anchoring system in cold temperatures is permitted, where appropriate, and actions taken accordingly   |
| 2.9      | Preparation for icebreaker towing and notch towing are carried out in accordance with accepted principles and practices  |
| <b>3</b> | <b>Maintain safety of ship's crew and passengers</b>   |
| 3.1      | Lifesaving, firefighting and other safety systems are maintained at their operational condition  |
| 3.2      | Response measures are in accordance with established plans and procedures and are appropriate to the situation and nature of the emergency                         |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This is a new unit. No equivalent unit.

## Links

Companion Volume implementation guide can be found in VetNet -

# Assessment Requirements for MARN012 Manage advanced operations of ships in polar waters

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two occasions and include:

- communicating with icebreaker, other vessels in the area and with rescue coordination centres, where applicable
- determining limitations of navigational equipment and communication systems in polar waters
- establishing bridge watch team which is consistent with environmental conditions and vessel equipment and ice class
- evaluating limitations and determining the extent to which information is suitable for safe navigation and identifying navigational solutions in hazard conditions
- identifying presentations of various ice conditions as they appear on radar
- interpreting visuals of ice conditions as they appear on radar
- measuring and observing environmental conditions
- modifying and deviating voyage plan for dynamic ice conditions
- manoeuvring of a vessel through ice, including:
  - manoeuvring a vessel through moderate ice concentration (range of 1/10 to 5/10)
  - manoeuvring a vessel through dense ice concentration (range of 6/10 to 10/10)
- preparing and conducting risk assessment before approaching ice
- using and interpreting information from navigational equipment, nautical charts, nautical publications and related documentation
- using icebreaker terminology and communication, where applicable.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of elements and performance criteria and include knowledge of:

- effects of handling ship in various ice concentration and coverage including risks associated with navigation in ice, including:
  - avoid turning and backing simultaneously
- equipment limitations, including:
  - communication systems

- discrimination of radar targets and ice features in ice clutter
- electronic positioning systems at high latitude
- hazards associated with limited terrestrial navigational aids in polar regions
- high latitude errors on compasses
- nautical charts and pilot descriptions
- national, international and regional standards, including:
  - International Convention for the Safety of Life at Sea (SOLAS)
  - International Code for Ships Operating in Polar Waters (Polar Code)
  - International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW)
  - International Convention for the Prevention of Pollution from Ships (MARPOL)
  - International Maritime Organization (IMO) standards for operation in remote areas
  - International Code of Signals
- operate and manoeuvre a ship in ice, including:
  - anchoring in ice, including:
    - dangers to anchoring system
    - ice accretion to hawse pipe and ground tackle
  - communications including:
    - icebreaker communication
    - communication with other vessels in the area
    - communication with Rescue Coordination Centres
  - conditions for safe entry and exit to and from ice and open water, including:
    - avoiding icebergs
    - cracks
    - dangerous ice conditions
    - leads
    - maintaining safe distance to icebergs
  - conditions which impact polar visibility and give indications of:
    - ice blink
    - local ice
    - refraction
    - sea smoke
    - water conditions
    - water sky
  - need for bridge watch team augmentation based on:
    - environmental conditions
    - vessel equipment
    - vessel ice class
  - icebreaker convoy terminology, including:
    - convoy communications

- icebreaker direction
- moving in convoy
- ice ramming procedures, including double and single ramming passage
- methods to avoid besetment, free best vessel and consequences of besetment
- preparation and risk assessment before approaching ice and icebergs and conditions, including:
  - darkness
  - fog
  - pressure ice
  - swell
  - wind
- presentations of various ice conditions as they appear on radar
- towing and rescue in ice, including risks associated with operation
- use of different type of propulsion and rudder systems, including:
  - avoiding damage when operating in ice
  - limitations in ice
- use of heeling and trim systems, including hazards associated with operation and various techniques to safely dock and undock in ice covered waters
- publications and manuals, including:
  - Polar Water Operations Manual (PWOM)
  - shipboard documentation
- ship crew and passenger safety, including:
  - limitations of firefighting systems and lifesaving applications due to low air temperatures
  - procedures and techniques for abandoning the ship and survival on ice and in ice covered waters
  - unique concerns when conducting emergency drills in ice and low temperatures
  - unique concerns when conducting emergency response in ice and low air and water temperatures
- voyage planning and reporting, including:
  - development of safe routing and passage planning to avoid ice where possible
  - evaluating information to determine if it is suitable for safe navigation
  - information sources
  - limitations of hydrographic information and charts in polar regions
  - passage planning deviation and modification for dynamic ice conditions
  - reporting regimes in polar waters.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include

requirements in the Standards for Registered Training Organisations current at the time of assessment.

Training and assessment must meet Australian Maritime Safety Authority (AMSA) regulatory requirements which are mandated in sections of International Maritime Organization (IMO) model courses for AMSA accreditation.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# **MARN013 Manage seaworthiness of a vessel up to 80 metres**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to manage vessel in a seaworthy condition for all stages of a voyage or operation being undertaken.

It includes supervising weather tight and watertight integrity of vessel, taking action to meet changed sea and weather conditions and maintaining records.

This unit applies to people working in the maritime industry in the capacity of:

- Master on commercial vessels less than 35 metres in length within the exclusive economic zone (EEZ)
- Master on vessels less than 80 metres in length in inshore waters
- Chief Mate or Deck Watchkeeper on vessels less than 80 metres in length within the EEZ.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 35 metres Near Coastal and a Mate less than 80 metres Near Coastal, as defined in the National Standard for Commercial Vessels (NSCV) Part D.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

N – Seamanship

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |  |
|--|--|
| <p><b>1 Supervise weather tight and watertight integrity of vessel</b></p> | <p><b>1.1</b> Principal structural components of vessel are identified from vessel drawings to understand the function of these components in relation to conventional vessel design</p> <p><b>1.2</b> Pumping and pipeline systems of vessel are investigated to establish survivability of vessel in case of flooding and damage control</p> <p><b>1.3</b> Procedures for maintaining weather tight and watertight integrity of vessel are interpreted and implemented according to vessel safety management plan and regulations</p> <p><b>1.4</b> Crew are instructed on requirements of plan and their responsibilities</p> <p><b>1.5</b> Actions are instigated to confirm weather tight and watertight integrity of vessel at all times</p> |
| <p><b>2 Take action to meet changed sea and weather conditions</b></p>     | <p><b>2.1</b> Weather forecasts and observations of sea and weather conditions are used to predict situations that may jeopardise vessel weather tight and watertight integrity</p> <p><b>2.2</b> Effect of severe wind and rolling in associated sea conditions on vessel weather tight and watertight integrity is recognised</p> <p><b>2.3</b> Effect of water on deck on vessel weather tight and watertight integrity is ascertained</p> <p><b>2.4</b> Appropriate action is taken to maintain vessel weather tight and watertight integrity according to organisational procedures</p>   |
| <p><b>3 Maintain records</b></p>   | <p><b>3.1</b> Relevant documents and records are completed and maintained, as required, according to regulatory and organisational requirements</p> <p><b>3.2</b> Relevant documents are sent to appropriate bodies and copies are filed according to regulatory and organisational requirements</p>   |

- 3.3** Documents are stored according to regulatory and organisational requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARN004 Manage seaworthiness of a vessel up to 80 metres.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARN013 Manage seaworthiness of a vessel up to 80 metres**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- appropriately using bilge and other pumping arrangements
- assessing damage control measures
- completing required records
- establishing procedures for restoring or managing weather tight and watertight integrity during an emergency
- reading and interpreting vessel specifications, drawings and operational manuals.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- bilge pumping arrangements
- different vessel types
- effects of adding and removing weights, water on deck, slack tanks, rolling period, stiff and tender vessel, and additions or alterations to vessels
- principal parts of vessel and their various functions
- structural components, including:
  - design characteristics attributing to watertight integrity
  - principal components of vessel structure
  - structural arrangements to restrain fires
  - watertight and collision bulkheads
- weather tight and watertight integrity of vessel, including:
  - closing openings
  - ensuring passenger distribution does not exceed allowed limits
  - ensuring stores, cargo and equipment are properly stowed and lashed
  - maintaining stability condition within approved limits
  - methods for testing tanks and other watertight openings
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work

practices.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- a commercial vessel greater than or equal to 12 metres in length
- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

# **MARN014 Plan and manage safe loading, unloading, securing and stowage of cargo**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to plan and ensure safe loading, stowage, securing and care during the voyage and unloading of cargo, including dangerous goods.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel Unlimited.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master Unlimited and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

N – Seamanship

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Develop cargo plan

- 1.1 Cargo properties and characteristics are identified and their impact on safety, the environment and vessel operations are outlined
- 1.2 Communication is conducted with terminal personnel to establish loading and unloading arrangements
- 1.3 Information and equipment are used in planning to ensure hull stress is kept within acceptable limits
- 1.4 Cargo plan is prepared according to legislative and organisational requirements

#### 2 Oversee cargo operations

- 2.1 Preparations for loading are monitored according to the cargo plan and organisational procedures
- 2.2 Regulations, procedures and instructions are interpreted to ensure that cargo is correctly identified, inspected and confirmed against documentation
- 2.3 Communication is maintained with crew and terminal personnel involved in cargo loading/unloading to facilitate loading/unloading
- 2.4 Cargo operations are managed to ensure they comply with regulations, procedures and instructions
- 2.5 Vessel stability is monitored during loading/unloading operations
- 2.6 Ballast management procedures are carried out according to organisational procedures and port authority requirements
- 2.7 Action is taken in a cargo handling incident or emergency to secure the cargo and the vessel and to maintain the safety of persons involved
- 2.8 All cargo handling documentation is completed according to organisational procedures and regulatory requirements

#### 3 Comply with legislation

- 3.1 Regulations, procedures and instructions are interpreted

- for dangerous cargo** to ensure that dangerous cargo is correctly identified, inspected and confirmed against documentation, prior to cargo operations
- 3.2** Information regarding dangerous cargo is made readily available in an incident
  - 3.3** Cargo operations are managed to ensure they comply with regulations, operational and security procedures, and cargo plan
  - 3.4** Safety data sheets (SDS)/material safety data sheets (MSDS) are accessed and interpreted to identify relevant cargo-related hazards to vessel and to personnel
  - 3.5** Procedures for safety and safety management are identified and documented
  - 3.6** Hazards associated with dangerous cargo are identified and action is taken to minimise risk to personnel, cargo, vessel and the environment
  - 3.7** Action is taken in a dangerous cargo handling incident or emergency to secure cargo and vessel, and to maintain the safety of persons involved
  - 3.8** All documentation is completed according to organisational procedures and regulatory requirements
- 4 Manage the care of cargo during the voyage**
- 4.1** Plan for the care of cargo during the voyage is prepared according to organisational and customer requirements and relevant regulations
  - 4.2** Cargo care operations are managed to ensure they comply with regulations, procedures and instructions
  - 4.3** Cargo stowage and security is managed to ensure stability and stress conditions remain within safe limits at all times during the voyage
  - 4.4** Extent and frequency of cargo condition monitoring is determined appropriate to its nature and prevailing conditions
  - 4.5** Hazards associated with cargo stowage are identified and action is taken to minimise risk to personnel, cargo, vessel and the environment
  - 4.6** Unacceptable or unforeseen variations in the condition or specification of the cargo is promptly recognised and

- remedial action is taken immediately to safeguard the safety of the vessel and those onboard
- 4.7** Documentation is completed according to organisational procedures and regulatory requirements
- 5 Manage emergencies related to cargo**
- 5.1** On becoming aware of emergency, initial actions are taken according to contingency plans, urgency of the situation and nature of the emergency
- 5.2** Onboard personnel are given information and instructions clearly and accurately
- 5.3** Procedures are implemented to combat emergency and protect persons onboard
- 5.4** Communications are established with others to facilitate the emergency response process
- 5.5** Injured persons are provided with assistance
- 5.6** Contact is maintained with others at all times to keep them briefed on the emergency response process
- 5.7** Preparation for abandoning vessel is undertaken, as required
- 5.8** Cessation of emergency is communicated to appropriate personnel
- 6 Prevent pollution of the environment**
- 6.1** Procedures to prevent pollution are identified and observed at all times
- 6.2** Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and organisational procedures
- 6.3** All relevant information is immediately reported to appropriate persons when a vapour leak or cloud is detected or a malfunction has occurred that poses a risk of a vapour leak or cloud
- 6.4** Shore-based response personnel are promptly notified when a vapour leak or cloud occurs
- 7 Complete documentation related to cargo**
- 7.1** Correct logbook entries are made relating to cargo operations and incidents according to regulatory requirements and organisational procedures
- 7.2** Letter of protest is completed in an incident relating to

cargo operations and care

- 7.3** Cargo reports and documentation are completed and maintained according to regulatory requirements and organisational procedures
- 7.4** Independent cargo surveyor reports are received and acknowledged as required
- 7.5** Cargo samples are correctly documented and secured as required

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARN006 Manage cargo operations.

## **Links**

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARN014 Plan and manage safe loading, unloading, securing and stowage of cargo**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying international regulations, codes and standards concerning the safe handling, stowage, securing and transport of cargo
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- communicating clearly and effectively, establishing effective communications and improving working relationships
- conducting and recording tests and inspections of cargo handling equipment according to regulations and organisational procedures
- conducting loading and unloading operations of cargo and heavy cargo to ensure safe stowage of cargo, vessel stability, trim and stress limitations are not exceeded at any time
- correctly identifying safety data sheets (SDS)/material safety data sheets (MSDS), relevant cargo-related hazards to vessel and personnel, and taking appropriate action according to organisational procedures
- developing effective planning documents and providing high-quality reports that conform international regulations
- ensuring currency of relevant regulatory and legislative knowledge
- establishing procedures for safe cargo handling according to provisions of the relevant instruments, such as:
  - International Maritime Dangerous Goods (IMDG) Code,
  - International Maritime Solid Bulk Cargoes (IMSBC) Code
  - International Convention for the Prevention of Pollution from Ships (MARPOL) 73/78 Annexes III and V
  - International Safety Guide for Oil Tankers and Terminals (ISGOTT)
  - other relevant information
- interpreting and applying knowledge of bulk carriers, containers and container ships, chemical and oil tanker, and liquefied gas tanker layouts, platform supply vessels, roll-on and roll-off (ro-ro) carriers, cargo features, and characteristics applying available shipboard data related to loading, care and unloading of cargo
- reading and interpreting cargo handling documentation
- recognising problems and hazards that can arise when managing safety on chemical and

oil tankers, and liquefied gas tankers, taking appropriate remedial action and initiating appropriate solutions

- using draft survey methods to determine cargo quantities and vessel displacement
- using stability and trim diagrams, and stress-calculating equipment to keep hull stress and stability within acceptable limits at all times.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of ventilation requirements for various cargo
- bulk carrier, chemical and oil tanker layouts, and liquefied gas tanker layouts, cargo features and characteristics, common structural rules and design limitations
- cargo care operations, including:
  - checking cargo lashings
  - maintaining ventilation requirements
  - monitoring cargo temperatures liable to spontaneous combustion
  - monitoring refrigerated cargo temperatures
- cargo handling documentation, including:
  - bills of lading
  - cargo gear register
  - cargo plan
  - letter of protest
  - logbook
  - ship/shore safety and security checklists
- cargo handling incidents or emergencies, including:
  - cargo shift
  - damaged cargo
  - damaged dangerous goods and escaping cargo or fumes
  - failure of cargo handling equipment, including lashings
  - failure of refrigeration machinery
  - fire in cargo spaces
  - incorrect ventilation
  - incorrectly stowed cargo
  - spontaneous combustion
- cargo plan, including:
  - allocating cargo containers requiring refrigeration appropriate spaces
  - avoiding incompatible cargo stowage
  - calculations relating to stability and stress
  - ensuring cargo is evenly distributed to maintain acceptable trim at all phases of the

voyage

- ensuring the loading/unloading sequence is in accordance with agreed cargo plan
- loading cargo manifest
- observing regulations relating to hazardous material/dangerous goods handling and stowage
- cargo stowage plan
- chemical tankers, including tank cleaning and control of pollution in chemical tankers
- compliance with the minimum freeboard requirements of the load line regulations
- confined space entry procedures
- dangerous goods classification, signage, stowage and segregation requirements under the IMDG Code and relevant Marine Orders
- effect on trim and stability of cargo and cargo operations
- gas tankers, including cargo operations in gas tankers
- hazards and control measures and additional safety measures associated with:
  - bulk carriers
  - chemical and oil tanker
  - liquefied gas tanker cargo operations
- information and equipment, including:
  - automatic databased (ADB) equipment
  - ballasting and deballasting procedures, including ballast water management convention
  - bulk cargo codes
  - calculations relating to drafts, deadweight, stability, trim and stress
  - cargo and lashing codes
  - IMSBC Code, MARPOL 73/78 Annexes III and V and other relevant information, including Australian Maritime Safety Authority (AMSA) and Notices relating to cargo carriage, loading and unloading
  - IMDG Code
  - international regulations, codes and standards concerning the safe handling, stowage, securing and transport of cargo
  - relevant sections of maritime regulations, codes and conventions related to chemical and oil tankers, and liquefied gas tankers
  - requirements for loading and care of various cargo types
  - requirements for the carriage of grain, grain stability and timber cargo
  - shipboard data, including drawings, load limitations and safe working loads
  - stability and trim diagrams
  - stress-calculating equipment
- loading and unloading operations with special regard to the transport of cargo identified in the Code of Safe Practice for Cargo Stowage and Securing
- loading cargo and ballasting to keep hull stress within acceptable limits
- maintenance required for cargo handling equipment and hatch covers

- methods and safeguards when fumigating hold
- oil tanker operations and related pollution prevention regulations
- preparation requirements for loading, including:
  - checking hatch covers for damage and ensuring watertight integrity of hatches
  - checking holds to ensure they are clean, dry and free of odour
  - checking bilges and bilge systems are operational before sealing cargo stowages
  - covering bilges with tarpaulins/wrappers before loading, as required
  - ensuring survey certification for all cargo handling equipment is valid and cargo record book is available for inspection
  - following confined space entry procedures, as required
  - inspecting access arrangements in holds to ensure they are in a safe condition
  - reviewing supplies of dunnage, mats and cargo-securing equipment to ensure sufficient are available
- procedures for receiving and delivering cargo
- relevant firefighting operations and the use of firefighting equipment
- shear forces, bending moments and torsional moments
- stability, trim and stress records
- stowage and securing of cargo onboard vessels, cargo-handling gear, and securing and lashing equipment, including timber deck cargo
- WHS/OHS requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## **MARN015 Use seamanship skills on board a vessel**

### **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### **Application**

This unit involves the skills and knowledge required to apply practical seamanship skills as part of operations on a vessel.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer - Engine/Deck
- Integrated Rating
- Navigational Watch - Deck/Engine

who assist the responsible officer in a range of seamanship activities on a range of vessels.

### **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Engine/Deck, Integrated Rating or Navigational Watch - Deck/Engine and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

N – Seamanship

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |  |
|--|--|
| <p><b>1 Use and maintain ropes and wires</b></p> | <p><b>1.1</b> Knots, splices, stoppers, whippings and servings are created and used in the course of operations onboard a vessel</p> <p><b>1.2</b> Ropes are spliced neatly and securely according to their correct application and rope ends are whipped, as required, to maintain good condition</p> <p><b>1.3</b> Breaking strain and working load limits (WLL) of rope and wire is determined and applied as load limits in the course of operations onboard a vessel</p> <p><b>1.4</b> Wear and damage to rope and wire are identified and reported</p> <p><b>1.5</b> Rope and wire are maintained and stored according to workplace procedures</p> |
| <p><b>2 Secure vessel at anchor</b></p>          | <p><b>2.1</b> Anchor and equipment are prepared for use according to workplace procedures</p> <p><b>2.2</b> Control of anchor cable is maintained within safe operating limits during anchoring operations</p> <p><b>2.3</b> Anchor and equipment are secured on completion of anchoring operations as instructed for anticipated forecast conditions</p> <p><b>2.4</b> Anchoring area is kept free of loose ropes, wires debris and personnel during all operations</p>   |
| <p><b>3 Secure vessel at a berth</b></p>         | <p><b>3.1</b> Mooring lines and associated equipment are handled safely at all times</p> <p><b>3.2</b> Mooring area is kept free of loose ropes, wires and debris throughout operations</p> <p><b>3.3</b> Rope stoppers are correctly applied to transfer mooring lines when securing vessel or tug</p> <p><b>3.4</b> Securing a tug using tug or ships lines is carried out safely and tug lines are monitored at all times</p>   |

- |  |            |  |
|--|------------|--|
|  | <b>3.5</b> | Tension on ropes is maintained at an appropriate level for stage and nature of the operation   |
|  | <b>3.6</b> | Snap-back zones are adhered to when working with lines under tension   |
|  | <b>3.7</b> | Tension on shore power leads and other umbilicals is monitored   |
| <b>4 Lash and secure stores, cargo and access ways</b> | <b>4.1</b> | Lashing equipment is inspected, maintained and correctly stored after use according to workplace procedures  |
|  | <b>4.2</b> | Cargo is stowed according to recognised principles and workplace procedures and shipboard procedures relating to transporting and handling dangerous goods |
|  | <b>4.3</b> | Cargo is lashed and secured according to recognised principles and workplace procedures  |
|  | <b>4.4</b> | Equipment and items on deck and in galley spaces are secured according to workplace procedures   |
|  | <b>4.5</b> | Personnel access ways are rigged and secured according to workplace procedures   |
|  | <b>4.6</b> | Accommodation spaces and personnel facilities onboard vessel are checked and correctly secured for sea according to workplace procedures                   |
| <b>5 Conduct fuelling and oil transfer operations</b>  | <b>5.1</b> | Appropriate personal protective equipment (PPE) is accessed and used   |
|  | <b>5.2</b> | Safety boundary for fuelling and transferring operations is established  |
|  | <b>5.3</b> | Spill prevention and response (shipboard oil pollution emergency plan (SOPEP) equipment) systems are correctly deployed                                    |
|  | <b>5.4</b> | Tank levels are correctly measured by sounding and/or ullage and reported pre-fuelling and post-fuelling and transferring operations                       |
|  | <b>5.5</b> | Fuelling and transferring operations are performed safely, and associated valves and pipelines are secured on completion to avoid spillages                |
|  | <b>5.6</b> | Appropriate action is taken to handle incidents arising during fuelling and transferring operations according to   |

emergency procedures and regulatory requirements

- 5.7** Effective communication is maintained with crew during fuelling and transferring operations to ensure the safety and integrity of the vessel and crew

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARN007 Use seamanship skills on board a vessel.

## Links

Companion Volume implementation guide can be found in VetNet -

# Assessment Requirements for MARN015 Use seamanship skills on board a vessel

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- anchoring a vessel in varying weather conditions
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and safe work practices, including:
  - chemical and biohazard safety
  - lifting techniques and methods of preventing back injury
- coiling and stowing ropes correctly
- handling ropes and wires safely
- handling, stowing and securing dangerous, hazardous and harmful substances and liquids safely
- identifying and correctly using personal protective equipment (PPE)
- lashing and securing moveable equipment, especially on deck, in holds and freezers
- measuring and reporting tank levels correctly by sounding and ullage
- operating anchoring equipment under various conditions, such as anchoring, weighing anchor, securing for sea and in emergencies
- performing:
  - appropriate whippings on ropes and line
  - eye and joining splice in 8-strand multi-plait mooring rope
  - eye splice (with locking tuck) in 6-strand flexible steel wire rope
  - eye splice, joining and a short splice in 3-strand hawser laid rope
- preparing and throwing a heaving line
- securing a vessel at its berth according to operational requirements
- securing from fuelling and transferring operations
- tying a:
  - bowline
  - clove hitch
  - figure-eight knot
  - half hitch
  - reef knot

- rolling hitch, sheet bend and timber hitch
- round turn and two half hitches
- using basic crane, winch and hoist signals
- using knots and hitches and securing arrangements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate use and selection of PPE
- basic crane, winch and hoist signals
- capacities, safe working loads and breaking strengths of mooring equipment, including:
  - anchor windlasses
  - bitts
  - bollards
  - capstans
  - chocks
  - mooring wires
  - synthetic and fibre lines
  - winches
- correct application of common knots and hitches
- dangers of working with ropes under tension
- different type of PPE and their application
- function of mooring and tug lines and how each line functions as part of an overall system
- incidents, including:
  - failure of communications systems
  - leakage from faulty valves and hoses
  - tank overflow
- maintenance of different types of rope, wire and chain
- methods of securing cargo, including vehicles, stores and equipment on a vessel before it puts to sea
- preparations for fuelling and transfer operations
- procedures and order of events associated with mooring to a buoy or buoys
- procedures and order of events for making fast and letting go mooring, tug lines and wires
- procedures and order of events for the use of anchors in various operations
- procedures and precautions for safe handling, stowage and securing of cargo and stores, including dangerous, hazardous and harmful substances and liquids
- procedures for connecting and disconnecting fuelling and transfer hoses
- procedures relating to incidents that may arise during fuelling and transferring operations
- purpose and application of lock out tags
- purpose and application of the Australian Dangerous Goods (ADG) Code and International

### Maritime Dangerous Goods (IMDG) Code

- purpose of a permit to work and restricted access guidelines
- purpose of safety data sheets (SDS)/material safety data sheets (MSDS)
- relevant WHS/OHS requirements, work practices and pollution control regulation and policies
- safe working practices, procedures and personal shipboard safety when working over the side and working aloft
- types of anchors, principles, method of operation and use in various conditions.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Seamanship practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARO007 Contribute to monitoring and controlling a safe engine watch**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to contribute to a safe engine watch on a vessel while under the direction of the officer in charge of the engineering watch.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer - Engine or Integrated Rating who assists, under the direction of the officer in charge of the engineering watch, in performing engine watchkeeping duties
- Navigational Watch - Deck/Engine.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer – Engine, Integrated Rating or Navigational Watch - Deck/Engine and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

O – Watchkeeping

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Follow instructions to monitor engine room machinery and equipment**

**1.1** Unsafe conditions and potential hazards are recognised, and risk is assessed and reported according to workplace procedures

**1.2** Unsafe conditions and hazards are rectified according to workplace procedures

**1.3** Effective communication is maintained with the officer in charge of the engineering watch about matters relevant to the safety and integrity of the vessel

**1.4** Procedures for relief, maintenance and handover of a watch are followed

**1.5** Emergency situations are promptly reported to the officer in charge of the engineering watch

**1.6** Alarms are recognised and reported

**2 Respond to potential emergency situations**

**2.1** Control measures to minimise a potential emergency are implemented

**2.2** Containment procedures are applied as required

**2.3** Appropriate safety procedures are followed, and personal protective equipment (PPE) is used according to workplace procedures

**2.4** Emergency is eliminated where possible or actions are taken to control the emergency

**2.5** Appropriate firefighting equipment is identified to carry out firefighting operations

**2.6** Unsafe conditions and potential hazards are recognised, and risk is assessed and reported to the officer in charge of the engineering watch according to workplace procedures

**2.7** Unsafe conditions and hazards are rectified according to workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARO005 Contribute to monitoring and controlling a safe engine watch.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARO007 Contribute to monitoring and controlling a safe engine watch**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- communicating clearly and concisely, and acknowledging orders in a seamanlike manner
- communicating effectively with the officer in charge of the engineering watch about matters relevant to watchkeeping duties
- conforming to accepted practices, principles and procedures in the maintenance, handover and relief of the watch
- conforming to established procedures and practices in taking initial action in the event of an emergency or abnormal situation
- maintaining the integrity of emergency alarm systems at all times
- monitoring and anticipating hazards and risks that may arise during engine watchkeeping duties
- monitoring engine room machinery and equipment, including:
  - boiler water levels and steam pressure
  - temperatures
  - oil levels
- monitoring propulsion and auxiliary machinery according to instructions during watchkeeping duties
- performing basic engine watchkeeping duties under the direction of the officer in charge of the engineering watch on a vessel moored, at anchor or under way
- recognising potential hazards, assessing risks and reporting them to the officer of the watch
- responding to engine orders given by the officer in charge of the engineering watch
- seeking advice/clarification from the officer in charge of the engineering watch where watch information or instructions are not clearly understood
- using internal communications and alarm systems.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- alarms associated with engine room machinery and their meaning
- appropriate selection and use of personal protective equipment (PPE)
- correct use of monitoring equipment used in the engine room
- emergency duties and alarm signals and response to emergency situations, including:
  - crankcase and gearbox explosions
  - fire, including engine room scavenge fires
  - gearbox failure
  - generator failure
  - loss of engine cooling water
  - starting air line
- engine room alarm systems and the difference between the various alarms, including fire-extinguisher gas alarms
- engine room emergency situations, and appropriate actions and solutions
- escape routes from machinery spaces
- function and operation of main propulsion and auxiliary machinery
- information required to maintain a safe engine watch
- location and use of firefighting equipment
- monitoring equipment used in the engine room
- orders as they relate to watchkeeping provided by the officer in charge of the engineering watch
- procedures for the relief, maintenance and handover of a watch
- relevant WHS/OHS requirements, work practices and pollution control regulation and policies, including shipboard oil pollution emergency plan (SOPEP)
- requirements for the safe operation of boilers
- shipboard terms and definitions
- terms used in machinery spaces, and names of machinery and equipment.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental

damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

# **MARO008 Contribute to monitoring and controlling a safe navigational watch**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to contribute to a safe navigational watch on a vessel while under the direction of the officer in charge of the navigational watch.

This unit applies to people working in the maritime industry in the capacity of:

- Able Seafarer - Deck or Integrated Rating who assists under the direction of the officer in charge of the navigational watch, in performing navigational watchkeeping duties.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as an Able Seafarer - Deck or Integrated Rating and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

O – Watchkeeping

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Follow instructions to monitor vessel situation when moored or anchored**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Scheduled checks and inspections are conducted to comply with instructions

**1.2** Appropriate action is taken in irregularities or abnormal conditions to maximise the safety and integrity of the vessel

**1.3** Restrictions on access within the vessel are enforced according to Master instructions

**1.4** Very high frequency (VHF) is monitored and information is communicated to the Master in accordance with workplace procedures

**1.5** Procedures for the relief, maintenance and handover of a watch are followed

#### **2 Follow instructions to monitor vessel situation when at sea**

**2.1** Responsibilities of a lookout are established

**2.2** Proper lookout is maintained by sight and hearing at all times according to instructions

**2.3** Lights, shapes and sound signals are correctly recognised and recorded

**2.4** Approximate bearing of a sound signal, light or other object is reported in degrees or points, to the officer in charge of the navigational watch

**2.5** Effective communication is maintained with the officer in charge of the navigational watch about matters relevant to the safety and integrity of the vessel

- |  |            |  |
|--|------------|--|
|  | <b>2.6</b> | VHF is monitored and information is communicated to the officer in charge of the navigational watch, as required |
|  | <b>2.7</b> | Procedures for the relief, maintenance and handover of a watch are followed                                      |
| <b>3 Respond to potential emergency situations</b> | <b>3.1</b> | Emergency situations are promptly reported to the officer in charge of the navigational watch                    |
|  | <b>3.2</b> | Distress signals are recognised and reported   |
|  | <b>3.3</b> | False distress alerts are avoided and correct action is taken in an accidental activation                        |
|  | <b>3.4</b> | Integrity of emergency and distress alerting systems is maintained at all times                                  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARO006 Contribute to monitoring and controlling a safe navigational watch.

# Assessment Requirements for MARO008 Contribute to monitoring and controlling a safe navigational watch

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- communicating clearly and concisely and acknowledging orders in a seamanlike manner
- communicating effectively with the officer in charge of the navigational watch about matters relevant to watchkeeping duties
- conforming to accepted practices and procedures in the maintenance, handover and relief of the navigational watch
- conforming to established procedures and practices in taking initial action in the event of an emergency or abnormal situation
- identifying and reporting lights, buoys and sound signals
- monitoring and anticipating hazards and risks that may arise during watchkeeping duties
- monitoring vessel situation, including:
  - communicating with other vessels
  - communicating with those onshore
  - regularly checking weather reports and warnings
- monitoring very high frequency (VHF) equipment
- recognising and reporting distress signals, including:
  - pyrotechnic distress signals
  - satellite emergency position indicating radio beacons (EPIRBs)
  - search and rescue transponders (SARTs)
- recognising potential hazards, assessing and reporting risks to the officer in charge of the navigational watch
- reporting approximate bearing of a sound signal, light or other object in degrees or points
- reporting other ships, objects, lights and navigation marks correctly, in relation to the ship's head
- responding to orders given by the officer in charge of the navigational watch
- seeking advice/clarification from the officer in charge of the navigational watch where watch information or instructions are not clearly understood
- undertaking the following scheduled checks and inspections:

- coverage
- frequency
- timing
- using internal communications and alarm systems.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate use and selection of personal protective equipment (PPE)
- basic purpose of bridge equipment, display modes and interpreting values of displays, including:
  - automatic identification system (AIS)
  - electronic chart display and information system (ECDIS) symbols and alarms
  - echosounder
  - Global Maritime Distress and Safety System (GMDSS)
  - global positioning system (GPS)
  - gyrocompass
  - log
  - magnetic compass
  - radar
  - VHF and VHF communication channels
- basic function and use of main steering systems, including:
  - changeover procedures between Autor (pilot), follow up (FU) or hand and non-follow up (NFU)
  - steering gear
- collection and documentation of weather data
- effect of tides on depth of water
- emergency situations, appropriate action and solutions taken to address them engine or propulsion controls
- environmental protection procedures as they apply on a vessel
- functions and purpose of pyrotechnic distress signals, satellite EPIRBs and SARTs
- information required to maintain a safe navigational watch on a vessel, including interpreting course, depth and speed data from nautical instruments
- International Regulations for Preventing Collisions at Sea (COLREGs)
- mooring lines
- nautical charts and publications relevant to planning navigational voyages
- person overboard
- procedures for the relief, maintenance and handover of a watch
- reception of distress signal
- relevant WHS/OHS requirements, work practices and pollution control regulations and

policies

- shipboard terms and definitions that are critical to a safe navigational watch
- stranding
- sudden list or loll
- synchronous rolling
- types, function and purpose of navigational lights, shapes and sound signals
- vessel position terminology
- watertight integrity.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## MARO009 Maintain a safe navigational watch

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to apply the accepted principles and procedures to be observed in maintaining a watch according to bridge resource management principles, to ensure a safe navigational watch on a vessel, deal with maritime emergencies, incidents and to a distress signal at sea.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial ship less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

#### Near Coastal Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

#### Blue Waters Qualifications:

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck. To meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

O – Watchkeeping

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Maintain watch on the bridge**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Own responsibility for the safety of navigation is clearly defined at all times, including periods when the Master is on the bridge and while under pilotage
- 1.2** Proper lookout is maintained at all times according to organisational procedures and regulatory requirements
- 1.3** Lights, shapes and sound signals are correctly recognised and acted upon
- 1.4** Frequency and extent of monitoring traffic, vessel and environment are scheduled to conform with organisational procedures and regulatory requirements
- 1.5** Bridge communication is maintained with other team members on matters relevant to the safety and integrity of the vessel
- 1.6** Clear and unambiguous bridge communications are maintained, and clarification is sought from or given to other team members when watch information or instructions are not clearly understood
- 1.7** Internal and external communications systems are used according to organisational procedures and regulatory requirements.

- |  |            |  |
|--|------------|--|
|  | <b>1.8</b> | Conduct, handover and relief of the watch is completed according to organisational procedures and regulatory requirements                                      |
| <b>2 Maintain watch when anchored</b>                            | <b>2.1</b> | Organisational procedures and regulatory requirements are complied with through frequency, timing and coverage of scheduled checks and inspections             |
|  | <b>2.2</b> | Appropriate action is taken in the event of irregularities or abnormal conditions to maximise the safety and integrity of the vessel                           |
|  | <b>2.3</b> | Restrictions on access to the vessel by non-authorised persons are followed according to organisational procedures and regulatory requirements                 |
|  | <b>2.4</b> | Internal and external communications systems are used according to organisational procedures and regulatory requirements                                       |
| <b>3 Respond to potential collision and emergency situations</b> | <b>3.1</b> | Potential collision situations are analysed and appropriate actions are taken in ample time according to regulatory requirements                               |
|  | <b>3.2</b> | Correct responses are made to emergencies and situations that pose a danger to the vessel and personnel onboard  |
|  | <b>3.3</b> | Distress signals are recognised and appropriate actions are taken to initiate search and rescue (SAR) operations   |
|  | <b>3.4</b> | Master is called in the event of a navigational incident which falls outside own responsibility  |
| <b>4 Respond to onboard emergency situations</b>                 | <b>4.1</b> | Initial actions in the event of an emergency are undertaken according to contingency plans and are appropriate to urgency of situation and nature of emergency |
|  | <b>4.2</b> | Urgency of situation and nature of emergency is identified promptly  |
|  | <b>4.3</b> | Relevant alarms are activated  |
|  | <b>4.4</b> | Distress signals are used to indicate need for assistance, as required   |
|  | <b>4.5</b> | Crew, personnel and passengers are given information and instructions clearly and accurately   |

- |          |            |   |
|----------|------------|---|
|          | <b>4.6</b> | Procedures are implemented to combat emergency and to protect crew, personnel and passengers  |
|          | <b>4.7</b> | Communications are established with others to facilitate emergency response process   |
| <b>5</b> |            | <b>Resource the bridge according to bridge resource management principles</b>   |
|          | <b>5.1</b> | Bridge resource management principles are interpreted to establish the functions and responsibilities of the watchkeeping team onboard a vessel     |
|          | <b>5.2</b> | Resources are allocated and assigned as needed in correct priority to perform necessary tasks to obtain and maintain situational awareness          |
|          | <b>5.3</b> | Watchkeeping schedule is developed with due consideration to team experience  |
|          | <b>5.4</b> | Instructions on watchkeeping and lookout requirements are clearly and unambiguously given in relation to monitoring traffic, vessel and environment |
|          | <b>5.5</b> | Clear and unambiguous roles and responsibilities of watchkeeping team are determined and allocated  |
|          | <b>5.6</b> | Effective communication is maintained with team on matters relevant to safety and integrity of vessel   |
|          | <b>5.7</b> | Questionable decisions and/or actions are dealt with using an appropriate challenge and response  |
| <b>6</b> |            | <b>Maintain navigation records</b>  |
|          | <b>6.1</b> | Proper records of the movements and activities related to the navigation of the vessel are maintained   |
|          | <b>6.2</b> | Records are filed and stored according to organisational procedures   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARO002 Maintain a safe navigational watch.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARO009 Maintain a safe navigational watch

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- activating relevant alarms, including:
  - abandon ship signals
  - emergency broadcasts
  - fire and general muster alarms
- allocating and assigning resources as needed in correct priority to perform necessary tasks
- applying International Regulations for Preventing Collisions at Sea (COLREGs)
- applying principles of bridge and maritime resource management
- appropriately challenging and responding to questionable decisions and/or actions
- clearly defining responsibility for the safety of navigation at all times
- communicating effectively with others on watchkeeping issues, arrangements and requirements
- communicating an accurate understanding of current and predicted vessel state, navigation path and external environment with team members
- conforming to accepted principles and procedures in the conduct, handover and relief of the watch
- correctly providing sound signals
- correctly recognising lights, shapes and sound signals
- giving and receiving clear and unambiguous communications
- identifying and implementing effective leadership behaviours
- identifying and solving problems that may arise during watchkeeping duties, reporting problems and issues and taking appropriate actions based on available information
- identifying type and scale of emergency promptly
- implementing contingency plans and instructions in standing orders when responding to a distress signal at sea
- interpreting and implementing procedures relevant to the role and responsibilities of Watchkeeper
- maintaining a proper lookout at all times and in such a way as to conform to accepted principles and procedures
- maintaining accurate and compliant records of the movements and activities relating to the navigation of the vessel

- modifying activities dependent on differing vessel contingencies, risk situations and environments
- manoeuvring vessel, according to contingency plans
- monitoring and anticipating hazards and risks that may arise during watchkeeping duties and taking appropriate action
- monitoring traffic, the ship and the environment to conform to accepted principles and procedures
- recognising a distress or emergency signal
- reporting according to the General Principles for Ship Reporting Systems and Vessel Traffic Services (VTS) procedures
- responding to vessel emergencies
- selecting and using appropriate internal and external communications equipment during watchkeeping
- using bridge communication equipment
- using information from navigational equipment to maintain a safe navigational watch
- using routing according to the General Provisions on Ships' Routing
- working as part of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian Maritime Safety Authority (AMSA) watchkeeping procedures contained in Marine Orders and Marine Notices
- blind pilotage techniques
- bridge instrumentation, controls and alarms relevant to the function of watchkeeping
- bridge procedures onboard a vessel
- bridge resource management principles, including allocation, assignment and prioritisation of resources; effective communication; assertiveness and leadership; obtaining and maintaining situational awareness; and consideration of team experience
- causes of groundings, collisions and casualties
- contingency plans with response to emergencies, including responding to distress signal at sea
- distress signals as listed in Annex IV of COLREGs
- fatigue management principles and techniques
- functions and responsibilities of the watchkeeping team onboard a vessel
- initial actions to be taken following a collision or grounding, including:
  - initial damage assessment and control
  - manoeuvring vessel
  - precautions when breaching a vessel
- International Association of Lighthouse Authorities (IALA) buoyage system A and B
- irregularities or abnormal conditions, including:
  - dragging anchor

- fog and restricted visibility
- heavy weather
- lights, shapes and sound signals as listed in COLREGs parts C
- manual and electronic navigational aids available to the bridge team and procedures for their operation and use during a watch
- maritime communication techniques onboard a vessel in accordance with the Standard Marine Communication Phrases
- nature of assistance, including:
  - assisting a ship in distress
  - rescuing persons from a vessel in distress and from a wreck
  - responding to emergencies occurring in port
- nature of emergencies
- navigational aids
- navigational hazards and implications for watchkeeping
- precautions for the protection and safety of crew and passengers
- precautions necessary when navigating in or near traffic separation schemes or other routing measures
- principles and use of navigational recording devices for keeping records of the operation, behaviour and performance of the vessel and navigation equipment
- principles for the use of vessel routing and reporting systems for safe navigation, including weather routing
- principles to be observed in keeping a safe navigational watch
- principles to be observed in keeping a watch in port, including when carrying hazardous cargo
- procedures for rescuing a person at sea, assisting a vessel in distress and responding to emergencies that arise in port
- procedures for the conduct, handover and relief of a watch
- procedures for the use of internal communications and alarm systems
- range of lifesaving appliances
- search and rescue using International Aeronautical and Maritime Search and Rescue (IAMSAR) Manual
- signs of personnel fatigue and hours of rest requirements
- typical bridge instrumentation, controls and alarms and their functions
- typical watchkeeping problems and emergency situations, and appropriate actions and solutions
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## MARO010 Perform basic lookout duties

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

### Application

This unit involves the skills and knowledge required to contribute to a safe lookout on a vessel less than 80 metres under instructions from the Master.

It includes following instructions to monitor vessel situation when moored or anchored, following instructions to monitor vessel situation when at sea and responding to potential emergency situations

This unit applies to general purpose hands working in the maritime industry on vessels less than 80 metres. They could be working independently or as part a vessel crew.

This unit applies to people working in the maritime industry in the capacity of:

- assistant to the Master or Engineer of a vessel working under their direct supervision
- worker on deck or in the engine room of a vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- worker in the engine room only for a vessel with propulsion power less than 3000 kW.

### Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit.

This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a General Purpose Hand Near Coastal as defined in the National Standard for Commercial Vessels (NSCV) Part D.

### Pre-requisite Unit

Not applicable.

### Competency Field

O – Watchkeeping

### Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Follow instructions to monitor vessel situation when moored or anchored**

- 1.1** Scheduled checks and inspections are conducted to comply with instructions
- 1.2** Appropriate action is taken in the event of irregularities or abnormal conditions to maximise the safety and integrity of the vessel
- 1.3** Restrictions on access to the vessel by visitors are followed according to instructions
- 1.4** Very high frequency (VHF) equipment is monitored and information is communicated to the Master as required

**2 Follow instructions to monitor vessel situation when at sea**

- 2.1** Proper lookout is maintained at all times according to instructions
- 2.2** Lights, shapes and sound signals are correctly identified and reported
- 2.3** Effective communication is maintained with the Master on matters relevant to the safety and integrity of the vessel
- 2.4** VHF equipment is monitored and information is communicated to the Master as required

**3 Respond to potential emergency situations**

- 3.1** Emergency situations are promptly reported to the Master
- 3.2** Distress signals are recognised and reported

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARO001 Perform basic lookout duties.

## Links

Companion Volume implementation guide can be found in VetNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARO010 Perform basic lookout duties

## Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating required information in a timely manner
- identifying and reporting lights, buoys and sound signals
- monitoring communications equipment
- reporting other ships, objects, lights and navigation marks in relation to the ship's head correctly
- responding to helm and engine orders given by the Master.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- anchor watch
- communicating effectively with others on lookout issues and arrangements
- coverage, frequency and timing of checks and inspections
- hazards and risks that may arise during lookout duties
- navigation lights, shapes and sound signals
- typical emergency situations and appropriate action and solutions, including:
  - collision
  - fire
  - heavy weather
  - loss of engine or propulsion controls
  - loss of watertight integrity
  - person overboard
  - personal injury or other medical emergency
- watch in port.

## Assessment Conditions

Assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, safety management system (SMS), workplace procedures and operational manuals
- tools, equipment, machinery, materials and personal protective equipment (PPE) currently used in industry.

## Links

# **MAR0011 Transmit and receive information by the Global Maritime Distress and Safety System (GMDSS)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to transmit and receive information by Global Maritime Distress and Safety System (GMDSS) subsystems and equipment.

This unit applies to people performing radio duties on a ship required to participate in the GMDSS.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

## **Licensing/Regulatory Information**

This unit is equivalent and delivers the objectives of the following STCW provisions:

- STCW Reg IV/2 and Code Section A-IV/2, Table A-IV/2.

Legislative and regulatory requirements are applicable to this unit.

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).
- Those regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

O – Watchkeeping

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Operate GMDSS subsystems and equipment to send and receive messages**

**1.1** GMDSS communication equipment is operated to send and receive various types of signals according to manufacturer instructions, established GMDSS procedures and regulatory requirements

**1.2** GMDSS procedures appropriate for the sea area concerned are correctly applied according to regulatory requirements

**1.3** Regulations and procedures applicable to vessel stations equipped with GMDSS communication equipment and digital selective calling facilities are applied during radio communication

**1.4** Work health and safety (WHS)/occupational health and safety (OHS) procedures and hazard control strategies and the application of the International Safety Management (ISM) Code are applied

#### **2 Maintain radio equipment**

**2.1** Routine maintenance checks are conducted on GMDSS equipment according to manufacturer specifications and organisational procedures

**2.2** Out-of-specification performance and faults are investigated using fault-finding techniques

**2.3** Identified faults and defective equipment and component parts are rectified or replaced according to manufacturer specifications and organisational procedures

#### **3 Provide radio services**

**3.1** Emergencies are correctly identified according to organisational procedures

**3.2** Organisational procedures are conformed with when taking initial actions in the event of an emergency or

abnormal situation

- 3.3 Communications are established with others using GMDSS communication equipment to facilitate the emergency response process
- 3.4 Contact is maintained at all times with others to keep them briefed on the emergency response process
- 3.5 Radio procedures as defined in the International Telecommunications Union (ITU), International Convention for the Safety of Life at Sea (SOLAS) and the International Aeronautical and Maritime Search and Rescue (IAMSAR) Manual are applied during the emergency

#### **4 Maintain records**

- 4.1 Records are completed and maintained, as required, according to regulatory and organisational requirements
- 4.2 Relevant records are sent to appropriate bodies and copies are filed according to regulatory and organisational requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **Unit Mapping Information**

This unit replaces and is equivalent to MARO003 Transmit and receive information by the global maritime distress and safety system.

## **Links**

Companion Volume implementation guide can be found in VetNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARO011 Transmit and receive information by the Global Maritime Distress and Safety System (GMDSS)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying work health and safety/occupational health and safety (WHS/OHS) procedures when operating Global Maritime Distress and Safety System (GMDSS) subsystems and equipment
- communicating effectively with others when using GMDSS subsystems and equipment
- conducting operational checks on GMDSS subsystems and equipment
- keeping a radio logbook of communications using the GMDSS equipment, including the required regulatory entries into the radio logbook
- operating GMDSS subsystems and equipment according to manufacturer instructions
- performing routine maintenance checks, including:
  - antennas
  - battery checks
  - equipment testing
- reading and interpreting instructions for the use of GMDSS subsystems and equipment
- recognising typical faults with GMDSS subsystems and equipment, and taking appropriate action
- using the international phonetic alphabet and numeral code.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- different types of marine radio equipment, their features, applications, operating characteristics and operating procedures
- GMDSS components
- GMDSS procedures in response to emergency situations, such as abandon ship, fire, persons in survival craft or piracy at sea
- hazards associated with radio transmission and the repair and maintenance of radio equipment and related hazard control measures

- identification of radio stations
- international and national radio regulations applicable to GMDSS communications, including Australian Maritime Safety Authority (AMSA) Marine Orders, International Telecommunications Union (ITU) and the International Convention for the Safety of Life at Sea (SOLAS) Chapter IV
- maintenance strategies and requirements for GMDSS equipment as defined in SOLAS, radio regulations and the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW)
- means to prevent the transmission of false distress alerts
- miscellaneous skills and operational procedures for general communications
- operational checks, including checking radio performance, measuring capacity of batteries, and measuring on and off load voltage
- principles and features of marine radio communications, including:
  - correct use of frequencies, frequency bands and modes of emission
  - definition of coverage and sea areas for digital selective calling (DSC)
  - distress, urgency and safety communication
  - frequencies for routine call and reply
  - limitations on the performance of different types of marine radio equipment
  - methods of communicating vessel position
  - purpose of and procedures for the monitoring of calling and working frequencies
  - purpose of silence periods when operating radio equipment
  - radio calling, replying and relaying procedures
- principles of radio propagation, including:
  - basic propagation mechanisms at low frequency (LF), medium frequency (MF), high frequency (HF) and very high frequency (VHF)
  - classes of emission
  - duplex, simplex paired frequencies and ITU channels
  - frequency bands
  - maximum usable frequency (MUF)
  - optimum working frequency (OWF)
- procedures for:
  - international phonetic alphabet and numeral code
  - keeping records of radio communication
  - using various GMDSS systems and services, including:
    - current inmarsat services enhanced group calling (EGC) system
    - MF/HF radio with narrow band direct printing (NBDP)
    - DSC facilities and usage
    - Enhanced group call (EGC) receiver
    - maritime safety information (MSI) services
    - navigational telex (NAVTEX) system
    - SafetyNET system

- prohibitions on connecting non-GMDSS equipment to reserve source of supply
- radio communication problems and appropriate actions and solutions
- radio equipment faults, defects and related fault-finding techniques
- requirements of ship reporting systems
- role and method of use of ship reporting systems
- search and rescue (SAR) operation
- service publications
- statutory framework of the Maritime Mobile Service
- systems used onboard, including:
  - automatic identification system (AIS)
  - ship security alert system
  - ultra-high frequency (UHF) handhelds
- types, applications and features of basic antenna systems used in marine radio communications
- use of radio medical services.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry, including GMDSS communication equipment.

# **MARO012 Transmit and receive information by visual signalling**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Application**

This unit involves the skills and knowledge required to transmit and receive information by visual signalling.

This unit applies to people working in the maritime industry in the capacity of:

- Master of a commercial vessel less than 80 metres in length within the exclusive economic zone (EEZ)
- Master of a commercial vessel less than 500 gross tonnage (GT)
- Master of a commercial vessel Unlimited
- Watchkeeper Deck.

## **Licensing/Regulatory Information**

Legislative and regulatory requirements are applicable to this unit.

- Regulatory requirements include STCW International Maritime Organization (IMO) model course competencies and areas of knowledge, understanding and proficiency, together with the estimated total hours required for lectures and practical exercises. Teaching staff should note that timings are suggestions only and should be adapted to suit individual groups of trainees depending on their experience, ability, equipment and staff available for training

## **Near Coastal Qualifications:**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master less than 80 metres Near Coastal as defined in the Marine Order 505 (Certificates of competency - National Law) 2013.

## **Blue Waters**

- This unit is one of the requirements to obtain Australian Maritime Safety Authority (AMSA) certification as a Master of a commercial vessel less than 500 gross tonnage (GT), Master Unlimited or Watchkeeper Deck and to meet regulatory requirements this unit must be delivered consistent with Marine Orders and with the relevant sections of the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW).

## Pre-requisite Unit

Not applicable.

## Competency Field

O – Watchkeeping

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Use code to send and receive messages by flashing light**

#### **2 Use International Code of Signals to send and receive messages with flags**

#### **3 Maintain records of visual communications**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Morse codes for letters and numerals are correctly recognised

**1.2** Message is correctly coded and transmitted using a flashing light

**1.3** Message received in code by flashing light is correctly decoded

**2.1** Flags used in the International Code of Signals are correctly recognised

**2.2** Message is correctly coded and sent with flags using the International Code of Signals

**2.3** Message coded and sent with flags using the International Code of Signals is correctly received and decoded

**3.1** Records of messages sent and received are completed and maintained as required according to regulatory and organisational requirements

**3.2** Relevant records are sent to appropriate bodies if requested and copies are filed according to regulatory

		and organisational requirements
	<b>3.3</b>	Documents are stored according to regulatory and organisational requirements
<b>4 Use English in written and oral communication</b>	<b>4.1</b>	IMO standard marine communication phrases are used in written and oral form
	<b>4.2</b>	English language nautical publications and messages relevant to the safety of the ship are correctly interpreted or drafted

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## Unit Mapping Information

This unit replaces and is equivalent to MARO004 Transmit and receive information by visual signalling.

## Links

Companion Volume implementation guide can be found in VetNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARO012 Transmit and receive information by visual signalling**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others, including the Master, when transmitting and receiving information by visual signalling
- keeping records of visual signalling communications
- reading and interpreting maritime regulations relating to visual signalling
- transmitting and receiving by Morse light, distress signal SOS as specified in Annex IV International Regulations for the Prevention of Collisions at Sea (COLREGs) and Appendix 1 of the International Code of Signals
- transmitting and receiving messages using flags according to the International Code of Signals
- using International Maritime Organization (IMO) Standard Marine Communication Phrases and using English in written and oral terms
- using the International Code of Signals.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian Maritime Safety Authority (AMSA)
- IMO Standard Marine Communication Phrases
- International Code of Signals, including:
  - Morse code
  - single letter and numeral international code flags
- messages, including:
  - distress signal SOS
  - medical advice
  - single letter flag signal codes
- procedures for sending visual messages with flags using the International Code of Signals
- procedures for using a flashing light to send messages using Morse code
- visual signalling of single letter signals as specified in the International Code of Signals

- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must occur in a workplace, or realistic simulated workplace, under the normal range of workplace conditions.

Simulations and scenarios may be used where situations cannot be provided in the workplace or may occur only rarely, in particular for situations relating to emergency procedures and adverse weather conditions where assessment would be unsafe, impractical or may lead to environmental damage.

Resources for assessment must include access to:

- applicable documentation, such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- tools, equipment, machinery, materials and relevant personal protective equipment (PPE) currently used in industry.

## AURREA2001 Apply environmental and sustainability best practice in a marine workplace

### Modification History

Release	Comment
Release 1	Replaces AURR271103A Apply environmental regulations in the marine service industry Performance Criteria updated to reflect sustainability

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to identify and apply environmental regulations and sustainability best practice to work safely and avoid potential environmental hazards in the maintenance and service of marine vessels.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work involves the theory, knowledge and application of skills related to environmental regulations and sustainability best practice in a marine workplace while maintaining and servicing marine vessels.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in undertaking environmentally sound work practices.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and apply environment regulations	1.1.Reasons for <b><i>ethical environmental practice</i></b> in an marine mechanical workplace are identified 1.2.Environmental responsibilities and penalties for individual breaches of legislation and regulations are identified 1.3. <b><i>Documents and procedures</i></b> relevant to environmental safety and <b><i>hazards</i></b> are located and determined 1.4. <b><i>Safety equipment and other material</i></b> necessary to support environmentally sound practices are identified and sourced
2. Identify and avoid hazards to water, foreshores and marine environments	2.1.Wastewater or <b><i>contaminants</i></b> are contained to restrict entry to water systems, foreshores or marine environments 2.2.Vessel and component maintenance, service and repair is undertaken in an environmentally responsible manner to avoid hazards to water systems, foreshores and marine environments 2.3.Preparation areas are checked to ensure accidental spillage cannot escape into water systems, foreshores and marine environments 2.4.Spill kit is identified and located in preparation to prevent damage to the marine environment 2.5.Waste containment areas are identified and inspected to

	avoid contamination of the surrounding area
3. Identify and avoid hazards to air quality	<p>3.1. Hazardous airborne particles, including anti-foulant are identified, minimised and contained</p> <p>3.2. Hazardous gases and fumes are identified, minimised and contained</p> <p>3.3. Clean-up of guns, general tools, equipment and spray and painting equipment is conducted in an environmentally safe manner</p>
4. Identify and avoid noise hazards	<p>4.1. Hazardous noise activities are identified, prevented, reduced and contained</p> <p>4.2. Hazardous noise activities are carried out within approved operating hours and regulations</p>
5. Identify and apply sustainability best practice	<p>5.1. <i>Sustainability best practice</i> is identified and applied to minimise waste and potential damage to the environment according to workplace policies and procedures</p> <p>5.2. Methods to reduce resource consumption (water, electricity, fossil fuels, chemicals) are identified and applied</p> <p>5.3. Environmental damage and breaches of environmental regulations are reported</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow oral instructions
  - communicate verbal and written ideas and information as they relate to environmental regulations and sustainability best practice of a marine mechanical workplace
- initiative and enterprise to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - identify and apply workplace environmental procedures
  - read and apply environmental regulations for a marine mechanical workplace
- numeracy skills to measure and calculate length, area and volume
- planning and organising skills to:
  - identify risk factors and actions to minimise risk
  - identify planning, checking and inspection techniques to avoid environmental

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- contamination and wastage
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - identify processes which contribute to improvements for sustainability best practice
- self-management skills to:
  - identify appropriate safety and environmental response equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to:
  - collaborate and cooperate with other team members relating to environmental and sustainability issues
- technical skills to:
  - collect, organise and interpret technical information relating to recognising workplace situations that are potentially harmful to the environment
  - use spill kits
- technology skills to:
  - use workplace environmental and safety-related technology to assist with clean and safe work practices

### Required knowledge

- effects of pollution and methods to minimise it
- environmental regulations and their implications for work being undertaken in a marine mechanical service and repair workplace
- characteristics and potential environmental impact of products used in the maintenance, repair and service of marine vessels, components and electrical systems
- philosophy of prevention, reuse, reduce, recycle
- awareness of the environmental effects of chemicals and contaminants on the marine environment
- procedures for use of spill kit
- reporting procedures for environmental damage and breaches of environmental regulations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- apply environmental regulations and sustainability best practice in a marine mechanical service and repair workplace
- identify materials used in an marine mechanical workplace and assess their potential environmental impact
- use a spill kit
- report environmental damage and breaches of environmental regulations.

#### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- access to environmental legislation, regulations and best practice models including access to workplace documents and reference images
- access to a marine maintenance and service workplace or simulated environment that accurately reflects workshop working conditions, including conditions for the removal and application of anti-foulants, recycling bins, liquid, sludge and solid wastes
- access to PPE and other equipment of the type intended to be used in response to an environmental incident or accident.

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of an holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### ***Ethical environmental practice*** may include:

- correct disposal methods for waste and cleaning and/or washing of internal and external surfaces, glass surfaces and wet areas
- painting with anti-foulant based products
- compliance with legislative obligations
- hazardous materials handling best practice applications
- organisation insurance requirements
- discretion, judgement and problem-solving skills in undertaking

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	environmentally sound work practices.
<b><i>Documents and procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• environmental legislation</li> <li>• health regulations</li> <li>• hazardous substances register</li> <li>• site environmental policy</li> <li>• workplace environmental procedures and safety instructions</li> <li>• dangerous goods code safe operating procedures.</li> </ul>
<b><i>Hazards</i></b> may include:	<ul style="list-style-type: none"> <li>• toxic fumes and substances</li> <li>• flammable materials and fire hazards</li> <li>• spillages</li> <li>• waste and debris especially on floors, ladders, trolleys</li> <li>• electricity and water</li> <li>• toxic substances</li> <li>• damaged packing material or containers</li> <li>• broken or damaged equipment</li> <li>• unsafe lifting practices.</li> </ul>
<b><i>Safety equipment and other material</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective equipment (PPE) including: <ul style="list-style-type: none"> <li>• eye protection</li> <li>• hearing protection</li> <li>• gloves</li> <li>• other suitable protective clothing</li> <li>• safety footwear</li> </ul> </li> <li>• spill kit</li> <li>• absorbent materials</li> <li>• drip and catchment trays</li> <li>• waste bags</li> <li>• waste segregation systems</li> </ul>
<b><i>Contaminants</i></b> may include:	<ul style="list-style-type: none"> <li>• solid or liquid wastes</li> <li>• oil, fuel and grease</li> <li>• hydrocarbon based degreasing agents and solvents</li> <li>• acids</li> <li>• alkaline wastes</li> <li>• tributyltin, arsenic, mercury and DDT</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• paint, lacquer, varnish</li> <li>• anti-foulant based products</li> <li>• glues and adhesive compounds</li> <li>• household chemicals and pesticides.</li> </ul>
<b><i>Sustainability best practice</i></b> may include:	<ul style="list-style-type: none"> <li>• recycling waste</li> <li>• energy conservation practices</li> <li>• natural resources (water, etc.) conservation practices</li> <li>• reusing</li> <li>• environmental (green) purchasing practices</li> <li>• noise minimisation.</li> </ul>

**Unit Sector(s)**

## BSBADM307 Organise schedules

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

### Application

This unit describes the skills and knowledge required to manage appointments and diaries for personnel within an organisation, using manual and electronic diaries, schedules and other appointment systems.

It applies to individuals employed in a range of work environments who provide administrative support to teams and individuals.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Unit Sector

Administration – General Administration

### Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Establish schedule requirements	1.1 Identify organisational requirements and protocols for diaries and staff planning tools 1.2 Identify organisational procedures for different types of appointments 1.3 Determine personal requirements for diary and schedule items for individual personnel 1.4 Establish appointment priorities and clarify in discussion with

ELEMENT	PERFORMANCE CRITERIA
	individual personnel
2 Manage schedules	<p>2.1 Identify recurring appointments and deadlines, and schedule these in accordance with individual and organisational requirements</p> <p>2.2 Establish availability of attendees, and schedule new appointments in accordance with required timelines and diary commitments</p> <p>2.3 Negotiate alternative arrangements and confirm when established appointments are changed</p> <p>2.4 Record appointments and manage schedules in accordance with organisational policy and procedures</p>

## Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.3, 2.1, 2.2, 2.4	<ul style="list-style-type: none"> <li>Interprets textual information from a range of sources and identifies relevant information</li> </ul>
Writing	2.1-2.4	<ul style="list-style-type: none"> <li>Uses clear and succinct language to complete and update workplace documentation</li> </ul>
Oral Communication	1.1, 1.3, 1.4, 2.3	<ul style="list-style-type: none"> <li>Participates effectively in spoken interactions using listening and questioning techniques to confirm and clarify understanding</li> </ul>
Numeracy	2.1, 2.2	<ul style="list-style-type: none"> <li>Makes time estimations and checks logistics when scheduling appointments</li> </ul>
Navigate the world of work	1.1, 1.2, 2.1, 2.4	<ul style="list-style-type: none"> <li>Recognises and responds to explicit and implicit organisational procedures and protocols</li> </ul>
Interact with others	1.3, 1.4, 2.3	<ul style="list-style-type: none"> <li>Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role</li> <li>Collaborates and negotiates with others to achieve agreeable outcomes</li> </ul>
Get the work done	1.1, 1.3, 1.4, 2.1, 2.2, 2.4	<ul style="list-style-type: none"> <li>Plans a range of routine tasks accepting goals and aiming to achieve them according to predetermined</li> </ul>

		<p>deadlines</p> <ul style="list-style-type: none"><li>• Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role</li><li>• Takes responsibility for routine low-impact decisions within familiar situations</li></ul>
--	--	--

# Assessment Requirements for BSBADM307 Organise schedules

## Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

## Performance Evidence

Evidence of the ability to:

- appropriately manage the schedules of various individuals through a process of careful planning and negotiation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the key provisions of relevant legislation, standards and codes that affect aspects of business operations or the achievement of team goals
- describe organisational requirements for managing appointments for personnel within the organisation
- summarise the range of appointment systems that could be used
- outline important considerations when managing the schedules of others.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the general administration field of work and include access to:

- office equipment and resources
- a range of diaries, planners and calendars to record and schedule appointments.

Assessors must satisfy NVR/AQTF assessor requirements.

## BSBCMM201 Communicate in the workplace

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package version 1.0

### Application

This unit describes the skills and knowledge required to communicate in the workplace including gathering, conveying and receiving information and completing routine written correspondence.

It applies to individuals who perform a range of routine workplace communication tasks using a limited range of practical skills and fundamental knowledge of effective listening, questioning and non-verbal communication in a defined context under direct supervision or with limited individual responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Unit Sector

Communication – Interpersonal Communication

### Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Gather, convey and receive information and ideas	1.1 Collect information to achieve work responsibilities from appropriate sources 1.2 Use method/s and/or equipment to communicate appropriate ideas and information to the audience 1.3 Use effective listening and speaking skills in verbal communication

ELEMENT	PERFORMANCE CRITERIA
	<p>1.4 Seek input from internal and external sources to develop and refine new ideas and approaches</p> <p>1.5 Respond to instructions or enquiries promptly and in accordance with organisational requirements</p>
2 Complete workplace documentation and correspondence	<p>2.1 Present written information and ideas in clear and concise language to ensure the intended meaning of correspondence is understood by the recipient</p> <p>2.2 Draft and present correspondence within designated time lines</p> <p>2.3 Ensure presentation of written information meets organisational standards of style, format and accuracy</p> <p>2.4 Complete workplace forms and documentation in a clear, concise and easy to read format</p>
3 Communicate in a way that responds positively to individual differences	<p>3.1 Value all individuals and treat them with respect, courtesy and sensitivity</p> <p>3.2 Take into consideration cultural differences in all verbal and non-verbal communication</p> <p>3.3 Use communication to develop and maintain positive relationships, mutual trust and confidence</p> <p>3.4 Make efforts to use basic strategies to overcome language barriers</p> <p>3.5 Ensure that behaviour is consistent with legislative requirements, enterprise guidelines and/or social protocols</p>

## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Skill	Performance Criteria	Description
Learning	1.4	<ul style="list-style-type: none"> <li>Seeks advice from others to implement strategies to improve knowledge or skills</li> </ul>
Reading	1.1, 1.4, 1.5, 2.3, 2.4	<ul style="list-style-type: none"> <li>Reviews textual information to identify and interpret communication requirements and organisational standards</li> </ul>
Writing	1.2, 1.5, 2.1, 2.2,	<ul style="list-style-type: none"> <li>Develops simple written texts using appropriate grammar, spelling and punctuation in accordance with</li> </ul>

	2.3, 2.4	organisational formats <ul style="list-style-type: none"> <li>Completes workplace forms and texts in accordance with organisational conventions and legislative requirements.</li> </ul>
Oral Communication	1.1, 1.2, 1.3, 1.4, 1.5, 3.3, 3.4	<ul style="list-style-type: none"> <li>Explains ideas and requirements clearly and listens carefully to verbal instructions and discussions</li> <li>Asks questions to confirm understanding</li> </ul>
Navigate the world of work	1.5, 2.3, 3.5	<ul style="list-style-type: none"> <li>Understands responsibilities of role and complies with legislative, regulatory and organisational requirements</li> </ul>
Interact with others	1.2, 1.4, 1.5, 3.1, 3.2, 3.3, 3.4	<ul style="list-style-type: none"> <li>Recognises common cultural and other differences of people in the work context and makes adjustments to accommodate the differences</li> <li>Follows accepted communication practices and protocols to assist in building and maintaining positive working relationships</li> </ul>
Get the work done	1.1, 1.2, 1.4, 1.5, 2.1-2.4	<ul style="list-style-type: none"> <li>Plans and implements routine tasks and workload making limited decisions on sequencing, timing and collaboration, seeking assistance in setting priorities</li> <li>Uses digital technology to find, record or communicate basic information</li> </ul>

# Assessment Requirements for BSBCMM201 Communicate in the workplace

## Modification History

Release	Comments
Release 1	This version first released with Business Services Training Package Version 1.0.

## Performance Evidence

Evidence of the ability to:

- communicate information and ideas verbally and non-verbally, taking cultural differences and language barriers into consideration
- produce written material, used routinely in day to day work, which is clear, concise and effectively convey the intended meaning to the recipient
- complete workplace forms
- use style, format and level of accuracy appropriate to the type of written material
- provide prompt responses to requests for information in accordance with organisational requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify any organisational policies, plans and procedures which detail organisation's standards or protocols for workplace communication
- describe different communication styles
- outline barriers to communication.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced by individuals using interpersonal communication skills in the workplace and include access to:

- office equipment
- business resources

- workplace policies and procedures relating to communication
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

## **Links**

## BSBCMM211 Apply communication skills

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

### Application

This unit describes the skills and knowledge required to apply basic communication skills in the workplace, including identifying, gathering and conveying information along with completing assigned written information.

The unit applies to individuals working under direct supervision, who are developing basic skills and knowledge of workplace communication in preparation for working in a broad range of settings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Unit Sector

Social Competence – Verbal Communication

### Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify communication requirements	1.1 Identify work task 1.2 Identify communication channels in the organisation 1.3 Identify relevant stakeholders 1.4 Seek advice from supervisor on communication methods
2. Communicate using verbal and non-verbal communication skills	2.1 Plan verbal communication 2.2 Use verbal communication to communicate with stakeholders 2.3 Use non-verbal behaviour to communicate with stakeholders 2.4 Seek and respond to feedback on communication

ELEMENT	PERFORMANCE CRITERIA
3. Draft written communications	3.1 Identify formats for written information according to organisational policies and procedures 3.2 Draft written information and submit to supervisor for approval 3.3 Seek and respond to feedback on written communication

## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"><li>Develops skills required to carry out own role by seeking and acting on feedback</li></ul>
Reading	<ul style="list-style-type: none"><li>Reviews textual information to identify communication requirements and organisational procedures</li></ul>

# Assessment Requirements for BSBCUS201 Deliver a service to customers

## Modification History

Release	Comments
Release 1	This version first released with Business Services Training Package Version 1.0.

## Performance Evidence

Evidence of the ability to:

- greet customer and establish rapport/relationship in accordance with organisational requirements
- identify customer needs using appropriate interpersonal skills
- provide prompt service to address customer needs in accordance with organisational requirements
- identify and follow up opportunities to increase the quality of service and products
- respond to and record all customer feedback according to organisational standards, policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and briefly describe key provisions of relevant legislation from all forms of government that apply to provision of customer services
- identify and explain workplace organisational policies and procedures relating to customer service and the customer service process.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- office equipment and technology
- workplace documents, organisational policies and procedures for customer service

- examples of customer complaints and feedback
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

## Assessment Requirements for BSBFLM303 Contribute to effective workplace relationships

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

### Performance Evidence

Evidence of the ability to:

- access and analyse information to achieve planned outcomes
- apply techniques for resolving problems and conflicts and dealing with poor performance within organisational and legislative requirements
- review and improve workplace outcomes in consultation with relevant personnel
- adjust interpersonal style and communications to respond to cultural and social diversity
- apply relationship management and communication skills with a range of people that:
  - demonstrate integrity, respect, empathy and cultural sensitivity and promote trust
  - forge effective relationships with internal and/or external people and help to maintain these networks
  - encourage participation and foster contribution of and respect for ideas and feedback
  - provide support to colleagues to resolve difficulties.
- communicate ideas and information to diverse audiences
- develop networks and build team relationships.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

### Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of how work relationships and the cultural and social environment can support or hinder achieving planned outcomes
- explain techniques for developing positive work relationships and building trust and confidence in a team
- identify relevant legislation from all levels of government that affects business operation

- describe a range of methods and techniques for communicating information and ideas to a range of stakeholders
- outline problem solving methods
- explain methods to resolve workplace conflict
- explain methods to manage poor work performance
- explain how to monitor, analyse and introduce ways to improve work relationships.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management field of work and include access to:

- relevant legislation and regulations
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

## BSBINN201 Contribute to workplace innovation

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

### Application

This unit describes the skills and knowledge required to make a pro-active and positive contribution to workplace innovation.

It applies to individuals working in any industry or community context, in both small and large organisations who take a pro-active approach to identifying, suggesting and developing ideas about better ways of doing things at a practical operational level in a specific area of activity. While the individual's overall work is undertaken with some supervision and guidance, they apply discretion, judgement and effective interpersonal skills in order to contribute to workplace innovation.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Unit Sector

Creativity and Innovation – Innovation

### Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Identify opportunities to do things better	1.1 Be aware of own role in workplace innovation 1.2 Proactively identify opportunities for improvement in own area of work 1.3 Gather and review information which may be relevant to ideas and which might assist in gaining support for ideas

ELEMENT	PERFORMANCE CRITERIA
2 Discuss and develop ideas with others	2.1 Identify people who could provide input into ideas for improvements 2.2 Select the best way of approaching people to begin sharing ideas 2.3 Seek feedback on improvement of ideas, and discuss and develop options and possible variations 2.4 Review and select ideas for follow up based on feedback and further review
3 Address the practicalities of change	3.1 Take action to implement routine changes in consultation with others and within scope of own responsibility 3.2 Identify and articulate issues and practical processes for implementing proposed ideas 3.3 Present ideas and practical suggestions to the appropriate people about how improvements could be made

## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Skill	Performance Criteria	Description
Reading	1.3, 2.4, 3.2	<ul style="list-style-type: none"> <li>Categorises, interprets and reviews information from a range of sources to generate ideas relevant to the workplace</li> </ul>
Writing	3.2, 3.3	<ul style="list-style-type: none"> <li>Communicates information using clear language and formats appropriate for the audience</li> </ul>
Oral Communication	2.3, 3.1, 3.2, 3.3	<ul style="list-style-type: none"> <li>Actively participates in verbal exchanges of ideas and elicits the view and opinions of others by listening and questioning</li> <li>Uses clear and relevant language to clarify workplace issues and promote ideas</li> </ul>
Numeracy	1.3, 3.2	<ul style="list-style-type: none"> <li>Performs basic mathematical calculations to estimate time and cost in relation to implementation of ideas</li> </ul>
Navigate the world of work	1.1, 1.2, 3.1	<ul style="list-style-type: none"> <li>Understands responsibilities of own role</li> </ul>
Interact with	2.3, 3.1-3.3	<ul style="list-style-type: none"> <li>Follows accepted communication practices and protocols when discussing or presenting ideas to others</li> </ul>

others		<ul style="list-style-type: none"> <li>Seeks and takes into account perspectives and opinions of others</li> </ul>
Get the work done	1.2, 1.3, 2.1, 2.2, 2.4, 3.1-3.3	<ul style="list-style-type: none"> <li>Plans and implements routine tasks making limited decisions and seeking assistance, when necessary</li> <li>Uses analytical or lateral thinking processes to identify improvements or new ways of approaching tasks</li> <li>Identifies and anticipates operational problems and develops possible solutions</li> </ul>

## Assessment Requirements for BSBINN201 Contribute to workplace innovation

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

### Performance Evidence

Evidence of the ability to:

- identify ideas for improvements and use information from a range of sources including other people to review and select ideas to put forward for implementation
- communicate the ideas and seek input from others in order to identify how the ideas could be implemented
- implement routine changes within scope of responsibility.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

### Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the role of individuals in suggesting and making improvements and the importance of pro-active involvement
- list the positive impacts and the challenges of change and innovation
- provide examples of the types of changes that can occur as a result of effective individual participation within own scope of responsibility
- give examples of the types of changes that are within and outside own scope of responsibility
- list typical reasons why suggested improvements or innovations may not be implemented, including operational and management constraints
- explain how to prepare and communicate ideas for improvement to maximise likelihood of support.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the creativity and innovation and include access to:

- workplace documents
- case studies and, where possible, real situations
- office equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for BSBOPS203 Deliver a service to customers

## Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

## Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deliver a service to at least three different customers.

In the course of the above, the candidate must:

- greet the customer and establish rapport according to organisational requirements
- identify customer needs using interpersonal skills
- provide prompt service to address customer needs
- identify and follow up opportunities to increase the quality of service and products
- respond to and record all customer feedback according to organisational standards, policies and procedures.

## Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key provisions of customer service legislation and consumer law
- requirements for responding to the needs of customers from a diverse background
- workplace organisational policies and procedures relating to customer service and the customer service process.

## Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documents, and organisational policies and procedures for customer service
- examples of customer complaints and feedback.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# Assessment Requirements for BSBPEF301 Organise personal work priorities

## Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

## Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare and implement a personal work plan.

In the course of the above, the candidate must:

- prepare a work plan according to organisational requirements and work objectives
- use technology to schedule, prioritise and monitor completion of tasks in a work plan
- assess and prioritise own work tasks and address contingencies
- monitor and assess personal performance against job role requirements by seeking feedback from relevant personnel
- identify personal development needs and access, complete and record skill development and learning.

## Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational policies and procedures relevant to work tasks
- goals, objectives and key performance indicators for task within scope of job role
- methods to elicit, analyse and interpret feedback when communicating with other people in the workplace
- content of work plans including:
  - timeframes
  - tasks requirements
  - risks
  - contingencies for identified risks
- types of personal learning and professional development requirements
- principles and techniques of goal setting, measuring performance and time management

- signs and sources of stress and strategies to deal with stress in the workplace
- methods to identify and prioritise personal learning needs.

## Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- challenges and situations to demonstrate application of performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

## BSBSTR301 Contribute to continuous improvement

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

### Application

This unit describes the skills and knowledge required to support continuous improvement in an organisation. Particular emphasis is on actively encouraging teams to participate in the process, monitoring and reporting on specified outcomes and supporting opportunities for further improvements.

The unit applies to individuals who use initiative, and organisational and communication skills to influence the ongoing development of the organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Unit Sector

Critical Thinking and Problem Solving – Business Strategy

### Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Coordinate continuous improvement	1.1 Communicate objectives and continuous improvement processes of the organisation to team members 1.2 Establish roles and skills within the team and identify training needs and performance improvement opportunities 1.3 Encourage team members to participate in decision making processes and exercise initiative
2. Monitor and report specified outcomes	2.1 Monitor team progress using systems and technology of the organisation and identify ways planning and operations could be improved 2.2 Report changes to processes and training to relevant

ELEMENT	PERFORMANCE CRITERIA
	stakeholders 2.3 Develop plans, in collaboration with team members, to apply continuous improvement techniques and processes
3. Support opportunities for further improvement	3.1 Communicate recommendations for improvements in achieving organisational objectives to team members 3.2 Monitor work performance and support team members to identify further opportunities for improvement 3.3 Maintain records, reports and recommendations for improvement within the organisation's systems and processes

## Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> <li>Contributes to ongoing organisational improvement by mentoring others to support continuous improvement processes</li> </ul>
Reading	<ul style="list-style-type: none"> <li>Interprets everyday workplace documentation</li> </ul>
Writing	<ul style="list-style-type: none"> <li>Uses appropriate vocabulary and grammatical structures to achieve precise meaning in a range of documentation</li> </ul>
Oral communication	<ul style="list-style-type: none"> <li>Articulates information in a positive manner using appropriate terminology, tone and style appropriate to context and audience</li> <li>Uses questioning and listening techniques to exchange and clarify information</li> </ul>
Enterprise and initiative	<ul style="list-style-type: none"> <li>Identifies the nature and purpose of own role and associated responsibilities and how own role relates to others and contributes to broader work goals</li> <li>Takes responsibility for adherence to organisational processes and systems</li> </ul>
Teamwork	<ul style="list-style-type: none"> <li>Shares information and resources, offers assistance and facilitates effective group interactions</li> </ul>
Planning and organising	<ul style="list-style-type: none"> <li>Takes responsibility for routine low-impact decisions within familiar situations</li> <li>Evaluates effectiveness of decisions in terms of how well they meet stated goals</li> </ul>
Technology	<ul style="list-style-type: none"> <li>Uses a range of digitally based technology and applications to organise, monitor, manage and communicate relevant information effectively</li> </ul>

## Unit Mapping Information

No equivalent unit. Supersedes but is not equivalent to:

- BSBFLM309 Support continuous improvement systems and processes
- BSBINN201 Contribute to workplace innovation.

# Assessment Requirements for BSBSTR301 Contribute to continuous improvement

## Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

## Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- coordinate, monitor and support the continuous improvement of a work task for a team or work area.

In the course of the above, the candidate must:

- identify options and benefits for improvements
- address barriers to continuous improvement
- use analysis work performance to identify improvement opportunities
- use technology to monitor operational progress
- apply recordkeeping processes.

## Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles and techniques relating to:
  - continuous improvement systems and processes
  - benchmarking
  - best practice
- benefits and barriers to continuous improvement
- quality approaches that may be implemented in an organisation
- methods that can be used in continuous improvement
- organisational recording, reporting and recommendation processes.

## Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documents and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

## BSBTWK201 Work effectively with others

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

### Application

This unit describes the skills and knowledge required to work cooperatively with others and deal effectively with issues, problems and conflict.

The unit applies to individuals who perform a range of routine tasks in a team environment and use a basic knowledge of teamwork in a defined context, under direct supervision or with limited individual responsibility.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Unit Sector

Social Competence – Teamwork and Relationships

### Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop effective workplace relationships	1.1 Identify individual responsibilities in relation to workgroup members 1.2 Clarify individual and workgroup responsibilities with work team 1.3 Participate in informal meetings and information sharing with workgroup 1.4 Request and apply feedback from supervisor on individual practices
2. Improve workgroup processes	2.1 Support team members to meet workgroup goals 2.2 Contribute to workgroup goals and tasks according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
	2.3 Share work-related information with workgroup according to organisational policies and procedures 2.4 Plan strategies for team performance improvement with workgroup
3. Resolve issues, problems and conflict	3.1 Identify advantages of differences in values and beliefs between workgroup members 3.2 Respond to any linguistic and cultural differences in communication styles according to legislation, organisational policies and procedures and ethical standards 3.3 Identify potential workgroup issues, problems and conflicts encountered in the workplace 3.4 Seek assistance from supervisor to address problems and conflicts that arise 3.5 Suggest possible ways of dealing with identified workplace issues

## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> <li>Identifies and interprets information to determine task requirements</li> </ul>
Writing	<ul style="list-style-type: none"> <li>Completes required documentation using organisational formats</li> <li>Composes simple documents for others to read</li> </ul>
Oral Communication	<ul style="list-style-type: none"> <li>Presents information and seeks advice using language and features appropriate to audience</li> <li>Participates in discussions using listening and questioning to elicit views of others and to clarify or confirm understanding</li> </ul>
Initiative and enterprise	<ul style="list-style-type: none"> <li>Identifies responsibilities of own role and follows explicit and implicit organisational protocols and procedures</li> </ul>
Teamwork	<ul style="list-style-type: none"> <li>Selects and uses appropriate communication practices when seeking or sharing information</li> <li>Establishes and builds rapport and relationships with others to foster a culture of respect and cooperation in communications</li> <li>Listens to the ideas of others and considers their needs</li> </ul>
Planning and organising	<ul style="list-style-type: none"> <li>Plans and organises work commitments to ensure deadlines and objectives are met</li> </ul>

# Assessment Requirements for BSBTWK201 Work effectively with others

## Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

## Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- work with a group to achieve an objective on at least two occasions and address at least one identified problem or conflict on each occasion.

In the course of the above, the candidate must:

- distinguish individual responsibilities from workgroup responsibilities
- demonstrate the ability to:
  - support team members
  - communicate according to the cultural and linguistic requirements of the individual
  - act on constructive feedback
  - use communication channels to share information
  - cooperate and contribute to team goals
  - identify improvement opportunities
- identify problems and conflicts and address them according to organisational and ethical policies and procedures.

## Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational and ethical standards, policies and procedures that relate to own work role
- team responsibilities and duties and their relationship to individual responsibilities and duties
- organisational policies and procedures relating to workplace discrimination and bullying
- personal values and beliefs including their importance in the development of relationships
- communication channels used to communicate in work teams including:
  - team meetings

- one-on-one interactions with individual team members
- emails
- instant messaging
- calls
- key problems and conflicts arising in workgroup contexts
- methods of resolving team problems including referral to relevant organisational personnel
- conflict resolution techniques.

## Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace discrimination and bullying legislation
- organisational and ethical standards, policies and procedures for working with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

## BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package release 1.0

### Application

This unit describes the skills and knowledge required to implement and monitor an organisation's work health and safety (WHS) policies, procedures and programs in the relevant work area in order to meet legislative requirements.

It applies to individuals with supervisory responsibilities for implementing and monitoring the organisation's WHS policies, procedures and programs in a work area. These individuals have a broad knowledge of WHS policies and contribute well developed skills in creating solutions to unpredictable problems through analysis and evaluation of information from a variety of sources. They provide supervision and guidance to others and have limited responsibility for the output of others.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Unit Sector

Regulation, Licensing and Risk – Work Health and Safety

### Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the</i>	<i>Performance criteria describe the performance needed to</i>

ELEMENT	PERFORMANCE CRITERIA
<i>essential outcomes.</i>	<i>demonstrate achievement of the element.</i>
1. Provide information to the work team about WHS policies and procedures	<p>1.1 Accurately explain to the work team relevant provisions of WHS Acts, regulations and codes of practice</p> <p>1.2 Provide information about the organisation's WHS policies, procedures and programs, and ensure it is readily accessible to, and understandable by the work team</p> <p>1.3 Regularly provide and clearly explain to the work team information about identified hazards and the outcomes of risk assessment and control</p>
2. Implement and monitor participation arrangements for managing WHS	<p>2.1 Communicate to workplace parties the importance of effective consultation mechanisms in managing health and safety risks in the workplace</p> <p>2.2 Apply consultation procedures to facilitate participation of the work team in managing work area hazards</p> <p>2.3 Promptly deal with issues raised through consultation, according to organisational consultation procedures and WHS legislative and regulatory requirements</p> <p>2.4 Promptly record and communicate to the work team the outcomes of consultation over WHS issues</p>
3. Implement and monitor organisational procedures for providing WHS training	<p>3.1 Identify WHS training needs according to organisational requirements and WHS legislative and regulatory requirements</p> <p>3.2 Make arrangements to meet WHS training needs of team members in consultation with relevant individuals</p> <p>3.3 Provide workplace learning opportunities and coaching and mentoring assistance to facilitate team and individual achievement of identified WHS training needs</p> <p>3.4 Identify and report to management the costs associated with providing training for work team, for inclusion in financial and management plans</p>
4. Implement and monitor organisational procedures and legal requirements for identifying hazards and assessing and controlling risks	<p>4.1 Identify and report on hazards in work area according to WHS policies and procedures and WHS legislative and regulatory requirements</p> <p>4.2 Promptly action team member hazard reports according to organisational procedures and WHS legislative and regulatory requirements</p> <p>4.3 Implement procedures to control risks using the hierarchy of control, according to organisational and WHS legislative requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4 Identify and report inadequacies in existing risk controls according to hierarchy of control and WHS legislative requirements</p> <p>4.5 Monitor outcomes of reports on inadequacies, where appropriate, to ensure a prompt organisational response</p>
5. Implement and monitor organisational procedures for maintaining WHS records for the team	<p>5.1 Accurately complete and maintain WHS records of incidents of occupational injury and disease in work area, according to WHS policies, procedures and legislative requirements</p> <p>5.2 Use aggregate information and data from work area records to identify hazards and monitor risk control procedures in work area</p>

## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Skill	Performance Criteria	Description
Reading	1.1-1.3, 5.2	<ul style="list-style-type: none"> <li>Interprets and analyses complex WHS legislative and organisational texts</li> </ul>

# Assessment Requirements for BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements

## Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

## Performance Evidence

Evidence of the ability to:

- explain clearly and accurately to work team the relevant work health and safety (WHS) information including:
  - WHS legislative and organisational requirements
  - identified hazards and outcomes of risk assessment and control
- ensure that the team has access to information about WHS policies, procedures and programs in appropriate structure and language
- implement and monitor procedures according to organisational and legislative WHS requirements including:
  - consultation and communications to enable team members to participate in managing WHS risks and hazards
  - identifying WHS training needs and providing learning opportunities, coaching and mentoring as appropriate to needs
  - identifying, reporting and taking action on WHS hazards and risks
  - identifying and reporting inadequacies in existing risk controls and monitoring outcomes to ensure a prompt organisational response
  - reporting on the cost of WHS training
  - keeping WHS records
  - analysing aggregate WHS data to identify hazards and monitor risk control procedures in work area.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the legal responsibilities and duties of managers, supervisors, persons conducting businesses or undertakings (PCBUs) and workers in relation to WHS risk management in the workplace
- identify key provisions of relevant WHS Acts, regulations and codes of practice that apply to the business and outline how they apply in the work area
- explain organisational policies and procedures relating to hazard identification, risk management, fire, emergency and evacuation, incident investigation and reporting
- explain the importance of effective consultation mechanisms in managing health and safety risks in the workplace
- explain how the hierarchy of control applies in the work area.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced by individuals carrying out work health and safety duties in the workplace and include access to:

- an actual workplace or simulated environment
- workplace equipment and resources
- examples of documents relating to workplace safety, hazard identification and risk assessment
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

# BSBWHS411 Implement and monitor WHS policies, procedures and programs

## Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

## Application

This unit describes the skills and knowledge required to implement and monitor an organisation's work health and safety (WHS) policies, procedures and programs in the relevant work area in order to meet legislative requirements.

The unit applies to those with supervisory responsibilities in a work area who have a broad knowledge of WHS policies and contribute well-developed skills in creating solutions to problems through analysis and evaluation of information from a variety of sources. They provide supervision and guidance to others and have limited responsibility for the output of others.

## NOTES

1. The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent, and generally either can be used in the workplace. In jurisdictions where *model WHS laws* have not been implemented, registered training organisations (RTOs) are advised to contextualise this unit of competency by referring to existing WHS legislative requirements.

2. The *model WHS laws* include the model WHS Act, model WHS Regulations and model WHS Codes of Practice. See Safe Work Australia for further information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Regulation, Licensing and Risk – Work Health and Safety

## Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Provide information to work team about WHS policies and procedures	1.1 Identify and communicate relevant provisions about WHS laws to work team 1.2 Provide information about organisation's WHS policies, procedures and programs, and ensure it is readily accessible to work team 1.3 Communicate information about identified hazards and outcomes of risk assessment and control to work team
2. Implement and monitor work team consultative arrangements for managing WHS	2.1 Communicate importance of consultation mechanisms in managing WHS risks to work team 2.2 Apply consultation mechanisms to facilitate work team participation in managing work area hazards, according to organisational policies and procedures 2.3 Contribute to managing issues raised through consultation mechanisms, according to organisational consultation procedures and WHS legislative requirements 2.4 Communicate outcomes of consultation about WHS issues to work team
3. Implement and monitor organisational procedures for providing WHS training to work team	3.1 Identify and document team WHS training needs according to organisational requirements and WHS laws 3.2 Make arrangements to meet WHS training needs of team members in consultation with relevant stakeholders 3.3 Provide workplace learning opportunities to facilitate team and individual achievement of identified WHS training needs
4. Implement and monitor organisational procedures and legal requirements for identifying hazards, and assessing and controlling risks	4.1 Identify and report on hazards in work area according to organisational policies and procedures, and WHS legislative requirements 4.2 Contribute to managing and implementing hazard reports according to organisational policies and procedures, and WHS legislative requirements 4.3 Implement procedures to control risks using the hierarchy of control measures according to organisational policies and procedures, and WHS legislative requirements 4.4 Identify and report inadequacies in existing risk controls according to the hierarchy of control measures, and WHS legislative requirements 4.5 Monitor outcomes of reports on inadequacies, as required, to ensure prompt organisational response

ELEMENTS	PERFORMANCE CRITERIA
5. Implement and monitor organisational procedures for maintaining WHS records	<p>5.1 Complete and maintain WHS incident records of occupational injury and disease in work area according to organisational policies and procedures, and WHS legislative requirements</p> <p>5.2 Use aggregate information and data from work area records to meet organisational recordkeeping requirements</p>

## Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Skill	Description
Reading	<ul style="list-style-type: none"> <li>Interprets and analyses WHS laws and organisational texts</li> </ul>
Writing	<ul style="list-style-type: none"> <li>Documents organisational WHS policies, procedures and programs according to WHS laws, using structure, layout and language suitable for audience</li> <li>Records WHS issues and actions taken according to reporting requirements</li> <li>Prepares and maintains required records using appropriate structure and vocabulary</li> </ul>
Oral communication	<ul style="list-style-type: none"> <li>Provides WHS organisational information and advice using structure and language suitable for audience</li> <li>Uses questioning and active listening to clarify understanding</li> </ul>
Navigate the world of work	<ul style="list-style-type: none"> <li>Adheres to legal and regulatory responsibilities, and organisational policies and procedures in relation to own WHS role and responsibilities</li> <li>Keeps up to date on changes to WHS laws, and related organisational policies and procedures relevant to own role</li> </ul>
Interact with others	<ul style="list-style-type: none"> <li>Selects and uses appropriate conventions and protocols to facilitate consultation and provide feedback</li> <li>Initiates and contributes to facilitating consultative role: responding, explaining, clarifying and expanding on ideas and information as required</li> <li>Collaborates with others to achieve individual team member and team outcomes</li> </ul>
Get the work done	<ul style="list-style-type: none"> <li>Uses combination of logical planning and intuitive understanding of context to identify relevant information and risks, and to identify and evaluate alternative strategies</li> <li>Uses decision-making processes: sets and clarifies goals, gathers</li> </ul>

Skill	Description
	<p>information, and identifies and evaluates choices against a set of criteria</p> <ul style="list-style-type: none"><li>• Takes responsibility for reporting WHS risk control inadequacies</li><li>• Uses processes to monitor implementation of WHS organisational procedures</li></ul>

## Unit Mapping Information

Supersedes and is equivalent to BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements.

# Assessment Requirements for BSBWHS411 Implement and monitor WHS policies, procedures and programs

## Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

## Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- implement and monitor the work health and safety (WHS) policies, procedures and programs for one work area in an organisation.

During the above, the candidate must:

- explain relevant WHS information clearly and accurately to work team
- provide work team with access to WHS policies, procedures and programs in appropriate structure and language
- implement and monitor procedures, according to WHS legislative and organisational requirements, for:
  - consultation on and communication about WHS hazards and risks
  - WHS training needs and learning opportunities
  - WHS records
  - using WHS aggregate data relating to hazards and risk control.

## Knowledge Evidence

The candidate must demonstrate the knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- key provisions of commonwealth and state/territory WHS laws that apply to the business, and procedures for their application in the work area
- organisational policies and procedures for:
  - consulting during WHS issue management
  - identifying hazards and managing risks, including using aggregate information and work area data
  - incident response, investigation and reporting

- legal responsibilities and duties of managers, supervisors, persons conducting a business or undertaking (PCBUs) and workers in relation to WHS risk management in the workplace
- procedures for assessing implications of near misses in relation to incidents, injuries and illnesses in the work area
- effective consultation mechanisms in managing health and safety risks in the workplace
- features of effective workplace learning opportunities, including coaching and mentoring assistance that facilitates team and individual achievement of WHS training needs
- key principles and components of the hierarchy of control measures
- procedures for applying the hierarchy of control measures in own work area.

## Assessment Conditions

Assessment must comply with WHS laws, legal responsibilities and duty of care required for this unit. It must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities undertaken by individuals carrying out WHS duties in the workplace, and must include access to:

- actual workplace or simulated environment
- workplace equipment and resources
- examples of documents about workplace safety, hazard identification and risk assessment
- WHS laws and organisational documentation required to demonstrate the performance evidence
- opportunities for interaction with others.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

## BSBWOR203 Work effectively with others

### Modification History

Release	Comments
Release 2	This version first released with BSB Business Services Training Package Version 1.1. Version created to correct mapping table information
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

### Application

This unit describes the skills and knowledge required to work cooperatively with others and deal effectively with issues, problems and conflict.

It applies to individuals who perform a range of routine tasks using a limited range of practical skills, and a fundamental knowledge of teamwork in a defined context under direct supervision or with limited individual responsibility.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Unit Sector

Industry Capability – Workplace Effectiveness

### Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop effective workplace relationships	1.1 Identify own responsibilities and duties in relation to workgroup members and undertake activities in a manner that promotes cooperation and good relationships 1.2 Take time and resource constraints into account in fulfilling

ELEMENT	PERFORMANCE CRITERIA
	work requirements of self and others 1.3 Encourage, acknowledge and act on constructive feedback provided by others in the workgroup
2. Contribute to workgroup activities	2.1 Provide support to team members to ensure workgroup goals are met 2.2 Contribute constructively to workgroup goals and tasks according to organisational requirements 2.3 Share information relevant to work with workgroup to ensure designated goals are met 2.4 Identify and plan strategies/opportunities for improvement of workgroup in liaison with workgroup
3. Deal effectively with issues, problems and conflict	3.1 Respect differences in personal values and beliefs and their importance in the development of relationships 3.2 Identify any linguistic and cultural differences in communication styles and respond appropriately 3.3 Identify issues, problems and conflict encountered in the workplace 3.4 Seek assistance from workgroup members when issues, problems and conflict arise and suggest possible ways of dealing with them as appropriate or refer them to the appropriate person

## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Skill	Performance Criteria	Description
Reading	1.1	<ul style="list-style-type: none"> <li>Identifies and interprets information to determine task requirements</li> </ul>
Writing	2.3, 2.4	<ul style="list-style-type: none"> <li>Completes required documentation using organisational formats</li> <li>Composes simple documents for others to read</li> </ul>
Oral Communication	1.3, 3.2, 3.4	<ul style="list-style-type: none"> <li>Presents information and seeks advice using language and features appropriate to audience</li> <li>Participates in discussions using listening and questioning to elicit views of others and to clarify or</li> </ul>

		confirm understanding
Numeracy	1.2	<ul style="list-style-type: none"> <li>Interprets information related to timeframes and resource quantities</li> </ul>
Navigate the world of work	1.1, 2.2	<ul style="list-style-type: none"> <li>Understands responsibilities of own role and follows explicit and implicit organisational protocols and procedures</li> </ul>
Interact with others	1.1, 1.3, 2.1-2.4, 3.1, 3.2, 3.4	<ul style="list-style-type: none"> <li>Selects and uses appropriate communication practices when seeking or sharing information Establishes and builds rapport and relationships with others to foster a culture of respect and cooperation in communications</li> </ul>
Get the work done	1.2, 2.4, 3.3, 3.4	<ul style="list-style-type: none"> <li>Plans and organises work commitments to ensure deadlines and objectives are met</li> <li>Uses formal analytical thinking techniques to recognise and respond to routine problems</li> </ul>

# Assessment Requirements for BSBWOR203 Work effectively with others

## Modification History

Release	Comments
Release 2	This version first released with BSB Business Services Training Package Version 1.1.  Version created to correct mapping table information
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

## Performance Evidence

Evidence of the ability to:

- identify own responsibilities in relation to the team and the organisation's requirements
- work effectively in a workgroup including:
  - supporting team members
  - using culturally appropriate communication skills
  - acting on constructive feedback
  - cooperating and contributing to team goals
  - identifying improvement opportunities
- identify problems and conflicts and address them appropriately.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the organisational standards, policies and procedures that relate to own work role
- outline team responsibilities and duties and their relationship to individual responsibilities and duties.
- summarise conflict resolution techniques.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability – workplace effectiveness field of work and include access to:

- office equipment and resources
- workplace documentation
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

# BSBWOR301 Organise personal work priorities and development

## Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

## Application

This unit describes the skills and knowledge required to organise own work schedules, to monitor and obtain feedback on work performance and to maintain required levels of competence.

This unit applies to individuals who exercise discretion and judgement and apply a broad range of competencies in various work contexts.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

## Unit Sector

Industry Capability – Workplace Effectiveness

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Organise and complete own work schedule	<p>1.1 Ensure that work goals, objectives or Key Performance Indicators (KPIs) are understood, negotiated and agreed in accordance with organisational requirements</p> <p>1.2 Assess and prioritise workload to ensure tasks are completed within identified timeframes</p> <p>1.3 Identify factors affecting the achievement of work objectives and incorporate contingencies into work plans</p> <p>1.4 Use business technology efficiently and effectively to manage</p>

ELEMENT	PERFORMANCE CRITERIA
	and monitor scheduling and completion of tasks
2. Monitor own work performance	<p>2.1 Accurately monitor and adjust personal work performance through self assessment to ensure achievement of tasks and compliance with legislation and work processes or KPIs</p> <p>2.2 Ensure that feedback on performance is actively sought and evaluated from colleagues and clients in the context of individual and group requirements</p> <p>2.3 Routinely identify and report on variations in the quality of products and services according to organisational requirements</p> <p>2.4 Identify signs of stress and effects on personal wellbeing</p> <p>2.5 Identify sources of stress and access appropriate supports and resolution strategies</p>
3. Co-ordinate personal skill development and learning	<p>3.1 Identify personal learning and professional development needs and skill gaps using self assessment and advice from colleagues and clients in relation to role and organisational requirements</p> <p>3.2 Identify, prioritise and plan opportunities for undertaking personal skill development activities in liaison with work groups and relevant personnel</p> <p>3.3 Access, complete and record professional development opportunities to facilitate continuous learning and career development</p> <p>3.4 Incorporate formal and informal feedback into review of further learning needs</p>

## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Skill	Performance Criteria	Description
Learning	3.1-3.4	<ul style="list-style-type: none"> <li>Employs a range of approaches and investigative techniques to source the knowledge necessary to arrange personal learning experiences</li> </ul>
Reading	1.1, 1.2, 2.1	<ul style="list-style-type: none"> <li>Interprets textual information to determine organisation's procedures, own work performance and objectives</li> </ul>

Writing	1.3, 1.4, 2.3, 3.1, 3.2, 3.3	<ul style="list-style-type: none"> <li>Prepares written reports and workplace documents that communicate information clearly and effectively</li> </ul>
Oral Communication	2.2, 2.3, 3.1, 3.2	<ul style="list-style-type: none"> <li>Clearly gives and receives feedback using specific and relevant language</li> <li>Uses listening and questioning techniques to confirm understanding</li> </ul>
Numeracy	1.1, 1.3	<ul style="list-style-type: none"> <li>Understands responsibilities and scope of role and complies with organisational policies, procedures and protocols</li> </ul>
Interact with others	1.1, 2.2, 2.3, 3.1, 3.2	<ul style="list-style-type: none"> <li>Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role</li> <li>Fosters and nurtures a culture of constructive and respectful feedback</li> <li>Proactively collaborates with others to achieve specific goals</li> </ul>
Get the work done	1.2, 1.3, 1.4, 2.4, 2.5, 3.2	<ul style="list-style-type: none"> <li>Plans and organises work commitments to ensure deadlines and objectives are met</li> <li>Uses formal analytical thinking techniques to recognise and respond to routine problems</li> <li>Uses digital systems and tools to enter, store and monitor information</li> </ul>

## Assessment Requirements for BSBWOR301 Organise personal work priorities and development

### Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

### Performance Evidence

Evidence of the ability to:

- prepare a work plan according to organisational requirements and work objectives
- use business technology to schedule, prioritise and monitor completion of tasks in a work plan
- assess and prioritise own work load and deal with contingencies
- monitor and assess personal performance against job role requirements by seeking feedback from colleagues and clients
- identify personal development needs and access, complete and record skill development and learning.

Note: if a specific volume or frequency is not stated, then evidence must be provided at least once.

### Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline key provisions of legislation that relate to own work role
- describe goals, objectives or key performance indicators of own work role
- explain ways to elicit, analyse and interpret feedback when communicating with other people in the workplace
- explain the principles and techniques of goal setting, measuring performance, time management and personal assessment of learning and development needs
- explain signs and sources of stress and strategies to deal with stress in the workplace
- identify methods to identify and prioritise personal learning needs.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability - workplace effectiveness field of work and include access to:

- office equipment and resources
- work schedules and performance improvement plans
- workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

## CHCCOM002 Use communication to build relationships

### Modification History

Release	Comments
Release 2	This version was released in <i>CHC Community Services Training Package release 3.0</i> . Amended modification history and mapping. Equivalent outcome.
Release 1	This version was released in <i>CHC Community Services Training Package release 2.0</i> and meets the requirements of the 2012 Standards for Training Packages. Significant changes to performance criteria. New evidence requirements for assessment including volume and frequency requirements. Significant changes to knowledge evidence.

### Application

This unit describes the skills and knowledge to apply specific communication techniques to establish, build and maintain relationships with clients, colleagues and other stakeholders based on respect and trust.

This unit applies to work across a range of workplace contexts where workers at all levels may communicate with individuals and/or groups both in person and in writing.

*The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.*

### Elements and Performance Criteria

#### ELEMENT

#### PERFORMANCE CRITERIA

*Elements define the essential outcomes*

*Performance criteria describe the performance needed to demonstrate achievement of the element*

1. Communicate with clients and co-workers

- 1.1 Identify and use appropriate communication techniques to communicate with clients and colleagues
- 1.2 Communicate in a manner that demonstrates respect,

**ELEMENT****PERFORMANCE CRITERIA**

*Elements define the essential outcomes*

*Performance criteria describe the performance needed to demonstrate achievement of the element*

accepts individual differences and upholds rights

1.3 Represent the organisation appropriately and in accordance with communication policies and protocols

1.4 Provide information to clients and service providers in accordance with communication policies and protocols

2. Address communication needs

2.1 Recognise and support communication needs of clients, colleagues and external networks

2.2 Facilitate access to interpreter and translation services as required

2.3 Identify and address problems and communication barriers

2.4 Defuse conflict or potentially difficult situations with clients and colleagues and refer in accordance with organisational requirements

2.5 Seek and respond to feedback on the effectiveness of communication with clients, colleagues and external networks

3. Facilitate meetings

3.1 Develop an agenda and list of invited participants in consultation with appropriate people

3.2 Communicate details of the meeting to the participants and other stakeholders in accordance with organisation communication protocols

3.3 Contribute to and follow objectives and agendas for meeting

3.4 Provide opportunities to fully explore all relevant issues and provide relevant information

3.5 Use strategies that encourage all members to participate equally, including seeking and acknowledging contributions from all members

3.6 Implement strategies to ensure the specific communication needs of individuals within the meeting are identified and addressed

3.7 Facilitate the resolution of conflict between

**ELEMENT**

**PERFORMANCE CRITERIA**

*Performance criteria describe the performance needed to demonstrate achievement of the element*

participants

3.8 Minute or record meeting in accordance with organisation requirements

3.9 Evaluate meeting processes and identify lessons learned or opportunities for improvement

**Foundation Skills**

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

*Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.*

**Unit Mapping Information**

No equivalent unit.

**Links**

Companion Volume implementation guides are found in VETNet -

## Assessment Requirements for CHCCOM002 Use communication to build relationships

### Modification History

Release	Comments
Release 2	This version was released in <i>CHC Community Services Training Package release 3.0</i> .  Amended modification history and mapping. Equivalent outcome.
Release 1	This version was released in <i>CHC Community Services Training Package release 2.0</i> and meets the requirements of the 2012 Standards for Training Packages.  Significant changes to performance criteria. New evidence requirements for assessment including volume and frequency requirements. Significant changes to knowledge evidence.

### Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be demonstrated evidence that the candidate has:

- obtained feedback from 3 clients or colleagues on effectiveness of communication and responded appropriately
- prepared 3 types of written correspondence in accordance with organisation communication protocols
- facilitated resolution of 1 difficult situation with a client, colleague or service provider
- facilitated 1 meeting around a workplace issue

### Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the work role. This includes knowledge of:

- organisation communication policies and protocols
- different communication styles and techniques, and how they impact on interpersonal communication, including:
  - strategies for effective interpersonal communication

- person centred and rights based approaches
- cross-cultural communication protocols
- non-verbal communication cues
- group processes and dynamics
- motivational interviewing versus coercive approach
- collaboration versus confrontation
- communication strategies to:
  - build and maintain relationships and trust
  - facilitate workplace meetings
  - negotiate for optimal outcomes
  - deliver business presentations
  - address barriers
  - solve problems and resolve conflict
- types of interpretation and translation services specific to the client group, and how to access them
- factors that commonly contribute to the development of communication barriers including high emotions, mistrust or misunderstandings
- professional relationship boundaries
- digital media and use in community services and health sector, including:
  - web
  - email
  - social media
  - podcast and videos
  - tablets and applications
  - newsletters and broadcasts
  - intranet
- written correspondence protocols and style guides, including letters, emails, minutes, case notes, reports

## Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including use of real workplace policies and procedures
- modelling typical workplace conditions, including:
  - interactions with clients and co-workers from a range of diverse backgrounds
  - facilitation of groups of at least 3 people
  - typical workplace reporting processes
  - interpreter and translation services where required
  - use of digital media

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

# **MARAO01 Contribute to safe cargo operations on liquefied gas tankers**

## **Modification History**

Release 1. New unit of competency.

## **Application**

This unit involves the skills and knowledge required to recognise hazards associated with liquefied gas tankers and to apply appropriate hazard control measures to ensure safe cargo operation.

This unit applies to seafarers required to assist in the safe operation of a liquefied gas tanker.

This unit has links to legislative and certification requirements.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

A – Handling Cargo and Vessel Stability

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine characteristics of tanker cargo and tankers to ensure safe transfer and transport of cargo**

- 1.1 Features of various types of liquefied gas tankers are outlined
- 1.2 Cargo operations of tankers are identified
- 1.3 Properties of cargo being transported are identified and their impact on safety, the environment and vessel operations are outlined

- |  |     |  |
|--|-----|--|
|  | 1.4 | Hazards associated with the transport of cargo are clarified according to emergency response documentation   |
|  | 1.5 | Hazard controls associated with tanker cargo are employed according to organisational procedures   |
| <b>2 Comply with legislative and organisational requirements for safe transfer and transport of tanker cargo</b> | 2.1 | Safety data sheets (SDS)/material safety data sheets (MSDS) relevant to cargo are accessed and procedures for tanker safety and safety management are identified |
|  | 2.2 | SDS/MSDS are interpreted to identify relevant cargo-related hazards to the vessel and to personnel   |
|  | 2.3 | Legislative and organisational requirements are interpreted to identify appropriate actions for safe transfer and transport of cargo                             |
| <b>3 Take precautions to prevent hazards</b>   | 3.1 | Organisational policies and procedures to minimise hazards are identified  |
|  | 3.2 | Type and severity of the hazard posed by cargo is recognised   |
|  | 3.3 | Transfer and transport of cargo is monitored to prevent hazards  |
|  | 3.4 | Gas monitoring equipment is regularly inspected and used according to organisational procedures  |
| <b>4 Act on becoming aware of a hazardous situation</b>  | 4.1 | Source of hazard is identified according to organisational procedures  |
|  | 4.2 | Risk is assessed considering severity and likelihood of consequences   |
|  | 4.3 | Control measures to minimise risk are implemented to level of responsibility or referred to appropriate person for further action                                |
|  | 4.4 | Containment procedures are applied where appropriate   |
|  | 4.5 | Appropriate safety procedures are followed and personal protective equipment is used according to organisational procedures                                      |
|  | 4.6 | Risk is eliminated where possible, and if not practical, actions are taken to control risk   |
| <b>5 Take precautions to prevent pollution of</b>  | 5.1 | Procedures to prevent pollution are identified and observed at all times   |

**the environment  
from release of  
liquefied gases**

- 5.2 Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and organisational procedures
- 5.3 All relevant information is immediately reported to appropriate persons when a vapour leak or cloud is detected or a malfunction has occurred that poses a risk of a vapour leak or cloud
- 5.4 Shore-based response personnel are promptly notified when a vapour leak or cloud occurs

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Cargo operations must include:

- cargo handling equipment
- emergency shut-down system (ESS)
- loading, unloading and care in transit
- piping systems and valves
- tank cleaning, purging, gas-freeing and inerting

Properties must include:

- chemical symbols
- pressure and temperature including vapour pressure/temperature relationship
- types of electrostatic charge generation

- Cargo must include:
- ammonia
  - butadiene
  - ethylene
  - liquefied natural gas (LNG)
  - liquefied petroleum gas (LPG)
  - propylene
  - vinyl chloride
- Hazards must include:
- corrosion hazards
  - electrostatic hazards
  - environmental hazards
  - explosion and flammability hazards
  - extremely low temperatures
  - health hazards
  - pressure hazards
  - reactivity hazards
  - sources of ignition
  - toxicity hazards
  - vapour leaks and clouds
- Hazard controls must include:
- anti-static measures
  - atmospheric control
  - cargo inhibition
  - gas testing
  - importance of cargo compatibility
  - inerting, drying and monitoring techniques
  - segregation
  - ventilation
- Gas monitoring equipment must include:
- gas monitoring instruments
  - oxygen indicators
- Firefighting equipment must include:
- firefighting agents
  - fixed dry chemical systems
  - fixed foam systems
  - portable foam systems

- Measures must include:
- assisting in implementing shipboard spill containment procedures
  - reporting relevant information to the responsible person

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARA3001A Contribute to safe cargo operations on liquefied gas tankers.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA001 Contribute to safe cargo operations on liquefied gas tankers**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating clearly and effectively
- correctly identifying safety data sheets (SDS)/material safety data sheets (MSDS), relevant cargo-related hazards to vessel and to personnel, and taking appropriate action according to organisational procedures
- ensuring cargo operations are carried out according to accepted principles and procedures to ensure safety of operations
- identifying and acting on becoming aware of a hazardous situation, according to organisational procedures
- interpreting and applying knowledge of liquefied gas tanker layouts, tanker cargo features, characteristics and hazards, and related hazard prevention strategies to duties on various types of liquefied gas tankers
- reading and interpreting SDS/MSDS
- recognising problems and hazards that can arise when managing safety on a liquefied gas tanker, taking appropriate remedial action and initiating appropriate solutions.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- anti-static measures in hazard control
- atmospheric control
- cargo handling equipment
- cargo inhibition in hazard control
- corrosion hazards associated with tanker operations
- emergency shut-down system (ESD)
- environmental hazards associated with tanker operations
- explosion and flammability hazards associated with tanker operations
- extremely low temperatures associated with tanker operations
- gas testing

- general arrangement and construction of liquefied gas tankers
- health hazards associated with tanker operations
- importance of cargo compatibility
- inerting, drying and monitoring techniques in hazard control
- information on a SDS/MSDS
- loading, unloading and care in transit
- piping systems and valves
- pressure and temperature, including vapour pressure/temperature relationship
- pressure hazards associated with tanker operations
- properties and characteristics of liquefied gas
- reactivity hazards associated with tanker operations
- relevant chemical symbols
- relevant firefighting operations and the use of firefighting installations
- segregation in hazard control
- sources of ignition associated with tanker operations
- tanker cleaning, purging, gas-freeing and inerting
- tanker safety culture and safety management
- types of electrostatic charge generation
- types of liquefied gas tankers
- vapour leaks and clouds associated with tanker operations
- ventilation in hazard control
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals

- range of relevant exercises, case studies and/or simulations.

# MARA002 Contribute to safe cargo operations on oil and chemical tankers

## Modification History

Release 1. New unit of competency.

## Application

This unit involves the skills and knowledge required to recognise hazards associated with oil and chemical tankers and apply appropriate hazard control measures to ensure safe cargo operation.

This unit applies to seafarers required to assist in the safe operation of oil and chemical tankers.

This unit has links to legislative and certification requirements.

## Pre-requisite Unit

Not applicable.

## Competency Field

A – Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

<b>2</b>	<b>Comply with legislative and organisational requirements for safe transfer and transport of tanker cargo</b>	
	2.1	Safety data sheets (SDS)/material safety data sheets (MSDS) relevant to cargo are accessed and procedures for tanker safety and safety management are identified
	2.2	SDS/MSDS are interpreted to identify relevant cargo-related hazards to the vessel and to personnel
	2.3	Legislative and organisational requirements are interpreted to identify appropriate actions for safe transfer and transport of cargo
<b>3</b>	<b>Take precautions to prevent hazards</b>	
	3.1	Organisational policies and procedures to minimise hazards are identified
	3.2	Type and severity of hazard posed by cargo is recognised
	3.3	Transfer and transport of cargo is monitored to prevent hazards
	3.4	Monitoring equipment, where installed, is regularly inspected and used according to organisational procedures
<b>4</b>	<b>Act on becoming aware of a hazardous situation</b>	
	4.1	Source of hazard is identified according to organisational procedures
	4.2	Risk is assessed considering severity and likelihood of consequences
	4.3	Control measures to minimise risk are implemented to level of responsibility or referred to appropriate person for permission or further action
	4.4	Containment procedures are applied where appropriate
	4.5	Appropriate safety procedures are followed and personal protective equipment is used according to organisational procedures
	4.6	Risk is eliminated where possible, and if not practical, actions are taken to control risk
	4.7	Appropriate firefighting equipment is identified to carry out

### firefighting operations

- |  |     |   |
|--|-----|---|
| <b>5 Take precautions to prevent pollution of the environment from the release of oil or chemicals</b> | 5.1 | Procedures to prevent pollution are identified and observed at all times  |
|  | 5.2 | Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and organisational procedures         |
|  | 5.3 | All relevant information is immediately reported to appropriate persons when a spill is detected or a malfunction has occurred that poses a risk of a spill |
|  | 5.4 | All required spill containment procedures are correctly implemented according to regulatory requirements and organisational procedures                      |

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Features of various types of oil and chemical tankers must include:

- general arrangement and construction
- types of oil and chemical tankers

Cargo operations must include:

- cargo handling equipment
- loading, unloading and care in transit
- piping systems and valves

	<ul style="list-style-type: none"><li>• tank cleaning, purging, gas-freeing and inerting</li></ul>
Properties must include:	<ul style="list-style-type: none"><li>• chemical symbols</li><li>• pressure and temperature including vapour pressure/temperature relationship</li><li>• types of electrostatic charge generation</li></ul>
Cargo must include:	<ul style="list-style-type: none"><li>• chemicals</li><li>• oil</li></ul>
Hazards must include:	<ul style="list-style-type: none"><li>• corrosion hazards</li><li>• electrostatic hazards</li><li>• environmental hazards</li><li>• explosion and flammability hazards</li><li>• health hazards</li><li>• pressure hazards</li><li>• reactivity hazards</li><li>• sources of ignition</li><li>• toxicity hazards</li><li>• vapour leaks and clouds</li></ul>
Hazard controls must include:	<ul style="list-style-type: none"><li>• anti-static measures</li><li>• atmospheric control</li><li>• cargo inhibition</li><li>• gas testing</li><li>• importance of cargo compatibility</li><li>• inerting, drying and monitoring techniques</li><li>• segregation</li><li>• ventilation</li></ul>
Firefighting equipment must include:	<ul style="list-style-type: none"><li>• firefighting agents</li><li>• fixed dry chemical systems</li><li>• fixed foam systems</li><li>• portable foam systems</li></ul>
Measures must include:	<ul style="list-style-type: none"><li>• assisting in implementing shipboard spill containment procedures</li><li>• reporting relevant information to the responsible person</li></ul>

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARA3002A Contribute to safe cargo operations on oil and chemical tankers.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA002 Contribute to safe cargo operations on oil and chemical tankers**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating clearly and effectively
- correctly identifying safety data sheets (SDS)/material safety data sheets (MSDS), relevant cargo-related hazards to vessel and to personnel, and taking appropriate action
- ensuring cargo operations are carried out according to accepted principles and procedures to ensure safety of operations
- identifying and acting on becoming aware of hazardous situation
- interpreting and applying knowledge of tanker layouts, tanker cargo features, characteristics and hazards, and related hazard prevention strategies to duties on various types of tankers and gas carriers
- reading and interpreting SDS/MSDS
- recognising problems and hazards that can arise when managing safety on a tanker, taking appropriate remedial action and initiating appropriate solutions.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actions to be taken in the event of spillage
- cargo pumps
- corrosion hazards
- effects of oil and chemical pollution on human and marine life
- features and characteristics of various types of tanker cargo
- functions and processes for the calibration of various types of measuring instruments and devices used to test environments on tankers and gas carriers
- general arrangement and construction of tankers
- hazard controls
- hazard control procedures on tankers and gas carriers
- hazards and control measures associated with tanker cargo operations
- hazards associated with:
  - tanker operations

- carriage of bulk liquids and gases
- hazards to the environment
- information on SDS/MSDS
- Loading and unloading
- measures to be taken in the event of spillage
- physical properties of oil and chemicals
- piping systems and valves
- principles of chemistry as they relate to tanker operations
- procedures for the safe use of personal protective equipment
- procedures to prevent air and water pollution
- reactivity hazards
- shipboard procedures to prevent pollution
- tanker cleaning, purging, gas-freeing and inerting
- tanker safety culture and safety management
- terminology relating to the structure capacities and operations of various types of tankers and gas carriers
- types of oil and chemical tankers
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

# MARAO03 Manage loading, discharging and stowing of cargo

## Modification History

Release 1. New unit of competency.

## Application

This unit involves the skills and knowledge required to manage the loading, discharging and stowage of cargo to prevent damage or deterioration and to deliver it, as far as is possible, in as good a condition and order as it was when received aboard.

This unit applies to people working in the maritime industry in the capacity of Master on a range of vessels up to 80 metres.

This unit has links to legislative and certification requirements.

## Pre-requisite Unit

Not applicable.

## Competency Field

A – Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Plan the stow

- 1.1 Loading manual is interpreted to determine operational loading conditions
- 1.2 Still water shear forces and bending moments in any load or ballast condition are known and not exceeded
- 1.3 Load is planned to ensure stresses in vessel are minimised by evenly distributing cargo
- 1.4 Load is planned to avoid incompatible cargo stowage

- 1.5 Regulations relating to hazardous materials/dangerous goods are observed, where appropriate
- 1.6 Load is planned for unloading sequence
- 1.7 Vessel cargo carrying capacity is not exceeded for appropriate load line
- 1.8 Vessel trim is calculated to allow for optimum vessel performance at sea
- 2 Plan load/unload with stevedores**
  - 2.1 Available port/vessel cargo handling gear and equipment is determined
  - 2.2 Handling capacity of cargo handling gear and equipment is established
  - 2.3 Pumping capacity of cargo pumps is verified
  - 2.4 Availability and status of human resources is resolved
  - 2.5 Cargo manifest is made available
  - 2.6 Cargo stowage plan is completed and agreed with stevedores
  - 2.7 Stability calculation is made and checked against vessel stability information manual
  - 2.8 Notice of readiness to load/unload is provided
- 3 Prepare for loading**
  - 3.1 Holds are checked to ensure they are clean, dry and free of smell
  - 3.2 Safety arrangements in holds are verified to ensure they are operational
  - 3.3 Supplies of dunnage and mats are reviewed to ensure there are sufficient available
  - 3.4 Bilges are covered with tarpaulins/wrappers before loading
  - 3.5 Checks are made to ensure cargo is correctly identified, inspected and confirmed against documentation
  - 3.6 Preparations for loading are monitored according to stowage plan and organisational procedures
- 4 Control loading/unloading of**
  - 4.1 Instructions are given to crew and stevedores involved in cargo loading/unloading according to cargo stowage plan

- |   |     |   |
|---|-----|---|
| <b>cargo</b>                                  | 4.2 | Compliance with regulations, procedures and instructions pertaining to type of cargo being handled is managed during loading/unloading operations   |
|   | 4.3 | Loading/unloading is monitored to ensure loading rate is not exceeded in the case of bulk or liquid cargo   |
|   | 4.4 | Vessel stability is observed during loading/unloading operations  |
|   | 4.5 | Loading/unloading operations are checked against stowage plan   |
|   | 4.6 | Cargo is secured and lashed according to lashing plan   |
|   | 4.7 | All cargo handling documentation is completed according to organisational procedures and regulatory requirements  |
| <b>5 Manage ballast management operations</b> | 5.1 | Ballast discharge requirements of port authority are complied with  |
|   | 5.2 | Ballast management activities are monitored according to organisational procedures and port authority requirements  |
|   | 5.3 | Ballast management problems are identified and appropriate action is taken to minimise risk to the environment  |
| <b>6 Monitor care of cargo during voyage</b>  | 6.1 | Vessel plan for care of cargo during the voyage is implemented according to organisational and customer requirements, and relevant regulations  |
|   | 6.2 | Ventilation and humidity control systems are checked  |
|   | 6.3 | Action required to maintain the wellbeing of cargo during the voyage is initiated according to customer requirements and organisational procedures  |
|   | 6.4 | Compliance with safety and hazard minimisation procedures and regulations related to cargo care is managed at all times during the voyage to maintain safety of personnel, cargo and vessel |
|   | 6.5 | Appropriate action is taken in the event of a cargo-related incident or emergency to rectify problem, secure cargo and maintain safety of vessel and personnel                              |

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Cargo includes one or more of the following:

- bulk cargo
- containerised cargo
- deck cargo
- liquid cargo
- refrigerated cargo
- any other material, equipment or machinery that may be safely handled and stowed on the vessel

Hazardous materials/dangerous goods include one or more of the following:

- any cargo described in the International Maritime Dangerous Goods (IMDG) Code as hazardous or dangerous

Cargo handling gear and equipment includes one or more of the following:

- cargo pumps
- cranes
- derricks
- grabs
- hooks, wires and shackles
- slings

Cargo stowage plan must include:

- cargo weight
- correct description and stowage of hazardous and dangerous

goods

- description of cargo to be loaded
- load/discharge port
- segregation of non compatible cargo

Ballast management problems include one or more of the following:

- confirmation that the stowage plan conforms to stability requirements at all stages of loading and discharging
- contaminated ballast
- failure of ballast pumps

Cargo-related incidents or emergencies include one or more of the following:

- cargo handling gear failure
- cargo shift
- leakage
- spontaneous combustion

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARA4001A Manage loading, discharging and stowing of cargo.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA003 Manage loading, discharging and stowing of cargo**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- developing effective planning document
- identifying and solving problems related to loading, stowage, security and unloading of cargo
- interpreting stability manual and ensuring stability calculations are within appropriate parameters for proposed cargo operation
- monitoring use of equipment involved in loading, stowage, security and unloading of cargo
- producing reliable documentation
- reading, interpreting and applying instructions, regulations, procedures and information relevant to loading, stowage, security and unloading of cargo.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ballast management issues and procedures
- cargo handling documentation requirements
- container position numbering
- design of vessel hold
- effects on cargo handling of sea conditions, wind and weather
- effects of different types of cargo operations on vessel trim and stability
- effects upon stability during loading and discharging operations including heeling moments from gear and loads
- homogenous loading
- main stresses set up by cargo, hogging, sagging and shearing
- methods of;
  - handling various types of cargo
  - caring for various types of cargo

- operational characteristics of different types of shipboard and terminal-based cargo handling equipment and facilities
- principles of cargo care
- procedures for carrying out calculations involving weights, capacities, stowage factors, load densities
- relevant sections of applicable maritime regulations
- relevant work health and safety (WHS)/occupational health and safety (OHS) and cargo handling legislation, codes of practice, policies and procedures
- standard stowage position numbering systems used on container vessels
- static and dynamic loads
- survey and inspection requirements for cargo handling equipment
- types of lashing devices
- typical cargo handling problems and hazards, and appropriate preventative and remedial actions and solutions
- typical types and sizes of shipping containers
- usual methods of packing, loading and discharging, stowage, dunnaging etc.
- use of cargo handling gear including purchases and tackles
- various types of cargo likely to be carried; their peculiar characteristics, liability to damage, decay or deterioration; their measurements; their hazards and problems, and appropriate preventative and remedial action and solutions
- ways of restricting vessel stress levels within permitted levels within permitted limits during loading/discharging cargo.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

## MARAO04 Manage vessel stability

### Modification History

Release 1. New unit of competency.

### Application

This unit involves the skills and knowledge required to manage the dynamic factors affecting the stability of a vessel up to 80 metres.

This unit applies to people working in the capacity of Master on a range of vessels up to 80 metres.

This unit has links to legislative and certification requirements.

### Pre-requisite Unit

Not applicable.

### Competency Field

A - Handling Cargo and Vessel Stability

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                              |   |
|------------------------------|---|
| <b>1 Calculate stability</b> | 1.1 Vessel stability data book is made available and checked for endorsement                |
|                              | 1.2 Data is interpreted to determine safety parameters for vessel                           |
|                              | 1.3 Stability is accurately calculated using data extracted from vessel stability data book |
|                              | 1.4 Stability calculations are checked to ensure they correlate                             |

- with data set out in vessel stability book
- 1.5 Miscalculations or unsafe conditions are recognised and recalculated or checked
  - 1.6 Calculated stability data is recorded using appropriate units and correct number of significant figures
- 2 Control vessel stress and stability**
- 2.1 Information from vessel stability information is used to determine loading limits and displacement from draft
  - 2.2 Vessel weight distribution is managed to maintain stability condition within safe limits at all times and regulatory requirements are complied with under all conditions of loading
  - 2.3 Relevant stability information is correctly communicated to others as required
  - 2.4 Stability conditions of vessel are managed in adverse weather conditions
  - 2.5 Emergencies that may jeopardise vessel stability are recognised and appropriate action is taken
- 3 Maintain records of stability management**
- 3.1 Data and information related to stability management is accurately recorded
  - 3.2 Data and information related to stability management is filed and stored according to organisational procedures

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Stability calculations must include:

- correlation against stability book data
- draft
- final height of the centre of gravity above the keel of a vessel (KG)
- trim

Loading limits include one or more of the following:

- not exceeding allowable passenger carrying capacity and distribution
- not exceeding vessel designed cargo carrying capacity
- understanding the effect of fuel, fresh water and ballast on cargo capacity

Emergencies include one or more of the following:

- cargo shift
- damaged hull
- flooding of cargo spaces

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARA4002A Manage vessel stability.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for MARA004 Manage vessel stability

## Modification History

Release 1. New unit of competency.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- attending to appropriate level of detail in recordkeeping
- carrying out basic calculations associated with maintaining vessel stability
- managing loading and weight distribution of vessel to ensure assigned load line conditions are not exceeded
- managing stability of vessel in a range of conditions
- producing reliable documentation
- recognising problems affecting vessel stability.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- bilging and permeability
- centroids and centre of gravity
- change of draught and trim (MCT)
- conditions of stable, neutral and unstable equilibrium and effects of disturbing vessel from upright
- construction features and stress characteristics for vessels
- density and specific gravity
- dockwater and freshwater allowance
- effects of free surface of liquids
- factors that affect the rolling period of vessel
- forces and moments
- information contained in stability data books
- loading and discharging weights
- principal stresses that act on the structure of a vessel
- principles of vessel stability
- procedures for carrying out basic calculations associated with vessel stability

- relationship between light displacement, loaded displacement and deadweight tonnage
- stability curves
- steps involved in bringing an unstable vessel to a stable condition
- tonnes per centimetre immersion (TPC)
- transverse and longitudinal dynamics
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

## MARA005 Maintain vessel stability

### Modification History

Release 2. Application, Elements and Performance Criteria and other minor edits were corrected to include relevant information.

Release 1. New unit of competency.

### Application

This unit involves the skills and knowledge required to determine the stability and trim of a vessel to ensure that stability conditions of vessel comply with intact stability criteria under all conditions of loading.

This unit applies to the work of a Watchkeeper Deck, Master up to 500 gross tonnage and Master up to 80 metres Near Coastal.

This unit has links to legislative and certification requirements.

### Pre-requisite Unit

Not applicable.

### Competency Field

A – Handling Cargo and Vessel Stability

### Unit Sector

Not applicable.

### Elements and Performance Criteria

- |                              |   |     |  |     |   |     |   |     |   |
|------------------------------|---|-----|--|-----|---|-----|---|-----|---|
| <b>1 Calculate stability</b> | <table border="0"><tr><td style="vertical-align: top;">1.1</td><td>Vessel stability data book is accessed and checked for endorsement</td></tr><tr><td style="vertical-align: top;">1.2</td><td>Data is interpreted to determine vessel safety parameters</td></tr><tr><td style="vertical-align: top;">1.3</td><td>Stability is accurately calculated using data extracted from vessel stability data book</td></tr><tr><td style="vertical-align: top;">1.4</td><td>Stability calculations are checked to ensure they correlate</td></tr></table> | 1.1 | Vessel stability data book is accessed and checked for endorsement | 1.2 | Data is interpreted to determine vessel safety parameters | 1.3 | Stability is accurately calculated using data extracted from vessel stability data book | 1.4 | Stability calculations are checked to ensure they correlate |

| 1.4                          | Stability calculations are checked to ensure they correlate   |     |  |     |   |     |   |     |   |

- with data set out in vessel stability book
- 1.5 Spurious or incorrect information is recognised and recalculated
  - 1.6 Trim, draughts and list are adjusted as required
  - 1.7 Stability calculations are conducted at a time, frequency and scope appropriate to voyage
- 2 Manage weight distribution**
- 2.1 Stability calculations are used to plan weight distribution to ensure assigned load line conditions are not exceeded
  - 2.2 Weight distribution is controlled to maintain vessel within acceptable stability and stress limits for loading operation and at all stages of voyage
  - 2.3 Appropriate action is taken when weight distribution is compromising vessel safety
- 3 Maintain records of stability management**
- 3.1 Data and information related to stability management is accurately recorded
  - 3.2 Data and information related to stability management is filed and stored according to organisational procedures

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Stability calculations must include:

- calculation of areas under the curve
- changes in draft and trim due to differing water densities
- correction for free surface effect
- draft and trim
- metacentric height
- moment of statical stability at small angles of heel
- transverse and longitudinal stability
- values for righting levers and construction of the curve of stability

Appropriate action includes one or more of the following:

- amending the vessel loading plan
- ballast management
- reduction of free surface

Data and information related to stability management includes one or more of the following:

- cargo stowage and loading plan
- records of stability calculations
- safety management system
- stability and trim booklet

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARA5001A Maintain vessel stability.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# Assessment Requirements for MARA005 Maintain vessel stability

## Modification History

Release 2. Application, Elements and Performance Criteria and other minor edits were corrected to include relevant information.

Release 1. New unit of competency.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying knowledge of stability, trim and stress tables, diagrams and stress calculating equipment
- carrying out calculations required when determining vessel stability and trim
- managing the loading and weight distribution of a vessel to ensure assigned load line conditions are not exceeded
- managing vessel stability in a range of conditions
- reading and interpreting vessel specifications and design drawings
- recognising problems affecting vessel stability and trim.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- calculation of vessels stability using the inclining experiment
- effects of angle of loll
- effects of beam and form coefficient on the stability of a vessel
- effects of density of sea water on the draught and freeboard of a vessel
- effects of free surface on the stability of a vessel
- features of the load-line and draught marks of a vessel and methods for performing related calculations
- fundamental actions to be taken in the event of partial loss of intact buoyancy
- fundamentals of watertight integrity
- principal stresses that act on the structure of a vessel
- principal structural members of a vessel and the proper names for various parts
- problems related to the control of trim, stability and stresses of vessels and appropriate action and solutions

- sections of the International Maritime Organization (IMO), Standards of Training, Certification & Watchkeeping (STCW) and Australian Maritime Safety Authority (AMSA) Marine Orders related to intact stability criteria
- stability, trim and stress tables, diagrams and stress calculating equipment
- theory and calculations of vessel stability and dynamics
- use of computer programs in calculating stability
- work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

# MARA006 Monitor loading, unloading and stowage of cargo

## Modification History

Release 1. New unit of competency.

## Application

This unit involves the skills and knowledge required to monitor the loading, stowage, securing and care of cargo during the voyage and the unloading of cargo according to the cargo plan, organisational procedures and vessel stowage limitations.

This unit applies to the work of a Watchkeeper Deck, Master up to 500 gross tonnage and Master up to 80 metres Near Coastal.

This unit has links to legislative and certification requirements.

## Pre-requisite Unit

Not applicable.

## Competency Field

A – Handling Cargo and Vessel Stability

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Review cargo plan

- 1.1 Cargo plan is interpreted to determine required cargo operations
- 1.2 Cargo plan is checked to ensure cargo is evenly distributed
- 1.3 Cargo plan is assessed to ensure incompatible cargo stowage is avoided

- 1.4 Cargo plan is evaluated to ensure regulations relating to hazardous materials/dangerous goods are observed, where appropriate
- 1.5 Cargo plan is checked to ensure unloading sequence is effective
- 2 Prepare for loading**
  - 2.1 Holds are checked to ensure they are clean, dry and free of smell
  - 2.2 Safety arrangements in holds are verified to ensure they are operational
  - 2.3 Supplies of cargo protection and securing material are reviewed to ensure there are sufficient available
  - 2.4 Bilge suction are protected before loading
  - 2.5 Checks are made to ensure cargo is correctly identified, inspected and confirmed against documentation
  - 2.6 Preparations for loading are monitored according to stowage plan and organisational procedures
  - 2.7 Ballast discharge plan is identified and understood and appropriate actions to support this plan are undertaken
- 3 Supervise loading/unloading of cargo**
  - 3.1 Instructions are given to crew and stevedores involved in cargo loading/unloading according to cargo stowage plan
  - 3.2 Compliance with regulations, procedures and instructions pertaining to type of cargo being handled is managed during loading/unloading operations
  - 3.3 Loading/unloading is monitored to ensure the loading rate is not exceeded in the case of bulk or liquid cargo
  - 3.4 Vessel stability is observed during loading/unloading operations
  - 3.5 Loading/unloading operations are checked against stowage plan
  - 3.6 Cargo is secured and lashed according to lashing plan
  - 3.7 Cargo handling documentation is completed according to organisational procedures and regulatory requirements
- 4 Monitor care of**
  - 4.1 Vessel plan for care of cargo during voyage is implemented according to organisational and customer requirements, and

**cargo during voyage**

## relevant regulations

- 4.2 Ventilation and humidity control systems are checked
- 4.3 Actions required to maintain the wellbeing of cargo during the voyage are initiated according to customer requirements and organisational procedures
- 4.4 Compliance with safety and hazard minimisation procedures and regulations related to cargo care is managed at all times during the voyage to maintain the safety of personnel, cargo and vessel
- 4.5 Appropriate action is taken when defects or damage to cargo are detected

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Cargo plan must include:
- cargo weight
  - correct description and stowage of hazardous and dangerous goods
  - description of cargo to be loaded
  - load/discharge port
  - segregation of non compatible cargo
  - stowage of refrigerated containers

Incompatible cargo stowage includes one or more of the following:	<ul style="list-style-type: none"><li>• cargo liable to taint</li><li>• dangerous and hazardous goods</li></ul>
Hazardous materials/dangerous goods includes one or more of the following:	<ul style="list-style-type: none"><li>• any cargo described in the International Maritime Dangerous Goods (IMDG) Code as hazardous or dangerous</li></ul>
Cargo includes one or more of the following:	<ul style="list-style-type: none"><li>• bulk cargo</li><li>• containerised cargo</li><li>• deck cargo</li><li>• heavy lift cargo</li><li>• liquid cargo</li><li>• refrigerated cargo</li><li>• any other material, equipment or machinery that may be safely handled and stowed on vessel</li></ul>
Cargo handling documentation includes one or more of the following:	<ul style="list-style-type: none"><li>• cargo gear register</li><li>• cargo receipts</li><li>• Cargo Securing Manual</li><li>• logbook entries</li><li>• Note of Protest</li><li>• Notice of Readiness to load or discharge</li><li>• operation orders and instructions</li><li>• safety data sheets (SDS)/material safety data sheets (MSDS)</li><li>• safety management system relating to cargo carriage</li><li>• ship/shore safety checklists</li></ul>
Actions required to maintain the wellbeing of cargo include one or more of the following:	<ul style="list-style-type: none"><li>• maintaining adequate ventilation</li><li>• monitoring cargo spaces</li><li>• temperature control of refrigerated or cooled cargo</li></ul>
Defects or damage to cargo include one or more of the following:	<ul style="list-style-type: none"><li>• damage caused by cargo movement</li><li>• deterioration of perishable cargo</li><li>• water ingress</li></ul>

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARA5002A Monitor loading, unloading and stowage of cargo.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA006 Monitor loading, unloading and stowage of cargo**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out cargo operations according to cargo plan or other documents and established safety rule/regulations, equipment operating instructions and shipboard stowage limitations
- establishing and maintaining effective communications during loading and unloading
- handling dangerous, hazardous and harmful cargo to comply with international regulations, recognised standards and codes of safe practice
- identifying and solving problems associated with loading, unloading, stowage and care of cargo
- initiating timely action in response to defects or damage
- monitoring and anticipating problems and risks associated with loading, unloading, stowage and care of cargo
- monitoring use of equipment in loading, unloading, stowage and care of cargo
- reading, interpreting and applying instructions, regulations, procedures and information associated with loading, unloading, stowage and care of cargo.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ballast management issues and procedures
- cargo handling documentation requirements
- cargo lifting equipment and safe working loads
- container position numbering
- effect of cargo, including heavy lifts, on the seaworthiness and stability of the vessel
- effects of different types of cargo operations on vessel trim and stability
- effects on cargo handling of sea conditions, wind and weather
- effects on stability during loading and discharging operations including heeling moments from gear and loads
- methods of caring for various types of cargo
- methods of handling various types of cargo

- operational characteristics of different types of shipboard and terminal-based cargo handling equipment and facilities
- principles of cargo care
- procedures for carrying out calculations involving weights, capacities, stowage factors
- relevant sections of applicable maritime regulations
- relevant work health and safety (WHS)/occupational health and safety (OHS) and cargo handling legislation, codes of practice, policies and procedures
- safe handling, stowage and securing of cargo including dangerous, hazardous and harmful cargo, and their effect on the safety of life and the vessel
- standard stowage position numbering systems used on container vessels
- typical cargo handling problems and hazards, and appropriate preventative and remedial actions and solutions
- typical types and sizes of shipping containers
- usual methods of container packing, loading and discharging, stowage, dunnaging
- various types of cargo likely to be carried; their peculiar characteristics, liability to damage, decay or deterioration; their measurements, hazards and problems; appropriate preventative and remedial action and solutions
- ways of restricting vessel stress levels within permitted levels within permitted limits during loading/discharging cargo.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

# **MARA007 Contribute to safe cargo operations on offshore support vessels**

## **Modification History**

Release 1. New unit of competency.

## **Application**

This unit involves the skills and knowledge required to undertake a range of offshore activities on board an offshore support vessel (OSV). It includes deck preparation, transfer of deck cargoes, bulk cargo operations and operations with deck equipment within the limits of responsibility of an integrated rating and under the direction of the officer in charge or Master.

This unit applies to Integrated Ratings working in the offshore maritime industry assigned to specific activities and responsibilities.

No licencing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

A – Handling Cargo and Vessel Stability

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Recognise characteristics of**

1.1 Features of various offshore installation types, vessels rig types and operations are outlined

<b>OSV cargo and OSVs to ensure the safe transfer and transport of cargo</b>	1.2	Cargo operations of offshore support vessels are identified
	1.3	Properties of cargo being transported are identified and their impact on safety, the environment and vessel operations is recognised
	1.4	Hazards associated with the transport of cargo are clarified according to emergency response documentation
	1.5	Hazard controls associated with OSV cargo are employed according to organisational procedures
<b>2 Comply with legislative and organisational requirements for safe transfer and transport of OSV cargo</b>	2.1	Safety data sheets (SDS)/material safety data sheets (MSDS)/IMDG Code relevant to cargo are accessed and safety management procedures are identified
	2.2	SDS/MSDS/IMDG Code are interpreted to identify relevant cargo-related hazards to the vessel and to personnel
	2.3	Legislative, organisational and company specific requirements are interpreted to identify appropriate actions for safe transfer and transport of cargo
	2.4	Transfer of cargo is undertaken under direction and within the limits of responsibility of an integrated rating
<b>3 Take precautions to prevent hazards</b>	3.1	Organisational policies and procedures to minimise hazards are identified
	3.2	Type and severity of hazards posed by OSV cargo is recognised
	3.3	Transfer and transport of cargo is monitored to prevent hazards
	3.4	Monitoring equipment, where installed, is regularly inspected and used according to organisational procedures
<b>4 Respond to hazardous situation</b>	4.1	Source of hazard is identified according to organisational procedures
	4.2	Risk is assessed considering severity and likelihood of consequences
	4.3	Control measures to minimise risk are implemented to level of responsibility or referred to appropriate person for permission or further action
	4.4	Containment procedures are applied where appropriate

- |  |     |   |
|--|-----|---|
|  | 4.5 | Appropriate safety procedures are followed and personal protective equipment is used according to organisational procedures                                 |
|  | 4.6 | Risk is eliminated where possible   |
| <b>5 Take precautions to prevent pollution of the environment from the release of liquid or dry bulk cargoes</b> | 5.1 | Procedures to prevent pollution are identified and observed at all times  |
|  | 5.2 | Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and organisational procedures         |
|  | 5.3 | All relevant information is immediately reported to appropriate persons when a spill is detected or a malfunction has occurred that poses a risk of a spill |
|  | 5.4 | All required spill containment procedures are correctly implemented according to regulatory requirements and organisational procedures                      |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- |   |  |
|---|--|
| Features of various types of offshore support vessels must include: | <ul style="list-style-type: none"> <li>• general arrangement and construction</li> <li>• types of offshore support vessels</li> <li>• types of offshore installations, rigs and platforms</li> </ul>   |
| Cargo operations must include:                                      | <ul style="list-style-type: none"> <li>• loading, unloading and care in transit of deck cargo</li> <li>• loading and unloading of liquid cargo</li> <li>• loading and unloading dry bulk cargo</li> <li>• piping systems and deck valve arrangements</li> <li>• tubular cargo securing arrangements</li> </ul> |
| Properties must include:  | <ul style="list-style-type: none"> <li>• deck cargo types and characteristics</li> <li>• hazards of oil cargoes</li> </ul>   |

	<ul style="list-style-type: none"><li>• hazards of noxious liquid substances (NLS) cargo</li><li>• hazards of offshore cargo operations</li><li>• tubular cargo stability and securing</li></ul>
Cargo must include:	<ul style="list-style-type: none"><li>• containerised deck cargo</li><li>• drilling muds</li><li>• drilling brines</li><li>• dry bulk cargo</li><li>• heavy lifts and unusual lifts</li><li>• NLS</li><li>• oil</li><li>• tubular deck cargo</li></ul>
Hazards must include:	<ul style="list-style-type: none"><li>• electrostatic hazards</li><li>• environmental hazards</li><li>• explosion and flammability hazards</li><li>• health hazards</li><li>• pressure hazards</li><li>• sources of ignition</li><li>• toxicity hazards</li></ul>
Hazard controls must include:	<ul style="list-style-type: none"><li>• atmospheric control</li><li>• cargo securing arrangements including ensuring safe stowage or lashing of deck cargo</li><li>• cargo segregation</li><li>• equipment colour coding</li><li>• personal protective equipment</li></ul>
Cargo securing equipment must include:	<ul style="list-style-type: none"><li>• capstan winches and wires</li><li>• cargo securing manual</li><li>• cargo securing pins</li><li>• chocks</li><li>• tugger winches and wires</li><li>• dollies</li></ul>
Measures must include:	<ul style="list-style-type: none"><li>• assisting in implementing shipboard cargo securing arrangements</li><li>• reporting relevant information to the responsible person</li></ul>

## Unit Mapping Information

No equivalent unit.

## Links

# **Assessment Requirements for MARA007 Contribute to safe cargo operations on offshore support vessels**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- carrying out cargo operations safely and according to accepted policies and procedures
- correctly identifying safety data sheets (SDS), material safety data sheets (MSDS and/or IMDG Code, relevant cargo-related hazards to vessel and to personnel, and taking appropriate action for safe transfer and stowage of cargo
- ensuring safe stowage or lashing of deck cargo
- identifying and developing awareness of hazardous situations
- interpreting and applying knowledge of OSV layouts, OSV cargo features, characteristics and hazards, and related hazard prevention strategies to duties on various types of offshore support vessels
- reading and interpreting SDS and/or MSDS and/or IMDG Code
- recognising hazards and other problems that can arise when managing safety on an OSV, taking appropriate remedial action and initiating appropriate solutions.
- using verbal and non-verbal means of communication in a clear and appropriate manner to effectively communicate with other crew members

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- actions and measures to be taken in the event of spillage
- features and characteristics of various types of offshore support vessels
- general arrangement and construction of offshore support vessels
- hazard control procedures on offshore support vessels
- hazard controls
- hazards associated with:
  - OSV deck cargo operations
  - OSV bulk and liquid

- below deck cargo operations
- hazards to the environment including the effects of oil and chemical pollution on human and marine life
- information on SDS and/or MSDS and/or IMDG Code
- loading and unloading cargo
- offshore support vessel safety culture and safety management systems
- piping systems, hoses and valves
- procedures for the safe use of personal protective equipment
- shipboard procedures to reflect current MARPOL regulations to prevent pollution
- terminology relating to the structure and operations of various types of offshore support vessels
- work health and safety/occupational health and safety (WHS/OHS) requirements and work practices

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must satisfy the National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) standards.

Assessment must occur in workplace operational situations on board an offshore support vessel (OSV) or where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant practical and written exercises, case studies and simulations that reflect typical ambient conditions found in the workplace
- tools, equipment, machinery, materials and personal protective equipment currently used in industry.

## Links

# MARA008 Contribute to safe anchor handling and towing operations

## Modification History

Release 1. New unit of competency.

## Application

This unit involves the skills and knowledge required to undertake a range of offshore anchor handling and towing activities on board an Anchor Handling Tug Supply (AHTS) vessel within the limits of responsibility of an integrated rating and under the direction of the officer in charge or Master.

This unit applies to Integrated Ratings working in the offshore maritime industry assigned to specific anchor handling and towing duties and responsibilities.

No licensing, legislative or certification requirements apply to this specific unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C - Equipment Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |   |            |  |
|---|------------|--|
| <b>1 Recognise types of anchor handling and towing equipment, vessels and towed</b> | <b>1.1</b> | Required safety precautions, including fatigue management are identified |
|   | <b>1.2</b> | Features of various AHTS are outlined                                    |

<b>objects</b>	1.3	Types of anchor handling and towing operations are identified
	1.4	Properties of towed objects are identified and their impact on safety, the environment and vessel operations is recognised
	1.5	Properties of anchor handling and towing equipment and tools are identified and their impact on safety and vessel operations is recognised
	1.6	Hazards associated with anchor handling and towing are identified
	1.7	Hazard controls associated with anchor handling and towing are employed according to organisational procedures
<b>2 Prepare anchor handling and towing deck equipment, tools and machinery for use</b>	2.1	Appropriate personal protective equipment and machinery is selected, used and stored according to work health and safety/occupational health and safety (WHS/OHS) requirements
	2.2	Routine pre-operational checks are carried out on anchor handling and towing deck equipment, tools and machinery according to manufacturer specifications, regulatory and organisational requirements
	2.3	Deviations from the norm are promptly identified and rectified
	2.4	Adjustments are made to achieve a safe and efficient operation
	2.5	Inability to start machinery is reported promptly and accurately to appropriate personnel
<b>3 Operate anchor handling and towing deck tools and equipment</b>	3.1	Deck equipment, tools and machinery is operated in a safe and controlled manner within defined operating limits when running, to achieve optimum safety and efficiency
	3.2	Deviations from normal operations are promptly identified
	3.3	Action is taken to rectify basic operational faults to maintain optimum safety and efficiency
	3.4	Appropriate action is taken in a malfunction or emergency
<b>4 Check and complete anchor handling and towing deck</b>	4.1	Equipment and machinery shut-down procedures are carried out according to manufacturer specifications and organisational procedures

**equipment , tools  
and machinery  
operations**

- 4.2 Equipment and machinery damage, malfunctions or irregular performance is recorded and reported according to organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Pre-operational checks must include:

- deck equipment
- equipment operational readiness
- inspecting safety guards
- pre-start and safety checks including:
  - oils, greases and lubricants
  - emergency stops

Anchor handling and towing equipment, tools and deck machinery must include:

- anchors
- buoys (surface and subsea)
- capstans
- capstan winches and wires
- chains
- connecting links (kenter, baldt, hinge, pear)
- fibre rope
- gob arrangements
- grapnels
- J hooks
- oil rig cranes
- shackles
- swivels
- towed rigs
- towed barges
- towing pins
- tugger winches and wires
- wire stoppers/shark jaws
- wires (towing and work)

Safe and controlled manner must include:

- maintaining safe workloads within ships specifications including:
  - safe working load (SWL)
  - working load limit (WLL)
- selecting and using appropriate machinery and equipment
- using operational techniques for specific location, operation and weather conditions

Basic operational faults must include one or more of the following:

- failure of deck tools and equipment
- breakage of wire
- machinery break downs

## Unit Mapping Information

This unit replaces and is equivalent to TDMMR5307B Carry out anchor handling, towage and supply duties at a rig.

## Links

# **Assessment Requirements for MARA008 Contribute to safe anchor handling and towing operations**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- following manufacturer recommendations, regulations and vessel operating procedures
- implementing and working in a safe and controlled manner
- using anchor handling, towing and deck equipment
- using deck machinery
- using deck tools
- using verbal and non-verbal means of communication in a clear and appropriate manner to effectively communicate with other crew members

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- anchor handling and towing tools including:
  - anchors
  - buoys (surface and subsea)
  - capstans
  - capstan winches and wires
  - chains
  - connecting links (kenter, baldt, hinge, pear)
  - fibre rope
  - gob arrangements
  - grapnels
  - J hooks
  - oil rig cranes
  - shackles

- swivels
- towed rigs
- towed barges
- towing pins
- tugger winches and wires
- wire stoppers/shark jaws
- wires (towing and work)
- legislation and guidance affecting anchor handling and towing operations
- anchor handling and towing equipment including:
  - capstan winches
  - towing winches
  - tugger winches
  - towing pins
  - working winches
  - wire stoppers/shark jaws
- safe working procedures
- terminology and abbreviations used in the maritime industry specific to anchor handling and towing operations
- work health and safety/occupational health and safety (WHS/OHS) requirements and work practices

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must satisfy the National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) standards.

Assessment must occur in workplace operational situations on board an Anchor Handling Tug Supply (AHTS) vessel or where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals

range of relevant practical and written exercises, case studies and simulations that reflect typical ambient conditions found in the workplace

tools, equipment, machinery, materials and personal protective equipment currently used in industry

## MARA009 Manage stability of a vessel 500 gross tonnage or more

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release 3.0.

### Application

This unit involves the skills and knowledge required to control trim, stability and stress within safe limits at all times on a vessel 500 gross tonnage or more.

This unit applies to people working in the maritime industry as a Master Unlimited.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

A – Handling cargo and vessel stability

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Manage vessel trim under normal operating conditions

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Stability analysis and weight distribution planning are conducted at a time frequency and scope appropriate to the proposed nature of the voyage and vessel operation
- 1.2 Weight distribution is arranged to maintain vessel within acceptable stability limits for the anticipated operational situations likely to be experienced during the voyage

- 1.3 Calculations are made to determine the draught and centre of gravity of vessel after adding, removing or shifting weight
- 1.4 Factors affecting the stability and trim of vessel are identified and allowances are made in calculations
- 1.5 Trim, draughts and list of vessel are controlled as required to ensure they are suitable to progress all anticipated vessel operations
- 2 Control vessel stability when compartment is flooded**
  - 2.1 Damage to vessel and nature of flooding of compartments is assessed
  - 2.2 Effect upon vessel stability of flooded and flooding compartments is evaluated
  - 2.3 Suitable strategy for maintaining or restoring trim and stability is devised
  - 2.4 Where stress limits of the vessel are exceeded as a consequence of damage and/or flooding, appropriate action is initiated to ensure safety of personnel, including abandoning the vessel as required
- 3 Manage stress conditions of the vessel**
  - 3.1 Stress levels of the vessel are assessed according to manufacturer specifications
  - 3.2 Stability of the vessel is monitored at a frequency and scope relevant to vessel operations, sufficient to enable stress and stability to be maintained within acceptable limits at all times
  - 3.3 Appropriate action is taken where weight distribution has or could exceed acceptable safety limits
- 4 Maintain records of stability management**
  - 4.1 Data and information related to stability management is accurately recorded
  - 4.2 Data and information related to stability management is filed and stored according to organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Calculations include:

- calculating required load distribution to achieve desired trim
- calculations for change of draught, trim and heel when entering different water densities and to bilging of compartments
- centre of gravity of a vessel using an inclining experiment and effect of suspended weights
- changes to draught, trim and heel due to adding or removing fuel, ballast or cargo
- determining required correction for height of centre of gravity (kg) for free surface effect
- determining values of righting lever and construction of righting lever curves
- displacement, wetted surface, form coefficients, tonne per centimetre immersion, application of Simpson's rules to first and second moments of area, centroids and centres of pressure
- effect on stability of dry docking and grounding
- hydrostatic stability of a vessel
- moment of statistical stability at small angles of heel
- shear force and bending moment calculations
- transverse and longitudinal stability using hydrostatic data
- vessel centre of gravity, centre of buoyancy and metacentre

Factors include one or more of the following:

- dry docking
- excessive trim
- free surface of a liquid
- grounding
- handling of heavy weights
- large swell conditions
- shift of cargo
- wind heel

Damage to vessel includes one or more of the following:

- damage caused by incorrectly lashed or secured cargo
- damage caused by incorrectly stowed cargo
- damage to cargo handling equipment by exceeding safe working limits

Nature of flooding includes one or more of the following:

- flooding due to collision or grounding
- ingress of sea water through hatch covers

Suitable strategy includes one of the following:

- addition of ballast
- temporary damage repairs

Data and information includes one or more of the following:

- cargo handling equipment
- instructions of relevant maritime authorities
- manufacturer instructions and procedures
- organisational cargo handling procedures
- relevant Australian and international standards and regulatory requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation
- vessel and shore safety checklists
- vessel Cargo Securing Manual
- vessel log
- vessel Register of Materials Handling Equipment

## Unit Mapping Information

This unit replaces and is equivalent to MARA6001A Manage stability of a vessel 500 gross tonnage or more.

MARA6001A replaces and is equivalent to TDMMA1007B Control trim, stability and stress.

# **Assessment Requirements for MARA009 Manage stability of a vessel 500 gross tonnage or more**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release 3.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying International Maritime Organization (IMO) recommendations concerning vessel stability
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- attending to appropriate level of detail in recordkeeping
- determining stability and trim requirements for docking or slipping the vessel
- determining the effect on trim and stability of vessel in the event of damage to and consequent flooding of a compartment, and countermeasures to be taken
- interpreting and applying information on the fundamental principles of vessel construction and the theories and factors affecting trim and stability, and measures necessary to preserve trim and stability
- maintaining stability and stress conditions within safe limits at all times
- producing accurate and reliable documentation
- using automatic data-based equipment.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- causes and repercussions of a heeling vessel
- effects of angle of loll including centre of buoyancy, how a ship behaves at the angle of loll, inherent dangers, corrective action and the difference between a loll and a list
- effects of density of sea water on the draught and freeboard of a vessel
- features of the load-line and draught marks of a vessel and procedures for carrying out related calculations

- fundamental principles of ship construction and the theories and factors that impact on trim and stability, and measures necessary to preserve trim and stability
- IMO recommendations concerning vessel stability
- levelling arrangements for damaged side compartments
- principle stresses that act on the structure of a vessel, including panting and pounding
- principles of parametric rolling and control methods
- principles of synchronous rolling and methods for its control
- procedures for calculating the required load distribution to achieve the desired trim
- typical problems related to the control of trim and stability for vessels of 500 gross tonnage and more
- WHS/OHS requirements and work practices.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations or where this is not available, in an industry-approved marine operations site or simulation where managing stability of a vessel of 500 gross tonnage or more may be demonstrated.

Resources for assessment include access to:

- relevant documentation including workplace procedures, regulations, codes of practice and operation manuals
- tools, equipment, materials and personal protective equipment currently used in industry.

Performance should be demonstrated consistently over time and in a suitable range of contexts.

## MARA010 Manage loading, unloading and stowage of cargo

### Modification History

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release 3.0.

### Application

This unit involves the skills and knowledge required to manage the loading, stowage, securing and care of cargo during the voyage and the unloading of cargo, according to the cargo plan, organisational procedures and vessel stowage limitations.

This unit applies to the work of a Watchkeeper Deck and Master up to 500 gross tonnage.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

A – Handling Cargo and Vessel Stability

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Review cargo plan

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Cargo plan is interpreted to determine required cargo operations

1.2 Characteristics of cargo being transported are identified and the type, severity and impact of the hazard posed by cargo on safety, the environment, vessel operations and personnel are

established

- 1.3 Cargo plan is evaluated to ensure regulations relating to hazardous materials/dangerous goods are observed
- 1.4 Cargo plan is assessed to ensure incompatible cargo stowage is avoided
- 1.5 Cargo plan is checked to ensure unloading sequence is effective

## **2 Prepare for loading**

- 2.1 Holds are checked to ensure they are clean, dry and free of smell
- 2.2 Safety arrangements are verified to ensure they are operational
- 2.3 Supplies of cargo protection and securing material are reviewed to ensure there are sufficient available
- 2.4 Bilge suction are protected before loading
- 2.5 Checks are made to ensure cargo is correctly identified, inspected and confirmed against documentation
- 2.6 Preparations for loading are monitored according to stowage plan and organisational procedures
- 2.7 Ballast discharge plan is identified and confirmed and appropriate actions to support this plan are undertaken

## **3 Supervise loading/unloading of cargo**

- 3.1 Instructions are given to crew and stevedores involved in cargo loading/unloading according to cargo stowage plan
- 3.2 Compliance with regulations, procedures and instructions pertaining to type of cargo being handled is managed during loading/unloading operations
- 3.3 Loading/unloading is monitored to ensure loading rate is not exceeded
- 3.4 Vessel stability is observed during loading/unloading operations
- 3.5 Loading/unloading operations are checked against cargo plan
- 3.6 Cargo is secured according to cargo plan
- 3.7 Cargo handling documentation is completed according to organisational procedures and regulatory requirements

- 3.8 Transfer of cargo is monitored to prevent hazards
- 3.9 Gas monitoring equipment is regularly inspected and used according to organisational procedures, as required
- 4 Monitor care of cargo during voyage**
  - 4.1 Plan for care of cargo during voyage is implemented according to organisational and customer requirements, and relevant regulations
  - 4.2 Ventilation and humidity control systems are checked
  - 4.3 Actions required to maintain the safety and security of cargo during the voyage are initiated according to customer requirements and organisational procedures
  - 4.4 Compliance with safety and hazard minimisation procedures and regulations related to cargo care is managed at all times during the voyage to maintain the safety of personnel, cargo and vessel
  - 4.5 Safety procedures are followed and appropriate action is taken when defects or damage to cargo are detected
- 5 Take precautions to prevent pollution of the environment**
  - 5.1 Procedures to prevent pollution are identified and observed at all times
  - 5.2 Measures to prevent pollution during normal and emergency situations are applied according to regulatory requirements and organisational procedures
  - 5.3 All relevant information is immediately reported to appropriate persons when a vapour leak or cloud is detected or a malfunction has occurred that poses a risk of a vapour leak or cloud
  - 5.4 Shore-based response personnel are promptly notified when a vapour leak or cloud occurs

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Cargo plan includes:

- cargo weight
- correct description and stowage of hazardous and dangerous goods
- description of cargo to be loaded
- load/discharge port
- segregation of non compatible cargo
- stowage of refrigerated containers

Cargo includes one or more of the following:

- bulk cargo
- chemicals and oils
- containerised cargo
- deck cargo
- heavy lift cargo
- liquefied gas
- liquid cargo
- material, equipment or machinery that may be safely handled and stowed on vessel
- refrigerated cargo

Hazardous materials/dangerous goods include:

- any cargo described in the International Maritime Dangerous Goods (IMDG) Code as hazardous or dangerous

Incompatible cargo stowage includes one or more of the following:

- cargo liable to taint
- dangerous and hazardous goods

Cargo handling documentation includes one or more of the following:

- cargo gear register
- cargo receipts
- Cargo Securing Manual
- logbook entries
- Note of Protest
- Notice of Readiness to load or discharge
- operation orders and instructions
- safety data sheets (SDSs)/material safety data sheets (MSDSs)
- safety management system relating to cargo carriage
- ship/shore safety checklists

Actions required to maintain the wellbeing of cargo include one or more of the following:

- maintaining adequate ventilation
- monitoring cargo spaces
- temperature control of refrigerated or cooled cargo

Defects or damage to cargo include one or more of the following:

- damage caused by cargo movement
- deterioration of perishable cargo
- water ingress

## Unit Mapping Information

No equivalent unit.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARA010 Manage loading, unloading and stowage of cargo**

## **Modification History**

Release 1. This is the first release of this unit of competency in the MAR Maritime Training Package Release 3.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying international regulations, codes and standards concerning the safe handling, stowage, securing and transport of bulk cargo and dangerous, hazardous, and harmful cargo
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- carrying out cargo operations according to cargo plan or other documents and established safety rule/regulations, equipment operating instructions and shipboard stowage limitations
- establishing and maintaining effective communications during loading, stowage, transportation and unloading
- initiating timely action in response to defects or damage
- monitoring and anticipating problems and risks associated with loading, unloading, stowage and care of cargo
- monitoring use of equipment in loading, unloading, stowage and care of cargo
- reading, interpreting and applying instructions, regulations, procedures and information associated with loading, unloading, stowage and care of cargo
- reading and interpreting safety data sheets (SDSs)/material safety data sheets (MSDSs), relevant cargo-related hazards to vessel and to personnel, and taking appropriate action according to organisational procedures
- interpreting and applying knowledge of bulk ship, chemical and oil tanker, and liquefied gas tanker layouts, cargo features, characteristics and hazards, and related hazard prevention strategies to duties on various types of vessel
- recognising problems and hazards that can arise when managing safety on a liquefied gas tanker, taking appropriate remedial action and initiating appropriate solutions.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- ballast management issues and procedures
- bulk ships, chemical and oil tanker layouts, liquefied gas tanker layouts, cargo features and characteristics
- dangerous goods classification, signage, stowage and segregation requirements under the International Maritime Dangerous Goods (IMDG) Code and relevant Marine Orders
- cargo handling documentation requirements
- cargo lifting equipment and safe working loads
- hazards and control measures associated with bulk ships, chemical and oil tanker cargo loading, and liquefied gas tanker cargo loading, stowage and unloading
- relevant firefighting operations and the use of firefighting equipment
- effect of cargo, including heavy lifts, on the seaworthiness and stability of the vessel
- effects of different types of cargo operations on vessel trim and stability
- effects on cargo handling of sea conditions, wind and weather
- effects on stability during loading and discharging operations including heeling moments from gear and loads
- methods of caring for various types of cargo
- operational characteristics of different types of shipboard and terminal-based cargo handling equipment and facilities
- procedures for carrying out calculations involving weights, capacities, stowage factors
- relevant firefighting operations and the use of firefighting equipment
- relevant sections of maritime regulations, codes and conventions related to chemical and oil tankers, and liquefied gas tankers
- relevant WHS/OHS and cargo handling legislation, codes of practice, policies and procedures
- safe handling, stowage and securing of cargo including dangerous, hazardous and harmful cargo, and their effect on the safety of life and the vessel
- standard stowage position numbering systems used on container vessels
- typical cargo handling problems and hazards, and appropriate preventative and remedial actions and solutions
- typical types and sizes of shipping containers
- usual methods of container packing, loading and discharging, stowage, dunnaging
- various types of cargo likely to be carried; their peculiar characteristics, liability to damage, decay or deterioration; their measurements, hazards and problems; appropriate preventative and remedial action and solutions
- ways of restricting vessel stress levels within permitted levels within permitted limits during loading/discharging cargo.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations or where these are not available, in simulated workplace operational situations or an industry-approved marine operations site.

Resources for assessment must include access to:

- gas monitoring equipment including:
  - gas monitoring instruments
  - oxygen indicators
- firefighting equipment including:
  - firefighting agents
  - fixed dry chemical systems
  - fixed foam systems
  - portable foam systems
- tools, cargo handling equipment, piping systems and valves and personal protective equipment currently used in industry
- documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals, including SDSs/MSDSs.
-

# MARB001 Assist with routine maintenance of a vessel

## Modification History

Release 1. New unit of competency.

## Application

This unit involves the skills and knowledge required to carry out general routine maintenance on a vessel up to 80 metres.

This unit applies to general purpose hands working in the maritime industry on vessels up to 80 metres in near coastal waters as part of a vessel crew.

This unit has links to legislative and certification requirements.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Select and set up equipment and materials for cleaning**

- 1.1 Equipment is selected according to type of cleaning to be undertaken
- 1.2 Equipment is checked to ensure it is clean and serviceable
- 1.3 Suitable dry and wet cleaning agents and chemicals are selected and prepared according to manufacturer instructions and work health and safety(WHS)/occupational health and safety (OHS) requirements

- 1.4 Suitable personal protective clothing and equipment is selected and used where necessary
- 2 Clean work area**
  - 2.1 Work area to be cleaned is prepared and hazards are identified
  - 2.2 Work area is barricaded or warning signs are provided, as appropriate, to reduce risk to self and other crew members
  - 2.3 Correct cleaning agents are selected and applied according to manufacturer instructions and WHS/OHS requirements
  - 2.4 Equipment is used correctly and safely
- 3 Follow instructions to carry out routine maintenance of vessel machinery**
  - 3.1 Suitable personal protective clothing is selected and used according to WHS/OHS safety requirements
  - 3.2 Greasing, lubrication and other routine servicing of vessel machinery and equipment is carried out according to supervisor and manufacturer instructions
  - 3.3 Routine adjustments and repairs are made to vessel machinery and equipment according to supervisor and manufacturer instructions
  - 3.4 Faulty vessel machinery and equipment is identified and reported according to workplace procedures
- 4 Prepare and paint surfaces**
  - 4.1 Suitable personal protective clothing is selected and used according to WHS/OHS requirements
  - 4.2 Surfaces are prepared using correct equipment
  - 4.3 Rust remover, rust converter and undercoats are applied according to manufacturer specifications
  - 4.4 Paints are mixed in correct proportions according to manufacturer specifications
  - 4.5 Finishing coat is applied using brush, roller or spray gun
- 5 Maintain and store tools, equipment and chemicals**
  - 5.1 Equipment and tools are cleaned, returned to operating order and stored according to supervisor and manufacturer instructions
  - 5.2 Environmental procedures are followed and waste from cleaning and maintenance tasks is collected, treated and disposed of or recycled, according to workplace procedures

- 5.3 Work area is cleaned and maintained according to workplace requirements
- 5.4 Malfunctions, faults, wear or damage to tools are reported according to workplace procedures
- 5.5 Chemicals are stored according to supervisor and manufacturer instructions

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Equipment includes one or more of the following:

- cleaning supplies
- hand held power tools
- hand tools
- grease guns
- paint and rust prevention material
- personal protective equipment

Personal protective clothing and equipment includes one or more of the following:

- boots
- gloves
- hat/hard hat
- hearing protection
- overalls
- protective eyewear

- respirator or face mask
- safety harness
- sun protection
- wet weather gear

Work area includes one or more of the following:

- battery room
- engine room
- exposed deck area
- firefighting equipment spaces
- store room
- wheelhouse and accommodation area

Routine adjustments and repairs includes one or more of the following:

- checking cooling system, fuel, grease and oil, battery levels
- dismantling and assembling
- inspecting fan belts, leads, lines, connections, air filters, hydraulics, lighting
- making minor adjustments
- testing

Surfaces include one or more of the following:

- external and internal bulkhead
- funnel
- hatches and coamings
- hull
- masts

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARB1001A Assist with routine maintenance of a vessel.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB001 Assist with routine maintenance of a vessel**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing maintenance records
- implementing safe and environmentally responsible work practices
- reading, interpreting and applying manufacturer instructions including all WHS/OHS requirements and data safety sheets (SDS)/material safety data sheets (MSDS)
- recognising faulty equipment
- selecting and using correct tools and equipment for cleaning or maintenance task.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- component parts, operation and routine maintenance requirements of vessel machinery
- environmental and waste management procedures:
  - preventative measures with regard to damage to natural areas caused by servicing, maintenance and cleaning activities
  - safely using and disposing of cleaning and maintenance debris including oil containers, fuel and chemical residues, paint
- equipment cleaning and preservation techniques
- maintenance hazards and problems
- paint types and applications
- principles and procedures of machinery lubrication as they relate to vessel machinery
- procedures for using hand tools for routine maintenance operations
- relevant WHS/OHS and pollution control legislation
- rust treatment
- techniques for maintenance of surfaces including paint, timber, fibre glass, steel and aluminium
- types, characteristics and functions of:
  - equipment/tools used in cleaning and maintenance
  - vessel machinery and equipment
- workplace cleaning and maintenance procedures.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

## Links

Companion Volume implementation guides are found in VETNet -

# **MARB008 Carry out basic welding, brazing, cutting and machining operations on a coastal vessel**

## **Modification History**

Release 1. New unit of competency.

## **Application**

This unit involves the skills and knowledge required to carry out basic welding, brazing, cutting and machining tasks.

This unit applies to engine workers in the maritime industry working as a Marine Engine Driver Grade 1 Near Coastal on vessels up to 1500 kW.

This unit has links to legislative and certification requirements.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B - Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Carry out basic welding tasks**

- 1.1 Requirements for welding tasks are correctly interpreted from work instructions
- 1.2 Parts are prepared for welding according to established practice
- 1.3 Parts are welded according to established practice and work requirements

- 1.4 Weld defects are identified and appropriate action is taken according to established practice and standard operating procedures
- 1.5 Flame gouging methods are used to remove plate and weld material according to established practice and standard operating procedures
- 1.6 Finished work is checked against work instructions for accuracy and quality
- 2 Carry out basic brazing tasks**
  - 2.1 Requirements for brazing tasks are correctly interpreted from work instructions
  - 2.2 Parts are prepared for brazing according to established practice and work requirements
  - 2.3 Brazing equipment is prepared for brazing operations according to established procedures
  - 2.4 Parts are brazed using established procedures
  - 2.5 Finished work is checked against work instructions for accuracy and quality
- 3 Carry out basic cutting tasks**
  - 3.1 Instructions are reviewed, and required size and shape of cut work is correctly identified and interpreted
  - 3.2 Work is correctly marked out in preparation for cutting according to established practice and standard operating procedures
  - 3.3 Thermal cutting plant and equipment is set up according to established procedures
  - 3.4 Steel plate and/or rolled sections are cut to shape and size according to established practice and standard operating procedures
  - 3.5 Finished work is checked against work instructions for accuracy and quality according to standard operating procedures
- 4 Carry out basic machining tasks**
  - 4.1 Requirements for basic machining tasks are correctly interpreted from work instructions according to standard operating procedures
  - 4.2 Work is correctly marked out in preparation for basic machining according to established practice and standard

		operating procedures
	4.3	Machine is set up according to established procedures
	4.4	Machining is carried out according to established procedures
	4.5	Finished work is checked against work instructions for accuracy and quality according to standard operating procedures
<b>5</b>	<b>Follow safety and hazard control procedures</b>	
	5.1	Required safety precautions and regulations are followed when carrying out basic welding
	5.2	Operational hazards are identified and action is taken to eliminate, or where elimination is not possible to minimise, risk to personnel

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Operational hazards include one or more of the following:	<ul style="list-style-type: none"> <li>• moving and rotating machinery</li> <li>• moving heavy loads using unsafe procedures</li> <li>• non-compliance with safe working procedures</li> <li>• poor housekeeping procedures</li> <li>• power tools</li> <li>• sharp tools and implements</li> <li>• unsecured machinery, components or equipment</li> <li>• using equipment beyond safe working limits</li> </ul>
---	---

- using welding equipment near explosive/flammable liquids and gases

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARB4001A Carry out basic welding, brazing, cutting and machining operations on a coastal vessel.

## Links

Companion Volume implementation guides are found in VETNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB008 Carry out basic welding, brazing, cutting and machining operations on a coastal vessel**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out basic welding, brazing, cutting and machining tasks while underway, in port and moored or at anchor
- cleaning, sharpening or adjusting tools according to standard operating procedures
- dressing and truing a grinding wheel
- following required work schedule according to company requirements
- identifying a glazed, loaded or untrue grinding wheel condition and taking appropriate action
- marking out work to specifications, and measuring and checking the quality of finished work
- performing basic calculations required to carry out basic welding, brazing, cutting and machining operations
- reading and interpreting work specifications and drawings
- reading, interpreting and applying instructions and standard operating procedures relevant to basic welding, brazing, cutting and machining operations required on a coastal vessel
- recognising routine problems that may occur when performing basic welding, brazing, cutting and machining operations on a vessel and taking appropriate action
- selecting and safely using welding, brazing, cutting and machining tools and equipment according to operating procedures
- storing welding, brazing, cutting and machining tools and equipment after use according to standard procedures
- taking action promptly to report operational incidents and problems according to regulations and shipboard procedures
- using effective verbal and other communication skills required when carrying out basic welding, brazing, cutting and machining operations on a vessel
- working safely and collaboratively with others when carrying out basic welding, brazing, cutting and machining operations on a vessel.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable sections of relevant maritime regulations
- applicable legislation, regulations and codes of practice:
  - National Standard for Commercial Vessels (NSCV) and Uniform Shipping Laws (USL) Code
  - relevant Australian engineering standards
  - relevant state and territory marine regulations
  - relevant work health and safety (WHS)/occupational health and safety (OHS) and pollution control legislation and policies
- basic operations within area of own responsibility:
  - basic fillet welds
  - basic butt welds
  - basic pad welds
  - manual metal arc welding
  - oxygen acetylene welding
  - basic machining operation
- characteristics and identifying features of common engineering drill bits
- documentation and records:
  - maintenance records
  - manufacturer instructions for tools and equipment
  - relevant safety data sheets (SDS)/material safety data sheets (MSDS)
  - safety management system plans, procedures, checklists and instructions
  - work instructions
  - vessel and company procedures
- environmental protection measures when carrying out basic engineering tasks
- hazards and related safety precautions when carrying out basic welding, brazing, cutting and machining tasks
- procedures for:
  - identifying a glazed, loaded or untrue grinding wheel condition
  - dressing and/or truing a grinding wheel
- safety management system and procedures
- standard operating procedures for basic welding, brazing, cutting and machining tasks required of a Marine Engine Driver Grade 1
- standard procedures for marking out work to specifications and measuring and checking the quality of finished work, including the correct use of:
  - adjustable gauge
  - callipers
  - centre punch hammers
  - dividers
  - rules and tapes
  - scribes
  - squares

- trammels
- vernier callipers and micrometer
- techniques for identifying defective welds within limits of responsibility
- types, names and identifying features of drilling machines used on coastal maritime vessels
- typical work specifications and drawings used on a coastal vessel.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

## MARB009 Manage refuelling

### Modification History

Release 2. ISC upgrade. Correction to typographical error in Performance Criteria 2.9.

Release 1. New unit of competency.

### Application

This unit involves the skills and knowledge required to manage refuelling and fuel transfer operations.

This unit applies to engine workers in the maritime industry working as a Marine Engine Driver Grade 1 Near Coastal on vessels up to 1500 kW.

This unit has links to legislative and certification requirements.

### Pre-requisite Unit

Not applicable.

### Competency Field

B - Equipment Checking and Maintenance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan refuelling or fuel transfer operations**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Fuel tanks are dipped to establish current level of fuel
- 1.2 Fuel is ordered according to organisational procedures
- 1.3 Amount and positioning of fuel on board vessel is calculated with reference to tank tables

- |  |     |  |
|--|-----|--|
|  | 1.4 | Impact of refuelling on safety and operation of vessel is determined and appropriate strategies are implemented  |
|  | 1.5 | Local port authorities are informed of vessel location for bunkering operations and duration of bunkering  |
| <b>2 Prepare vessel for refuelling or fuel transfer operations</b> | 2.1 | Vessel is positioned and secured for refuelling  |
|  | 2.2 | All personal protective equipment is accessed and used   |
|  | 2.3 | Bunkering equipment is correctly deployed according to organisational procedures   |
|  | 2.4 | Safety zone for refuelling process is established and maintained for full duration of operation  |
|  | 2.5 | Procedures for refuelling are established with bunker operator and completed lists are checked according to organisation and safety management system (SMS) requirements |
|  | 2.6 | Bunker hose is securely connected to vessel fuel manifold  |
|  | 2.7 | Tank valves are opened as necessary and refuelling operations are performed safely according to SMS and regulatory requirements  |
|  | 2.8 | Tanks are dipped to ensure correct amount of fuel has been received  |
|  | 2.9 | Fuel samples are taken to check quality of fuel received and appropriate action is taken if fuel sample is not to specification  |
| <b>3 Complete refuelling operations</b>                            | 3.1 | Shut-down procedures are conducted according to organisational procedures  |
|  | 3.2 | Malfunctions, faults, irregular performance or damage to refuelling equipment are recorded and repairs are organised, according to organisational procedures             |
|  | 3.3 | Refuelling equipment is maintained and secured according to organisational procedures  |
|  | 3.4 | Refuelling records are completed according to organisational procedures and regulatory requirements  |
| <b>4 Manage an emergency</b>                                       | 4.1 | Appropriate response is made to an emergency situation according to organisational procedures  |

- 4.2 Safety zone is closed off and isolated according to organisational procedures
- 4.3 All persons in the safety zone are correctly notified and their activities are managed to ensure safety according to organisational procedures
- 4.4 Appropriate authorities are notified and actions are taken as directed according to emergency procedures and regulatory requirements
- 4.5 Documentation of emergency is completed according to organisational procedures and relevant maritime authority

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Impact of refuelling on safety and operation of vessel include one or more of the following:

- hot work
- increase in the potential for fire
- loading and discharging operations
- stability including the effect of free surface
- toxic fumes
- work being conducted by shore contractors

Personal protective equipment must include:

- gloves
- overalls

- work boots
- Bunkering equipment includes one or more of the following :
- bunding
  - bunker flag
  - fire extinguishers
  - no smoking signs
  - radios
  - sample containers
  - scupper plugs
  - sounding tape
  - spill kit
- Safety zone includes one or more of the following:
- area where no smoking or hot work is permitted
  - area that can contain a spill
- Procedures for refuelling includes one or more of the following:
- establishing:
  - flow rates
  - system of communication with supplier in relation to starting and shut-down procedures
  - emergency disconnection procedures
- Shut-down procedures include one or more of the following:
- blowing through of bunker hoses
  - disconnecting bunker hose
  - isolating fuel valves
  - stowing equipment
- Refuelling records include one or more of the following:
- bunker receipt
  - log book entry
  - oil record book
- Emergency situations include one or more of the following:
- broken mooring lines
  - fire
  - oil spill
- Documentation includes one or more of the
- incident report forms
  - logbook entry

following:

## **Unit Mapping Information**

This is a new unit. This unit is equivalent to MARB4003A Manage refuelling.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for MARB009 Manage refuelling

## Modification History

Release 2. Correction to typographical error in Performance Criteria 2.9.

Release 1. New unit of competency.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing required records
- implementing procedures for dealing with an oil spill
- measuring tank levels
- recognising faulty equipment and taking appropriate action
- recognising problems and hazards during refuelling and fuel transfer operations, and taking appropriate action
- selecting and using relevant equipment required for refuelling and fuel transfer operations
- taking appropriate action in an accidental spillage, fire or safety incident during refuelling and fuel transfer operations.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental protection measures to be applied during refuelling or transfer operations
- functions and responsibilities of crew during refuelling or transfer operations
- hazards and safety precautions to be observed during refuelling or transfer operations
- own ability and limits to rectify irregularities and faults
- refuelling and fuel transfer procedures applying to commercial vessels
- requirements for reporting incidents
- work health and safety (WHS)/occupational health and safety (OHS) and pollution control legislation and policies.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

# MARB010 Plan and supervise routine maintenance on a vessel up to 80 metres

## Modification History

Release 1. New unit of competency.

## Application

This unit involves the skills and knowledge required to implement a maintenance program for a vessel up to 80 metres.

This unit applies to people working in the maritime industry on a range of vessels up to 80 metres.

This unit has links to legislative and certification requirements.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Develop maintenance program**

- 1.1 Planned maintenance system is accessed to establish maintenance requirements for vessel
- 1.2 Maintenance program for vessel is developed to meet requirements of planned maintenance system
- 1.3 Maintenance schedules and budgets are identified

- 1.4 Suggestions that support effective implementation of maintenance program are offered according to organisational procedures
- 1.5 Strategies to minimise impact of maintenance activities on vessel operations are identified
- 2 Implement maintenance program**
  - 2.1 Routine maintenance activities are proposed and prioritised in conjunction with others involved in or affected by maintenance work
  - 2.2 Routine maintenance activities are allocated within scheduled timeframes and budgets according to organisational procedures
  - 2.3 Vessel operations are maintained where possible without interruption
  - 2.4 Safety of crew is maintained at all times according to relevant legislation and organisational procedures
  - 2.5 Requests for assistance from crew to complete maintenance activities are responded to promptly
- 3 Identify failed or unsafe machinery and equipment**
  - 3.1 Faulty machinery and equipment is identified and clear and noticeable warning signs are erected according to organisational procedures
  - 3.2 Failed or unsafe machinery and equipment is assessed according to organisational procedures
  - 3.3 Repairs are allocated to appropriate crew members according to organisational procedures
  - 3.4 Unsafe machinery and equipment which cannot be repaired is promptly tagged and isolated according to organisational procedures
  - 3.5 Unsafe machinery and equipment is promptly reported according to organisational procedures
  - 3.6 Reports on all repair work undertaken are completed according to organisational procedures
- 4 Monitor supplies**
  - 4.1 Supply and stock levels are maintained to ensure ongoing availability
  - 4.2 Management of supplies is undertaken according to organisational procedures

- 4.3 Supply and stock levels are reconciled and any discrepancies are rectified or reported
- 4.4 Supply records are maintained according to organisational procedures

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Planned maintenance system must include:

- anchoring equipment
- communications equipment
- compliance with applicable mandatory rules and regulations, including work health and safety (WHS)/occupational health and safety (OHS) and environment protection legislation
- continuous improvement and review procedures
- document control procedures
- firefighting equipment
- identifying hazards and risk management
- lifesaving equipment
- navigation equipment
- procedures for updating and correcting charts, publications and electronic chart information
- provision of safe practices in vessel operation and a safe working environment
- reference to applicable codes, guidelines and standards
- steering gear

	<ul style="list-style-type: none"><li>• systems for recording completed maintenance schedules, including identification of defective equipment and rectification of defects</li></ul>
Maintenance program must include:	<ul style="list-style-type: none"><li>• lines of communication and relationship between vessel and owner</li><li>• periodic survey requirements</li><li>• procedure for programmed maintenance of hull and machinery</li><li>• regular inspection of all equipment referred to in planned maintenance system</li><li>• routine maintenance as contained in manufacturer instruction manuals and drawings</li><li>• safety and environmental policy</li></ul>
Routine maintenance activities include one or more of the following:	<ul style="list-style-type: none"><li>• checking life saving appliances</li><li>• inspecting breathing apparatus</li><li>• navigational equipment</li><li>• operation of emergency firefighting equipment including fire hoses and nozzles</li><li>• servicing equipment as required by service manuals and manufacturer instructions relating to vessel equipment</li><li>• testing communication equipment, including distress calling</li><li>• testing lifting equipment</li></ul>
Machinery and equipment includes one or more of the following:	<ul style="list-style-type: none"><li>• fire pumps</li><li>• navigational equipment</li><li>• steering gear and emergency steering gear</li><li>• winches and windlasses</li></ul>
Management of supplies include one or more of the following:	<ul style="list-style-type: none"><li>• issue</li><li>• purchase</li><li>• receipt</li><li>• stock control</li><li>• storage</li></ul>

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARB4005A Plan and supervise routine maintenance on a vessel up to 80 metres.

## Links

Companion Volume implementation guides are found in VETNet -

# **Assessment Requirements for MARB010 Plan and supervise routine maintenance on a vessel up to 80 metres**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- effectively liaising with internal and external authorities/agencies
- initiating timely action in response to defects or damage
- interpreting planned maintenance system to determine maintenance requirements
- managing maintenance of vessel
- monitoring selection and use of supplies involved in maintenance of vessel
- preparing reports on outcomes of inspection and maintenance activities
- reading and interpreting safety data sheets (SDS)/material safety data sheets (MSDS)
- reading and interpreting vessel, equipment and machinery specifications, drawings, operational manuals and diagrams
- taking appropriate precautions to prevent pollution of marine environment.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- elements of ship structure crucial to the safety of the ship
- fundamental principles of vessel construction
- maintenance records that must be maintained on vessel to meet organisational and statutory requirements
- nature and causes of corrosion of marine surfaces and structures, and available means for control
- principal structural components
- procedures for initiation and coordination of repair and/or replacement procedures on board vessel
- relevant laws and regulations including work health and safety (WHS)/occupational health and safety (OHS) and pollution control legislation
- slipping and docking procedures suitable for various types of hull forms
- typical problems related to maintenance of vessels and appropriate actions and solutions.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

# **MARB011 Undertake maintenance of 240 to 440 voltage alternating current electrical systems**

## **Modification History**

Release 1. New unit of competency.

## **Application**

This unit involves the skills and knowledge required to perform establish, organise and implement a preventative and reactive maintenance program and capabilities on 240 to 440 voltage alternating current (AC) electrical systems on a vessel.

This unit applies to engine workers in the maritime industry working as a Marine Engine Driver Grade 1 Near Coastal on vessels up to 1500 kW.

**WARNING:** Relevant state/territory qualification requirements apply to persons carrying out installation, maintenance and/or repair of refrigeration equipment, especially with regard to preventing the escape of refrigerants into the atmosphere and to electrical work.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B - Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Verify maintenance requirements**

- |     |  |
|-----|--|
| 1.1 | Regulatory and organisational requirements for electrical system maintenance program are identified and followed |
| 1.2 | Specifications, diagrams and organisational procedures for electrical systems are checked for recommended        |

## maintenance

- 1.3 Special requirements for electrical system maintenance are separated from adjustment and day-to-day maintenance schedules
- 1.4 Maintenance system goals for electrical systems are outlined
- 1.5 Maintenance plan and related work schedule for electrical systems are developed according to regulatory requirements and safety management system (SMS)
- 2 Establish maintenance systems**
  - 2.1 Maintenance costs are identified and quantified
  - 2.2 Interruptions, processes and procedures are documented
  - 2.3 Internal and external maintenance providers are specified
  - 2.4 Maintenance plan is prepared to minimise negative impacts on production, costs, waste and the environment
  - 2.5 Approvals for maintenance plan are negotiated and confirmed
  - 2.6 Recordkeeping systems are developed and maintained
- 3 Organise maintenance activities**
  - 3.1 Schedules and rosters are checked to verify time when maintenance process may be scheduled, including optimal timing for shut down
  - 3.2 Agreement from Master is obtained for timing of maintenance tasks to optimise maintenance process and minimise operational disruptions
  - 3.3 Detailed work plans are developed in line with schedules, availability of expertise and scheduling of resource availability
  - 3.4 Team members with required competencies are allocated to maintenance activities
  - 3.5 Consumables and equipment are secured to meet work plan requirements
  - 3.6 Externally sourced equipment, consumables and expertise are located and procured
  - 3.7 Contingency plans are prepared
  - 3.8 Maintenance schedules and procedures are effectively

- communicated to team
- 4 Supervise maintenance tasks**
- 4.1 Job specifications and maintenance tasks are communicated effectively to team members
  - 4.2 Maintenance and repair tasks are monitored to ensure they satisfy system specifications
  - 4.3 Work health and safety (WHS)/occupational health and safety (OHS) requirements are monitored and observed at all times
  - 4.4 Emergency equipment is made available and working order of this equipment is ensured
  - 4.5 Contingencies are managed to ensure quality of work is maintained and work is completed within agreed timeframe
- 5 Perform planned maintenance activities**
- 5.1 WHS/OHS risk control measures and procedures for carrying out work are followed
  - 5.2 Maintenance schedule and process compliance requirements are confirmed and work is appropriately sequenced according to job specification
  - 5.3 Appropriate person/s are consulted to ensure work is coordinated effectively with others
  - 5.4 Resources needed to conduct maintenance are obtained according to organisational procedures and are checked against job requirements
  - 5.5 Tools, equipment and testing devices needed to conduct maintenance are obtained according to organisational procedures and checked for correct operation and safety
  - 5.6 Live and operating system is tested or measured strictly according to WHS/OHS requirements and within established safety procedures
  - 5.7 Electrical equipment is checked as being isolated where necessary, strictly according to WHS/OHS requirements and within established safety procedures
  - 5.8 Electrical equipment to be maintained is inspected and evaluated for compliance with system specifications
  - 5.9 Noncompliant electrical equipment components are rectified or repaired according to system specifications

- |   |  |
|---|--|
| <b>6 Perform breakdown maintenance</b>                                    | 6.1 Nature of breakdown is confirmed with appropriate personnel  |
|   | 6.2 Extent of breakdown is evaluated and confirmed using diagnostic and troubleshooting techniques   |
|   | 6.3 Restrictions are applied to operations, if necessary, and agreed to with the Master  |
|   | 6.4 Electrical equipment is checked as being isolated where necessary, strictly according to WHS/OHS requirements and within established safety procedures |
|   | 6.5 Repair work is carried out according to system specifications  |
|   | 6.6 Master is notified of completion of repair work and details are documented   |
| <b>7 Monitor, adjust and report on implementation of maintenance plan</b> | 7.1 Maintenance tasks are monitored to ensure they are completed according to maintenance plan and statutory survey requirements                           |
|   | 7.2 Electrical systems are monitored to ensure achievement of planned outcomes   |
|   | 7.3 Costs are monitored and controlled   |
|   | 7.4 Adjustments are made to maintenance plan to take into account failure to achieve planned outcomes  |
|   | 7.5 Reports are completed according to maintenance plan requirements and organisational procedures   |
|   | 7.6 Recommendations to improve maintenance plan safety, efficiency and effectiveness are implemented under regular review of SMS                           |
|   | 7.7 Maintenance tasks are monitored to ensure they are completed according to maintenance plan and statutory survey requirements                           |

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Electrical systems include one or more of the following:

- AC generators
- alarm systems
- batteries
- electrical motor starting circuits
- emergency electrical supply
- emergency generators
- generators
- power and lighting
- shore supply
- steering gear
- switchboards

Special requirements for electrical system maintenance include one or more of the following:

- breakdown maintenance
- periodic inspections and surveys

Maintenance tasks include one or more of the following:

- battery maintenance
- generator servicing
- replacing faulty wiring
- testing:
  - alarm systems
  - emergency generator
- power and lighting systems

Consumables and equipment include one or

- replacement parts
- testing equipment

more of the following:

- tools and equipment rated for electrical work

Emergency equipment includes one or more of the following:

- alarm systems
- emergency generator
- firefighting equipment
- lifesaving equipment
- pump operations

Nature of breakdown includes one or more of the following:

- failure of electricity generating systems
- generator failure

Restrictions include one or more of the following:

- stopping main engine
- stopping one generator
- switching to emergency power

Reports include one or more of the following:

- incident reports
- maintenance log
- operational orders from organisation SMS
- reports required under planned maintenance system
- survey reports

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARB4006A Undertake maintenance of 240 to 440 voltage alternating current electrical systems.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB011 Undertake maintenance of 240 to 440 voltage alternating current electrical systems**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying safety requirements throughout work sequence including the use of personal protective equipment (PPE)
- completing all work to specification
- developing effective planning documents
- ensuring correct requirements and details of maintenance of electrical systems and equipment
- implementing safe and environmentally responsible work practices in testing and maintenance activities
- locating, interpreting and applying manufacturer specifications for electrical systems and equipment
- operating AC systems and conducting operator preventive maintenance according to manufacturer recommendations, regulations and vessel operating procedures to ensure safe operation
- operating electrical systems and equipment according to manufacturer recommendations, regulations and vessel operating procedures to ensure safe operation providing high quality reports
- recognising electrical system faults and where necessary taking steps to make them immediately safe
- selecting and using appropriate processes, tools and equipment.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- AC systems not exceeding 440 voltage AC
- batteries (types, care and maintenance, hazards)
- care of electrical systems and equipment in general (fault recognition)
- charging systems:
  - alarms/indicators
  - regulators

- connecting batteries
- electric systems (above 240 V AC and up to 440 V AC)
- fault identification, location and safety implications
- operation and maintenance of starter motors, alternators and associated equipment
- personal safety
- protective devices on switchboards
- shore power connection
- use of fuses and circuit breakers (selection of correct capacity).

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

# **MARB012 Undertake maintenance of machinery, machinery systems and structural components**

## **Modification History**

Release 1. New unit of competency.

## **Application**

This unit involves the skills and knowledge required to establish, organise and implement a preventative and reactive maintenance program and capabilities for machinery, machinery systems and structural components to optimise vessel operational performance.

This unit applies to engine workers in the maritime industry working as a Marine Engine Driver Grade 1 Near Coastal on vessels up to 1500 kW.

This unit has links to legislative and certification requirements.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B - Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Verify maintenance requirements**

- 1.1 Maintenance program regulatory and organisational requirements for machinery, machinery systems and structural components are identified and followed
- 1.2 Technical specifications, service requirements and organisational procedures for machinery, machinery systems and structural components are checked for recommended

## maintenance requirements

- 1.3 Special requirements for maintenance of machinery, machinery systems and structural components are separated from normal lubrication, adjustment and day-to-day maintenance schedules
- 1.4 Maintenance system goals for machinery, machinery systems and structural components are outlined
- 1.5 Maintenance plan and related work schedule for machinery, machinery systems and structural components is developed
- 2 Establish maintenance systems**
  - 2.1 Maintenance costs are identified and quantified
  - 2.2 Processes, procedures and delays are documented
  - 2.3 Internal and external maintenance providers are specified
  - 2.4 Maintenance plan is prepared to minimise ship operation costs, waste and harm to the environment
  - 2.5 Approvals for maintenance plan are negotiated and confirmed
  - 2.6 Recordkeeping systems are developed and maintained
- 3 Organise maintenance activities**
  - 3.1 Schedules and rosters are checked to verify time when maintenance process may be scheduled, including optimal timing for shut down
  - 3.2 Agreement with the Master is obtained for timing of maintenance tasks to optimise maintenance process and minimise operational disruptions
  - 3.3 Detailed work plans are developed in line with schedules, availability of expertise, scheduling of resource availability and environmental requirements
  - 3.4 Team members with required competencies are allocated to maintenance activities
  - 3.5 Consumables and equipment are secured to meet work plan requirements
  - 3.6 Externally sourced equipment, consumables and expertise are located and procured
  - 3.7 Contingency plans are prepared

- |   |     |  |
|---|-----|--|
|   | 3.8 | Maintenance schedules and procedures are effectively communicated to the team  |
| <b>4 Supervise maintenance tasks</b>            | 4.1 | Job specifications and maintenance tasks are communicated effectively to team members  |
|   | 4.2 | Maintenance and repair tasks are monitored to ensure they satisfy technical specifications   |
|   | 4.3 | Work health and safety (WHS)/occupational health and safety (OHS) requirements are monitored and observed at all times                       |
|   | 4.4 | Emergency equipment is made available and working order of this equipment is ensured   |
|   | 4.5 | Contingencies are managed to ensure quality of work is maintained and work is completed within agreed time frame                             |
| <b>5 Perform planned maintenance activities</b> | 5.1 | WHS/OHS risk control measures and procedures for carrying out work are followed  |
|   | 5.2 | Preventative maintenance is carried out in compliance with technical specifications  |
|   | 5.3 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes                               |
|   | 5.4 | Ongoing quality checks of maintenance work are undertaken according to technical specifications  |
|   | 5.5 | Work is carried out efficiently without waste of materials and damage to equipment, machinery or other services                              |
|   | 5.6 | Work site is made safe according to organisational safety procedures   |
|   | 5.7 | Maintenance work is checked to verify that it conforms with technical specifications   |
| <b>6 Perform breakdown maintenance</b>          | 6.1 | Nature of breakdown is ascertained and reported to appropriate personnel or authorities  |
|   | 6.2 | Maintenance records of machinery, machinery systems and structural components related to reported breakdown are reviewed for possible causes |
|   | 6.3 | Extent of breakdown is evaluated and confirmed using diagnostic and troubleshooting techniques   |

- 6.4 Restrictions are applied to operations where necessary and agreed to with the Master
- 6.5 Extent of repair work is ascertained from available evidence
- 6.6 Limits of repair work that can be carried out are established
- 6.7 Machinery and equipment is isolated
- 6.8 Repair work is carried out according to technical specifications
- 6.9 Master is notified of completed repair work and details are documented
- 7 **Monitor, adjust and report on implementing the maintenance plan**
  - 7.1 Execution of maintenance tasks is monitored to ensure they are completed according to maintenance plan and statutory survey requirements
  - 7.2 Machinery, machinery systems and structural components are monitored to ensure achievement of planned outcomes
  - 7.3 Costs are monitored and controlled
  - 7.4 Adjustments are made to maintenance plan to take into account failure to achieve planned outcomes
  - 7.5 Reports are completed according to maintenance plan requirements and organisational procedures
  - 7.6 Recommendations to improve maintenance plan safety, efficiency and effectiveness are implemented under regular review of safety management system
  - 7.7 Machinery, machinery systems and structural components are maintained in a clean and safe operational condition
- 8 **Carry out damage control procedures**
  - 8.1 Damage to vessel hull and watertight integrity is ascertained and monitored according to established procedures and safety regulations
  - 8.2 After hull damage, appropriate damage control measures are implemented to maintain watertight integrity and to control flooding of vessel according to vessel emergency and safety management plans

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

- greasing
- maintaining:
  - emergency equipment
  - firefighting and lifesaving equipment
- oiling
- oily water separator
- overhauling and repairing pumps
- scheduled survey inspections
- topping up oils

- Consumables and equipment include one or more of the following:
- cleaning chemicals
  - coolants
  - hand and power tools
  - oils and grease
  - refrigerant gas
  - replacement parts
  - test equipment

- Emergency equipment includes one or more of the following:
- communication equipment
  - emergency lighting
  - firefighting equipment
  - first aid provisions
  - lifesaving equipment

- Nature of breakdown includes one or more of the following:
- cooling water system failure
  - engine failure
  - exhaust systems
  - fuel system failure
  - gearbox failure
  - loss of control systems
  - lubricating systems failure
  - power plant failure
  - propeller and shafting arrangements
  - pumping systems failure
  - refrigeration plant and its operation
  - steering gear failure

- Restrictions applied to operations include one or
- stopping or slowing main engine
  - switching to emergency power

more of the following:

- Reports include one or more of the following:
- incident reports
  - maintenance log
  - reports required under planned maintenance system
  - survey reports

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARB4007A Undertake maintenance of machinery, machinery systems and structural components.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=772efb7b-4cce-47fe-9bbd-ee3b1d1eb4c2>

# **Assessment Requirements for MARB012 Undertake maintenance of machinery, machinery systems and structural components**

## **Modification History**

Release 1. New unit of competency.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing maintenance records
- developing effective planning documents
- implementing safe and environmentally responsible work practices
- managing legislative compliance and compliance records
- planning and organising application of control techniques for hull damage
- planning and preparing for maintenance including isolating equipment
- providing high quality report
- reading, interpreting and applying:
  - manufacturer instructions including all WHS/OHS requirements and safety data sheets (SDS)/material safety data sheets (MSDS)
  - operating and service manuals
- recognising damage to hull of small vessel and taking appropriate action according to operating instructions
- recognising faulty equipment including:
  - cooling water system corrosion
  - fuel oil contamination
  - lubricating oil contamination
- repairing pipe work
- selecting and using correct tools and equipment for maintenance task
- servicing valves.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate mathematical procedures for estimating and measuring including calculating time to complete tasks
- back-flooding and down-flooding
- causes of vibrations and undue wear in power transmission system

- construction, layout and subdivision requirements of a typical vessel, including freeboard and bulkhead deck, watertight compartments, weather tight compartments and bulkheads of vessel
- costs of material, consumables and labour
- environmental protection requirements including safe disposal of waste material, safe use and storage of chemicals, and safe handling and storage of LPG
- environmental risks and hazards
- inspections to be undertaken on vessel hull during slipping or dry docking
- maintenance procedures and methodologies for:
  - batteries
  - cooling water systems including treatment
  - fuel systems including contamination
  - heat exchangers
  - hull maintenance including use of sacrificial anodes
  - hydraulic systems
  - lifesaving appliances
  - lubricating oil systems including contamination
  - power transmission systems
  - steering systems
  - starter motors, alternators and associated equipment
- material and stress characteristics in constructing a vessel
- methods of corrosion and how to prevent corrosion
- organisational requirements, policies and procedures for organising maintenance programs
- principal features of structure of a vessel
- procedures for recording and reporting workplace information
- types of tools and equipment, and procedures for their safe use and maintenance
- valve types and construction.

## Assessment Conditions

Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- tools, equipment, machinery, materials and personal protective equipment currently used in industry
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operational manuals
- range of relevant exercises, case studies and/or simulations.

# MARB013 Maintain and repair marine electrical and electronic equipment

## Modification History

Release 1. New unit of competency.

## Application

This unit involves the skills and knowledge required to maintain and repair marine electrical and electronic equipment on a vessel. This includes carrying out routine maintenance of marine generators, switchboards, electric motors, motor starters, direct current (DC) electrical systems and electrical distribution systems; and identifying faults in automated control systems.

This unit applies to the work of a Marine Engineer Class 3 Near Coastal.

This unit has links to legislative and certification requirements.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Maintain marine generators**

- 1.1 Safety requirements associated with working on marine electrical generation systems are complied with
- 1.2 Marine generators are inspected using appropriate manuals and drawings according to regulatory, organisational and

- manufacturer requirements
- 1.3 Routine maintenance and testing of marine generators is performed according to regulatory, organisational and manufacturer requirements
  - 1.4 Alternators are synchronised according to organisational and manufacturer requirements
  - 1.5 Testing and maintenance records are maintained according to regulatory, organisational and manufacturer requirements
- 2 Maintain marine switchboards**
- 2.1 Safety requirements associated with handling circuit breakers are complied with
  - 2.2 Routine maintenance is performed on main circuit breaker according to with regulatory, organisational and manufacturer requirements
  - 2.3 Faults in circuit breakers are detected and corrected according to regulatory, organisational and manufacturer requirements
  - 2.4 Testing and maintenance records are maintained according to regulatory, organisational and manufacturer requirements
- 3 Maintain marine electrical motors**
- 3.1 Safety requirements associated with working on marine electrical motors are complied with
  - 3.2 Equipment required for maintenance of electrical motors is selected and checked for serviceability
  - 3.3 Routine maintenance procedures are applied on marine electrical motors according to regulatory, organisational and manufacturer requirements
- 4 Test marine electrical motor starters**
- 4.1 Safety requirements associated with working on marine electrical motor starters are complied with
  - 4.2 Faults in electrical motor starters are detected and rectified according to regulatory, organisational and manufacturer requirements
  - 4.3 Starting and running current load testing is performed on electrical motors according to regulatory, organisational and manufacturer requirements
  - 4.4 Procedures for finding start and finish of electrical motor windings are applied according to regulatory, organisational and manufacturer requirements

- 4.5 Testing and maintenance records are maintained according to regulatory, organisational and manufacturer requirements
- 5 Maintain marine electrical distribution systems**
- 5.1 Safety requirements associated with working on marine electrical distribution systems are complied with
- 5.2 Causes and potential dangers associated with earth faults in multi earth neutral and floating neutral systems are identified
- 5.3 Earth faults are detected and repaired using correct equipment according to regulatory, organisational and manufacturer requirements
- 5.4 Hazards associated with working on fluorescent lamp circuits are identified
- 5.5 Fluorescent lamp circuit is constructed using appropriate manuals and drawings according to regulatory, organisational and manufacturer requirements
- 5.6 Components, function and operation of watertight and flame proof fittings are identified
- 5.7 Reasons for earthing high voltage systems via a resistor are outlined
- 5.8 Routine maintenance, inspection and testing of marine electrical distribution systems is performed according to regulatory, organisational and manufacturer requirements
- 5.9 Temporary repairs to insulation are performed according to regulatory, organisational and manufacturer requirements
- 5.10 Limitation of temporary repairs to insulation in terms of survey requirements are identified
- 6 Maintain DC electrical systems**
- 6.1 Safety requirements associated with working on marine DC electrical systems are complied with
- 6.2 Operation of a rectifier is identified
- 6.3 Single-phase full wave rectifier fitted with filters is built and operated
- 6.4 Routine battery maintenance is carried out according to organisational and manufacturer requirements
- 6.5 Correct procedures for checking specific gravity of electrolyte in lead acid and alkaline batteries are applied

		according to manufacturer requirements
	6.6	Methods for supplying back up power for remote/automatic control equipment are identified
	6.7	Procedure for testing back up power is identified and applied
<b>7 Identify faults in automated control systems</b>	7.1	Pneumatic, hydraulic, electronic/electrical control systems are compared and contrasted
	7.2	Function and operation of main components of automated control systems is outlined
	7.3	Faults in automated control systems are detected and rectified using standard fault finding procedures
	7.4	Testing procedures for identifying function and performance of automatic control systems in vessel operating systems are identified and applied
<b>8 Operate electrical testing and measuring equipment</b>	8.1	Insulation tester is operated safely according to manufacturer procedures
	8.2	Continuity testing on electrical circuits is performed according to organisational and manufacturer procedures
	8.3	Clamp meter is operated safely according to manufacturer procedures
	8.4	Multimeter is operated safely according to manufacturer procedures
<b>9 Test automatic control devices</b>	9.1	Operational functions are performed on a monitor
	9.2	Different types and operation of control valves are identified
	9.3	Control system control functions are applied using different control devices

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Testing of marine generators include one or more of the following:

- functional test of automatic voltage regulator (AVR)
- insulation
- reading of alternator:
  - excitation circuit
  - stator

Faults in circuit breakers include one or more of the following:

- alignment of contactors
- condition of:
  - closing and opening mechanisms
  - insulation barriers
- wear and tear on linkages

Faults in electrical motor starters include one or more of the following:

- earthing
- open circuit

Main components of automated control systems include one or more of the following:

- actuator
- control valve
- controller
- positioner
- regulator
- relay
- sensor
- servomotor
- transducer

Faults in automated control systems include

- failure of components
- intermittent functional faults

one or more of the following:

Vessel operating systems include one or more of the following:

- auxiliary machinery
- boilers
- main engine
- power generation and distribution

Operation of control valves include one or more of the following:

- electrical
- hydraulic
- manual
- pneumatic

## Unit Mapping Information

This is a new unit. This unit is equivalent to MARB5001A Maintain and repair marine electrical and electronic equipment.
