Introduction 1

1 The nature of design 4

1.1 Design and analysis 4

1.2 A personal view of the design process 5

1.3 Teamwork in design 6

1.4 The specialisation of designers 7

1.5 Qualities required by a bridge designer 8

1.6 Economy and beauty in design 9

1.7 Expressive design 14

1.8 Bridges as sculpture 19

1.9 Engineering as an art form 23

2 Basic concepts 28

2.1 Introduction 28

2.2 Units 28

2.3 Loads on bridge decks 28

2.4 Bending moments, shear force and torque 29

2.5 Limit states 32

2.6 Statical determinacy and indeterminacy 33

3 Reinforced concrete 35

3.1 General 35

3.2 The historical development of reinforced concrete 35

3.3 General principles of reinforced concrete 37

3.4 Reinforced concrete in bending 40

3.5 The cracking of reinforced concrete 47

3.6 The exothermic reaction 51

3.8 Imposed loads and imposed deflections 58

3.9 Creep and relaxation of concrete 60

- 3.10 Truss analogy 61
- 3.11 Strut-and-tie analogy 70
- 3.12 Continuity between the concepts of bending and arching action 77

4 Prestressed concrete 80

- 4.1 Introduction 80
- 4.2 A comparison between reinforced concrete and prestressed concrete 84
- 4.3 Pre-tensioning and post-tensioning 89
- 4.4 Conclusion 90

5 Prestressing for statically determinate beams 91

- 5.1 General 91
- 5.2 Materials employed for the example 91
- 5.3 Section properties 91
- 5.4 Central kern and section efficiency 93
- 5.5 Loads 95
- 5.6 Bending moments, bending stresses and shear force 95
- 5.7 Centre of pressure 96
- 5.8 Calculation of the prestress force 97
- 5.9 Table of stresses 100
- 5.10 Non-zero stress limits 101
- 5.11 Compressive stress limits 102
- 5.12 Sign convention 103
- 5.13 Arrangement of tendons at mid-span 103
- 5.14 Cable zone 104
- 5.15 The technology of prestressing 107
- 5.16 Cable profile 111
- 5.17 Losses of prestress 116
- 5.18 The concept of equivalent load 120
- 5.19 Internal and external loads 125
- 5.20 Prestress effect on shear force 125
- 5.21 Anchoring the shear force 126
- 5.22 Deflections 126
- 5.23 The shortening of prestressed members 128
- 5.24 Forces applied by prestress anchorages 129
- 5.25 Following steel 135

5.26 The introduction of prestress forces 137

5.27 Bonded and unbonded cables 137

6 Prestressing for continuous beams 139

6.1 General 139

6.2 The nature of prestress parasitic moments 139

6.3 Parasitic moments at the ULS 142

6.4 The effect of parasitic moments on the beam reactions 143

6.5 Concordant cables 144

6.6 Straight cables in built-in beams 144

6.7 Cable transformations 145

6.8 Control of prestress parasitic moments 145

6.9 Details of the sample bridge deck 146

6.10 Section properties 147

6.11 Comment on the accuracy of calculations 149

6.12 Dead and live loads 150

6.13 Bending moments 150

6.14 Considerations on the choice of tendon size 164

6.15 Calculating the prestress force 165

6.16 Prestress scheme 1 167

6.17 Prestress scheme 2 174

6.18 Non-zero stress limits 175

6.19 Very eccentric cross sections 177

6.20 Design of the parasitic moments 177

6.21 Modification of bending moments due to creep 179

6.22 Modification of bending stresses due to creep following change of cross section 184

6.23 Bursting out of tendons 185

6.24 The anchorage of tendons in blisters 187

6.25 Checks at the ULS 187

7 Articulation of bridges and the design of substructure 191

7.1 General 191

7.2 Design parameters 191

7.3 Bearings: general design considerations 194

7.4 Mechanical bearings 194

7.5 Elastomeric bearings 197

7.6 Concrete hinges 198

- 7.7 Design of foundations 199
- 7.8 The design of piers 208
- 7.9 The articulation of decks with mechanical bearings 212
- 7.10 Deck on laminated rubber bearings 222
- 7.11 Piers built into the deck 223
- 7.12 Split piers 223
- 7.13 Integral bridges 226
- 7.14 Continuity versus statical determinacy 227
- 7.15 Examples of bridge articulation 231

8 The general principles of concrete deck design 238

- 8.1 General 238
- 8.2 Transverse bending 238
- 8.3 Transverse distribution of live loads 240
- 8.4 Material quantities and costs 243
- 8.5 Choice of most economical span 248

9 The design of bridge deck components 250

- 9.1 General 250
- 9.2 Side cantilevers 250
- 9.3 Top slabs 264
- 9.4 Bottom slabs 270
- 9.5 Webs 278
- 9.6 Diaphragms 294
- 9.7 Deck drainage 303
- 9.8 Waterproofing 306
- 9.10 Expansion joints 307

10 Precast beams 308

- 10.1 General 308
- 10.2 Standard precast beams 308
- 10.3 Customised precast beams 312

11 Solid slabs, voided slabs and multi-cell box girders 327

- 11.1 Slab bridges, general 327
- 11.2 Reinforced concrete slab bridges 327
- 11.3 Prestressed concrete slab bridges 328
- 11.4 Solid slab portal bridges 333
- 11.5 Voided slabs 340
- 11.6 Case history: River Nene Bridge 344

11.7 Multi-cell box girders 346

12 Ribbed slabs 349

12.1 General 349

12.2 Behaviour of twin rib decks 351

12.3 The use of diaphragms 355

12.4 Proportioning of twin rib decks 357

12.5 Ribbed slabs and skew bridges 362

12.6 Heat of hydration effects on twin rib decks 362

12.7 Prestress layout 365

12.8 Substructure for twin rib bridges 365

12.9 Construction technology 365

12.10 The development of ribbed slabs 367

13 Box girders 369

13.1 General 369

13.2 Cast-in-situ construction of boxes 369

13.3 Evolution towards the box form 371

13.4 Shape and appearance of boxes 372

13.5 The number of webs per box 378

13.6 Number of boxes in the deck cross section 379

14 Counter-cast technology for box section decks 386

14.1 General 386

14.2 Long line casting 387

14.3 Short line casting 388

15 The construction of girder bridges 414

15.1 General 414

15.2 Cast-in-situ span-by-span construction of continuous beams 414

15.3 Precast segmental span-by-span erection 422

15.4 Cast-in-situ balanced cantilever construction 428

15.5 Precast segmental balanced cantilever construction 439

15.6 Progressive erection of precast segmental decks 458

15.7 Construction programme for precast segmental decks 459

15.8 Incremental launching 460

15.9 Prefabrication of complete spans 475

16 The effect of scale on the method of construction 484

16.1 General 484

16.2 A bridge length of 130 m on four spans 484

16.3	A bridge length of 130 m on three spans	485
16.4	The bridge is 500 m long	487
16.5	A series of short bridges totalling typically 1,000 m	490
16.6	The bridge is 1,000 m long	491
16.7	The bridge is 2,000 m long	492
16.8	The bridge is 10,000 m long	494
17	The design and construction of arches	498
17.1	General	498
17.2	Line of thrust	498
17.3	Unreinforced concrete and masonry arches	501
17.4	Flat arches	502
17.5	Reinforced concrete arches	503
17.6	Short-span reinforced concrete arches with earth fill	504
17.7	Longer span reinforced concrete arches supporting bridge decks	509
17.8	Construction of arches	512
xii	Contents	
17.9	Progressive collapse of multi-span arch bridges	516
17.10	Tied arches	516
18	Cable-supported decks	519
18.1	General	519
18.2	Extradosed bridge decks	519
18.3	Undertrussed bridges	521
18.4	Cable-stayed bridges	522
18.5	Stressed ribbon bridges	552
18.6	Steel cable catenary bridges	560
18.7	Flat suspension bridges	561
	Appendix	564
	References	568
	Index	572

Topics in Theory & Design of Bridges

PREFACE

xv

1 INTRODUCTION

1

- 1-1 Brief History of Bridge Engineering / 1
- 1-2 Bridge Appearance and Esthetics / 5
- 1-3 Elements of Geometric Design / 12
- 1-4 Economic Evaluation and Relevant Factors / 14
- 1-5 Bridge Appraisal and Inventory / 23
- 1-6 Bridge Needs / 24
- 1-7 Principles of Bridge Management / 28

2 DESIGN METHODS AND LOADS

37

- 2-1 Specifications and Standards / 37
- 2-2 Structural Analysis in Bridges / 38
- 2-3 Design Methods: Concrete Bridges / 52
- 2-4 Design Methods: Steel Bridges / 53
- 2-5 Bridge Loads / 55
- 2-6 AASHTO Combinations of Loads / 74
- 2-7 Distribution of Longitudinal Forces to Bridge Bearings / 76
- 2-8 Application of Loads: Numerical Example / 89

v

- 2-9 Impact and Dynamic Analysis / 95
- 2-10 Distribution of Loads in Concrete Box–Slab Bridges / 102
- 2-11 Distribution of Loads According to AASHTO Specifications / 108
- 2-12 Distribution of Loads Based on Results of NCHRP Project 12-26 / 114
- 2-13 LRFD Specifications (1992) / 116
- 2-14 Parallel Girder Systems / 131
- 2-15 Strut-and-Tie Model / 138

3 REINFORCED CONCRETE BRIDGES

147

- 3-1 Characteristics of Reinforced Concrete / 147
- 3-2 Types of Reinforced Concrete Bridges / 151
- 3-3 Slab Bridges: Simple Spans / 153
- 3-4 Slab Bridges: Continuous Spans / 159
- 3-5 Deck Girder Bridges / 166
- 3-6 Box Girder Bridges / 186
- 3-7 Through Girder Bridges / 198
- 3-8 Topics Relevant to Slab Bridges / 202
- 3-9 Rigid-Frame Concrete Bridges / 210
- 3-10 Fundamentals of Prestressed Concrete Bridges / 213
- 3-11 Precast Prestressed Concrete I-Beam Bridges: Simple and Continuous Spans / 219
- 3-12 Precast Prestressed Deck Beam Bridges / 236
- 3-13 Topics Relevant to Prestressed Concrete Bridges / 239
- 3-14 Prestressed Waffle Slab Bridges / 249
- 3-15 Prestressed Concrete Box Girders / 252
- 3-16 Principles of Strength Design: Conventional Reinforced Concrete Decks / 258
- 3-17 Principles of Strength Design: Prestressed Concrete Decks / 262
- 3-18 Design Examples: Strength Design Method (Load Factor) / 272
- 3-19 High-Strength Concrete in Bridges / 281
- 3-20 Trends in Prestressed Concrete / 286

4	STEEL I-BEAM BRIDGES	296
4-1	Characteristics of I-Beam Bridges /	296
4-2	Structural Materials /	297
4-3	Design Requirements /	305
4-4	Slab-I-Beam Bridge with Simple Span /	305
4-5	Composite Steel Beam-Concrete Construction /	312
4-6	Trends in Composite Bridges /	319
4-7	Composite I-Beam Bridge: Simple Span /	321
4-8	Nonlinear Analysis of Composite Beams /	342
4-9	Topics Relevant to Composite Beams /	348
4-10	Composite Bridges with Precast Decks /	349
4-11	Continuous-Beam Bridges /	352
4-12	Continuous Composite Beam Bridges /	359
4-13	Prestressed Decks in Continuous Composite Bridges: Case Study /	364
4-14	Strength Design Method: Load Factor Design (Current AASHTO Terminology) /	371
4-15	Design Examples: Simple Beams (Load Factor Approach) /	374
4-16	Design Examples: Continuous Beams (Load Factor Approach) /	380
4-17	Basic Principles of Plastic Analysis /	383
4-18	Design Example: Continuous Composite I-Beam Bridge (Load Factor Approach) /	386
4-19	Topics Relevant to Load Factor Design of Continuous Composite Bridges: Case Studies /	388
4-20	Alternate Load Factor Design: Braced Compact Sections (AASHTO, 1991) /	400
4-21	Prestressed Steel Bridges /	402
5	WELDED PLATE GIRDER AND BOX GIRDER BRIDGES	413
5-1	Introduction /	413
5-2	Floor Systems /	414
5-3	Correlation Between Flange and Web Area: Flange Area Formula /	417
5-4	Bridge Plate Girders with Variable Depth /	419

- 5-5 Basic Principles of Welding / 422
- 5-6 Topics Relevant to Optimum Proportioning of Plate Girders / 426
- 5-7 Longitudinally Stiffened Plate Girders / 430
- 5-8 Design Example: Optimum Bridge Proportioning / 436
- 5-9 Design Example: Two-Girder System with Concrete Slab / 452
- 5-10 Steel Box Girders: General Principles / 465
- 5-11 Design Example: Steel Box Girder Bridge / 475
- 5-12 Hybrid Girders / 484
- 5-13 Torsional Loading / 485
- 5-14 Fatigue Considerations / 491
- 5-15 LRFD Approach: Basic Principles / 495
- 5-16 Strength of Steel Box Girder Bridges / 507
- 5-17 Redundancy Design of Two-Girder Bridge Systems / 516

6 STEEL BRIDGES CURVED IN PLAN 531

- 6-1 General Characteristics / 531
- 6-2 Simplified Method of Analysis / 532
- 6-3 Effects of Skew Angle and Elevated Supports / 540
- 6-4 Specifications and Design Recommendations: I Girders / 547
- 6-5 Specifications and Design Recommendations: Steel Box Girders / 555
- 6-6 Examples of Curved Steel Box Girder Bridges: A Survey / 561
- 6-7 Analytical Procedure: Single Span / 564
- 6-8 Extended Method of Analysis / 579

7 ORTHOTROPIC DECK BRIDGES 606

- 7-1 Development of the Steel Plate Deck / 606
- 7-2 The Orthotropic System / 609
- 7-3 Relevant Specifications / 615
- 7-4 Deck Plate: Theory and Behavior / 623
- 7-5 Design Approaches / 632
- 7-6 Pelikan–Esslinger Method / 637
- 7-7 Solutions for Steel Plate Deck on Rigid Supports / 647

- 7-8 Effects of Flexible Floor Beams / 659
- 7-9 Design Considerations of the Plate Deck / 666
- 7-10 Floor Beam Forces and Deformations / 683
- 7-11 Orthotropic Plate Behavior Under Alternate Loads: Case Study / 684
- 7-12 Theoretical Aspects of Orthotropic Skew Steel Decks: Case Study / 687
- 7-13 Combined System of Plate and Girder / 691
- 7-14 Bending and Continuity: Skew Orthotropic Plate Structures / 701
- 7-15 Design Example / 712
- 7-16 Types of Orthotropic Plate Bridges / 722

8 SEGMENTAL CONCRETE BRIDGES

730

- 8-1 Basic Construction Methods / 730
- 8-2 Segment Dimensions and Details / 736
- 8-3 Span Arrangement and Details / 738
- 8-4 Methods and Analysis / 740
- 8-5 Design Considerations / 741
- 8-6 Curved Prestressed Segmental Bridges: Case Study / 753
- 8-7 Moment Redistribution: Case Study / 768

9 TRUSSES, MOVABLE BRIDGES, AND CABLE-STAYED BRIDGES

PART 1: TRUSSES

781

- 9-1 Truss Types and Characteristics / 781
- 9-2 Topics Relevant to Truss Design / 785
- 9-3 Analysis of Trusses / 788
- 9-4 Design Approach to Trusses: Allowable Stress Method / 797
- 9-5 Design Approach of Trusses: Load Factor Method / 805
- 9-6 Design Examples of Truss Bridges / 808
- 9-7 Cantilever Trusses / 821

PART 2: MOVABLE BRIDGES

823

- 9-8 Movable Bridges: Structural Considerations / 823
- 9-9 Movable Bridges: Special Features / 827

- 9-10 Special Structural Design Provisions
for Movable Bridges / 828
- 9-11 Example of Swing Bridge / 832
- 9-12 Example of Bascule Bridge / 834

PART 3: CABLE-STAYED BRIDGES

837

- 9-13 General Features of Cable-Stayed Bridges / 837
- 9-14 Load Effects in Cable-Stayed Bridges / 841
- 9-15 Cable Characteristics / 843
- 9-16 Analytical Concepts of Cable-Stayed
Bridges / 849
- 9-17 Design Requirements of Cable-Stayed
Bridges / 861
- 9-18 Multispan Stayed Bridges / 862
- 9-19 Buckling of Cable-Stayed Bridges / 870
- 9-20 Cable-Stayed Bridges: Design Example / 878
- 9-21 Fatigue Effects from Wind-Induced
Vibrations / 882
- 9-22 LRFD Specifications / 884

10 ELASTIC ARCH BRIDGES

891

- 10-1 Types of Arch Bridges / 891
- 10-2 Examples of Main Features / 896
- 10-3 Erection Procedures / 905
- 10-4 Fundamental Theory of Arches / 907
- 10-5 First-Order Arch Analysis / 918
- 10-6 Miscellaneous Topics / 921
- 10-7 Fundamentals of Deflection Theory / 928
- 10-8 Buckling and Geometry Imperfections:
Stability Considerations / 935
- 10-9 Limit Analysis of Reinforced Concrete Arch
Bridges; A Case Study / 944
- 10-10 Design Principles / 951
- 10-11 Analysis of Fixed Arches / 958
- 10-12 Analysis of Hinged Arch Bridges / 967
- 10-13 Multispan Arches on Elastic Piers / 975
- 10-14 Arches with Rigidly Connected Decks / 981
- 10-15 Example of Deck-Stiffened Arch Bridge / 989
- 10-16 Artificial or External Stress Control / 993
- 10-17 The Prestressed Bowstring Arch / 1005

- 10-18 Example of Numerical Bending Analysis / 1011
- 10-19 Deformation and Elastic Buckling Behavior:
Case Studies / 1023
- 10-20 Design of Arches by the Complex Method / 1040
- 10-21 Relevant Specifications / 1045

11 SPECIAL BRIDGE TYPES

1054

- 11-1 Traffic Underpasses in Urban Areas / 1054
- 11-2 Prefabricated Elements for Bridge
Superstructures / 1055
- 11-3 Prefabricated Elements for Bridge
Substructures / 1059
- 11-4 Slurry Walls in Bridge Construction / 1064
- 11-5 Posttensioned Diaphragm Walls / 1067
- 11-6 Examples of Traffic Underpasses / 1073
- 11-7 Bridge Structures Under Roadway
Embankment / 1076
- 11-8 Rigid-Frame Bridge: Design Example / 1081
- 11-9 Short-Span Bridges with Haunches:
Design Example / 1089
- 11-10 Cantilever Bridges / 1096
- 11-11 Integral Bridges / 1102
- 11-12 Other Types of Bridges / 1107

12 TOPICS RELEVANT TO DESIGN

1114

- 12-1 Lateral Wind Bracing in Plate Girder Bridges:
Design Example / 1114
- 12-2 Unintended Composite Action in Bridges / 1119
- 12-3 Deflection and Camber / 1122
- 12-4 Forces Induced by Settlement / 1129
- 12-5 Temperature Effects in Bridges / 1137
- 12-6 Basic Concepts of Strength and Fracture / 1151
- 12-7 Development of Data for Fatigue Design / 1157
- 12-8 Fatigue-Induced Stresses and Fractures / 1161
- 12-9 Factors Influencing Fatigue / 1173
- 12-10 Design Approach to Fatigue / 1181
- 12-11 Fatigue Effects Under Variable-Amplitude Loading:
Experimental Investigations / 1190
- 12-12 Full-Scale Welded Bridge Attachments: Fatigue
Behavior in Experimental Investigations / 1216

- 12-13 Summary and Evaluation of Fatigue Tests / 1219
- 12-14 Overload Effects and Fatigue of Concrete
Bridges / 1226

13 BRIDGE DETAILS

1246

- 13-1 Basic Types of Bearings / 1246
- 13-2 Specifications Relevant to Bearings / 1247
- 13-3 Sliding Bearings / 1250
- 13-4 Rolling Expansion Bearings / 1259
- 13-5 Elastomeric Bearings / 1264
- 13-6 Special Bearings / 1271
- 13-7 Bearing Pin Connection: Design Example / 1277
- 13-8 Links and Hangers / 1279
- 13-9 Stressed in Pin Connections / 1282
- 13-10 Requirements of Shop and Field Splices / 1283
- 13-11 Design Example: Bolted Field Splice for Plate
Girder (Service Load) / 1286
- 13-12 Design Example: Bolted Field Splice of Box
Girder (Load Factor Design) / 1290
- 13-13 Welded Field Splices / 1298
- 13-14 Beam-Girder Continuous Connections / 1302
- 13-15 Field Splice: Box Girder to Steel Pier
(Load Factor Method) / 1306
- 13-16 Expansion Joints / 1311
- 13-17 Performance of Bridge Deck Expansion
Joints / 1313
- 13-18 Example of Expansion Joint / 1316
- 13-19 Diaphragms and Cross Frames: Design
Requirements / 1318
- 13-20 Diaphragms and Cross Frames: Design
Examples (Load Factor Method) / 1320
- 13-21 Diaphragms and Cross Frames for Curved
Girders / 1326
- 13-22 Design Examples of Cross Frames: Curved
Bridge (Load Factor Approach) / 1329
- 13-23 Diaphragms for Curved Steel Box Girders / 1339
- 13-24 Distortional Response of Curved Concrete
Box Girders / 1340
- 13-25 Example of Cross-Frame Design: Curved Steel
Box Girder (Allowable Stress Method) / 1341
- 13-26 Hinge Details at Base of Bridge Columns / 1343
- 13-27 Construction Aspects of Bridge Decks / 1352

14 SUBSTRUCTURES

1356

- 14-1 Foundation Investigations / 1356
- 14-2 Abutment Types / 1357
- 14-3 Pier Types / 1360
- 14-4 Relevant Specifications / 1368
- 14-5 Load and Moment: Analysis Criteria / 1374
- 14-6 Pier Section Design / 1383
- 14-7 Design Example 1: Integral Abutment / 1391
- 14-8 Design Example 2: Spill-Through Abutment / 1394
- 14-9 Design Example 3: Load Factor Method
for Foundations / 1400
- 14-10 Design Example 4: Single-Hammerhead Pier
(Load Factor Design) / 1407
- 14-11 Alternate Limit Stack Approach:
Soil-Structure Systems / 1423
